**APPENDIX B3**  
**GREENHOUSE GAS EMISSIONS MODEL DATA**

Ontario Ranch Business Park - Unmitigated - San Bernardino-South Coast County, Annual

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

**Ontario Ranch Business Park - Unmitigated**

**San Bernardino-South Coast County, Annual**

**1.0 Project Characteristics**

**1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Office Park	227.95	1000sqft	5.23	227,950.00	0
Refrigerated Warehouse-No Rail	179.13	1000sqft	4.11	179,135.00	0
Unrefrigerated Warehouse-No Rail	913.05	1000sqft	20.96	913,053.00	0
Unrefrigerated Warehouse-No Rail	320.55	1000sqft	7.36	320,551.00	0
Other Asphalt Surfaces	491.00	1000sqft	11.27	491,000.00	0
Parking Lot	1,144.52	1000sqft	26.27	1,144,515.00	0
City Park	4.75	Acre	4.75	206,910.00	0

**1.2 Other Project Characteristics**

<b>Urbanization</b>	Urban	<b>Wind Speed (m/s)</b>	2.2	<b>Precipitation Freq (Days)</b>	32
<b>Climate Zone</b>	10			<b>Operational Year</b>	2024
<b>Utility Company</b>	Southern California Edison				
<b>CO2 Intensity (lb/MWhr)</b>	390.98	<b>CH4 Intensity (lb/MWhr)</b>	0.033	<b>N2O Intensity (lb/MWhr)</b>	0.004

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics -

Land Use - Land uses based on TIA, landscaping shown as City Park, Parking Lot includes drive aisles, parking spaces, and docks. Off-site improvements modeled as Other Asphalt Surfaces

Construction Phase - Anticipated construction schedule

Off-road Equipment - Crushing

Trips and VMT - demo crushed onsite and reused

Ontario Ranch Business Park - Unmitigated - San Bernardino-South Coast County, Annual

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Demolition - demo = 10,200 sf, crushed on site reused as base. crushing calcs done outside model

Grading - site is balanced

Vehicle Trips - based on TIA, passenger cars shown under Office Park, trucks shown under refrigerated warehouse. cars: 2908/227.951= 12.75712762830608  
trucks: 748/179.135= 4.175621737795517

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Construction Off-road Equipment Mitigation - incorporate RULE 403

Water Mitigation - comply with building code

Operational Off-Road Equipment - assume 1 yard truck per building, 6 total. Assume 0.03 forklifts per 1000 sf of warehouse rounded up to 50

Fleet Mix - Fleet Mix based on TIA

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics -

Land Use - Land uses based on TIA, landscaping shown as City Park, Parking Lot includes drive aisles, parking spaces, and docks. Off-site improvements modeled as Other Asphalt Surfaces

Construction Phase - Anticipated construction schedule

Off-road Equipment - includes crushing equipment

Trips and VMT - demo crushed onsite and reused

Ontario Ranch Business Park - Mitigated - San Bernardino-South Coast County, Annual

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied**

Demolition - demo = 10,200 sf, crushed on site reused as base. crushing calcs done outside model

Grading - site is balanced

Vehicle Trips - based on TIA, passenger cars shown under Office Park, trucks shown under refrigerated warehouse. cars: 2908/227.951= 12.75712762830608  
trucks: 748/179.135= 4.175621737795517

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Construction Off-road Equipment Mitigation - incorporate RULE 403, Mitigation: Require Tier 4 equipment

Mobile Commute Mitigation - Require TDM Program

Area Mitigation - Require "Super Compliant" Low VOC Paint 10 g/L

Water Mitigation - comply with building code

Operational Off-Road Equipment - assume 1 yard truck per building, 6 total. Assume 0.03 forklifts per 1000 sf of warehouse rounded up to 50 - MITIGATION:  
Require electrical cargo handling equipment

Fleet Mix - Fleet Mix based on TIA

Architectural Coating - Super Compliant VOC paint

**SUBJECT:     *Results of a General Habitat Assessment; ±80-acre Ontario Ranch Business Park  
Phase 2, City of Ontario, San Bernardino County, California***

Dear Jeff:

This letter report presents findings of field surveys conducted to generally evaluate the suitability of a ±80-acre project site to support sensitive biological resources. Results of this habitat assessment are intended to provide the applicant and resource agencies with preliminary biological information required for planning and permitting decisions concerning the proposed project.

### ***Introduction***

The project site (ORBP Phase 2) is located in San Bernardino County, California (***Plate 1***). Specifically, the site is located in the City of Ontario north of Merrill Avenue, south of Eucalyptus Avenue, east of Sultana Avenue, and west of Bon View Avenue. The site occurs on the "Prado Dam" California USGS 7.5-minute quadrangle map, Township 2 South, Range 7 West (***Plate 2***).

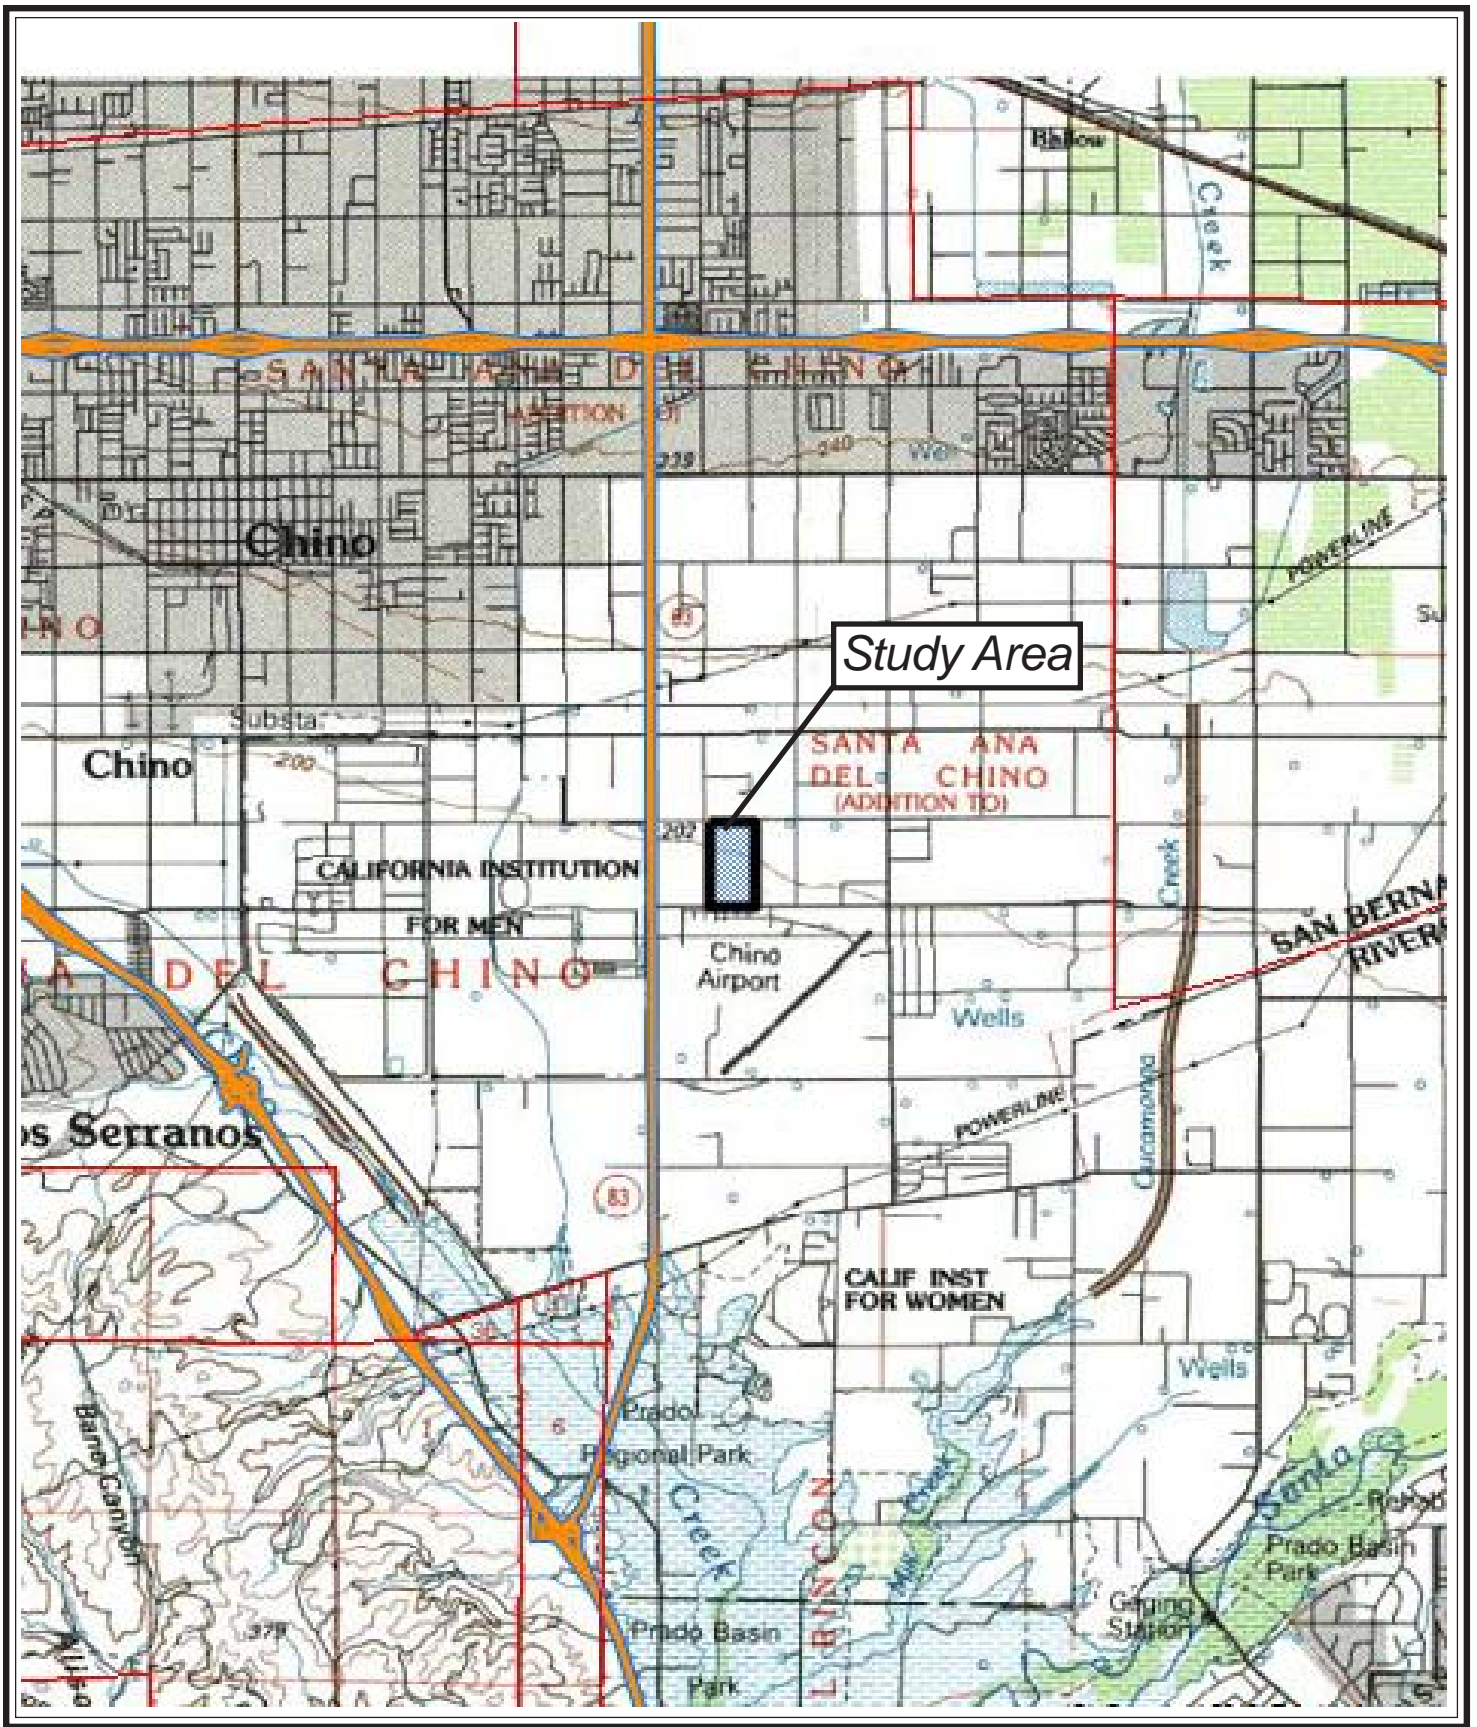

Projects proposed in this area that contain potentially suitable habitat to support sensitive biological resources must demonstrate to reviewing agencies that potential project-related impacts to sensitive biological resources are adequately addressed and mitigated pursuant to the California Environmental Quality Act (CEQA) California Endangered Species Act (CESA), and the federal Endangered Species Act (Act) of 1973, as amended. Biological resources within the project site may fall under the jurisdiction of several federal and state agencies, including, but not necessarily limited to, California Department of Fish and Wildlife (CDFW/CDFG), U.S. Fish and Wildlife Service (FWS), County of San Bernardino (County), City of Ontario (City), Regional Water Quality Control Board (RWQCB), and U.S. Army Corps of Engineers (USACE).

Due to the inherent limitations of unseasonal or habitat-based data, definitive conclusions regarding the actual presence or absence of certain sensitive biological resources cannot necessarily be made in this report. Therefore, conclusions relative to potential presence or absence of selected sensitive biological resources are based solely on the nature of habitat present. This general analysis of biological resources is based on information compiled through field reconnaissance, literature review, and by applicable reference materials. No focused surveys were conducted as part of this analysis.

