Suite 420  
Riverside, CA 92501  
Contact: Kevin Thomas

The City of Ontario (City), as the lead agency, has determined that the proposed Ontario Ranch Business Park Specific Plan Amendment project (Project) will require the preparation of a Subsequent Environmental Impact Report (EIR) in compliance with the California Environmental Quality Act (CEQA) (California Public Resources Code, Section (Section) 21000 et seq.). In accordance with Section 15082 of CEQA Guidelines, the City has issued this Notice of Preparation (NOP) to provide responsible agencies, trustee agencies, and other interested parties with information describing the proposed Project and its potential environmental effects. The EIR will be prepared as a Subsequent EIR pursuant to CEQA Guidelines Section 15162, due to the expanded area of the Specific Plan. The Subsequent EIR will tier off of the previously certified Ontario Ranch Business Park Specific Plan EIR (SCH# 2019050018, approved on October 6, 2020).

Due to time limits mandated by state law, your response to this NOP must be submitted as soon as possible but no later than 30 days after receipt of this notice. Please address your response to Alexis Vaughn at the City of Ontario address listed above and provide the name, phone number, and address of a contact person for your response. If your agency or organization will be a responsible or trustee agency for this proposed Project, please so indicate, and provide input in accordance with CEQA Guidelines Section 15096(b).

**PROJECT TITLE** Ontario Ranch Business Park Specific Plan Amendment

CLERK OF THE BOARD

Received on: 06/30/2021

Remove on: 08/06/2021

## PROJECT LOCATION

The proposed Project is located on a 71.69-acre site in the southwest portion of the City of Ontario, within San Bernardino County. The proposed Project site is east of the unimproved right-of-way (ROW) of Sultana Avenue, north of Merrill Avenue, south of Eucalyptus Avenue, and east of Campus Avenue (refer to Exhibit 1, *Vicinity Map*).

The proposed Project site consists of eight parcels that include the Assessor Parcel Numbers (APNs) presented in Table 1.

**Table 1: Assessor Parcel Numbers**

1054-041-01	1054-041-02
1054-031-01	1054-031-02
1054-261-01	1054-261-02
1054-291-01	1054-291-02

Regional access to the Project site is provided by State Route 83 (SR-83; Euclid Avenue), which connects to State Route 60 (SR-60) and Interstate 10 (I-10) to the north, I-15 approximately 5.75 miles to the east, and State Route 71 (SR-71) approximately 3 miles to the southwest. SR-71 connects the project to Interstate 91 (I-91) in unincorporated Riverside County.

## PROJECT SETTING

The Project site is currently occupied by agricultural uses, including a dairy farm and row crops, and vacant land. There are several residential structures located throughout the Project site. The Project site also includes dairy barns, a storage structure, feed storage barns, and numerous livestock corrals. There are large existing retention ponds that collect agricultural waste. The site is currently served by a domestic potable water well located at the northeast corner of the site. There is no identified septic system on the property. The remainder of the Project site is used as irrigated cropland with berms located along the site perimeter. To the north, east, and west of the Project site exists mostly rural farmland, and to the south is the Chino Airport.

## PROJECT DESCRIPTION

The Ontario Ranch Business Park Specific Plan (ORBP SP) was approved in October of 2020 and consisted of a General Plan Amendment (GPA), Specific Plan, Development Plan Review, Tentative Parcel Maps, and a Development Agreement to allow for development of an industrial and business park on eleven parcels covering 85.6 acres in the City. The ORBP SP project included eight warehouse buildings ranging from 46,900 square feet (sf) to 618,353 sf, totaling a maximum development of 1,905,027 sf of warehouse and office uses. The proposed Project would incorporate the abutting approximately 72 acres to the east of the approved ORBP SP site into the overall ORBP SP area.

The Project to be addressed in the EIR includes a GPA, Specific Plan Amendment (SPA), a Development Agreement, Development Plan(s), and Tentative Parcel Map(s) to allow development of approximately 1.6 million square feet of industrial and business park land uses on the 71.69-acre site, as described further below. The Project would allow for the development of six warehouses on six parcels, ranging from 61,300

sf to 530,460 sf in building size. The Project adds two new planning areas (PAs) to the ORBP SP (PAs 3 and 4), and would allow Business Park and Industrial development uses totaling 1,640,690 sf. The expansion of the approved ORBP SP is depicted in Exhibit 2, ***Proposed General Plan Land Uses***.

In addition, in compliance with the Housing Accountability Act (SB 330), a GPA is proposed to increase residential densities on a separate site to replace residential capacity lost due to implementation of the proposed Project.

The following summarizes the discretionary approvals to be evaluated in the EIR as part of the Project review and approval process by the City of Ontario.

***General Plan Amendment (GPA)***. The proposed GPA would amend the Project site's land use designations from 18 acres of Business Park (BP) and 56 acres of Low-Medium Density Residential (LMDR) to approximately 12 acres of BP and 60 acres of Industrial General (IG). As mentioned above, as part of SB330, an additional GPA will be processed concurrently to increase residential density elsewhere in the City to achieve no net loss of residential unit capacity (see further discussion below).

***Ontario Ranch Business Park Specific Plan Amendment (also referenced as a Zone Change herein)***. The SPA would add the Project site to the existing ORBP SP. The SPA proposes a comprehensive land use plan, circulation plan, streetscape plan, infrastructure service plan, grading plan, maintenance plan, phasing plan, design guidelines, development regulations, and implementation measures to guide the development of the 71.69-acre Project site into a master-planned industrial and business park. The SPA consists of two PAs which would accommodate a variety of industrial-serving commercial, low-intensity office, technology, light manufacturing, warehouse/distribution, and other similar uses that are compatible with the Project site's location within Safety Zone 6 of the Chino Airport. Refer to Exhibit 2, ***Proposed General Plan Land Uses***.

The SPA would allow up to 1,640,690 sf of building space for these PAs. PAs 3 and 4 would be located between Eucalyptus Avenue to the north, Merrill Avenue to the south, Sultana Avenue to the west and Campus Avenue to the east.

- Business Park: The SPA would allow for up to 227,951 sf of Business Park building space to be developed on a total of 11.63 acres within PA 3. This PA would be developed with business park buildings that would allow for the development of uses such as offices, technology centers, research and development, enterprises, light manufacturing, and warehouse/distribution uses.
- Industrial: The SPA would allow for up to 1,412,739 sf of Industrial building space to be constructed within PA 4. This PA would comprise 60.06 acres and would allow for the development of uses such as general light industrial, manufacturing, warehouse/distribution, and e-commerce fulfillment center operations.

The land use types proposed by the SPA are summarized below in Table 2, ***Maximum Specific Plan Build-Out Summary***.

**Table 2: Maximum Specific Plan Build-Out Summary**

Planning Area	Maximum Floor Area Ratio	Site Acreage	Maximum Building Square Footage
<b>Phase 2</b>			
Planning Area 3: Business Park	0.45	11.629	227,951 sf
Planning Area 4: General Industrial	0.54	60.059	1,412,739 sf
<b>TOTAL</b>		<b>71.688</b>	<b>1,640,690 sf</b>

***Development Agreement.*** A Development Agreement would be executed between the Project Applicant and the City strictly in relation to the proposed Development Plan and associated Parcel Map for the Project site. California Government Code §§65864-65869.5 authorizes the use of development agreements between any City, County, or City and County, with any person having a legal or equitable interest in real property for the development of the property.

***Development Plan.*** A Development Plan (DP) is proposed to be submitted concurrently with the GPA and SPA. The DP site plan will consist of six industrial concrete tilt-up business park and industrial/warehouse buildings with ancillary office space totaling up to 1,522,240 sf, which is less development than the maximum allowable under the Specific Plan. Each warehouse and its associated parking would be constructed on a separate parcel listed as building 8 through 13. (see Table 3, ***Conceptual Site Plan Summary***, and Exhibit 3, ***Conceptual Site Plan***).

**Table 3: Conceptual Site Plan Summary**

Planning Area	SP Zoning District	Site Acreage	Proposed Conceptual Building Square Footage
Planning Area 3	BP	11.63	83,110 sf
			61,300 sf
			67,380 sf
<b>Subtotal</b>			<b>211,790 sf</b>
Planning Area 4	IG	60.06	352,830 sf
			530,460 sf
			427,160 sf
<b>Subtotal</b>			<b>1,310,450 sf</b>
<b>TOTAL</b>		<b>71.69</b>	<b>1,522,240 sf</b>

Note:

1. PA 3 and PA 4 sf reflect the conceptual site plan which reflects the Tentative Parcel Map to be considered as part of the Project review and approval process. The conceptual site plan reflects current market trends, site conditions, and planned infrastructure. However, the conceptual site plan may be modified provided it does not exceed the maximum building area presented in Table 2 and complies with this Specific Plan and applicable provisions of the City of Ontario Development Code. The ORBP SP, including PAs 3 and 4, has analyzed maximum FAR allowances that are less than those allowable by the respective TOP land use district thresholds.

***Tentative Parcel Map(s).*** A Tentative Parcel Map(s) (TPM) would subdivide the approximately 71.69-acre Development Plan area to provide 6 lots and establish a subdivision of Business Park lots and General Industrial lots.

Phasing and Construction. The Project site is anticipated to be developed in one phase with a completion date by 2023 and expected full occupancy by 2024 (depending on market conditions and other factors). The proposed Project entitlement and construction permitting process is expected to take approximately one and a half years followed by one year of construction and buildout occurring in mid-2022.

Access. Access drives would be provided from all four fronting streets, with a total of 16 driveway access points proposed. Internal drive aisles would provide connectivity throughout the site.

Landscaping and Stormwater Management. The Project will meet the minimum landscape requirement of the Ontario Ranch Business Park Specific Plan. Onsite stormwater treatment would incorporate underground chambers installed within each building's parking area.

Roadway Improvements. The Project includes frontage improvements to the buildout condition identified in the TOP Circulation Element. Full buildout is identified below, with the Project responsible for a half-width improvement only:

- Merrill Avenue: Collector Street, 4 Lanes (98' ROW)
- Campus Avenue: Minor Arterial Street 4 Lanes (108' ROW)
- Eucalyptus Avenue: Collector Street, 4 Lanes (108' ROW)
- Sultana Avenue: Collector Street, 2 Lanes (66' ROW)

Eucalyptus and Merrill Avenues each require additional dedication (21 feet) and half-width improvements, to include curb and gutter 42 feet from centerline and a 12-foot parkway including sidewalk.

Campus Ave will require a 29-foot half-width dedication and a 12-foot parkway including the sidewalk. An additional 23-foot dedication in fee simple for the neighborhood edge is required.

Sultana Avenue is a fully-dedicated paper street; half-width improvements would be required to include curb and gutter 24 feet from centerline and a 13-foot parkway including sidewalk.

Utilities. As part of the Ontario Ranch Business Park Specific Plan, the following infrastructure improvements were required, and the proposed Project will connect to these facilities:

- Recycled water infrastructure is planned to include installing an 8-inch recycled water main in Euclid Avenue connecting the existing IEUA 30-inch 930 Pressure Zone Recycled Water main in Eucalyptus Avenue to an 8-inch recycled water main in Merrill Avenue. The 8-inch recycled water main in Merrill Avenue will extend from Euclid Avenue easterly to Sultana Avenue. An 8-inch recycled water main will be installed in Sultana Avenue connecting the recycled water main in Merrill Avenue to the existing IEUA 30-inch recycled water main in Eucalyptus Avenue.
- A 36-inch sewer main will connect to an existing IEUA interceptor trunk main sewer located in Kimball Avenue to the south, run north in Euclid Avenue to Merrill Avenue, then reduces to a 30-inch sewer main east to Sultana Avenue. The IEUA interceptor trunk sewer main is 54- inches east of Euclid and 60-inches west of Euclid Avenue. A 21-inch sewer main will run from Merrill Avenue north within Euclid Avenue to Eucalyptus Avenue. An eight-inch public sewer main will be located along Sultana Avenue.

- Storm drains in Eucalyptus Avenue and Euclid Avenue north of Merrill Avenue will be constructed. The reinforced concrete box facility in Merrill Avenue will end just north of the existing earthen channel, located between the paved portions of Euclid Avenue and the existing easterly right-of-way. The storm water will then bubble up in the structure and spill out into the existing channel where it will continue to flow south to eventually discharge south of Pine Avenue in the City of Chino.

