Intersection Summary

HCM 6th Ctrl Delay	64.6
HCM 6th LOS	E

Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [NBR, EBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

HCM 6th Ctrl Delay	39.6
HCM 6th LOS	D

Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
 Unsignalized Delay for [EBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

HCM 6th Ctrl Delay	76.5
HCM 6th LOS	E

Notes

\* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.  
Unsignalized Delay for [NBR, EBR] is excluded from calculations of the approach delay and intersection delay.

# 1 SUMMARY OF FINDINGS

This report presents the results of the traffic impact analysis (TIA) for the proposed Merrill Commerce Center Specific Plan (“Project”), which is located north of Merrill Avenue between Grove Avenue and Carpenter Avenue in the City of Ontario, as shown on Exhibit 1-1.

The purpose of this TIA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and where necessary recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. This traffic study has been prepared in accordance with the San Bernardino County Congestion Management Program (CMP) Guidelines for CMP Traffic Impact Analysis Reports (Appendix B, 2016 Update), the California Department of Transportation (Caltrans) Guide for the Preparation of Traffic Impact Studies (December 2002), and consultation with City staff during the traffic study scoping process. (1) (2) The City approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TIA.

## 1.1 PROJECT OVERVIEW

Exhibit 1-1 illustrates the preliminary Project land use plan and proposed phasing. The Project anticipates development over three phases and is expected to be fully built and operational by 2026. Phase A is anticipated to be completed by Year 2022 and includes the development of Planning Areas 4 and 5. Phase B is anticipated to be completed by Year 2025 and includes the development of Planning Areas 1, 2, 3, and 6. Project Buildout is to include the remainder of the development (Planning Areas 1A, 3A, 4A, 5A, and 6A) and would be completed by the Year 2026.

As indicated on Exhibit 1-1, the total development is proposed to consist of:

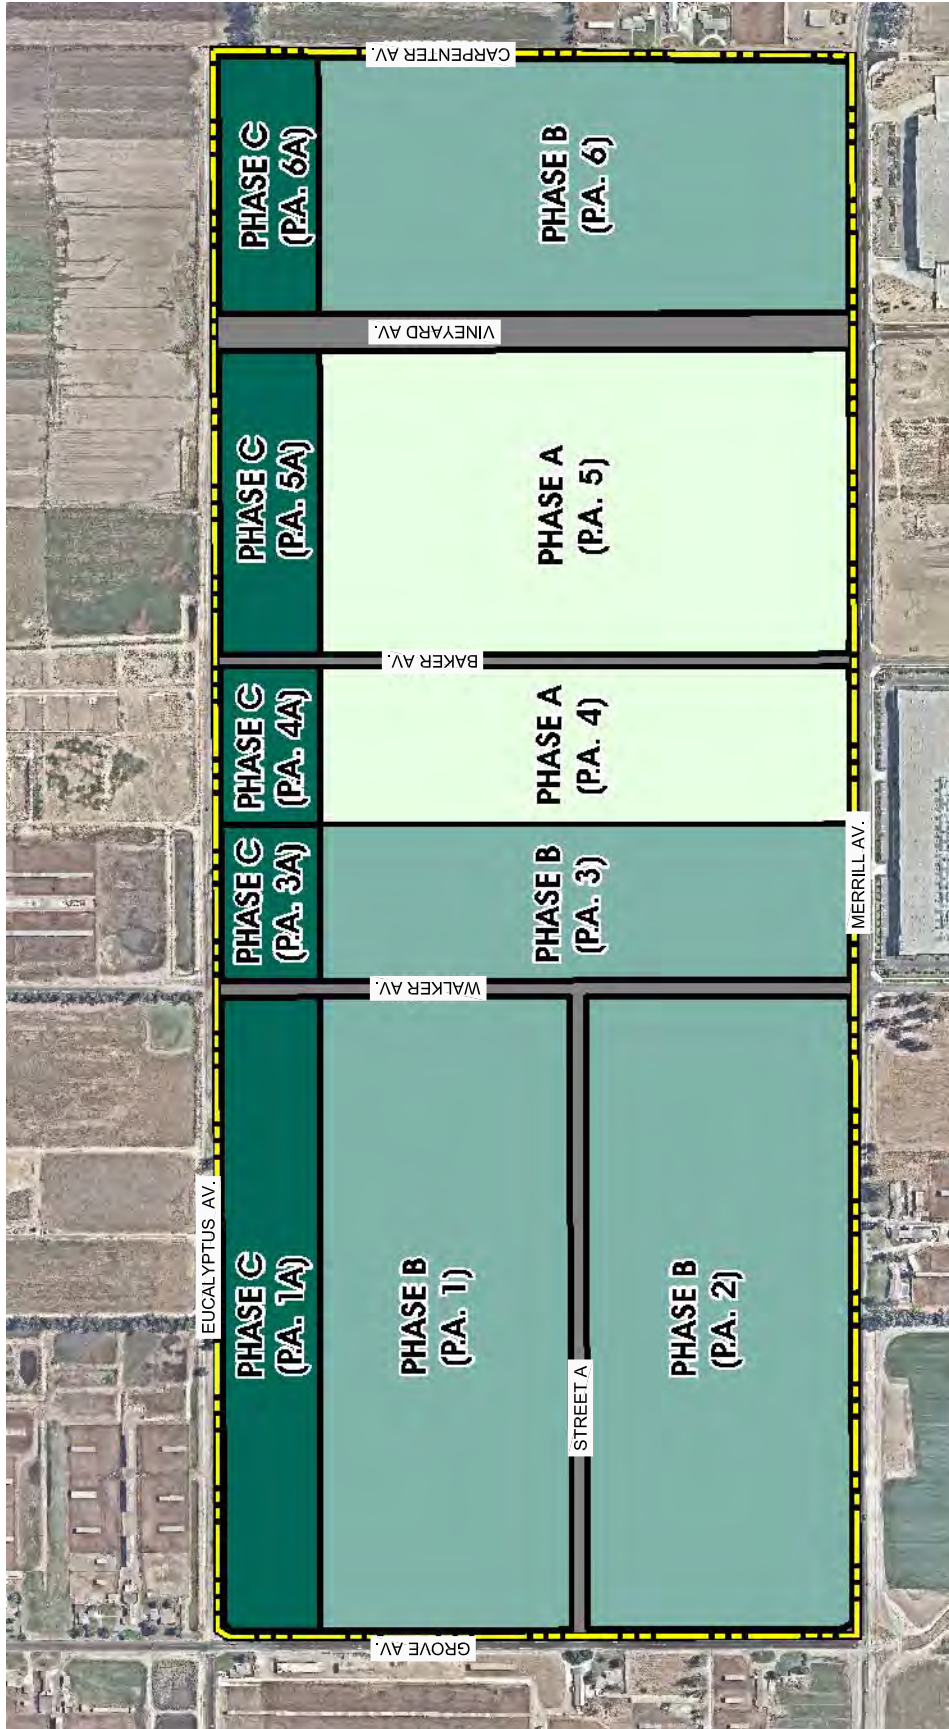

- Industrial: 6,312,000 square feet of high-cube fulfillment center warehouse use and 701,400 square feet of high-cube cold storage warehouse use
- Business Park: 1,441,000 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses
- **Total of 8,455,000 square feet**

In an effort to conduct a conservative analysis, high-cube fulfillment center warehouse use and high-cube cold storage warehouse use were selected to capture the range of allowable uses within the Industrial areas of the Specific Plan. Similarly, the industrial park rate was selected to capture the range of allowable uses within the Business Park areas of the Specific Plan. From a trip generation perspective, these land uses assumptions are conservative in that trip generation would likely be overstated as opposed to understated.

EXHIBIT 1-1: PRELIMINARY LAND USE PLAN AND PHASING PLAN

LEGEND:

- PHASE A (2022)
- PHASE B (2025)
- PHASE C (2026)

Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10<sup>th</sup> Edition, 2017 and the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019). (3) (4) The proposed Project is anticipated to generate a net total of 19,806 actual trip-ends per day, 1,420 AM peak hour trips and 1,701 PM peak hour trips. The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

## 1.2 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential deficiencies to traffic and circulation have been assessed for each of the following conditions:

- Existing (2019)
- Existing plus Project (E+P), with analysis broken down for:
  - Phase A: Planning Areas 4 and 5
  - Phase A + Phase B: where Phase B is Planning Areas 1, 2, 3, and 6
  - Phase A + Phase B + Phase C: where Phase C is Planning Areas 1A, 3A, 4A, 5A, and 6A
- Opening Year Cumulative (2022) Without Project
- Opening Year Cumulative (2022) With Project (Phase A)
- Opening Year Cumulative (2025) Without Project
- Opening Year Cumulative (2025) With Project (Phase A + Phase B)
- Opening Year Cumulative (2026) Without Project
- Opening Year Cumulative (2026) With Project (Project Buildout – All 3 Phases)
- Horizon Year (2040) Without Project
- Horizon Year (2040) With Project (Project Buildout – All 3 Phases)

### 1.2.1 EXISTING (2019) CONDITIONS

Information for Existing (2019) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared.

### 1.2.2 EXISTING PLUS PROJECT CONDITIONS

The Existing plus Project (E+P) analysis determines traffic deficiencies that would occur on the existing roadway system with the addition of Project traffic. E+P traffic conditions have been evaluated for each development phase in order to determine any potential off-site improvements, by phase.

<sup>3</sup>Institute of Transportation Engineers. *Trip Generation Manual*. 10th Edition. 2017.

<sup>4</sup>WSP. *High Cube Warehouse Trip Generation Study*. January 29, 2019.

### **1.2.3 OPENING YEAR CUMULATIVE (2022, 2025 & 2026) CONDITIONS**

The Opening Year Cumulative conditions analysis determines the potential near-term cumulative circulation system deficiencies. To account for background traffic growth, traffic associated with other known cumulative development projects in conjunction with an ambient growth factor from Existing conditions of 2% per year (compounded annually) are included for Opening Year Cumulative (2022, 2025 & 2026) traffic conditions. This comprehensive list was compiled from information provided by the City of Ontario and other near-by agencies.

### **1.2.4 HORIZON YEAR (2040) CONDITIONS**

Traffic projections for Horizon Year (2040) with Project conditions were derived from the San Bernardino Transportation Analysis Model (SBTAM) modified to represent buildout of the City of Ontario. The Horizon Year (2040) conditions analysis will be utilized to determine if improvements funded through regional transportation mitigation fee programs, such as the City's Development Impact Fee (DIF) program, or other approved funding mechanisms can accommodate the long-range cumulative traffic at the target level of service (LOS) identified by the City of Ontario (lead agency). It should be noted that the City of Ontario has updated their DIF program to also include appropriate contributions towards regionally significant improvements that have been identified via the San Bernardino County CMP regional fee program study. If the planned and funded improvements can provide the target LOS, then the Project's payment into established fee programs will be considered as an improvement to address deficiencies. Other improvements needed beyond the "funded" improvements (such as localized improvements to non-DIF facilities) are identified as such.

## **1.3 STUDY AREA**

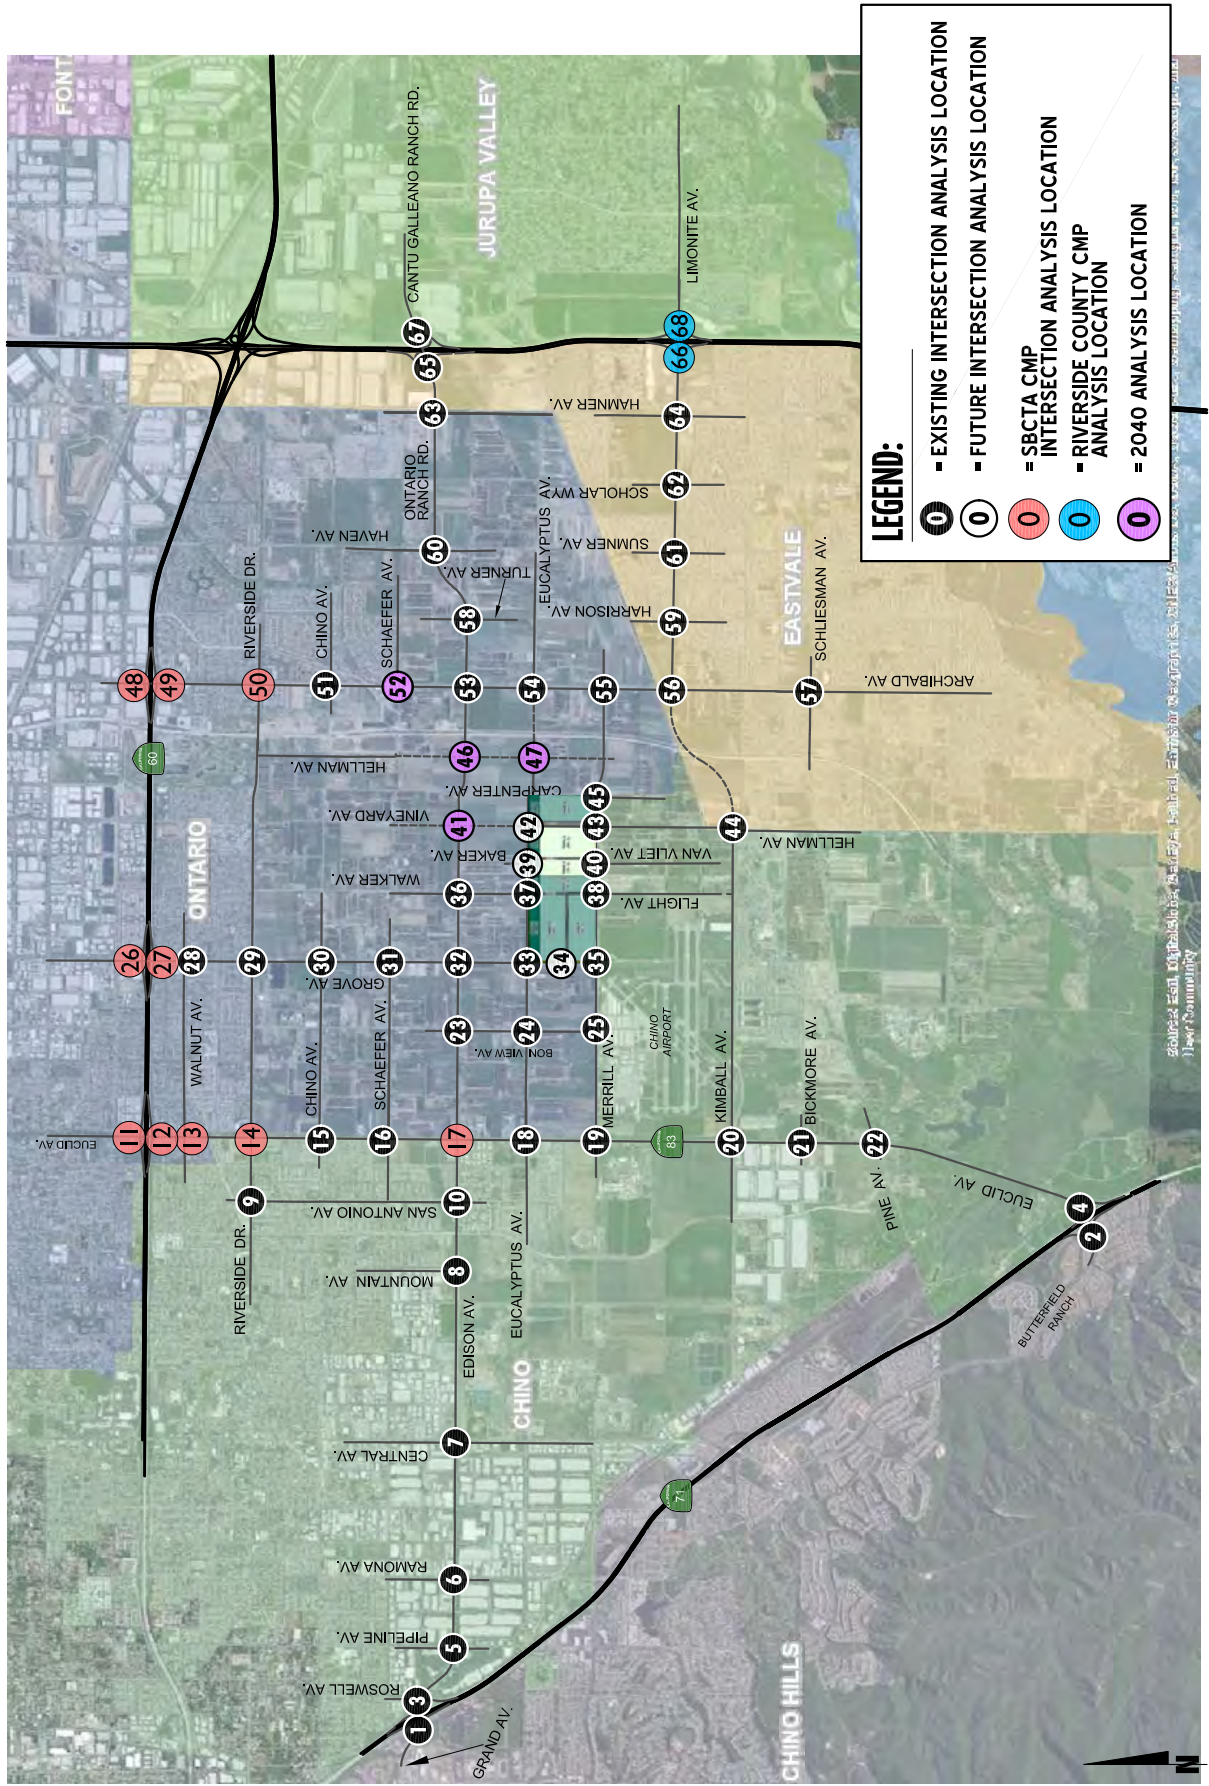

To ensure that this TIA satisfies the City of Ontario's traffic study requirements, Urban Crossroads, Inc. prepared a project traffic study scoping package for review by City staff prior to the preparation of this report. The Agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology.

### **1.3.1 INTERSECTIONS**

The following 68 study area intersections shown on Exhibit 1-2 and listed on Table 1-1 were selected for this TIA based on consultation with City of Ontario staff. The "50 peak hour trip" criterion utilized by the City of Ontario is consistent with the methodology employed by the County of San Bernardino, and generally represents a minimum number of trips at which a typical intersection would have the potential to be affected by a given development proposal. Although each intersection may have unique operating characteristics, this traffic engineering rule of thumb is a widely utilized tool for estimating a potential area of influence (i.e., study area). The "50 peak hour trip" criterion is also utilized by the City of Eastvale. Other analysis intersections, within the adjacent cities were not selected for evaluation as the Project is anticipated to contribute less than 50 peak hour trips.

EXHIBIT 1-2: LOCATION MAP

**TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS**

ID	Intersection Location	Jurisdiction	SBCTA CMP?
1	SR-71 SB Ramps & Grand Av.	Chino Hills, Caltrans	No
2	SR-71 SB Ramps & Butterfield Ranch Rd.	Chino Hills, Caltrans	No
3	SR-71 NB Ramps & Edison Av.	Chino, Caltrans	No
4	SR-71 NB Ramps & Euclid Av. (SR-83)	Chino, Caltrans	No
5	Pipeline Av. & Edison Av.	Chino	No
6	Ramona Av. & Edison Av.	Chino	No
7	Central Av. & Edison Av.	Chino	No
8	Mountain Av. & Edison Av.	Chino	No
9	San Antonio Av. & Riverside Dr.	Chino	No
10	San Antonio Av. & Edison Av.	Chino	No
11	Euclid Av. (SR-83) & SR-60 WB Ramps	Ontario, Caltrans	Yes

68	I-15 NB Ramps & Limonite Av.	Jurupa Valley, Caltrans	No

The intent of a CMP is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. Study area intersections that are identified as CMP facilities in the County of San Bernardino per the San Bernardino County Transportation Authority (SBCTA) CMP are indicated on Table 1-1. (1)

<sup>1</sup> San Bernardino Associated Governments. Congestion Management Program for County of San Bernardino. County of San Bernardino : s.n., Updated June 2016.

### 1.3.2 FREEWAY MAINLINE AND RAMP JUNCTION ANALYSIS

Study area freeway mainline analysis locations were selected based on Caltrans traffic study guidelines, which may require the analysis of State highway facilities. (2) Consistent with recent Caltrans guidance, and because deficiencies to freeway segments tend to dissipate with distance from the point of State Highway System (SHS) entry, quantitative study of freeway segments beyond those immediately adjacent to the point of entry typically is not required. As such, this study evaluates the following freeway segments adjacent to the point of entry to the SHS, where the Project is anticipated to contribute 25 or more one-way peak hour trips (see Table 1-2):

**TABLE 1-2: FREEWAY FACILITY ANALYSIS LOCATIONS**

ID	Freeway Facilities
1	SR-71 Freeway, Southbound – North of Grand Avenue/Edison Avenue
2	SR-71 Freeway, Southbound – Southbound Off-Ramp at Grand Avenue
3	SR-71 Freeway, Southbound – Southbound Loop On-Ramp at Euclid Avenue (SR-83)
4	SR-71 Freeway, Southbound – South of Euclid Avenue (SR-83)
5	SR-71 Freeway, Northbound – North of Grand Avenue/Edison Avenue
6	SR-71 Freeway, Northbound – Northbound On-Ramp at Edison Avenue
7	SR-71 Freeway, Northbound – Northbound Off-Ramp at Euclid Avenue (SR-83)
8	SR-71 Freeway, Northbound – South of Euclid Avenue (SR-83)
9	SR-60 Freeway, Westbound – West of Euclid Avenue (SR-83)
10	SR-60 Freeway, Westbound – Westbound On-Ramp at Euclid Avenue (SR-83)
11	SR-60 Freeway, Westbound – Euclid Avenue (SR-83) to Grove Avenue
12	SR-60 Freeway, Westbound – Westbound On-Ramp at Grove Avenue
13	SR-60 Freeway, Westbound – Between Grove Avenue Ramps
14	SR-60 Freeway, Westbound – Westbound Off-Ramp at Grove Avenue
15	SR-60 Freeway, Westbound – East of Grove Avenue
16	SR-60 Freeway, Westbound – Westbound Off-Ramp at Archibald Avenue
17	SR-60 Freeway, Westbound – East of Archibald Avenue

## 1.4 PROJECT DEFICIENCIES

This section provides a summary of Project deficiencies. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 5 *E+P Traffic Analysis*, Section 6 *Opening Year Cumulative (2022) Traffic Analysis*, Section 7 *Opening Year Cumulative (2025) Traffic Analysis*, Section 8 *Opening Year Cumulative (2026) Traffic Analysis*, and Section 9 *Horizon Year (2040) Traffic Analysis* includes the detailed analysis. A summary of LOS results for all analysis scenarios is presented on Exhibit 1-3.

### 1.4.1 E+P (PHASE A) CONDITIONS

Based on a comparison of Existing to E+P (Phase A) traffic conditions, the addition of Phase A traffic is anticipated to contribute to an existing deficiency and would worsen the LOS or is anticipated to cause a new deficiency at the following intersections.

***Euclid Avenue (SR-83) & Riverside Drive (#14)*** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency.

***Grove Avenue & Edison Avenue (#32)*** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency.

***Grove Avenue & Eucalyptus Avenue (#33)*** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency.

***Grove Avenue & Merrill Avenue (#35)*** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency.

**Walker Avenue & Edison Avenue (#36)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency.

**Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase A) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Carpenter Avenue & Merrill Avenue (#45)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency.

**Hamner Avenue & Ontario Ranch Road (#63)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency.

#### 1.4.2 E+P (PHASE B) CONDITIONS

Based on a comparison of Existing to E+P (Phase B) traffic conditions, the addition of Phase A and Phase B traffic is anticipated to contribute to an existing deficiency and would worsen the LOS or is anticipated to cause a new deficiency at the following intersections.

**Euclid Avenue (SR-83) & Riverside Drive (#14)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency.

**Euclid Avenue (SR-83) & Merrill Avenue (#19)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase B) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Grove Avenue & Edison Avenue (#32)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency.

**Grove Avenue & Eucalyptus Avenue (#33)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency.

**Grove Avenue & Merrill Avenue (#35)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is

anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency.

**Walker Avenue & Edison Avenue (#36)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency.

**Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase B) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Carpenter Avenue & Merrill Avenue (#45)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency.

**Archibald Avenue & Limonite Avenue (#56)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase B) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Hamner Avenue & Ontario Ranch Road (#63)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency.

### 1.4.3 E+P (PHASE C) CONDITIONS

Based on a comparison of Existing to E+P (Phase C) traffic conditions, the addition of Phase A, Phase B, and Phase C traffic is anticipated to contribute to an existing deficiency and would worsen the LOS or is anticipated to cause a new deficiency at the following intersections.

**Euclid Avenue (SR-83) & Riverside Drive (#14)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency.

**Euclid Avenue (SR-83) & Edison Avenue (#17)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Euclid Avenue (SR-83) & Merrill Avenue (#19)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Bon View Avenue & Edison Avenue (#23)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Grove Avenue & Edison Avenue (#32)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency.

**Grove Avenue & Eucalyptus Avenue (#33)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency.

**Grove Avenue & Merrill Avenue (#35)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency.

**Walker Avenue & Edison Avenue (#36)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency.

**Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Hellman Avenue & Kimball Avenue (#44)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency.

**Carpenter Avenue & Merrill Avenue (#45)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency.

**Archibald Avenue & Merrill Avenue (#55)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Archibald Avenue & Limonite Avenue (#56)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Archibald Avenue & Schleisman Avenue (#57)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency.

**Hamner Avenue & Ontario Ranch Road (#63)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency.

#### 1.4.4 OPENING YEAR CUMULATIVE (2022) CONDITIONS

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2022) Without Project traffic conditions. The Project is anticipated to contribute to these deficiencies by adding traffic (as measured by 50 or more peak hours trips) to already deficient intersections resulting in an increase to peak hour delays. The Project is anticipated to contribute traffic to these facilities along with other cumulative development projects that are operating at unacceptable LOS under Without Project traffic conditions.

- Euclid Avenue (SR-83) & Riverside Drive (#14) – LOS E AM and PM peak hours
- Euclid Avenue (SR-83) & Merrill Avenue (#19) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Pine Avenue (#22) – LOS E PM peak hour only
- Grove Avenue & Edison Avenue (#32) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#33) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F PM peak hour only
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS E AM peak hour only
- Carpenter Avenue & Merrill Avenue (#45) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#56) – LOS E AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#63) – LOS F PM peak hour only

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2022) With Project traffic conditions with the addition of Phase A Project traffic, in addition to the locations identified above for Opening Year Cumulative (2022) Without Project traffic conditions.

- Euclid Avenue (SR-83) & Edison Avenue (#17) – LOS E PM peak hour only
- Baker Avenue/Van Vliet Avenue & Merrill Avenue (#40) – LOS E PM peak hour only

- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#43) – LOS F AM peak hour; LOS E PM peak hour

#### 1.4.5 OPENING YEAR CUMULATIVE (2025) CONDITIONS

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2025) Without Project traffic conditions. The Project is anticipated to contribute to these deficiencies by adding traffic (as measured by 50 or more peak hours trips) to already deficient intersections resulting in an increase to peak hour delays. The Project is anticipated to contribute traffic to these facilities along with other cumulative development projects that are operating at unacceptable LOS under Without Project traffic conditions.

- Euclid Avenue (SR-83) & Riverside Drive (#14) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Edison Avenue (#17) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Merrill Avenue (#19) – LOS E PM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Kimball Avenue (#20) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Pine Avenue (#22) – LOS E AM peak hour; LOS F PM peak hour
- Grove Avenue & SR-60 Eastbound Ramps (#27) – LOS F AM peak hour only
- Grove Avenue & Edison Avenue (#32) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#33) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F PM peak hour only
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#43) – LOS E AM peak hour only
- Carpenter Avenue & Merrill Avenue (#45) – LOS F AM and PM peak hours
- Archibald Avenue & SR-60 Westbound Ramps (#48) – LOS E AM peak hour only
- Archibald Avenue & Merrill Avenue (#55) – LOS F AM and PM peak hour
- Archibald Avenue & Limonite Avenue (#56) – LOS F AM and PM peak hours
- Hamner Avenue & Ontario Ranch Road (#63) – LOS F PM peak hour only

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2025) With Project traffic conditions with the addition of Phase B Project traffic, in addition to the locations identified above for Opening Year Cumulative (2025) Without Project traffic conditions.

- Bon View Avenue & Merrill Avenue (#25) – LOS F PM peak hour only
- Grove Avenue & Chino Avenue (#30) – LOS F PM peak hour only
- Grove Avenue & Schaefer Avenue (#31) – LOS F PM peak hour only
- Baker Avenue/Van Vliet Avenue & Merrill Avenue (#40) – LOS E PM peak hour only
- Archibald Avenue & Ontario Ranch Road (#53) – LOS F AM peak hour only

#### 1.4.6 OPENING YEAR CUMULATIVE (2026) CONDITIONS

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2026) Without Project traffic conditions. The Project is anticipated to contribute to these deficiencies by adding traffic (as measured by 50 or more peak hours trips) to already deficient intersections resulting in an increase to peak hour delays. The Project is anticipated to contribute traffic to these facilities along with other cumulative development projects that are operating at unacceptable LOS under Without Project traffic conditions.

- Central Avenue & Edison Avenue (#7) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#12) – LOS E AM peak hour only
- Euclid Avenue (SR-83) & Riverside Drive (#14) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Schaefer Avenue (#16) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Edison Avenue (#17) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Merrill Avenue (#19) – LOS E PM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Kimball Avenue (#20) – LOS F PM peak hour only
- Euclid Avenue (SR-83) & Pine Avenue (#22) – LOS E AM peak hour; LOS F PM peak hour
- Bon View Avenue & Edison Avenue (#23) – LOS F AM and PM peak hours
- Bon View Avenue & Merrill Avenue (#25) – LOS E PM peak hour only
- Grove Avenue & SR-60 Eastbound Ramps (#27) – LOS F AM peak hour only
- Grove Avenue & Edison Avenue (#32) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#33) – LOS F AM and PM peak hours
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F PM peak hour only
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#43) – LOS E AM peak hour only
- Hellman Avenue & Kimball Avenue (#44) – LOS F AM peak hour; LOS E PM peak hour
- Carpenter Avenue & Merrill Avenue (#45) – LOS F AM and PM peak hours
- Archibald Avenue & SR-60 Westbound Ramps (#48) – LOS E AM peak hour only
- Archibald Avenue & Riverside Drive (#50) – LOS F PM peak hour only
- Archibald Avenue & Ontario Ranch Road (#53) – LOS F AM peak hour only
- Archibald Avenue & Merrill Avenue (#55) – LOS F PM peak hour only
- Archibald Avenue & Limonite Avenue (#56) – LOS F AM and PM peak hours
- Archibald Avenue & Schleisman Road (#57) – LOS F AM and PM peak hours
- Hamner Avenue & Ontario Ranch Road (#63) – LOS E AM peak hour; LOS F PM peak hour

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2026) With Project traffic conditions with the

addition of Phase C Project traffic, in addition to the locations identified above for Opening Year Cumulative (2026) Without Project traffic conditions.

- Grove Avenue & Chino Avenue (#30) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#31) – LOS F PM peak hour only
- Walker Avenue & Eucalyptus Avenue (#37) – LOS F AM peak hour only
- Baker Avenue/Van Vliet Avenue & Merrill Avenue (#40) – LOS E AM peak hour; LOS F PM peak hour

#### **1.4.7 HORIZON YEAR (2040) CONDITIONS**

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Horizon Year (2040) Without Project traffic conditions. The Project is anticipated to contribute to these deficiencies by adding traffic (as measured by 50 or more peak hours trips) to already deficient intersections resulting in an increase to peak hour delays. The Project is anticipated to contribute traffic to these facilities along with other cumulative development projects that are operating at unacceptable LOS under Without Project traffic conditions.

- SR-71 Southbound Ramps & Grand Avenue (#1) – LOS E PM peak hour only
- SR-71 Northbound Ramps & Edison Avenue (#3) – LOS F AM peak hour only
- Central Avenue & Edison Avenue (#7) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#11) – LOS F AM peak hour; LOS E PM peak hour
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#12) – LOS E AM peak hour only
- Euclid Avenue (SR-83) & Riverside Drive (#14) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#15) – LOS F PM peak hour only
- Euclid Avenue (SR-83) & Schaefer Avenue (#16) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#17) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#18) – LOS F PM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#19) – LOS F AM and PM peak hours

## 1.5 RECOMMENDATIONS

The following recommendations are based on the improvements needed to address the Project's deficiencies to baseline (Existing) year traffic conditions. Exhibit 1-4 shows the site adjacent recommendations and Exhibit 1-5 shows the Phase A off-site improvement recommendations.

### *Phase A Conditions:*

**Recommendation 1 – Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – The following improvements are necessary to improve the peak hour deficiency:

- Project to install a traffic signal.
- Project to restripe the northbound approach to provide a northbound left turn lane and right turn lane.

**Recommendation 2 – Baker Avenue & Eucalyptus Avenue (#39)** – The following improvement is recommended:

- Project to install a stop control on the northbound approach and add a shared left-right turn lane.

**Recommendation 3 – Baker Avenue/Van Vliet Avenue & Merrill Avenue (#40)** – The following improvements are necessary to improve the peak hour deficiency:

- Project to install a stop control on the southbound approach and add a shared left-through-right turn lane.
- Project to stripe a 100-foot eastbound left turn lane within the painted median.
- Project to add a 2<sup>nd</sup> westbound through lane.

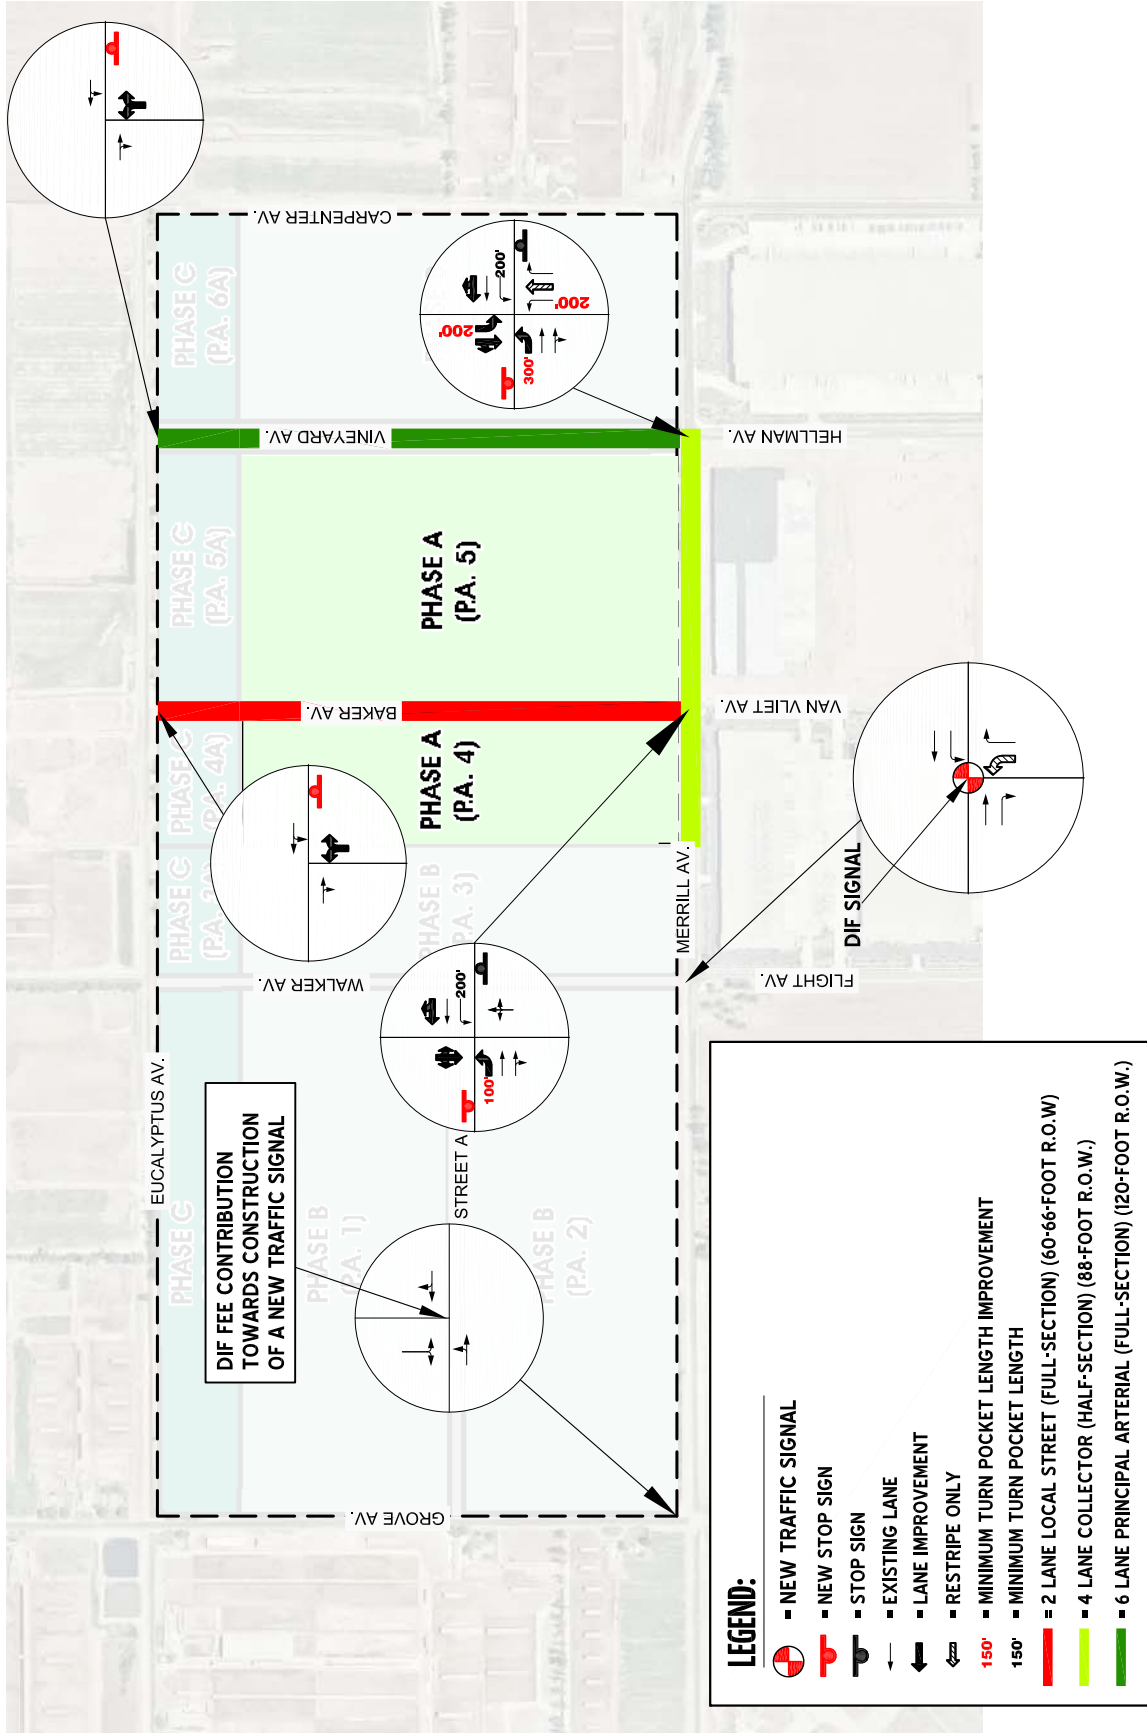

**Recommendation 4 – Vineyard Avenue & Eucalyptus Avenue (#42)** – The following improvements are recommended:

- Project to install a stop control on the northbound approach and add a shared left-right turn lane.