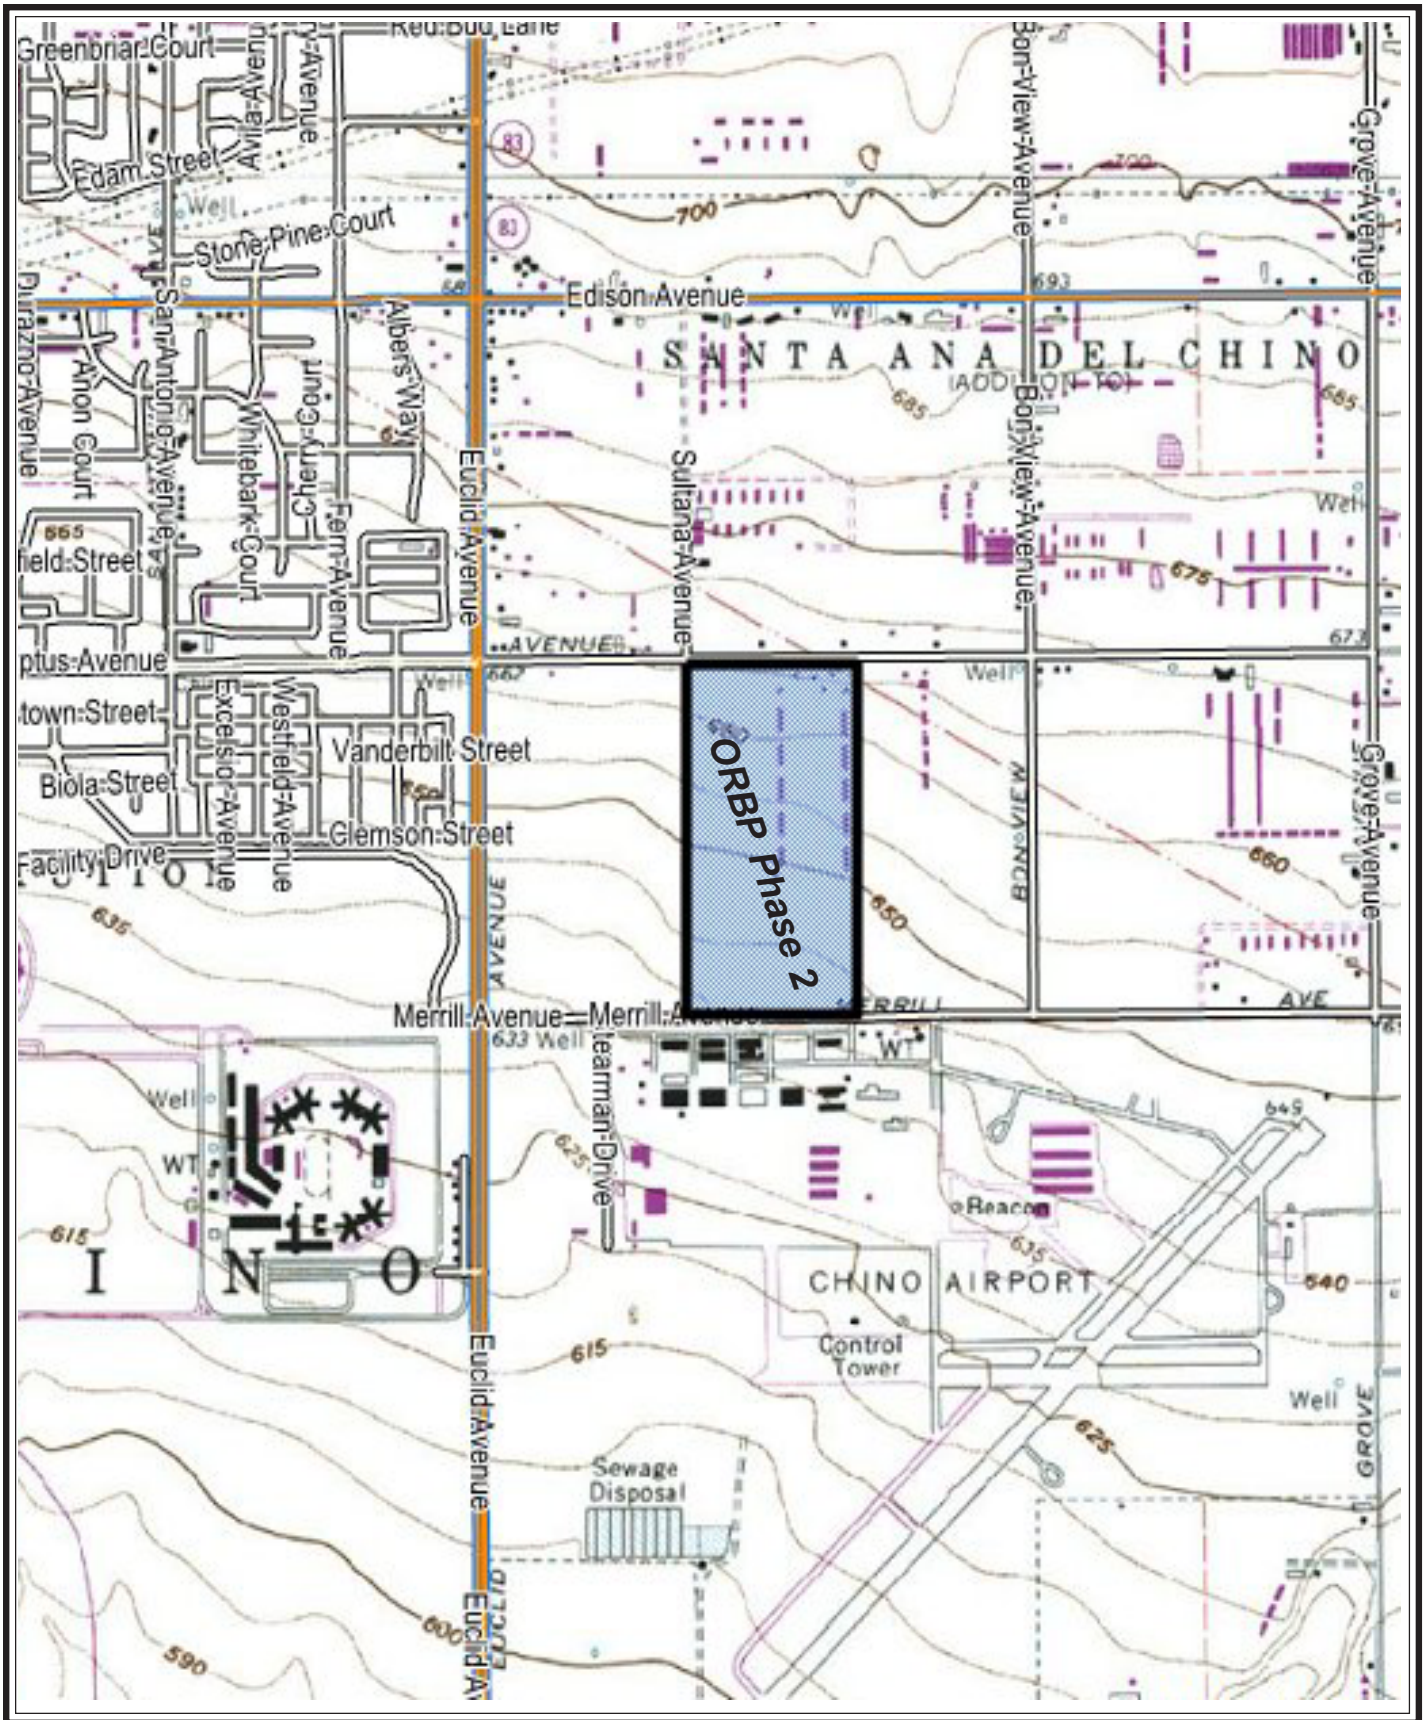

### ***Investigative Methods***

#### ***Information Review***

Documentation pertinent to the biological resources in the vicinity of the site was reviewed and analyzed. Primary data sources reviewed to evaluate the occurrence potential of special-status resources on the subject site, included, but were not necessarily limited to: (1) California Natural Diversity Data Base

(CNDDB 2020) and (2) California Native Plant Society (CNPS 2021) online inventory for the "Prado Dam and surrounding California USGS 7.5-minute quadrangle maps covering ±5 miles or more from the project site; (3) available literature pertaining to habitat requirements of special-status species potentially occurring in the project site; (4) 2020 FWS Information, Planning, and Conservation System Database (IPaC); and (5) historic distributional data contained in Hall (1981); Grinnell and Miller (1944); Garrett and Dunn (1981); Holland (1986); Stebbins (1985); Hickman (1993); and CNPS (2001).

### **2021 Reconnaissance-Level Field Surveys**

Ecological Sciences Principal Biologist, Scott D. Cameron, conducted reconnaissance-level field surveys on April 25, May 11, June 15, and July 5, 2020, to characterize on-site habitats and to evaluate their potential to support sensitive biological resources. Plant species and vegetation communities were primarily identified by walking transects throughout the site. All direct observations of wildlife were recorded, as was wildlife sign. In addition to species actually detected, expected use of the site by other wildlife was evaluated from habitat analysis of the site, combined with known habitat preferences of locally occurring wildlife species. The site was also evaluated for the potential presence of plant, animal, or habitats considered rare, threatened, sensitive, endangered, or otherwise unique by regulatory or resource agencies. Weather conditions during the April 25, survey were clear, breezes between 1-9 mph, and air temperatures of approximately 75-89 °F. Weather conditions during the May 11 survey were hazy to clear with 1-7 mph breeze and air temperatures of approximately - 68-80 °F. Weather conditions during the June 15 survey were mostly clear to hazy, 1-6 mph winds, and air temperatures of approximately 70-84 °F. Weather conditions during the July 5 survey were mostly clear skies, 0-3 breezes, and air temperatures of approximately 75-94 °F.

### **2020 Focused BUOW Surveys**

BUOW surveys were previously conducted in accordance with the March 7, 2012 CDFG Staff Report on Burrowing Owl Mitigation (Ecological Sciences, Inc. 2020). These guidelines include searches for BUOW, burrows (natural and artificial), and BUOW sign by walking parallel transects (where feasible) through suitable habitat over the entire survey area [i.e., the project site and within a 150 meter (500 feet) buffer area where feasible or at least by visual means]. Upon arrival at the survey area and prior to initiating the walking surveys, the biologist used binoculars and/or spotting scope to scan suitable habitat. Ecological Sciences' Principal Biologist, Scott Cameron, initiated the first of four total focused breeding season BUOW surveys on April 12, 2020. Subsequent surveys were conducted on May 17, June 14, and July 11, 2020. Mr. Cameron has extensive experience conducting habitat assessments and focused burrowing owl surveys over the past 25 years, and has recorded numerous BUOW over the course of 100+ surveys throughout southern California. Mr. Cameron has also conducted passive relocation activities, used burrow probes, and conducted burrow closing procedures for multiple projects.

### **Existing Biological Environment**

The subject site is characterized primarily as an active dairy operation. The site contains a single-family residence, multiple dairy-related structures (sheds, corrals, etc.), concrete feeding preparation areas, waste ponds/basins, cultivated/discarded areas, manure spreading areas, and debris dumping areas. The ruderal/disturbed areas support mostly invasive, non-native annual species. Manure, associated with the ongoing dairy operation, is present throughout most of the site. Cattle feeding areas were barren ground covered in manure and mud. The entire developed portion of the site has been disturbed by agricultural use and no native habitat was present on site. The agricultural fields are disturbed and dominated by non-native plants used for cattle grazing. The project site also contains three areas of stock/retention basins. The eastern basins are artificial and appear to be fed by wells. The basins obviously appear highly polluted and supported very little vegetation except for the eastern basin complex where dense mats of vegetation was present at the time of the survey. Surrounding land uses include agricultural areas similar to the subject site and the Chino Airport is located to the south. **Plate 3** aerially illustrates site features. **Plates 4a-4b** illustrate existing conditions.

## **Project Area Soils**

Ontario Ranch Business Park Phase 2

## Vegetation

Typical of active dairy sites in the region, plants recorded included various non-native and native weedy/grass species such as foxtail chess (*Bromus madritensis* spp. *rubens*), ripgut grass (*Bromus diandrus*), Mediterranean grass (*Schismus barbatus*), Russian thistle (*Salsola tragus*), milk thistle (*Silybum marianum*), black mustard (*Brassica nigra*), cheeseweed (*Malva parviflora*), pigweed (*Amaranthus albus*), Bermuda grass (*Cynodon dactylon*), common sunflower (*Helianthus annuus*), telegraph weed (*Heterotheca grandiflora*), tree tobacco (*Nicotiana glauca*), Lamb's quarters (*Chenopodium album*), Mediterranean grass (*Schismus barbatus*), alfalfa (*Medicago sativa*), and puncture vine (*Tribulus terrestris*), and blue gum (*Eucalyptus globulus*).

## Wildlife

Reptile species recorded on site included western fence lizard (*Sceloporus occidentalis*). Birds observed included those species that are accustomed to nearby human presence such as turkey vulture (*Cathartes aura*), red-tailed hawk (*Buteo jamaicensis*), common raven (*Corvus corax*), American crow (*Corvus brachyrhynchos*), western kingbird (*Tyrannus verticalis*), Brewer's blackbird (*Euphagus cyanocephalus*), European starling (*Sturnus vulgaris*), rock dove (*Columba livia*), mourning dove (*Zenaidura macroura*), Eurasian collard dove (*Streptopelia decaocto*), barn swallow (*Hirundo rustica*), house finch (*Carpodacus mexicanus*), and house sparrow (*Passer domesticus*). Common small mammals observed, or of which sign was detected, included California ground squirrel (*Spermophilus beecheyi*) and desert cottontail (*Sylvilagus auduboni*).

## General Soils Analysis / Soil Conservation Map Review

A review of soil maps prepared for the area by the Natural Resource Conservation Service (NRCS 2021) indicate that the subject site is located within an area mapped as containing only Chino silt loam (Db). **Plate 5** illustrates mapped soils (previous page).

## Sensitive Biological Resources Evaluation

Discussed in this section are plant and wildlife species potentially present in the study area that have been afforded special recognition by federal or state agencies. The focus of this discussion is on those species that would potentially pose considerable constraints on the proposed project because of their high sensitivity status (listed or proposed for listing as rare, threatened, or endangered) with state and/or federal resource agencies. In addition, plants included on Lists 1, 2, 3, or 4 of the CNPS inventory are also considered of special-status. Vegetation communities that are unique, of relatively limited distribution, or of particular value to wildlife and considered sensitive by state and/or federal resource agencies are also generally discussed.

In general, those species presented in **Tables 1 and 2** that are “not expected” or that have a “low occurrence potential” generally correspond to “less than significant” under CEQA. The occurrence potential of special-status plant and wildlife species is primarily based on habitat types present, occurrence records of sensitive species from the site vicinity, and results of the on-site reconnaissance surveys. No focused wildlife or botanical surveys were conducted.

## Special-Status Plant Species

No special-status plant species were detected on site during the reconnaissance survey and none are expected due to lack of suitable habitat. Special-status plant species known from the region that potentially occur within the project site are summarized below in **Table 1**.

Table 1

Special-Status Plant Species Potentially Occurring in the Site Vicinity<sup>1</sup>

Common Name Scientific Name	Status		Habitat Requirements	Occurrence Potential
	Federal	State		
Paniculate tarplant <i>Deinandra paniculata</i>	--	--	4 Valley grassland	<b>Low Potentially:</b> marginally suitable habitat present
Coulter's saltbush <i>Atriplex coulteri</i>	--	--	1B Coastal bluff scrub, coastal dunes, coastal scrub, and valley and foothill grassland; sometimes associated with alkaline low places and clay soil.	<b>Not Expected:</b> suitable habitat not present
South Coast salscale <i>Atriplex pacifica</i>	FSC	--	1B Coastal bluff scrub, playas, chenopod scrub	<b>Not Expected:</b> suitable habitat not present
Long-spined spineflower <i>Chorizanthe polygonoides</i> var. <i>longispina</i>	FSC	--	1B Chaparral, sage scrub, grasslands, often with clay soils	<b>Not Expected:</b> suitable habitat not present
California spineflower <i>Mucrona californica</i>	--	--	4 Chaparral, cismontane woodland, coastal dunes, coastal scrub, grasslands with sandy soils	<b>Not Expected:</b> suitable habitat not present
Palmer's grapplinghook <i>Harpagonella palmeri</i>	FSC	--	2 Chaparral, grasslands, sage scrub with clay soils	<b>Not Expected:</b> suitable habitat not present
Round-leaved filaree <i>Erodium macrophyllum</i>	--	--	2 Cismontane woodland, valley and foothill grassland with clay soils	<b>Not Expected:</b> suitable habitat not present
California muhly <i>Muhlenbergia californica</i>	--	--	4 Chaparral, coastal scrub, lower montane coniferous forest; moist conditions	<b>Not Expected:</b> suitable habitat not present
Plummer's mariposa lily <i>Calochortus plummeræ</i>	FSC	--	1B Chaparral, cismontane woodlands, coastal scrub. Lower coniferous forests, and grasslands; associated with granitic soils.	<b>Not Expected:</b> suitable habitat not present
Intermediate mariposa lily <i>Calochortus weedii</i> var. <i>intermedius</i>	FSC	--	1B Chaparral, coastal scrub, grasslands; often associated with dry, rocky, open slopes.	<b>Not Expected:</b> suitable habitat not present
Parry's spineflower <i>Chorizanthe parryi</i> ssp. <i>parryi</i>	FSC	--	3 Chaparral and coastal scrub; associated with sandy or rocky openings.	<b>Not Expected:</b> suitable habitat not present
Many-stemmed dudleya <i>Dudleya multifida</i>	FSC	--	1B Chaparral, coastal scrub, and grasslands; often associated with clay soils.	<b>Not Expected:</b> suitable habitat not present
Santa Ana River woollystar <i>Eriastrum densifolium</i> ssp. <i>sanctorum</i>	FE	CE	1B Coastal scrub, chaparral, and alluvial scrub; associated with sandy soil in river floodplains or terraced fluvial deposits.	<b>Not Expected:</b> suitable habitat not present
Smooth tarplant <i>Centromadia pungens</i> ssp. <i>laevis</i>	FSC	--	1B Chenopod scrub, meadows, playas, riparian woodland, and valley and foothill grasslands; associated with alkaline areas.	<b>Not Expected:</b> suitable habitat not present
San Diego ambrosia <i>Ambrosia pumila</i>	FE	--	1B Chaparral, coastal scrub, grasslands, vernal pools with sandy loam or clay soils (20-4-15M)	<b>Not Expected:</b> suitable habitat not present
Slender-horned spineflower <i>Dodecahema leptoceras</i>	FE	CE	1B Chaparral, alluvial fan sage scrub; terraces and washes	<b>Not Expected:</b> suitable habitat not present
Many-stemmed dudleya <i>Dudleya multifida</i>	--	--	1B Chaparral, coastal scrub, valley and foothill grassland/ often clay soils	<b>Not Expected:</b> suitable habitat not present
Coulter's goldfields <i>Lasthenia glabrata</i> ssp. <i>coulteri</i>	FSC	--	1B Playas, vernal pools	<b>Not Expected:</b> suitable habitat not present