The Project proposes new on-and offsite public sewer, potable water, and storm drain infrastructure, and would receive Southern California Edison electrical service. There are power poles and overhead facilities located opposite the site along Eucalyptus Avenue and Sultana Avenue. Onsite improvements would include storm drains, water quality systems, a sewer main and sewer lines, water lines, and dry utility connections.

### **Housing Accountability Act (SB 330)**

The Project also includes evaluation of “replacement housing” in accordance with SB 330, the Housing Crisis Act of 2019 (Government Code Section 6300). SB 330 requires in part that, where a development project results in reducing the number of housing units allowed under existing zoning, the City must concurrently rezone other parcels such that there is no “net loss” of the total allowable housing development in the City. The City has evaluated the proposed Project and has determined that the General Plan Amendment and Zone Change would result in the “loss” of approximately 479 low- to moderate-density housing units. Therefore, the City is evaluating replacement sites for rezoning to ensure that there is no net loss in allowable housing density due to the Project.

The proposed Project would eliminate the LMDR housing designation, thereby theoretically eliminating 479 units (as determined by the City’s density determinations to be 8.5 units per acre, based on 56 acres of LMDR residential land within the proposed area to be added to the ORBP SP). Pursuant to SB330, the Project will create an Overlay District on an “SB330 Replacement Site” to increase the residential zoning capacity by 479 units, which will offset the “loss” of residential zoning capacity within the Project site. Refer to Exhibit 4, ***Proposed SB330 Replacement Site***. Due to this offset, the Project would result in a no net loss of residential zoning in the City.

### **Required Entitlements and Approvals**

The City is serving as the CEQA Lead Agency and will consider the EIR for certification and the Project for approval. Additional permits and/or approvals from the following agencies are anticipated to be necessary for implementation of the Project:

**Table 4: Anticipated Permits and Approvals Required**

<b>Lead Agency</b>	<b>Action</b>
City of Ontario City Council	<ul style="list-style-type: none"> <li>• Certification of the Ontario Ranch Business Park Specific Plan Amendment EIR</li> <li>• Adoption of the Mitigation Monitoring and Reporting Program</li> <li>• Approval of the General Plan Amendment</li> <li>• Approval of the Ontario Ranch Business Park Specific Plan Amendment</li> <li>• Approval of the Development Plan Review</li> <li>• Approval of the Tentative Parcel Maps</li> <li>• Approval of a Development Agreement</li> </ul>
<b>Responsible Agencies</b>	<b>Action</b>
San Bernardino County	<ul style="list-style-type: none"> <li>• Well removal permit from County Health Department (if required)</li> </ul>
City of Chino	<ul style="list-style-type: none"> <li>• Street and drainage improvements</li> </ul>
Caltrans	<ul style="list-style-type: none"> <li>• Encroachment permit (if required)</li> </ul>
Santa Ana Regional Water Quality Control Board	<ul style="list-style-type: none"> <li>• Issuance of a National Pollutant Discharge Elimination system (NPDES) Permit</li> </ul>
Inland Empire Utilities Agency	<ul style="list-style-type: none"> <li>• Recycled water and connection to trunk sewer line</li> </ul>
Federal Aviation Administration	<ul style="list-style-type: none"> <li>• Obstruction evaluation</li> </ul>
State Water Resources Control Board	<ul style="list-style-type: none"> <li>• Stormwater Pollution prevention Plan (SWPPP), and Water Quality Monitoring Program (WQMP)</li> </ul>
South Coast Air Quality Management District	<ul style="list-style-type: none"> <li>• Demolition Notification</li> </ul>

**Environmental Issues to be Evaluated in the EIR**

The following issues are anticipated to be addressed in the EIR:

- Agriculture/Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards/Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire

The EIR will address the short- and long-term effects of the proposed Project on the environment, including the impacts of any off-site improvements. It will also evaluate the potential for the proposed Project to cause direct and indirect growth-inducing impacts, as well as cumulative impacts. Alternatives to the proposed Project will be evaluated that may reduce impacts that are determined to be significant in the EIR. Mitigation will be proposed for those impacts that are determined to be significant. A mitigation monitoring program will also be developed for any proposed mitigation as required by Section 15097 of the CEQA Guidelines.

**Cortese List Notice:** Pursuant to Public Resources Code Section 21092.6(a), the Project site is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 (California Department of Toxic Substances Control list of various hazardous sites).<sup>1</sup>

### **PUBLIC REVIEW PERIOD**

In accordance with CEQA, this NOP will be circulated for a 30-day public review period. Should you have any comments, please provide a written response to this NOP within the 30-day NOP public review period, which runs from July 1 through August 6, 2021. Please indicate a contact person for your agency or organization. Pursuant to CEQA Guidelines Section 15082, responsible and trustee agencies and other interested parties, including members of the public, must submit any comments in response to this notice no later than 30 days after receipt of the notice.

Please send any comments to:

City of Ontario Planning Department, c/o Alexis Vaughn  
303 East B Street, Ontario, CA 91764  
Email: [AVaughn@ontarioca.gov](mailto:AVaughn@ontarioca.gov)  
Telephone: (909) 395-2036  
Fax: (909) 395-2420

### **PUBLIC SCOPING MEETING**

Pursuant to Section 21083.9(a)(2) of CEQA (California Public Resources Code, Section 21000 et seq.), scoping meetings are required for projects that may have statewide, regional, or area-wide environmental significance. A public scoping meeting will be held by the City of Ontario on Wednesday, July 21, 2021, at 5:30 PM via Zoom. To ensure the health and safety of residents, limitation of contact will be enforced to prevent the spread the COVID-19 virus. Therefore, there will be no members of the public in attendance of the scoping meeting. Members of the public, project applicants and consultants, and staff will participate in this meeting via Zoom. The public scoping will begin promptly at 5:30 PM and end no later than 7:30 PM. Verbal and written comments regarding the scope of the environmental issues to be addressed in the EIR will be accepted at the virtual meeting. Written comments can also be mailed to the above-mentioned lead agency address, addressed to Alexis Vaughn, during the NOP 30-day public comment period.

### ***Special Accommodations***

Should you require special accommodations at the public scoping meeting, such as for the hearing impaired or an English translator, please contact the City of Ontario no later than Friday, July 16, 2021 (see contact information above).

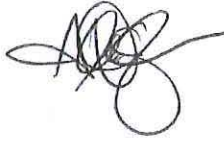

Scoping Meeting Date: Wednesday, July 21, 2021

Scoping Meeting Time: 5:30 PM (beginning promptly at) and ending no later than 7:30 PM

## **NEWSPAPER NOTICE**

**NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT  
AND SCOPING HEARING TO BE PREPARED BY THE CITY OF ONTARIO FOR THE  
ONTARIO RANCH BUSINESS PARK SPECIFIC PLAN AMENDMENT (FILE NO.  
PSPA21-002) AND RELATED GENERAL PLAN AMENDMENT (FILE NO. PGPA21-001)**

Notice is hereby given, that the City of Ontario (Latitude 34°03'N / Longitude 117°37'W) will be the Lead Agency and will prepare an Environmental Impact Report (EIR) for the Project identified below. Interested public agencies are invited to comment on the scope of the EIR. A copy of an expanded Notice of Preparation is available for review at the following locations or by or may be viewed online at <https://www.ontarioca.gov/Planning>.

City Hall, Planning Department  
303 East "B" Street  
Ontario, CA 91764

Ontario Main Library  
215 East "C" Street  
Ontario, CA 91764

**Project Location:** The Ontario Ranch Business Park Specific Plan Amendment ("Project" or "Specific Plan Amendment") is located east of the unimproved right-of-way of Sultana Avenue, north of Merrill Avenue, south of Eucalyptus Avenue, and east of Campus Avenue in Ontario, California, 91764. The project consists of 8 parcels: APNs 1054-041-01, -02; 1054-031-01, -02; 1054-261-01, -02; and 1054-291-01, -02. Regional access to the Project site is provided by State Route 83 (SR-83; Euclid Avenue), which connects to State Route 60 (SR-60) and Interstate 10 (I-10) to the north, I-15 approximately 5.75 miles to the east, and State Route 71 (SR-71) approximately 3 miles to the southwest. SR-71 connects the project to Interstate 91 (I-91) in unincorporated Riverside County.

The project site is on an existing operational dairy farm with several residential structures, dairy barns, storage structures and feed storage barns, and numerous livestock corrals. To the north, east, and west of the proposed Project site, exists mostly rural farmland, and to the south is the Chino Airport within the City of Chino.

**Project Description:** The Project includes a General Plan Amendment and Specific Plan, and will include a Development Agreement, Development Plan(s), and Tentative Parcel Map(s) in the future to allow development of approximately 1.6 million square feet (sf) of industrial and business park land uses on the 71.68-acre site, as described further below. The Project is an amendment of the Ontario Ranch Business Park Specific Plan project, which was approved September 15, 2020, to allow for development of an industrial and business park on eleven parcels covering 85.6 acres in the City of Ontario. The Ontario Ranch Business Park Specific Plan project included eight warehouse buildings ranging from 46,900 sf to 618,353 sf, totaling a maximum development of 1,905,027 sf of warehouse and office uses. This Project will amend the Ontario Ranch Business Park Specific Plan project and would annex the abutting approximately 72 acres to the east. The Project consists of two planning areas (PAs) adding to the Ontario Ranch Business Park Specific Plan. PAs 3 and 4 would allow for a total of 1,640,690 sf of industrial and business park uses. The Development Plan currently proposes the construction of six industrial concrete tilt-up warehouse buildings. PA 3 will consist of three buildings utilized for warehousing and ancillary office space, totaling 227,951 sf. PA 4 will consist of industrial and warehousing uses, totaling 1,412,739 sf. The Environmental Impact Report (EIR) will evaluate the Project at a "subsequent level." The EIR will evaluate the total maximum allowable development in the Specific Plan, which is 1,640,690 sf of industrial and business park land uses and associated on-site and off-site infrastructure improvements. The Specific Plan serves to implement The Ontario Plan for the land covered by the Specific Plan and provides zoning regulations for development of the project site through adopted permitted land uses, development standards, infrastructure requirements and implementation requirements for the development within the Specific Plan boundaries. Per the Specific Plan and EIR, the floor area ratios (FARs) analyzed are less than that which The Ontario Plan allows.

Since the proposed Project would rezone land that is currently zoned for residential development, the Project requires compliance with SB330. For SB330 compliance the City will be adopting an Overlay District along Grove Corridor to provide for additional residential housing density “lost” by rezoning the Project site (refer to the NOP at the link above for details).

**Environmental Issues:** An Initial Study has not been prepared for the Project as the City has determined that an EIR will clearly be required for the Project, which is in the discretion of the Lead Agency as set forth in CEQA Guidelines Section 15063(a). Accordingly, the following environmental topics will be analyzed within the forthcoming EIR:

- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards/Hazardous Materials
- Hydrology/Water Quality
- Land Use and Planning
- Noise
- Population/Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities/Service Systems
- Wildfire

The EIR will address the short and long-term effects of the Project on the environment. It will also evaluate the potential for the Project to cause direct and indirect growth-inducing impacts, as well as cumulative impacts. Alternatives to the proposed Project will be evaluated that may reduce impacts that are determined to be significant in the EIR. Mitigation measures may be proposed for those impacts that are determined to be significant. A mitigation monitoring program will also be developed as required by Section 15097 of the CEQA Guidelines.

The environmental determination in this Notice of Preparation is subject to a 30-day public review period per Public Resources Code Section 21080.4 and CEQA Guidelines Section 15082. Public agencies, interested organizations, and individuals have the opportunity to comment on the proposed Project and identify the environmental issues, which have the potential to be affected by the Project, and should therefore be addressed further in the EIR.

A scoping meeting will be held by the City of Ontario on **Wednesday, July 21, 2021, at 5:30 PM** via Zoom.

To ensure the health and safety of our residents by limiting contact that could spread the COVID-19 virus, there will be no members of the public in attendance of the scoping meeting. Members of the public, project applicants and consultants, and staff will participate in this meeting via Zoom.