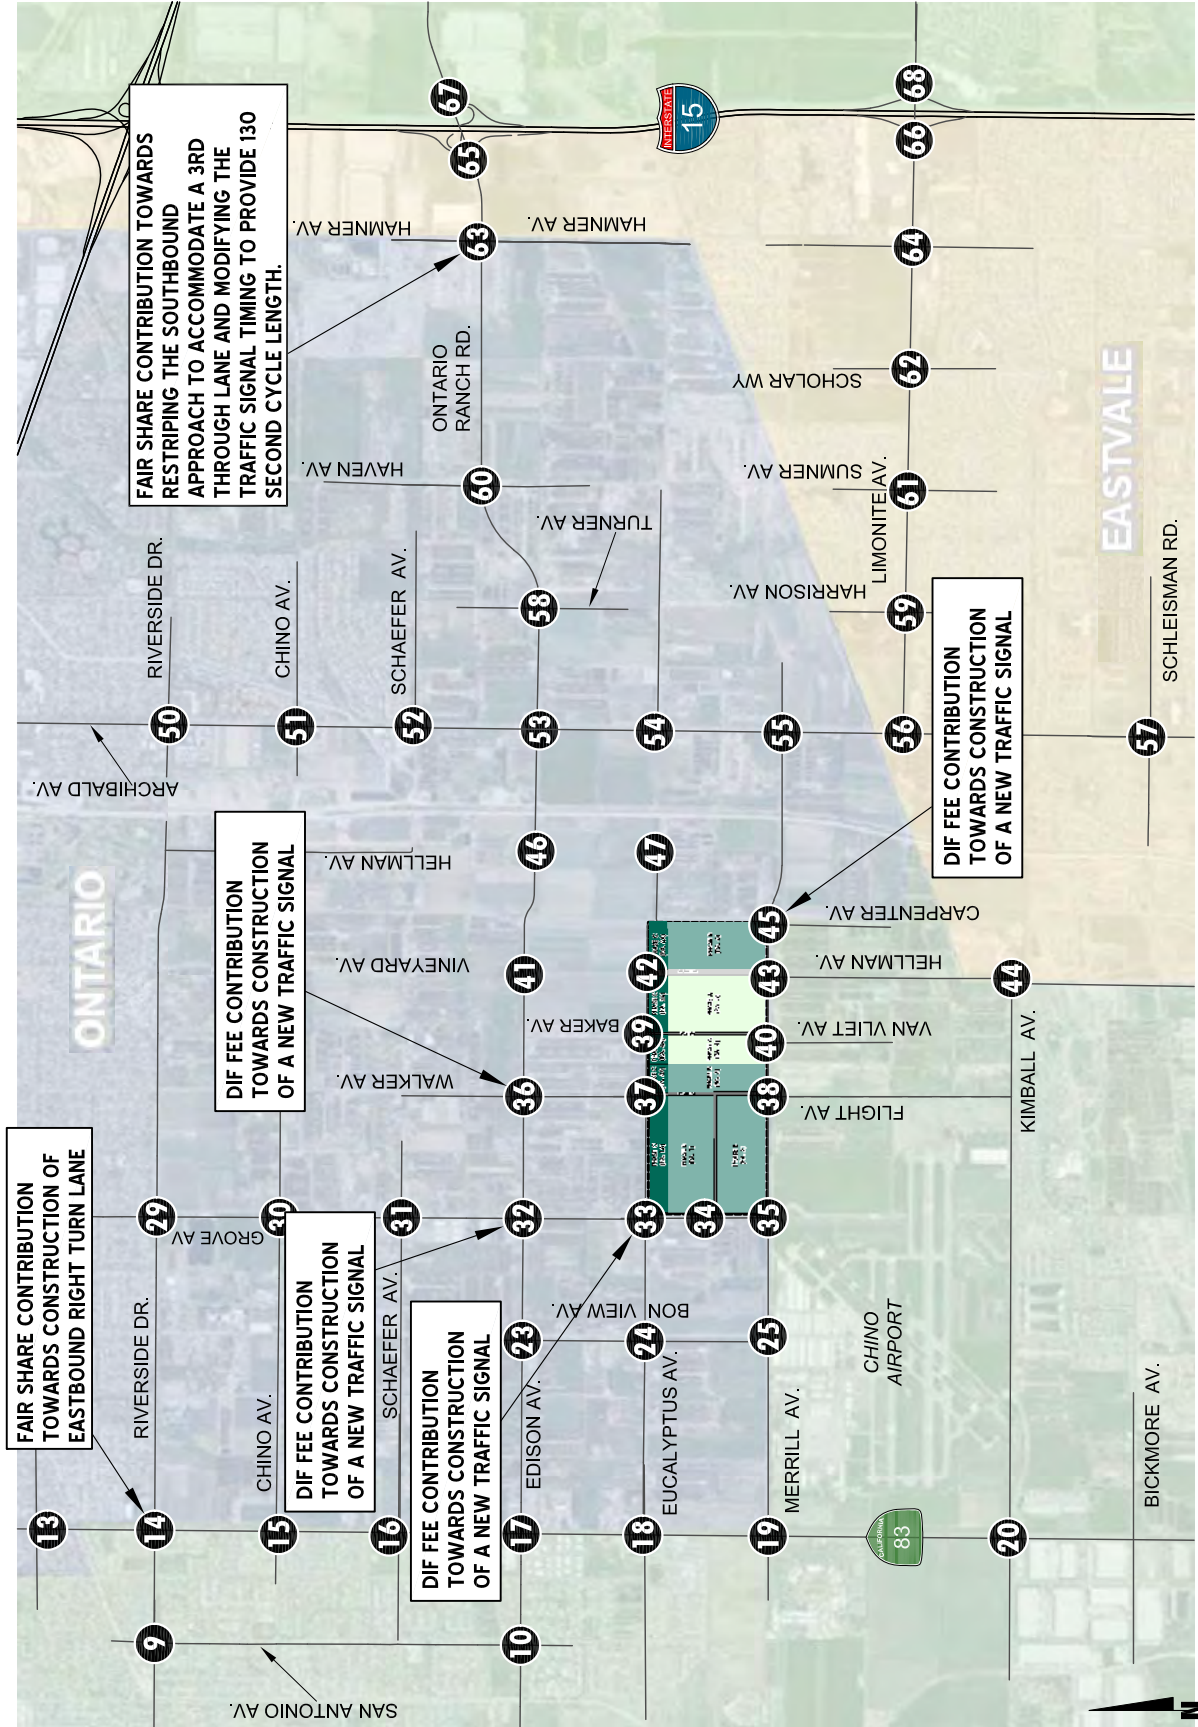

**Recommendation 5 – Vineyard Avenue/Hellman Avenue & Merrill Avenue (#43)** – The following improvements are necessary to improve the peak hour deficiency:

- Project to install a stop control on the southbound approach and add a 200-foot left turn and a shared through-right turn lane.
- Project to restripe the northbound approach to accommodate a left, through, and right turn lanes.
- Project to stripe a 300-foot eastbound left turn lane within the painted median.
- Project to add a 2<sup>nd</sup> westbound through lane.

**EXHIBIT 1-4: PHASE A (2022) SITE ADJACENT ROADWAY AND SITE ACCESS RECOMMENDATIONS**

**EXHIBIT 1-5: E+P (PHASE A) RECOMMENDED OFF-SITE IMPROVEMENTS**

**Recommendation 6 – Merrill Avenue** – Merrill Avenue is an east-west oriented roadway located along Planning Area 4 and Planning Area 5’s southern boundary. Project to construct Merrill Avenue from the western boundary of Planning Area 4 to Vineyard Avenue/Hellman Avenue at its ultimate half-section width as a 4-lane collector (88-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 7 – Baker Avenue** – Baker Avenue is a north-south oriented roadway located between Planning Area 4 and Planning Area 5. Project to construct Baker Avenue from Merrill Avenue to Eucalyptus Avenue at its ultimate full-section width as a 2-lane local street (60-66-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 8 – Vineyard Avenue** – Vineyard Avenue is a north-south oriented roadway located along Planning Area 5’s eastern boundary. Project to construct Vineyard Avenue from Merrill Avenue to Eucalyptus Avenue at its ultimate full-section width as a 6-lane principal arterial (120-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

A review of the long-range peak hour intersection operations and roadway segment forecasts suggest that Vineyard Avenue, north of Merrill Avenue could operate at acceptable levels of service as a 4-lane arterial as opposed to the currently planned 6-lane facility. The anticipated traffic volumes under Horizon Year (2040) With Project conditions is 16,277 vehicles. Based on the City of Ontario’s General Plan, a 4-lane divided arterial has a capacity of 34,100 vehicles. As such, as a 4-lane facility, Vineyard Avenue would still operate at an acceptable LOS (LOS A) based on the volume-to-capacity ratio.

*Phase B Conditions:*

Exhibit 1-6 shows the site adjacent recommendations and Exhibit 1-7 shows the Phase B off-site improvement recommendations.

**Recommendation 9 – Grove Avenue & Eucalyptus Avenue (#33)** – The following improvement is necessary to improve the peak hour deficiency:

- Project to add a 2<sup>nd</sup> northbound through lane.

**Recommendation 10 – Grove Avenue & Street A (#34)** – The following improvements are necessary to improve the peak hour deficiency:

- Project to install a traffic signal.
- Project to add a southbound left turn lane with 100-feet of storage.
- Project to add a westbound shared left-right turn lane.

**Recommendation 11 – Grove Avenue & Merrill Avenue (#35)** – The following improvements are necessary to improve the peak hour deficiency:

- Add an eastbound left turn lane.
- Project to add a 2<sup>nd</sup> westbound through lane.

EXHIBIT 1-6: PHASE B (2025) SITE ADJACENT ROADWAY AND SITE ACCESS RECOMMENDATIONS

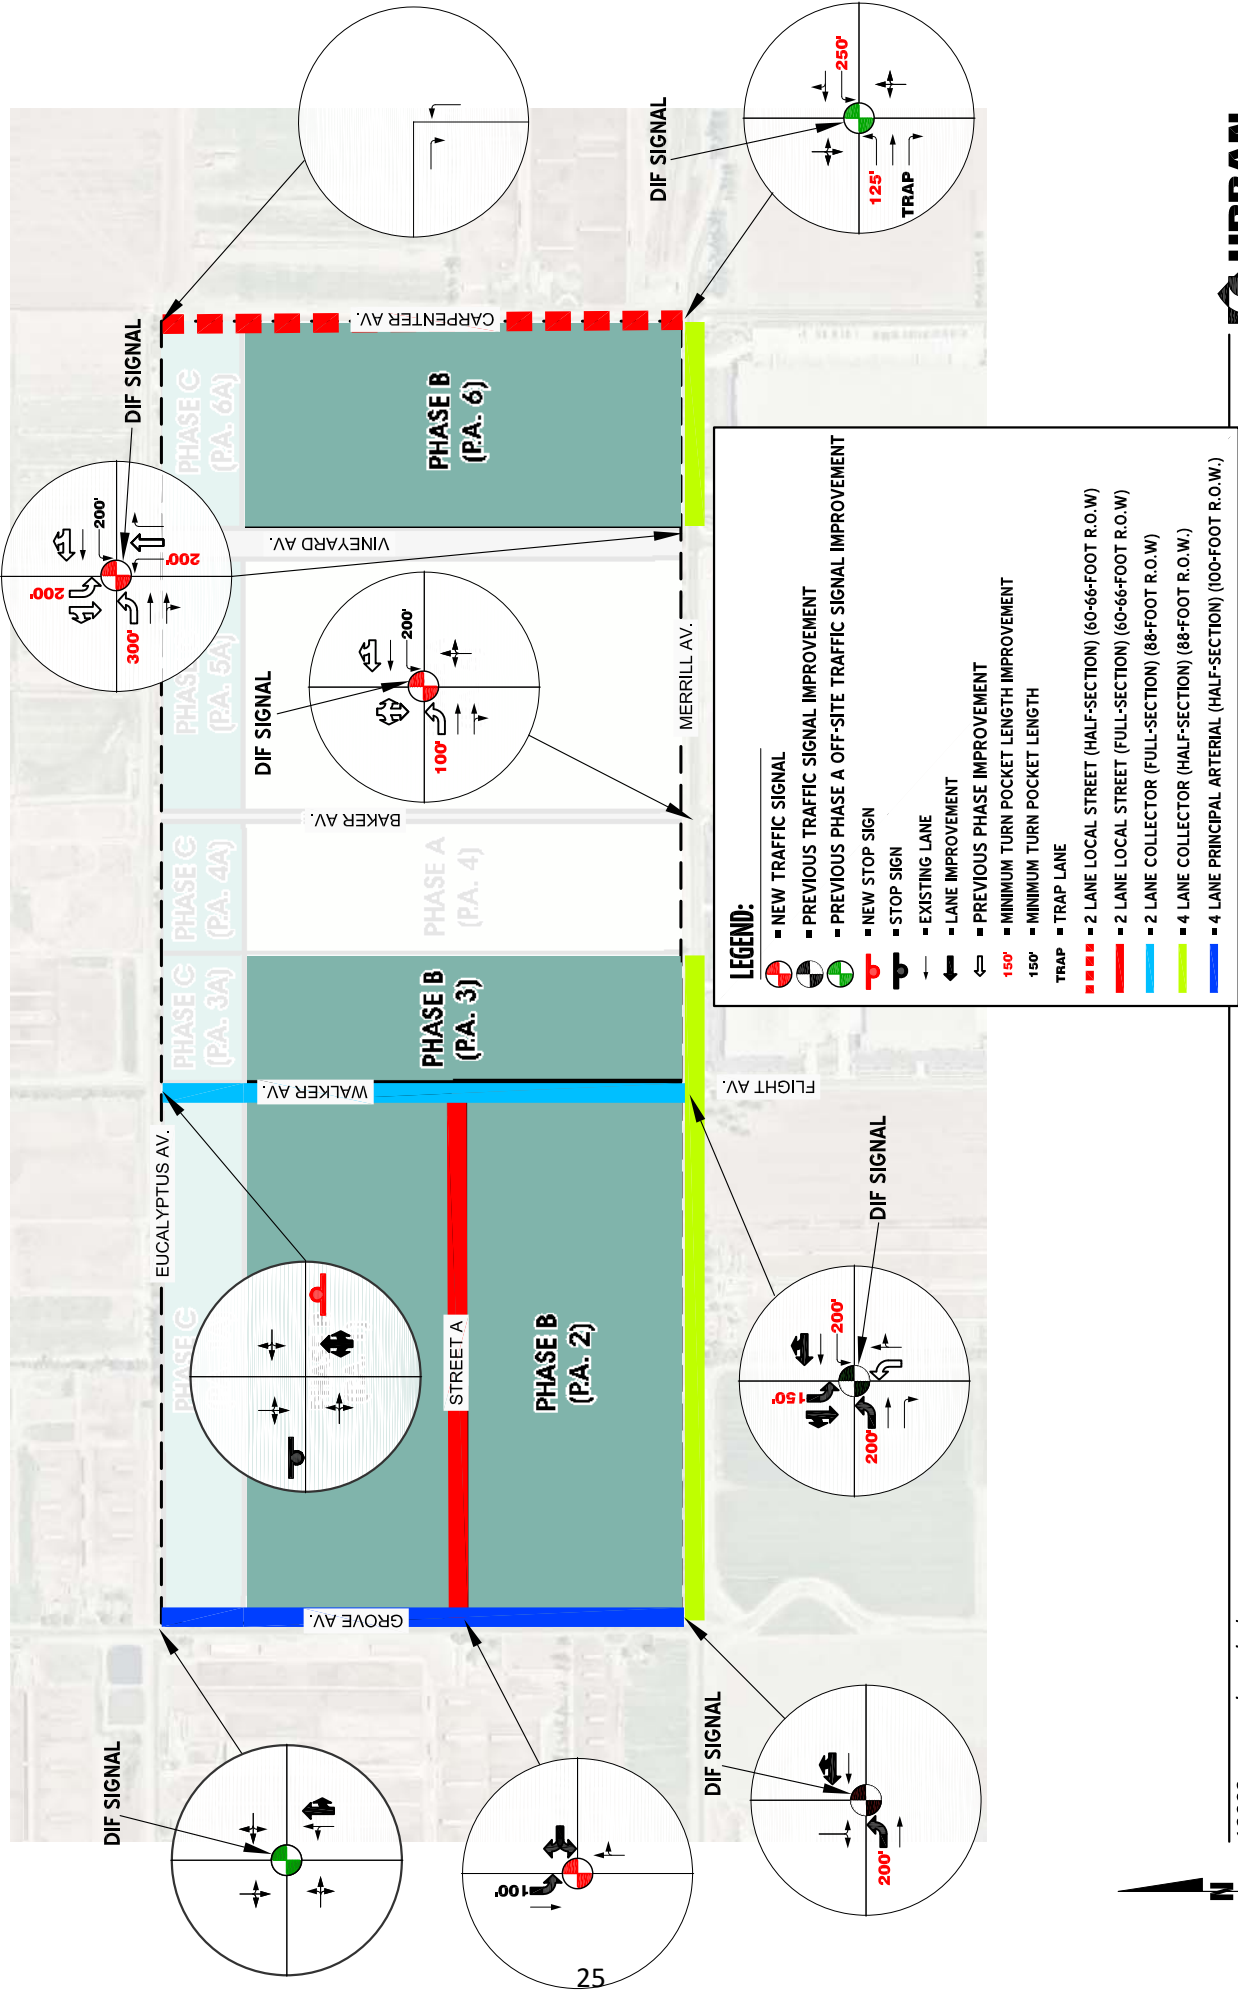

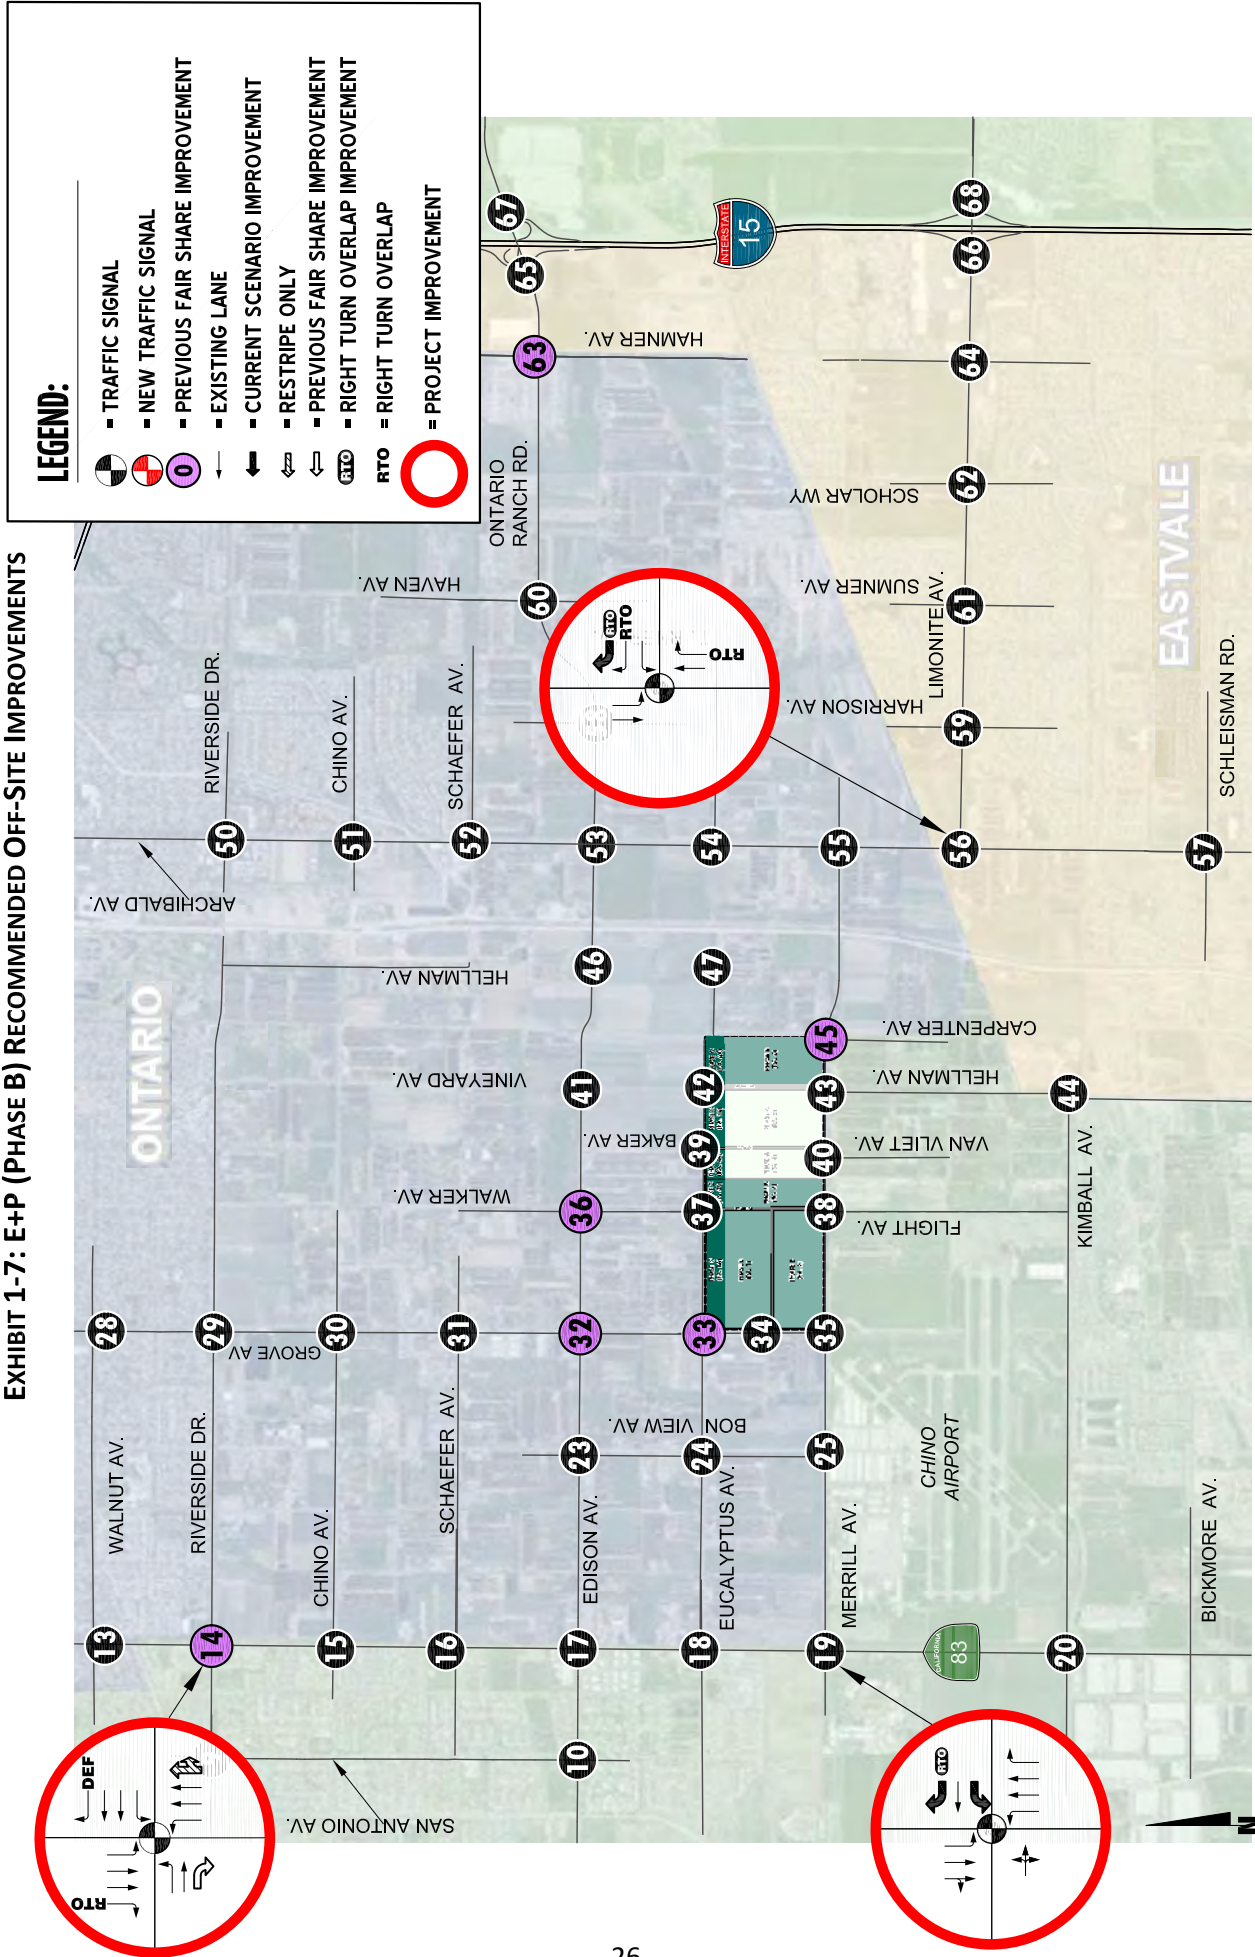

EXHIBIT 1-7: E+P (PHASE B) RECOMMENDED OFF-SITE IMPROVEMENTS

**Recommendation 12 – Walker Avenue & Eucalyptus Avenue (#37)** – The following improvement is necessary to improve the peak hour deficiency:

- Project to add a stop control on the northbound approach and a shared left-through-right turn lane.

**Recommendation 13 – Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – The following improvements are necessary to improve the peak hour deficiency:

- Improvements from Phase A.
- Project to add a southbound left turn lane with 100-feet of storage and shared through-right turn lane.
- Project to add an eastbound left turn lane with 150-feet of storage.
- Project to add a 2<sup>nd</sup> westbound through lane.

**Recommendation 14 – Baker Avenue/Van Vliet Avenue & Merrill Avenue (#40)** – The following improvement is necessary to improve the peak hour deficiency:

- Project to install a traffic signal.

**Recommendation 15 – Vineyard Avenue/Hellman Avenue & Merrill Avenue (#40)** – The following improvement is necessary to improve the peak hour deficiency:

- Improvements from Phase A.
- Project to install a traffic signal.

**Recommendation 16 – Carpenter Avenue & Eucalyptus Avenue** – The following improvements are recommended:

- Project to add a northbound left turn lane.
- Project to add an eastbound right turn lane.

**Recommendation 17– Carpenter Avenue & Merrill Avenue (#45)** – The following improvements are necessary to improve the peak hour deficiency:

- Project to install a traffic signal.
- Project to modify the eastbound left turn lane with 125-feet of storage.
- Project to modify the westbound left turn lane with 150-feet of storage.

**Recommendation 18 – Street A** – Street A is an east-west oriented roadway located between Planning Area 1 and Planning Area 2. Project to construct Street A from Grove Avenue to Walker Avenue at its ultimate full-section width as a 2-lane local street (60-66-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 19 – Merrill Avenue** – Merrill Avenue is an east-west oriented roadway located along the Project’s southern boundary. Project to construct Merrill Avenue from the Grove Avenue to the eastern boundary of Planning Area 3 and Vineyard Avenue to Carpenter Avenue at its ultimate half-section width as a 4-lane collector (88-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 20 – Grove Avenue** – Grove Avenue is a north-south oriented roadway located along the Project’s western boundary. Project to construct Grove Avenue from Merrill Avenue to Eucalyptus Avenue at its ultimate half-section width as a 4-lane principal arterial (100-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 21 – Walker Avenue** – Walker Avenue is a north-south oriented roadway located between Planning Area 1/2 and Planning Area 3. Project to construct Walker Avenue from Merrill Avenue to Eucalyptus Avenue at its ultimate full-section width as a 2-lane collector (88-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 22 – Carpenter Avenue** – Carpenter Avenue is a north-south oriented roadway located along the Project’s eastern boundary. Project to construct Carpenter Avenue from Merrill Avenue to Eucalyptus Avenue at its ultimate half-section width as a 2-lane local street (60-66-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 23 – Euclid Avenue (SR-83) & Riverside Avenue (#14)** – The following improvement is necessary to improve the peak hour deficiency:

- Project to restripe the northbound right turn lane as a shared through-right turn lane.

**Recommendation 24 – Euclid Avenue (SR-83) & Merrill Avenue (#19)** – The following improvements are necessary to improve the peak hour deficiency:

- Add a westbound left turn lane and westbound right turn lane.
- Modify the traffic signal to accommodate overlap phasing on the westbound right turn lane.

**Recommendation 25 – Archibald Avenue & Limonite Avenue (#56)** – The following improvement is necessary to improve the peak hour deficiency:

- Add a 2<sup>nd</sup> westbound right turn lane with overlap phasing.

*Phase C Conditions:*

Exhibit 1-8 shows the site adjacent recommendations and Exhibit 1-9 shows the Phase B off-site improvement recommendations.

**Recommendation 26 – Walker Avenue & Eucalyptus Avenue (#37)** – The following improvement is necessary to improve the peak hour deficiency:

- Project to install a traffic signal.

**EXHIBIT 1-8: PHASE C (2026) SITE ADJACENT ROADWAY AND SITE ACCESS RECOMMENDATIONS**

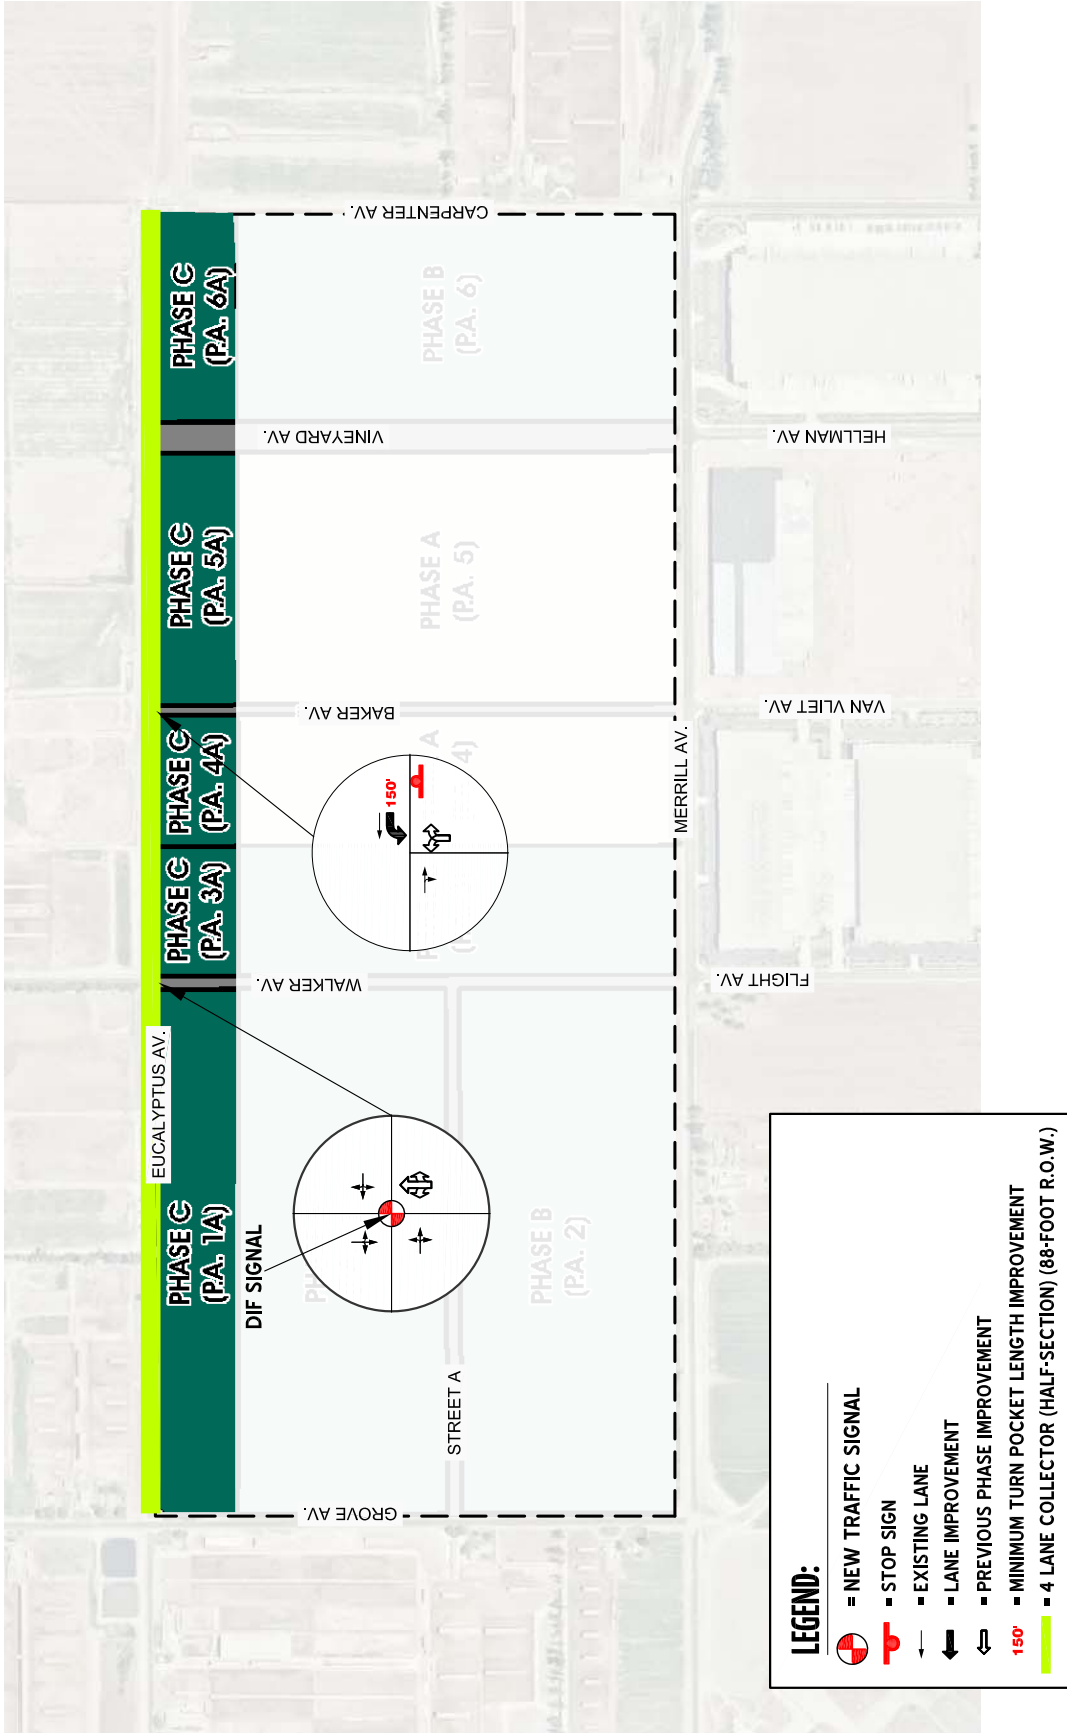

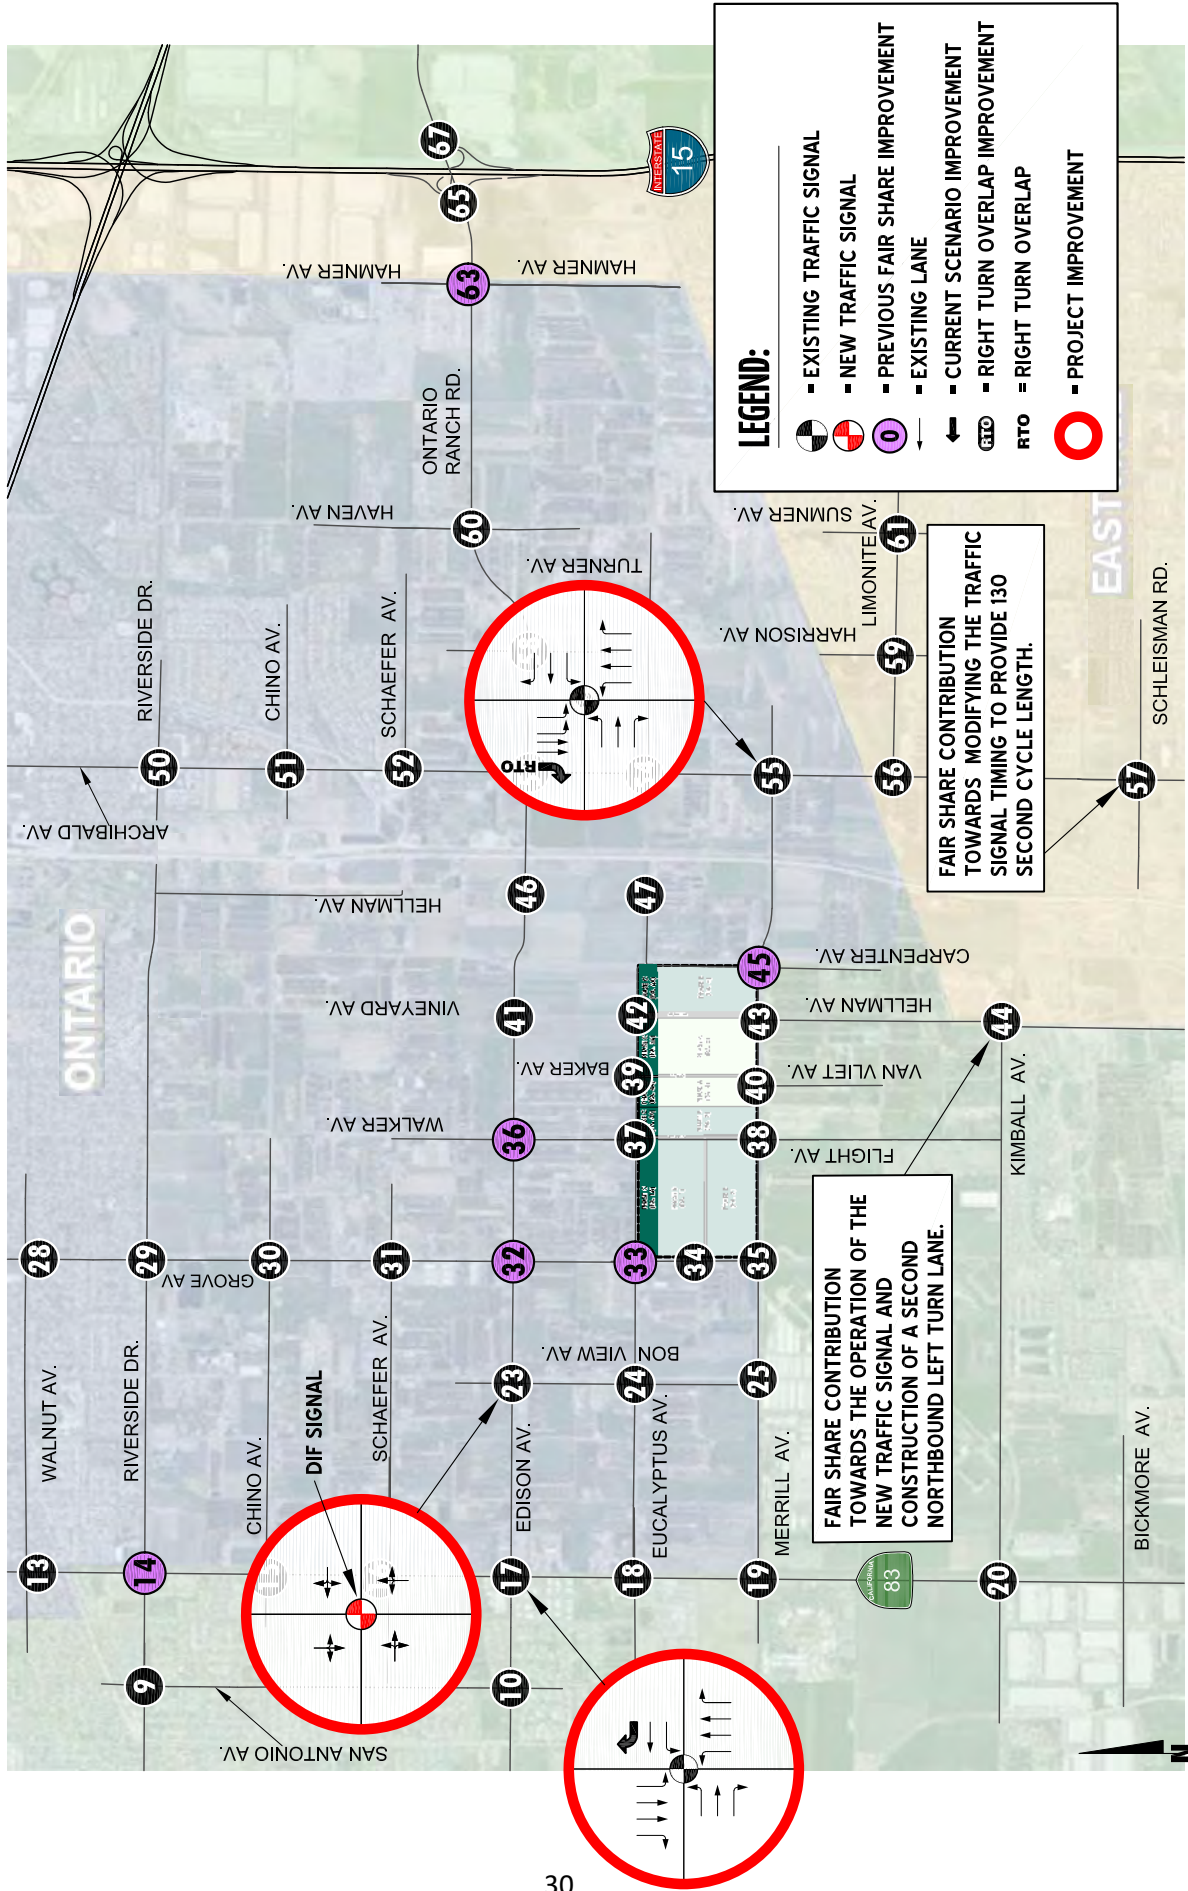

EXHIBIT 1-9: E+P (PHASE C) RECOMMENDED OFF-SITE IMPROVEMENTS

**Recommendation 27 – Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – The following improvement is necessary to improve the peak hour deficiency:

- Improvements from Phase A and Phase B.

**Recommendation 28 – Baker Avenue & Eucalyptus Avenue (#39)** – The following improvement is recommended:

- Project to add a westbound left turn lane with 150-feet of storage.

**Recommendation 29 – Euclid Avenue (SR-83) & Edison Avenue (#17)** – The following improvement is necessary to improve the peak hour deficiency:

- Add a westbound right turn lane.

**Recommendation 30 – Euclid Avenue (SR-83) & Merrill Avenue (#19)** – The following improvement is necessary to improve the peak hour deficiency:

- Improvements from Phase B.

**Recommendation 31 – Bon View Avenue & Edison Avenue (#23)** – The following improvement is necessary to improve the peak hour deficiency:

- Install a traffic signal.

**Recommendation 32 – Archibald Avenue & Merrill Avenue (#55)** – The following improvements are necessary to improve the peak hour deficiency:

- Stripe a southbound right turn lane and modify the traffic signal to implement overlap phasing on the southbound right turn lane.

**Recommendation 33 – Archibald Avenue & Limonite Avenue (#56)** – The following improvement is necessary to improve the peak hour deficiency:

- Improvements from Phase B.

**Recommendation 34 – Eucalyptus Avenue** – Eucalyptus Avenue is an east-west oriented roadway located along the Project’s northern boundary. Project to construct Eucalyptus Avenue from Grove Avenue to Carpenter Avenue at its ultimate half-section width as a 4-lane collector (88-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

For those recommended improvements listed on Table 1-3 and not constructed as part of the Project (as identified above), the Applicant’s responsibility for the Project’s contributions to deficient traffic conditions is fulfilled by payment of fair share fees and/or Development Impact Fees (DIF) that would be assigned to construction of the identified recommended improvements.

Preliminary cost estimates and fee assessments for these improvements are summarized on Table 1-3. The Project Applicant would be required to pay DIF and fair share fees consistent with the City requirements. Please refer to Section 10 *Local and Regional Funding Mechanisms*.

<b>Total Project Fair Share Contribution to the City of Ontario (non-DIF/other)<sup>6</sup></b>																			<b>\$1,521,896</b>

<sup>1</sup> Improvements included in City of Ontario DIF program for local, regional and specific plan components.  
<sup>2</sup> Costs have been estimated using the data provided in Appendix "G" of the CMP (2003 Update) for preliminary construction costs.  
<sup>3</sup> Appendix "G" costs escalated by a factor of 1.568 per City direction except Traffic Signals.  
<sup>4</sup> Program improvements constructed by project may be eligible for fee credit, at discretion of City. See Table 10-1 for Fair Share Calculations.  
<sup>5</sup> Rough order of magnitude cost estimate.  
<sup>6</sup> Total project fair share contribution consists of the improvements which are not already included in the City-wide DIF for those intersections wholly or partially within the City of Ontario.  
<sup>7</sup> Traffic signal is currently flashing red. As such, an all-way stop controlled intersection was assumed for Existing and E+P traffic conditions.  
<sup>8</sup> Improvement includes modifying the traffic signal to run the northbound and southbound left turns as lead-lag, with the northbound left turn running as lag.  
<sup>9</sup> The Project contributes less than 50 peak hour trips. No improvements recommended.  
<sup>10</sup> Future intersections are not listed on this table. For future intersections, refer to Section 1.5 of the report.