Table 1-continued

Special-Status Plant Species Potentially Occurring in the Site Vicinity<sup>1</sup>

Common Name Scientific Name	Status		Habitat Requirements	Occurrence Potential
	Federal	State		
Heart-leaved pitcher sage <i>Lepechinia cardiophylla</i>	--	--	1B Closed cone coniferous forest, chaparral, cismontane woodland	<b>Not Expected:</b> suitable habitat not present
Payson's jewel-flower <i>Caulanthus similans</i>	--	--	4 Chaparral, coastal sage; burned areas; streambed; rocky slopes	<b>Not Expected:</b> suitable habitat not present
California saw-grass <i>Cladium californicum</i>	--	--	2 Freshwater and alkali marshes; seeps	<b>Not Expected:</b> suitable habitat not present
Mesa horkelia <i>Horkelia cuneata</i> ssp. <i>puberula</i>	--	--	1B Chaparral, cismontane woodland, coastal scrub; sandy or gravelly	<b>Not Expected:</b> suitable habitat not present
Prostrate vernal pool navarretia <i>Navarretia prostrata</i>	--	--	1B Valley and foothill grassland, coastal scrub, vernal pools	<b>Not Expected:</b> suitable habitat not present
Santiago Peak phacelia <i>Phacelia suaveolens</i> ssp. <i>keckii</i>	--	--	1B Closed cone coniferous forests and chaparral; sometimes along creeks	<b>Not Expected:</b> suitable habitat not present
San Bernardino aster <i>Symphotrichum defoliatum</i>	--	--	1B Meadows and seeps, marshes and swamps; coastal scrub, woodlands; mesic grassland; ditches	<b>Not Expected:</b> suitable habitat not present
Robinson's pepper-grass <i>Lepidium virginicum</i> var. <i>robinsonii</i>	--	--	1B Chaparral and coastal scrub; associated with dry soils; known to occur on roadsides.	<b>Not Expected:</b> suitable habitat not present
Chaparral sand verbena <i>Abronia villosa</i> var. <i>aurita</i>	--	--	1B Chaparral, coastal scrub with sandy soils	<b>Not Expected:</b> suitable habitat not present
Salt spring checkerbloom <i>Sidalcea neomexicana</i>	--	--	2 Chaparral, coastal scrub, lower montane coniferous forest, Mohavean desert scrub, coastal brackish marsh, and alkali playas, seeps, and marshes; associated with moist, alkaline soils.	<b>Not Expected:</b> suitable habitat not present
Vernal barley <i>Hordeum intercedans</i>	--	--	3 Coastal dunes, coastal scrub, grasslands (saline flats and depressions)	<b>Not Expected:</b> suitable habitat not present
Southern California black walnut <i>Juglans californica</i> var. <i>californica</i>	--	--	4 Chaparral, cismontane woodland, coastal sage scrub	<b>Not Expected:</b> suitable habitat not present
Tecate cypress <i>Cupressus forbesii</i>	--	--	1B Closed-cone coniferous forest, chaparral	<b>Not Expected:</b> suitable habitat not present

**TABLE 1 KEY:** <sup>1</sup>Based primarily on review of 2020 CNDDDB, 2020 CNPS online database, and 2021 FWS IPaC; additional locality information derived from internal unpublished data, technical reports from the region, and other informal grey literature

### Special-Status Wildlife Species

No special-status wildlife species were directly observed on site. However, several species not observed during the survey may have a moderate or moderate-high occurrence potential (primarily as foragers). Most remaining potentially occurring sensitive wildlife species are not expected to occur on site due to lack of suitable habitat. Sensitive wildlife species potentially occurring on the project site are summarized below in **Table 2**.

**Table 2**

**Special-Status Wildlife Species Potentially Occurring in the Site Vicinity<sup>1</sup>**

Common Name Scientific Name	Status		Habitat Requirements	Occurrence Potential
	Federal	State		
<b>INVERTEBRATES</b>				
Delhi Sands flower-loving fly <i>Rhaphiomidas terminatus abdominalis</i>	FE	--	Open, sandy (Delhi) dune areas commonly supporting buckwheat, croton, telegraph weed, <i>Carissonia</i> and <i>Oenothera</i>	<b>Not Expected:</b> no suitable habitat present
Riverside fairy shrimp <i>Streptocephalus wootoni</i>	FE	--	Swales, vernal pools, and basins within grasslands and sage scrub habitats	<b>Not Expected;</b> suitable habitat not present
Vernal pool fairy shrimp <i>Branchinecta lynchi</i>	FT	--	Vernal pools or alkali vernal pools	<b>Not Expected;</b> suitable habitat not present
California linderiella <i>Linderiella occidentalis</i>	--	--	Vernal pools	<b>Not Expected;</b> suitable habitat not present
<b>FISHES</b>				
Santa Ana sucker <i>Catostomus santaanae</i>	FT	CSC	Small to medium-sized perennial streams	<b>Not Expected:</b> suitable habitat not present
Arroyo chub <i>Gila orcutti</i>	FSC	CSC	Slow moving or backwater sections of streams with sandy or mud substrates	<b>Not Expected:</b> suitable habitat not present
Santa Ana speckled dace <i>Rhinichthys osculus</i> spp. 3	--	CSC	Headwaters of Santa Ana and San Gabriel rivers with permanent flowing streams	<b>Not Expected:</b> suitable habitat not present
<b>REPTILES AND AMPHIBIANS</b>				
Arroyo toad <i>Anaxyrus californicus</i>	FE	CSC	Rivers with sandy banks and loose gravelly areas, open canopy	<b>Not Expected:</b> suitable habitat not present
Western spadefoot toad <i>Spea hammondi</i>	--	CSC	Relatively open grasslands, scrublands, and woodlands with fine, loose soil	<b>Not Expected:</b> suitable habitat not present
San Diego banded gecko <i>Coleonyx variegatus abbotti</i>	--	--	Coastal and cismontane southern California; granite or rocky outcrops in coastal scrub and chaparral	<b>Not Expected:</b> suitable habitat not present
San Diego horned lizard <i>Phrynosoma coronatum blainvillii</i>	FSC	CSC	Relatively open grasslands, scrublands, and woodlands with fine, loose soil.	<b>Not Expected:</b> suitable habitat not present
Coast horned lizard <i>Phrynosoma blainvillii</i>	--	CSC	Lowlands along sandy washes; scattered low shrubs; loose soil; abundant supply of ants	<b>Not Expected:</b> suitable habitat not present
Silvery legless lizard <i>Anniella pulchra pulchra</i>	FSC	CSC	Stabilized dunes, beaches, dry washes, pine, oak, and riparian woodlands, and chaparral; associated with sparse vegetation with sandy or loose, loamy soils.	<b>Not Expected:</b> suitable habitat present
Orange-throated whiptail <i>Aspidoscelis hyperythrus</i>	--	--	Relatively open grasslands, scrublands, and woodlands with fine, loose soil	<b>Not Expected:</b> suitable habitat not present
Coastal western whiptail <i>Aspidoscelis tigris multiscutatus</i>	--	◆	Sage scrub, chaparral, grassland	<b>Not Expected:</b> suitable habitat not present
Northern red diamond rattlesnake <i>Crotalus ruber ruber</i>	--	CSC	Sage scrub, chaparral, grasslands	<b>Not Expected:</b> suitable habitat not present
Southwestern pond turtle <i>Clemmys marmorata pallida</i>	--	CSC	Permanent or nearly permanent bodies of water with basking sites	<b>Not Expected:</b> suitable habitat not present

Common Name Scientific Name	Status		Habitat Requirements	Occurrence Potential
	Federal	State		
Western yellow-billed cuckoo <i>Coccyzus americanus occidentalis</i>	--	CE	Riparian forest nester, lower flood-bottoms of larger river systems	<b>Not Expected:</b> suitable habitat not present
Yellow warbler <i>Dendroica petechia</i>	--	CSC	Riparian thickets and woodlands	<b>Not Expected:</b> suitable habitat not present
Yellow-breasted chat <i>Icteria virens</i>	--	CSC	Riparian thickets and riparian woodlands with dense understorey	<b>Not Expected:</b> suitable habitat not present
Mountain plover <i>Charadrius montanus</i>	PT	CSC	Agricultural areas, fallow fields, grasslands, prairies	<b>Not Expected:</b> suitable habitat not present
Coastal cactus wren <i>Campylorhynchus brunneicapillus couesi</i>	--	CSC	Desert succulent scrub, desert wash, scrub and chaparral habitats with cactus	<b>Not Expected:</b> suitable habitat not present
S. California rufous-crowned sparrow <i>Aimophila ruficeps canescens</i>	--	CSC	Coastal sage scrub, grasslands	<b>Not Expected:</b> suitable habitat not present
Grasshopper sparrow <i>Ammodramus savannarum</i>	MNBMC	--	Coastal sage scrub, grassland	<b>Not Expected:</b> suitable habitat not present
Bell's sage sparrow <i>Amphispiza belli belli</i>	MNBMC	CSC	Coastal sage scrub, chaparral	<b>Not Expected:</b> suitable habitat not present
Tricolored blackbird <i>Agelaius tricolor</i>	--	CSC, CCE	Marshes for nesting; forages in fields and scrub habitats	<b>Low Potential:</b> marginally suitable foraging habitat present
<b>MAMMALS</b>				
Long-eared myotis <i>Myotis evotis</i>	FSC	--	Found in nearly all brush, woodland, and forest habitats from sea level to at least 9,000 ft.	<b>Low Potential:</b> limited foraging and roosting habitat present
Small-footed myotis <i>Myotis ciliolabrum</i>	FSC	--	Arid wooded and brushy uplands near water from sea level to at least 9,000 ft.	<b>Low Potential:</b> limited foraging and roosting habitat present
Fringed myotis <i>Myotis thysanodes</i>	FSC	--	Utilizes open habitats and early successional stages, streams, lakes, and ponds from sea level to at least 9,350 ft.	<b>Low Potential:</b> limited foraging and roosting habitat present
Long-legged myotis <i>Myotis volans</i>	FSC	--	Found in nearly all brush, woodland, and forested habitats from sea level to around 9,000 ft.; a bat primarily of coniferous forests	<b>Low Potential:</b> limited foraging and roosting habitat present
Yuma myotis <i>Myotis yumanensis</i>	FSC	CSC	Found in a variety of habitats; optimal habitats are open forests and woodlands with sources of water over within to feed	<b>Low Potential:</b> limited foraging and roosting habitat present
Spotted bat <i>Euderma maculata</i>	FSC	CSC	Deserts, scrublands, chaparral, and coniferous woodlands; highly associated with prominent rock features	<b>Low Potential:</b> limited foraging and roosting habitat present
Pale big-eared bat <i>Corynorhinus townsendii pallascens</i>	FSC Full Species	CSC Full Sp.	Utilizes a variety of communities, including conifer and oak woodlands and forests, arid grasslands and deserts, and high-elevation forests and meadows	<b>Low Potential:</b> limited foraging and roosting habitat present
Pallid bat <i>Antrozous pallidus</i>	--	CSC	Arid habitats, including grasslands, shrublands, woodlands, and forests; prefers rocky outcrops, cliffs, and crevices with access to open habitats for foraging	<b>Low Potential:</b> limited foraging and roosting habitat present
Western mastiff bat <i>Eumops perotis</i>	FSC (ssp. <i>californicus</i> )	CSC	Primarily arid lowlands and coastal basins with rugged, rocky terrain, along with suitable crevices for day-roosts; primarily a cliff-dweller	<b>Low Potential:</b> limited foraging and roosting habitat present

Table 2-continued

Special-Status Wildlife Species Potentially Occurring in the Site Vicinity<sup>1</sup>

Common Name Scientific Name	Status		Habitat Requirements	Occurrence Potential
	Federal	State		
Pocketed free-tailed bat <i>Nyctinomops femorosaccus</i>	--	CSC	Pine juniper woodlands, desert scrub, palm oasis, desert wash, desert riparian; rocky areas with high cliffs	<b>Not Expected:</b> suitable habitat not present
Big free-tailed bat <i>Nyctinomops macrotis</i>	--	--	Low lying arid areas in California; needs high cliffs or rocky outcrops for roosting	<b>Not Expected:</b> suitable habitat not present
Western yellow bat <i>Lasurus xanthinius</i>	--	CSC	Valley foothill riparian, desert riparian, palm oasis	<b>Not Expected:</b> suitable habitat not present
San Diego desert woodrat <i>Neotoma lepida intermedia</i>	--	CSC	Moderate to dense sage scrub; rocky outcrops	<b>Not Expected:</b> suitable habitat not present
San Diego black-tailed jackrabbit <i>Lepus californicus bennettii</i>	FSC	CSC	Chaparral, coastal scrub, grasslands	<b>Low Potential:</b> marginally suitable habitat present
Northwestern San Diego pocket mouse <i>Chaetodipus fallax fallax</i>	--	CSC	Open shrublands, sandy areas	<b>Not Expected:</b> suitable habitat not present
Los Angeles pocket mouse <i>Perognathus longimembris brevinasus</i>	FSC	CSC	Grasslands and coastal sage scrub; prefers lower elevational areas with open ground and sandy soils.	<b>Not Expected:</b> suitable habitat not present
San Bernardino kangaroo rat <i>Dipodomys merriami parvus</i>	FE	CSC	Coastal sage scrub; prefers lower elevational areas with open ground and sandy soils.	<b>Not Expected:</b> suitable habitat not present
Stephens' kangaroo rat <i>Dipodomys stephensi</i>	FE	CE	Grasslands, open sage scrub	<b>Not Expected:</b> no suitable habitat present

 ♦: CDFG Special Animal

**Special-Status Habitats**

Special-status habitat types are vegetation communities that support concentrations of sensitive plant or wildlife species, are of relatively limited distribution, or are of particular value to wildlife. Although sensitive habitats are not necessarily afforded legal protection unless they support protected species, potential impacts to them may increase concerns and mitigation suggestions by resources agencies. Sensitive habitat types known from the site vicinity (mostly associated with Prado Dam and the Santa Ana River) include Riversidean Alluvial Fan Sage Scrub, Southern California Arroyo Chub/Santa Ana

Sucker Stream, Southern Coast Live Oak Forest, Southern Cottonwood Willow Riparian Forest, Southern Interior Cypress Forest, Southern Riparian Forest, Southern Sycamore Alder Riparian Woodland, and Southern Willow Scrub. None of these native or special-status habitats were recorded on site.

### ***Sensitive Habitats in the Project Vicinity***

The project site is surrounded by agriculture and development. The nearest known habitats (as mentioned above) that would support sensitive biological resources would be the Santa Ana River and Prado Dam areas located approximately ±3.0 miles south of the site. The species associated with these sensitive biological resource areas would not be expected to occur on site due to lack of suitable habitat.

### ***Jurisdictional Resources***

Based on the field investigation conducted by Ecological Sciences, USACE “waters of the United States” per Sections 401 and 404 of the Federal Clean Water Act and “streambeds” per Section 1600-1603 of the CDFW Code were not observed on the property.

The on-site detention basins on the southern border were listed in the FWS National Wetlands Inventory (IPaC 2021) as freshwater ponds. However, these basins would not be subject to federal wetland regulatory requirements and would not be considered freshwater ponds. The artificial basins are not connected to a natural stream, nor do they divert natural flow from any river, stream or lake. Since the source of the water for these artificial features are not part of a natural stream, river, or lake, the stock ponds are not considered jurisdictional under the CDFW Lake and Streambed Alteration Program. The program states: “An entity shall not substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake...”. Therefore, the stock ponds/basins on the project site are not a “natural flow” of a stream, river, or lake, and would not be considered jurisdictional by CDFW. Further, the artificial basins are not adjacent to and are not considered Waters of the United States. The stock ponds/basins are isolated features that are not tributary to, nor do they have a significant nexus (biological, chemical, or physical connection) to traditional navigable waters of the United States. Therefore, the artificial basins on the project site would not be considered federally jurisdictional under the Clean Water Act.