In place of in-person attendance, members of the public can observe and offer comment at this meeting remotely in one of three ways:

1. **PROVIDE PUBLIC TESTIMONY DURING THE MEETING:** The Zoom meeting link and call-in phone number will be made available on the City's website a minimum of 72 hours prior to the hearing, which can be accessed at <http://www.ontarioca.gov/planning>
2. **E-MAIL:** Please e-mail your comments to the City Contact no later than 4:00 PM on the day of the meeting.
3. **TELEPHONE BEFORE THE MEETING:** Please call the City Contact prior to and no later than 4:00 PM on the day of the meeting to submit your comments on the Project.

If you do not wish to participate in the scoping meeting but would like to comment on the Project, please send your comments, including contact information, to Alexis Vaughn, Assistant Planner, Ontario Planning Department, 303 East "B" Street, Ontario, CA 91764, (909) 395-2416 or [avaughn@ontarioca.gov](mailto:avaughn@ontarioca.gov), no later than Friday, August 20, 2021.

**PUBLIC SCOPING MEETING PRESENTATION**

City of Ontario

Ontario Ranch Business Park  
Specific Plan Amendment Subsequent EIR

July 21, 2021

Scoping Meeting

# Purpose of Scoping Meetings

- ❑ Early public consultation
- ❑ Learn about environmental concerns regarding the project from potentially affected agencies and individuals
- ❑ Opportunity to identify and address issues that might otherwise arise late in the process
- ❑ Help focus the EIR's content and identify alternatives

# CEQA Process

- ❑ The California Environmental Quality Act (CEQA) is required for discretionary approvals.
- ❑ Purpose is to inform decision makers and the public of potential effects of project approval.
- ❑ Expanded NOP provides consultation and focuses subsequent efforts.

# Roles and Responsibilities

*Developer*

Design and submit development proposal

*City Staff*

Review and evaluate Developer's project

Manage EIR Consultant

Make recommendations to Decision Makers

*Environmental Consultant*

Evaluate impacts of project approval on the existing environment

*Decision Makers*

Planning Commission and City Council

Evaluate and approve or disapprove project

# The Project

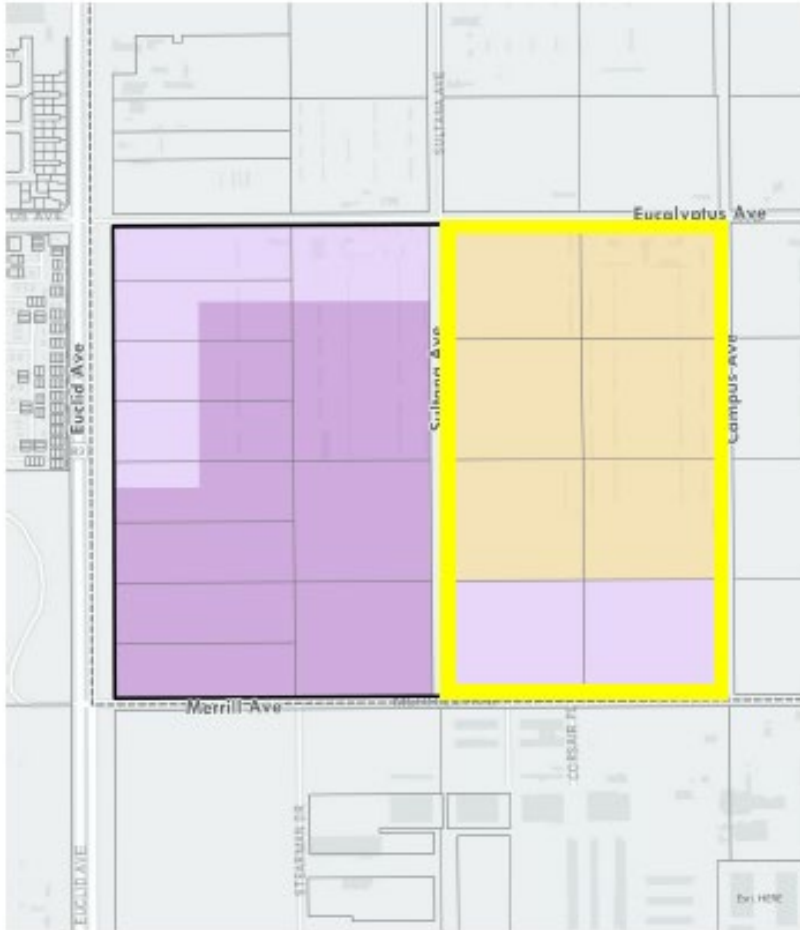

- ❑ The Project is an amendment of the approved Ontario Ranch Business Park Specific Plan, approved October 2020.
- ❑ Proposes a mix of industrial and business park land uses on approximately 71.69 acres.
- ❑ Proposes development and operation of up to:
  - ❑ 1,412,739 square feet of industrial/warehouse uses with ancillary office space
  - ❑ 227,951 square feet of industrial/business park uses
- ❑ Located in the City of Ontario, east of the unimproved right-of-way of Sultana Avenue, north of Merrill Avenue, south of Eucalyptus Avenue, and east of Campus Avenue.

# Project Location

# Land Use Plan – Planning Areas

General Plan Land Use Designations

- Business Park
- Industrial General
- Low-Medium Density
- Project Site

Existing Land Use

Ontario Ranch BP Land Use Designations

- Business Park
- Industrial General
- Project Site

Proposed Land Use

# Proposed Development by Planning Area

Planning Area	Maximum Floor Area Ratio	Site Acreage	Maximum Building Square Footage
<b>Phase 2</b>			
Planning Area 3: Business Park	0.45	11.629	227,951 sf
Planning Area 4: General Industrial	0.54	60.059	1,412,739 sf
<b>TOTAL</b>		<b>71.688</b>	<b>1,640,690 sf</b>

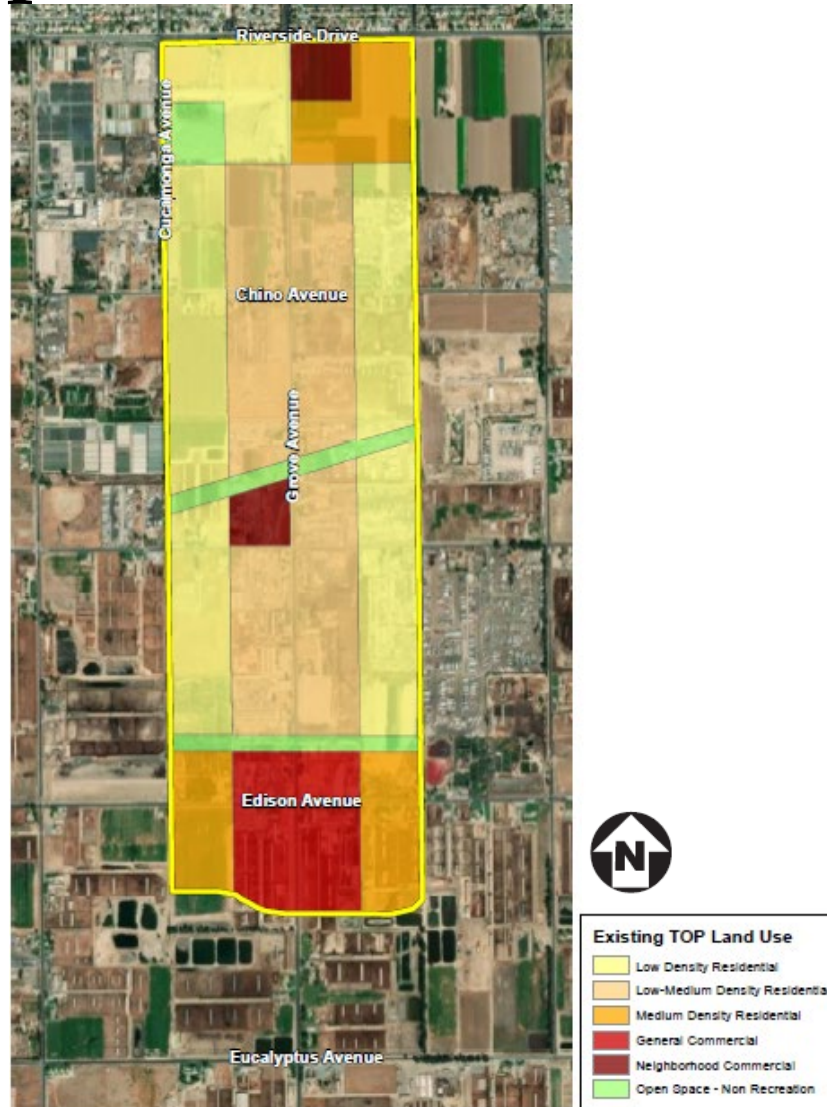

# The Project

- ❑ Discretionary Approvals Necessary:
  - ❑ Certification of the Ontario Ranch Business Park Specific Plan Amendment EIR;
  - ❑ Approval of Policy Plan (Land Use) Amendments;
  - ❑ Adoption of the Ontario Ranch Business Park Specific Plan Amendment;
  - ❑ Approval of SB330 Replacement Site Upzoning
  - ❑ Approval of Parcel Map/Development Plan;
  - ❑ Adoption of a Development Agreement.

# SB330 Replacement Site

# EIR Focus Areas

Based on the NOP and public scoping, the following topics will be addressed in the Project EIR:

- Agriculture/ Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology and Soils
- GHG Emission
- Hazards/ Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire

# Opportunities for Public Involvement

- ❑ Comments on the NOP will be accepted through August 20, 2021.
- ❑ 45-day Draft EIR comment period is anticipated to run during Fall 2021.
- ❑ Responses to EIR comments will be provided to public agencies not less than ten days prior to public hearings.
- ❑ Notices will be provided on dates of Planning Commission and City Council hearings on Final EIR.

# Questions or Comments?

If you have further questions or require additional information, please contact Alexis Vaughn, Assistant Planner, at [AVaughn@ontarioca.gov](mailto:AVaughn@ontarioca.gov).

# Traffic Analysis Study Area

**NOP COMMENT LETTERS**

July 21, 2021

Alexis Vaughn  
Planning Department  
City of Ontario  
303 East B Street  
Ontario, CA 91764

Subject: Notice of Preparation of a Draft Environmental Impact Report  
Ontario Ranch Business Park Specific Plan Amendment Project  
State Clearinghouse No. 2019050018

Dear Alexis Vaughn:

The California Department of Fish and Wildlife (CDFW) received a Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) from the City of Ontario (City) for the Ontario Ranch Business Park Specific Plan Amendment Project (Project) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.<sup>1</sup>

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

### **CDFW ROLE**

CDFW is California's Trustee Agency for fish and wildlife resources, and holds those resources in trust by statute for all the people of the State. (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a).) CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. (*Id.*, § 1802.) Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

---

<sup>1</sup> CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

CDFW is also submitting comments as a Responsible Agency under CEQA. (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381.) CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. As proposed, for example, the Project may be subject to CDFW's lake and streambed alteration regulatory authority. (Fish & G. Code, § 1600 et seq.) Likewise, to the extent implementation of the Project as proposed may result in "take" as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), the Project proponent may seek related take authorization as provided by the Fish and Game Code.

## **PROJECT DESCRIPTION SUMMARY**

The proposed Project includes a general plan amendment, specific plan amendment, a development agreement, development plan(s), and tentative parcel map(s) to allow development of approximately 1.6 million square feet (sf) of industrial and business park land uses on 71.69 acres. The proposed Project is located north of Merrill Avenue, south of Eucalyptus Avenue, and east of Campus Avenue, in the City of Ontario, within San Bernardino County, California on eight Assessor Parcel Numbers (APNs): 1054-041-01, 1054-041-02, 1054-031-01, 1054-031-02, 1054-261-01, 1054-261-02, 1054-291-01, and 1054-291-02. The proposed Project would allow for the development of six warehouses on six parcels, ranging from 61,300 sf to 530,460 sf in building size. The proposed Project adds two new planning areas to the existing specific plan, and would allow Business Park and Industrial development uses totaling 1,640,690 sf. The general plan amendment is proposed to increase residential densities on a separate site to replace residential capacity lost due to implementation of the proposed Project.

## **COMMENTS AND RECOMMENDATIONS**

CDFW offers the comments and recommendations below to assist the City in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources.

CDFW recommends that the forthcoming DEIR address the following:

### **Assessment of Biological Resources**

Section 15125(c) of the CEQA Guidelines states that knowledge of the regional setting of a project is critical to the assessment of environmental impacts and that special emphasis should be placed on environmental resources that are rare or unique to the region. To enable CDFW staff to adequately review and comment on the project, the DEIR should include a complete assessment of the flora and fauna within and adjacent to the Project footprint, with particular emphasis on identifying rare, threatened, endangered, and other sensitive species and their associated habitats.