This Page Intentionally Left Blank

## 2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with City of Ontario’s Traffic Study Guidelines.

### 2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

### 2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 6<sup>th</sup> Edition Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (5) The HCM uses different procedures depending on the type of intersection control.

#### 2.2.1 SIGNALIZED INTERSECTIONS

##### *City of Ontario, City of Chino, City of Chino Hills, City of Eastvale, City of Jurupa Valley*

The City of Ontario, City of Chino, City of Chino Hills, City of Eastvale, and City of Jurupa Valley require signalized intersection operations analysis based on the methodology described in the HCM. (5) Intersection LOS operations are based on an intersection’s average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described on Table 2-1.

**TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS**

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F

<sup>5</sup> Transportation Research Board. *Highway Capacity Manual (HCM)*. 6th Edition. s.l. : National Academy of Sciences, 2016.

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F	F

Source: HCM (6<sup>th</sup> Edition)

Consistent with Appendix B of the San Bernardino County CMP, the following saturation flow rates, in vehicles per hour green per lane (vphgpl), will be utilized in the traffic analysis for signalized intersections:

*Existing and Opening Year Cumulative Traffic Conditions:*

- Exclusive through: 1800 vphgpl
- Exclusive left: 1700 vphgpl
- Exclusive right: 1800 vphgpl
- Exclusive dual left: 1600 vphgpl
- Exclusive triple left: 1500 vphgpl

*Horizon Year (2040) Traffic Conditions:*

- Exclusive through: 1900 vphgpl
- Exclusive left: 1800 vphgpl
- Exclusive dual left: 1700 vphgpl
- Exclusive right: 1900 vphgpl
- Exclusive dual right: 1800 vphgpl
- Exclusive triple left: 1600 vphgpl or less

The traffic modeling and signal timing optimization software package Synchro (Version 10) has been utilized to analyze signalized intersections within the City of Ontario, City of Chino, City of Chino Hills, City of Eastvale, and City of Jurupa Valley. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as

delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g.  $PHF = \frac{\text{Hourly Volume}}{4 \times \text{Peak 15-minute Flow Rate}}$ ). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (5)

**California Department of Transportation (Caltrans)**

Per the Caltrans Guide for the Preparation of Traffic Impact Studies, the traffic modeling and signal timing optimization software package Synchro (Version 10) has also been utilized to analyze signalized intersections under Caltrans’ jurisdiction, which include interchange to arterial ramps (i.e., SR-60 Freeway ramps at Euclid Avenue (SR-83), SR-71 Freeway ramps at Edison Avenue, I-15 Freeway ramps at Cantu Galleano Ranch Road, etc.). (2) Euclid Avenue (SR-83) is also under Caltrans jurisdiction and intersections along Euclid Avenue (SR-83) have been evaluated per Caltrans’ guidelines. Signal timing for the freeway arterial-to-ramp intersections and intersections along Euclid Avenue (SR-83) have been obtained from Caltrans District 8 and were utilized for the purposes of this analysis.

**2.2.2 UNSIGNALIZED INTERSECTIONS**

The City of Ontario, City of Chino, City of Chino Hills, City of Eastvale, and City of Jurupa Valley require the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (5) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

**TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS**

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

Source: HCM (6<sup>th</sup> Edition)

<sup>2</sup> California Department of Transportation. *Guide for the Preparation of Traffic Impact Studies*. December 2002.

<sup>5</sup> Transportation Research Board. *Highway Capacity Manual (HCM)*. 6th Edition. s.l. : National Academy of Sciences, 2016.

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. For all-way stop controlled intersections, LOS is computed for the intersection as a whole.

**2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY**

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TIA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (6)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (6) Specifically, this TIA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Warrant 3 is appropriate to use for this TIA because it provides specialized warrant criteria for intersections with rural characteristics (e.g. located in communities with populations of less than 10,000 persons or with adjacent major streets operating above 40 miles per hour). For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection.

Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets.

Traffic signal warrant analyses were performed for the following study area intersection shown on Table 2-3:

**TABLE 2-3: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS**

ID	Intersection Location	Jurisdiction	SBCTA CMP?
23	Bon View Av. & Edison Av.	Ontario	No
24	Bon View Av. & Eucalyptus Av.	Ontario	No

45	Carpenter Av. & Merrill Av.	Chino, Ontario	No
46	Hellman Av. & Edison Av. – 2040 Analysis Location Only	Ontario	No
47	Hellman Av. & Eucalyptus Av. – 2040 Analysis Location Only	Ontario	No
52	Archibald Av. & Schaefer Av. – 2040 Analysis Location Only	Ontario	No

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Analysis*, Section 6 *Opening Year Cumulative (2022) Traffic Analysis*, Section 7 *Opening Year Cumulative (2025) Traffic Analysis*, Section 8 *Opening Year Cumulative (2026) Traffic Analysis*, and Section 9 *Horizon Year (2040) Traffic Analysis* of this report. It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

## 2.4 FREEWAY OFF-RAMP QUEUING ANALYSIS

The study area for this TIA includes the following freeway-to-arterial interchanges:

- SR-71 Freeway & Grand Avenue/Edison Avenue
- SR-71 Freeway & Euclid Avenue (SR-83)
- Euclid Avenue (SR-83) & SR-60 Freeway
- Grove Avenue & SR-60 Freeway
- Archibald Avenue & SR-60 Freeway
- I-15 Freeway & Cantu Galleano Ranch Road
- I-15 Freeway & Limonite Avenue

Consistent with Caltrans requirements, the 95<sup>th</sup> percentile queuing of vehicles has been assessed at the off-ramps to determine potential queuing deficiencies at the freeway ramp intersections at the interchanges identified above. Specifically, the queuing analysis is utilized to identify any potential queuing and “spill back” onto the SR-71, SR-60, or I-15 Freeway mainline from the off-ramps.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential deficiencies/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations at the ramps have been based upon the 95<sup>th</sup> percentile queue resulting from the Synchro progression analysis. There are two footnotes which appear on the Synchro outputs. One footnote indicates if the 95<sup>th</sup> percentile cycle exceeds capacity. Traffic is simulated for two complete cycles of the 95<sup>th</sup> percentile traffic in Synchro in order to account for the effects of spillover between cycles. In practice, the 95<sup>th</sup> percentile queue shown will rarely be exceeded and the queues shown with the footnote are acceptable for the design of storage bays. The other footnote indicates whether or not the volume for the 95<sup>th</sup> percentile queue is metered by an upstream signal. In many cases, the 95<sup>th</sup> percentile queue will not be experienced and may potentially be less than the 50<sup>th</sup> percentile queue due to upstream metering. If the upstream intersection is at or near capacity, the 50<sup>th</sup> percentile queue represents the maximum queue experienced.

A vehicle is considered queued whenever it is traveling at less than 10 feet/second. A vehicle will only become queued when it is either at the stop bar or behind another queued vehicle. Although only the 95<sup>th</sup> percentile queue has been reported in the tables, the 50<sup>th</sup> percentile queue can be found in the appendix alongside the 95<sup>th</sup> percentile queue for each ramp location. The 50<sup>th</sup> percentile maximum queue is the maximum back of queue on a typical cycle during the peak hour, while the 95<sup>th</sup> percentile queue is the maximum back of queue with 95<sup>th</sup> percentile traffic volumes during the peak hour. The queue length reported is for the lane with the highest queue in the lane group. The 50<sup>th</sup> percentile or average queue represents the typical queue length for peak hour traffic conditions, while the 95<sup>th</sup> percentile queue is derived from the average queue plus 1.65 standard deviations. The 95<sup>th</sup> percentile queue is not necessarily ever observed it is simply based on statistical calculations.

## **2.5 FREEWAY MAINLINE SEGMENT ANALYSIS METHODOLOGY**

Consistent with recent Caltrans guidance and because deficiencies to freeway segments dissipate with distance from the point of SHS entry, quantitative study of freeway segments beyond those immediately adjacent to the point of entry is not required. The freeway system in the study area has been broken into segments defined by the freeway-to-arterial interchange locations. The freeway segments have been evaluated in this TIA based upon peak hour directional volumes. The freeway segment analysis is based on the methodology described in the HCM and performed using HCS7 (Highway Capacity Software, HCM 6<sup>th</sup> Edition). The performance measure preferred by Caltrans to calculate LOS is density. Density is expressed in terms of passenger cars per mile per lane. Table 2-4 illustrates the freeway segment LOS descriptions for each density range utilized for this analysis.

The number of lanes for existing baseline conditions has been obtained from field observations conducted by Urban Crossroads in March 2019. These existing freeway geometrics have been utilized for Existing, E+P, Opening Year Cumulative Without and With Project, and Horizon Year Without and With Project conditions.

The SR-71 Freeway, SR-60 Freeway, and I-15 Freeway mainline volume data were obtained from the Caltrans Performance Measurement System (PeMS) website for the segments of the SR-71

Freeway north of Edison Avenue and north of Central Avenue, SR-60 Freeway west of Euclid Avenue (SR-83) and east of Archibald Avenue, and I-15 Freeway north of Cantu Galleano Ranch Road. The data was obtained from January 2019. In an effort to conduct a conservative analysis, the maximum value observed within the three-day period was utilized for the weekday morning (AM) and weekday evening (PM) peak hours. In addition, truck traffic, represented as a percentage of total traffic, has been utilized for the purposes of this analysis in an effort to not overstate traffic volumes and peak hour deficiencies. As such, actual vehicles (as opposed to passenger-car-equivalent volumes) have been utilized for the purposes of the basic freeway segment analysis. (7)

**TABLE 2-4: DESCRIPTION OF FREEWAY MAINLINE LOS**

Level of Service	Description	Density Range (pc/mi/ln) <sup>1</sup>
A	Free-flow operations in which vehicles are relatively unimpeded in their ability to maneuver within the traffic stream. Effects of incidents are easily absorbed.	0.0 – 11.0
B	Relative free-flow operations in which vehicle maneuvers within the traffic stream are slightly restricted. Effects of minor incidents are easily absorbed.	11.1 – 18.0
C	Travel is still at relative free-flow speeds, but freedom to maneuver within the traffic stream is noticeably restricted. Minor incidents may be absorbed, but local deterioration in service will be substantial. Queues begin to form behind significant blockages.	18.1 – 26.0
D	Speeds begin to decline slightly and flows and densities begin to increase more quickly. Freedom to maneuver is noticeably limited. Minor incidents can be expected to create queuing as the traffic stream has little space to absorb disruptions.	26.1 – 35.0
E	Operation at capacity. Vehicles are closely spaced with little room to maneuver. Any disruption in the traffic stream can establish a disruption wave that propagates throughout the upstream traffic flow. Any incident can be expected to produce a serious disruption in traffic flow and extensive queuing.	35.1 – 45.0
F	Breakdown in vehicle flow.	>45.0

<sup>1</sup> pc/mi/ln = passenger cars per mile per lane. Source: HCM (6<sup>th</sup> Edition)

## 2.6 FREEWAY MERGE/DIVERGE RAMP JUNCTION ANALYSIS

The freeway system in the study area has been broken into segments defined by freeway-to-arterial interchange locations resulting in two existing on and off ramp locations. Although the HCM indicates the influence area for a merge/diverge junction is 1,500 feet, the analysis presented in this traffic study has been performed at all ramp locations with respect to the nearest on or off ramp at each interchange in an effort to be consistent with Caltrans guidance/comments on other projects Urban Crossroads has worked on in the region.

<sup>7</sup> —. *Freeway Performance Measurement (PeMS)*. [Online] [Cited: February 12, 2019.] <http://pems.dot.ca.gov/>.

The merge/diverge analysis is based on the HCM Ramps and Ramp Junctions analysis method and performed using HCS7 software. The measure of effectiveness (reported in passenger car/mile/lane) are calculated based on the existing number of travel lanes, number of lanes at the on and off ramps both at the analysis junction and at upstream and downstream locations (if applicable) and acceleration/deceleration lengths at each merge/diverge point. Table 2-5 presents the merge/diverge area level of service descriptions for each density range utilized for this analysis.

Similar to the basic freeway segment analysis, the SR-71, SR-60, and I-15 Freeway mainline volume data were obtained from the Caltrans PeMS website for the segments of the SR-71 Freeway north of Edison Avenue and Central Avenue, SR-60 Freeway west of Euclid Avenue (SR-83) and east of Archibald Avenue, and I-15 Freeway north of Cantu Galleano Ranch Road. The ramp data (per the count data presented in Appendix 3.1) were then utilized to flow conserve the mainline volumes to determine the remaining SR-71, SR-60, and I-15 Freeway mainline segment volumes. Flow conservation checks ensure that traffic flows from east to west and north to south (and vice versa) of the interchange area with no unexplained loss of vehicles. The data was obtained from January 2019. In an effort to conduct a conservative analysis, the maximum value observed within the three-day period was utilized for the weekday morning (AM) and weekday evening (PM) peak hours. In addition, truck traffic, represented as a percentage of total traffic, has been utilized for the purposes of this analysis in an effort to not overstate traffic volumes and peak hour deficiencies. (7) As such, actual vehicles (as opposed to passenger-car-equivalent volumes) have been utilized for the purposes of the freeway ramp junction (merge/diverge) analysis.

**TABLE 2-5: DESCRIPTION OF FREEWAY MERGE AND DIVERGE LOS**

Level of Service	Density Range (pc/mi/ln) <sup>1</sup>
A	≤10.0
B	10.0 – 20.0
C	20.0 – 28.0
D	28.0 – 35.0
E	>35.0
F	Demand Exceeds Capacity

<sup>1</sup> pc/mi/ln = passenger cars per mile per lane. Source: HCM (6<sup>th</sup> Edition)

<sup>7</sup> —. Freeway Performance Measurement (PeMS). [Online] [Cited: February 12, 2019.] <http://pems.dot.ca.gov/>.

## 2.7 MINIMUM ACCEPTABLE LEVELS OF SERVICE (LOS)

Minimum Acceptable LOS and associated definitions of intersection deficiencies has been obtained from each of the applicable surrounding jurisdictions.

### 2.7.1 CITY OF ONTARIO

Per the Ontario Plan's Policy M-1, the City of Ontario utilizes a minimum acceptable LOS of LOS E, where feasible. (8)

### 2.7.2 CITY OF CHINO HILLS

The Traffic Impact Study Guidelines for Development Projects in the City of Chino Hills (dated October 15, 2001) indicates LOS D shall be the minimum acceptable LOS to be used for all City of Chino Hills roadways and intersections. Therefore, any intersection operating at LOS E or LOS F will be considered deficient. (9)

### 2.7.3 CITY OF CHINO

According to the City of Chino's General Plan Objective TRA-1.2/Policy P1, LOS D is the minimum acceptable condition that should be maintained during the peak commute hours, where feasible. (10)

### 2.7.4 CITY OF EASTVALE

The City of Eastvale General Plan Policy C-10 sets a standard of LOS C with LOS D as acceptable in commercial and employment areas and at intersections of any combination of major highways, urban arterials, secondary highways, or freeway ramps. (11) Based on this criterion, where feasible, LOS D is the minimum acceptable LOS at each of the study intersections within the City of Eastvale.

### 2.7.5 CITY OF JURUPA VALLEY

Per the City of Jurupa Valley's General Plan Policy ME 1.1, the City of Jurupa Valley utilizes a minimum acceptable LOS of LOS D at all intersections, except where flexibility is warranted based on a multi-modal LOS evaluation, or where LOS E is deemed appropriate to accommodate complete streets/multi-modal facilities. (12)

<sup>8</sup> The Planning Center for The City of Ontario. *The Ontario Plan Environmental Impact Report*. Ontario : s.n., July 2009.

<sup>9</sup> The City of Chino Hills. *Traffic Impact Study Guidelines for Development Projects in the City of Chino Hills*. Chino Hills : s.n., October 15, 2001.

<sup>10</sup> The City of Chino. *Envision Chino General Plan 2025*. Chino : s.n., July 2010.

<sup>11</sup> The City of Eastvale. *Adopted Genreal Plan*. Eastvale : s.n., June 13, 2012.

<sup>12</sup> The City of Jurupa Valley. *2017 General Plan*. Jurupa Valley : s.n., September 2017.

### 2.7.6 CMP

The CMP definition of deficiency is based on maintaining a level of service standard of LOS E or better, where feasible, except where an existing LOS F condition is identified in the CMP document. However, in an effort to overstate as opposed to understate potential deficiencies, LOS D has been utilized for the CMP intersections for the purposes of this analysis, unless the intersection is located in the City of Ontario (which uses LOS E). (1)

### 2.7.7 CALTRANS

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on SHS facilities, however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. (2) If an existing State highway facility is operating at less than this target LOS, the existing LOS should be maintained. In general, the region-wide goal for an acceptable LOS on all freeways and intersections is LOS D. Consistent with the City of Ontario LOS threshold of LOS D and in excess of the City of Ontario stated LOS threshold of LOS E, LOS D will be used as the target LOS for freeway ramps, freeway segments, and freeway merge/diverge ramp junctions.

## 2.8 DEFICIENCY CRITERIA

This section outlines the methodology used in this analysis related to identifying circulation system deficiencies.

### 2.8.1 INTERSECTIONS

To determine whether the addition of project traffic at a study intersection would result in a traffic deficiency, the following will be utilized:

- When the Without Project condition is at or better than LOS D (or LOS E for CMP intersections and intersections located in the City of Ontario) (i.e., acceptable LOS), and project-generated traffic, as measured by 50 or more peak hour trips, causes deterioration below LOS D/LOS E (i.e., unacceptable LOS), a deficiency is deemed to occur.

When the Without Project condition is already below LOS D/LOS E (i.e., unacceptable LOS), the Project will be responsible for improving its deficiency to acceptable levels of service. Thus, for intersections operating at unacceptable LOS during either the AM and/or PM peak hour, improvements have been identified to improve the deficiencies of the Project to an intersection LOS that is equal to or better than Without Project conditions (see Table 2-6).

The Project's contribution to a deficiency can be reduced if the Project is required to implement or fund its fair share of improvements designed to alleviate its contribution to the deficient condition.

<sup>1</sup> San Bernardino Associated Governments. *Congestion Management Program for County of San Bernardino*. County of San Bernardino : s.n., Updated June 2016.

<sup>2</sup> California Department of Transportation. *Guide for the Preparation of Traffic Impact Studies*. December 2002.

**TABLE 2-6: DEFICIENCY CRITERIA**

Without Project Level of Service	Level of Service with 50 or more Project trips	Deficient?	Improvement Required?
<b>City of Ontario</b>			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D-E	No	No
E	E	No	No
A-E	F	Yes	Yes, bring LOS to E or better
F	F	Yes	Yes, bring LOS to E or better
<b>City of Chino, City of Eastvale, City of Chino Hills, City of Jurupa Valley</b>			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D	No	No
A-D	E or F	Yes	Yes, bring LOS to D or better
E	E	Yes	Yes, bring LOS to D or better
E	F	Yes	Yes, bring LOS to D or better
F	F	Yes	Yes, bring LOS to D or better

In the event that an intersection is operating at or is forecast to operate at a deficient LOS, the CMP guidelines have defined a series of steps to be completed to determine the Project’s contribution to the deficiency of intersections, which has been applied to both CMP and non-CMP study area intersections. The steps are as follows:

- Determine the improvements necessary to achieve an acceptable service level,
- Calculate the Project’s share in the future traffic volume projections for the peak hours,
- Estimate the cost to implement recommended improvements, and
- Calculate the Project’s fair-share contribution to improve the Project’s traffic deficiencies

**2.8.2 CALTRANS FREEWAY FACILITIES**

To determine whether the addition of project traffic to the SHS freeway segments would result in a deficiency, the following will be utilized:

- The traffic study finds that the LOS of a segment will degrade from D or better to E or F.
- The traffic study finds that the project will exacerbate an already deficient condition by contributing 50 or more one-way peak hour trips. A segment that is operating at or near capacity is deemed to be deficient.

### 2.8.3 CALTRANS FREEWAY OFF-RAMPS

To determine whether the addition of project traffic to the freeway off-ramps would result in a deficiency, the following will be utilized:

- The traffic study finds that the off-ramp will degrade from acceptable 95<sup>th</sup> percentile queues to unacceptable 95<sup>th</sup> percentile queues.
- The traffic study finds that the project will exacerbate an already deficient condition by contributing 50 or more peak hour trips to the off-ramp. An off-ramp that has 95<sup>th</sup> percentile queues that exceed the available storage is deemed to be deficient.

### 2.9 PROJECT FAIR SHARE CALCULATION METHODOLOGY

In cases where this TIA identifies that the Project would contribute additional traffic volumes to traffic deficiencies, Project fair share costs of improvements necessary to address deficiencies have been identified. The Project's fair share cost of improvements is determined based on the following equation, which is the ratio of Project traffic to new traffic, and new traffic is total future (Horizon Year) traffic less existing baseline traffic:

$$\text{Project Fair Share \%} = \frac{\text{Project (2040) AM/PM Traffic}}{\text{(2040 With Project AM/PM Total Traffic - Existing AM/PM Traffic)}}$$

The project fair share percentage has been calculated for both the AM peak hour and PM peak hour and the highest of the two has been selected. The Project fair share contribution calculations are presented in Section 10 *Local and Regional Funding Mechanisms* of this TIA. The cost of implementing the improvements shown on Table 1-3 have been estimated based on the preliminary construction cost estimates found in Appendix G of the San Bernardino County CMP in conjunction with a total cost escalation factor of 1.484 to more closely approximate current (2019) costs. These cost estimates have been utilized in conjunction with the Project fair share percentages to determine the Project's fair share cost of the recommended improvements (see Table 10-2). These estimates are a rough order of magnitude only as they are intended only for discussion purposes and do not imply any legal responsibility or formula for contributions or physical improvements.

### 3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Ontario General Plan Circulation Network, and a review of existing peak hour intersection operations, freeway facility operations, and traffic signal warrant analyses.

#### 3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with City of Ontario staff (Appendix 1.1), the study area includes a total of 68 existing and future intersections as shown previously on Exhibit 1-2. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

#### 3.2 CITY OF ONTARIO GENERAL PLAN CIRCULATION ELEMENT

As noted previously, the Project site is located within the City of Ontario. The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the City of Ontario General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the City of Ontario General Plan Circulation Element and Exhibit 3-3 illustrates the City of Ontario General Plan roadway cross-sections.

The study area roadways that are classified as 8-lane Principal Arterials are identified as having four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 8-lane Principal Arterials:

- Euclid Avenue (SR-83) from the SR-60 Freeway to Merrill Avenue
- Edison Avenue/Ontario Ranch Road from Euclid Avenue (SR-83) to Hamner Avenue
- Hamner Avenue from the SR-60 Freeway to Bellegrave Avenue

The study area roadways that are classified as 6-lane Principal Arterials are identified as having three lanes of travel in each direction and a 14-foot curbed or painted median. The following study area roadways within the City of Ontario are classified as 6-lane Principal Arterials:

- Grove Avenue north of Riverside Drive
- Vineyard Avenue from the SR-60 Freeway to Merrill Avenue
- Archibald Avenue north of Bellegrave Avenue

The study area roadways that are classified as 4-lane Principal Arterials are identified as having two lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 4-lane Principal Arterials:

- Grove Avenue north of Merrill Avenue
- Haven Avenue from Riverside Drive to Bellegrave Avenue

**EXHIBIT 3-3: CITY OF ONTARIO GENERAL PLAN ROADWAY CROSS-SECTIONS**

SOURCE: CITY OF ONTARIO

The study area roadway that is classified as a 6-lane Minor Arterial is identified as having three lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Minor Arterial:

- Riverside Drive

The study area roadway that is classified as a 4-lane Minor Arterial is identified as having two lanes of travel in each direction and a 14-foot median. The following study area roadway within the City of Ontario is classified as a 4-lane Minor Arterial:

- Bellegrave Avenue from Haven Avenue to Hamner Avenue

The study area roadways that are classified as Collector Streets are identified as having two to four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as Collector Streets:

- Walnut Street
- Chino Avenue
- Schaefer Avenue
- Eucalyptus Avenue
- Merrill Avenue
- Bon View Avenue
- Walker Avenue
- Hellman Avenue
- Turner Avenue

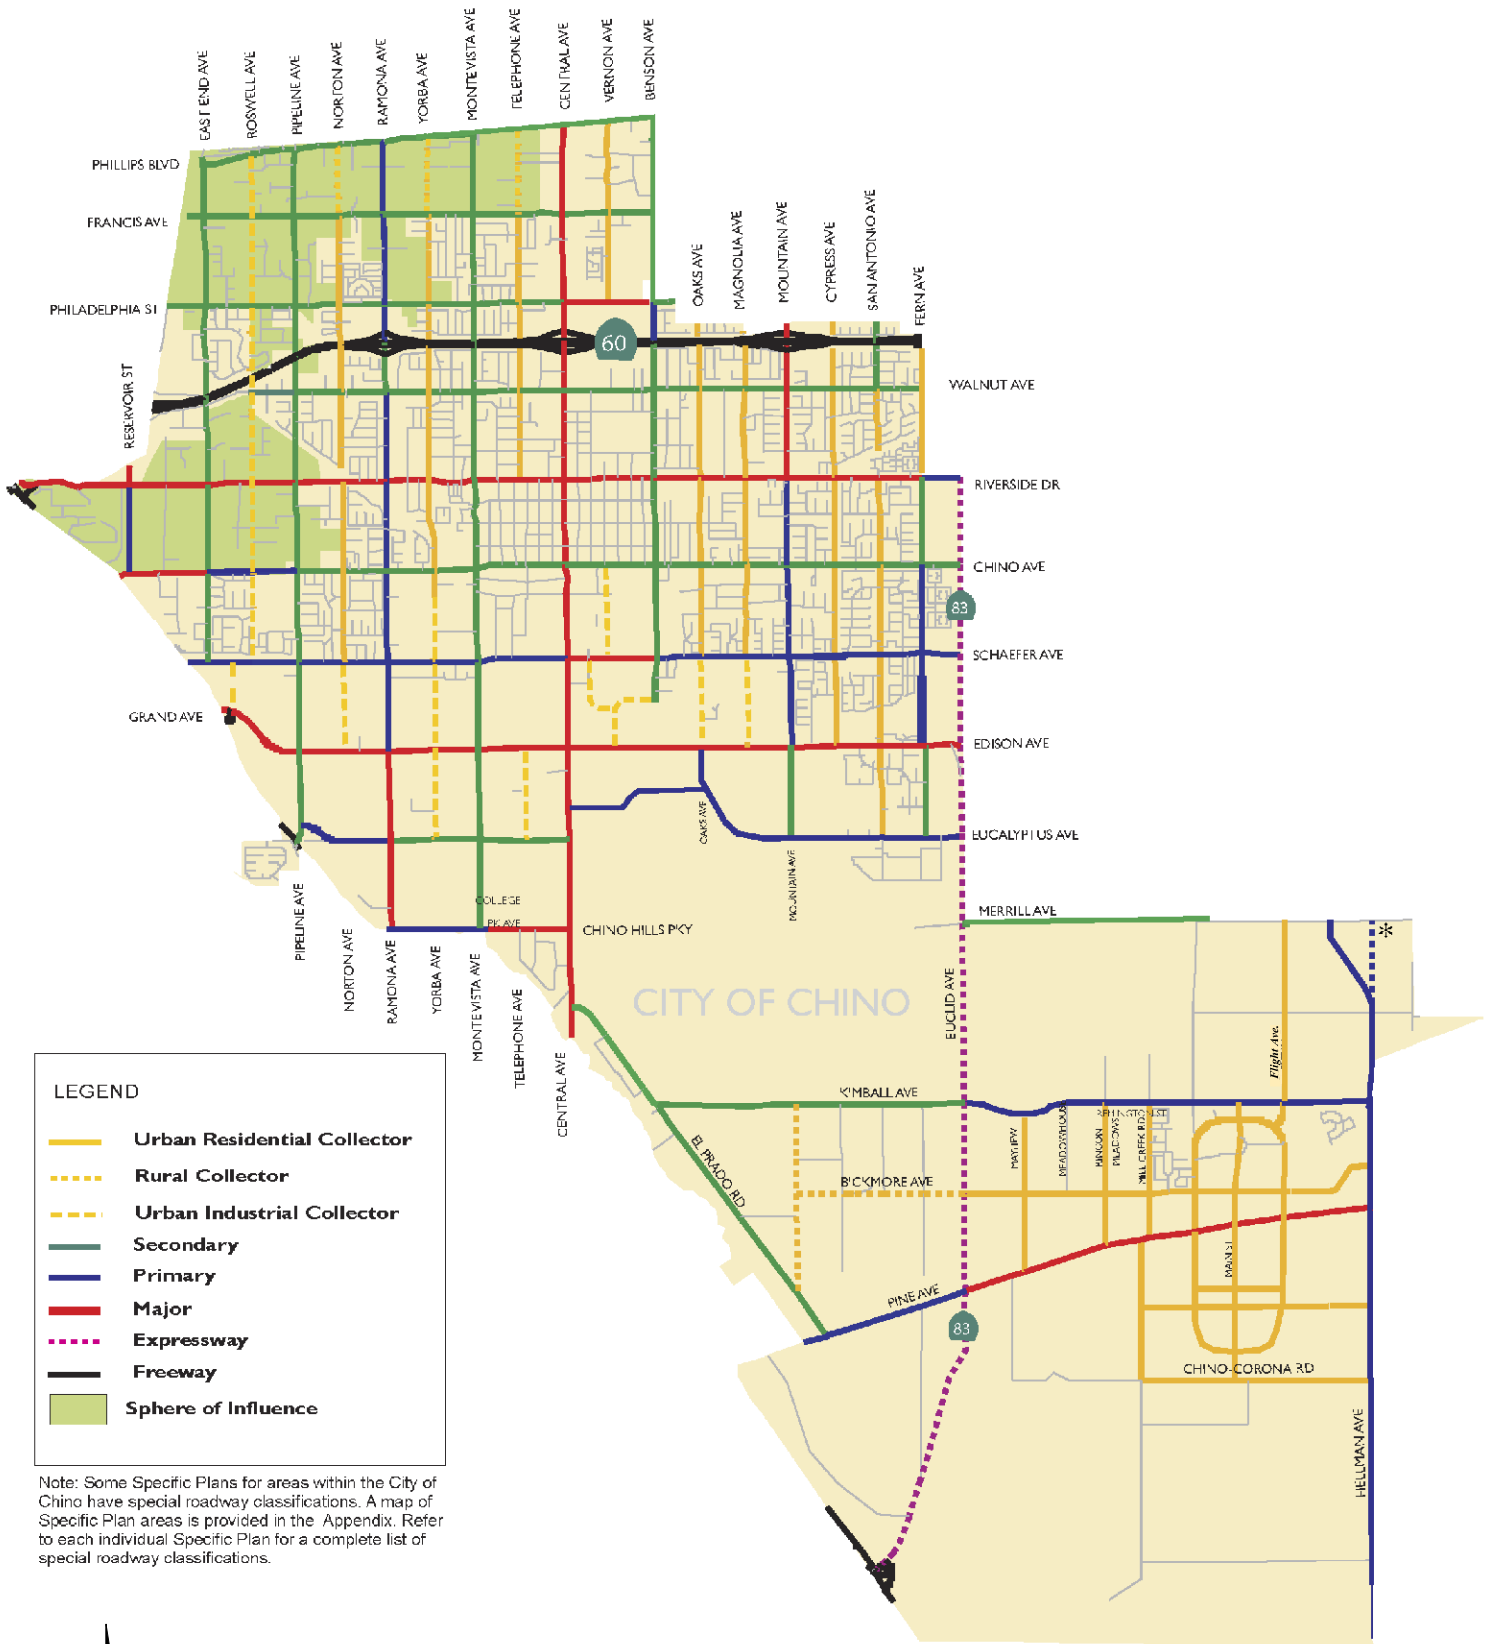

### **3.3 CITY OF CHINO, CITY OF CHINO HILLS, CITY OF EASTVALE, CITY OF JURUPA VALLEY GENERAL PLAN CIRCULATION ELEMENT**

Exhibits 3-4 and 3-5 show the City of Chino General Plan Circulation Element and roadway cross-sections, respectively. Exhibits 3-6 and 3-7 show the City of Chino Hills General Plan Circulation Element and roadway cross-sections, respectively. Exhibits 3-8 and 3-9 show the City of Eastvale General Plan Circulation Element and roadway cross-sections, respectively. Lastly, Exhibits 3-10 and 3-11 show the City of Jurupa Valley General Plan Circulation Element and roadway cross-sections, respectively.

### **3.4 TRUCK ROUTES**

The City of Ontario designated truck route map is shown on Exhibit 3-12. Euclid Avenue (SR-83), Edison Avenue/Ontario Ranch Road, Merrill Avenue, Archibald Avenue, and Hamner Avenue/Milliken Avenue are designated as Truck Routes in the City of Ontario. The designated truck route map has been utilized to route study area truck traffic.

**EXHIBIT 3-4: CITY OF CHINO GENERAL PLAN CIRCULATION ELEMENT**

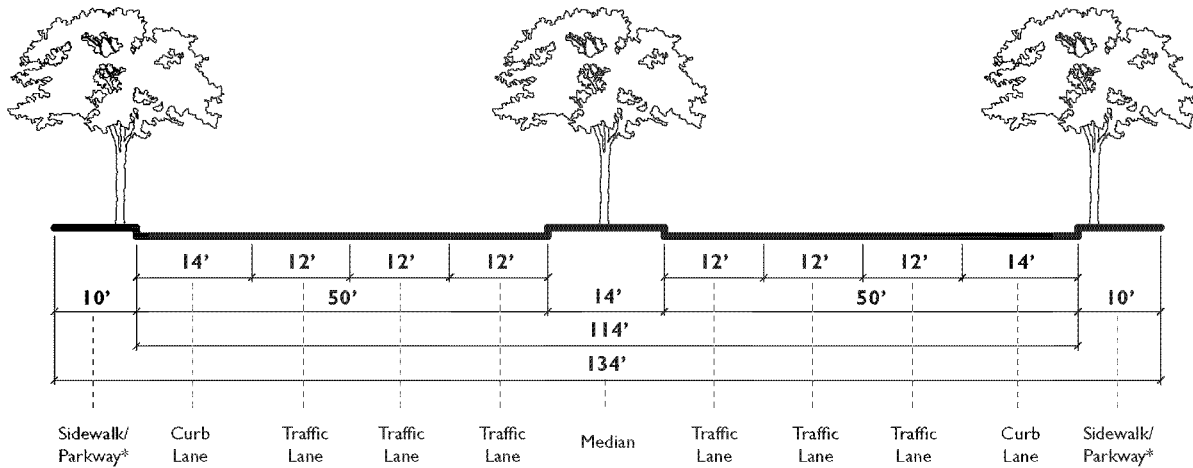

**EXHIBIT 3-5 (1 of 2): CITY OF CHINO GENERAL PLAN ROADWAY CROSS-SECTIONS**

**Major Arterial (Expressway): Typical 8 Lane**  
 Provides 8 traffic lanes and a wide median without parking

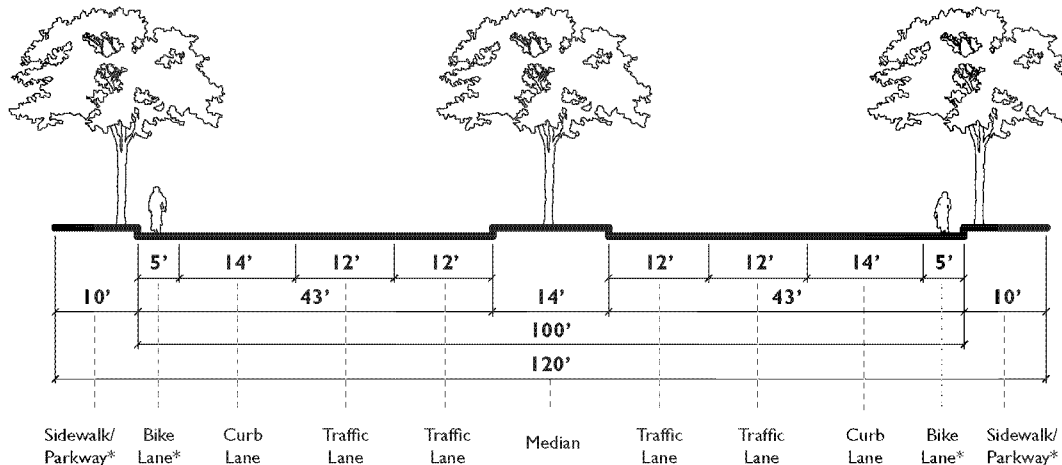

**Major Arterial: Minimum 8 Lane**

Provides 8 traffic lanes and 2 bicycle lanes separated by a median without parking

The City of Chino designated truck route map is shown on Exhibit 3-13. Riverside Drive, Central Avenue, Edison Avenue, Merrill Avenue, Kimball Avenue, Pine Avenue, Flight Avenue, and Hellman Avenue are some of the designated City of Chino truck routes within the study area while Euclid Avenue (SR-83) is designated as a State Truck Route. The designated truck route map has been utilized to route study area truck traffic.

### **3.5 BICYCLE, EQUESTRIAN, & PEDESTRIAN FACILITIES**

Field observations conducted in March 2019 indicate nominal pedestrian and bicycle activity within the study area. Exhibit 3-14 illustrates the City of Ontario future planned bicycle facilities, which proposes Class II and Multipurpose Trails along Merrill Avenue and Eucalyptus Avenue adjacent to the Project and the Cucamonga Creek Multipurpose Trail located immediately to the east of the Project. Exhibit 3-15 illustrates City of Chino future bicycle facilities, which proposes Class I bicycle facilities along Hellman Avenue and Kimball Avenue near the vicinity of the site. Exhibit 3-16 illustrates the City of Eastvale trails and bikeway systems. Existing pedestrian facilities within the study area are shown on Exhibit 3-17.

### **3.6 TRANSIT SERVICE**

The study area within the City of Ontario is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. Based on a review of the existing transit routes within the vicinity of the proposed Project, Omnitrans Route 81 operates on Riverside Drive north of the site. However, there are no existing bus routes near the vicinity of the Project. The Riverside Transit Authority (RTA) serves the City of Eastvale. Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the applicant work in conjunction with Omnitrans and RTA to potentially provide additional bus service to the site. Existing transit routes in the vicinity of the study area are illustrated on Exhibit 3-18.

### **3.7 EXISTING (2019) TRAFFIC COUNTS**

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in January 2019. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

The weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1.