### ***Wildlife Movement Corridors***

The project site is essentially surrounded by various forms of existing development, and therefore, it is highly unlikely that the subject site occupies an important location relative to regional wildlife movement. As such, project implementation would not be expected to have any substantial effect on local or regional wildlife movement.

### ***Discussion***

The level of constraint that a sensitive biological resource would pose to potential development typically depends on the following criteria: (1) the relative value of that resource; (2) the amount or degree of impact to the resource; (3) whether or not impacts to the resource would be in violation of state and/or federal regulations or laws; (4) whether or not impacts to the resource would require permitting by resource agencies; and (5) the degree to which impacts on the resource would otherwise be considered “significant” under CEQA. On-site habitats have been assigned a relatively low biological constraint rating based on the degree in which expected impacts to on-site resources would meet the criteria discussed above. This designation is primarily due to the generally high level of site disturbances (associated with recurring and historic anthropogenic dairy/agricultural disturbances) resulting in low biological diversity (i.e., replacement and exclusion of many native species with fewer non-native species) and an overall low potential for special-status species to utilize or reside within areas proposed for development (due to absence of suitable habitat).

No **special-status plant species** are expected on site due to lack of suitable habitat. The intent of the botanical survey was to generally evaluate the potential of the site to support sensitive plant species based on existing site conditions and habitat types present. Long-standing use of the site for agricultural uses and other anthropogenic disturbances have likely altered soil chemistry and other substrate characteristics such that on-site soils are not likely capable of supporting those sensitive plant species known from the site vicinity. Site development would not eliminate significant amounts of habitat for potentially occurring special-status plant species, nor reduce population size of sensitive plant species below self-sustaining levels on a local or regional basis (if present). No CEQA significant impacts are expected.

No **special-status wildlife species** were directly recorded on site, however, the California horned lark and loggerhead shrike have moderate-high occurrence potential because they are well known to utilize agricultural areas. However, these species were deemed by FWS to be too widespread and common to warrant listing as threatened or endangered, and as such, were removed from formal sensitive species status. Impacts to agricultural-related habitats could amount to an incremental reduction of potential foraging habitat for certain species that may be considered locally adverse. However, site development would not eliminate significant amounts of habitat for these species, nor reduce population size below self-sustaining levels on a local or regional basis. No CEQA significant impacts to these species would be expected.

No direct observations or **western burrowing owl (BUOW)** sign (feathers, pellets, fecal material, prey remains, etc.) were recorded during the 2020 focused surveys or habitat-based surveys. However, several California ground squirrel burrows potentially suitable to accommodate BUOW were recorded on site. None of the potential burrows inspected during the surveys were determined to be currently occupied or recently used by BUOW based on the lack of owl observations and absence of sign around burrow entrances. Despite that fact that the site has been exposed to long-standing disturbances, the BUOW (Low-Moderate occurrence potential) often occur in less than optimal and/or disturbed conditions. While this species is not protected by state or federal endangered species acts, burrowing owls (and other native avian species) are protected under the federal Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S.C. 703-714) and CDFW Code sections 3503, 3503.5, and 3800 which prohibits take, possession, or destruction of birds, their nests or eggs (in particular raptor species such as BUOW). If it were later determined that active nests of BUOW (or other native species) would be lost as a result of site-preparation, it could result in CEQA significant adverse impacts and would be in conflict with these regulations.

Specific burrowing owl survey protocol and mitigation guidelines were developed and described in the 2012 CDFG Staff Report on Burrowing Owl Mitigation in order to reduce project-related impacts to burrowing owls. If site preparation activities occur within potential BUOW habitat, a **pre-construction burrowing owl / Initial Take Avoidance Survey** conducted no less than 14 days prior to initiating ground disturbance activities using the recommended methods described in the 2012 Staff Report is required by CDFG to determine if active nests of species protected by the MBTA and/or CDFG codes are present in the construction zone for CEQA compliance and to subsequently evaluate appropriate measures that may reduce potential adverse project-related impacts.

Implementation of avoidance and minimization measures would be triggered by positive BUOW presence on the site where project activities would occur. The development of avoidance and minimization approaches would be developed by monitoring the BUOW. BUOW may re-colonize a site after only a few days. Time lapses (i.e. construction delays) between project activities would trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance (CDFG 2012). Should eggs or fledglings be discovered in any owl burrow or native nest, these resources cannot be disturbed (pursuant to CDFG guidelines) until the young have hatched and fledged (matured to a stage that they can leave the nest on their own). Take of active nests should always be avoided. If owls must be moved away from the disturbance area, *passive* relocation techniques (where applicable outside of the breeding season before breeding behavior is exhibited and

after the burrow is confirmed empty by site surveillance) should be used rather than trapping (2012 CDFG Staff Report). If burrow exclusion and/or burrow closure is implemented, BUOWs should not be excluded from burrows unless or until: (1) a Burrowing Owl Exclusion Plan is developed and approved by the applicable local CDFW office; and (2) permanent loss of occupied burrow(s) and habitat is mitigated in accordance with the Mitigating Impacts (CDFG 2012).

Development of the proposed project would remove disturbed/ruderal, cultivated, and disced fields potentially suitable for foraging by several species of **special-status raptors** during winter or migration periods. Because most potentially occurring raptor species are very widespread and roam over large areas of foraging territory, these losses would amount to an incremental reduction of seasonal foraging habitat and occasionally use areas that could be considered locally adverse. Impacts to raptors that may forage occasionally onsite would be incremental in nature, related to the cumulative regional loss of foraging habitat. The contribution of the proposed project in this regard would be not significant. However, site development would not likely eliminate significant amounts of foraging habitat for these special-status species, nor reduce population size below self-sustaining levels on a regional basis.

No nesting birds were incidentally observed during surveys conducted on the subject site in 2020. Although many **native bird species** are not protected by state or federal/state endangered species acts, most are protected under the federal Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S.C. 703-711) and CDFG Code sections 3503, 3503.5, and 3800 which prohibits take, possession, or destruction of birds, their nests or eggs. If it were later determined that active nests of any of special-status or native species would be lost or indirectly impacted as a result of site-preparation, it could result in adverse impacts and would be in conflict with these regulations. If construction activities (e.g., site disturbances) are proposed during the nesting season, a nesting bird survey(s) may be required prior to development. Development activities performed outside of the avian breeding season (generally September 1 to December 31) usually eliminates the need to conduct pre-activity nesting surveys for most native species known from the site vicinity, and ensure that there were no constraints to construction relative to the MBTA/CDFG code. Compliance with the MBTA and CDFG codes would be necessary prior to development; however no special permit or approval is typically required in most instances where owls are not present. Development activities performed outside of the avian breeding season would generally eliminate the need to conduct pre-activity nesting surveys for most common native species (other than BUOW) known from the site vicinity, and likely ensure that there were no constraints to construction relative to the MBTA/CDFG codes.

Although not expected on site due to absence of preferred nesting habitat, the **tricolored blackbird** would need to be considered under CESA due to its current status as endangered. According to Grinnell and Miller (1944), tricolored blackbird habitat in the nesting season was found in the “vicinity of fresh water, especially marshy areas. The most favored sites for colonies are heavy growths of cattails and tules, but even when these are available, other vegetation may be resorted to for nesting: sedges, nettles, willows, thistles, mustard, blackberry, wild rose, foxtail grass, barley, etc.” Meese *et al.* 2014 summarized tricolored blackbird breeding habitat requirements as a nesting substrate that is relatively impenetrable or is flooded, is adjacent to water, and is within a few kilometers of foraging areas such as rangeland, alfalfa or cut hay, or irrigated pasture, with adequate insect prey. Meese *et al.* (2014) wrote that the tricolored blackbird’s preferred winter roosting sites included “cattail and bulrush marshes near suitable foraging areas in pasturelands, recently cultivated croplands, and livestock feedstores” (in Report to the Fish and Game Commission, Evaluation of the Petition from the Center for Biological Diversity to List Tricolored Blackbird (*Agelaius tricolor*), CDFW March 2015).

Hamilton (2003) stated that “Tricolored blackbird colony sites require nesting substrates offering protection from predation. These include emergent marsh vegetation (cattails, *Typha latifolia*, less frequently *T. angustifolia*), bulrushes (*Schoenoplectus californicus*, *S. acutus*) and Himalayan blackberries (*Rubus discolor*) thickets, thistle, and nettles. Tricolored blackbirds do not settle in grain, hay, silage, or cut-feed fields before grain forms seed awns or spiny or prickly weeds develop in them. We assume that

grain fields are identified as spiny vegetation by tricolors” (in CDFW 2015). Based on this general habitat analysis, absence of breeding habitat, and that no known colony sites are present in the site vicinity, no significant impacts are expected either to potential breeding or foraging habitat under CESA or CEQA.

Because many North American **bat species** tend to congregate at preferred roosting sites or at isolated water sources, several field methods are available to identify species and broad habitat associations (e.g., tree cavities, exfoliating bark, bark fissures, crevices, cliff faces, and/or dense foliage). Acoustic surveys convert the ultrasonic echolocation signals of bats into audible electronic signals, which can be recorded and processed to assist in identification of the species. If construction activities (e.g., tree removal) are proposed during the breeding season, acoustic bat surveys may be required prior to development to determine current roosting status and species present. The breeding season of native bat species in California is generally from April 1 through August 31. CDFW shall be notified of any active maternity roosts within the construction zone. If non-maternity day roosts or hibernacula are found in trees scheduled to be removed, in crevices or man-made structures within the grading footprint, the individuals will be safely evicted following approved CDFW guidelines developed specifically for the species and location. No special-status bat species are expected to occur on site due to absence of preferred habitat. Results of pre-construction bats surveys would determine specific measures if applicable.

Habitat present within the project site does not represent critical optimal habitat for sensitive plant or wildlife species, and the site does not occupy an important or strategic position as a wildlife corridor. At this time, the losses resulting from the project could be, for the most part, important on a local rather than regional level. When viewed individually, it may be possible for projects in the site vicinity (which contribute to the cumulative loss of habitat) to mitigate potential project-specific significant impacts through the implementation of appropriate mitigation.

## **Conclusion**

Results of the general habitat assessment (April to July 2020) and focused breeding season BUOW survey results (April to June 2020), indicate that habitats located within the ±80-acre site generally represent low biological resource values based on the degree in which expected impacts to on-site resources would meet CEQA criteria discussed above and the context in which they occur (e.g., highly disturbed site conditions present in a predominantly degraded and isolated environment). The existing degraded condition of the site is the direct consequence of long-standing and historic dairy/agricultural uses resulting in low biological diversity (e.g., dominance of non-native species), absence of special-status plant communities, and overall low potential for most special-status species to utilize or reside on site. Construction activities would not be expected to directly impact federal- or state-listed threatened or endangered species, jeopardize the continued existence of listed species (or special-status species), nor directly impact designated critical habitat. Site development would also not be expected to substantially alter the diversity of plants or wildlife in the area because of current degraded site conditions. The loss of these habitats would not be expected to substantially affect special-status resources or cause a population of sensitive plant or wildlife species to drop below self-sustaining levels.

Although no native habitat types are present, and no listed species (currently protected by state or federal endangered species acts) are expected to occur due to absence of suitable habitat, the potential presence of certain special-status species (e.g., nesting birds/roosting bats/burrowing owl) may impose some degree of constraint to development depending upon the nature of both direct and indirect impacts on these resources, as well as on the particular species and seasonal timing of construction activities. During permitting procedures, certain measures (detailed above) to avoid or further reduce project-related impacts to potentially occurring sensitive biological resources would be necessary pursuant to CEQA.

φ

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this biological survey, and that the facts, statements, and information presented herein are true and correct to the best of my knowledge and belief.

Sincerely,

Ecological Sciences, Inc.

Scott D. Cameron  
Principal Biologist

**SUBJECT: Results of a Focused Burrowing Owl Surveys, ±80-acre Ontario Ranch Business Park Phase 2 Site, City of Ontario, San Bernardino County, California**

Dear Jeff:

This letter report presents results of focused surveys conducted to evaluate the presence/absence of the special-status burrowing owl (*Athene cunicularia*-BUOW) on a ±80-acre site.