The CDFW recommends that the DEIR specifically include:

1. An assessment of the various habitat types located within the project footprint, and a map that identifies the location of each habitat type. CDFW recommends that floristic, alliance- and/or association based mapping and assessment be completed following *The Manual of California Vegetation*, second edition (Sawyer et al. 2009). Adjoining habitat areas should also be included in this assessment where site activities could lead to direct or indirect impacts offsite. Habitat mapping at the alliance level will help establish baseline vegetation conditions.
2. A general biological inventory of the fish, amphibian, reptile, bird, and mammal species that are present or have the potential to be present within each habitat type onsite and within adjacent areas that could be affected by the project. CDFW's California Natural Diversity Database (CNDDDB) in Sacramento should be contacted at (916) 322-2493 or CNDDDB@wildlife.ca.gov to obtain current information on any previously reported sensitive species and habitat, including Significant Natural Areas identified under Chapter 12 of the Fish and Game Code, in the vicinity of the proposed Project.

Please note that CDFW's CNDDDB is not exhaustive in terms of the data it houses, nor is it an absence database. CDFW recommends that it be used as a starting point in gathering information about the *potential presence* of species within the general area of the project site.

3. A complete, *recent* inventory of rare, threatened, endangered, and other sensitive species located within the Project footprint and within offsite areas with the potential to be affected, including California Species of Special Concern (CSSC) and California Fully Protected Species (Fish and Game Code § 3511). Species to be addressed should include all those which meet the CEQA definition (CEQA Guidelines § 15380). The inventory should address seasonal variations in use of the Project area and should not be limited to resident species. Focused species-specific surveys, completed by a qualified biologist and conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable, are required. Acceptable species-specific survey procedures should be developed in consultation with CDFW and the U.S. Fish and Wildlife Service, where necessary. Note that CDFW generally considers biological field assessments for wildlife to be valid for a one-year period, and assessments for rare plants may be considered valid for a period of up to three years. Some aspects of the proposed Project may warrant periodic updated surveys for certain sensitive taxa, particularly if the Project is proposed to occur over a protracted time frame, or in phases, or if surveys are completed during periods of drought.

#### Burrowing Owl (*Athene cunicularia*)

The Project site has the potential to provide suitable foraging and/or nesting habitat for burrowing owl. Take of individual burrowing owls and their nests is defined by Fish and Game Code section 86, and prohibited by sections 3503, 3503.5 and 3513.

Take is defined in Fish and Game Code section 86 as “hunt, pursue, catch, capture or kill, or attempt to hunt, pursue, catch, capture or kill.”

CDFW recommends that the City follow the recommendations and guidelines provided in the *Staff Report on Burrowing Owl Mitigation* (Department of Fish and Game, March 2012); available for download from CDFW’s website:

<https://www.wildlife.ca.gov/conservation/survey-protocols>. The Staff Report on Burrowing Owl Mitigation, specifies three steps for project impact evaluations:

- a. A habitat assessment;
- b. Surveys; and
- c. An impact assessment

As stated in the Staff Report on Burrowing Owl Mitigation, the three progressive steps are effective in evaluating whether a project will result in impacts to burrowing owls, and the information gained from the steps will inform any subsequent avoidance, minimization, and mitigation measures. Habitat assessments are conducted to evaluate the likelihood that a site supports burrowing owl. Burrowing owl surveys provide information needed to determine the potential effects of proposed projects and activities on burrowing owls, and to avoid take in accordance with Fish and Game Code sections 86, 3503, and 3503.5. Impact assessments evaluate the extent to which burrowing owls and their habitat may be impacted, directly or indirectly, on and within a reasonable distance of a proposed CEQA project activity or non-CEQA project.

### **Analysis of Direct, Indirect, and Cumulative Impacts to Biological Resources**

The DEIR should provide a thorough discussion of the direct, indirect, and cumulative impacts expected to adversely affect biological resources as a result of the Project. To ensure that Project impacts to biological resources are fully analyzed, the following information should be included in the DEIR:

1. A discussion of potential impacts from lighting, noise, human activity (e.g., recreation), defensible space, and wildlife-human interactions created by zoning of development projects or other project activities adjacent to natural areas, exotic and/or invasive species, and drainage. The latter subject should address Project-related changes on drainage patterns and water quality within, upstream, and downstream of the Project site, including: volume, velocity, and frequency of existing and post-Project surface flows; polluted runoff; soil erosion and/or sedimentation in streams and water bodies; and post-Project fate of runoff from the Project site.
2. A discussion of potential indirect Project impacts on biological resources, including resources in areas adjacent to the project footprint, such as nearby public lands (e.g. National Forests, State Parks, etc.), open space, adjacent natural habitats, riparian ecosystems, wildlife corridors, and any designated and/or proposed reserve or

mitigation lands (e.g., preserved lands associated with a Natural Community Conservation Plan, or other conserved lands).

3. A cumulative effects analysis developed as described under CEQA Guidelines section 15130. The DEIR should analyze the cumulative effects of the plan's land use designations, policies and programs on the environment. Please include all potential direct and indirect Project related impacts to riparian areas, wetlands, vernal pools, alluvial fan habitats, wildlife corridors or wildlife movement areas, aquatic habitats, sensitive species and other sensitive habitats, open lands, open space, and adjacent natural habitats in the cumulative effects analysis. General and specific plans, as well as past, present, and anticipated future projects, should be analyzed relative to their impacts on similar plant communities and wildlife habitats.

### **Alternatives Analysis**

CDFW recommends the DEIR describe and analyze a range of reasonable alternatives to the Project that are potentially feasible, would "feasibly attain most of the basic objectives of the Project," and would avoid or substantially lessen any of the Project's significant effects (CEQA Guidelines § 15126.6[a]). The alternatives analysis should also evaluate a "no project" alternative (CEQA Guidelines § 15126.6[e]). The no Project alternative should evaluate how the changing environment, such as climate change and drought, may affect the community if a new or revised general plan were not adopted.

### **Mitigation Measures for Project Impacts to Biological Resources**

The DEIR should identify mitigation measures and alternatives that are appropriate and adequate to avoid or minimize potential impacts, to the extent feasible. The City should assess all direct, indirect, and cumulative impacts that are expected to occur as a result of the implementation of the Project and its long-term operation and maintenance. When proposing measures to avoid, minimize, or mitigate impacts, CDFW recommends consideration of the following:

1. *Fully Protected Species*: Fully protected species may not be taken or possessed at any time. Project activities described in the DEIR should be designed to completely avoid any fully protected species that have the potential to be present within or adjacent to the Project area. CDFW also recommends that the DEIR fully analyze potential adverse impacts to fully protected species due to habitat modification, loss of foraging habitat, and/or interruption of migratory and breeding behaviors. CDFW recommends that the Lead Agency include in the analysis how appropriate avoidance, minimization, and mitigation measures will reduce indirect impacts to fully protected species.
2. *Sensitive Plant Communities*: CDFW considers sensitive plant communities to be imperiled habitats having both local and regional significance. Plant communities, alliances, and associations with a statewide ranking of S-1, S-2, S-3, and S-4 should

be considered sensitive and declining at the local and regional level. These ranks can be obtained by querying the CNDDDB and are included in *The Manual of California Vegetation* (Sawyer et al. 2009). The DEIR should include measures to fully avoid and otherwise protect sensitive plant communities from project-related direct and indirect impacts.

3. *California Species of Special Concern* (CSSC): CSSC status applies to animals generally not listed under the federal Endangered Species Act or the CESA, but which nonetheless are declining at a rate that could result in listing, or historically occurred in low numbers and known threats to their persistence currently exist. CSSCs should be considered during the environmental review process. CSSC that have the potential or have been documented to occur within or adjacent to the project area, including, but not limited to the burrowing owl.
4. *Mitigation*: CDFW considers adverse project-related impacts to sensitive species and habitats to be significant to both local and regional ecosystems, and the DEIR should include mitigation measures for adverse project-related impacts to these resources. Mitigation measures should emphasize avoidance and reduction of project impacts. For unavoidable impacts, onsite habitat restoration and/or enhancement, and preservation should be evaluated and discussed in detail. Where habitat preservation is not available onsite, offsite land acquisition, management, and preservation should be evaluated and discussed in detail.

The DEIR should include measures to perpetually protect the targeted habitat values within mitigation areas from direct and indirect adverse impacts in order to meet mitigation objectives to offset project-induced qualitative and quantitative losses of biological values. Specific issues that should be addressed include restrictions on access, proposed land dedications, long-term monitoring and management programs, control of illegal dumping, water pollution, increased human intrusion, etc.

If sensitive species and/or their habitat may be impacted from the Project, CDFW recommends the inclusion of specific mitigation in the DEIR. CEQA Guidelines section 15126.4, subdivision (a)(1)(8) states that formulation of feasible mitigation measures should not be deferred until some future date. The Court of Appeal in *San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645 struck down mitigation measures which required formulating management plans developed in consultation with State and Federal wildlife agencies after Project approval. Courts have also repeatedly not supported conclusions that impacts are mitigable when essential studies, and therefore impact assessments, are incomplete (*Sundstrom v. County of Mendocino* (1988) 202 Cal. App. 3d. 296; *Gentry v. City of Murrieta* (1995) 36 Cal. App. 4th 1359; *Endangered Habitat League, Inc. v. County of Orange* (2005) 131 Cal. App. 4th 777).

CDFW recommends that the DEIR specify mitigation that is roughly proportional to the level of impacts, in accordance with the provisions of CEQA (CEQA Guidelines,

§§ 15126.4(a)(4)(B), 15064, 15065, and 16355). The mitigation should provide long-term conservation value for the suite of species and habitat being impacted by the Project. Furthermore, in order for mitigation measures to be effective, they need to be specific, enforceable, and feasible actions that will improve environmental conditions.

5. *Habitat Revegetation/Restoration Plans*: Plans for restoration and revegetation should be prepared by persons with expertise in southern California ecosystems and native plant restoration techniques. Plans should identify the assumptions used to develop the proposed restoration strategy. Each plan should include, at a minimum:
  - (a) the location of restoration sites and assessment of appropriate reference sites;
  - (b) the plant species to be used, sources of local propagules, container sizes, and seeding rates;
  - (c) a schematic depicting the mitigation area;
  - (d) a local seed and cuttings and planting schedule;
  - (e) a description of the irrigation methodology;
  - (f) measures to control exotic vegetation on site;
  - (g) specific success criteria;
  - (h) a detailed monitoring program;
  - (i) contingency measures should the success criteria not be met; and
  - (j) identification of the party responsible for meeting the success criteria and providing for conservation of the mitigation site in perpetuity. Monitoring of restoration areas should extend across a sufficient time frame to ensure that the new habitat is established, self-sustaining, and capable of surviving drought.

CDFW recommends that local onsite propagules from the Project area and nearby vicinity be collected and used for restoration purposes. Onsite seed collection should be initiated in the near future in order to accumulate sufficient propagule material for subsequent use in future years. Onsite vegetation mapping at the alliance and/or association level should be used to develop appropriate restoration goals and local plant palettes. Reference areas should be identified to help guide restoration efforts. Specific restoration plans should be developed for various project components as appropriate.

Restoration objectives should include protecting special habitat elements or re-creating them in areas affected by the Project; examples could include retention of woody material, logs, snags, rocks, and brush piles.

6. *Nesting Birds and Migratory Bird Treaty Act*: Please note that it is the Project proponent's responsibility to comply with all applicable laws related to nesting birds and birds of prey. Fish and Game Code sections 3503, 3503.5, and 3513 afford protective measures as follows: Fish and Game Code section 3503 makes it unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except as otherwise provided by Fish and Game Code or any regulation made pursuant thereto. Fish and Game Code section 3503.5 makes it unlawful to take, possess, or destroy any birds in the orders Falconiformes or Strigiformes (birds-of-prey) to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by Fish and Game Code or any regulation adopted pursuant thereto. Fish and Game Code section 3513 makes it unlawful to take or possess any migratory nongame bird

except as provided by the rules and regulations adopted by the Secretary of the Interior under provisions of the Migratory Bird Treaty Act of 1918, as amended (16 U.S.C. § 703 et seq.).