Exhibit 2.8-2 Planned Trails

EXHIBIT 3-17: EXISTING PEDESTRIAN FACILITIES

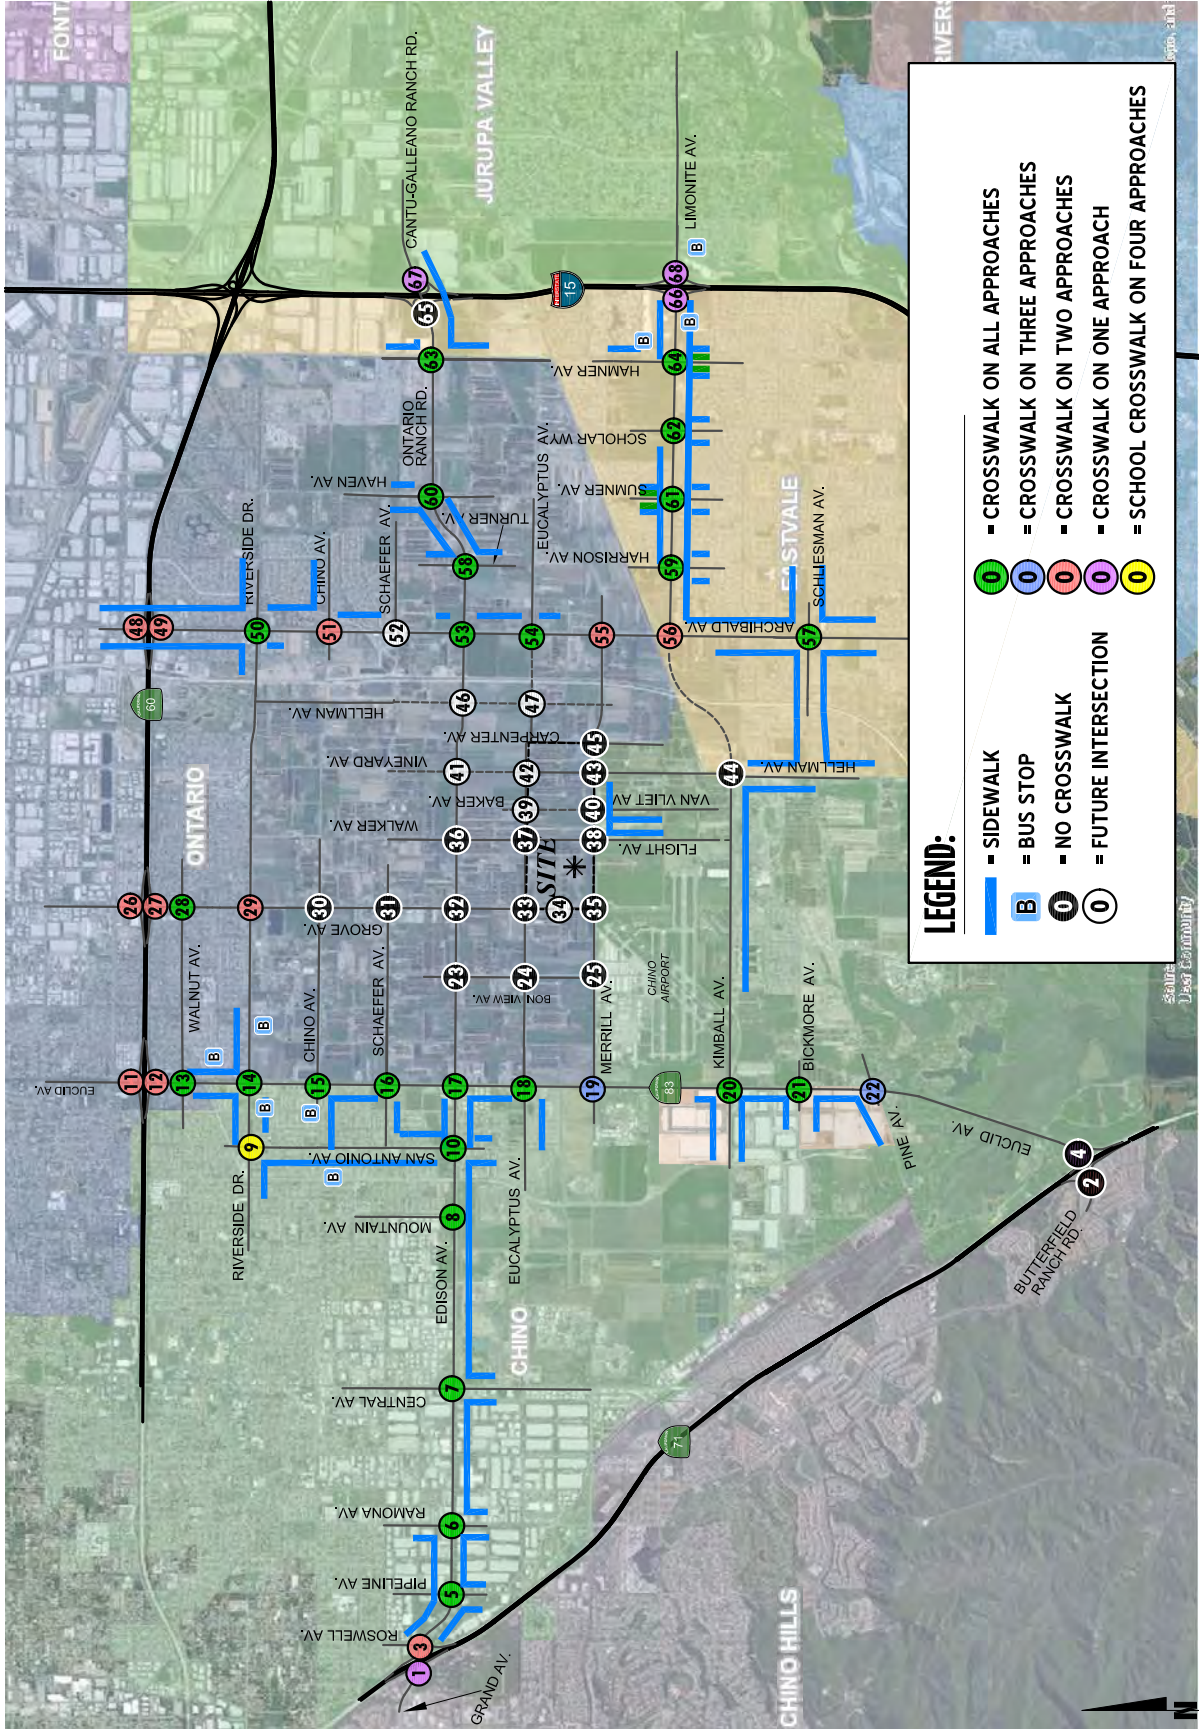

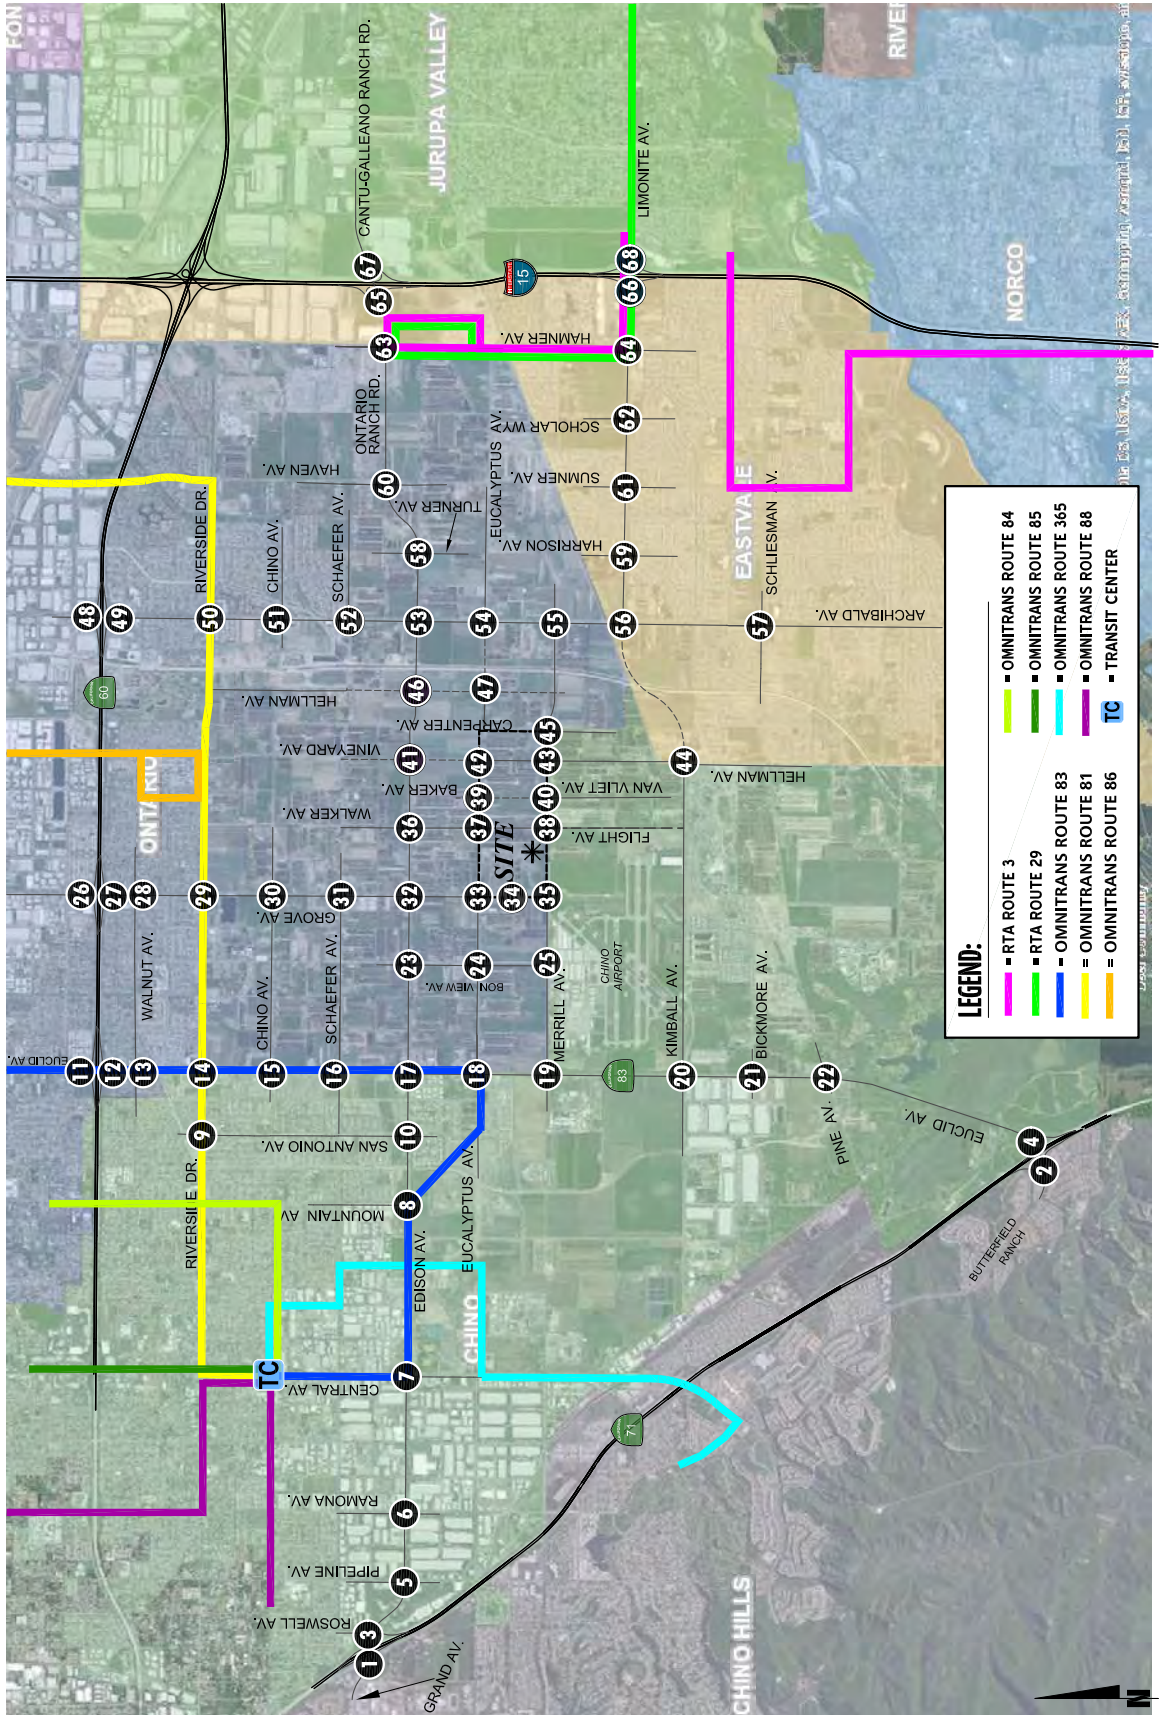

EXHIBIT 3-18: EXISTING TRANSIT ROUTES

The traffic counts collected in January 2019 include the following vehicle classifications: Passenger Cars, 2-Axle Trucks, 2-Axle Trucks, and 4 or More Axle Trucks. To represent the effect of large trucks, buses and recreational vehicles have on traffic flow; all trucks were converted into passenger car equivalent (PCE). By their size alone, these vehicles occupy the same space as two or more passenger cars. In addition, the time it takes for them to accelerate and slow-down is much longer than for passenger cars and varies depending on the type of vehicle and number of axles. For the purpose of this analysis, a PCE factor of 1.5 has been applied to 2-axle trucks, 2.0 for 3-axle trucks, and 3.0 for 4+-axle trucks to estimate each turning movement. These factors are consistent with the values recommended for use in the CMP.

Existing weekday ADT volumes are shown on Exhibit 3-19. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

$$\text{Weekday PM Peak Hour (Approach Volume + Exit Volume)} \times 12.55 = \text{Leg Volume}$$

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 7.97 percent. As such, the above equation utilizing a factor of 12.55 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 7.97 percent (i.e.,  $1/0.0797 = 12.55$ ) and was assumed to sufficiently estimate average daily traffic (ADT) volumes for planning-level analyses. Existing weekday AM and weekday PM peak hour intersection volumes (in PCE) are shown on Exhibit 3-20.

### 3.8 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized on Table 3-1, which indicates that all existing study area intersections are currently operating at acceptable LOS during the peak hours with exception to the following:

- Euclid Avenue (SR-83) & Riverside Drive (#14) – LOS E PM peak hour only
- Grove Avenue & Edison Avenue (#32) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#33) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#35) – LOS E PM peak hour only
- Walker Avenue & Edison Avenue (#36) – LOS F PM peak hour only
- Hellman Avenue & Kimball Avenue (#44) – LOS F AM and PM peak hour
- Carpenter Avenue & Merrill Avenue (#45) – LOS F AM and PM peak hours
- Archibald Avenue & Schleisman Road (#57) – LOS F AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#63) – LOS F PM peak hour only

Consistent with Table 3-1, a summary of the peak hour intersection LOS for Existing conditions are shown on Exhibit 3-21. The intersection operations analysis worksheets are included in Appendix 3.2 of this TIA.

<sup>1</sup> **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.  
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; d= Defacto Right Turn Lane

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal

<sup>4</sup> Minimum acceptable LOS for each applicable jurisdiction.

<sup>5</sup> Traffic signal is currently flashing red. As such, an all-way stop controlled intersection was assumed for Existing traffic conditions.

<sup>6</sup> I-15 Freeway and Limonite Avenue Interchange is currently under construction and is anticipated to be completed in 2020. Pre-construction volumes and lane geometrics have been utilized for the operations analysis.

### 3.9 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The following study area intersections currently warrant a traffic signal for Existing traffic conditions:

- Bon View Avenue & Edison Avenue (#23)
- Grove Avenue & Chino Avenue (#30)
- Grove Avenue & Schaefer Avenue (#31)
- Grove Avenue & Edison Avenue (#32)
- Grove Avenue & Eucalyptus Avenue (#33)
- Grove Avenue & Merrill Avenue (#35)
- Walker Avenue & Edison Avenue (#36)
- Walker Avenue/Flight Avenue & Merrill Avenue (#38)
- Carpenter Avenue & Merrill Avenue (#45)

Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.3.

### 3.10 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the study area intersections along the SR-71 Freeway, SR-60 Freeway, and I-15 Freeway to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the SR-71, SR-60, and I-15 Freeway mainlines. Queuing analysis findings are presented on Table 3-2. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown on Table 3-2, there are no movements that are currently experiencing queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows. Worksheets for Existing traffic conditions off-ramp queuing analysis are provided in Appendix 3.4.

### 3.11 FREEWAY FACILITY ANALYSIS

Existing (2019) mainline directional volumes for the AM and PM peak hours are provided on Exhibit 3-22. As shown on Table 3-3, the study area freeway segments and merge/diverge ramp junctions analyzed for this study are currently operating at an acceptable LOS (i.e., LOS D or better) during the peak hours for Existing (2019) traffic conditions, with exception of the following:

- SR-60 Freeway Westbound, Westbound On-Ramp at Grove Avenue (#12) – LOS E AM peak hour only

Existing (2019) freeway facility analysis worksheets are provided in Appendix 3.5.

Table 3-2

## Peak Hour Freeway Off-Ramp Queuing Summary for Existing (2019) Conditions

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

Table 3-3

Freeway Facility Analysis for Existing (2019) Conditions

### 3.12 RECOMMENDED IMPROVEMENTS

Improvement strategies have been recommended at intersections and freeway facilities that have been identified as deficient under Existing (2019) traffic conditions in an effort to achieve an acceptable LOS (i.e., LOS D or better).

#### 3.12.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Table 3-4 indicates the physical improvements needed to address LOS deficiencies at each of the study area intersections under Existing (2019) traffic conditions. The following improvements are recommended to improve the Existing (2019) deficiencies back to acceptable levels.

***Euclid Avenue (SR-83) & Riverside Drive (#14)*** – The following improvement is necessary to improve the existing deficiency to acceptable levels:

- Add an eastbound right turn lane.

***Grove Avenue & Edison Avenue (#32)*** – The following improvement is necessary to improve the existing deficiency to acceptable levels:

- Install a traffic signal.

***Grove Avenue & Eucalyptus Avenue (#33)*** – The following improvement is necessary to improve the existing deficiency to acceptable levels:

- Install a traffic signal.

***Grove Avenue & Merrill Avenue (#35)*** – The following improvement is necessary to improve the existing deficiency to acceptable levels:

- Install a traffic signal.

***Walker Avenue & Edison Avenue (#36)*** – The following improvement is necessary to improve the existing deficiency to acceptable levels:

- Install a traffic signal.

***Hellman Avenue & Kimball Avenue (#44)*** – The following improvements are necessary to improve the existing deficiency to acceptable levels:

- Operation of the traffic signal.
- Add a 2<sup>nd</sup> northbound left turn lane.

***Carpenter Avenue & Merrill Avenue (#45)*** – The following improvement is necessary to improve the existing deficiency to acceptable levels:

- Install a traffic signal.

***Archibald Avenue & Schleisman Road (#57)*** – The following improvement is necessary to improve the existing deficiency to acceptable levels:

- Modify the traffic signal to extend the cycle length to 130 seconds.

Table 3-4

Intersection Analysis for Existing (2019) Conditions With Improvements

#	Intersection	Traffic Control <sup>3</sup>	Intersection Approach Lanes <sup>1</sup>												Delay <sup>2</sup> (secs.)		Level of Service		Jurisdiction(s) / LOS Standard

		TS	2	3	1	2	3	0	2	4	0	2	2	1	40.1	47.5	D	D	

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> CSS = Cross-Street Stop; AWS = All-Way Stop; TS = Traffic Signal; TS = Improvement

<sup>4</sup> Traffic signal is currently flashing red. As such, an all-way stop controlled intersection was assumed for Existing traffic conditions.

<sup>5</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.

**Hamner Avenue & Ontario Ranch Road (#63)** – The following improvement is necessary to improve the existing deficiency to acceptable levels:

- Restripe the southbound right turn lane as a shared through-right turn lane.

The intersection operations analysis worksheets, with improvements, are included in Appendix 3.7 of this TIA.

### **3.12.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously on Table 3-2, there are no peak hour queuing issues at the SR-71 Freeway, SR-60 Freeway, and I-15 Freeway study area interchanges. As such, no improvements have been recommended.

### **3.12.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES**

SHS facilities are owned and maintained by Caltrans. Improvements to the SHS is regional/state-wide and Caltrans' responsibility. Improvements to freeway facilities LOS deficiencies is addressed through Caltrans regional improvement plans and programs. At this time, Caltrans has no plans or programs in place to address development-specific deficiencies affecting the SHS. There are no feasible measures to address LOS deficiencies that can be autonomously implemented by the Lead Agency or the Project Applicant.

This Page Intentionally Left Blank

## 4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network. Phase A is anticipated to be completed by Year 2022 and includes the development of Planning Areas 4 and 5. Phase B is anticipated to be completed by Year 2025 and includes the development of Planning Areas 1, 2, 3, and 6. Project Buildout is to include the remainder of the development (Planning Areas 1A, 3A, 4A, 5A, and 6A) which is anticipated to be completed by the Year 2026. For purposes of the TIA, the following land uses are assumed:

- Industrial: 6,312,600 square feet of high-cube fulfillment center warehouse use and 701,400 square feet of high-cube cold storage warehouse use
- Business Park: 1,441,000 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses (as would fall under ITE Land Use Code 130 – Industrial Park).
- **Total of 8,455,000 square feet**

### 4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development.

Trip generation rates for the Project are shown on Table 4-1 for both actual vehicles and PCE. The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project in actual vehicles and PCE are shown on Table 4-2 and Table 4-3, respectively. The trip generation rates used for this analysis are based upon information collected by the Institute of Transportation Engineers (ITE) as provided in their Trip Generation Manual (10<sup>th</sup> Edition, 2017) and the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019). <sup>4</sup> The Specific Plan allows for the Business Park area to be developed with merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses. However, the Business Park (ITE Land Use Code 770) land use has trip generation rates for the peak hours is based on limited data (i.e., one surveyed site). As such, the trip generation rates for ITE Land Use Code 130 has been utilized for the business park portion of the Project.

<sup>1</sup> TSF = thousand square feet

<sup>2</sup> TOTAL NET TRIPS = Passenger Cars + Net Truck Trips.

<sup>3</sup> Square footage assumptions for each Planning Area are based on maximum planned development as defined by the Specific Plan.

For purposes of this analysis, the following ITE land use codes and vehicle mixes have been utilized:

- High-Cube Fulfillment Center Warehouse has been used to derive site specific trip generation estimates for up to 6,312,600 square feet of the proposed Project. The ITE Trip Generation Manual (2017) has trip generation rates for high-cube fulfillment center use (ITE land use code 155), however, these rates are unreliable because they are based on limited data (i.e., one to two surveyed sites) and the ITE Trip Generation Manual recommends the use of local data sources where available. As such, the trip-generation statistics published in the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019) which was commissioned by the Western Riverside Council of Governments (WRCOG) in support of the Transportation Uniform Mitigation Fee (TUMF) update, has been utilized for the high-cube fulfillment center use. The WSP trip generation rates were published in January 2019 and are based on data collected at 11 local high-cube fulfillment center sites. However, the WSP study does not include a split for inbound and outbound vehicles, as such, the inbound and outbound splits per the ITE High-Cube Warehouse Vehicle Trip Generation Analysis (October 2016) have been utilized. (13)
- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for up to 701,400 square feet of the proposed Project. The truck percentage was obtained from the ITE's High Cube Warehouse Vehicle Trip Generation Analysis (October 2016). The vehicle mix varies by peak hour and overall daily: 69.2% passenger cars in the AM peak hour, 78.3% passenger cars in the PM peak hour, and 67.8% passenger cars weekday daily. Trip generation for heavy trucks was further broken down by truck type (or axle type). The total truck percentage is comprised of 3 different truck types: 2-axle, 3-axle, and 4+-axle trucks. For the purposes of this analysis, the percentage of trucks, by axle type, were obtained from the SCAQMD Warehouse Truck Trip Study Data Results and Usage (2014) recommended truck mix. The SCAQMD has recently performed surveys of existing facilities and compiled the data to provide interim guidance on the mix of heavy trucks for these types of high-cube warehousing/distribution facilities. Based on this interim guidance from the SCAQMD, the following truck fleet mix was utilized for the purposes of estimating the truck trip generation for the site (with cold storage): 34.7% of the total trucks as 2-axle trucks, 11.0% of the total trucks as 3-axle trucks, and 54.3% of the total trucks as 4+-axle trucks.

<sup>13</sup> Institute of Transportation Engineers. *High Cube Warehouse Vehicle Trip Generation Analysis*. Washington, DC : ITE, October 2016.

- The Specific Plan allows for the business park planning areas (1A, 3A, 4A, 5A, and 6A) to be developed with merchant wholesale, professional services, professional office, warehouse/storage, research and development, and other similar related uses. Because the peak hour trip generation rates collected for the “business park” land use category by the ITE as provided in their Trip Generation Manual, 10<sup>th</sup> Edition, 2017 (ITE land use code 770) are based on limited data (i.e., a single surveyed site) that does not have the same physical or operational characteristics as the range of uses permitted in the Business Park planning areas of the Specific Plan, the trip generation rates for ITE land use code 130 (Industrial Park) have been used to derive site specific trip generation estimates for up to 1,441,000 square feet of business park uses proposed for the Project in planning areas 1A, 3A, 4A, 5A, and 6A. The ITE Trip Generation Handbook (3<sup>rd</sup> Edition, 2017) identifies a 13% mix of heavy trucks for ITE land use code 130, however, does not provide a breakdown of the 13% further by axle type. As such, the percentage of trucks, by axle type, were obtained from the South Coast Air Quality Management District (SCAQMD) Warehouse Truck Trip Study Data Results and Usage (2014) recommended truck mix. Based on this guidance from the SCAQMD, the following truck fleet mix was utilized for the purposes of estimating the truck trip generation for the business park use (without cold storage): 16.7% of the total trucks as 2-axle trucks, 20.7% of the total trucks as 3-axle trucks, and 62.6% of the total trucks as 4+-axle trucks.

Finally, PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles) for both the Industrial and Business Park planning areas of the Merrill Commerce Center Specific Plan. PCEs allow the typical “real-world” mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in Appendix B of the San Bernardino County Congestion Management Program (CMP), 2016 Update.

As shown on Table 4-2, the proposed Project (Project buildout) is anticipated to generate a net total of 19,806 trip-ends per day, 1,420 AM peak hour trips and 1,701 PM peak hour trips. The proposed Project is anticipated to generate a net total of 25,198 PCE trip-ends per day, 1,760 PCE AM peak hour trips and 2,041 PCE PM peak hour trips (see Table 4-3).

## 4.2 PROJECT TRIP DISTRIBUTION

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The trip distribution pattern of passenger cars is heavily influenced by the geographical location of the site, the location of surrounding uses, and the proximity to the regional freeway system. The trip distribution pattern for truck traffic is also influenced by the local truck routes approved by the City of Ontario, City of Chino, City of Chino Hills, City of Eastvale, City of Jurupa Valley, and Caltrans. Given these differences, separate trip distributions were generated for both passenger cars and truck trips.

The Opening Year Cumulative distribution patterns utilize the existing roadway system in relation to the Horizon Year trip distribution patterns, which assumes future roadway connections. The Project trip distribution patterns are also affected by near-term development patterns in the vicinity of the Project site. The extension of Limonite Avenue/Kimball Avenue extension between Hellman Avenue and Archibald Avenue, and the Merrill Avenue extension to Bellegrave Avenue will also be assumed for Horizon Year conditions only.

Exhibit 4-1 illustrates the truck trip distribution patterns for Opening Year Cumulative and Horizon Year conditions. As shown on Exhibit 4-1, trucks are anticipated to utilize designated truck routes such as Merrill Avenue, Euclid Avenue (SR-83), Archibald Avenue, Edison Avenue/Ontario Ranch Road, and Limonite Avenue to reach regional freeways such as the SR-71, SR-60, and I-15 Freeways. These travel patterns are not anticipated to change with the addition of new future facilities for Horizon Year traffic conditions.

Exhibit 4-2 illustrates the Opening Year Cumulative passenger car trip distribution patterns. The Opening Year Cumulative passenger car trip distribution patterns are based on a SBTAM select zone run for a zone wholly or partially containing the Project, with modifications to utilize existing roadways. Exhibit 4-3 illustrates the passenger car trip distribution patterns for Horizon Year traffic conditions which is based on a SBTAM select zone run of the Project.

### **4.3 MODAL SPLIT**

The potential for Project trips (non-truck) to be reduced by the use of public transit, walking or bicycling have not been included as part of the Project's estimated trip generation. Essentially, the Project's traffic projections are "conservative" in that these alternative travel modes would reduce the forecasted traffic volumes (non-truck trips only).

### **4.4 PROJECT TRIP ASSIGNMENT**

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movement volumes are shown on the following exhibits:

- Exhibits 4-4 and 4-5 for Phase A traffic conditions
- Exhibits 4-6 and 4-7 for Phase B traffic conditions
- Exhibits 4-8 and 4-9 for Phase C (Near-term Project Buildout) traffic conditions
- Exhibits 4-10 and 4-11 for Project Buildout (2040) traffic conditions

## 4.5 BACKGROUND TRAFFIC

### 4.5.1 OPENING YEAR CUMULATIVE CONDITIONS

Future year traffic forecasts have been based upon background (ambient) growth at 2% per year for 2022, 2025, and 2026 traffic conditions. The ambient growth factor is intended to approximate regional traffic growth. This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in addition to traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies.

Opening Year Cumulative (2022), Opening Year Cumulative (2025), and Opening Year Cumulative (2026) traffic volumes are provided in Section 6, Section 7, and Section 8 of this report. The traffic generated by the proposed Project was then manually added to the base volume to determine Opening Year Cumulative “With Project” forecasts for each applicable phase.

### 4.5.2 HORIZON YEAR (2040) CONDITIONS

The adopted Southern California Association of Governments (SCAG) 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (April 2016) growth forecasts for the City of Ontario identifies projected growth in population of 166,300 in 2012 to 258,600 in 2040, or a 55.50% increase over the 28-year period. (14) The change in population equates to roughly a 1.59% growth rate, compounded annually. Similarly, growth over the same 28-year period in households is projected to increase by 66.96%, or a 1.85% annual growth rate. Finally, growth in employment over the same 28-year period is projected to increase by 69.80%, or a 1.91% annual growth rate.

Based on a comparison of Existing (2019) traffic volumes to the Horizon Year (2040) forecasts, the average growth rate is estimated at approximately 3.37%, compounded annually between Existing (2019) and 2040 traffic conditions. The annual growth rate at each individual intersection is not lower than 0.49% compounded annually to as high as 8.35% compounded annually over the same time period.

Therefore, the annual growth rate utilized for the purposes of this analysis would appear to conservatively approximate the anticipated regional growth in traffic volumes in the City of Ontario for Opening Year Cumulative and Horizon Year (2040) traffic conditions, especially when considered along with the addition of project-related traffic. As such, the growth in traffic volumes assumed in this traffic impact analysis would tend to overstate as opposed to understate the potential deficiencies to traffic and circulation. Horizon Year (2040) With Project traffic forecasts reflects buildout of the Project (i.e., traffic associated with Phases A through C).

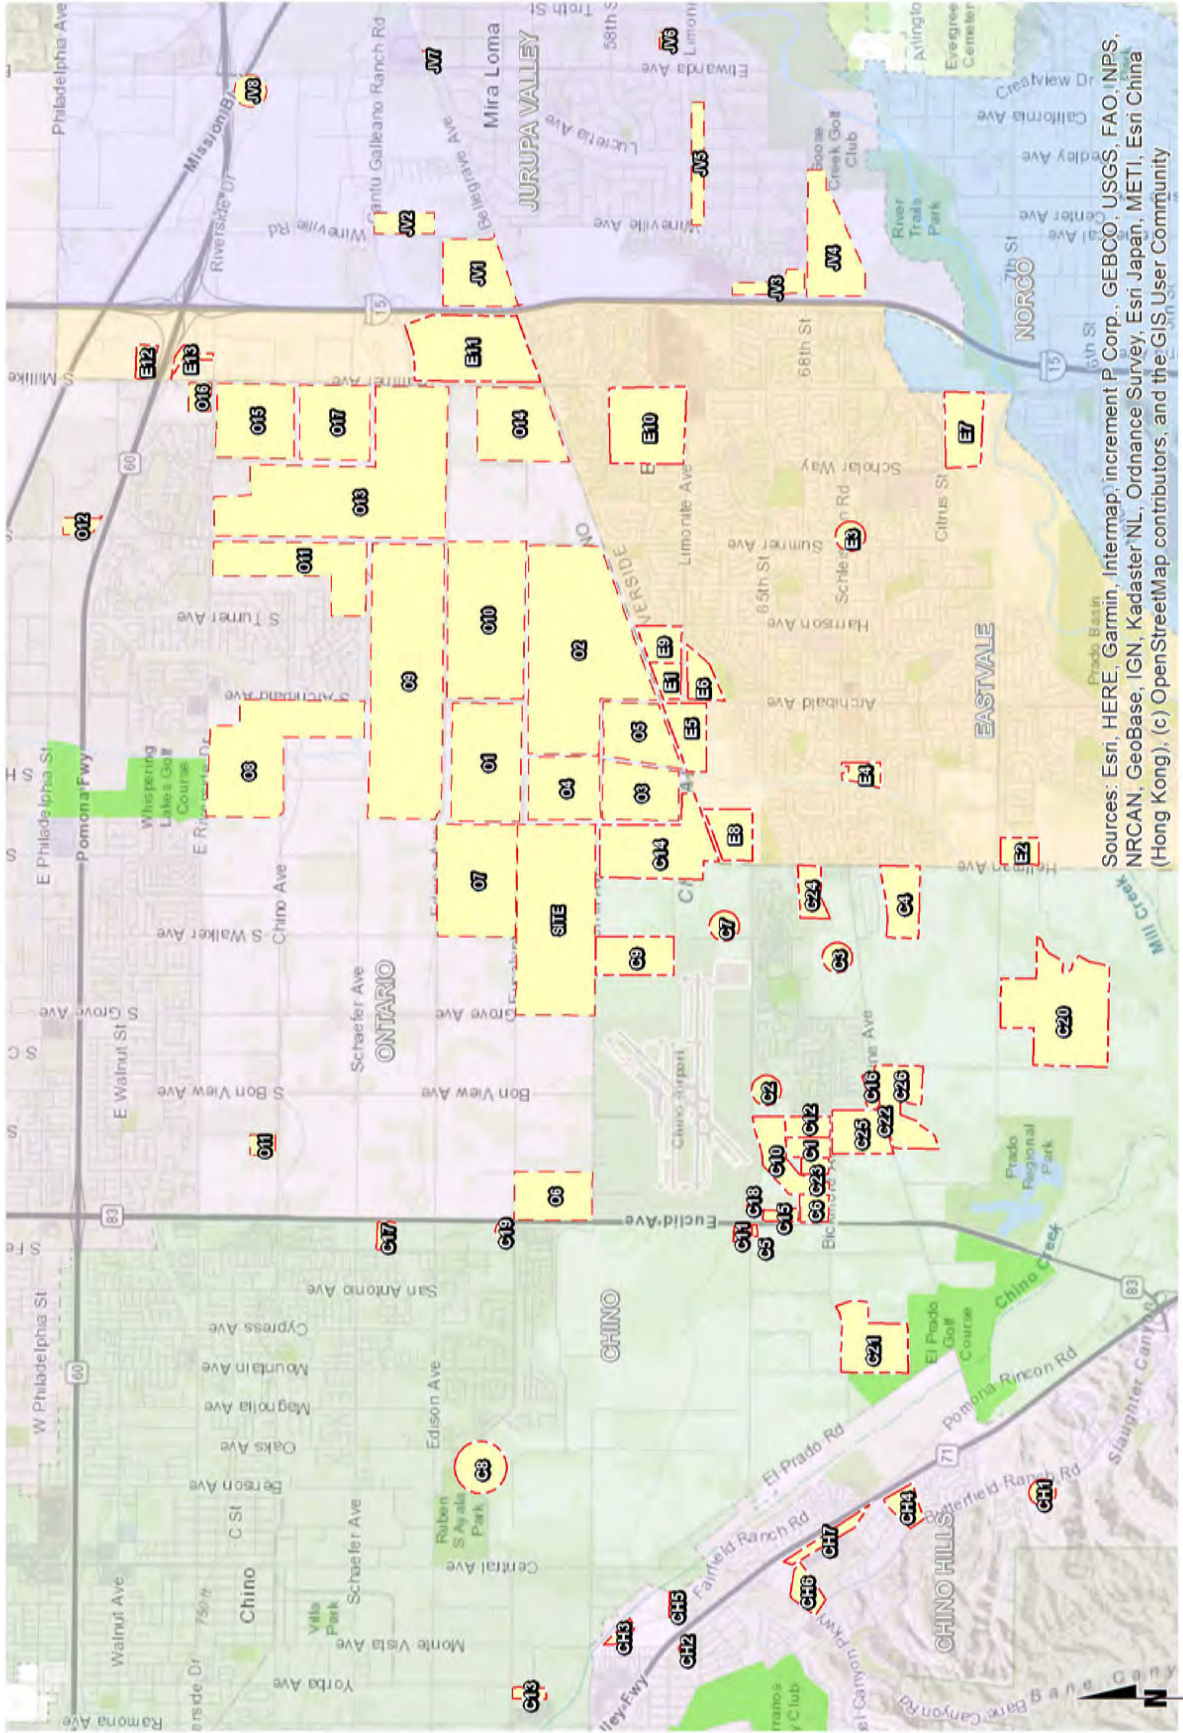

## 4.6 CUMULATIVE DEVELOPMENT TRAFFIC

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Ontario. The cumulative projects listed are those that would generate traffic and would contribute traffic to study area intersections. The neighboring jurisdictions of Chino, Eastvale, and Jurupa Valley have also been contacted to include key projects in their respective cities.

Exhibit 4-12 illustrates the cumulative development location map. A summary of cumulative development projects and their proposed land uses are shown on Table 4-4. If applicable, the traffic generated by individual cumulative projects was manually added to the Opening Year Cumulative forecasts to ensure that traffic generated by the listed cumulative development projects on Table 4-4 are reflected as part of the background traffic. In an effort to conduct a conservative analysis, the cumulative projects are added in conjunction with the ambient growth identified in Section 4.5.1 *Background Traffic: Opening Year Cumulative Conditions*. Cumulative ADT and peak hour intersection turning movement volumes are shown on Exhibits 4-13 and 4-14 for near-term traffic conditions.

#### 4.7 HORIZON YEAR (2040) VOLUME DEVELOPMENT

Traffic projections for Horizon Year (2040) without Project conditions were derived from the San Bernardino Transportation Analysis Model (SBTAM) using accepted procedures for model forecast refinement and smoothing for study area intersections located within the County of San Bernardino. The current version of the SBTAM (Version 2.20, March 2019) reflects the local input in the adopted 2016 SCAG RTP within the County of San Bernardino.

The traffic forecasts reflect the area-wide growth anticipated between Existing (2019) conditions and Horizon Year (2040) traffic conditions. In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Horizon Year (2040) peak hour forecasts were refined using the model derived long range forecasts, base (validation) year model forecasts, along with existing peak hour traffic count data collected at each analysis location in January 2019. The SBTAM has a base (validation) year of 2012 and a horizon (future forecast) year of 2040. The difference in model volumes (2040-2012) defines the growth in traffic over the 28-year period. Similarly, the Riverside Transportation Analysis Model (RivTAM) has a base (validation) year of 2012 and a horizon (future forecast) year of 2040.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 255), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

The SBTAM uses an AM peak period-to-peak hour factor of 0.35 and a PM peak period-to-peak hour factor of 0.27. These factors represent the relationship of the highest single AM peak hour to the modeled 3 hour AM peak period (an even distribution would result in a factor of 0.33) and the highest single PM peak hour to the modeled 4 hour PM peak period (an even distribution would result in a factor of 0.25). The model data from RivTAM represents peak hour data and therefore did not require adjustments.

Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Horizon Year traffic conditions. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing or Opening Year Cumulative traffic conditions were not assumed as part of this analysis. As such, in conjunction with the addition of cumulative projects that are not consistent with the General Plan, additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable Horizon Year (2040) forecasts. Horizon Year (2040) turning volumes were compared to Opening Year Cumulative (2026) volumes in order to ensure a minimum growth as a part of the refinement process. The minimum growth includes any additional growth between Opening Year Cumulative (2026) and Horizon Year (2040) traffic conditions that is not accounted for by the traffic generated by cumulative development projects and ambient growth rates assumed between Existing (2019) and Opening Year Cumulative (2026) conditions. Adjustments have not

been made to study area intersections that may be affected by new future roadway connections (such as the extension of Pine Avenue or the extension of Kimball Avenue/Limonite Avenue), where travel patterns would likely get affected and forecasts may potentially decrease from the Opening Year Cumulative conditions. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the Horizon Year (2040) peak hour forecasts.

The future Horizon Year (2040) Without Project peak hour turning movements were then reviewed by Urban Crossroads, Inc. for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two adjacent driveway locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there is no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis.

The SBTAM and RivTAM do not include a truck component or have data that is unusually low. As such, in an effort to conduct a conservative analysis, the presence of trucks has been accounted for based on the manual volume adjustments made to demonstrate growth above Opening Year Cumulative (2026) traffic forecasts, which are presented and evaluated in PCE (see Section 3.7 *Existing (2019) Traffic Counts* for discussion on PCE). As such, the Horizon Year (2040) forecasts are also assumed to be in PCE for the purposes of this analysis. Post-processing worksheets for Horizon Year (2040) without Project traffic conditions are provided in Appendix 4.1.

This Page Intentionally Left Blank

## 5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Existing plus Project (E+P) conditions and the resulting intersection operations, freeway facility operations, and traffic signal warrant analyses. E+P traffic conditions has been evaluated for each Phase.

### 5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

### 5.2 EXISTING PLUS PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus Project traffic. The ADT and weekday AM and PM peak hour intersection turning movement volumes which can be expected for E+P traffic conditions are shown on the following exhibits:

- Exhibits 5-1 and 5-2: E+P (Phase A) Conditions
- Exhibits 5-3 and 5-4: E+P (Phase B) Conditions
- Exhibits 5-5 and 5-6: E+P (Phase C) Conditions

### 5.3 INTERSECTION OPERATIONS ANALYSIS

E+P peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TIA.