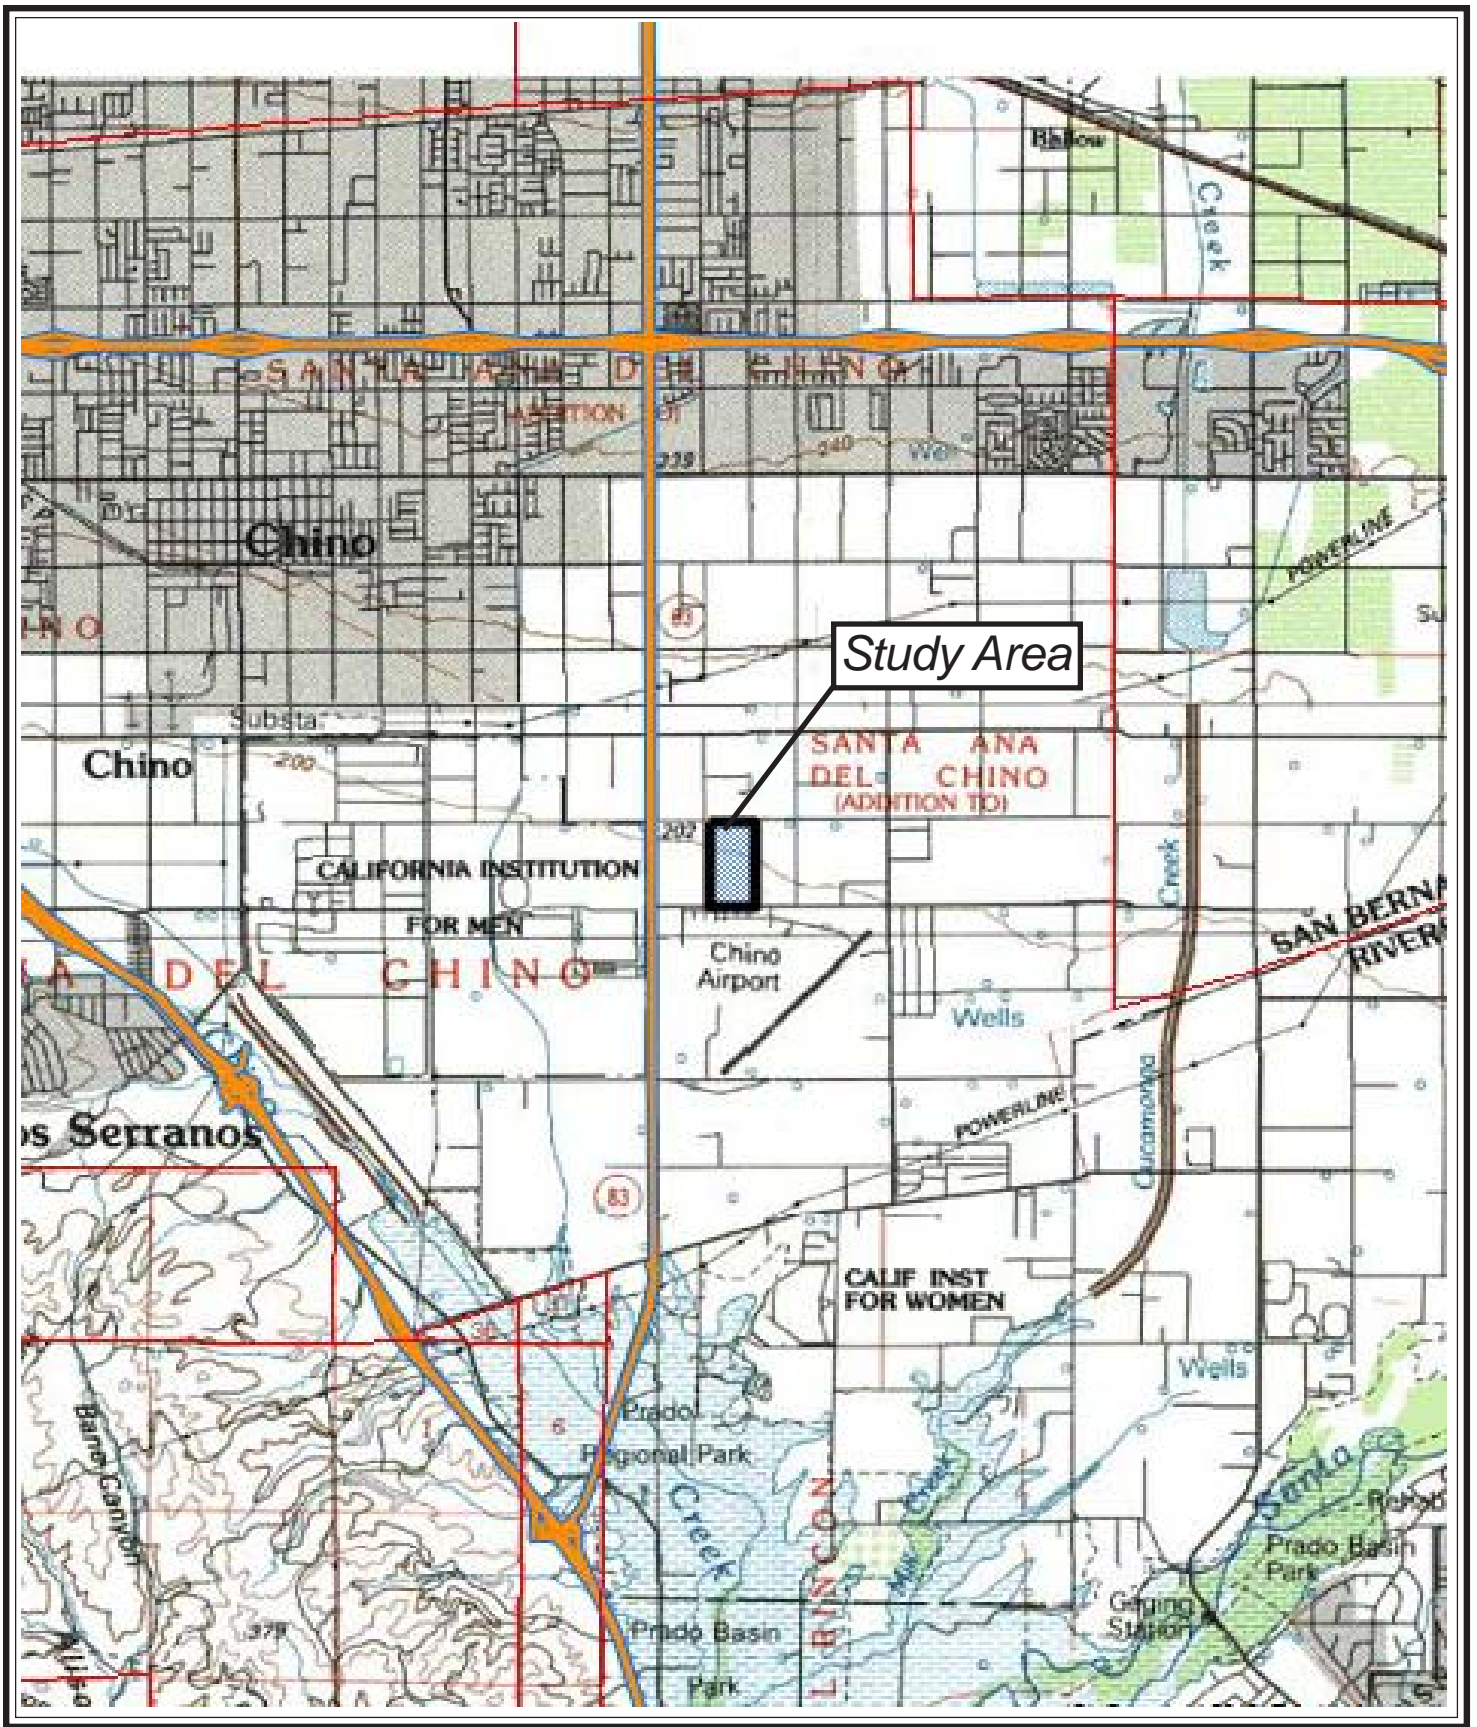

### **Introduction**

The project site (ORBP Phase 2) is located in San Bernardino County, California (**Plate 1**). Specifically, the site is located in the City of Ontario north of Merrill Avenue, south of Eucalyptus Avenue, east of Sultana Avenue, and west of Bon View Avenue. The site occurs on the "Prado Dam" California USGS 7.5-minute quadrangle map, Township 2 South, Range 7 West (**Plate 2**).

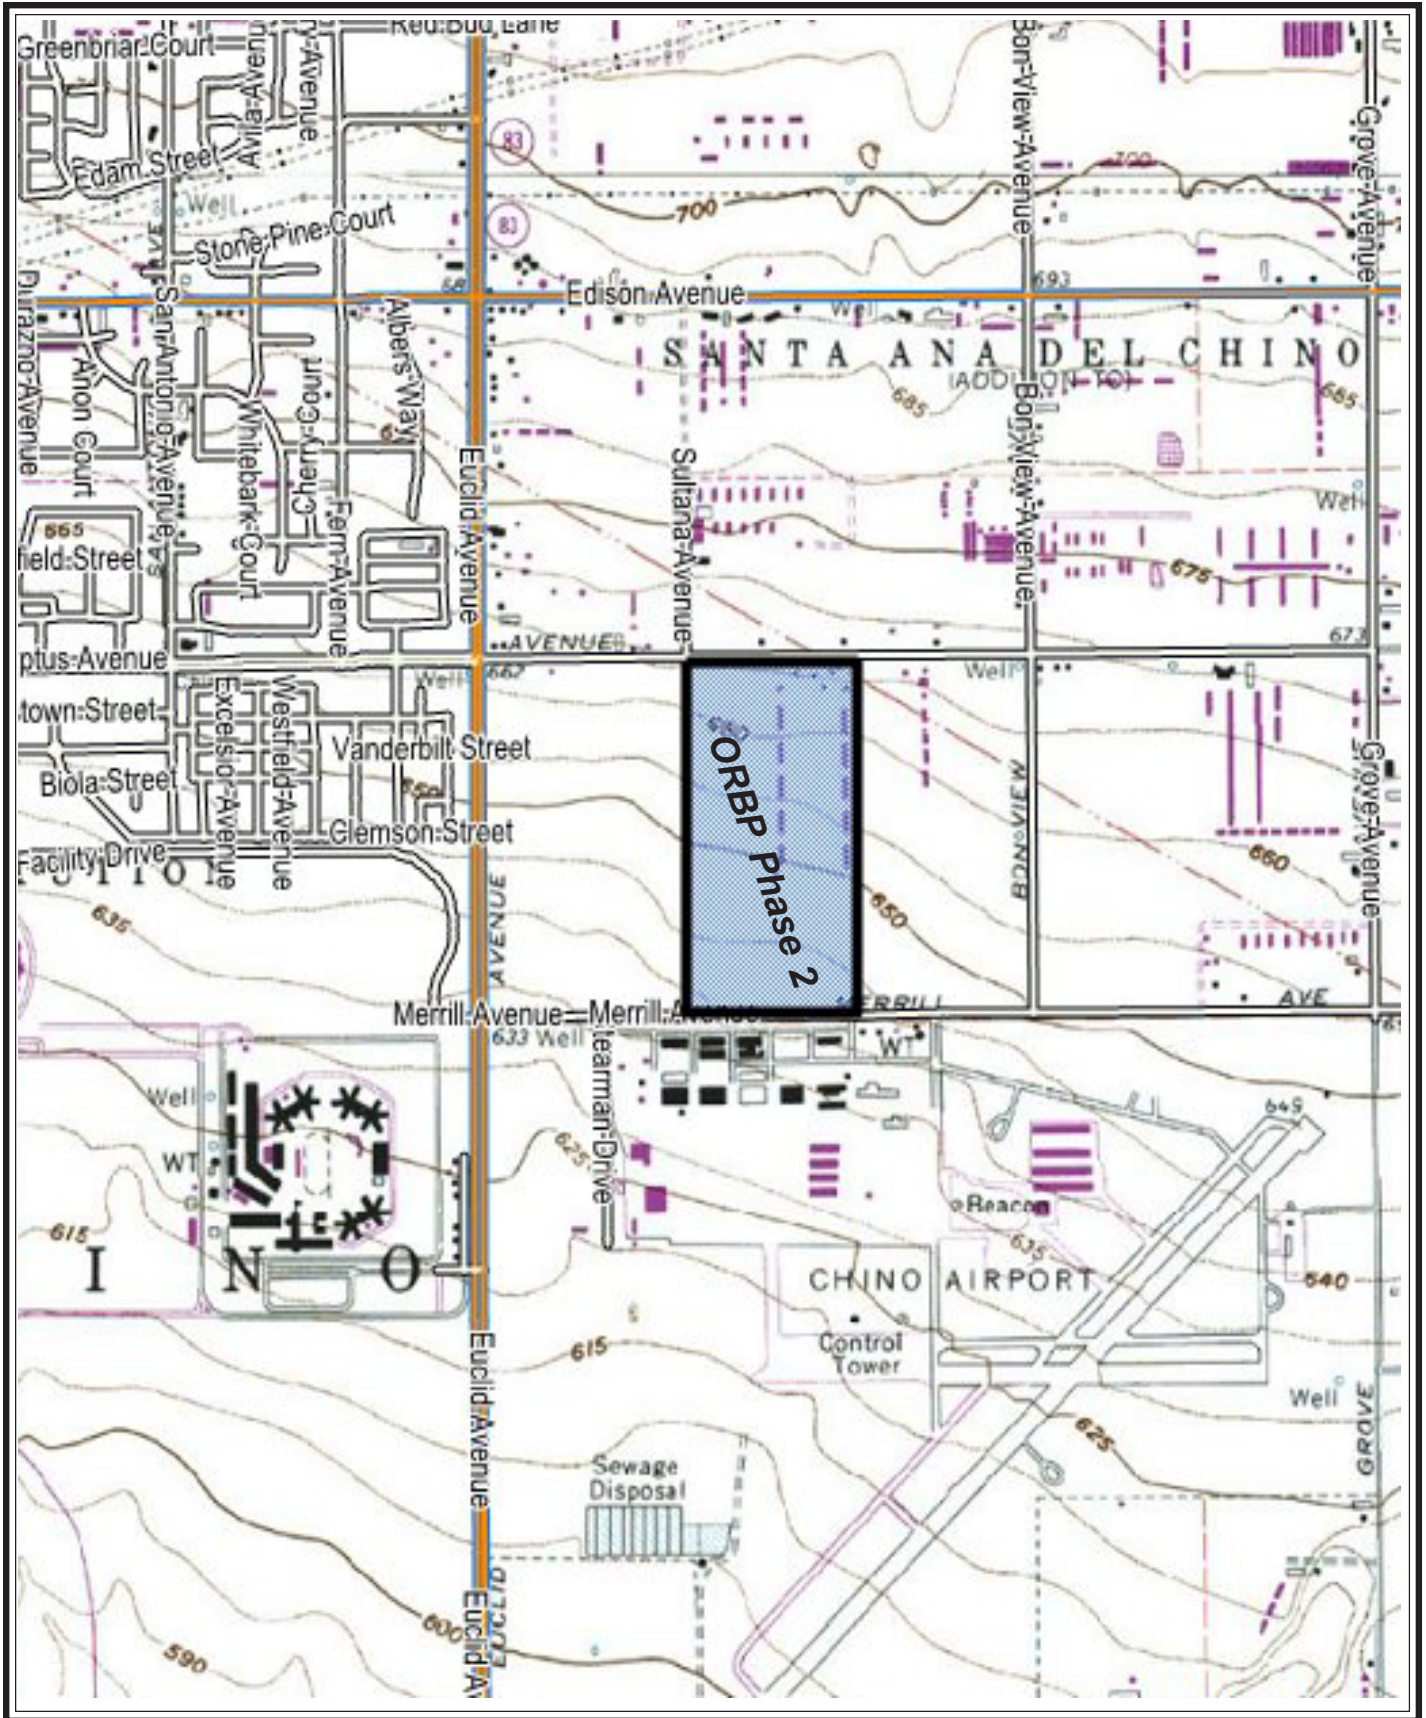

Projects proposed in the area that contain potentially suitable habitat to support sensitive biological resources must demonstrate to reviewing agencies [e.g., U.S. Fish and Wildlife Service (FWS), California Department of Fish and Game (CDFG-currently Department of Fish and Wildlife or CDFW), County of San Bernardino (County), City of Ontario (City)] that potential project-related impacts to sensitive biological resources are adequately addressed and mitigated pursuant to the California Environmental Quality Act (CEQA) and other environmental regulations as part of project approval. For the purposes of this report, both the 1995 CDFG Staff Report on Burrowing Owl Mitigation and the 2012 CDFG Staff Report on Burrowing Owl Mitigation are referenced to provide background information.

### **Selected Species Overview / Regulatory Background**

The **western burrowing owl** is considered a California Species of Special Concern, Federal Species of Concern, Partners in Flight Priority Bird Species, and Fish and Wildlife Service Species of Management Concern because of declines of suitable habitat, as well as localized and statewide population declines (CDFG 1995, 2012). Burrowing owls range across most of western North America. In coastal southern California, they occur in annual and perennial grasslands, agricultural areas, and coastal dunes. Habitat characteristics also include deserts and arid scrublands that contain low-growing vegetation (Zarn 1974). It is believed that burrowing owls may potentially occur wherever there are ground squirrel (e.g., *Spermophilus beecheyi*) colonies as this owl uses ground squirrel burrows throughout the year. Burrows are the essential component of burrowing owl habitat (CDFG 1995), however, burrowing owls are also known to use artificial burrows under certain circumstances such as abandoned concrete structures and debris piles. The BUOW generally prefers moderately to heavily grazed grasslands for nesting and roosting and avoids recently cultivated/disc'd fields. BUOW may utilize multiple burrows/sites throughout the year (e.g., small seasonal migrations), although in central and southern California, owls are predominantly non-migratory (CBOC 2000).

While this special-status species is not protected by state or federal endangered species acts, take, possession or destruction of individual burrowing owls, their nests and eggs is prohibited under CDFG code sections 3503, 3503.5 and 3513, as well as the federal Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S.C. 703-711). Under CEQA, goals would consist of measures that would avoid, minimize and mitigate impacts to a less than significant level. For individual projects, mitigation must be roughly proportional to the level of impacts, including cumulative impacts, in accordance with the provisions of CEQA (CEQA Guidelines, §§ 15126.4(a)(4)(B), 15064, 15065, and 16355). If it were later determined that active nests would be lost as a result of site-preparation, it would be in conflict with these regulations, and could also be considered a significant impact under CEQA without mitigation. In order to avoid violation of the MBTA and CDFG Code requirements, CDFG guidelines (1995, 2012) suggest that project-related disturbances at active nesting territories be reduced or eliminated during the BUOW nesting/breeding cycle (typically February 1 to August 31). Accordingly, construction should take place, as much as possible, outside of the breeding season for BUOW (i.e., construction between September 1 to January 31) to avoid or reduce potential impacts to this species. However, BUOW nesting activity is variable, and as such the time frame should be adjusted accordingly based on specific site information.

Owl survival can be adversely affected by disturbance (e.g., foraging habitat loss) even when impacts to individual birds and nest/burrows are avoided (CDFG 1995). Recommended restricted activity dates and setback distances by level of disturbance for burrowing owls (Scobie and Faminow 2000 in 03/7/12 CDFG BUOW Staff Report are provided below in Table 1.