CDFW recommends that the DEIR include the results of avian surveys, as well as specific avoidance and minimization measures to ensure that impacts to nesting birds do not occur. Project-specific avoidance and minimization measures may include, but not be limited to: project phasing and timing, monitoring of project-related noise (where applicable), sound walls, and buffers, where appropriate. The DEIR should also include specific avoidance and minimization measures that will be implemented should a nest be located within the project site. If pre-construction surveys are proposed in the DEIR, the CDFW recommends that they be required no more than three (3) days prior to vegetation clearing or ground disturbance activities, as instances of nesting could be missed if surveys are conducted sooner.

7. *Moving out of Harm's Way*: To avoid direct mortality, CDFW recommends that the lead agency condition the DEIR to require that a CDFW-approved qualified biologist be retained to be onsite prior to and during all ground- and habitat-disturbing activities to move out of harm's way special status species or other wildlife of low or limited mobility that would otherwise be injured or killed from project-related activities. Movement of wildlife out of harm's way should be limited to only those individuals that would otherwise be injured or killed, and individuals should be moved only as far as necessary to ensure their safety (i.e., CDFW does not recommend relocation to other areas). Furthermore, it should be noted that the temporary relocation of onsite wildlife does not constitute effective mitigation for the purposes of offsetting project impacts associated with habitat loss.
8. *Translocation of Species*: CDFW generally does not support the use of relocation, salvage, and/or transplantation as mitigation for impacts to rare, threatened, or endangered species as studies have shown that these efforts are experimental in nature and largely unsuccessful.

### **California Endangered Species Act**

CDFW is responsible for ensuring appropriate conservation of fish and wildlife resources including threatened, endangered, and/or candidate plant and animal species, pursuant to CESA. CDFW recommends that a CESA Incidental Take Permit (ITP) be obtained if the Project has the potential to result in "take" (California Fish and Game Code Section 86 defines "take" as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill") of State-listed CESA species, either through construction or over the life of the project. CESA ITPs are issued to conserve, protect, enhance, and restore State-listed CESA species and their habitats.

CDFW encourages early consultation, as significant modification to the proposed Project and avoidance, minimization, and mitigation measures may be necessary to

obtain a CESA ITP. The California Fish and Game Code requires that CDFW comply with CEQA for issuance of a CESA ITP. CDFW therefore recommends that the DEIR addresses all Project impacts to listed species and specifies a mitigation monitoring and reporting program that will meet the requirements of CESA.

Based on review of CNDDDB, and/or knowledge of the project site/vicinity/general area, CDFW is aware that the following CESA-listed species have the potential to occur onsite/have previously been reported onsite: tricolored blackbird (*Agelaius tricolor*) and California black rail (*Laterallus jamaicensis coturniculus*).

### **ADDITIONAL COMMENTS AND RECOMMENDATIONS**

To ameliorate the water demands of this Project, CDFW recommends incorporation of water-wise concepts in project landscape design plans. In particular, CDFW recommends xeriscaping with locally native California species, and installing water-efficient and targeted irrigation systems (such as drip irrigation). Local water agencies/districts, and resource conservation districts in your area may be able to provide information on plant nurseries that carry locally native species, and some facilities display drought-tolerant locally native species demonstration gardens (for example the Riverside-Corona Resource Conservation District in Riverside). Information on drought-tolerant landscaping and water-efficient irrigation systems is available on California's Save our Water website: <http://saveourwater.com/what-you-can-do/tips/landscaping/>

### **ENVIRONMENTAL DATA**

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDDB). Information can be submitted online or via completion of the CNDDDB field survey form at the following link: <https://wildlife.ca.gov/Data/CNDDDB/Submitting-Data>. The completed form can be mailed electronically to CNDDDB at the following email address: [CNDDDB@wildlife.ca.gov](mailto:CNDDDB@wildlife.ca.gov). The types of information reported to CNDDDB can be found at the following link: <https://wildlife.ca.gov/Data/CNDDDB/Plants-and-Animals>.

### **FILING FEES**

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.).

## CONCLUSION

CDFW appreciates the opportunity to comment on the NOP of a DEIR for the Ontario Ranch Business Park Specific Plan Amendment Project (SCH No. 2019050018) and recommends that the City of Ontario address the CDFW's comments and concerns in the forthcoming DEIR. If you should have any questions pertaining to the comments provided in this letter, please contact Marina Barton, Environmental Scientist, at (909) 948-9632 or at [marina.barton@wildlife.ca.gov](mailto:marina.barton@wildlife.ca.gov).

Sincerely,

DocuSigned by:

Ontario, CA 91764

Re: Notice of Preparation of an EIR: Ontario Ranch Business Park Specific Plan Amendment  
Subsequent Environmental Impact Report

Dear Ms. Vaughn,

This letter is in response to the Notice of Preparation and Public Scoping Meeting Notice for an Environmental Impact Report for the Proposed Ontario Ranch Business Park Specific Plan Amendment Subsequent Environmental Impact Report, made available on July 1, 2021. Thank you for giving the City of Chino the opportunity to review the information and provide comment. The City's comment is outlined below:

### Traffic / Transportation

1. The City requests participation in the scoping and review of the transportation studies prepared as part of this project, as we expect this project to have impacts to Chino's transportation infrastructure which requires review and analysis of both the industrial/business park project, as well as the proposed residential changes identified in the Notice of Preparation.

If you have any questions, please contact Michael Hitz, Principal Planner, by email at [mhitz@cityofchino.org](mailto:mhitz@cityofchino.org), or by phone at 909-334-3448.

Sincerely,

Warren Morelion, AICP  
City Planner

## **Notice of Preparation of a Subsequent Environmental Impact Report for the Ontario Ranch Business Park Specific Plan Amendment**

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Subsequent Environmental Impact Report (EIR). Please send a copy of the Subsequent EIR upon its completion and public release directly to South Coast AQMD as copies of the Subsequent EIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, and air quality modeling and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

### **CEQA Air Quality Analysis**

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website<sup>1</sup> as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod<sup>2</sup> land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds<sup>3</sup> and localized significance thresholds (LSTs)<sup>4</sup> to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road

---

<sup>1</sup> South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: <http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook>.

<sup>2</sup> CalEEMod is available free of charge at: [www.caleemod.com](http://www.caleemod.com).

<sup>3</sup> South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf>.

<sup>4</sup> South Coast AQMD's guidance for performing a localized air quality analysis can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds>.

mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from the overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA *operational* thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment<sup>5</sup>.

In the event that implementation of the Proposed Project requires a permit from South Coast AQMD, South Coast AQMD should be identified as a Responsible Agency for the Proposed Project in the Subsequent EIR. The assumptions in the air quality analysis in the EIR will be the basis for evaluating the permit under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385.

The California Air Resources Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective*<sup>6</sup> is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process with additional guidance on strategies to reduce air pollution exposure near high-volume roadways available in CARB's technical advisory<sup>7</sup>.

South Coast AQMD staff is concerned about potential public health impacts of siting warehouses within close proximity of sensitive land uses, especially in communities that are already heavily affected by the existing warehouse and truck activities. The South Coast AQMD's Multiple Air Toxics Exposure Study (MATES IV), completed in May 2015, concluded that the largest contributor to cancer risk from air pollution is diesel particulate matter (DPM) emissions<sup>8</sup>. According to the MATES IV Carcinogenic Risk interactive Map, the area surrounding the Proposed Project has an estimated cancer risk over 1,020 in one million<sup>9</sup>. Operation of warehouses generates and attracts heavy-duty diesel-fueled trucks that emit DPM. When the health impacts from the Proposed Project are added to those existing impacts, residents living in the communities surrounding the Proposed Project will possibly face an even greater exposure to air pollution and bear a disproportionate burden of increasing health risks.

### **Mitigation Measures**

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook<sup>1</sup>, South Coast AQMD's Mitigation Monitoring and

Reporting Plan for the 2016 Air Quality Management Plan<sup>10</sup>, and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy<sup>11</sup>.

Mitigation measures for operational air quality impacts from mobile sources that the Lead Agency should consider in the Subsequent EIR may include the following:

- Require zero-emissions (ZE) or near-zero emission (NZE) on-road haul trucks such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible. Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks such as the Advanced Clean Trucks Rule<sup>12</sup> and the Heavy-Duty Low NOx Omnibus Regulation<sup>13</sup>, ZE and NZE trucks will become increasingly more available to use. The Lead Agency should require a phase-in schedule to incentive the use of these cleaner operating trucks to reduce any significant adverse air quality impacts. South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency. At a minimum, require the use of 2010 model year<sup>14</sup> that meet CARB's 2010 engine emissions standards at 0.01 g/bhp-hr of particulate matter (PM) and 0.20 g/bhp-hr of NOx emissions or newer, cleaner trucks. Include environmental analyses to evaluate and identify sufficient electricity and supportive infrastructures in the Energy and Utilities and Service Systems Sections in the CEQA document, where appropriate. Include the requirement in applicable bid documents, purchase orders, and contracts. Operators shall maintain records of all trucks associated with project construction to document that each truck used meets these emission standards, and make the records available for inspection. The Lead Agency should conduct regular inspections to the maximum extent feasible to ensure compliance.
- Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final CEQA document. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.
- Provide electric vehicle (EV) charging stations or at a minimum, provide the electrical infrastructure and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

---

<sup>10</sup> South Coast AQMD's 2016 Air Quality Management Plan can be found at: <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2017/2017-mar3-035.pdf> (starting on page 86).

<sup>11</sup> Southern California Association of Governments' 2020-2045 RTP/SCS can be found at:

[https://www.connectsocal.org/Documents/PEIR/certified/Exhibit-A\\_ConnectSoCal\\_PEIR.pdf](https://www.connectsocal.org/Documents/PEIR/certified/Exhibit-A_ConnectSoCal_PEIR.pdf).

<sup>12</sup> CARB. June 25, 2020. *Advanced Clean Trucks Rule*. Accessed at: <https://ww2.arb.ca.gov/our-work/programs/advanced-clean-trucks>.

<sup>13</sup> CARB has recently passed a variety of new regulations that require new, cleaner heavy-duty truck technology to be sold and used in state. For example, on August 27, 2020, CARB approved the Heavy-Duty Low NOx Omnibus Regulation, which will require all trucks to meet the adopted emission standard of 0.05 g/hp-hr starting with engine model year 2024. Accessed at: <https://ww2.arb.ca.gov/rulemaking/2020/hdomnibuslownox>.

<sup>14</sup> CARB adopted the statewide Truck and Bus Regulation in 2010. The Regulation requires diesel trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. More information on the CARB's Truck and Bus Regulation is available at: <https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>.

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should consider in the Subsequent EIR may include the following:

- Maximize use of solar energy by installing solar energy arrays.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Use of water-based or low VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113.

Design considerations for the Proposed Project that the Lead Agency should consider to further reduce air quality and health risk impacts include the following:

- Clearly mark truck routes with trailblazer signs, so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, day care centers, etc.).
- Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.
- Design the Proposed Project such that any check-in point for trucks is inside the Proposed Project site to ensure that there are no trucks queuing outside.
- Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.
- Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM. These emission reductions will reduce public health impacts for communities located near warehouses from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt in to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of the development of six warehouses totaling 1,640,690 square feet, the Proposed Project's warehouses owners and operators will be required to comply with Rule 2305 once the warehouses are occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation<sup>15</sup>. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or [waire-program@aqmd.gov](mailto:waire-program@aqmd.gov).

---

<sup>15</sup> South Coast AQMD Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program. Accessed at: <http://www.aqmd.gov/docs/default-source/rule-book/reg-xxiii/r2305.pdf>.

For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage<sup>16</sup>.

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at [lsun@aqmd.gov](mailto:lsun@aqmd.gov).

Sincerely,

August 6, 2021

Alexis Vaughn  
Assistant Planner  
City of Ontario Planning Department  
303 East B Street  
Ontario, California 91764  
[avaughn@ontarioca.gov](mailto:avaughn@ontarioca.gov)

Dear Alexis Vaughn:

Thank you for providing the California Air Resources Board (CARB) with the opportunity to comment on the Notice of Preparation (NOP) for the Ontario Ranch Business Park Specific Plan Amendment Project (Project) Draft Subsequent Environmental Impact Report (DSEIR), State Clearinghouse No. 2019050018. The DSEIR tiers off of the Ontario Ranch Business Park Specific Plan Amendment Project Final Environmental Impact Report (2020 FEIR) that was approved by the City of Ontario (City) in October of 2020. The 2020 FEIR proposed the development of 1,905,027 square feet of warehouse and office uses on eleven parcels covering approximately 81 acres. The proposed Project, evaluated in the DSEIR, would allow for the expansion of the Project to include an additional 1,640,690 square feet of Business Park and Industrial uses on a neighboring site totaling approximately 72 additional acres.