#### 5.3.1 E+P (PHASE A)

The intersection analysis results are summarized on Table 5-1 for E+P (Phase A) traffic conditions, which indicate that the following additional study area intersection is anticipated to operate at an unacceptable LOS, in addition to those identified for Existing traffic conditions:

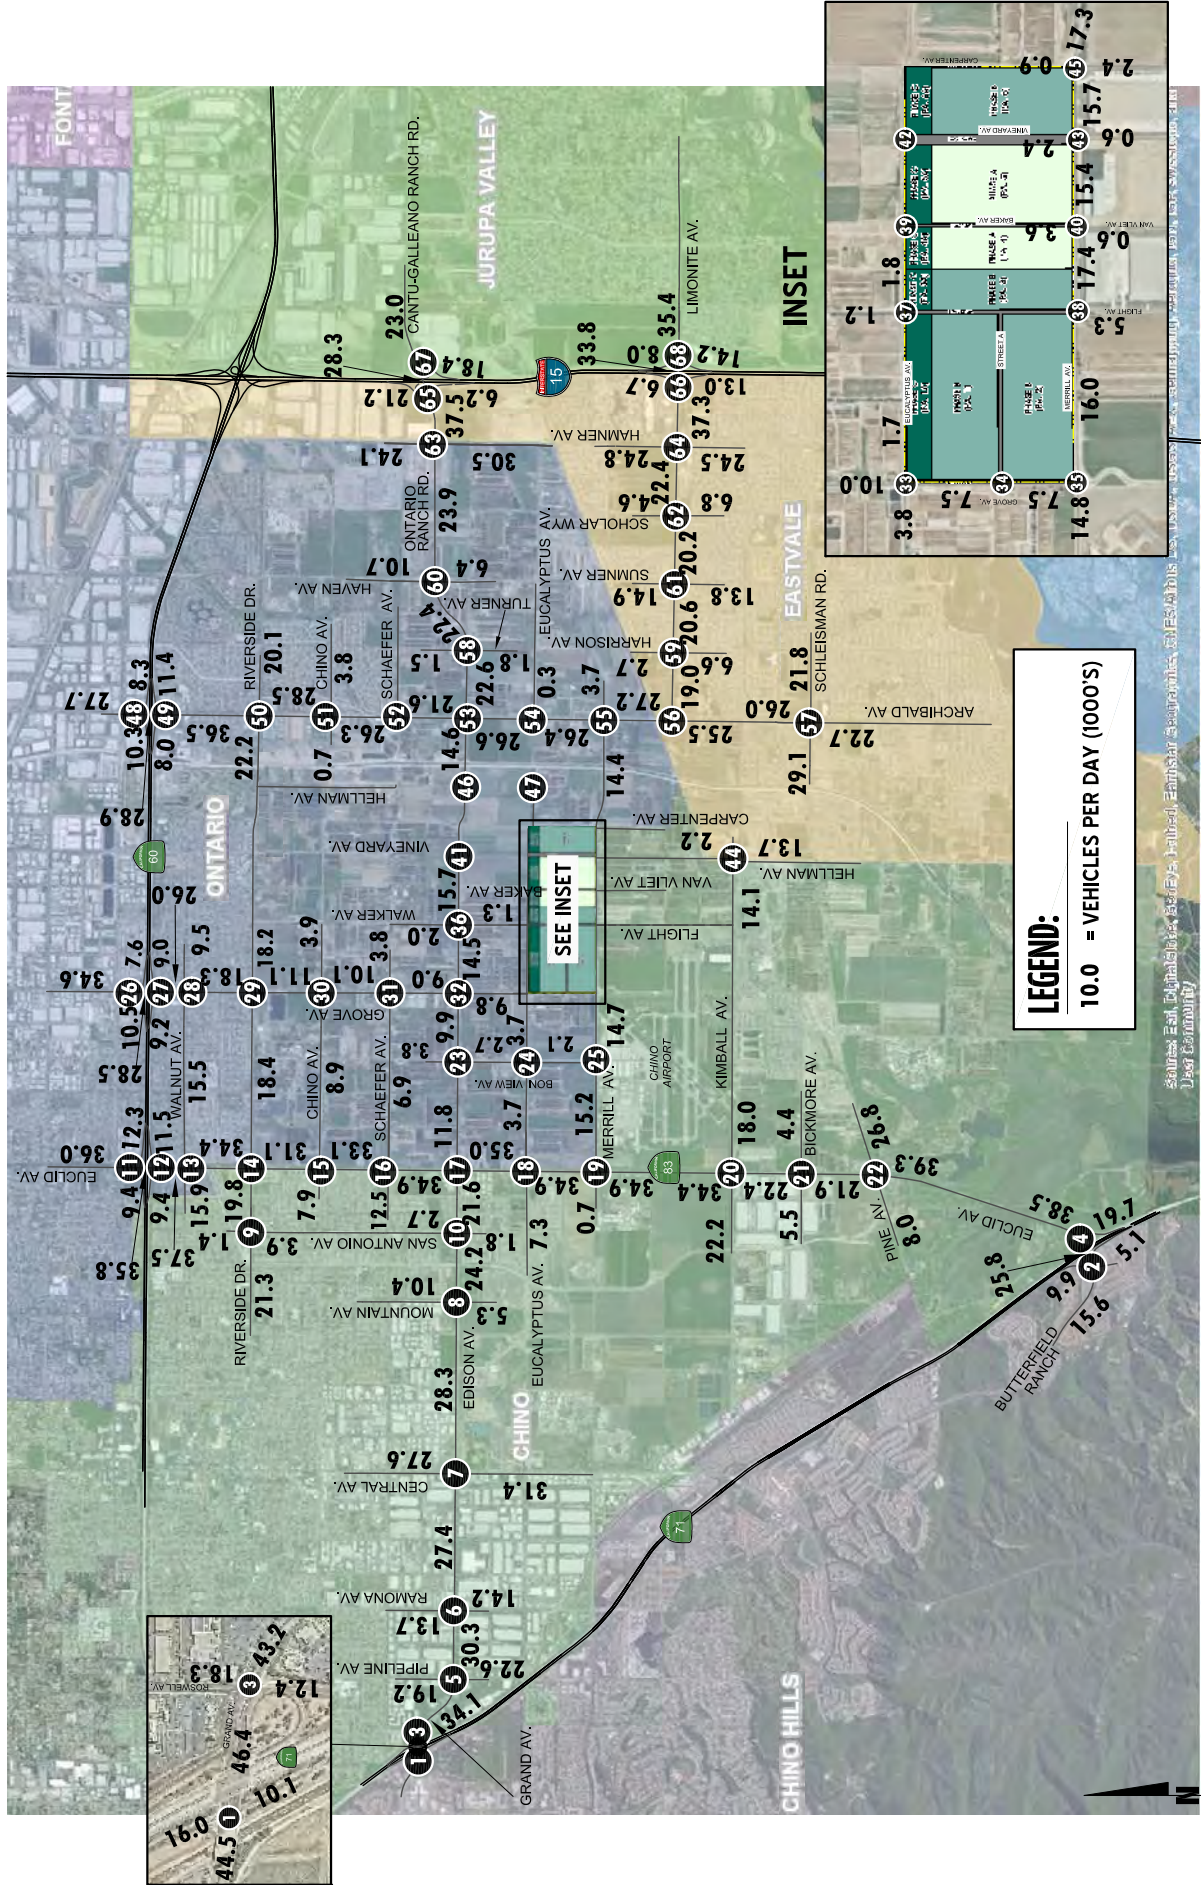

- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS E AM and PM peak hours

The Project (Phase A) is anticipated to contribute less than 50 peak hour trips to the following locations for E+P (Phase A) traffic conditions:

- Hellman Avenue & Kimball Avenue (#44)
- Archibald Avenue & Schleisman Road (#57)

Consistent with Table 5-1, a summary of the peak hour intersection LOS is shown on Exhibit 5-7 for E+P (Phase A) traffic conditions. The intersection operations analysis worksheets for E+P (Phase A) traffic conditions are included in Appendix 5.1 of this TIA.

<sup>\*</sup> **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

<sup>3</sup> Minimum acceptable LOS for each applicable jurisdiction.

<sup>4</sup> Impact is significant if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels, a deficiency is deemed to occur. However, if the pre-project condition is already below LOS D (or acceptable LOS), the Project will be responsible for mitigating its impact to a LOS equal to or better than it was without the Project.

<sup>5</sup> Traffic signal is currently flashing red. As such, an all-way stop controlled intersection was assumed for Existing and E+P traffic conditions only.

<sup>6</sup> I-15 Freeway and Limonite Avenue Interchange is currently under construction and is anticipated to be completed in 2020. Pre-construction volumes and lane geometrics have been utilized for the operations analysis.

### 5.3.2 E+P (PHASE B)

The intersection analysis results are summarized on Table 5-2 for E+P (Phase B) traffic conditions, which indicate that the following additional study area intersections are anticipated to operate at an unacceptable LOS, in addition to those identified for Existing traffic conditions:

- Euclid Avenue (SR-83) & Merrill Avenue (#19) – LOS E AM peak hour; LOS F PM peak hour
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#56) – LOS E AM peak hour only

The Project (Phase B) is anticipated to contribute less than 50 peak hour trips to the following locations for E+P (Phase B) traffic conditions:

- Hellman Avenue & Kimball Avenue (#44)
- Archibald Avenue & Schleisman Road (#57)

Consistent with Table 5-2, a summary of the peak hour intersection LOS is shown on Exhibit 5-8 for E+P (Phase B) traffic conditions. The intersection operations analysis worksheets for E+P (Phase B) traffic conditions are included in Appendix 5.2 of this TIA.

### 5.3.3 E+P (PHASE C)

The intersection analysis results are summarized on Table 5-3 for E+P (Phase C) traffic conditions, which indicate that the following additional study area intersections are anticipated to operate at an unacceptable LOS, in addition to those identified for Existing traffic conditions:

- Euclid Avenue (SR-83) & Edison Avenue (#17) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Merrill Avenue (#19) – LOS E AM peak hour; LOS F PM peak hour
- Bon View Avenue & Edison Avenue (#23) – LOS F AM and PM peak hours
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Archibald Avenue & Merrill Avenue (#55) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#56) – LOS E AM peak hour only

Consistent with Table 5-3, a summary of the peak hour intersection LOS is shown on Exhibit 5-9 for E+P (Phase C) traffic conditions. The intersection operations analysis worksheets for E+P (Phase C) traffic conditions are included in Appendix 5.3 of this TIA.

\* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

<sup>3</sup> Minimum acceptable LOS for each applicable jurisdiction.

<sup>4</sup> Impact is significant if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels, or if the Project contributes 50 or more peak hour trips to an existing deficiency. However, if the pre-project condition is already below LOS D (or acceptable LOS), the Project will be responsible for mitigating its impact to a LOS equal to or better than it was without the Project.

<sup>5</sup> Traffic signal is currently flashing red. As such, an all-way stop controlled intersection was assumed for Existing and E+P traffic conditions only.

<sup>6</sup> I-15 Freeway and Limonite Avenue Interchange is currently under construction and is anticipated to be completed in 2020. Pre-construction volumes and lane geometrics have been utilized for the operations analysis.

68	I-15 NB Ramps & Limonite Av. <sup>6</sup>	TS	31.3	25.5	C	C	32.7	25.7	C	C	Jurupa Valley, Caltrans / LOS D

\* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

<sup>3</sup> Minimum acceptable LOS for each applicable jurisdiction.

<sup>4</sup> Impact is significant if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels, a deficiency is deemed to occur. However, if the pre-project condition is already below LOS D (or acceptable LOS), the Project will be responsible for mitigating its impact to a LOS equal to or better than it was without the Project.

<sup>5</sup> Traffic signal is currently flashing red. As such, an all-way stop controlled intersection was assumed for Existing and E+P traffic conditions only.

<sup>6</sup> I-15 Freeway and Limonite Avenue Interchange is currently under construction and is anticipated to be completed in 2020. Pre-construction volumes and lane geometrics have been utilized for the operations analysis.

**EXHIBIT 5-8: E+P (PHASE B) SUMMARY OF LOS**

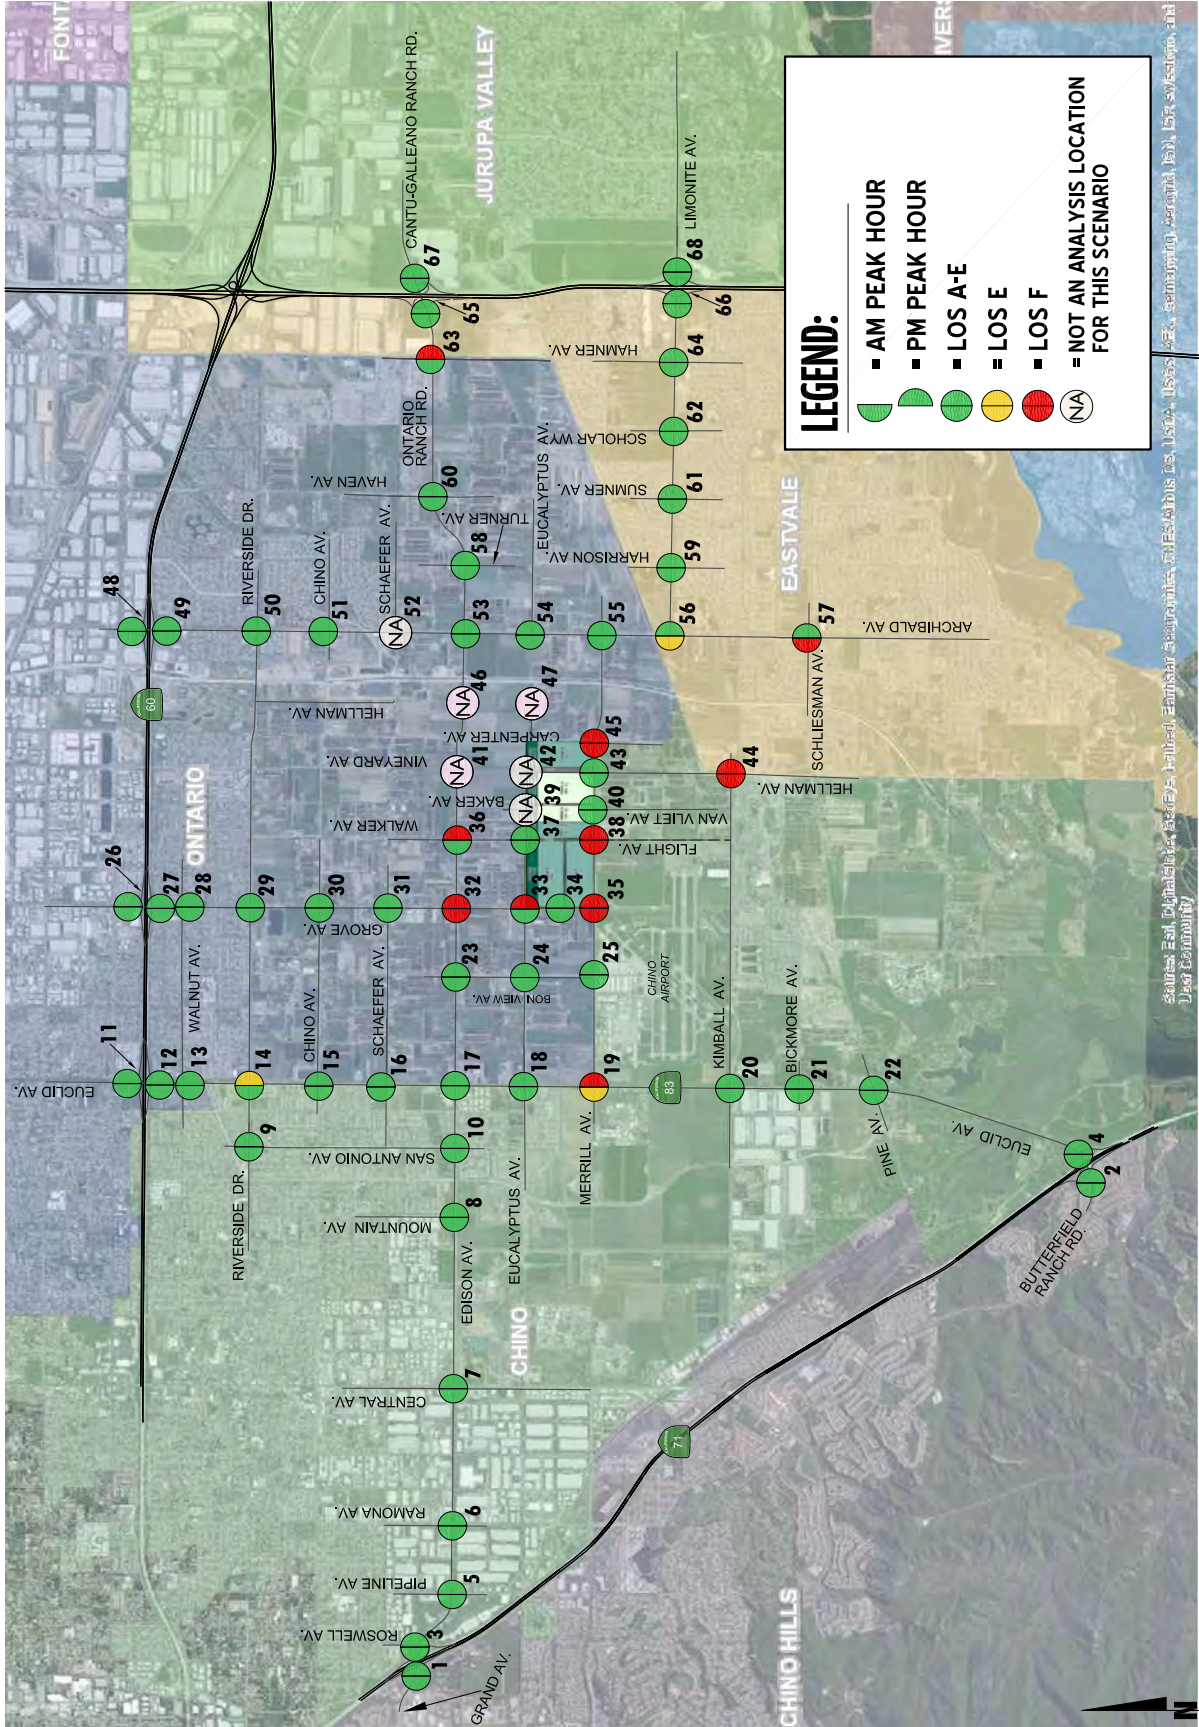

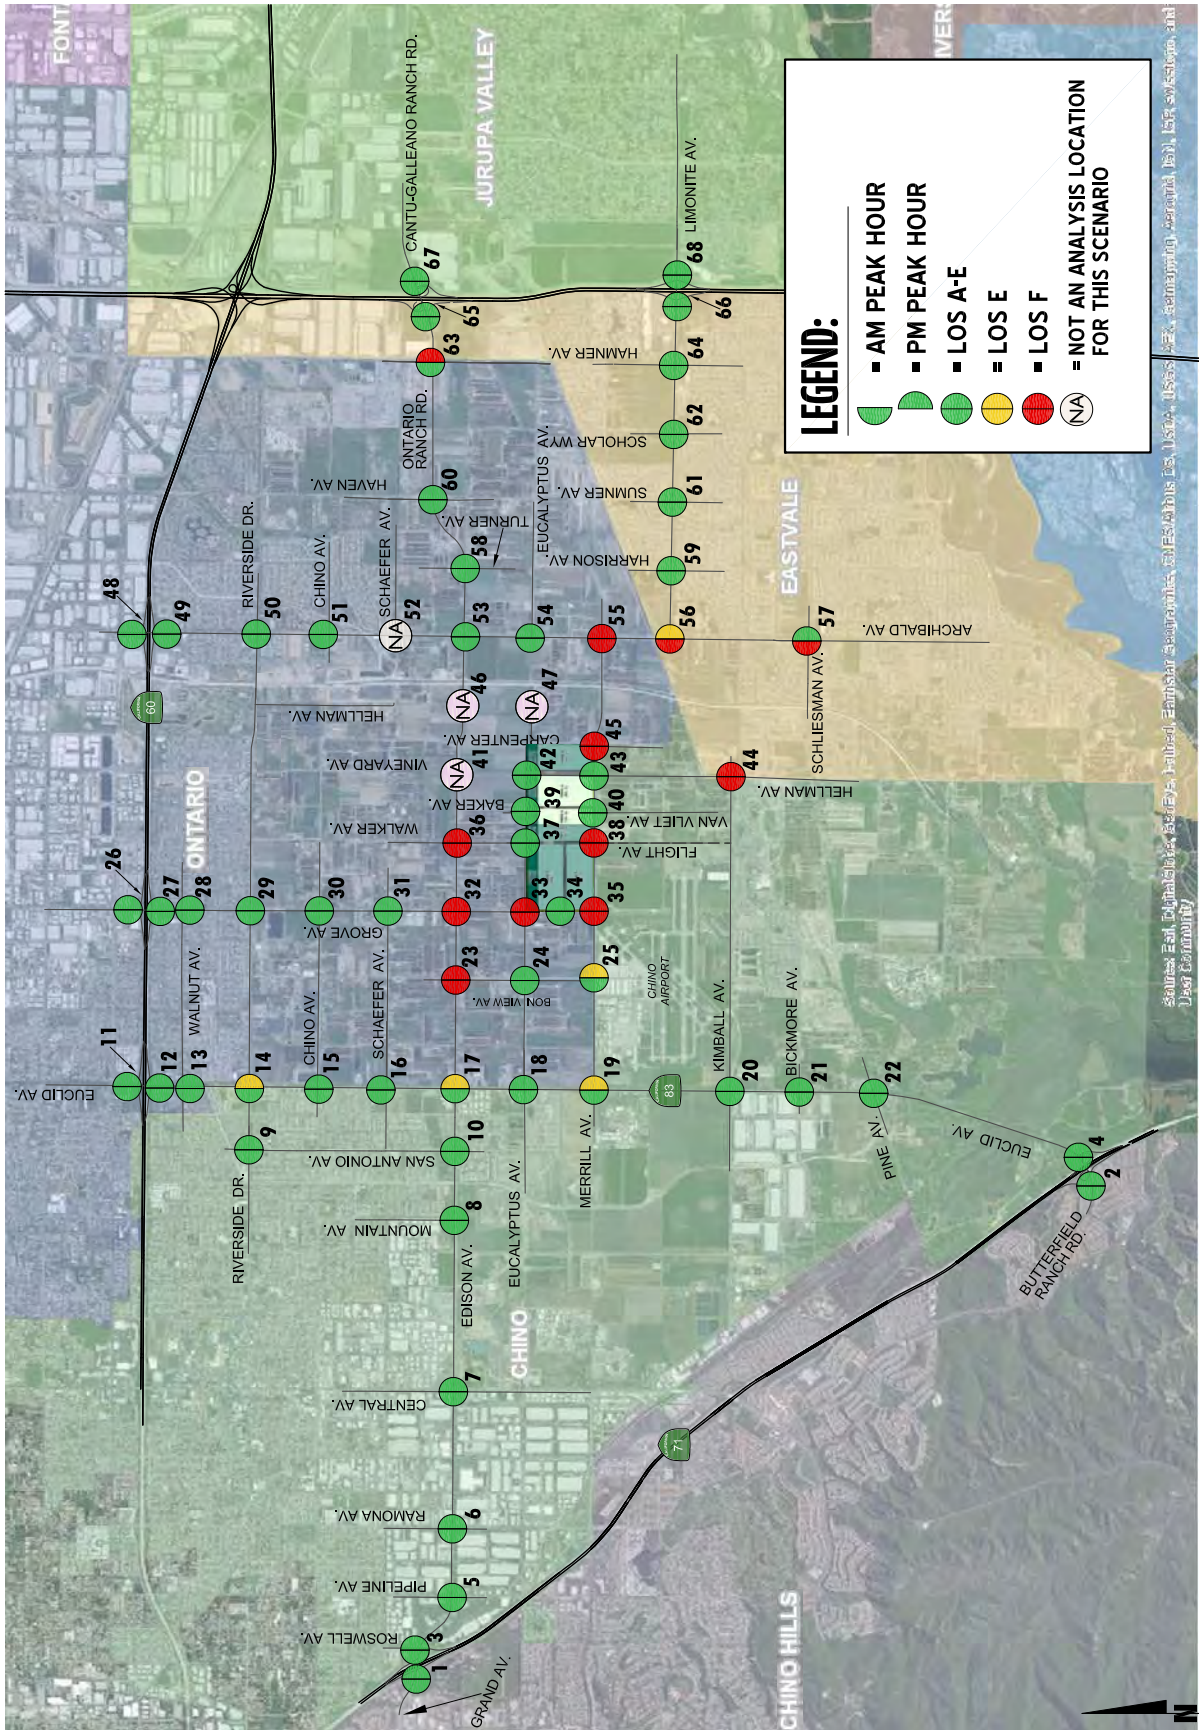

EXHIBIT 5-9: E+P (PHASE C) SUMMARY OF LOS

## 5.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

The following study area intersections are anticipated to meet peak hour volume-based traffic signal warrants for E+P (Phase A) traffic conditions (see Appendix 5.4), in addition to those previously warranted under Existing traffic conditions:

- Baker Avenue/Van Vliet Avenue & Merrill Avenue (#40)
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#43)

The following study area intersection is anticipated to meet planning level (ADT) volume-based traffic signal warrant for E+P (Phase B) traffic conditions (see Appendix 5.5), in addition to those previously warranted under Existing and E+P (Phase A) traffic conditions:

- Grove Avenue & Street A (#34)

The following study area intersection is anticipated to meet a peak hour volume-based traffic signal warrants for E+P (Phase C) traffic conditions (see Appendix 5.6), in addition to those previously warranted under Existing, E+P (Phase A), and E+P (Phase B) traffic conditions:

- Walker Avenue & Eucalyptus Avenue (#37)

## 5.5 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for E+P are presented on Tables 5-4 through 5-6 for Phases A through C. As shown on Tables 5-4 through 5-6, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows with the addition of Project (Phase A through Phase C) traffic. Worksheets for E+P (Phase A through Phase C) traffic conditions off-ramp queuing analysis are provided in Appendix 5.7, Appendix 5.8, and Appendix 5.9, respectively.

## 5.6 FREEWAY FACILITY ANALYSIS

E+P mainline directional volumes for the AM and PM peak hours are provided on Exhibits 5-10, 5-11, and 5-12 for Phases A, B, and C, respectively. As shown on Tables 5-7 through 5-9, there are no additional freeway segments or merge/diverge ramp junctions that are anticipated to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours for E+P (Phase A, Phase B, and Phase C) traffic conditions, in addition to the location previously identified under Existing traffic conditions. E+P (Phase A through Phase C) freeway facility analysis worksheets are provided in Appendix 5.10, Appendix 5.11, and Appendix 5.12, respectively.

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

## 5.7 PROJECT DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

This section provides a summary of Project deficiencies and recommended improvements. Based on the City of Ontario deficiency criteria discussed in Section 2.8 *Deficiency Criteria*, the following intersections were found to be deficient. Improvements necessary to improve project-related traffic deficiencies are also discussed below.

### 5.7.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

The effectiveness of the proposed recommended improvements is presented on Table 5-10 for E+P (Phase A), Table 5-11 for E+P (Phase B), and Table 5-12 for E+P (Phase C) traffic conditions. The intersection operations analysis worksheets for E+P (Phase A through Phase C) traffic conditions, with improvements, are included in Appendix 5.13, Appendix 5.14, and Appendix 5.15 of this TIA.

*E+P (Phase A) Conditions:*

***Euclid Avenue (SR-83) & Riverside Drive (#14)*** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Add an eastbound right turn lane.

***Grove Avenue & Edison Avenue (#32)*** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Install a traffic signal.

***Grove Avenue & Eucalyptus Avenue (#33)*** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Install a traffic signal.

***Grove Avenue & Merrill Avenue (#35)*** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Install a traffic signal.

**Walker Avenue & Edison Avenue (#36)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Install a traffic signal.

**Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase A) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Recommendation 1.1 – Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – The following improvements are necessary to improve the peak hour deficiency:

- Project to install a traffic signal.
- Project to restripe the northbound approach to provide a northbound left turn lane and right turn lane.

**Carpenter Avenue & Merrill Avenue (#45)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Install a traffic signal.

**Hamner Avenue & Ontario Ranch Road (#63)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase A) traffic resulting in a deficiency. The following improvements are necessary to improve the peak hour deficiency:

- Modify the cycle length to 130-seconds.
- Restripe the southbound approach to accommodate two left turn lanes, two through lanes, and one shared through-right turn lane.

Table 5-10

Intersection Analysis for E+P (Phase A) Conditions With Improvements

	-With Improvements <sup>4</sup>	TS	2	3	1	2	<u>3</u>	<u>0</u>	2	4	0	2	2	1	41.8	49.3	D	D	

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-Street Stop; TS = Traffic Signal; **TS** = Improvement

<sup>4</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.

<sup>5</sup> Only existing study area intersections that require improvements are shown in this Table. For all Project site adjacent design features, see Exhibit 1-4, 1-6, and 1-8.

*E+P (Phase B) Conditions:*

**Euclid Avenue (SR-83) & Riverside Drive (#14)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Add an eastbound right turn lane; and

**Recommendation 20.1 – Euclid Avenue (SR-83) & Riverside Avenue (#14)** – The following improvement is necessary to improve the peak hour deficiency:

- Restripe the northbound right turn lane as a shared through-right turn lane.

**Euclid Avenue (SR-83) & Merrill Avenue (#19)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase B) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Recommendation 21.1 – Euclid Avenue (SR-83) & Merrill Avenue (#19)** – The following improvements are necessary to improve the peak hour deficiency:

- Add a westbound left turn lane and westbound right turn lane.
- Modify the traffic signal to accommodate overlap phasing on the westbound right turn lane.

**Grove Avenue & Edison Avenue (#32)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase A).

**Grove Avenue & Eucalyptus Avenue (#33)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase A); and

**Recommendation 10.1 – Grove Avenue & Eucalyptus Avenue (#33)** – The following improvement is necessary to improve the peak hour deficiency:

- Add a 2<sup>nd</sup> northbound through lane.

**Grove Avenue & Merrill Avenue (#35)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours

with the addition of Project (Phase B) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase A).

**Walker Avenue & Edison Avenue (#36)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase A).

**Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase B) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Recommendation 1.2 – Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – The following improvements are necessary to improve the peak hour deficiency:

- Improvements from E+P (Phase A).
- Project to add a southbound left turn lane with 100-feet of storage and shared through-right turn lane.
- Project to add an eastbound left turn lane with 150-feet of storage.
- Project to add a 2<sup>nd</sup> westbound through lane.

**Carpenter Avenue & Merrill Avenue (#45)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase A).

**Archibald Avenue & Limonite Avenue (#56)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase B) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Recommendation 22.1 – Archibald Avenue & Limonite Avenue (#56)** – The following improvement is necessary to improve the peak hour deficiency:

- Add a 2<sup>nd</sup> westbound right turn lane with overlap phasing.

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-Street Stop; TS = Traffic Signal; TS = Improvement

<sup>4</sup> Improvement includes restriping the northbound approach to provide one left turn lane, two through lanes, and one shared through-right turn lane.

<sup>5</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.

<sup>6</sup> Only existing study area intersections that require improvements are shown in this Table. For all Project site adjacent design features, see Exhibit 1-4, 1-6, and 1-8.

**Hamner Avenue & Ontario Ranch Road (#63)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase A).

*E+P (Phase C) Conditions:*

**Euclid Avenue (SR-83) & Riverside Drive (#14)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase B).

**Euclid Avenue (SR-83) & Edison Avenue (#17)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Recommendation 23.1 – Euclid Avenue (SR-83) & Edison Avenue (#17)** – The following improvement is necessary to improve the peak hour deficiency:

- Add a westbound right turn lane.

**Euclid Avenue (SR-83) & Merrill Avenue (#19)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Recommendation 21.2 – Euclid Avenue (SR-83) & Merrill Avenue (#19)** – The following improvement is necessary to improve the peak hour deficiency:

- Improvements from E+P (Phase B).

**Bon View Avenue & Edison Avenue (#23)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Recommendation 24.1 – Bon View Avenue & Edison Avenue (#23)** – The following improvement is necessary to improve the peak hour deficiency:

- Install a traffic signal.

**Grove Avenue & Edison Avenue (#32)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is

anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase B).

**Grove Avenue & Eucalyptus Avenue (#33)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase B).

**Grove Avenue & Merrill Avenue (#35)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase B).

**Recommendation 12.1 – Grove Avenue & Merrill Avenue (#35)** – The following improvements are necessary to improve the peak hour deficiency:

- Add an eastbound left turn lane.
- Project to add a 2<sup>nd</sup> westbound through lane.

**Walker Avenue & Edison Avenue (#36)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase B).

**Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Recommendation 1.3 – Walker Avenue/Flight Avenue & Merrill Avenue (#38)** – The following improvement is necessary to improve the peak hour deficiency:

- Improvements from E+P (Phase A) and E+P (Phase B).

**Hellman Avenue & Kimball Avenue (#44)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency. The following improvements are necessary to improve the peak hour deficiency:

- Operation of the traffic signal and the addition of a 2<sup>nd</sup> northbound left turn lane.

**Carpenter Avenue & Merrill Avenue (#45)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency. The following improvement is necessary to improve the peak hour deficiency:

- Same as E+P (Phase B).

**Archibald Avenue & Merrill Avenue (#55)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Recommendation 25.1 – Archibald Avenue & Merrill Avenue (#55)** – The following improvements are necessary to improve the peak hour deficiency:

- Stripe a southbound right turn lane and modify the traffic signal to implement overlap phasing on the southbound right turn lane.

**Archibald Avenue & Limonite Avenue (#56)** – This intersection was found to operate at an acceptable LOS (LOS D or better) during the peak hours under Existing traffic conditions, however, the addition of Project (Phase C) traffic is anticipated to result in deficient peak hour operations during one or both peak hours.

**Recommendation 22.2 – Archibald Avenue & Limonite Avenue (#56)** – The following improvement is necessary to improve the peak hour deficiency:

- Improvements from E+P (Phase B).

**Archibald Avenue & Schleisman Avenue (#57)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase C) traffic resulting in a deficiency. The following improvements are necessary to improve the peak hour deficiency:

- Modify the cycle length to 130-seconds.

**Hamner Avenue & Ontario Ranch Road (#63)** – This intersection was found to operate at an unacceptable LOS (LOS E or worse) during the peak hours under Existing traffic conditions, and is anticipated to continue to operate at an unacceptable LOS during the one or more peak hours with the addition of Project (Phase B) traffic resulting in a deficiency. The following improvements are necessary to improve the peak hour deficiency:

- Same as E+P (Phase B).

#### **5.7.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously on Tables 5-4 through 5-6, there are no peak hour queuing issues at the study area interchanges. As such, no improvements have been recommended.

#### **5.7.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES**

SHS facilities are owned and maintained by Caltrans. Improvements to the SHS is regional/state-wide and Caltrans' responsibility. Improvements to freeway facilities LOS deficiencies is addressed through Caltrans regional improvement plans and programs. At this time, Caltrans has no plans or programs in place to address development-specific deficiencies affecting the SHS. There are no feasible measures to address LOS deficiencies that can be autonomously implemented by the Lead Agency or the Project Applicant.

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-Street Stop; TS = Traffic Signal; **TS** = Improvement

<sup>4</sup> Improvement includes restriping the northbound approach to provide one left turn lane, two through lanes, and one shared through-right turn lane.

<sup>5</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.

<sup>6</sup> Only existing study area intersections that require improvements are shown in this Table. For all Project site adjacent design features, see Exhibit 1-4, 1-6, and 1-8.

This Page Intentionally Left Blank

## 6 OPENING YEAR CUMULATIVE (2022) TRAFFIC CONDITIONS

This section discusses the methods used to develop Opening Year Cumulative (2022) Without and With Project traffic forecasts, and the resulting intersection operations, freeway facility operations, and traffic signal warrant analyses.

### 6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2022) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only.
- The new interchange improvements at the I-15 Freeway and Limonite Avenue are assumed to be completed (see Exhibit 6-1).

### 6.2 OPENING YEAR CUMULATIVE (2022) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus an ambient growth factor of 6.12% plus traffic from pending and approved but not yet constructed known development projects in the area. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2022) Without Project traffic conditions are shown on Exhibits 6-2 and 6-3, respectively.

### 6.3 OPENING YEAR CUMULATIVE (2022) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Opening Year Cumulative (2022) Without Project traffic in conjunction with the addition of Project (Phase A) traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2022) With Project traffic conditions are shown on Exhibits 6-4 and 6-5, respectively.

EXHIBIT 6-1: I-15 / LIMONITE AVENUE INTERCHANGE PROJECT

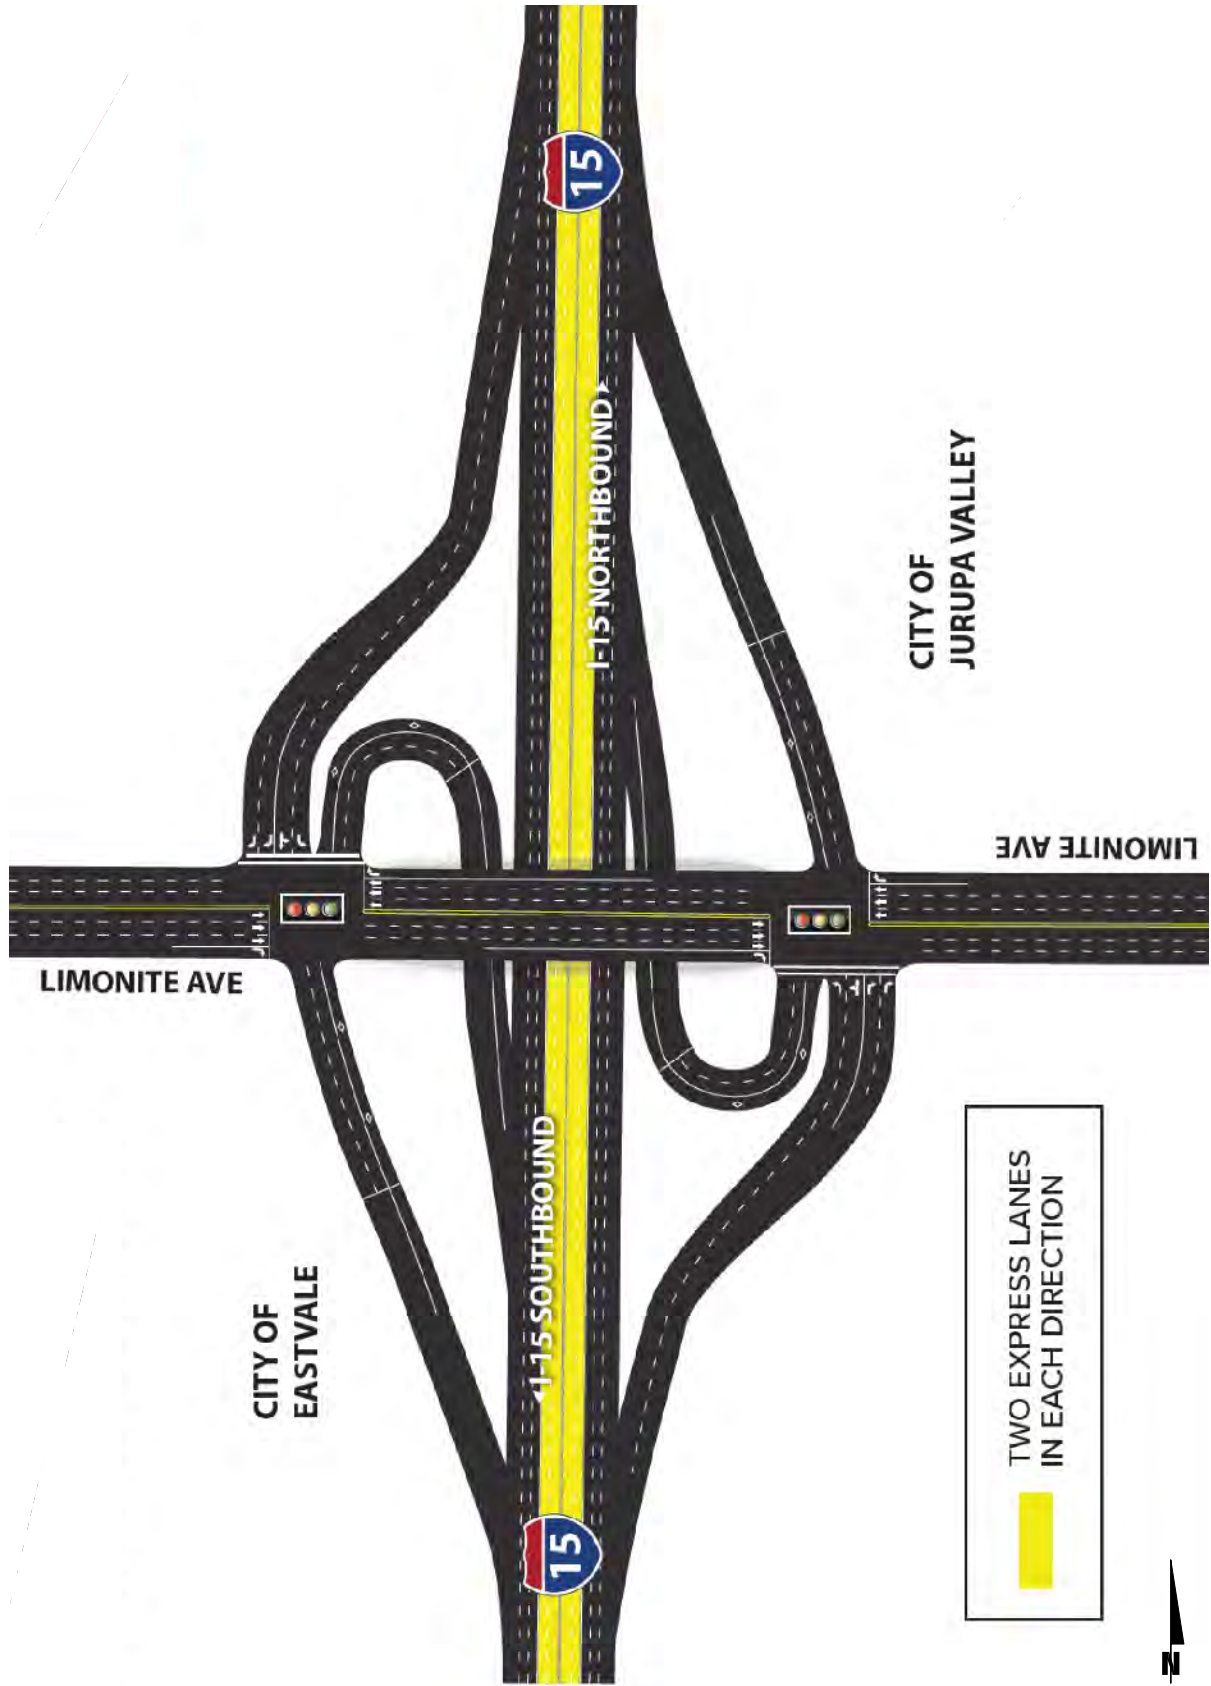

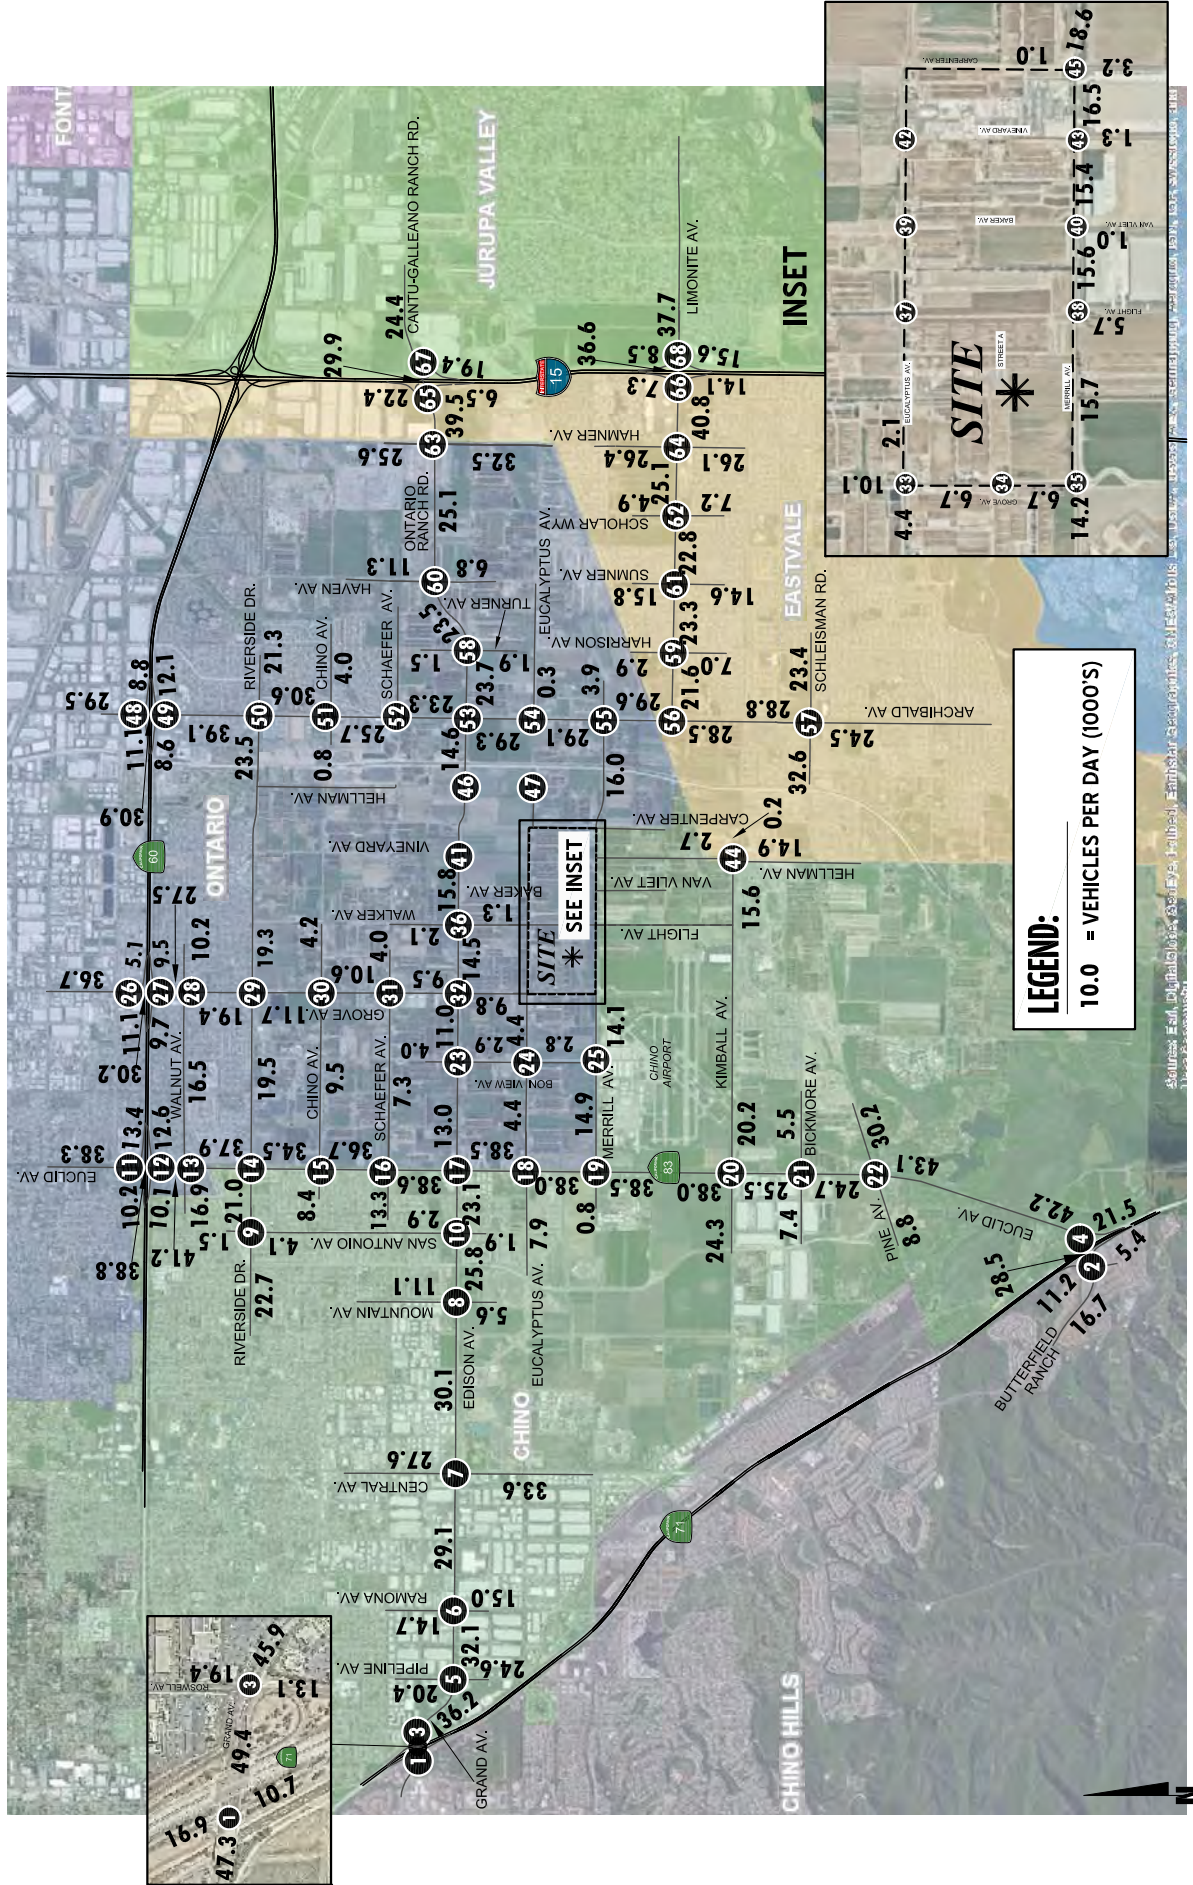

EXHIBIT 6-2: OPENING YEAR CUMULATIVE (2022) WITHOUT PROJECT AVERAGE DAILY TRAFFIC (ADT) (IN PCE)

## 6.4 INTERSECTION OPERATIONS ANALYSIS

### 6.4.1 OPENING YEAR CUMULATIVE (2022) WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Opening Year Cumulative (2022) Without Project conditions with roadway and intersection geometrics consistent with Section 6.1 *Roadway Improvements*. As shown on Table 6-1, the following additional study area intersections are anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2022) Without Project traffic conditions:

- Euclid Avenue (SR-83) & Riverside Drive (#14) – LOS E AM and PM peak hours
- Euclid Avenue (SR-83) & Merrill Avenue (#19) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Pine Avenue (#22) – LOS E PM peak hour only
- Grove Avenue & Edison Avenue (#32) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#33) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F PM peak hour only
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS E AM peak hour only
- Carpenter Avenue & Merrill Avenue (#45) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#56) – LOS E AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#63) – LOS F PM peak hour only

A summary of the peak hour intersection LOS for Opening Year Cumulative (2022) Without Project conditions is shown on Exhibit 6-6. The intersection operations analysis worksheets for Opening Year Cumulative (2022) Without Project traffic conditions are included in Appendix 6.1 of this TIA.