**Table 1- CDFG Recommended Restricted Activity Dates and Setback Distances by Level of Disturbance for BUOW**

Location	Time of Year	Level of Disturbance		
		Low	Medium	High
Nesting sites	April 1-Aug 15	200 m*	500 m	500 m
Nesting sites	Aug 16-Oct 15	200 m	200 m	500 m
Nesting sites	Oct 16-Mar 31	50 m	100 m	500 m

\*meters (m). Table and text excerpted directly from 2012 CDFG BUOW Staff Report

Note: Based on existing vegetation, human development, and land uses in an area, resource managers may decide to allow human development or resource extraction closer to these areas/sites than recommended above. However, if it is decided to allow activities closer than the setback distances recommended, a broad-scale, long-term, scientifically-rigorous monitoring program ensures that burrowing owls are not detrimentally affected by alternative approaches.

Mitigation measures detailed in the CDFG 1995 staff report include: (1) preservation of habitat, (2) artificial burrow construction, and (3) provide funding for long-term management and monitoring of protected mitigation lands. Mitigation measures successfully implemented for this species also include giving the Service/CDFW right of first refusal for actively relocating any BUOW present. Currently occupied receiving sites may be available where this species has a greater chance of successful long-term relocation. Other minimization measures include eliminating actions that reduce burrowing owl forage and burrowing surrogates (e.g. ground squirrel), or introduce/facilitate burrowing owl predators. Actions that could influence these factors include reducing livestock grazing rates and/or changing the timing or duration of grazing or vegetation management that could result in less suitable habitat (CDFG 2012).

Implementation of avoidance and minimization measures would be triggered by positive owl presence on the site where project activities would occur. The development of avoidance and minimization approaches would be developed by monitoring. BUOW may re-colonize a site after only a few days. Time lapses (i.e. construction delays) between project activities would trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance (CDFG 2012). Should eggs or fledglings be discovered in any owl burrow or native nest, these resources

cannot be disturbed (pursuant to CDFW guidelines) until the young have hatched and fledged (matured to a stage that they can leave the nest on their own). Take of active nests should always be avoided. If owls must be moved away from the disturbance area, passive relocation techniques (where applicable outside of the breeding season before breeding behavior is exhibited and after the burrow is confirmed empty by site surveillance) should be used rather than trapping (CDFG 2012). If burrow exclusion and/or burrow closure is implemented, BUOWs should not be excluded from burrows unless or until: (1) a Burrowing Owl Exclusion Plan is developed and approved by the applicable local CDFW office; and (2) permanent loss of occupied burrow(s) and habitat is mitigated in accordance with the Mitigating Impacts (CDFG 2012).

## **Methodology**

### **Review of Existing Information**

Existing documentation pertinent to the distribution and habitat requirements of the burrowing owl was reviewed and analyzed. This included a review of: (1) the California Natural Diversity Data Base (CNDDB 2020), (2) both the 1995 CDFG Staff Report on Burrowing Owl Mitigation and the 2012 CDFG Staff Report on Burrowing Owl Mitigation, and (3) other literature pertaining to habitat requirements of the BUOW as referenced herein.

### **2020 Focused BUOW Survey**

The BUOW surveys were conducted in accordance with the March 7, 2012 CDFG Staff Report on Burrowing Owl Mitigation. These guidelines include searches for BUOW, burrows (natural and artificial), and BUOW sign by walking parallel transects (where feasible) through suitable habitat over the entire survey area [i.e., the project site and within a 150 meter (500 feet) buffer area where feasible or at least by visual means]. Upon arrival at the survey area and prior to initiating the walking surveys, the biologist used binoculars and/or spotting scope to scan suitable habitat. Ecological Sciences' Principal Biologist, Scott Cameron, initiated the first of four total focused breeding season BUOW surveys on April 12, 2020. Subsequent surveys were conducted on May 17, June 14, and July 11. Mr. Cameron has extensive experience conducting habitat assessments and focused burrowing owl surveys over the past 25 years, and has recorded numerous BUOW over the course of 100+ surveys throughout southern California. Mr. Cameron has also conducted passive relocation activities, used burrow probes, and conducted burrow closing procedures for multiple projects.

Per the Staff Report, the breeding season BUOW surveys included a review of pertinent information of the project site and vicinity and a series of four focused burrowing owl surveys conducted according to the 2012 California Department of Fish and Game (CDFG April 7, 2012) Staff Report on Burrowing Owl Mitigation. The Staff reports requires at least one site visit between 15 February and 15 April, and a minimum of three survey visits, at least three weeks apart, between 15 April and 15 July, with at least one visit after 15 June. Surveys would be conducted by walking straight-line transects spaced 7 meters (23 feet) to 20 meters (65 feet) apart, adjusting for vegetation height and density using standard auditory and visual means. At the start of each transect and, at least, every 100 m (328 feet), the entire visible project area would be scanned for BUOW using binoculars. During walking surveys, a record of all potential burrows used by burrowing owls as determined by the presence of one or more burrowing owls, pellets, prey remains, whitewash, or decoration would be recorded. Surveys should not be conducted when wind speed is >20 kilometers/hour (>12.5 miles/hour), and/or if there is precipitation or dense fog. Surveys have greater detection probability if conducted when ambient temperatures are >20° Celsius (>68° Fahrenheit), <12 km/hr winds (<7.5 miles/hr), and cloud cover is <75%. Surveys would be conducted between morning civil twilight and 10:00 a.m. and two hours before sunset until evening civil twilight (highest detection probabilities); It is assumed that a copy of this report would be forwarded to the lead agency at the discretion of the project applicant in order to comply with conditions of approval (where applicable).

Focused BUOW surveys were conducted to determine if the BUOW was foraging on or adjacent to the site. Transects were spaced to allow 100 percent visual coverage of the ground surface. The distance between transect center lines was no more than 20 meters ( $\pm 65$  feet) and were reduced (as necessary) to account for differences in terrain, vegetation density, and ground surface visibility. Periodic stops along each transect (generally at 100 meter intervals) and at the end of each transect were implemented to scan the site for BUOW with binoculars. Suitable burrows were examined for sign of BUOW use such as the presence of owl pellets, prey remains, or feathers at burrow entrances. Suitable burrows (burrows that are open and wide enough for owl use), regardless if owl sign was recorded, were noted. Burrows (where present) were inspected with the aid of a mirror to better view burrow interiors. Per protocol, surveys were conducted during weather that was conducive to observing owls outside their burrows and detecting BUOW sign. Focused surveys were conducted two hours before sunset until evening civil twilight (highest detection probabilities). Weather conditions through the survey period included clear skies, scattered clouds, and partly cloudy (<50% cover), 1-8 mph variable breezes, and air temperatures ranging between 67-89 °F. Accordingly, weather conditions were conducive for above-ground BUOW activity.

### **Existing Biological Environment**

The subject site is characterized primarily as an active dairy operation. The site contains a single-family residence, multiple dairy-related structures (sheds, corrals, etc.), feeding preparation areas, waste ponds/basins, cultivated/disc'd areas, manure spreading areas, and debris dumping areas. The ruderal/disturbed areas support mostly invasive, non-native annual species. Manure, associated with the ongoing dairy operation, is present throughout most of the site. Cattle feeding areas were barren ground covered in manure and mud. Surrounding land uses include agricultural areas similar to the subject site and the Chino Airport is located to the south. **Plate 3** aerially illustrates site features.

### **Vegetation**

Ruderal plants recorded on site included various non-native grasses and weedy species such as foxtail chess (*Bromus madritensis* spp. *rubens*), ripgut grass (*Bromus diandrus*), Bermuda grass (*Cynodon dactylon*), Mediterranean grass (*Schismus barbatus*), filaree (*Erodium* sp.), Lamb's quarter's (*Chenopodium album*), milk thistle (*Silybum marianum*), alfalfa (*Medicago sativa*), Russian thistle (*Salsola tragus*), puncture vine (*Tribulus terrestris*), black mustard (*Brassica nigra*), cheeseweed (*Malva parviflora*), nettle (*Urtica* sp.), tree tobacco (*Nicotiana glauca*), and gum (*Eucalyptus* sp.).

### **Survey Results**

No direct BUOW observations were recorded during the April-July 2020 focused BUOW breeding season surveys. No potential burrows inspected during the survey were determined to be currently occupied by BUOW based on absence of BUOW observations and sign (feathers, pellets, fecal material, prey remains, etc.) at or near burrow entrances/aprons. BUOW were also not observed utilizing the site for foraging purposes on or adjacent to the site (adjacent areas viewed by binocular only).

Avian species observed on site included turkey vulture (*Cathartes aura*), red-tailed hawk (*Buteo jamaicensis*), common raven (*Corvus corax*), American crow (*Corvus brachyrhynchos*), killdeer (*Charadrius vociferus*), barn swallow (*Hirundo rustica*), European starling (*Sturnus vulgaris*), rock pigeon (*Columba livia*), Eurasian collared dove (*Streptopelia decaocto*), black-phoebe (*Sayornis nigricans*), Say's phoebe (*Sayornis saya*), mourning dove (*Zenaida macroura*), northern mockingbird (*Mimus polyglottos*), Brewer's blackbird (*Euphagus cyanocephalus*), western meadowlark (*Sturnella neglecta*), house finch (*Carpodacus mexicanus*), white-crowned sparrow (*Zonotrichia leucophrys*), and house sparrow (*Passer domesticus*). Reptile species observed included site-blotched lizard (*Uta stansburiana*). Mammal species directly observed, or of which sign was detected, included California ground squirrel (*Otospermophilus beecheyi*), desert cottontail (*Sylvilagus auduboni*), and pocket gopher (*Thomomys bottae*).

## ***Aerial of Survey Area***

ORBP Phase 2

Despite that fact that the site has been exposed to long-standing disturbances, BUOW often occur in less than optimal and/or disturbed conditions. If it were later determined that active nests of BUOW would be lost as a result of site-preparation, it could result in CEQA significant adverse impacts and would be in conflict with CDFW code sections. Although no BUOW were recorded on site, it is recommended by CDFW to complete an initial take avoidance survey no less than 14 days prior to initiating ground disturbance activities. Implementation of avoidance and minimization measures would be triggered by positive owl presence on the site where project activities would occur. The development of avoidance and minimization approaches would be evaluated by monitoring burrowing owls (if present on site). BUOW may re-colonize a site after only a few days. Time lapses between project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance (CDFW 2012).

---

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this biological survey, and that the facts, statements, and information presented herein are true and correct to the best of my knowledge and belief.

Sincerely,

Ecological Sciences, Inc.

Scott D. Cameron  
Principal Biologist

## MANAGEMENT SUMMARY

Euclid Land Ventures, LLC (Proponent) proposes the development of a new warehouse facility, as outlined in the Ontario Ranch Business Park Specific Plan (hereafter referred to as Project or Specific Plan Area). The Specific Plan Area is located on 84.1 acres of land at the southeast corner of Eucalyptus Avenue and Euclid Avenue and 80.83 acres of land located at the southeast corner of Eucalyptus Avenue and Sultana Avenue, in the City of Ontario, San Bernardino County. Material Culture Consulting, Inc. (MCC) was initially retained by the Proponent to conduct a Phase I cultural and paleontological resource investigation of the 84.1-acre Specific Plan Area in July 2018. These assessments were conducted in accordance with the California Environmental Quality Act (CEQA), along with local regulations and guidelines. This assessment included a cultural resources records search of the California Historical Resources Information System (CHRIS), a locality search at the National History Museum of Los Angeles County (LACM), an examination of geological maps and paleontological literature, a search of the Sacred Lands File by the Native American Heritage Commission (NAHC), outreach efforts with 20 Native American tribal representatives, background research, and a pedestrian survey. In February 2020, MCC was retained by EPD to conduct a supplemental assessment of an expanded Specific Plan Area encompassing an additional 80.83 acres. This assessment included a compilation of previous CHRIS record searches that overlap the expanded Specific Plan Area.

The SLF search did not identify any previously known cultural resources within the entire Specific Plan Area. MCC sent letters on August 1, 2018 to 20 Native American contacts identified by the NAHC, requesting any information related to cultural resources or heritage sites within or adjacent to the Project Area. Additional attempts at contact by letter, email, or phone call were made on August 10, August 22, and August 23, 2018. As a result of this outreach effort, MCC received nine responses from Native American Tribes or individuals. No specific cultural resources were identified in the responses; however, several Native American Tribes stated an interest in the Project and provided comments. These results are summarized in the Native American Outreach and Background Research section of this report and in Appendix C. MCC did not conduct formal consultation with the Native American representatives.

The CHRIS records searches in 2018 and 2020 identified 23 cultural resources investigations previously conducted within a 1-mile radius buffer around the Specific Plan Area, seven of which are located adjacent to the Specific Plan Area. The cultural records search identified six previously recorded cultural resources within a 1-mile radius buffer around the Specific Plan Area, none of which are located within the Specific Plan boundaries. A review of historical aerial photographs and maps show the Specific Plan Area has been consistently used for agricultural and dairy activities since the 1930s.

The Specific Plan Area is comprised of younger Quaternary Alluvium, derived broadly from the San Bernardino Mountains to the north. These deposits typically do not contain significant vertebrate fossils within the uppermost layers, however, it is likely that the Specific Plan Area is underlain by older Quaternary deposits at an unknown depth. No previously recorded fossil localities are located within one mile of the Project Area.

Allison Hill, M.A., RPA, MCC Archaeologist and Cross-Trained Paleontologist, conducted the cultural and paleontological survey of the initial 84.1-acre Specific Plan Area on July 27, 2018. During fieldwork, survey conditions were generally poor with the Specific Plan Area utilized by ongoing agricultural activities and dairy cattle pasture / enclosures. The property has been previously disturbed by agricultural and dairy operations conducted by the current owners. No cultural or paleontological resources were identified during the survey. The expanded

Specific Plan Area is considered to not need a supplemental cultural and paleontological survey at this time.

Based on the above findings, the probability of encountering cultural or paleontological resources within the Specific Plan Area is considered low. MCC recommends no further mitigation measures prior to implementation of projects within the Specific Plan. While we do not recommend additional mitigation, we do recommend including a section in the Specific Plan which addresses inadvertent discoveries of cultural materials and/or human remains, should these be encountered during any projects within the Specific Plan Area. Please note – if the lead agency for any project within the Specific Plan requires presence of Tribal Cultural Monitors, archaeological monitoring should also occur in tandem, to quickly and expeditiously salvage materials in a scientific manner and assess such finds for archaeological significance.

Excavation extending more than ten feet below surface has the potential to impact the paleontologically sensitive older Quaternary sediments. If excavation for a given project extends deeper than ten feet below surface, MCC recommends that a paleontological resource mitigation program be put in place to monitor, salvage, and curate any recovered fossils associated with the current study area, should these be unearthed during ground disturbance associated with any project within the Specific Plan Area.

A copy of this report will be permanently filed with the SCCIC at California State University, Fullerton. All notes, photographs, correspondence and other materials related to this Project are located at MCC, Inc located in Pomona, California.

## INTRODUCTION

Euclid Land Ventures, LLC (Proponent) proposes the development of a new warehouse facility, as outlined in the Ontario Ranch Business Park Specific Plan (hereto after referred to as Project or Specific Plan Area). The Specific Plan Area is located on 84.1 acres of land at the southeast corner of Eucalyptus Avenue and Euclid Avenue and 80.83 acres of land located at the southeast corner of Eucalyptus Avenue and Sultana Avenue, in the City of Ontario, San Bernardino County. Material Culture Consulting, Inc. (MCC) was initially retained by the Proponent to conduct a Phase I cultural and paleontological resource investigation of the 84.1-acre Specific Plan Area in July 2018. These assessments were conducted in accordance with the California Environmental Quality Act (CEQA), along with local regulations and guidelines. This assessment included a cultural resources records search of the California Historical Resources Information System (CHRIS), a locality search at the National History Museum of Los Angeles County (LACM), an examination of geological maps and paleontological literature, a search of the Sacred Lands File by the Native American Heritage Commission (NAHC), outreach efforts with 20 Native American tribal representatives, background research, and a pedestrian survey. In February 2020, MCC was retained by EPD to conduct a supplemental assessment of an expanded Specific Plan Area encompassing an additional 80.83 acres. This assessment included a compilation of previous CHRIS record searches that overlap the expanded Specific Plan Area.