CARB submitted a comment letter, which is attached to this letter, on the Ontario Ranch Business Park Specific Plan Amendment Project Draft Environmental Impact Report (2020 DEIR) released in February 2020. CARB's comments dated March 27, 2020, highlighted concerns regarding the Project's modeling assumptions when evaluating health risk impacts from on-site Transport Refrigeration Units (TRU) and encouraged the City and applicant to implement all existing and emerging zero-emission technologies to minimize exposure to diesel particulate matter (diesel PM) and nitrogen oxide (NOx) emissions for all neighboring communities, and to minimize the greenhouse gases that contribute to climate change.

Industrial development, such as the proposed expansion of the Project, can result in high daily volumes of heavy-duty diesel truck traffic and operation of on-site equipment (e.g., forklifts and yard tractors) that emit toxic diesel emissions, and contribute to regional air pollution and global climate change.<sup>1</sup> The proposed expansion to the Project will expose nearby communities to elevated levels of air pollution. Residences are located north and west of the Project with the closest residences located approximately 85 feet from the Project's northern boundary. In addition to residences, three schools (Edwin Rhodes Elementary

---

1. With regard to greenhouse gas emissions from this project, CARB has been clear that local governments and project proponents have a responsibility to properly mitigate these impacts. CARB's guidance, set out in detail in the Scoping Plan issued in 2017, makes clear that in CARB's expert view, local mitigation is critical to achieving climate goals and reducing greenhouse gases below levels of significance.

School, Howard Cattle Elementary School and Magnolia Junior High School) are located within 2 miles of the Project area. These communities are surrounded by existing toxic diesel PM emission sources, which include existing industrial sources, the Chino Airport, and vehicular traffic along State Route 83, State Route 60 and State Route 71. Due to the Project's proximity to residences and schools already burdened by multiple sources of air pollution, CARB is concerned with the potential cumulative health impacts associated with the construction and operation of the Project. CARB has reviewed the NOP and is concerned about the air pollution and health risk impacts that would result from the proposed expansion to the Project.

## **The DSEIR Should Quantify and Discuss the Potential Cancer Risks from Project Operation**

Since the Project is near residences and schools that are already burdened by multiple air pollution sources, CARB urges the City and applicant to prepare a health risk assessment (HRA) for the Project. The HRA should account for all potential operational health risks from Project-related diesel PM emission sources, including, but not limited to, back-up generators, on-site diesel-powered equipment, and heavy-duty trucks. The HRA should also determine if the operation of the Project in conjunction with past, present, and reasonably foreseeable future projects or activities would result in a cumulative cancer risk impact on nearby residences. To reduce diesel PM exposure and associated cancer risks, CARB urges the City and applicant to include all the air pollution reduction measures listed in CARB's attached comment letter on the 2020 DEIR in the DSEIR.

Since the Project description provided in the NOP does not explicitly state that the proposed industrial land uses would not be used for cold storage, there is a possibility that trucks and trailers visiting the Project-site would be equipped with TRUs.<sup>2</sup> TRUs on trucks and trailers can emit large quantities of diesel exhaust while operating within the Project-site. Residences and other sensitive receptors (e.g., daycare facilities, senior care facilities, and schools) located near where these TRUs could be operating, would be exposed to diesel exhaust emissions that would result in a significant cancer risk impact to the nearby community. If the Project would be used for cold storage, CARB urges the City to model air pollutant emissions from on-site TRUs in the DSEIR, as well as include potential cancer risks from on-site TRUs in the Project's HRA. If the Project will not be used for cold storage, CARB urges the City to include one of the following design measures in the DSEIR:

- A Project design measure requiring contractual language in tenant lease agreements that prohibits tenants from operating TRUs within the Project-site; or
- A condition requiring a restrictive covenant over the parcel that prohibits the applicant's use of TRUs on the property unless the applicant seeks and receives an amendment to its conditional use permit allowing such use.

---

<sup>2</sup> TRUs are refrigeration systems powered by integral diesel engines that protect perishable goods during transport in an insulated truck and trailer vans, rail cars, and domestic shipping containers.

The HRA prepared in support of the Project should be based on the latest Office of Environmental Health Hazard Assessment's (OEHHA) guidance (2015 Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments),<sup>3</sup> CARB's Hot Spots Analysis and Reporting Program (HARP2 model), and the South Coast Air Quality Management District's (SCAQMD) CEQA Air Quality Handbook.<sup>4</sup> The Project's mobile diesel PM emissions used to estimate the Project's cancer risk impacts should be based on CARB's latest 2021 Emission Factors model (EMFAC2021). Mobile emission factors can be easily obtained by running the EMFAC2021 Web Database: <https://arb.ca.gov/emfac/>.

The HRA should evaluate and present the existing baseline (current conditions), future baseline (full build-out year, without the Project), and future year with the Project. The health risks modeled under both the existing and the future baselines should reflect all applicable federal, state, and local rules and regulations. By evaluating health risks using both baselines, the public and planners will have a complete understanding of the potential health impacts that would result from the Project.

## **The DSEIR Should Quantify and Discuss the Potential Cancer Risks from Project Construction**

In addition to the health risks associated with operational diesel PM emissions, health risks associated with construction diesel PM emissions should also be included in the air quality section of the DSEIR and the Project's HRA. Construction of the Project would result in short-term diesel PM emissions from the use of both on-road and off-road diesel equipment. The OEHHA guidance recommends assessing cancer risks for construction projects lasting longer than two months. Since construction would very likely occur over a period lasting longer than two months, the HRA prepared for the Project should include health risks for existing residences near the Project-site during construction.

The HRA should account for all diesel PM emission sources related to Project construction, including, but not limited to, off-road mobile equipment, diesel generators, and on-road heavy-duty trucks. As previously stated in Section I of this letter, the cancer risks evaluated in the construction HRA should be based on the latest OEHHA guidance, CARB's HARP2 model, and SCAQMD's CEQA guidance. The cancer risks reported in the HRA should be calculated using the latest emission factors obtained from CARB's latest EMFAC (currently EMFAC 2021) and off-road models.

---

4. SCAQMD's 1993 Handbook can be found at: <http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook>.

## Conclusion

To reduce the exposure of toxic diesel PM emissions in disadvantaged communities already impacted by air pollution, the final design of the Project should include all existing and emerging zero-emission technologies to minimize diesel PM and NO<sub>x</sub> emissions, as well as the greenhouse gases that contribute to climate change. CARB encourages the City and applicant to implement the measures listed in CARB's attached comment letter on the 2020 DEIR in the SEIR.

Given the breadth and scope of projects subject to CEQA review throughout California that have air quality and greenhouse gas impacts, coupled with CARB's limited staff resources to substantively respond to all issues associated with a project, CARB must prioritize its substantive comments here based on staff time, resources, and its assessment of impacts. CARB's deliberate decision to substantively comment on some issues does not constitute an admission or concession that it substantively agrees with the lead agency's findings and conclusions on any issues on which CARB does not substantively submit comments.

CARB appreciates the opportunity to comment on the NOP for the Project and can provide assistance on zero-emission technologies and emission reduction strategies, as needed. Please include CARB on your State Clearinghouse list of selected State agencies that will receive the DSEIR as part of the comment period. If you have questions, please contact Stanley Armstrong, Air Pollution Specialist via email at [stanley.armstrong@arb.ca.gov](mailto:stanley.armstrong@arb.ca.gov).

Sincerely,

Richard Boyd, Assistant Division Chief, Transportation and Toxics Division

## Attachment A

March 27, 2020

Richard Ayala  
Senior Planner  
City of Ontario  
303 East B Street  
Ontario, California 91761

Dear Richard Ayala:

Thank you for providing the California Air Resources Board (CARB) with the opportunity to comment on the Ontario Ranch Business Park Specific Plan (Project) Draft Environmental Impact Report (DEIR), State Clearinghouse No. 2019050018. The project includes the development of 8 industrial/warehouse buildings totaling 1,905,027 square feet, which includes 200,000 square feet of cold storage space. Once in operation, the Project would introduce up to 4,328 daily vehicle trips, including 796 daily heavy-duty truck trips, along local roadways. The Project is located within the City of Ontario (City), California, which is the lead agency for California Environmental Quality Act (CEQA) purposes.

The industrial uses proposed under the Project would permit warehousing and distribution facilities. Freight facilities, such as warehouse and distribution, can result in high daily volumes of heavy-duty diesel truck traffic and operation of on-site equipment (e.g., forklifts, yard tractors, etc.) which emit toxic diesel emissions and contribute to regional air pollution and global climate change.<sup>1</sup> CARB has reviewed the DEIR and is concerned about the air pollution impacts that would result should the City approve the Project and the land-use change from General Commercial, Office Commercial, Low-Medium Density Residential to Business Park, Industrial to build the proposed industrial/warehouse buildings.

## **I. The Project Would Increase Exposure to Air Pollution in Disadvantaged Communities**

The Project, if approved, will expose nearby disadvantaged communities to elevated levels of air pollution. Residences are located north, east, northeast, and northwest of the Project with the closest residences located approximately 85 feet from the Project's northern boundary. In addition to residences, two elementary schools (Edwin Rhodes Elementary School and Howard Cattle Elementary School), and a high school

---

<sup>1</sup> With regard to greenhouse gas emissions from this project, CARB has been clear that local governments and project proponents have a responsibility to properly mitigate these impacts. CARB's guidance, set out in detail in the Scoping Plan issued in 2017, makes clear that in CARB's expert view local mitigation is critical to achieving climate goals and reducing greenhouse gases below levels of significance.

(Magnolia Junior High School) are located within 1 mile of the Project area. The community is surrounded by existing toxic diesel particulate matter (diesel PM) emission sources, which include existing industrial sources, the Chino Airport, and vehicular traffic along State Route 60 (SR-60) and State Route 71 (SR-71). Due to the Project's proximity to residences and schools already disproportionately burdened by multiple sources of air pollution, CARB is concerned with the potential cumulative health impacts associated with the construction and operation of the Project.

The State of California has placed additional emphasis on protecting local communities from the harmful effects of air pollution through the passage of Assembly Bill 617 (AB 617) (Garcia, Chapter 136, Statutes of 2017). AB 617 is a significant piece of air quality legislation that highlights the need for further emission reductions in communities with high exposure burdens, like those in which the Project is located. Diesel PM emissions generated during the construction and operation of the Project would negatively impact the community, which is already disproportionately impacted by air pollution from existing industrial sources, the Chino Airport, and traffic on SR-60 and SR-71.

## **II. The Health Risk Assessment Used Inappropriate Assumptions When Modeling the Project's Health Risk Impacts from On-Site Transport Refrigeration Units**

CARB has reviewed the Project's health risk assessment (HRA) and has concerns regarding the assumptions used to estimate the Project's health impacts from on-site transport refrigeration units (TRU). Based on the Project's traffic analysis, 138 of the total 796 daily trucks serving the Project will be associated with the proposed 200,000 square feet of cold storage space. In the HRA, the City and applicant assumed half of the 138 heavy truck trips (i.e., 69 heavy truck trips) serving the proposed 200,000 square feet of cold storage space would be equipped with TRUs. Given the size of the Project, it is difficult to estimate the number of TRU-equipped trucks and trailers that may access the site. However, it is conceivable that it could be much higher than half of the total truck trips associated with the proposed cold storage space. CARB urges the applicant and City to revise the HRA assuming all of the Project's trucks serving the proposed cold storage space are equipped with TRUs.

The HRA assumed all TRUs visiting the Project site would not idle longer than 30 minutes. Data obtained by CARB indicates that TRUs can operate for as long as 2 hours per visit, which is well above the 30-minute duration assumed in the HRA. Unless the applicant and City restrict TRU idling duration to less than 30 minutes, the Project's HRA should be revised. The revised HRA should assume a TRU idling duration supported by substantial evidence.