### 6.4.2 OPENING YEAR CUMULATIVE (2022) WITH PROJECT TRAFFIC CONDITIONS

As shown on Table 6-1 and illustrated on Exhibit 6-7, the following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2022) With Project traffic conditions with the addition of Phase A Project traffic, in addition to the locations identified above for Opening Year Cumulative (2022) Without Project traffic conditions.

- Euclid Avenue (SR-83) & Edison Avenue (#17) – LOS E PM peak hour only
- Baker Avenue/Van Vliet Avenue & Merrill Avenue (#40) – LOS E PM peak hour only
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#43) – LOS F AM peak hour; LOS E PM peak hour

The intersection operations analysis worksheets for Opening Year Cumulative (2022) With Project traffic conditions are included in Appendix 6.2 of this TIA.

Table 6-1

\* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

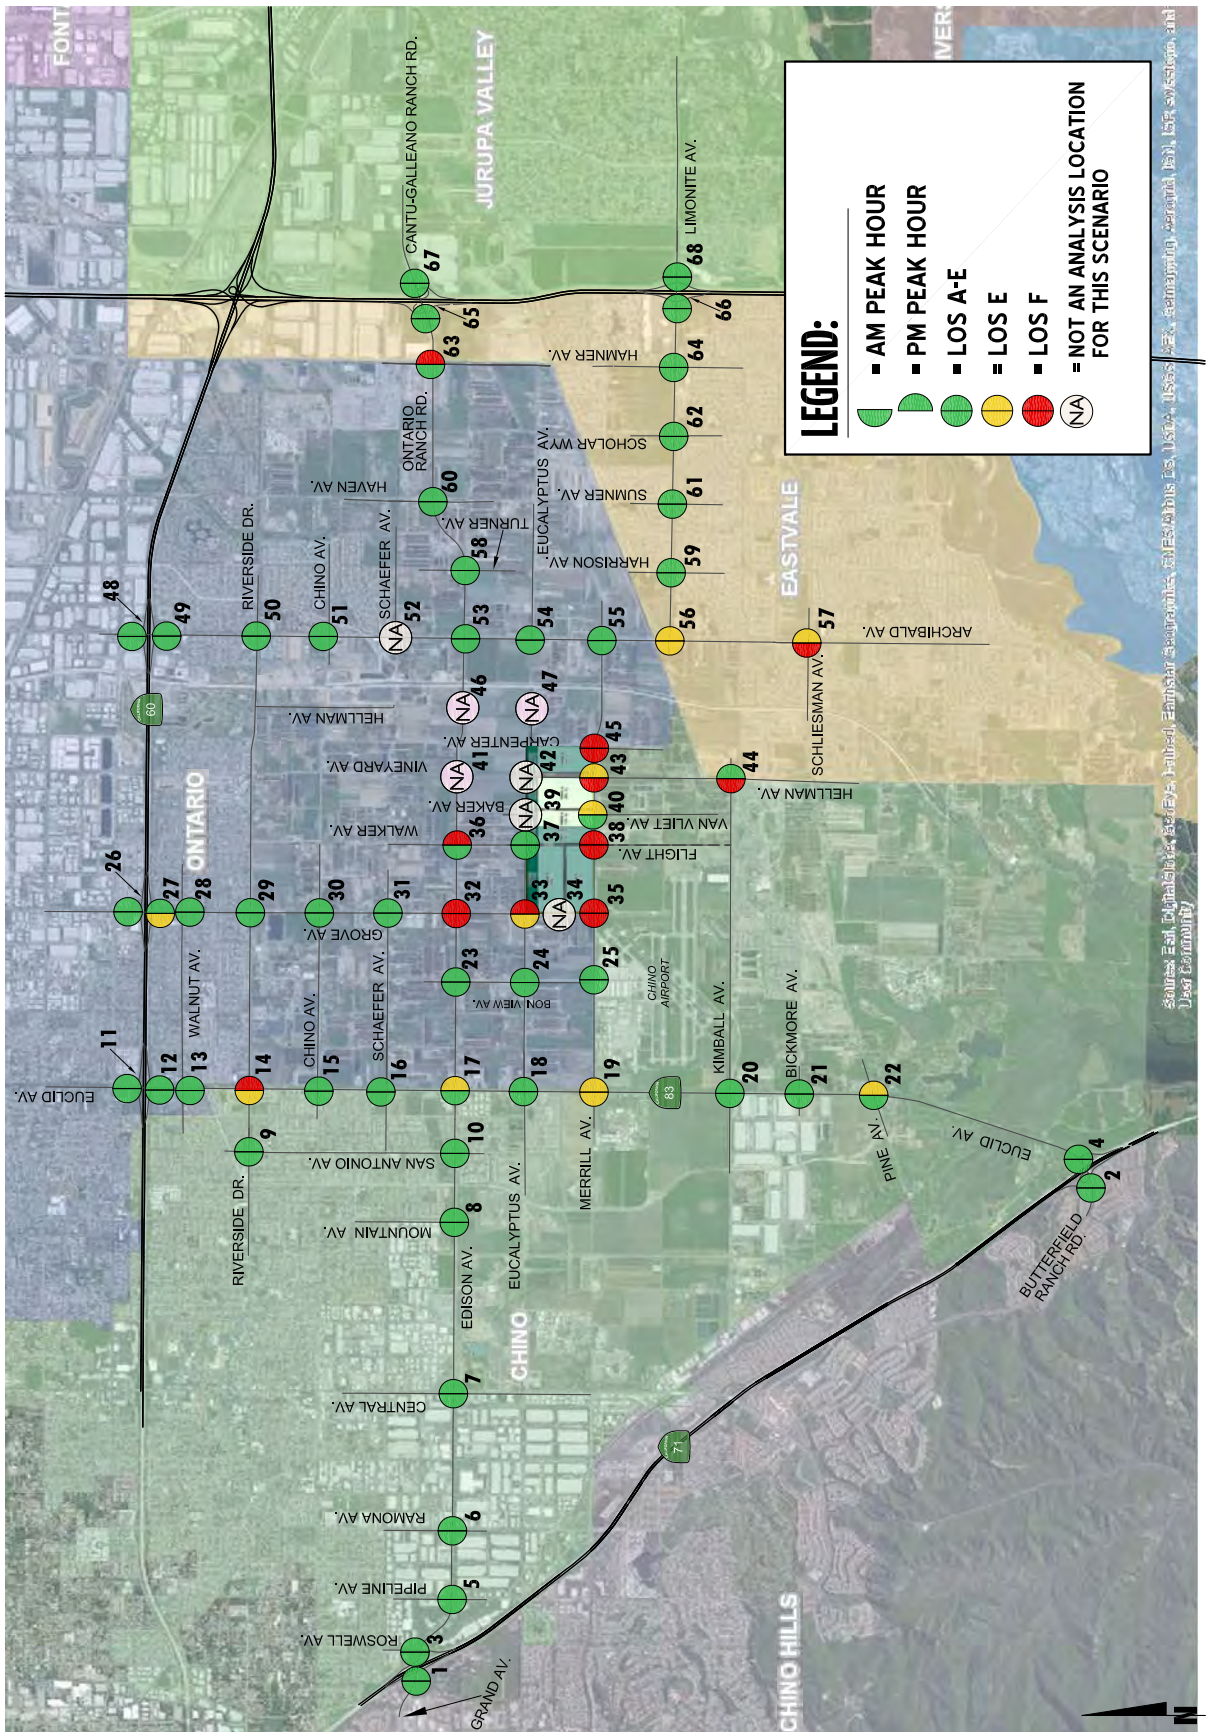

<sup>3</sup> Minimum acceptable LOS for each applicable jurisdiction.

<sup>4</sup> Assumes signalization of the intersection and buildout of the east leg.

<sup>5</sup> Assumes new interchange improvements at I-15 Freeway and Limonite Avenue.

EXHIBIT 6-7: OPENING YEAR CUMULATIVE (2022) WITH PROJECT SUMMARY OF LOS

## 6.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

Bon View Avenue and Merrill Avenue is anticipated to warrant a peak hour volume-based traffic signal under Opening Year Cumulative (2022) Without Project traffic conditions in addition to those previously warranted under Existing and E+P traffic conditions (see Appendix 6.3). There are no additional traffic signals warranted for Opening Year Cumulative (2022) With Project traffic conditions in addition to those previously warranted under Opening Year Cumulative (2022) Without traffic conditions (see Appendix 6.4).

## 6.6 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for Opening Year Cumulative (2022) Without and With Project traffic conditions are shown on Table 6-2. As shown on Table 6-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows with the addition of Project traffic. Worksheets for Opening Year Cumulative (2022) Without and With Project traffic conditions off-ramp queuing analysis are provided in Appendices 6.5 and 6.6, respectively.

## 6.7 FREEWAY FACILITY ANALYSIS

Opening Year Cumulative (2022) Without and With Project mainline directional volumes for the AM and PM peak hours are provided on Exhibits 6-8 and 6-9, respectively. As shown on Table 6-3, the following additional freeway segments and merge/diverge ramp junctions are anticipated to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours for both Opening Year cumulative (2022) Without and With Project conditions, in addition to those previously identified under Existing and E+P traffic conditions:

- SR-60 Freeway Westbound, West of Euclid Avenue (SR-83) (#9) – LOS E AM and PM peak hours
- SR-60 Freeway Westbound, Euclid Avenue (SR-83) to Grove Avenue (#11) – LOS E AM peak hour only
- SR-60 Freeway Westbound, East of Grove Avenue (#15) – LOS E AM and PM peak hours
- SR-60 Freeway Eastbound, Euclid Avenue to Grove Avenue (#20) – LOS E AM peak hour only
- SR-60 Freeway Eastbound, Eastbound Off-Ramp at Grove Avenue (#21) – LOS E AM peak hour only
- SR-60 Freeway Eastbound, East of Grove Avenue (#24) – LOS E AM peak hour only
- I-15 Freeway Northbound, Northbound On-Ramp at Cantu Galleano Ranch Road (#32) – LOS E AM peak hour only

Opening Year Cumulative (2022) Without and With Project freeway facility analysis worksheets are provided in Appendix 6.7 and 6.8, respectively.

Table 6-2

Peak Hour Freeway Off-Ramp Queuing Summary for Opening Year Cumulative (2022) Conditions

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

**BOLD** = Unacceptable Level of Service

<sup>1</sup> Number of lanes are in the specified direction and is based on existing conditions.

<sup>2</sup> Density is measured by passenger cars per mile per lane (pc/mi/ln).

<sup>3</sup> LOS = Level of Service

## **6.8 RECOMMENDED IMPROVEMENTS**

### **6.8.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS**

Improvement strategies have been recommended at intersections that have been identified as deficient, in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). Deficiencies have been identified at deficient intersections if the Project contributes 50 or more peak hours.

The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2022) traffic deficiencies are presented on Table 6-4. If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of City DIF fees or fair share contribution as identified on Table 1-3. Worksheets for Opening Year Cumulative (2022) Without and With Project conditions, with improvements, HCM calculation worksheets are provided in Appendix 6.9 and Appendix 6.10.

### **6.8.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously on Table 6-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for Opening Year Cumulative (2021) traffic conditions. As such, no improvements have been recommended.

### **6.8.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES**

SHS facilities are owned and maintained by Caltrans. Improvements to the SHS is regional/state-wide and Caltrans' responsibility. Improvements to freeway facilities LOS deficiencies is addressed through Caltrans regional improvement plans and programs. At this time, Caltrans has no plans or programs in place to address development-specific deficiencies affecting the SHS. There are no feasible measures to address LOS deficiencies that can be autonomously implemented by the Lead Agency or the Project Applicant.

Table 6-4

Intersection Analysis for Opening Year Cumulative (2022) Conditions With Improvements

#	Intersection <sup>6</sup>	Traffic Control <sup>3</sup>	Intersection Approach Lanes <sup>1</sup>												Delay <sup>2</sup> (secs.)		Level of Service		Jurisdiction(s) / LOS Standard

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.  
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free Right Turn; d = Defacto Right Turn Lane; 1 = Improvement  
<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.  
<sup>3</sup> AWS = All-Way Stop; CSS = Cross-Street Stop; TS = Traffic Signal; TS = Improvement  
<sup>4</sup> Improvement includes restriping the northbound approach to provide one left turn lane, two through lanes, and one shared through-right turn lane.  
<sup>5</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.  
<sup>6</sup> Only existing study area intersections that require improvements are shown in this Table. For all Project site adjacent design features, see Exhibits 1-4, 1-6, and 1-8.

## **7 OPENING YEAR CUMULATIVE (2025) TRAFFIC CONDITIONS**

This section discusses the methods used to develop Opening Year Cumulative (2025) Without and With Project traffic forecasts, and the resulting intersection operations, freeway facility operations, and traffic signal warrant analyses.

### **7.1 ROADWAY IMPROVEMENTS**

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2025) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the Project’s frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only.
- The new interchange improvements at the I-15 Freeway and Limonite Avenue are assumed to be completed.

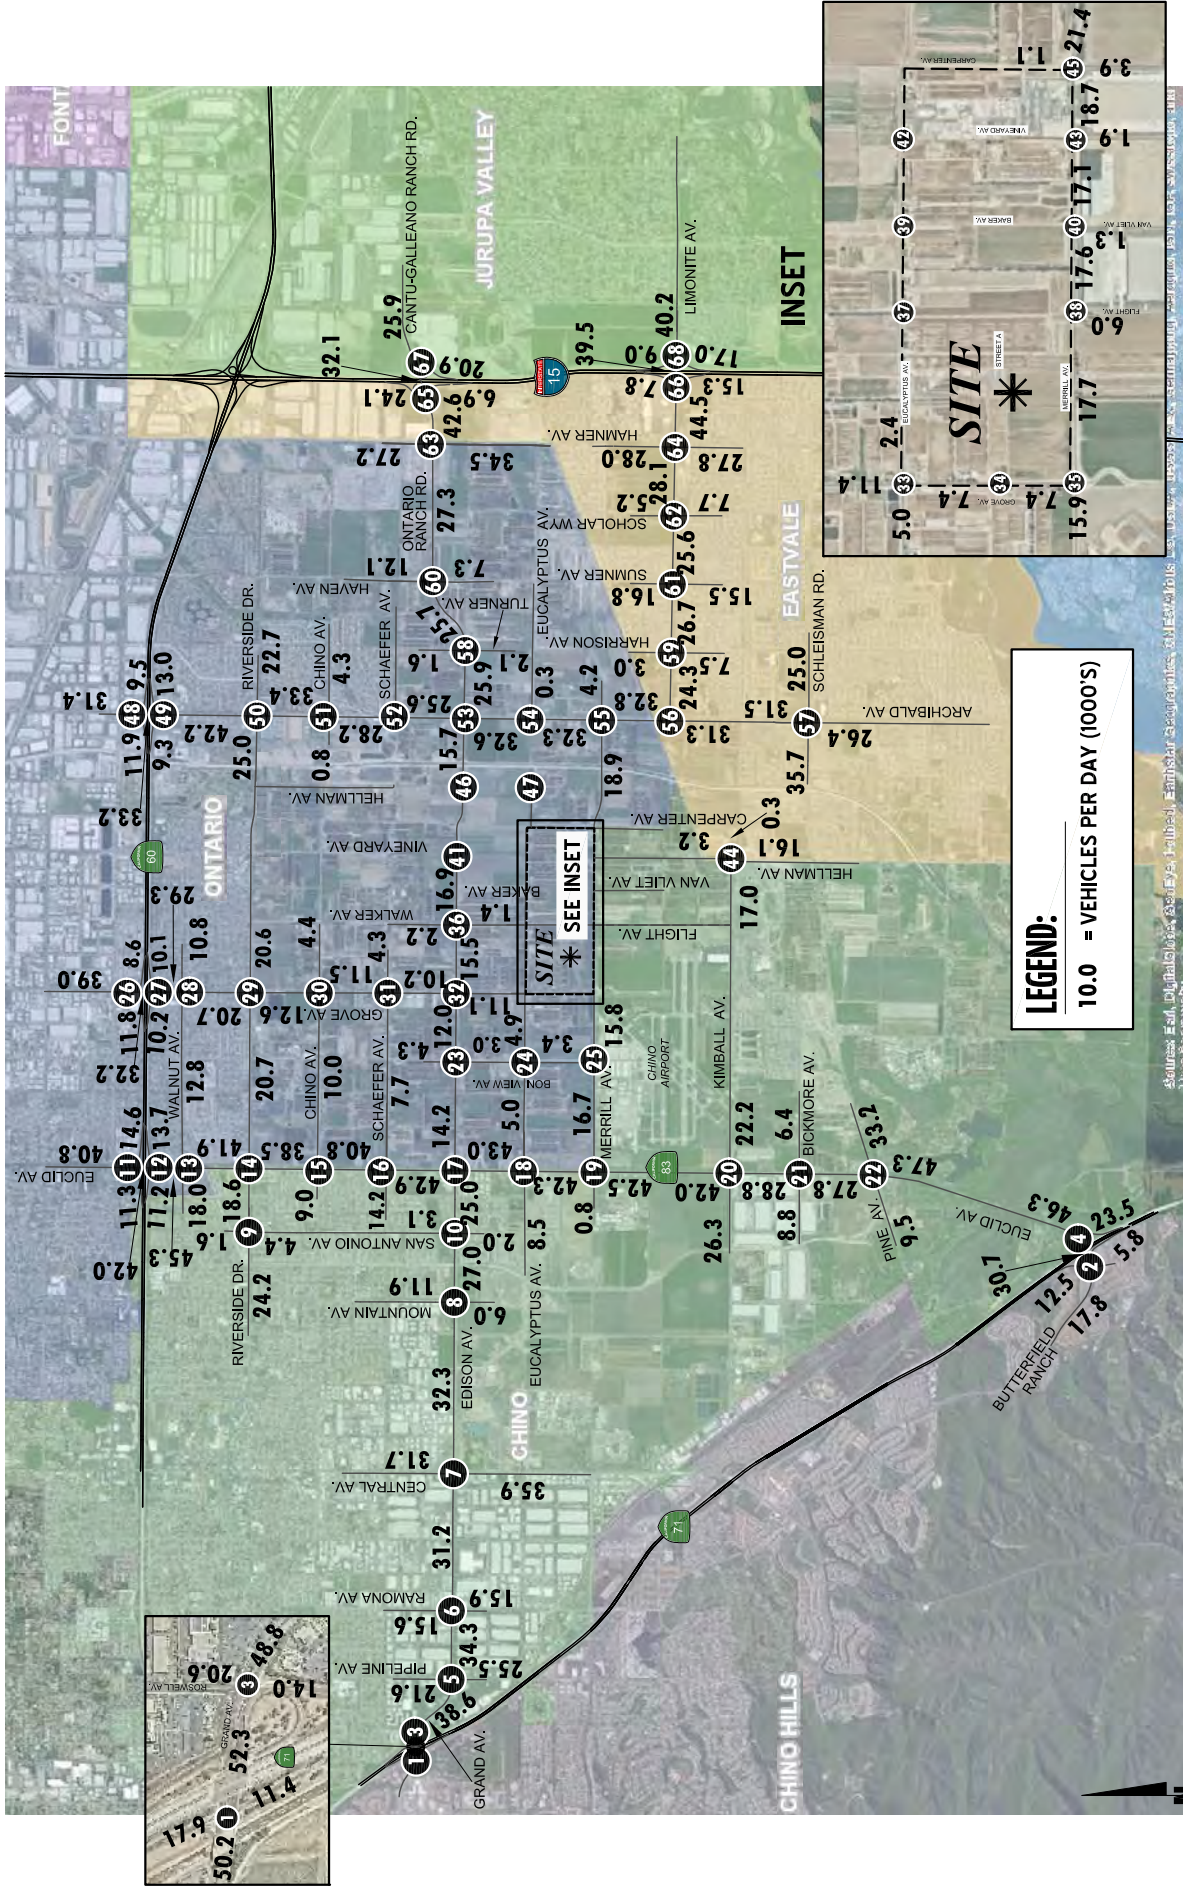

### **7.2 OPENING YEAR CUMULATIVE (2025) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS**

This scenario includes Existing traffic volumes plus an ambient growth factor of 12.62% plus traffic from pending and approved but not yet constructed known development projects in the area. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2025) Without Project traffic conditions are shown on Exhibits 7-1 and 7-2, respectively.

### **7.3 OPENING YEAR CUMULATIVE (2025) WITH PROJECT TRAFFIC VOLUME FORECASTS**

This scenario includes Opening Year Cumulative (2025) Without Project traffic in conjunction with the addition of Project (Phase B) traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2025) With Project traffic conditions are shown on Exhibits 7-3 and 7-4, respectively.

## 7.4 INTERSECTION OPERATIONS ANALYSIS

### 7.4.1 OPENING YEAR CUMULATIVE (2025) WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Opening Year Cumulative (2025) Without Project conditions with roadway and intersection geometrics consistent with Section 7.1 *Roadway Improvements*. As shown on Table 7-1, the following additional study area intersections are anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2025) Without Project traffic conditions:

- Euclid Avenue (SR-83) & Riverside Drive (#14) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Edison Avenue (#17) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Merrill Avenue (#19) – LOS E PM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Kimball Avenue (#20) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Pine Avenue (#22) – LOS E AM peak hour; LOS F PM peak hour
- Grove Avenue & SR-60 Eastbound Ramps (#27) – LOS F AM peak hour only
- Grove Avenue & Edison Avenue (#32) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#33) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F PM peak hour only
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#43) – LOS E AM peak hour only
- Carpenter Avenue & Merrill Avenue (#45) – LOS F AM and PM peak hours
- Archibald Avenue & SR-60 Westbound Ramps (#48) – LOS E AM peak hour only
- Archibald Avenue & Merrill Avenue (#55) – LOS F AM and PM peak hour
- Archibald Avenue & Limonite Avenue (#56) – LOS F AM and PM peak hours
- Hamner Avenue & Ontario Ranch Road (#63) – LOS F PM peak hour only

A summary of the peak hour intersection LOS for Opening Year Cumulative (2025) Without Project conditions is shown on Exhibit 7-5. The intersection operations analysis worksheets for Opening Year Cumulative (2025) Without Project traffic conditions are included in Appendix 7.1 of this TIA.

\* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

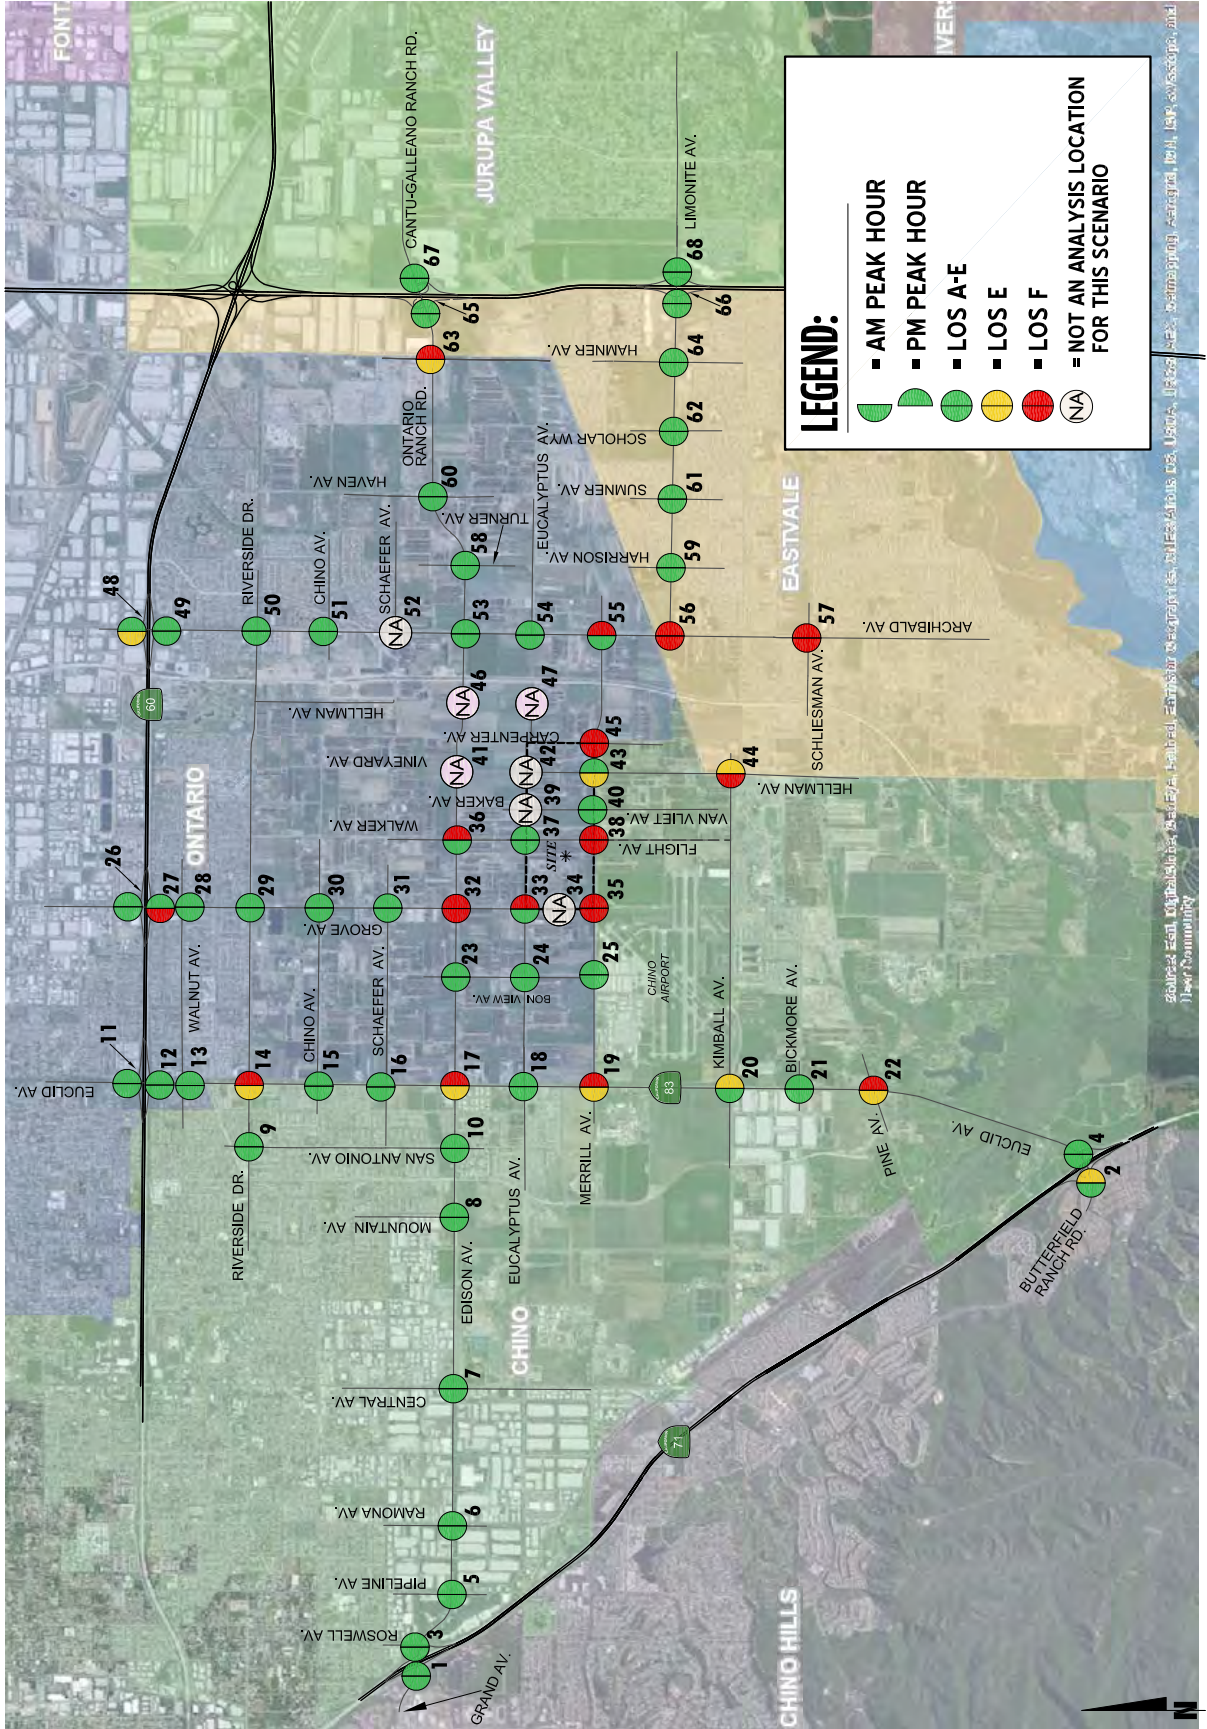

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

<sup>3</sup> Minimum acceptable LOS for each applicable jurisdiction.

<sup>4</sup> Assumes signalization of the intersection and buildout of the east leg.

<sup>5</sup> Assumes new interchange improvements at I-15 Freeway and Limonite Avenue.

EXHIBIT 7-5: OPENING YEAR CUMULATIVE (2025) WITHOUT PROJECT SUMMARY OF LOS

Source: Esri, DigitalGlobe, GeoEye, Earthstar OpenSource, Bing, Aero, IGN, USGS, Aero, GeoEye, IGN, Aerotech, Earthstar, USDA, (NAIP, NAIP), Swirebird, and GeoEye. © 2012 Earthstar Geographics, CNR Aero, DLR, GeoEye, IGN, Aerotech, Earthstar, USDA, (NAIP, NAIP), Swirebird, and GeoEye.

#### **7.4.2 OPENING YEAR CUMULATIVE (2025) WITH PROJECT TRAFFIC CONDITIONS**

As shown on Table 7-1 and illustrated on Exhibit 7-6, the following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2025) With Project traffic conditions with the addition of Phase B Project traffic, in addition to the locations identified above for Opening Year Cumulative (2025) Without Project traffic conditions.

- Bon View Avenue & Merrill Avenue (#25) – LOS F PM peak hour only
- Grove Avenue & Chino Avenue (#30) – LOS F PM peak hour only
- Grove Avenue & Schaefer Avenue (#31) – LOS F PM peak hour only
- Baker Avenue/Van Vliet Avenue & Merrill Avenue (#40) – LOS E PM peak hour only
- Archibald Avenue & Ontario Ranch Road (#53) – LOS F AM peak hour only

The intersection operations analysis worksheets for Opening Year Cumulative (2025) With Project traffic conditions are included in Appendix 7.2 of this TIA.

#### **7.5 TRAFFIC SIGNAL WARRANTS ANALYSIS**

There are no study area intersections anticipated to meet either peak hour or planning level (ADT) volume-based traffic signal warrants for Opening Year Cumulative (2025) Without and With Project traffic conditions, in addition to those previously warranted under Existing (2019), E+P, and Opening Year Cumulative (2022) traffic conditions (see Appendix 7.3 and Appendix 7.4).

#### **7.6 OFF-RAMP QUEUING ANALYSIS**

Queuing analysis findings for Opening Year Cumulative (2025) Without and With Project traffic conditions are shown on Table 7-2. As shown on Table 7-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows with the addition of Project (Phase B) traffic. Worksheets for Opening Year Cumulative (2025) Without and With Project traffic conditions off-ramp queuing analysis are provided in Appendices 7.5 and 7.6, respectively.

EXHIBIT 7-6: OPENING YEAR CUMULATIVE (2025) WITH PROJECT SUMMARY OF LOS

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

## 7.7 FREEWAY FACILITY ANALYSIS

Opening Year Cumulative (2025) Without and With Project mainline directional volumes for the AM and PM peak hours are provided on Exhibits 7-7 and 7-8, respectively. As shown on Table 7-3, the following additional freeway segments and merge/diverge ramp junctions are anticipated to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours for both Opening Year Cumulative (2025) Without and With Project conditions, in addition to those previously identified under Existing, E+P, and Opening Year Cumulative (2022) traffic conditions:

- SR-60 Freeway Westbound, Westbound On-Ramp at Euclid Avenue (SR-83) (#10) – LOS F AM peak hour only
- SR-60 Freeway Westbound, Between Grove Avenue Ramps (#13) – LOS E AM peak hour only
- SR-60 Freeway Eastbound, West of Euclid Avenue (SR-83) (#18) – LOS E AM peak hour only

Opening Year Cumulative (2025) Without and With Project freeway facility analysis worksheets are provided in Appendix 7.7 and 7.8, respectively.

## 7.8 RECOMMENDED IMPROVEMENTS

### 7.8.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient, in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). Deficiencies have been identified at deficient intersections if the Project contributes 50 or more peak hours.

The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2025) traffic deficiencies are presented on Table 7-4. If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of City DIF fees or fair share contribution as identified on Table 1-3. Worksheets for Opening Year Cumulative (2025) Without and With Project conditions, with improvements, HCM calculation worksheets are provided in Appendix 7.9 and Appendix 7.10.

### 7.8.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously on Table 7-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for Opening Year Cumulative (2025) traffic conditions. As such, no improvements have been recommended.

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.  
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-Street Stop; TS = Traffic Signal; **TS** = Improvement

<sup>4</sup> Improvement includes restriping the northbound approach to provide one left turn lane, two through lanes, and one shared through-right turn lane.

<sup>5</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.

<sup>6</sup> Only existing study area intersections that require improvements are shown in this Table. For all Project site adjacent design features, see Exhibits 1-4, 1-6, and 1-8.

### **7.8.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES**

SHS facilities are owned and maintained by Caltrans. Improvements to the SHS is regional/state-wide and Caltrans' responsibility. Improvements to freeway facilities LOS deficiencies is addressed through Caltrans regional improvement plans and programs. At this time, Caltrans has no plans or programs in place to address development-specific deficiencies affecting the SHS. There are no feasible measures to address LOS deficiencies that can be autonomously implemented by the Lead Agency or the Project Applicant.

This Page Intentionally Left Blank

## 8 OPENING YEAR CUMULATIVE (2026) TRAFFIC CONDITIONS

This section discusses the methods used to develop Opening Year Cumulative (2019) Without and With Project traffic forecasts, and the resulting intersection operations, freeway facility operations, and traffic signal warrant analyses.

### 8.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2026) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only.
- The new interchange improvements at the I-15 Freeway and Limonite Avenue are assumed to be completed.