### PROJECT LOCATION AND DESCRIPTION

The proposed Specific Plan is located at the northeast corner of Eucalyptus Avenue and Euclid Avenue and located at the southeast corner of Eucalyptus Avenue and Sultana Avenue, in the City of Ontario, San Bernardino County, California (Figures 1 and 2). The Specific Plan Area is bounded by Eucalyptus Avenue to the north, by Euclid Avenue to the west, by Merrill Avenue to the south, and is bisected by Sultana Avenue, with additional agricultural and dairy fields to the east (Figure 3). This Specific Plan Area is located on Section 19 of the USGS 7.5-minute Prado Dam and Ontario, California topographic maps, Township 2 South, Range 7 West (Figure 2). The Specific Plan Area consists of nineteen parcels, identified as Assessor's Parcel Numbers (APNs) 1054-011-01, -02, -04; 1054-021-01, -02; 1054-031-01, -02; 1054-041-01, -02; 1054-261-01, -02; 1054-271-01, -02, -03; 1054-281-01, -02, -03; and 1054-291-01, -02. Presently, the Specific Plan Area contains an operational dairy farm, Legend Dairy Farms and two single-family residences. The proposed Project includes demolition of existing structures and facilities, and construction of eight buildings consisting of warehouses and offices. Currently, no major utilities connect to undeveloped projects within the Specific Plan Area, therefore projected onsite improvements will include installation of storm drains, water quality systems, a sewer main and sewer lines, water lines, and dry utility connections.

### PROJECT PERSONNEL

Tria Belcourt, M.A., Registered Professional Archaeologist (RPA), President of MCC, served as the Project Manager and Principal Archaeologist for the study. Belcourt holds a M.A. in Anthropology from the University of Florida, a B.A. in Anthropology from the University of California at Los Angeles, and has gained over thirteen years of experience in California archaeology and eight years of experience overseeing paleontological assessments in California (See Appendix A). Ms. Belcourt oversaw the project and performed editorial review of this report. Jennifer Kelly, M.S., served as the Principal Investigator for Paleontology for the study. Ms. Kelly has a M.Sc. in Geology from California State University, Long Beach, and has over ten years of experience in environmental and paleontological compliance in California (See Appendix A). Ms. Kelly conducted the paleontological resource literature and map reviews, oversaw the field study, and prepared the paleontological sections of this report. Allison Hill, M.A., RPA, Archaeologist and Cross-Trained Paleontologist conducted the cultural resources records search and cultural/paleontological field survey of the initial 84.1-acre Specific Plan Area. Sonia Sifuentes, M.Sc., RPA, provided primary authorship of this report. Julia Carvajal, M.A., provided GIS support for the investigation.

## REGULATORY ENVIRONMENT

The current study is subject to local and state laws and regulations regarding cultural and paleontological resources. These regulations require the identification of cultural and paleontological resources within the Specific Plan Area which should be considered during the planning stage of new Projects; include application review for Projects that would potentially involve land disturbance; provide Project-level standard conditions of approval that address unanticipated discoveries; and provide requirements to develop specific mitigation measures if resources are encountered during any development activity. Specific governing legislation and regulations include the following:

### **CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)**

CEQA declares that it is state policy to "take all action necessary to provide the people of this state with...historic environmental qualities." It further states that public or private Projects financed or approved by the state are subject to environmental review by the state. All such Projects, unless entitled to an exemption, may proceed only after this requirement has been satisfied. CEQA requires detailed studies that analyze the environmental impacts of a proposed Project. In the event that a Project is determined to have a potential significant environmental impact, CEQA requires that alternative plans and mitigation measures be considered. CEQA includes historic and archaeological resources as integral features of the environment.

CEQA requires a designated lead agency to determine whether a Project may have a significant impact on historical resources. A historical resource is defined as a resource listed in, or determined to be eligible for listing in, the California Register of Historical Resources (CRHR) (Section 21084.1); a resource included in a local register of historical resources (Section 15064.5(a)(2)); or any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant (Section 15064.5 (a)(3)). Public Resources Code (PRC) Section 5024.1, Section 15064.5 of the Guidelines, and Sections 21083.2 and 21084.1 of the Statutes of CEQA were used as one of the basic guidelines for the current cultural resources study. PRC Section 5024.1 directs evaluation of historical resources to determine their eligibility for listing on the CRHR.

The purpose of the register is to maintain listings of the state's historical resources. The criteria for listing resources on the CRHR were expressly developed to be in accordance with previously established criteria developed for listing on the NRHP, enumerated above, and require similar protection to what NHPA Section 106 mandates for historic properties. According to Public Resources Code (PRC) Section 5024.1(c)(1-4), a resource is considered historically significant if it meets at least one of the following criteria:

1. Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States;
2. Associated with the lives of persons important to local, California or national history;
3. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values; or
4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

In addition to having significance, resources must retain integrity. Integrity is the authenticity of a historical resource's physical identity as evidenced by the survival of characteristics or historic fabric that existed during the resource's period of significance. Alterations to a resource or changes in its use over time may have historical, cultural, or architectural significance. Simply, resources must retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. A resource that has lost its historic character or appearance may still have sufficient integrity for the California Register, if,

under Criterion 4, it maintains the potential to yield significant scientific or historical information or specific data. Note that California Historical Landmarks with numbers 770 or higher are automatically included in the CRHR.

Under CEQA, if an archeological site is not a significant “historical resource” but meets the definition of a “unique archeological resource” as defined in PRC Section 21083.2, then it should be treated in accordance with the provisions of that section. A unique archeological resource is defined in PRC Section 21083.2(g) as follows:

An archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

Resources that neither meet any of these criteria for listing on the NRHP or CRHR nor qualify as a “unique archaeological resource” under CEQA PRC Section 21083.2 are viewed as not significant. Under CEQA, “A non-unique archaeological resource need be given no further consideration, other than the simple recording of its existence by the lead agency if it so elects” [PRC Section 21083.2(h)].

Impacts to historical resources that alter the characteristics that qualify the historical resource for listing on the CRHR are considered to be a significant impact. Impacts to a historical resource are considered significant if the Project activities physically destroy or damage all or part of a resource; change the character of the use of the resource or physical feature within the setting of the resource which contribute to its significance; or introduce visual, atmospheric, or audible elements that diminish the integrity of significant features of the resource. If it can be demonstrated that a Project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (Section 21083.2 (a), (b), and (c)).

#### **CALIFORNIA HISTORICAL LANDMARKS AND POINTS OF HISTORICAL INTEREST**

Historical landmarks are sites, buildings, features, or events that are of statewide significance and have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other value. In order to be considered a California Historical Landmark, the landmark must meet at least one of the following criteria:

- 1) Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States;
- 2) Associated with the lives of persons important to local, California, or national history;
- 3) Embodies the distinctive characteristics of a type, period, region, or method of construction; represents the work of a master; or possesses high artistic values;
- 4) Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

If a site is primarily of local or countywide interest, it may meet the criteria for the California Point of Historical Interest Program. Points of Historical Interest are sites, buildings, features, or events that are of local (city or county) significance and have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other value. To be eligible for designation as a Point of Historical Interest, a

resource must meet at least one of the following criteria:

1. The first, last, only, or most significant of its type in the local geographic region (city or county);
2. Associated with an individual or group having a profound influence on the history of the local area;
3. A prototype of, or an outstanding example of, a period, style, architectural movement or construction; or
4. One of the more notable works or the best surviving work in the local region of a pioneer architect, designer, or master builder.

Points of Historical Interest designated after December 1997 and recommended by the State Historical Resources Commission are also listed in the California Register. No historical resource may be designated as both a Landmark and a Point of Interest. If a Point of Interest is subsequently granted status as a Landmark, the Point of Interest designation will be retired.

## PALEONTOLOGY

The State of California Public Resources Code (Chapter 1.7), Sections 5097.5 and 30244, includes additional state level requirements for the assessment and management of paleontological resources. These statutes require reasonable mitigation of adverse impacts to paleontological resources resulting from development on state lands, define the removal of paleontological “sites” or “features” from state lands as a misdemeanor, and prohibit the removal of any paleontological “site” or “feature” from State land without permission of the jurisdictional agency. These protections apply only to State of California land, and thus apply only to portions of the Project, if any, which occur on State land.

As defined by Society for Vertebrate Paleontology (SVP), paleontological resources means any fossilized remains, traces, or imprints of prehistoric plants and/or animals which are preserved in or on the earth’s crust that can provide information about the history of past life on the planet (2009). Generally, any resource greater than 5,000 years old is considered to be a fossil and are considered a nonrenewable resource that are subject to impacts from land development (SVP, 2010). Paleontological resources are important scientific and educational resources because they are used to:

- 1) Document the evolutionary history of now extinct organisms to study any associated evolution patterns and/or speciation;
- 2) Reconstruct the environments, climate change, and/or paleoecological relationships these organism lived in; and
- 3) Determine the relative geologic age of the strata in which the resources occur and any geological events that resulted in the deposition of the sediments that formed the strata.

Fossil resources vary widely in their relative abundance and distribution and not all are regarded as significant. Vertebrate fossils, whether preserved remains or track ways, are classed as significant by most state and federal agencies and professional groups (and are specifically protected under the California Public Resources Code). In some cases, fossils of plants or invertebrate animals are also considered significant and can provide important information about ancient local environments. Assessment of significance is also subject to the California Environmental Quality Act (CEQA) criterion that the resource constitutes a “unique paleontological resource or site.” A significant paleontological resource is considered to be of scientific interest if it is a rare or previously unknown species, it is of high quality and well-preserved, it preserves a previously unknown anatomical or other characteristic, provides new information about the history of life on earth, or has an identified educational or recreational value. Paleontological resources that may be considered not to have scientific significance include those that lack provenience or context, lack physical integrity due to decay or natural erosion, or that are overly redundant or are otherwise not useful for research. Vertebrate fossil remains and traces include bone, scales, scutes, skin impressions, burrows, tracks, tail drag marks, vertebrate coprolites (feces), gastroliths (stomach stones), or other physical evidence of past vertebrate life or activities (BLM, 2007). The full significance of fossil

specimens or fossil assemblages cannot be accurately predicted before they are collected, and in many cases, before they are prepared in the laboratory and compared with previously collected material.

Pre-construction assessment of significance associated with an area or formation must be made based on previous finds, characteristics of the sediments, and other methods that can be used to determine paleoenvironmental conditions. A separate issue is the potential of a given geographic area or geologic unit to preserve fossils.

Information that can contribute to assessment of this potential includes:

- 1) The existence of known fossil localities or documented absence of fossils nearby and in the same geologic unit (e.g. "Formation" or one of its subunits);
- 2) Observation of fossils within the Project vicinity;
- 3) The nature of sedimentary deposits in the area of interest, compared with those of similar deposits known elsewhere (size of particles, clasts and sedimentary structures conducive or non-conductive to fossil inclusion) that may favor or disfavor inclusion of fossils; and
- 4) Sedimentology details, and known geologic history, of the sedimentary unit of interest in terms of the environments in which the sediments were deposited, and assessment of the favorability of those environments for the probable preservation of fossils.

As so defined, significant paleontological resources are determined to be fossils or assemblages of fossils that are unique, unusual, rare, uncommon, or diagnostically important. Significant fossils can include remains of large to very small aquatic and terrestrial vertebrates or remains of plants and animals previously not represented in certain portions of the stratigraphy. Assemblages of fossils that might aid stratigraphic correlation, particularly those offering data for the interpretation of tectonic events, geomorphologic evolution, and paleoclimatology are also critically important (Scott and Springer 2003; Scott et al. 2004).

#### **CITY OF ONTARIO GENERAL PLAN**

The City of Ontario General Plan Community Design Element contains several policies (CD4-1 through CD4-7) were developed to meet the City's goals regarding management of cultural and paleontological resources. CD4-1 applies to the current study as an effort to update the known information on the project area, as it has not been surveyed or examined in the past ten years:

CD4-1 Cultural Resource Management. Update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps, and other archives.

CD4-2 Collaboration with Property Owners and Developers. Educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes, and neighborhoods.

CD4-3 Collaboration with Outside Agencies. Pursue opportunities to team with other agencies, local organizations, and nonprofits in order to preserve and promote Ontario's heritage.

CD4-4 Incentives. Use the Mills Act and other federal, state, regional, and local programs to assist property owners with the preservation of select properties and structures.

CD4-5 Adaptive Reuse. Actively promote and support the adaptive reuse of historic sites and buildings to preserve and maintain their viability.

CD4-6 Promotion of Public Involvement in Preservation. Engage in programs to publicize and promote the City's and the public's involvement in preservation efforts.

CD4-7 Public Outreach. Provide opportunities for our residents to research and learn about the history of Ontario through the Planning Department, Museum of History and Art, Ontario, and the Robert E. Ellingwood Model Colony History Room.

## BACKGROUND

### ENVIRONMENTAL SETTING

The Specific Plan Area is located 5.2 miles south of the downtown area of the City of Ontario, bounded by Eucalyptus Avenue to the north, Euclid Avenue to the west, Merrill Avenue to the south, bisected by Sultana Avenue, and additional agricultural and dairy fields to the east. To the north is a mixture of dairy/agricultural and service commercial properties. Heavily developed residential areas are found west of Euclid Avenue and Chino Airport is located to the south. Ontario lies within the broad alluvial fan originating from the southern flank of the San Gabriel Mountains, and dips gradually southward to the confluence of San Antonio Channel, Cucamonga Channel/Mill Creek, and the Santa Ana River at the Prado Dam Flood Control Basin in Riverside County. The Santa Ana River flows to the south of the City and Cucamonga Creek and Deer Creek traverse north to south through the City. The Specific Plan Area is generally flat, with elevation averaging approximately 197 meters (m) (646 ft) above mean sea level (AMSL). The entire project area has been disturbed by the development and over 80 years of use by Legend Dairy Farms, currently located within the subject properties. Vegetation is characterized as primarily agricultural and commercial landscaping with no native vegetation observed.

### PALEONTOLOGICAL SETTING

The Specific Plan Area is situated in the San Bernardino Basin, adjacent to the Transverse Ranges Geomorphic Province. This province is comprised of a series of mountain ranges that run transverse to most mountain ranges in southern California – roughly east/west trending. The mountains within the province, including the San Gabriel and San Bernardino mountains to the north and northeast, were uplifted by tectonic activity, and provide a major sedimentary source for the alluvium basins of the adjacent areas (Critelli et al. 1995). The geologic units underlying this project are mapped entirely as younger Quaternary alluvium (Qyfa) dating from the late Holocene to Pleistocene (Jennings et al. 1977) (Figure 4). These deposits derived broadly as alluvial fan deposits from the San Bernardino Mountains to the north (McLeod 2018).

*Young Quaternary alluvium* (Qyfa) are Holocene to late Pleistocene-aged alluvial fan deposit that typically consists of river and stream derived sediments. The sediments are comprised of slightly consolidated gray-hued arkosic, sandy and gravel-sand deposits derived from local Peninsular Ranges batholith granitic bodies (Morton 2003).