The HRA assumed the TRUs accessing the Project site would have an average power rating of 50 horsepower (hp). TRUs with a power rating of less than 25 hp have a particulate matter (PM) emission rate of 0.3 grams per brake horsepower-hour

(g/bhp-hr), whereas TRUs with a power rating greater than 25 hp have a PM emission rate of 0.02 g/bhp-hr. Unless the applicant and City prohibit TRUs with a power rating of less than 25 hp from accessing the Project site, the Project's HRA should be revised to assume a conservative percentage of the TRUs entering the Project site have a power rating of less than 25 hp, supported by substantial evidence.

### **III. Air Pollutant Emissions from On-Road Trucks Reported in the DEIR are not Consistent with the Project's Air Quality Modeling Results**

CARB has reviewed the air pollutant emission rates presented in Chapter 5.2 (Air Quality) and Appendix C (Air Quality Modeling and Reports) of the DEIR. Based on this review, CARB has identified inconsistencies between the air pollutant emission rates shown in Table 5.2-11 and Appendix C. According to Table 5.2-11, on-road trucks would emit 105 pounds per day (ppd) of nitrogen oxides (NO<sub>x</sub>). This NO<sub>x</sub> emission rate was estimated using the California Emissions Estimator Model (CalEEMod). After reviewing the CalEEMod outputs presented in Appendix C (Air Quality) of the DEIR, the operation of Project-related on-road trucks would result in 188 ppd of NO<sub>x</sub>, which is higher than the truck emission rate reported in the air quality section of the DEIR (i.e., Table 5.2-11). Although the DEIR does ultimately conclude the Project would result in a significant and unavoidable impact after mitigation, CARB urges the City and applicant to report accurate air pollutant emission estimates in the FEIR.

### **IV. Recommended Mitigation Measures**

Chapter 5.2 (Air Quality) of the DEIR includes Mitigation Measure AQ-1 through AQ-12 to reduce the Project's impacts on air quality during its construction and operation. These mitigation measures include requiring the use of Tier 4 equipment, the use of paints with a volatile organic compound (VOC) of 25 grams per liter or less during project construction, and the use of electric-powered on-site equipment (e.g., yard trucks/hostlers) and electrified truck/dock bays during project operation. With the implementation of these mitigation measures, the DEIR concluded that the Project would result in a significant and unavoidable impact on air quality. Even where impacts will remain significant and unavoidable after mitigation, CEQA requires that all feasible mitigation measures be incorporated (see California Public Resources Code § 21081; 14 CCR § 15126.2(b)). To meet this requirement, CARB urges the City to implement the emission reduction measures found in Attachment A of this letter that are not already in the DEIR.

### **V. Conclusion**

CARB is concerned about the Project's potential public health impacts. The DEIR does not incorporate conservative modeling assumptions when evaluating health risk impacts from on-site TRUs, has reporting inconsistencies, and does not include all feasible mitigation measures to reduce the Project's construction and operational air pollution

Richard Ayala  
March 27, 2020  
Page 4

emissions. CARB recommends that the City and applicant reanalyze the Project's health risk impacts using conservative assumptions and include the air pollution emission measures provided in Attachment A in the FEIR.

Given the breadth and scope of projects subject to CEQA review throughout California that have air quality and greenhouse gas impacts coupled with CARB's limited staff resources to substantively respond to all issues associated with a project, CARB must prioritize its substantive comments here based on staff time, resources, and its assessment of impacts. CARB's deliberate decision to substantively comment on some issues does not constitute an admission or concession that it substantively agrees with the lead agency's findings and conclusions on any issues on which CARB does not substantively submit comments.

CARB appreciates the opportunity to comment on the DEIR for the Project and can provide assistance on zero-emission technologies and emission reduction strategies, as needed. If you have questions, please contact Stanley Armstrong, Air Pollution Specialist, at (916) 440-8242 or via email at [stanley.armstrong@arb.ca.gov](mailto:stanley.armstrong@arb.ca.gov).

Sincerely,

Richard Boyd, Chief

## ATTACHMENT A

### Recommended Air Pollution Emission Reduction Measures for Warehouses and Distribution Centers

The California Air Resources Board (CARB) recommends developers and government planners use all existing and emerging zero to near-zero emission technologies during project construction and operation to minimize public exposure to air pollution. Below are some measures, currently recommended by CARB, specific to warehouse and distribution center projects. These recommendations are subject to change as new zero-emission technologies become available.

#### Recommended Construction Measures

1. Ensure the cleanest possible construction practices and equipment are used. This includes eliminating the idling of diesel-powered equipment and providing the necessary infrastructure (e.g., electrical hookups) to support zero and near-zero equipment and tools.
2. Implement, and plan accordingly for, the necessary infrastructure to support the zero and near-zero emission technology vehicles and equipment that will be operating on site. Necessary infrastructure may include the physical (e.g., needed footprint), energy, and fueling infrastructure for construction equipment, on-site vehicles and equipment, and medium-heavy and heavy-heavy duty trucks.
3. In construction contracts, include language that requires all off-road diesel-powered equipment used during construction to be equipped with Tier 4 or cleaner engines, except for specialized construction equipment in which Tier 4 engines are not available. In place of Tier 4 engines, off-road equipment can incorporate retrofits, such that, emission reductions achieved equal or exceed that of a Tier 4 engine.
4. In construction contracts, include language that requires all off-road equipment with a power rating below 19 kilowatts (e.g., plate compactors, pressure washers) used during project construction be battery powered.
5. In construction contracts, include language that requires all heavy-duty trucks entering the construction site, during the grading and building construction phases be model year 2014 or later. All heavy-duty haul trucks should also meet CARB's lowest optional low-oxides of nitrogen (NO<sub>x</sub>) standard starting in the year 2022.<sup>1</sup>

---

<sup>1</sup> In 2013, CARB adopted optional low-NO<sub>x</sub> emission standards for on-road heavy-duty engines. CARB encourages engine manufacturers to introduce new technologies to reduce NO<sub>x</sub> emissions below the current mandatory on-road heavy-duty diesel engine emission standards for model year 2010 and later. CARB's optional low-NO<sub>x</sub> emission standard is available at: <https://www.arb.ca.gov/msprog/onroad/optionnox/optionnox.htm>.

6. In construction contracts, include language that requires all construction equipment and fleets to be in compliance with all current air quality regulations. CARB is available to assist in implementing this recommendation.

## **Recommended Operation Measures**

1. Include contractual language in tenant lease agreements that requires tenants to use the cleanest technologies available, and to provide the necessary infrastructure to support zero-emission vehicles and equipment that will be operating on site.
2. Include contractual language in tenant lease agreements that requires all loading/unloading docks and trailer spaces be equipped with electrical hookups for trucks with transport refrigeration units (TRU) or auxiliary power units. This requirement will substantially decrease the amount of time that a TRU powered by a fossil-fueled internal combustion engine can operate at the project site. Use of zero-emission all-electric plug-in TRUs, hydrogen fuel cell transport refrigeration, and cryogenic transport refrigeration are encouraged and can also be included in lease agreements.<sup>2</sup>
3. Include contractual language in tenant lease agreements that requires all TRUs entering the project site be plug-in capable.
4. Include contractual language in tenant lease agreements that requires future tenants to exclusively use zero-emission light and medium-duty delivery trucks and vans.
5. Include contractual language in tenant lease agreements requiring all TRUs, trucks, and cars entering the Project site be zero-emission.
6. Include contractual language in tenant lease agreements that requires all service equipment (e.g., yard hostlers, yard equipment, forklifts, and pallet jacks) used within the project site to be zero-emission. This equipment is widely available.
7. Include contractual language in tenant lease agreements that requires all heavy-duty trucks entering or on the project site to be model year 2014 or later, expedite a transition to zero-emission vehicles, and be fully zero-emission beginning in 2030.

---

<sup>2</sup> CARB's Technology Assessment for Transport Refrigerators provides information on the current and projected development of TRUs, including current and anticipated costs. The assessment is available at: [https://www.arb.ca.gov/msprog/tech/techreport/tru\\_07292015.pdf](https://www.arb.ca.gov/msprog/tech/techreport/tru_07292015.pdf).

8. Include contractual language in tenant lease agreements that requires the tenant be in, and monitor compliance with, all current air quality regulations for on-road trucks including CARB's Heavy-Duty (Tractor-Trailer) Greenhouse Gas Regulation,<sup>3</sup> Periodic Smoke Inspection Program (PSIP),<sup>4</sup> and the Statewide Truck and Bus Regulation.<sup>5</sup>
9. Include contractual language in tenant lease agreements restricting trucks and support equipment from idling longer than 5 minutes while on site.
10. Include contractual language in tenant lease agreements that limits on-site TRU diesel engine runtime to no longer than 15 minutes. If no cold storage operations are planned, include contractual language and permit conditions that prohibit cold storage operations unless a health risk assessment is conducted, and the health impacts fully mitigated.
11. Include rooftop solar panels for each proposed warehouse to the extent feasible, with a capacity that matches the maximum allowed for distributed solar connections to the grid.

---

<sup>3</sup>. In December 2008, CARB adopted a regulation to reduce greenhouse gas emissions by improving the fuel efficiency of heavy-duty tractors that pull 53-foot or longer box-type trailers. The regulation applies primarily to owners of 53-foot or longer box-type trailers, including both dry-van and refrigerated-van trailers, and owners of the heavy-duty tractors that pull them on California highways. CARB's Heavy-Duty (Tractor-Trailer) Greenhouse Gas Regulation is available at: <https://www.arb.ca.gov/cc/hdghg/hdghg.htm>.

<sup>4</sup>. The PSIP program requires that diesel and bus fleet owners conduct annual smoke opacity inspections of their vehicles and repair those with excessive smoke emissions to ensure compliance. CARB's PSIP program is available at: <https://www.arb.ca.gov/enf/hdvp/hdvp.htm>.

<sup>5</sup>. The regulation requires that newer heavier trucks and buses must meet particulate matter filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent. CARB's Statewide Truck and Bus Regulation is available at: <https://www.arb.ca.gov/msprog/onrdiesel/onrdiesel.htm>.

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics -

Land Use - Land uses based on TIA, landscaping shown as City Park, Parking Lot includes drive aisles, parking spaces, and docks. Off-site improvements modeled as Other Asphalt Surfaces

Construction Phase - Anticipated construction schedule

Off-road Equipment - Crushing

Trips and VMT - demo crushed onsite and reused

Ontario Ranch Business Park - Unmitigated - San Bernardino-South Coast County, Winter

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Demolition - demo = 10,200 sf, crushed on site reused as base. crushing calcs done outside model

Grading - site is balanced

Vehicle Trips - based on TIA, passenger cars shown under Office Park, trucks shown under refrigerated warehouse. cars: 2908/227.951= 12.75712762830608  
trucks: 748/179.135= 4.175621737795517

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Construction Off-road Equipment Mitigation - incorporate RULE 403

Water Mitigation - comply with building code

Operational Off-Road Equipment - assume 1 yard truck per building, 6 total. Assume 0.03 forklifts per 1000 sf of warehouse rounded up to 50

Fleet Mix - Fleet Mix based on TIA

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics -

Land Use - Land uses based on TIA, landscaping shown as City Park, Parking Lot includes drive aisles, parking spaces, and docks. Off-site improvements modeled as Other Asphalt Surfaces

Construction Phase - Anticipated construction schedule

Off-road Equipment - includes crushing equipment

Trips and VMT - demo crushed onsite and reused

Ontario Ranch Business Park - Mitigated - San Bernardino-South Coast County, Summer

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Demolition - demo = 10,200 sf, crushed on site reused as base. crushing calcs done outside model

Grading - site is balanced

Vehicle Trips - based on TIA, passenger cars shown under Office Park, trucks shown under refrigerated warehouse. cars: 2908/227.951= 12.75712762830608  
trucks: 748/179.135= 4.175621737795517

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Construction Off-road Equipment Mitigation - incorporate RULE 403, Mitigation: Require Tier 4 equipment

Mobile Commute Mitigation - Require TDM Program

Area Mitigation - Require "Super Compliant" Low VOC Paint 10 g/L

Water Mitigation - comply with building code

Operational Off-Road Equipment - assume 1 yard truck per building, 6 total. Assume 0.03 forklifts per 1000 sf of warehouse rounded up to 50 - MITIGATION:  
Require electrical cargo handling equipment

Fleet Mix - Fleet Mix based on TIA

Architectural Coating - Super Compliant VOC paint

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics -

Land Use - Land uses based on TIA, landscaping shown as City Park, Parking Lot includes drive aisles, parking spaces, and docks. Off-site improvements modeled as Other Asphalt Surfaces