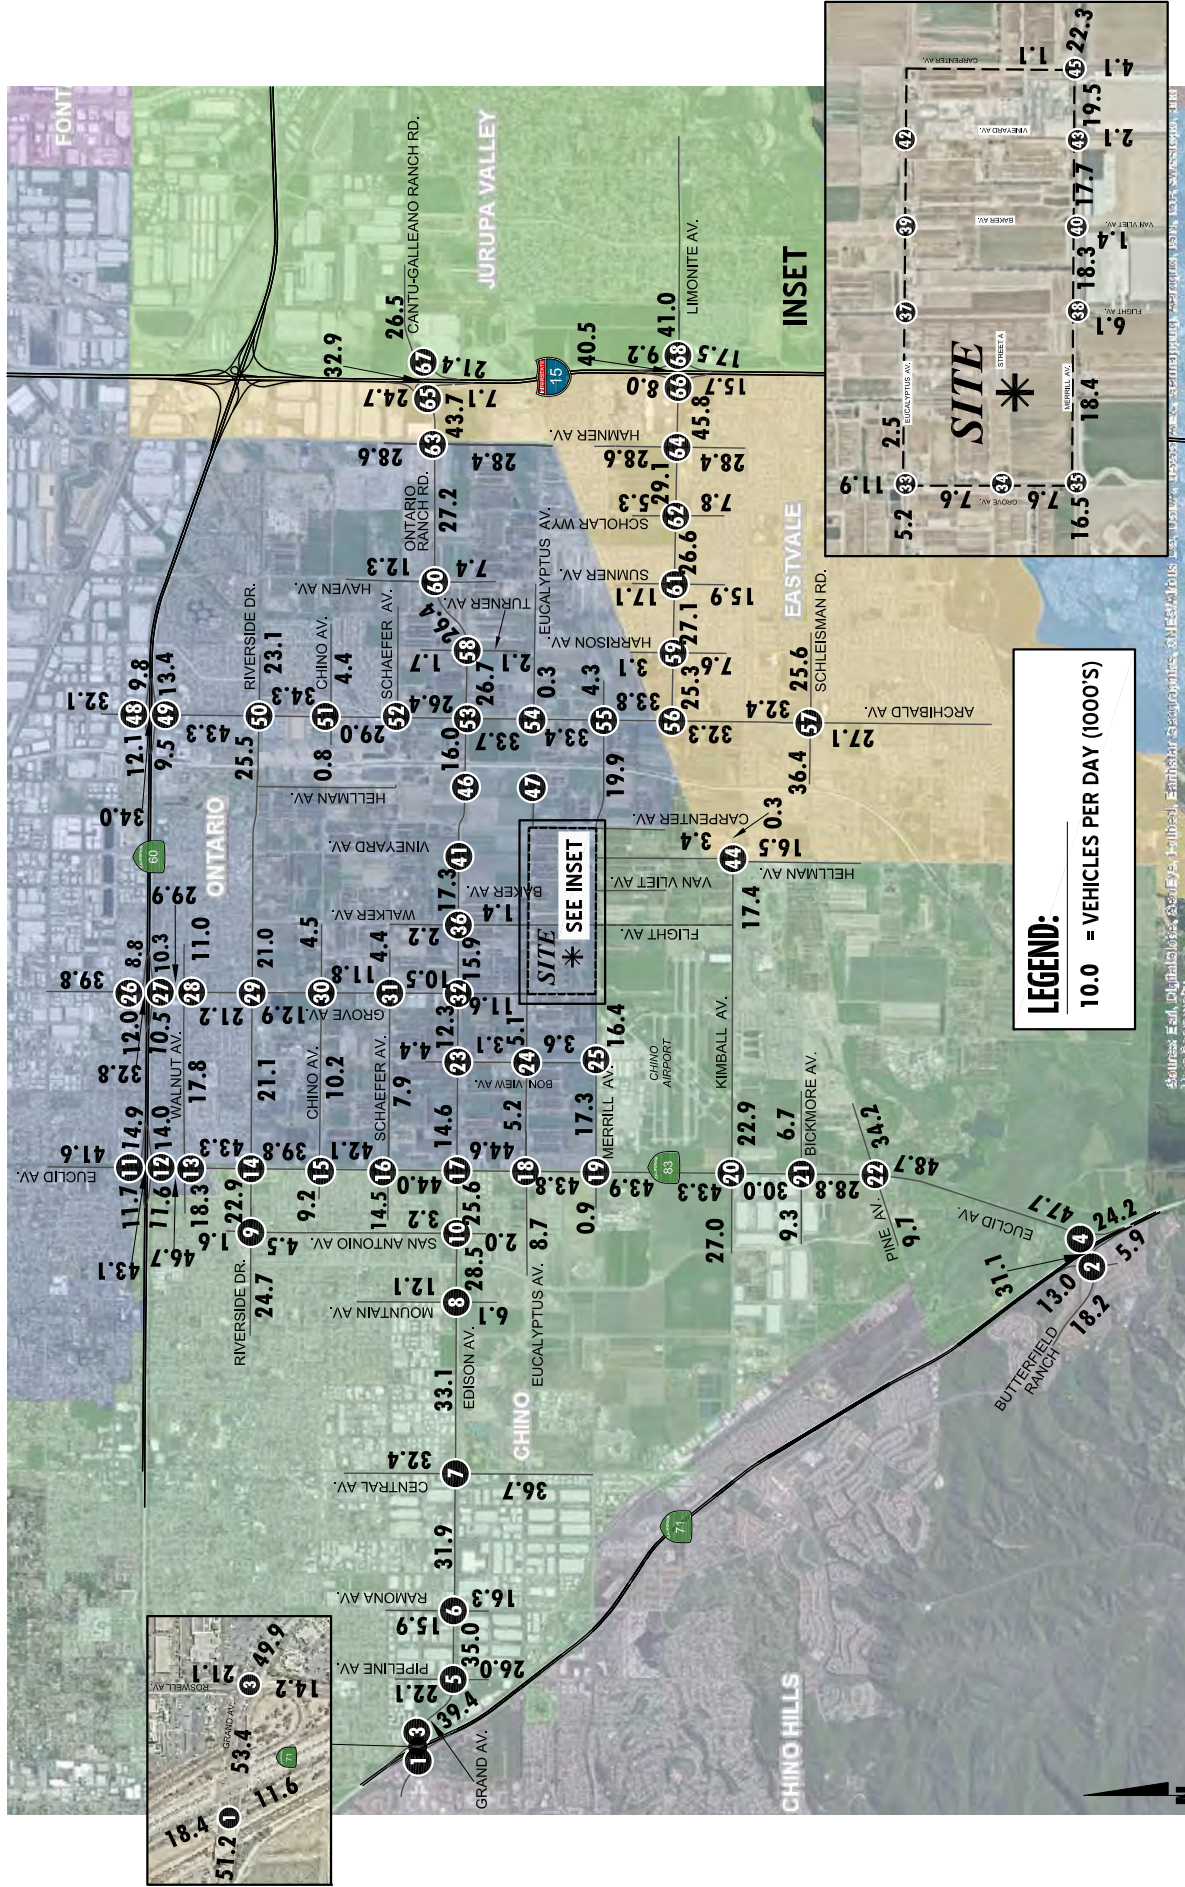

### 8.2 OPENING YEAR CUMULATIVE (2026) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus an ambient growth factor of 14.87% plus traffic from pending and approved but not yet constructed known development projects in the area. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2026) Without Project traffic conditions are shown on Exhibits 8-1 and 8-2, respectively.

### 8.3 OPENING YEAR CUMULATIVE (2026) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Opening Year Cumulative (2026) Without Project traffic in conjunction with the addition of Project (Phase C) traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2026) With Project traffic conditions are shown on Exhibits 8-3 and 8-4, respectively.

**EXHIBIT 8-1: OPENING YEAR CUMULATIVE (2026) WITHOUT PROJECT AVERAGE DAILY TRAFFIC (ADT) (IN PCE)**

Map of the project site area showing ADT values. The site is marked with an asterisk. Surrounding areas include Font, Jurupa Valley, Eastvale, and Chino Hills. Major roads like I-15, I-60, and I-78 are shown.

## 8.4 INTERSECTION OPERATIONS ANALYSIS

### 8.4.1 OPENING YEAR CUMULATIVE (2026) WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Opening Year Cumulative (2026) Without Project conditions with roadway and intersection geometrics consistent with Section 8.1 *Roadway Improvements*. As shown on Table 8-1, the following additional study area intersections are anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2026) Without Project traffic conditions:

- Central Avenue & Edison Avenue (#7) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#12) – LOS E AM peak hour only
- Euclid Avenue (SR-83) & Riverside Drive (#14) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Schaefer Avenue (#16) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Edison Avenue (#17) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Merrill Avenue (#19) – LOS E PM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Kimball Avenue (#20) – LOS F PM peak hour only
- Euclid Avenue (SR-83) & Pine Avenue (#22) – LOS E AM peak hour; LOS F PM peak hour
- Bon View Avenue & Edison Avenue (#23) – LOS F AM and PM peak hours
- Bon View Avenue & Merrill Avenue (#25) – LOS E PM peak hour only
- Grove Avenue & SR-60 Eastbound Ramps (#27) – LOS F AM peak hour only
- Grove Avenue & Edison Avenue (#32) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#33) – LOS F AM and PM peak hours
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F PM peak hour only
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#43) – LOS E AM peak hour only
- Hellman Avenue & Kimball Avenue (#44) – LOS F AM peak hour; LOS E PM peak hour
- Carpenter Avenue & Merrill Avenue (#45) – LOS F AM and PM peak hours
- Archibald Avenue & SR-60 Westbound Ramps (#48) – LOS E AM peak hour only
- Archibald Avenue & Riverside Drive (#50) – LOS F PM peak hour only
- Archibald Avenue & Ontario Ranch Road (#53) – LOS F AM peak hour only
- Archibald Avenue & Merrill Avenue (#55) – LOS F PM peak hour only
- Archibald Avenue & Limonite Avenue (#56) – LOS F AM and PM peak hours
- Archibald Avenue & Schleisman Road (#57) – LOS F AM and PM peak hours
- Hamner Avenue & Ontario Ranch Road (#63) – LOS E AM peak hour; LOS F PM peak hour

\* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

<sup>3</sup> Minimum acceptable LOS for each applicable jurisdiction.

<sup>4</sup> Assumes signalization of the intersection and buildout of the east leg.

<sup>5</sup> Assumes new interchange improvements at I-15 Freeway and Limonite Avenue.

A summary of the peak hour intersection LOS for Opening Year Cumulative (2026) Without Project conditions is shown on Exhibit 8-5. The intersection operations analysis worksheets for Opening Year Cumulative (2026) Without Project traffic conditions are included in Appendix 8.1 of this TIA.

#### **8.4.2 OPENING YEAR CUMULATIVE (2026) WITH PROJECT TRAFFIC CONDITIONS**

As shown on Table 8-1 and illustrated on Exhibit 8-6, the following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2026) With Project traffic conditions with the addition of Phase C Project traffic, in addition to the locations identified above for Opening Year Cumulative (2026) Without Project traffic conditions.

- Grove Avenue & Chino Avenue (#30) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#31) – LOS F PM peak hour only
- Walker Avenue & Eucalyptus Avenue (#37) – LOS F AM peak hour only
- Baker Avenue/Van Vliet Avenue & Merrill Avenue (#40) – LOS E AM peak hour; LOS F PM peak hour

The intersection operations analysis worksheets for Opening Year Cumulative (2026) With Project traffic conditions are included in Appendix 8.2 of this TIA.

#### **8.5 TRAFFIC SIGNAL WARRANTS ANALYSIS**

There are no study area intersections anticipated to meet either peak hour or planning level (ADT) volume-based traffic signal warrants for Opening Year Cumulative (2026) Without and With Project traffic conditions, in addition to those previously warranted under Existing (2019), E+P, Opening Year Cumulative (2022), and Opening Year Cumulative (2025) traffic conditions (see Appendix 8.3 and Appendix 8.4).

#### **8.6 OFF-RAMP QUEUING ANALYSIS**

Queuing analysis findings for Opening Year Cumulative (2026) Without and With Project traffic conditions are shown on Table 8-2. As shown on Table 8-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows with the addition of Project (Phase C) traffic. Worksheets for Opening Year Cumulative (2026) Without and With Project traffic conditions off-ramp queuing analysis are provided in Appendices 8.5 and 8.6, respectively.

EXHIBIT 8-5: OPENING YEAR CUMULATIVE (2026) WITHOUT PROJECT SUMMARY OF LOS

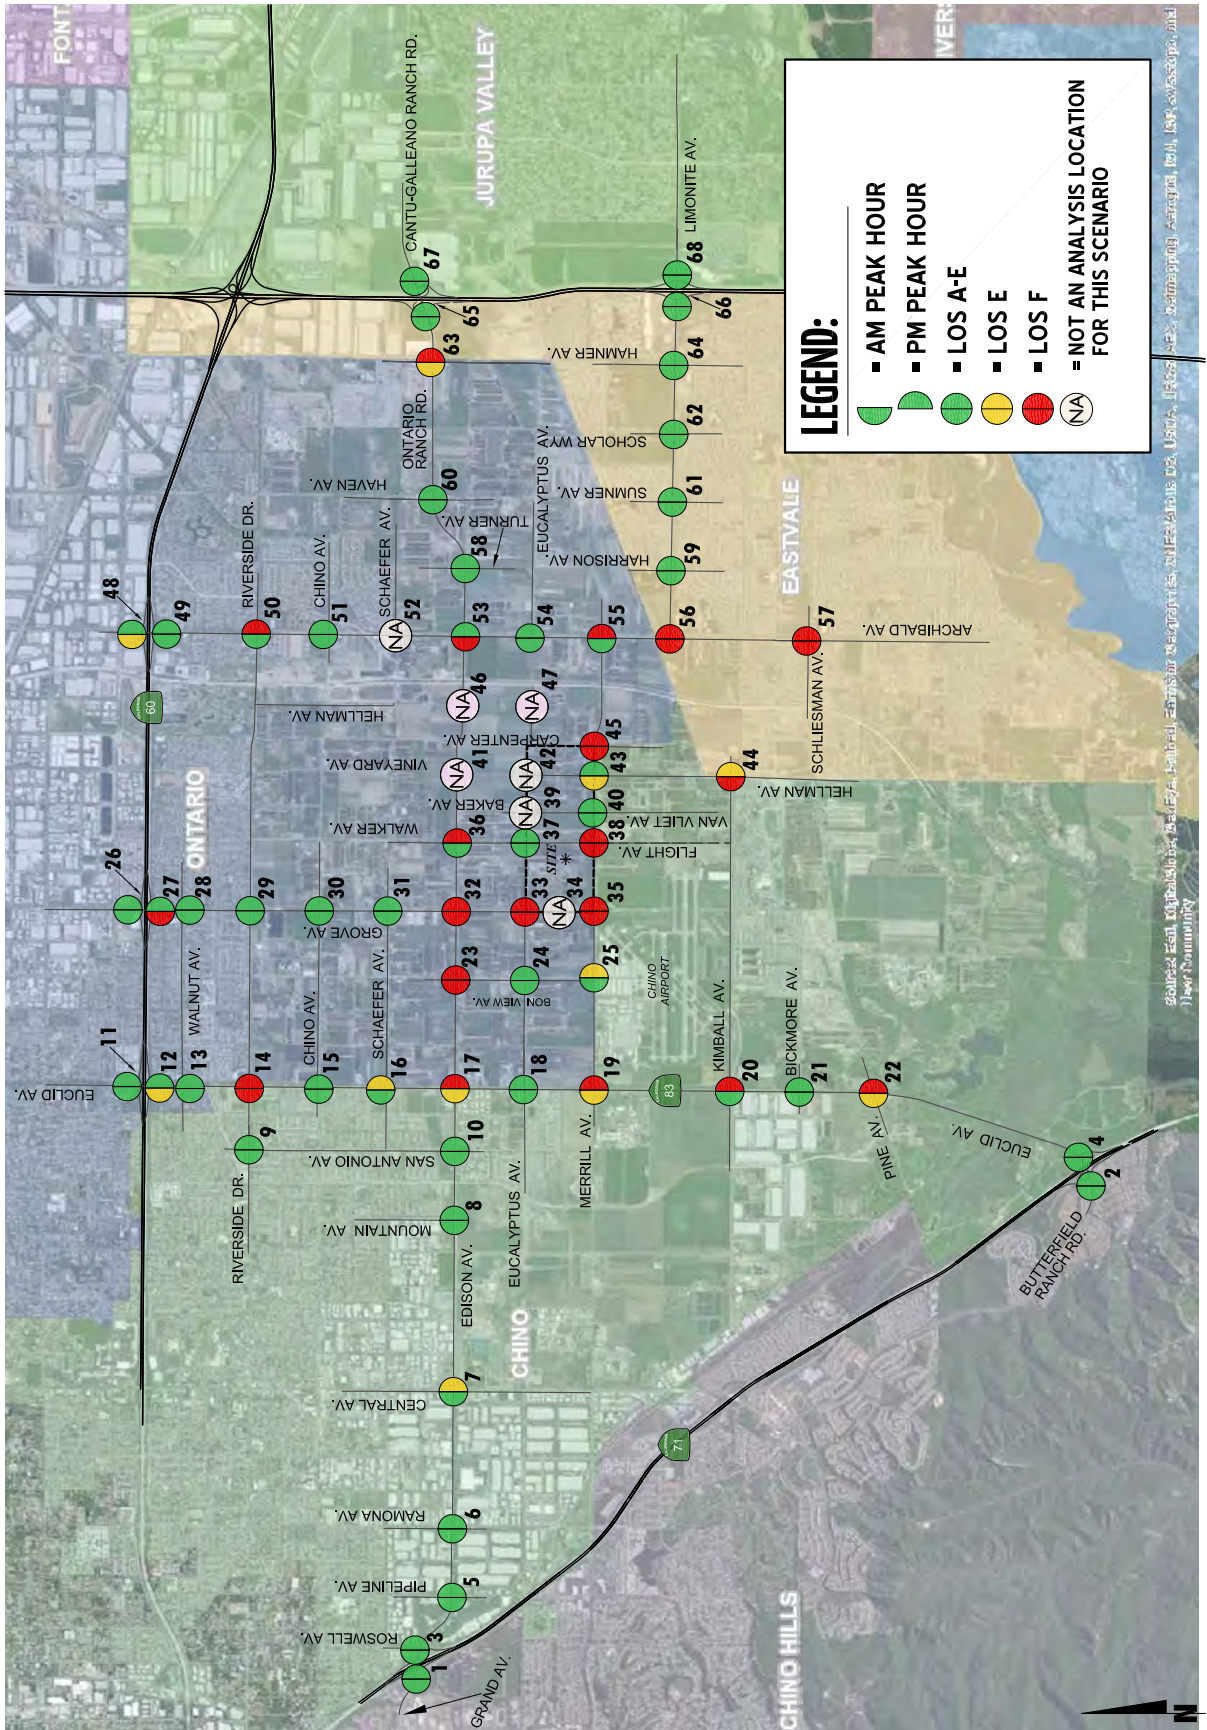

EXHIBIT 8-6: OPENING YEAR CUMULATIVE (2026) WITH PROJECT SUMMARY OF LOS

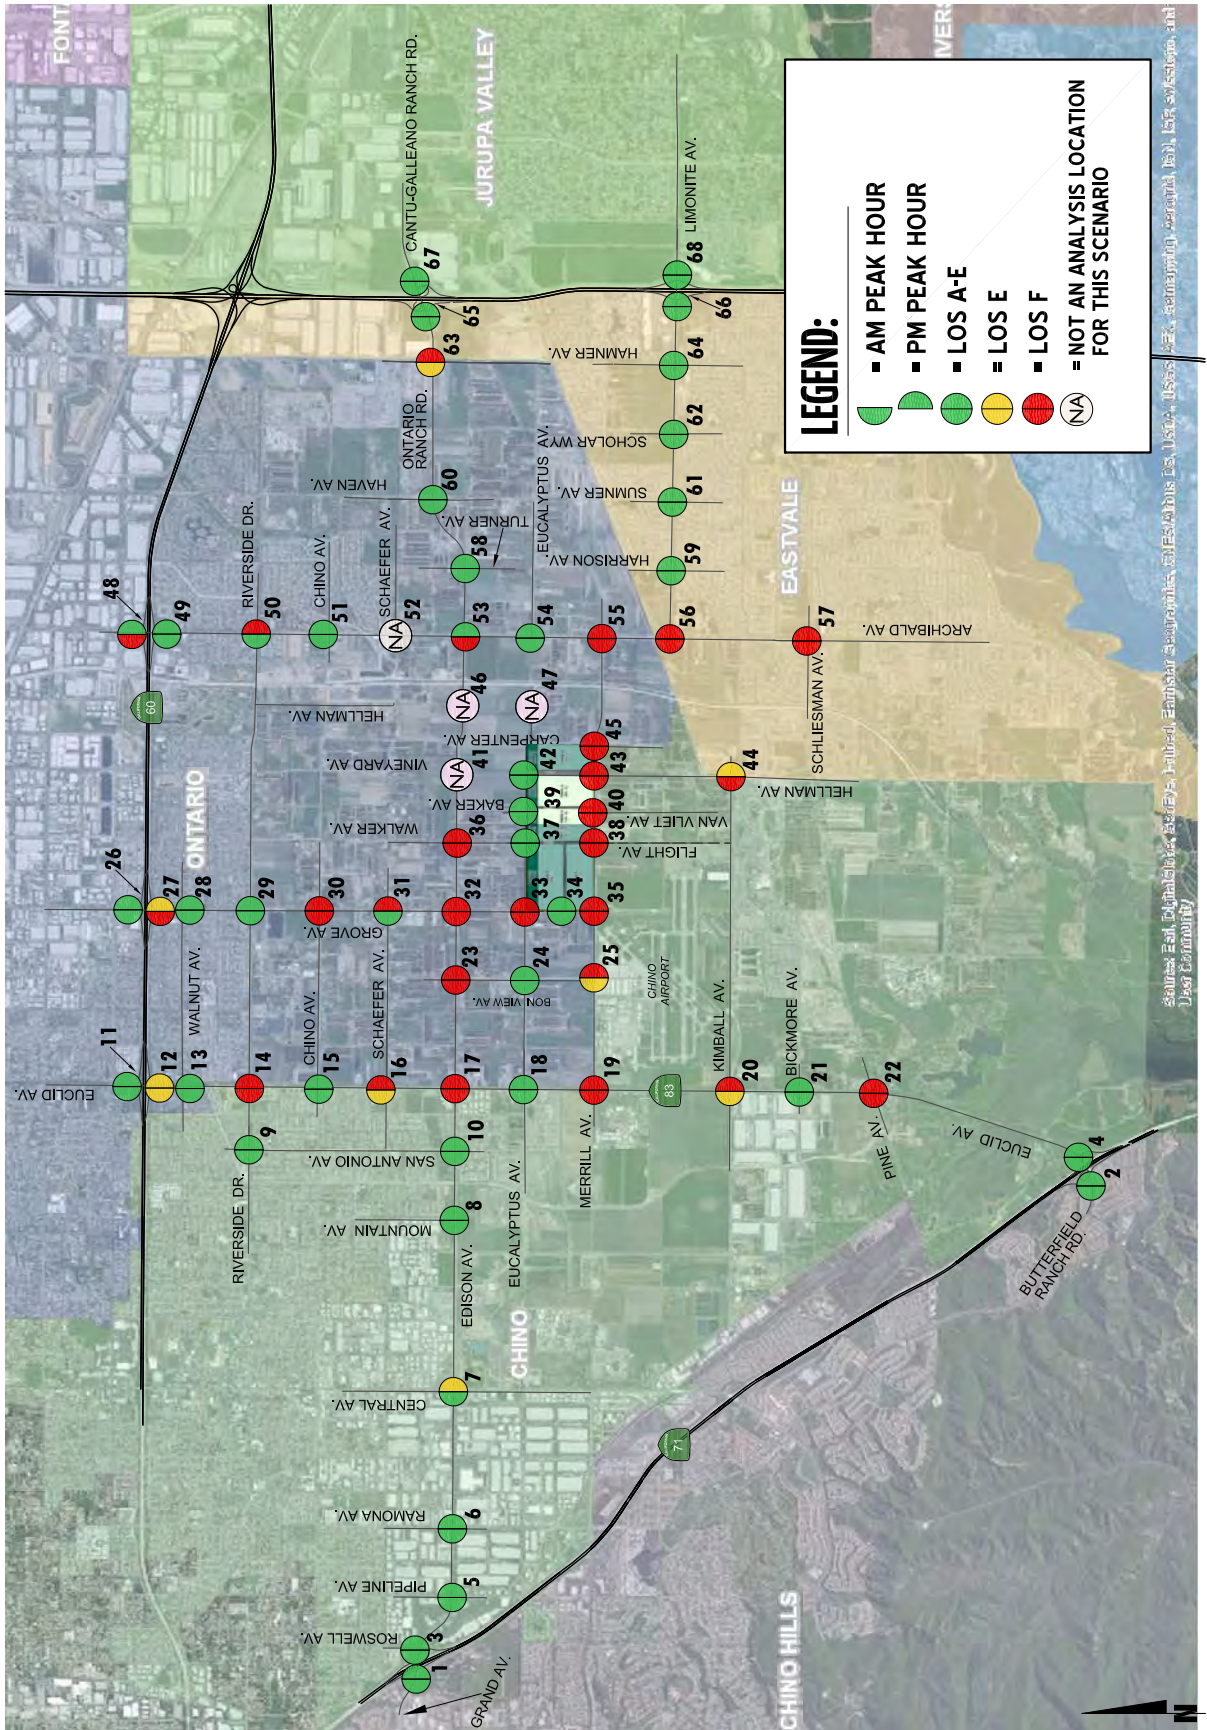

Table 8-2

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

## 8.7 FREEWAY FACILITY ANALYSIS

Opening Year Cumulative (2026) Without and With Project mainline directional volumes for the AM and PM peak hours are provided on Exhibits 8-7 and 8-8, respectively. As shown on Table 8-3, the following additional merge/diverge ramp junction is anticipated to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours for both Opening Year Cumulative (2026) Without and With Project conditions, in addition to those previously identified under Existing, E+P, Opening Year Cumulative (2022), and Opening Year Cumulative (2025) traffic conditions:

- SR-60 Freeway Westbound, Westbound Off-Ramp at Grove Avenue (#14) – LOS F AM peak hour only

Opening Year Cumulative (2026) Without and With Project freeway facility analysis worksheets are provided in Appendix 8.7 and 8.8, respectively.

## 8.8 RECOMMENDED IMPROVEMENTS

### 8.8.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient, in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). Deficiencies have been identified at deficient intersections if the Project contributes 50 or more peak hours.

The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2026) traffic deficiencies are presented on Table 8-4. If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of City DIF fees or fair share contribution as identified on Table 1-3. Worksheets for Opening Year Cumulative (2026) Without and With Project conditions, with improvements, HCM calculation worksheets are provided in Appendix 8.9 and Appendix 8.10.

### 8.8.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously on Table 8-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for Opening Year Cumulative (2026) traffic conditions. As such, no improvements have been recommended.

### 8.8.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES

SHS facilities are owned and maintained by Caltrans. Improvements to the SHS is regional/state-wide and Caltrans' responsibility. Improvements to freeway facilities LOS deficiencies is addressed through Caltrans regional improvement plans and programs. At this time, Caltrans has no plans or programs in place to address development-specific deficiencies affecting the SHS. There are no feasible measures to address LOS deficiencies that can be autonomously implemented by the Lead Agency or the Project Applicant.

**BOLD** = Unacceptable Level of Service

<sup>1</sup> Number of lanes are in the specified direction and is based on existing conditions.

<sup>2</sup> Density is measured by passenger cars per mile per lane (pc/mi/ln).

<sup>3</sup> LOS = Level of Service

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.  
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-Street Stop; TS = Traffic Signal; TS = Improvement

<sup>4</sup> Improvement includes restriping the eastbound approach to provide dual left turn lanes, one through lane, and one shared through-right turn lane.

<sup>5</sup> Assumes signalization of the intersection and the buildout of the east leg.

<sup>6</sup> Improvement includes modifying the traffic signal to run the northbound and southbound left turns as lead-lag, with the northbound left turn running as lag.

<sup>7</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.

<sup>8</sup> Only existing study area intersections that require improvements are shown in this Table. For all Project site adjacent design features, see Exhibits 1-4, 1-6, and 1-8.

## 9 HORIZON YEAR (2040) TRAFFIC CONDITIONS

This section discusses the methods used to develop Horizon Year (2040) Without and With Project traffic forecasts, and the resulting intersection operations, freeway facility operations, and traffic signal warrant analyses.

### 9.1 ROADWAY IMPROVEMENTS

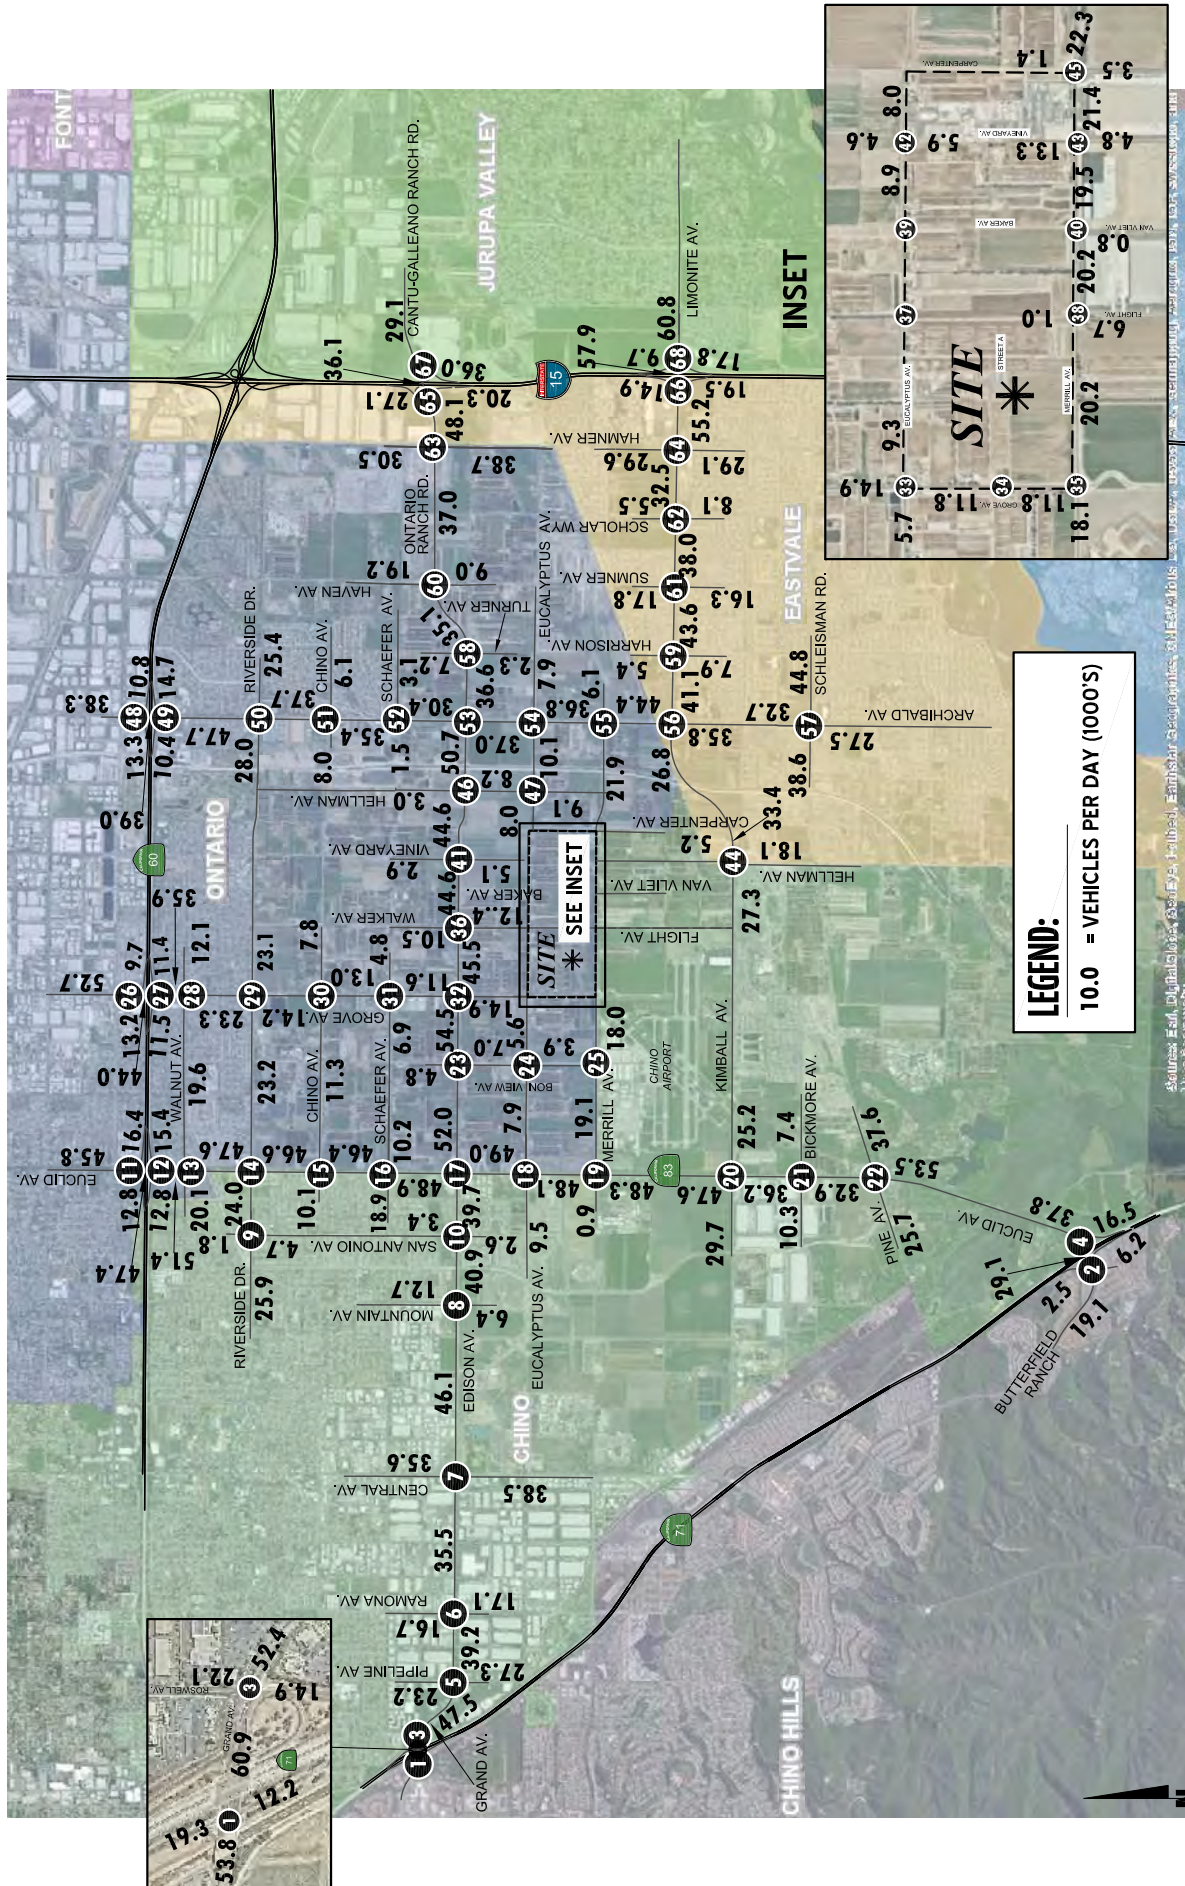

The lane configurations and traffic controls assumed to be in place for Horizon Year (2040) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages and driveways such as the northern extension of Meadow Valley Avenue on Kimball Avenue and the northern extension of Hellman Avenue north of Kimball Avenue).
- The new interchange improvements at the I-15 Freeway and Limonite Avenue are assumed to be completed.
- The Pine Avenue extension between its El Prado Road and the SR-71 Freeway.
- The Kimball Avenue/Limonite Avenue extension between Hellman Avenue and Archibald Avenue.
- Other parallel facilities, that although not evaluated for the purposes of this analysis, are anticipated to be in place for Horizon Year traffic conditions and would affect the travel patterns within the study area (e.g., new future roadways within the New Model Colony area such as Schaefer Avenue east of Archibald Avenue, Eucalyptus Avenue east of Archibald Avenue, Merrill Avenue east of Archibald Avenue, The Preserve Specific Plan roadway network within the City of Chino, etc.).

### 9.2 HORIZON YEAR (2040) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM/RivTAM (see Section 4.7 *Horizon Year (2040) Volume Development* of this TIA for a detailed discussion on the post-processing methodology). The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) Without Project traffic conditions are shown on Exhibits 9-1 and 9-2, respectively.

### 9.3 HORIZON YEAR (2040) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM/RivTAM, plus the traffic generated by the proposed Project. Horizon Year (2040) With Project traffic forecasts assumes buildout of the Project (i.e., traffic associated with Phases A through C). The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) With Project traffic conditions are shown on Exhibits 9-3 and 9-4, respectively.

### 9.4 INTERSECTION OPERATIONS ANALYSIS

#### 9.4.1 HORIZON YEAR (2040) WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Horizon Year (2040) Without Project conditions with roadway and intersection geometrics consistent with Section 9.1 *Roadway Improvements*. As shown on Table 9-1, the following additional study area intersections are anticipated to operate at an unacceptable LOS under Horizon Year (2040) Without Project traffic conditions:

- SR-71 Southbound Ramps & Grand Avenue (#1) – LOS E PM peak hour only
- SR-71 Northbound Ramps & Edison Avenue (#3) – LOS F AM peak hour only
- Central Avenue & Edison Avenue (#7) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#11) – LOS F AM peak hour; LOS E PM peak hour
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#12) – LOS E AM peak hour only
- Euclid Avenue (SR-83) & Riverside Drive (#14) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#15) – LOS F PM peak hour only
- Euclid Avenue (SR-83) & Schaefer Avenue (#16) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#17) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#18) – LOS F PM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#19) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Kimball Avenue (#20) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Pine Avenue (#22) – LOS F AM and PM peak hours
- Bon View Avenue & Edison Avenue (#23) – LOS F AM and PM peak hours
- Bon View Avenue & Eucalyptus Avenue (#24) – LOS F PM peak hour only
- Bon View Avenue & Merrill Avenue (#25) – LOS F PM peak hour only
- Grove Avenue & SR-60 Westbound Ramps (#26) – LOS E AM peak hour only
- Grove Avenue & SR-60 Eastbound Ramps (#27) – LOS F AM and PM peak hours
- Grove Avenue & Riverside Drive (#29) – LOS F AM and PM peak hours
- Grove Avenue & Chino Avenue (#30) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#31) – LOS F AM and PM peak hours
- Grove Avenue & Edison Avenue (#32) – LOS F AM and PM peak hours

- Grove Avenue & Eucalyptus Avenue (#33) – LOS F AM and PM peak hours
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F AM and PM peak hours
- Walker Avenue & Eucalyptus Avenue (#37) – LOS F AM and PM peak hours
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Vineyard Avenue & Edison Avenue (#41) – LOS F AM and PM peak hours
- Vineyard Avenue & Eucalyptus Avenue (#42) – LOS F AM and PM peak hours
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#43) – LOS F AM and PM peak hours
- Hellman Avenue & Kimball Avenue (#44) – LOS E AM peak hour; LOS F PM peak hour
- Carpenter Avenue & Merrill Avenue (#45) – LOS F AM and PM peak hours
- Hellman Avenue & Edison Avenue (#46) – LOS F AM and PM peak hours
- Archibald Avenue & SR-60 Westbound Ramps (#48) – LOS F AM peak hour; LOS E PM peak hour
- Archibald Avenue & SR-60 Eastbound Ramps (#49) – LOS E AM and PM peak hours
- Archibald Avenue & Riverside Drive (#50) – LOS F AM and PM peak hours
- Archibald Avenue & Schaefer Avenue (#52) – LOS F PM peak hour only
- Archibald Avenue & Ontario Ranch Road (#53) – LOS F AM and PM peak hours
- Archibald Avenue & Eucalyptus Avenue (#54) – LOS F AM and PM peak hours
- Archibald Avenue & Merrill Avenue (#55) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#56) – LOS F AM and PM peak hours
- Turner Avenue & Ontario Ranch Road (#58) – LOS F AM and PM peak hours
- Haven Avenue & Ontario Ranch Road (#60) – LOS F AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#63) – LOS F AM and PM peak hours

A summary of the peak hour intersection LOS for Horizon Year (2040) Without Project conditions is shown on Exhibit 9-5. The intersection operations analysis worksheets for Horizon Year (2040) Without Project traffic conditions are included in Appendix 9.1 of this TIA.

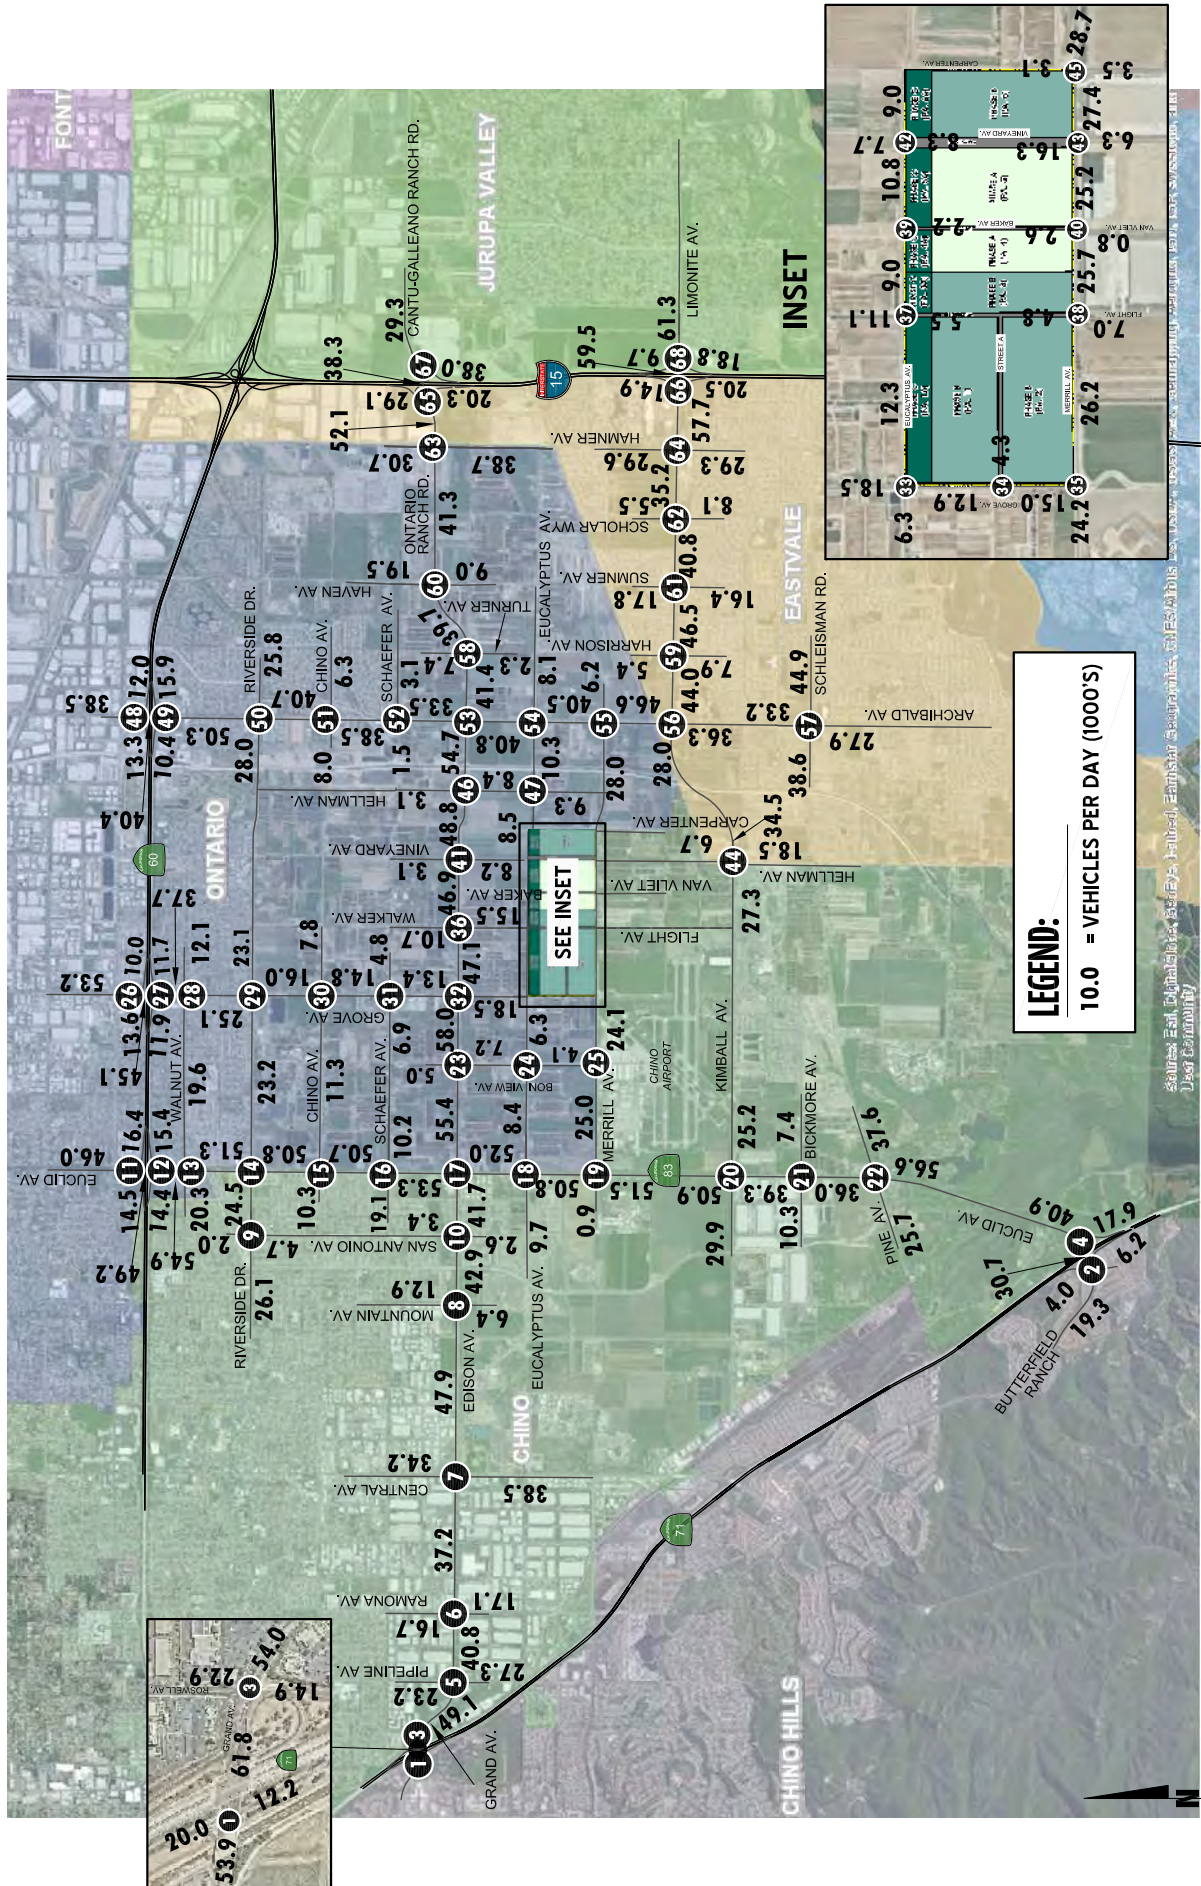

**9.4.2 HORIZON YEAR (2040) WITH PROJECT TRAFFIC CONDITIONS**

As shown on Table 9-1 and illustrated on Exhibit 9-6, the following study area intersection is anticipated to operate at a deficient LOS during one or both peak hours for Horizon Year (2040) With Project traffic conditions with the addition of Project traffic, in addition to the locations identified above for Horizon Year (2040) Without Project traffic conditions.