Construction Phase - Anticipated construction schedule

Off-road Equipment - includes crushing equipment

Trips and VMT - demo crushed onsite and reused

Ontario Ranch Business Park - Mitigated - San Bernardino-South Coast County, Winter

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Demolition - demo = 10,200 sf, crushed on site reused as base. crushing calcs done outside model

Grading - site is balanced

Vehicle Trips - based on TIA, passenger cars shown under Office Park, trucks shown under refrigerated warehouse. cars: 2908/227.951= 12.75712762830608  
trucks: 748/179.135= 4.175621737795517

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Construction Off-road Equipment Mitigation - incorporate RULE 403, Mitigation: Require Tier 4 equipment

Mobile Commute Mitigation - Require TDM Program

Area Mitigation - Require "Super Compliant" Low VOC Paint 10 g/L

Water Mitigation - comply with building code

Operational Off-Road Equipment - assume 1 yard truck per building, 6 total. Assume 0.03 forklifts per 1000 sf of warehouse rounded up to 50 - MITIGATION:  
Require electrical cargo handling equipment

Fleet Mix - Fleet Mix based on TIA

Architectural Coating - Super Compliant VOC paint

\*\*\* MODELOPTs: RegDEFAULT CONC ELEV URBAN ADJ\_U\*

\*\*\* MODEL SETUP OPTIONS SUMMARY

\*\*\*

---  
---  
\*\*Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

\*\*NO GAS DEPOSITION Data Provided.  
\*\*NO PARTICLE DEPOSITION Data Provided.  
\*\*Model Uses NO DRY DEPLETION. DRYDPLT = F  
\*\*Model Uses NO WET DEPLETION. WETDPLT = F

\*\*Model Uses URBAN Dispersion Algorithm for the SBL for 1055 Source(s),  
for Total of 1 Urban Area(s):  
Urban Population = 2035210.0 ; Urban Roughness Length = 1.000 m

\*\*Model Uses Regulatory DEFAULT Options:  
1. Stack-tip Downwash.  
2. Model Accounts for ELEVated Terrain Effects.  
3. Use Calms Processing Routine.  
4. Use Missing Data Processing Routine.  
5. No Exponential Decay.  
6. Urban Roughness Length of 1.0 Meter Assumed.

\*\*Other Options Specified:  
ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET  
CCVR\_Sub - Meteorological data includes CCVR substitutions  
TEMP\_Sub - Meteorological data includes TEMP substitutions

\*\*Model Assumes No FLAGPOLE Receptor Heights.

\*\*The User Specified a Pollutant Type of: PM\_10

\*\*Model Calculates 2 Short Term Average(s) of: 1-HR 24-HR  
and Calculates PERIOD Averages

\*\*This Run Includes: 1055 Source(s); 1 Source Group(s); and 572  
Receptor(s)

with: 0 POINT(s), including  
0 POINTCAP(s) and 0 POINTHOR(s)  
and: 1055 VOLUME source(s)  
and: 0 AREA type source(s)  
and: 0 LINE source(s)  
and: 0 RLINE/RLINEXT source(s)  
and: 0 OPENPIT source(s)  
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)

\*\*Model Set To Continue RUNNING After the Setup Testing.

\*\*The AERMET Input Meteorological Data Version Date: 16216

\*\*Output Options Selected:

Model Outputs Tables of PERIOD Averages by Receptor  
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE  
Keyword)  
Model Outputs External File(s) of High Values for Plotting (PLOTFILE  
Keyword)  
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE  
Keyword)

\*\*NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours  
m for Missing Hours  
b for Both Calm and  
Missing Hours

\*\*Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 198.00 ; Decay  
Coef. = 0.000 ; Rot. Angle = 0.0  
Emission Units = GRAMS/SEC ;  
Emission Rate Unit Factor = 0.10000E+07  
Output Units = MICROGRAMS/M\*\*3

\*\*Approximate Storage Requirements of Model = 4.0 MB of RAM.

\*\*Input Runstream File: aermod.inp

\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: ORBP\_Unmitigated\_Construction.err

\*\*File for Summary of Results: ORBP\_Unmitigated\_Construction.sum

PAGE 1

\*\*\* MODELOPTs: RegDEFAULT CONC ELEV URBAN ADJ\_U\*

\*\*\* MODEL SETUP OPTIONS SUMMARY

\*\*\*

-----  
\*\*Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

\*\*NO GAS DEPOSITION Data Provided.

\*\*NO PARTICLE DEPOSITION Data Provided.

\*\*Model Uses NO DRY DEPLETION. DRYDPLT = F

\*\*Model Uses NO WET DEPLETION. WETDPLT = F

\*\*Model Uses URBAN Dispersion Algorithm for the SBL for 1055 Source(s),  
for Total of 1 Urban Area(s):  
Urban Population = 2035210.0 ; Urban Roughness Length = 1.000 m

\*\*Model Uses Regulatory DEFAULT Options:

1. Stack-tip Downwash.
2. Model Accounts for ELEVated Terrain Effects.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Assumed.

\*\*Other Options Specified:

ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET

CCVR\_Sub - Meteorological data includes CCVR substitutions

TEMP\_Sub - Meteorological data includes TEMP substitutions

\*\*Model Assumes No FLAGPOLE Receptor Heights.

\*\*The User Specified a Pollutant Type of: PM\_10

\*\*Model Calculates 2 Short Term Average(s) of: 1-HR 24-HR  
and Calculates PERIOD Averages

\*\*This Run Includes: 1055 Source(s); 1 Source Group(s); and 572  
Receptor(s)

with: 0 POINT(s), including  
0 POINTCAP(s) and 0 POINTHOR(s)  
and: 1055 VOLUME source(s)  
and: 0 AREA type source(s)  
and: 0 LINE source(s)  
and: 0 RLINE/RLINEXT source(s)  
and: 0 OPENPIT source(s)  
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)

\*\*Model Set To Continue RUNNING After the Setup Testing.

\*\*The AERMET Input Meteorological Data Version Date: 16216

\*\*Output Options Selected:

Model Outputs Tables of PERIOD Averages by Receptor  
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE  
Keyword)  
Model Outputs External File(s) of High Values for Plotting (PLOTFILE  
Keyword)  
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE  
Keyword)

\*\*NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours  
m for Missing Hours  
b for Both Calm and  
Missing Hours

\*\*Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 198.00 ; Decay  
Coef. = 0.000 ; Rot. Angle = 0.0  
Emission Units = GRAMS/SEC ;  
Emission Rate Unit Factor = 0.10000E+07  
Output Units = MICROGRAMS/M\*\*3

\*\*Approximate Storage Requirements of Model = 4.0 MB of RAM.

\*\*Input Runstream File: aermod.inp

\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: ORBP\_Mitigated\_Construction.err

\*\*File for Summary of Results: ORBP\_Mitigated\_Construction.sum

\*\*\*            MODEL SETUP OPTIONS SUMMARY

\*\*\*

-----  
-----

\*\*Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

\*\*NO GAS DEPOSITION Data Provided.

\*\*NO PARTICLE DEPOSITION Data Provided.

\*\*Model Uses NO DRY DEPLETION. DRYDPLT = F

\*\*Model Uses NO WET DEPLETION. WETDPLT = F

\*\*Model Uses URBAN Dispersion Algorithm for the SBL for 1056 Source(s),  
for Total of 1 Urban Area(s):

Urban Population = 2035210.0 ; Urban Roughness Length = 1.000 m

\*\*Model Uses Regulatory DEFAULT Options:

1. Stack-tip Downwash.
2. Model Accounts for ELEVated Terrain Effects.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Assumed.

\*\*Other Options Specified:

ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET

CCVR\_Sub - Meteorological data includes CCVR substitutions

TEMP\_Sub - Meteorological data includes TEMP substitutions

\*\*Model Assumes No FLAGPOLE Receptor Heights.

\*\*The User Specified a Pollutant Type of: PM\_10

\*\*Model Calculates 2 Short Term Average(s) of: 1-HR 24-HR  
and Calculates PERIOD Averages

\*\*This Run Includes: 1056 Source(s); 1 Source Group(s); and 572  
Receptor(s)

with: 0 POINT(s), including  
0 POINTCAP(s) and 0 POINTHOR(s)  
and: 1056 VOLUME source(s)  
and: 0 AREA type source(s)  
and: 0 LINE source(s)  
and: 0 RLINE/RLINEXT source(s)  
and: 0 OPENPIT source(s)  
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)

\*\*Model Set To Continue RUNning After the Setup Testing.

\*\*The AERMET Input Meteorological Data Version Date: 16216

\*\*Output Options Selected:  
 Model Outputs Tables of PERIOD Averages by Receptor  
 Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE  
 Keyword)  
 Model Outputs External File(s) of High Values for Plotting (PLOTFILE  
 Keyword)  
 Model Outputs Separate Summary File of High Ranked Values (SUMMFILE  
 Keyword)

\*\*NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours  
 m for Missing Hours  
 b for Both Calm and

Missing Hours

\*\*Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 198.00 ; Decay  
 Coef. = 0.000 ; Rot. Angle = 0.0  
 Emission Units = GRAMS/SEC ;  
 Emission Rate Unit Factor = 0.10000E+07  
 Output Units = MICROGRAMS/M\*\*3

\*\*Approximate Storage Requirements of Model = 4.0 MB of RAM.

\*\*Input Runstream File: aermod.inp

\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: ORBP\_Unmitigated\_Operations.err

\*\*File for Summary of Results: ORBP\_Unmitigated\_Operations.sum

\*\*\*            MODEL SETUP OPTIONS SUMMARY

\*\*\*

-----  
-----

\*\*Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

\*\*NO GAS DEPOSITION Data Provided.

\*\*NO PARTICLE DEPOSITION Data Provided.

\*\*Model Uses NO DRY DEPLETION. DRYDPLT = F

\*\*Model Uses NO WET DEPLETION. WETDPLT = F

\*\*Model Uses URBAN Dispersion Algorithm for the SBL for 1056 Source(s),  
for Total of 1 Urban Area(s):

Urban Population = 2035210.0 ; Urban Roughness Length = 1.000 m

\*\*Model Uses Regulatory DEFAULT Options:

1. Stack-tip Downwash.
2. Model Accounts for ELEVated Terrain Effects.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Assumed.

\*\*Other Options Specified:

ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET

CCVR\_Sub - Meteorological data includes CCVR substitutions

TEMP\_Sub - Meteorological data includes TEMP substitutions

\*\*Model Assumes No FLAGPOLE Receptor Heights.

\*\*The User Specified a Pollutant Type of: PM\_10

\*\*Model Calculates 2 Short Term Average(s) of: 1-HR 24-HR  
and Calculates PERIOD Averages

\*\*This Run Includes: 1056 Source(s); 1 Source Group(s); and 572  
Receptor(s)

with: 0 POINT(s), including  
0 POINTCAP(s) and 0 POINTHOR(s)  
and: 1056 VOLUME source(s)  
and: 0 AREA type source(s)  
and: 0 LINE source(s)  
and: 0 RLINE/RLINEXT source(s)  
and: 0 OPENPIT source(s)  
and: 0 BUOYANT LINE source(s) with a total of 0 line(s)

\*\*Model Set To Continue RUNning After the Setup Testing.

\*\*The AERMET Input Meteorological Data Version Date: 16216

\*\*Output Options Selected:  
 Model Outputs Tables of PERIOD Averages by Receptor  
 Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE  
 Keyword)  
 Model Outputs External File(s) of High Values for Plotting (PLOTFILE  
 Keyword)  
 Model Outputs Separate Summary File of High Ranked Values (SUMMFILE  
 Keyword)

\*\*NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours  
 m for Missing Hours  
 b for Both Calm and

Missing Hours

\*\*Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 198.00 ; Decay  
 Coef. = 0.000 ; Rot. Angle = 0.0  
 Emission Units = GRAMS/SEC ;  
 Emission Rate Unit Factor = 0.10000E+07  
 Output Units = MICROGRAMS/M\*\*3

\*\*Approximate Storage Requirements of Model = 4.0 MB of RAM.

\*\*Input Runstream File: aermod.inp

\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: ORBP\_Mitigated\_Operations.err

\*\*File for Summary of Results: ORBP\_Mitigated\_Operations.sum