- Baker Avenue/Van Vliet Avenue & Merrill Avenue (#40) – LOS E AM peak hour; LOS F PM peak hour

The intersection operations analysis worksheets for Horizon Year (2040) With Project traffic conditions are included in Appendix 9.2 of this TIA.

EXHIBIT 9-3: HORIZON YEAR (2040) WITH PROJECT AVERAGE DAILY TRAFFIC (ADT) (IN PCE)

Scale: 1" = 1000'. Prepared by: [unreadable] for [unreadable]. Date: [unreadable].

<sup>1</sup> **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).  
<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.  
<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement  
<sup>3</sup> Minimum acceptable LOS for each applicable jurisdiction.  
<sup>4</sup> Assumes signalization of the intersection and buildout of the east leg.  
<sup>5</sup> Assumes new interchange improvements at I-15 Freeway and Limonite Avenue.

## 9.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

The following study area intersections are anticipated to meet planning level (ADT) volume-based traffic signal warrants for Horizon Year (2040) Without Project traffic conditions (see Appendix 9.3), in addition to those previously warranted under Existing, E+P, and Opening Year Cumulative traffic conditions:

- Bon View Avenue & Eucalyptus Avenue (#24)
- Vineyard Avenue & Edison Avenue (#41)
- Hellman Avenue & Edison Avenue (#46)
- Hellman Avenue & Eucalyptus Avenue (#47)
- Archibald Avenue & Schaefer Avenue (#52)

The following study area intersection is anticipated to meet planning level (ADT) volume-based traffic signal warrant for Horizon Year (2040) With Project traffic conditions (see Appendix 9.4), in addition to those previously warranted under Horizon Year (2040) Without Project traffic conditions:

- Vineyard Avenue & Eucalyptus Avenue (#42)

## 9.6 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for Horizon Year (2040) Without and With Project traffic conditions are shown on Table 9-2. As shown on Table 9-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows with the addition of Project (Project Buildout) traffic. Worksheets for Horizon Year (2040) Without and With Project traffic conditions off-ramp queuing analysis are provided in Appendices 9.5 and 9.6, respectively.

Table 9-2

Peak Hour Freeway Off-Ramp Queuing Summary for Horizon Year (2040) Conditions

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

## 9.7 FREEWAY FACILITY ANALYSIS

Horizon Year (2040) mainline directional volumes for the AM and PM peak hours are provided on Exhibits 9-7 and 9-8. As shown on Table 9-3, the following freeway segments and merge/diverge ramp junctions analyzed for this study are anticipated to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours, in addition to those previously identified in Existing, E+P, and Opening Year Cumulative traffic conditions:

- SR-71 Freeway Northbound, Northbound On-Ramp at Edison Avenue (#6) – LOS F AM peak hour only
- SR-60 Freeway Westbound, Westbound Off-Ramp at Archibald Avenue (#16) – LOS E AM peak hour only
- SR-60 Freeway Eastbound, Eastbound Off-Ramp at Euclid Avenue (SR-83) (#19) – LOS E PM peak hour only
- SR-60 Freeway Eastbound, Between Grove Avenue Ramps (#22) – LOS F PM peak hour only
- SR-60 Freeway Eastbound, Eastbound On-Ramp at Grove Avenue (#23) – LOS F PM peak hour only
- SR-60 Freeway Eastbound, Eastbound On-Ramp at Archibald Avenue (#25) – LOS F PM peak hour only
- SR-60 Freeway Eastbound, East of Archibald Avenue (#26) – LOS F PM peak hour only
- I-15 Freeway Southbound, Southbound Off-Ramp at Cantu Galleano Ranch Road (#28) – LOS E AM peak hour only
- I-15 Freeway Southbound, Southbound On-Ramp at Limonite Avenue (#29) – LOS F AM peak hour only
- I-15 Freeway Southbound, South of Limonite Avenue (#30) – LOS F AM peak hour only

Horizon Year (2040) Without and With Project freeway facility analysis worksheets are provided in Appendix 9.7 and 9.8, respectively.

**EXHIBIT 9-7 (1of2): HORIZON YEAR (2040) WITHOUT PROJECT FREEWAY MAINLINE VOLUMES**

**BOLD** = Unacceptable Level of Service

<sup>1</sup> Number of lanes are in the specified direction and is based on existing conditions.

<sup>2</sup> Density is measured by passenger cars per mile per lane (pc/mi/ln).

<sup>3</sup> LOS = Level of Service

<sup>4</sup> HCS7 does not report density for freeway facilities operating at LOS F for the facilities analyzed using HCS Basic Freeway Segment analysis methodology. However, HCS7 does report density for freeway facilities operating at LOS F for the facilities analyzed using HCS Facility or Merge/Diverge analysis methodology.

## **9.8 HORIZON YEAR (2040) DEFICIENCIES AND RECOMMENDED IMPROVEMENTS**

### **9.8.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS**

Improvement strategies have been recommended at intersections that have been identified as deficient, in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D/E or better). Deficiencies have been identified at deficient intersections if the Project contributes 50 or more peak hours. The effectiveness of the recommended improvement strategies to address Horizon Year (2040) traffic deficiencies are presented on Table 9-4. If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of City DIF fees or fair share contribution as identified on Table 1-3.

Worksheets for Horizon Year (2040) Without and With Project conditions, with improvements, HCM calculation worksheets are provided in Appendix 9.9 and Appendix 9.10, respectively.

### **9.8.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously on Table 9-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for Horizon Year (2040) traffic conditions. As such, no improvements have been recommended.

### **9.8.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES**

SHS facilities are owned and maintained by Caltrans. Improvements to the SHS is regional/state-wide and Caltrans' responsibility. Improvements to freeway facilities LOS deficiencies is addressed through Caltrans regional improvement plans and programs. At this time, Caltrans has no plans or programs in place to address development-specific deficiencies affecting the SHS. There are no feasible measures to address LOS deficiencies that can be autonomously implemented by the Lead Agency or the Project Applicant.

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.  
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free Right Turn Lane; d = Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; TS = Improvement

<sup>4</sup> Improvement consists of modifying the traffic signal to extend the cycle length to 120 seconds. No other physical improvements are recommended.

<sup>5</sup> Assumes signalization of the intersection and the buildout of the east leg.

<sup>6</sup> Improvement includes modifying the coordinated cycle length from 90 seconds to 120 seconds.

<sup>7</sup> Improvement consists of modifying the traffic signal to extend the cycle length to 130 seconds.

<sup>8</sup> Only existing study area intersections that require improvements are shown in this Table. For all Project site adjacent design features, see Exhibits 1-4, 1-6, and 1-8.

This Page Intentionally Left Blank

## 10 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the City of Ontario are funded through a combination of construction of improvements, development impact fee programs or fair share contributions, such as the City of Ontario Development Impact Fee (DIF) program. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

### 10.1 CITY OF ONTARIO DEVELOPMENT IMPACT FEE PROGRAM

The City of Ontario has created its own local DIF program to impose and collect fees from new residential, commercial and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF includes regional improvements to comply with Measure "I." The fee schedule was last updated in October 16, 2017 and is reviewed/adjusted annually based upon changes in the construction cost index (CCI). Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list. The City also uses this data to ensure that the improvements listed on the facilities list are constructed before the LOS falls below the LOS performance standards adopted by the City. In this way, the improvements are constructed before the LOS falls below the City's LOS performance thresholds.

The Project Applicant will be subject to the City's DIF fee program and will pay the requisite City DIF fees at the rates then in effect pursuant to the City's ordinance. The Project Applicant's payment of the requisite DIF at the rates then in effect, pursuant to the City DIF Program, would satisfy the Project's proportional improvement requirements at potentially affected DIF-funded facilities.

**TABLE 10-1: ESTIMATED FEE OBLIGATION**

Fee Reference	Light Industrial (\$ PER SQ. FT.)
Industrial: Regional and Local Streets	\$2.923/SF
Business Park: Regional and Local Streets	\$5.672/SF

\* Ontario Ranch DIF rates effective as of October 16, 2017.

**Fee Calculation**

Program	Category	Unit Cost	Units/Sq.Ft.	Local Circulation
Local/Regional Impacts	Industrial	\$2.92	7,014,000	\$20,501,922
	Business Park	\$5.67	1,441,000	\$8,173,352

<b>Total Transportation Impact Fees</b>	<b>\$28,675,274</b>
---	---------------------

## **10.2 MEASURE “I” FUNDS**

In 2004, the voters of San Bernardino County approved the 30-year extension of Measure “I,” a one-half of one percent sales tax on retail transactions, through the year 2040, for transportation projects including, but not limited to, infrastructure improvements, commuter rail, public transit, and other identified improvements. The Measure “I” extension requires that a regional traffic impact fee be created to ensure development is paying its fair share. A regional Nexus study was prepared by SBCTA and concluded that each jurisdiction should include a regional fee component in their local programs in order to meet the Measure “I” requirement. The regional component assigns specific facilities and cost sharing formulas to each jurisdiction and was most recently updated in November 2011. Revenues collected through these programs are used in tandem with Measure “I” funds to deliver projects identified in the Nexus Study. While Measure “I” is a self-executing sales tax administered by SBCTA, it bears discussion here because the funds raised through Measure “I” have funded in the past and will continue to fund new transportation facilities in San Bernardino County.

## **10.3 FAIR SHARE CONTRIBUTION**

Project improvement may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City’s discretion).

When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, has been provided on Table 10-2 for the applicable deficient study area intersections.

These fees are collected with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases.

Mr. Ross Geller  
Applied Planning, Inc.  
11762 De Palma Road, 1-C 310  
Corona, CA 92883

**SUBJECT: MERRILL COMMERCE CENTER SPECIFIC PLAN VEHICLE MILES TRAVELLED (VMT) ASSESSMENT**

Dear Mr. Ross Geller:

The following Vehicle Miles Travelled (VMT) Assessment has been prepared for the proposed Merrill Commerce Center Specific Plan (referred to as “Project”) located north of Merrill Avenue between Grove Avenue and Vineyard Avenue in the City of Ontario.

The proposed project will be implemented through a specific plan that permits a variety of industrial and warehouse-related uses. In order to (i) conservatively estimate (and in fact over-estimate) the potential traffic impacts of the project and (ii) be reflective of likely market absorption, a conservative mix of trip rates were used to analyze the project’s potential traffic impacts as follows:

- Industrial: 6,312,600 square feet of high-cube fulfillment center warehouse use (TUMF High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019))
- High Cube Cold Storage: 701,400 square feet of high-cube cold storage warehouse use (ITE Code 157)
- Business Park: 1,441,000 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses (ITE Code 130)
- **Total of 8,455,000 square feet**

## **BACKGROUND**

Senate Bill 743 (SB 743), approved in 2013, endeavors to change the way transportation impacts will be determined according to the California Environmental Quality Act (CEQA). The Office of Planning and Research (OPR) has recommended the use of VMT as the replacement for automobile delay-based LOS for the purposes of determining a significant transportation impact under CEQA. As of December 2018, the Natural Resources Agency finalized updates to CEQA Guidelines to incorporate SB 743 (i.e., VMT). Lead agencies have the option to immediately apply the new VMT based criteria, however statewide application of the new guidelines is not required until July 1, 2020.

To assist in the implementation of VMT as the primary measure of a transportation impact under CEQA, the OPR published an updated Technical Advisory on Evaluating Transportation Impacts in CEQA in December 2018.

In addition to OPR's guidance, the Western Riverside Council of Governments (WRCOG) recently published the SB 743 Implementation Pathway Document Package in March 2019 ("WRCOG Document"). WRCOG provides a suggested approach to VMT assessment methodology, thresholds of significance and examples of potential mitigation measures.

The San Bernardino County Transportation Authority (SBCTA) is currently conducting a multi-jurisdictional study to develop a set of procedures and provide local jurisdictions with sufficient information to adopt VMT baselines and thresholds of significance at or around the July 2020 required implementation date. Based on the information provided in the February 27, 2019 kick-off meeting for the SBCTA Countywide SB 743 VMT Implementation Study, we expect that SBCTA would follow a similar path to implementation of SB 743 as WRCOG. For the purposes of this analysis, the San Bernardino County Transportation Analysis Model (SBTAM) is assumed to be the appropriate tool to estimate VMT in San Bernardino County. SBTAM is a sub-regional model that was developed based on the Southern California Association of Governments (SCAG) Regional Planning model. SBTAM is functionally similar to the SCAG model with a focused approach to San Bernardino County, having disaggregated zones within the county area and aggregated zones outside of the county. SBTAM uses socioeconomic data to model travel behavior. The model responds to changes in land use types, household and employment characteristics, transportation infrastructure, and travel costs. The use of a travel demand model is supported by substantial evidence since the information contained in the model is specific to the region and for the land use type being proposed. Furthermore, the use of travel demand models is also a recommended practice that is being promoted by the OPR in their updated CEQA guidelines with respect to Senate Bill (SB) 743. Specifically, the latest technical advisory documentation published by OPR (December 2018 see Page 30-31) explicitly states that:

"...agencies can use travel demand models or survey data to estimate existing trip lengths and input those into sketch models such as CalEEMod to achieve more accurate results. Whenever possible, agencies should input localized trip lengths into a sketch model to tailor the analysis to the project location."

The procedure described by OPR in their SB 743 technical advisory is precisely the method that has been used to calculate trip lengths and consequently VMT for the Project.

## **VMT THRESHOLD**

The OPR's 2018 Technical Advisory has the following recommended numeric thresholds for residential, office and retail projects:

- For residential projects, a proposed project exceeding a level of 15% below existing VMT/capita may indicate a significant transportation impact. Existing VMT/capita may be measured as regional VMT per capita or as City VMT per capita.
- For office projects, a proposed project exceeding a level of 15% below existing regional VMT/employee may indicate a significant transportation impact.

- For retail projects, a net increase in total VMT may indicate a significant transportation impact.
- Numerical thresholds are not provided for other project types such as industrial uses.

WRCOG identifies the following criteria for lead agencies to consider:

- Below City-wide average VMT
- Below WRCOG regional average VMT

The San Bernardino Countywide Plan Draft Program Environmental Report (June 2019, “2019 CWP PEIR”) identifies the following VMT thresholds for land use development in the unincorporated San Bernardino County:

- A residential VMT exceeding a level of 4% below existing VMT per capita would indicate a significant transportation impact.
- An employment VMT exceeding a level of 4% below existing VMT per employee would indicate a significant transportation impact.

It is our understanding that the City of Ontario has yet to formally adopt VMT thresholds of significance for purposes of determining transportation impacts under CEQA. Notwithstanding, this analysis has utilized a threshold of 15% below baseline average VMT/Service Population (SP)<sup>1</sup> for the City consistent with OPR’s Technical Advisory recommendation.

CEQA Guidelines Section 15064.3, subdivision (a) states “For the purposes of this section ‘vehicle miles traveled’ refers to the amount and distance of automobile travel attributable to a project.” The OPR’s 2018 Technical Advisory notes that here, the term “automobile” refers to on-road passenger vehicles, specifically cars and light trucks.

Nevertheless, it is also recognized that the Project would generate Heavy Duty Truck (HDT) traffic and has been considered in this VMT assessment. For consistency with other CEQA technical studies, HDT VMT identified in this analysis will be reflected in other applicable technical studies (e.g. Air Quality Impact Analysis, Greenhouse Gas Analysis, etc.).

As previously stated, based on OPR’s 2018 Technical Advisory recommendation, Project VMT/SP that is not reduced to a level 15% below the Baseline (2019) average daily VMT/SP for the City of Ontario is considered a significant transportation impact.

Lastly, a less than significant impact at the Project level would not be cumulatively significant. Conversely, significant impacts at the Project level would also be considered cumulatively significant.

---

<sup>1</sup> Service Population (SP) = Residents + Employees

## VMT ANALYSIS

The calculation of VMT for a development project has two components – the total number of vehicle trips generated and the average trip length of each vehicle. The SBTAM is a useful tool to estimate the average trip length as it takes into account interaction between employment centers and housing areas based on socio-economic data such as population, households, employment and others. The vehicle trips produced by a proposed development Project are typically based on the type and size of the proposed development and trip generation rates published in Institute Transportation Engineers (ITE) Trip Generation Manual. The use of ITE based trip rates is typically preferred to ensure consistency with other technical reports such as noise, air quality and greenhouse gas analyses.

### AVERAGE TRIP LENGTH

As noted previously, SBTAM is a sub-regional model that was developed based on the Southern California Association of Governments (SCAG) Regional Planning model. SBTAM is functionally similar to the SCAG model with a focused approach to San Bernardino County, having disaggregated zones within the county area and aggregated zones outside of the county. SBTAM uses socioeconomic data to model travel behavior. The model responds to changes in land use types, household and employment characteristics, transportation infrastructure, and travel costs.

The average trip length for automobiles was calculated based on a select-zone model run for the traffic analysis zone (TAZ) in which the Project is located using SBTAM. Where applicable, adjustments were made to the socio-economic data (i.e., number of employees) to reflect the Project’s land use. Based on SBTAM model runs, the TAZ in which the Project is located generated a daily automobile flow of 13,063 trips and daily automobile VMT of 215,933 vehicle-miles. Therefore, the average trip length for the Project was calculated by dividing the model VMT by the model daily flow,  $215,933/13,063 = 16.5$  miles.

The average trip length for heavy trucks were based on the South Coast Air Quality Management District (SCAQMD) documents for the implementation of the Facility-Based Mobile Source Measures (FBMSMs) adopted in the 2016 Air Quality Management Plan (AQMP). SCAQMD’s “Preliminary Warehouse Emission Calculations” cites 39.9 mile trip length for heavy-heavy trucks, and 15.5 mile trip length for light-heavy trucks based on SCAG 2016 RTP. As a conservative measure, a trip length of 40 miles has been utilized for all trucks for the purposes of this analysis.

Table 1 provides a summary of average trip length for the Project. As shown on Table 1, the average trip length was 16.5 miles for automobiles and 40.0 miles for heavy trucks.

**TABLE 1: AVERAGE TRIP LENGTH**

Vehicle Type	Average Trip Length (Miles)
Automobiles	16.5
Heavy Trucks	40.0

**TRIP GENERATION**

The daily vehicle trips for the Project have been calculated based on trip generation rates consistent with the ITE Trip Generation Manual, 10<sup>th</sup> Edition (2017) and the TUMF High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019) consistent with Merrill Commerce Center Specific Plan Traffic Impact Analysis (December 2019, Urban Crossroads, Inc.). As shown on Table 2, the proposed Project is anticipated to generate a net total of 19,806 trip-ends per day with 16,286 daily automobile trips and 3,520 daily truck trips.

**TABLE 2: PROJECT TRIP GENERATION SUMMARY<sup>1</sup>**

Project	Quantity	Units <sup>2</sup>	Daily <sup>3</sup>
High-Cube Warehouse and Business Park	8,455.00	TSF	
Automobiles:			16,286
Truck Trips (Actual Vehicles):			3,520
Project Trips			19,806

<sup>1</sup> Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, 10<sup>th</sup> Edition (2017) and TUMF High-cube Warehouse Trip Generation Study, WSP, January 29, 2019.

<sup>2</sup> TSF = thousand square feet

<sup>3</sup> Source: Merrill Commerce Center Specific Plan Traffic Impact Analysis (December 2019, Urban Crossroads, Inc.)

**PROJECT VMT**

Table 3 provides a summary of Project VMT for passenger cars and trucks. As shown on Table 3, the estimated VMT for the Project is 268,719 vehicle-miles per day for automobiles and 140,800 vehicle-miles per day for trucks resulting in a total VMT of 409,519 vehicle-miles.

**TABLE 3: PROJECT VMT**

Vehicle Type	Project Trip Generation (Daily)	Average Trip Length (Miles)	Project VMT (Vehicle-Miles)
Automobiles	16,286	16.5	268,719
Trucks	3,520	40.0	140,800
Total	19,806	20.68	409,519

**PROJECT VMT/SP**

Since the Project does not have any residential component, the Project SP consists of employees only. Because the tenant of the Project’s building is not yet known, the number of jobs that the Project would

generate cannot be precisely determined; therefore, for purposes of this analysis, employment estimates were calculated using employment density factors of 0.65 Employees/Thousand Square Feet (TSF) for non-office portions and 2.86 Employees/TSF for office portions of industrial and business park uses consistent with the Ontario General Plan Buildout Methodology document (April 2015)<sup>2</sup>. Based on these employment generation rates, the Project is expected to create approximately 8,638 jobs. As shown on Table 4, the Project’s Automobile VMT/SP is 31.11 and the Project’s Total VMT/SP is 47.41.

**TABLE 4: PROJECT VMT/SP**

Project Employment	8,638
Project Automobile VMT	268,719
Project Truck VMT	140,800
Project Total VMT	409,519
Project Automobile VMT/Employee	31.11
Project Total VMT/Employee	47.41

**CITYWIDE AVERAGE VMT/SP**

The Citywide Average VMT was calculated based on select-zone model runs for all the TAZs within the City of Ontario using 2012 and 2040 SBTAM. The population and employment data were added for all the SBTAM TAZs within the City of Ontario to calculate the citywide service population. A summary of the citywide VMT, population and employment is provided in Table 5. Additional details extracted from the SBTAM 2012 and 2040 models are included in Attachment A of this letter.

**TABLE 5: CITYWIDE VMT/SP**

	SBTAM 2012	SBTAM 2040
Automobile VMT	8,586,612	14,063,294
Truck VMT	1,062,164	1,810,305
Total VMT	9,648,776	15,873,599
Population	163,356	256,593
Employment	65,602	114,536
SP	228,958	371,129
Auto VMT/SP	37.5	37.9
Total VMT/SP	42.1	42.8

The Baseline (2019) average VMT/SP was calculated by linearly interpolating between 2012 and 2040. Table 5 provides a summary of the average VMT/SP for the City of Ontario. As shown on Table 6, the

<sup>2</sup> Source: <http://www.ontarioplan.org/wp-content/uploads/sites/4/2016/01/Methodology-Revised.pdf>

Baseline (2019) average Automobile and Total VMT/SP for the City of Ontario is 37.6 and 42.3, respectively.

The threshold level of 15% below the baseline average based on OPR’s 2018 Technical Advisory recommendation is 31.96 for Automobile VMT/SP and 35.96 for Total VMT/SP.

**TABLE 6: CITYWIDE VMT/SP**

Vehicle Type	2012 VMT/SP	2040 VMT/SP	2019 VMT/SP
Automobile	37.5	37.9	37.6
Total	42.1	42.8	42.3

## IMPACT AND MITIGATION

The Project generates 31.11 Automobile VMT/SP, which is 0.85 Automobile VMT/SP lower than the 31.96 Automobile VMT/SP threshold based on OPR’s 2018 Technical Advisory recommendation. Additionally, the Project generates 47.41 Total VMT/SP, which is 11.45 Total VMT/SP higher than the 35.96 Total VMT/SP threshold based on OPR’s 2018 Technical Advisory recommendation.

As such, the Project’s transportation impact based on VMT is potentially significant based on OPR’s recommended thresholds.

Transportation demand management (TDM) strategies have been evaluated for reducing VMT impacts determined to be potentially significant. The effectiveness of TDM strategies to reduce VMT has been determined based on the SB 743 Implementation TDM Strategy Assessment (February 26, 2019, Fehr & Peers) prepared for the WRCOG. The memo evaluated 50 transportation measures presented in the CAPCOA 2010 report Quantifying Greenhouse Gas Mitigation Measures and indicated 41 are applicable at building and site level. The remaining measures are functions of, or depend on, site location and/or actions by local and regional agencies or funders.

Based on available research, WRCOG has determined that for projects located within a suburban context, a maximum 10% reduction in VMT is achievable when combining multiple mitigation strategies. Furthermore, to even achieve a 10% reduction in VMT, a project would need to contain a diverse land use mix, workforce housing and project-specific transit options.

Review of the 41 transportation measures identified by CAPCOA, indicates that only 7 of those measures may be effective at the project level, which is consistent with WRCOGs findings. Evaluation of potentially applicable TDM strategies in the context of the Project is summarized below. As indicated, of the seven TDMs with potential application to the Project, only two would provide for any potentially meaningful reduction in VMT.

- Measure 1: Increase Diversity of Land Uses. Having different types of land uses near one another can decrease VMT since trips between land use types are shorter and may be accommodated by non-auto modes of transport. For example, when residential areas are in the same neighborhood as retail

and office buildings, a resident does not need to travel outside of the neighborhood to meet his/her trip needs.

Remarks: The Project proposes the construction of up to 7,014,000 square feet of high-cube fulfillment center uses and up to 1,441,000 square feet of business park uses. In order for the above measure to apply, at least three of the following will be located on or off-site within ¼ mile of the Project: Residential Development, Retail Development, Park, Open Space, or Office. There may be office space located on-site and off-site within ¼ mile of the Project; and potential future residential development may occur off-site within ¼ mile of the Project. However, there are no existing or proposed retail developments proposed within a ¼ mile of the Project, nor is there existing or proposed designated Open Space. This measure is therefore not evaluated further as means of providing a reduction in Project VMT.

It is however recognized that the Project would introduce additional employment opportunities, acting to generally improve the City and region jobs/housing balance. The resulting improved jobs/housing balance could reduce area commute VMT. This analysis however conservatively assumes no such VMT reduction.

- Measure 2: Provide Pedestrian Network Improvements. Providing a pedestrian access network to link areas of the Project site encourages people to walk instead of drive. This mode shift results in people driving less and thus a reduction in VMT.

Remarks: Although there are existing sidewalks off-site along portions of Merrill Avenue, Flight Avenue, and Van Vliet Avenue as illustrated at Exhibit 3-17 of the Traffic Impact Analysis, field observations conducted at the time the Traffic Impact Analysis was prepared indicate there is nominal pedestrian activity in the study area likely due to the lack of diversity of land uses. Furthermore, given the industrial nature of the Project and surrounding uses, it is unlikely that there would be substantive pedestrian activity even if a pedestrian network were to be expanded. This measure is therefore not evaluated further as means of providing a reduction in Project VMT.

- Measure 3: Provide Traffic Calming Measure. Providing traffic calming measures encourages people to walk or bike instead of using a vehicle. This mode shift will result in a decrease in VMT. Traffic calming features may include: marked crosswalks, count-down signal timers, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others.

Remarks: Given the industrial nature of the Project and similar characteristics of surrounding uses, there is limited opportunity for pedestrian and bicycle activity. This measure is therefore not evaluated further as means of providing a reduction in Project VMT.

- Measure 4: Implement Car-Sharing Program. Implementing a car-sharing program would allow individuals to have on-demand access to a shared fleet of vehicles on an as-needed basis. User costs are typically determined through mileage or hourly rates, with deposits and/or annual membership fees.

Remarks: It is possible that employers within the Project site could implement car-sharing programs. This may provide car access for employees on an as-needed basis, and thereby alleviate some of the costs and responsibilities of individual car ownership. However, this would not necessarily result in a reduction of VMT, but would rather transfer the VMT source from individually-owned autos to employee-subsidized autos. Moreover, CAPCOA indicates that this measure would at most result in 0.4 to 0.7 percent reduction in VMT (CAPCOA, Quantifying Greenhouse Gas Mitigation Measures, p. 245). This measure is therefore not evaluated further as means of providing a reduction in Project VMT.

- Measure 5: Increase Transit Service Frequency and Speed. This measure serves to reduce transit-passenger travel time through more reduced headways and increased speed and reliability. This makes transit service more attractive and may result in a mode shift from auto to transit which reduces VMT.

Remarks: The study area is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. No bus routes currently provide proximate service (within one-quarter mile) of the Project site. Transit service is reviewed and updated by RTA periodically to address ridership, budget and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. It is recommended that the Applicant work in conjunction with the Lead Agency and Omnitrans to coordinate potential bus service to the Project site. Since implementation of this strategy would require agency implementation it is not applicable for individual development projects. This measure is therefore not evaluated further as means of providing a reduction in Project VMT.

- Measure 6: Encourage Telecommuting and Alternative Work Schedule. Encouraging telecommuting and alternative work schedules reduces the number of commute trips and therefore VMT traveled by employees. Alternative work schedules could take the form of staggered starting times, flexible schedules, or compressed work weeks.

Remarks: The effectiveness of this measure is dependent on the ultimate building tenant(s) which are unknown at this time. This measure could provide for a potential reduction in Project VMT. CAPCOA notes that implementation of this measure could reduce commute VMT by 0.07 – 5.50 percent (Quantifying Greenhouse Gas Mitigation Measures, p. 236).

- Measure 7: Provide Ride-Sharing Programs. This strategy focuses on encouraging carpooling and vanpooling but its ultimate implementation is limited as Measure 6 above.

Remarks: The effectiveness of this measure is dependent on the ultimate building tenant(s) which are unknown at this time. This measure could provide for a potential reduction in Project VMT. CAPCOA notes that implementation of this measure could reduce commute VMT by 1.0 – 15.0 percent (Quantifying Greenhouse Gas Mitigation Measures, p. 227).

Implementation of applicable TDM strategies (Measure 6: Encourage Telecommuting and Alternative Work Schedule and Measure 7: Provide Ride-Sharing Programs) have the potential to reduce the Project Automobile and Total VMT/SP.

The effectiveness of the above-noted TDM measures would be dependent in part on final Project designs and occupancies, which are unknown at this time. Beyond Project design and tenancy considerations, land use context is a major factor relevant to the potential application and effectiveness of TDM measures. More specifically, the land use context of the Project is characteristically suburban. Of itself, the Project's suburban context acts to reduce the range of feasible TDM measures and moderates their potential effectiveness. Relevant discussion in this regard is presented in *WRCOG SB 743 Implementation Pathway Document Package* (Fehr + Peers [for WRCOG]) March 2019, excerpted in pertinent part below:

The Technical Advisory relies on the *Quantifying Greenhouse Gas Mitigation Measures*, (CAPCOA) 2010 resource document to help justify the 15 percent reduction in VMT

threshold stating, “. . . fifteen percent reduction in VMT are achievable at the project level in a variety of place types . . .”. A more accurate reading of the CAPCOA document is that a fifteen percent is the maximum reduction when combining multiple mitigation strategies for the *suburban center*<sup>3</sup> place type. For *suburban*<sup>4</sup> place types 10 percent is the maximum and requires a project to contain a diverse land use mix, workforce housing, and project-specific transit. It is also important to note that the maximum percent reductions were not based on data or research comparing the actual performance of VMT reduction strategies in these place types. Instead, the percentages were derived from a limited comparison of aggregate citywide VMT performance for Sebastopol, San Rafael, and San Mateo where VMT performance ranged from 0 to 17 percent below the statewide VMT/capita average based on data collected prior to 2002. Little evidence exists about the long-term performance of similar TDM strategies in different land use contexts. As such, VMT reductions from TDM strategies cannot be guaranteed in most cases (*WRCOG SB 743 Implementation Pathway Document Package*, pp. 65 – 66).

As indicated in the preceding discussion, even under the most favorable circumstances, projects located within a suburban context, such as the Project evaluated here, could realize a maximum 10 percent reduction in VMT through implementation of feasible TDM measures. For the Project considered here, this could result in 28.00 Automobile VMT/SP which is below the applicable threshold of 31.96 Automobile VMT/SP. A 10% reduction in Total Project VMT/SP would yield 42.67 VMT/SP, which would still exceed the applicable threshold of 35.96 VMT/SP.

It is also recognized that as the Project area and City develop as envisioned under the City of Ontario Policy Plan, new residential, commercial/retail, and industrial development would be implemented. These actions could collectively alter transportation patterns, improve the City’s jobs/housing ratio, diminish VMT/SP, and support implementation of new or alternative TDM measures. There is no means however to quantify any VMT reductions that could result. Additionally, the effectiveness of the TDM strategies that have potential to reduce the Project VMT/SP are dependent on as yet unknown final Project designs building tenant(s); and as noted above, “VMT reductions from TDM strategies cannot be guaranteed in most cases.” Further, the identified TDM measures are not likely to reduce Project truck VMT. Pointedly, CAPCOA provides no TDM measures targeted at truck traffic.

In summary, the Project’s Automobile VMT/SP is lower than the applicable thresholds. However, unmitigated Project Total VMT/SP, including truck VMT, would exceed applicable thresholds. The Project would implement TDM measures that could potentially reduce Automobile VMT/SP impacts to levels

---

<sup>3</sup> **Suburban Center:** A project typically involving a cluster of multi-use development within dispersed, low-density, automobile dependent land use patterns (a suburb). The center may be an historic downtown of a smaller community that has become surrounded by its region’s suburban growth pattern in the latter half of the 20th Century. The suburban center serves the population of the suburb with office, retail and housing which is denser than the surrounding suburb (*Quantifying Greenhouse Gas Mitigation Measures*, p. 60).

<sup>4</sup> **Suburban:** A project characterized by dispersed, low-density, single-use, automobile dependent land use patterns, usually outside of the central city . . . (*Quantifying Greenhouse Gas Mitigation Measures*, p. 60).

that would be less-than-significant. Even with implementation of TDM measures, Total VMT/SP impacts could not be reduced to levels that would be less-than-significant. In any case, the efficacy of TDM measures and reduction of VMT impacts below thresholds cannot be assured at this concept stage of Project development. The Project VMT impact is therefore considered **significant and unavoidable**.

As a point of interest, the significant and unavoidable VMT impact determination for the Project parallels conclusions of the San Bernardino Countywide Plan (CWP) Draft Program EIR. In this latter regard, the CWP Draft Program EIR concludes that . . . “[t]rip generation related to land use development under the projected 2040 buildout of the CWP would exceed the County’s VMT reduction threshold (4 percent reduction in VMT/person (residential) and 4 percent reduction in VMT/employee in comparison to existing VMT/person (or employee)” (Draft Program EIR, p. 1-36, et al.)

### **Cumulative VMT Impacts**

As summarized in *WRCOG SB 743 Implementation Pathway Document Package* . . . “VMT thresholds based on an efficiency form of the metric such as VMT per capita, can address project and cumulative impacts in a similar manner that some air districts do for criteria pollutants and GHGs (*WRCOG SB 743 Implementation Pathway Document Package*, p. 67). In this respect, significant and unavoidable VMT impacts at the Project level would also be considered cumulatively significant.

As discussed herein, Project VMT impacts based on a VMT/SP metric would be significant and unavoidable at the Project level, and therefore would also be cumulatively significant and unavoidable.

## **INDUCED VMT ASSESSMENT**

Use of VMT as an environmental impact metric for transportation projects is discretionary under the Section 15064.3 (b) (2) of the CEQA Guidelines:

*(2) Transportation Projects. Transportation projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact. For roadway capacity projects, agencies have discretion to determine the appropriate measure of transportation impact consistent with CEQA and other applicable requirements. To the extent that such impacts have already been adequately addressed at a programmatic level, such as in a regional transportation plan EIR, a lead agency may tier from that analysis as provided in Section 15152.*

OPR Technical Memorandum states that building new roadways, adding roadway capacity in congested areas, or adding roadway capacity to areas where congestion is expected in the future, typically induces additional vehicle travel. OPR identifies addition of through lanes on existing or new highways, including general purpose lanes, HOV lanes, peak period lanes, auxiliary lanes, or lanes through grade-separated interchanges as project types that would likely lead to a measurable and substantial increase in induced vehicle travel. Further, OPR Technical Memorandum acknowledges that addition of capacity on local or collector streets provided the project also substantially improves conditions for pedestrians, cyclists,

and, if applicable, transit would not likely lead to a substantial or measurable increase in vehicle travel, and therefore generally should not require an induced travel analysis.

The Project is proposing to construct site adjacent local streets, collectors and arterials, including sidewalk and bicycle lanes consistent with the City of Ontario Policy Plan (the City's General Plan). The construction of these local facilities consistent with the Policy Plan is not likely to significantly alter regional or interregional travel.

Project job creation would not exceed employment projections developed under the Policy Plan. Growth resulting from Project job creation is anticipated under the Policy Plan, and such growth would not result in environmental impacts not already considered and addressed in the Policy Plan EIR. Growth resulting from or facilitated by Project infrastructure improvements is anticipated under the Policy Plan, and environmental impacts attributable to such growth is considered and addressed in the Policy Plan EIR.

Additionally, the Policy Plan EIR notes that while the City of Ontario is jobs-rich, the subregion as a whole is housing-rich. The Policy Plan EIR concludes that buildout of the Ontario Plan would act to improve the job/housing balance within the subregion. Based on the preceding discussions, the potential for the Project to induce substantial population growth in the area, either directly or indirectly is considered less-than-significant.

It may also be worthwhile noting that the Project would generate approximately one-half of the total daily trips that would result from development of the subject under the site's current Policy Plan Land Use designations (see Table 7). A comparable reduction in total VMT could be expected.

Environmental impacts of VMT generated under the current Policy Plan Land Uses are reflected in related Policy Plan EIR Traffic, Air Quality, Greenhouse Gas/Global Climate Change, and Vehicular-source Noise analyses. The Project would result in a comparative reduction in total ADT and VMT when compared to ADT and VMT generated by the site's current Policy Plan Land Uses. Additionally, roadway improvements proposed by the Project are consistent with and would not provide capacity beyond that reflected in the Policy Plan Mobility Element.

While roadway improvements associated with the Project may facilitate vehicular travel within the City and surrounding areas, total VMT and environmental impacts of such travel would be comparatively reduced when compared with VMT and VMT-related impacts already considered and addressed in the Policy Plan EIR.

**TABLE 7: TRIP GENERATION COMPARISON CURRENT POLICY PLAN LAND USES VS. PROJECT**

Current Policy Plan Land Use			Project	
Policy Plan Land Use Designation	ITE Metric	ADT (PCE)	Policy Plan Land Use Designation	ADT (PCE)
Business Park 303.5 acres; 7,932,300 sf	ITE Land Use 130 3.37 Trips/TSF	26,730	Business Park 55.1 acres; 1,441,000 sf	5,842
Office Commercial 43.3 acres; 1,414,600 sf	ITE Land Use 710 9.74 Trips/TSF	13,778	N/A	--

Notes:

1. "Right-of-way/other" land use under existing condition assumes balance of site would be assigned to rights-of-way or non-building other uses.
2. Maximum building square footage calculated by multiplying the total acreage of each land use by the anticipated floor area ratio (FAR) for the respective land use designation per Policy Plan Table LU-02 Land Use Designations Summary Table – Industrial FAR = 0.55; Business Park FAR = 0.60; General Commercial FAR = 0.040; Office Commercial FAR = 0.75.
3. Existing Policy Plan Land Use Trip Generation Metrics from ITE Trip Generation Manual, 10th Edition (2017). ITE Land Use Codes: 130-Industrial Park; 710 General Office, 820 Shopping Center.
4. Project Trip Generation from Merrill Commerce Center Specific Plan, Traffic Impact Analysis, City of Ontario (Urban Crossroads, Inc.) December 23, 2019.
5. ADT = Average Daily Trips, TSF = Thousand Square Feet