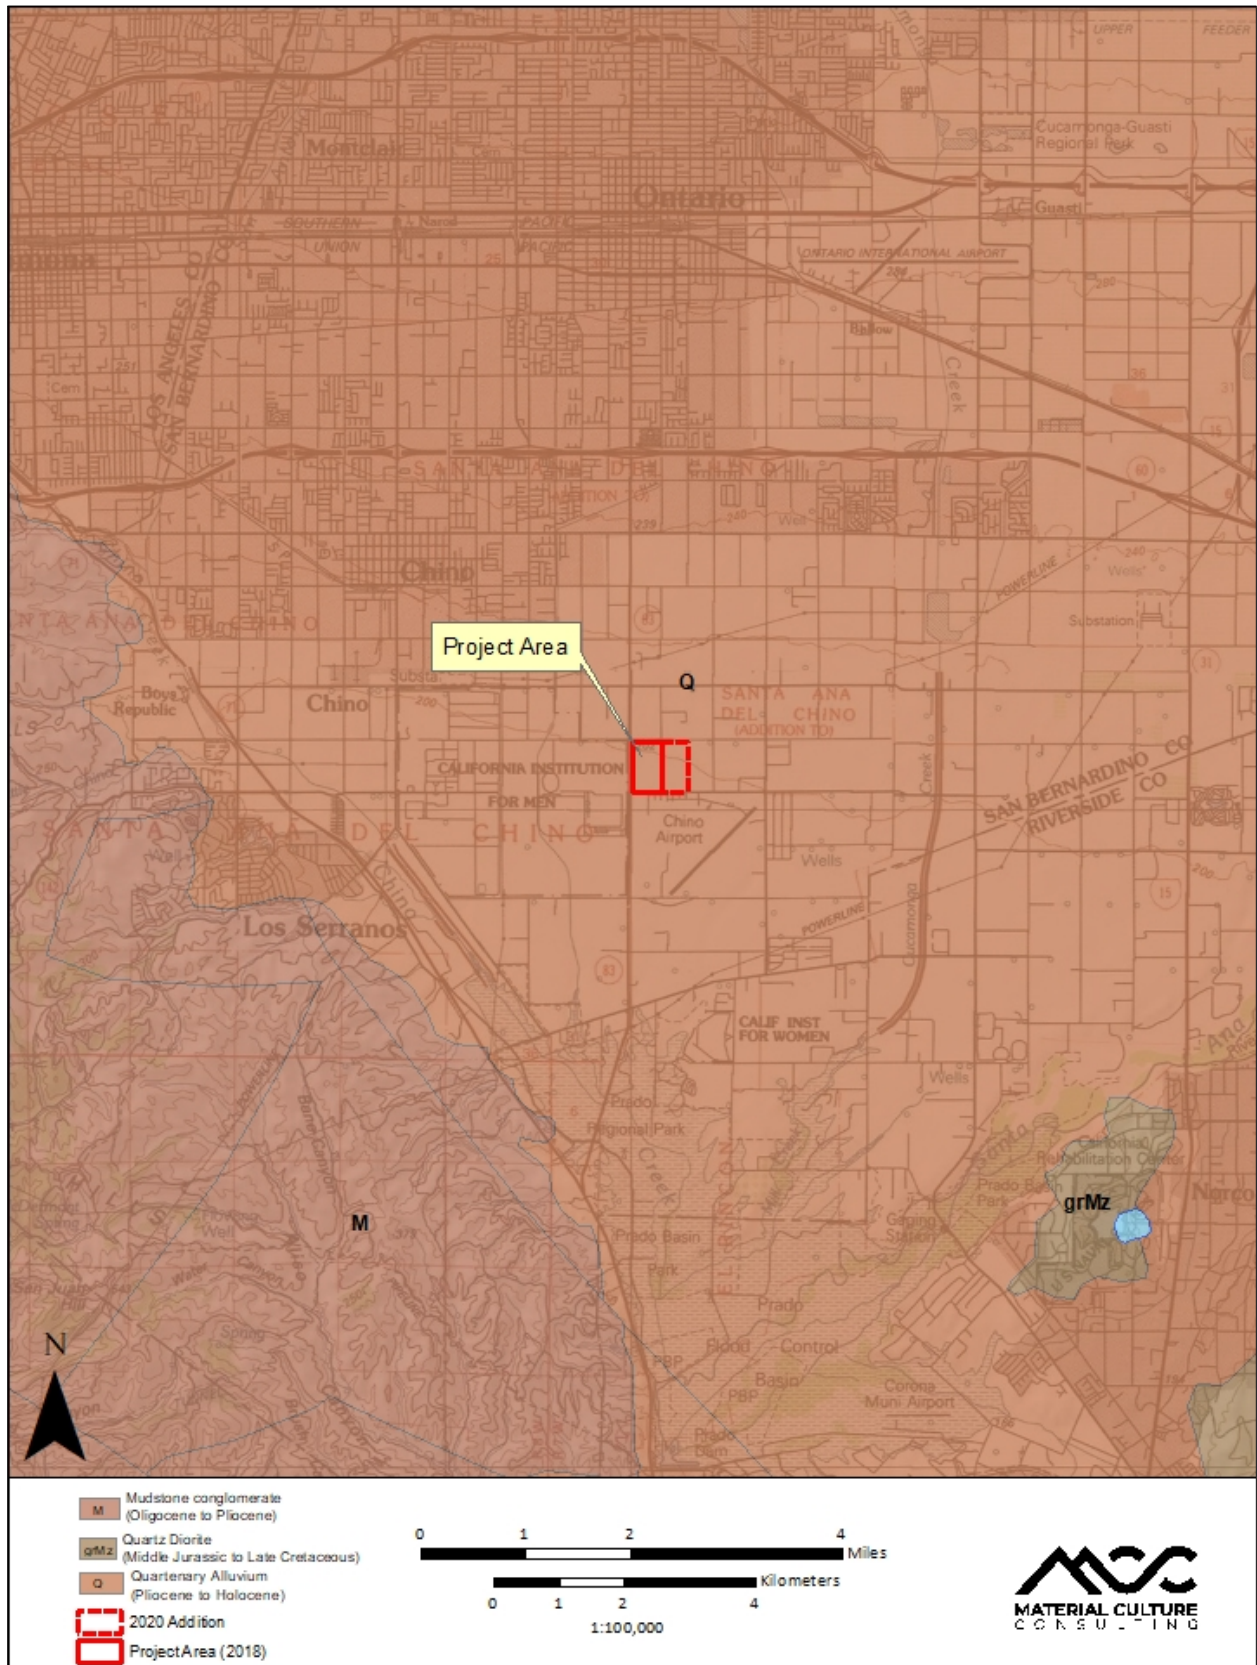

Figure 4. Geological Map of Specific Plan Area (1:100,000; compiled by USGS in open source PDF format)

## PREHISTORIC CONTEXT

Most researchers agree that the earliest occupation for the Ontario area dates to the early Holocene (11,000 to 8,000 years ago). The following discussion of the cultural history of San Bernardino County references the San Dieguito Complex, the Milling Stone Horizon, the Encinitas Tradition, the La Jolla Complex, the Pauma Complex, and the San Luis Rey Complex, since these culture sequences have been used to describe archaeological manifestations in the region. The Late Prehistoric component in the area of San Bernardino County was represented by the Cahuilla, Gabrielino, and Luiseño Indians. Absolute chronological information, where possible, will be incorporated into this discussion to examine the effectiveness of continuing to use these terms interchangeably.

### *The Paleo Indian Period*

The Paleo Indian Period is associated with the terminus of the late Pleistocene (12,000 to 10,000 YBP). The environment during the late Pleistocene was cool and moist, which allowed for glaciation in the mountains and the formation of deep, pluvial lakes in the deserts and basin lands (Moratto 1984). However, by the terminus of the late Pleistocene, the climate became warmer, which caused glaciers to melt, sea levels to rise, greater coastal erosion, large lakes to recede and evaporate, extinction of Pleistocene megafauna, and major vegetation changes (Moratto 1984; Martin 1967, 1973; Fagan 1991). Paleo Indians were likely attracted to multiple habitat types, including mountains, marshlands, estuaries, and lakeshores. These people likely subsisted using a more generalized hunting, gathering, and collecting adaptation, utilizing a variety of resources including birds, mollusks, and both large and small mammals (Erlandson and Colten 1991; Moratto 1984; Moss and Erlandson 1995). The earliest sites known in the area are attributed to the San Dieguito culture, which consists of a hunting culture with flaked stone tool industry (Warren 1967). The material culture related to this time included scrapers, hammer stones, large flaked cores, drills, and choppers, which were used to process food and raw material.

### *Milling Stone Period*

Around 8,000 years ago, subsistence patterns changed, resulting in a material complex consisting of an abundance of milling stones (for grinding food items) with a decrease in the number of chipped stone tools. The material culture from this time period includes large, bifacially worked dart points and grinding stones, handstones and metates. Archaeologists initially designated this period as the "Millingstone Horizon" (Wallace 1955). Later, the Millingstone Horizon was redefined as a cultural tradition named the Encinitas Tradition (Warren 1967) with various regional expressions including Topanga and La Jolla. Use by archaeologists varied as some adopted a generalized Encinitas Tradition without regional variations, while others continued to use Millingstone Horizon, and still others used Middle Holocene (the geologic time period) to indicate this observed pattern (Sutton and Gardner 2010:1-2). Recently, this generalized terminology was criticized by Sutton and Gardner (2010) as suppressing the identification of cultural, spatial, and temporal variation, as well as the movement of peoples throughout space and time. It is these factors that are believed to be critical to an understanding of prehistoric cultural adaptation and change in this portion of southern California (Sutton and Gardner 2010:1-2).

The Encinitas Tradition characteristics include abundant metates and manos, crudely-made core and flake tools, bone tools, shell ornaments, very few projectile points, indicating a subsistence pattern focused on hunting and gathering a variety of floral resources. Faunal remains vary by location but include marine mammals, fish, and shellfish, as well as terrestrial animals, reptiles, and birds (Sutton and Gardner 2010:7). The Encinitas Tradition has been redefined to have four patterns (Sutton and Gardner 2010: 8-25). These include the Topanga Pattern in coastal Los Angeles and Orange counties, the La Jolla Pattern in coastal San Diego County, and the Sayles or Pauma cultures in inland San Diego County extending into western San Bernardino County, where the project is located. At approximately 3,500 years ago, Pauma groups in the general Project vicinity adopted new cultural traits which

transformed the archaeological site characteristics - including mortar and pestle technology. This indicated the development of food storage, largely acorns, which could be processed and saved for the leaner, cooler months of the year.

#### *Late Prehistoric Period*

At approximately 1,500 years before present, bow and arrow technology started to emerge in the archaeological record, which also indicates new settlement patterns and subsistence systems. The local population retained the subsistence methods of the past but incorporated new materials into their day to day existence, as evidenced by the archaeological record. The Palomar Tradition is attributed to this time, and is comprised of larger two patterns: the Peninsular Pattern in the inland areas of the northern Peninsular Ranges (e.g., San Jacinto and Santa Rosa mountains) and the northern Coachella Valley (Sutton 2010), and the San Luis Rey pattern of the project area. Archaeological sites from this time period are characterized by soapstone bowls, arrowhead projectile points, pottery vessels, rock paintings, and evidence of cremation sites. The shift in material culture assemblages is largely attributed to the emergence of Shoshonean (Takic-speaking) people who entered California from the east.

### **ETHNOGRAPHY**

The territory of the Gabrielino at the time of Spanish contact covered much of current-day Los Angeles and Orange Counties and extended into the western part of San Bernardino County. The southern extent of this culture area is bounded by Aliso Creek, the eastern extent is located east of present-day San Bernardino along the Santa Ana River, the northern extent includes the San Fernando Valley, and the western extent includes portions of the Santa Monica Mountains. The Gabrielino also occupied several Channel Islands including Santa Barbara Island, Santa Catalina Island, San Nicholas Island, and San Clemente Island. Because of their access to certain resources, including a steatite source from Santa Catalina Island, this group was among the wealthiest and most populous aboriginal groups in all of southern California. Trade of materials and resources controlled by the Gabrielino extended as far north as the San Joaquin Valley, as far east as the Colorado River, and as far south as Baja California (Johnson 1962; Kroeber 1976; Bean and Smith 1978).

The Gabrielino lived in permanent villages and smaller, resource-gathering camps occupied at various times of the year depending upon the seasonality of the resource. Larger villages were comprised of several families or clans, while smaller, seasonal camps typically housed smaller family units. The coastal area between San Pedro and Topanga Canyon was the location of primary subsistence villages, while secondary sites were located near inland sage stands, oak groves, and pine forests. Permanent villages were located along rivers and streams, as well as in sheltered areas along the coast. As previously mentioned, the Channel Islands were also the locations of relatively large settlements (Kroeber 1976; Bean and Smith 1978).

The Gabrielino tribe carried out food exploitation strategies that utilized local resources ranging from plants to animals; coastal resources were also exploited. Rabbit and deer were hunted and acorns, buckwheat, chia, berries, fruits and many other plants were collected. Artifacts associated with their occupations include a wide array of chipped stone tools including knives and projectile points, wooden tools like digging sticks and bows, and ground stone tools like bedrock and portable mortars, metates and pestles. Local vegetation was used to construct shelters as well as for medicinal purposes. Cooked foods were prepared on hearths (Kroeber 1976; Bean and Smith 1978; McCawley 1996). Acorns were one of the most important food resources utilized by the Gabrielino and other Native American groups across California. The acorns were ground into a fine powder in order to make an acorn mush or gruel. A dietary staple, acorns provided a large number of calories and nutrients. The ability to store and create stockpiles in case of lean times also contributed to the importance of acorns as a vital natural resource. Much of the material evidence available to archaeologists concerning the Gabrielino is a result of tools and technologies related to their subsistence activities.

The social structure of the Gabrielino is little known; however, there appears to have been at least three social classes: 1) the elite, which included the rich, chiefs, and their immediate family; 2) a middle class, which included people of relatively high economic status or long established lineages; and 3) a class of people that included most other individuals in the society. Villages were politically autonomous units comprised of several lineages. During times of the year when certain seasonal resources were available, the village would divide into lineage groups and move out to exploit them, returning to the village between forays (Kroeber 1976; Bean and Smith 1978). Each lineage had its own leader, with the village chief coming from the dominant lineage. Several villages might be allied under a paramount chief. Chiefly positions were of an ascribed status, most often passed to the eldest son. Chiefly duties included providing village cohesion, leading warfare and peace negotiations with other groups, collecting tribute from the village(s) under his jurisdiction, and arbitrating disputes within the village(s). The status of the chief was legitimized by his safekeeping of the sacred bundle, a representation of the link between the material and spiritual realms and the embodiment of power (Kroeber 1976; Bean and Smith 1978). Shamans were leaders in the spirit realm. The duties of the shaman included conducting healing and curing ceremonies, guarding of the sacred bundle, locating lost items, identifying and collecting poisons for arrows, and making rain (Kroeber 1976; Bean and Smith 1978). Marriages were made between individuals of equal social status and, in the case of powerful lineages, marriages were arranged to establish political ties between the lineages (Kroeber 1976; Bean and Smith 1978). Men conducted the majority of the heavy labor, hunting, fishing, and trading with other groups. Women's duties included gathering and preparing plant and animal resources, and making baskets, pots, and clothing (Kroeber 1976; Bean and Smith 1978). The name "Gabrielino" is Spanish in origin and was used in reference to the Native Americans associated with the Mission San Gabriel. It is unknown what these people called themselves before the Spanish arrived, but today they call themselves "Tongva", meaning "people of the earth".

## HISTORICAL SETTING

The "Sacred Expedition" of 1769, led by Spaniard Gaspar de Portola and Franciscan Fray (or Father) Junipero Serra, started the process of colonization in Alta California was meant to begin the permanent settlement of Alta California, beginning in San Diego. Once the first European exploration of California occurred, the region underwent immense change. As early as 1827, Anglo-Americans were migrating into Southern California. In the decades to come, California would be taken by the United States with the close of the Mexican-American War and subsequent events such as the Civil War and California Gold Rush would continue to shape the history of California.

### *Spanish Period (1769 to 1821) to Mexican Period (1821 to 1848)*

The Spanish period began in 1769 with Captain Gaspar de Portolá's land expedition and ended in 1821 with Mexican Independence. During the Spanish Period, the establishment of the Mission San Gabriel Arcángel (1771) was influential throughout the surrounding regions, using the area for cattle grazing. An asistencia was established within the area nearby in Redlands in 1819 and helped facilitate the Mission's control of the surrounding area. However, after control of the area shifted to Mexico, secularization began throughout the area and the missions and their associated ranches began to decline. The Mexican government proceeded to push settlements of Mexican populations from the south by deeding large grants to individuals who promised to employ settlers. One such land grant was the *Rancho Santa Ana del Chino*.

In 1841, Antonio Maria Lugo was granted the rights to what became *Rancho Santa Ana del Chino*. After building an adobe house (now currently the location of Boy's Republic in Chino Hills), Lugo turned over the management of the ranch to his son-in-law, Isaac Williams. For decades, Williams successfully grazed cattle on the 46,000 acres Rancho. Notably, Williams played a significant part of the Battle of Chino, a local skirmish during the Mexican-American War. On September 26 and 27, 1846, the Mexican army sent an advancing contingency to intercept 24 American sympathizers, led by Benjamin D. Wilson, on their way to Los Angeles (Beattie 1942; Martino et al. 2011;

Lech 2014). The adobe house at *Rancho Santa Ana del Chino*, where the sympathizers had been hiding, was set ablaze as a result of multiple attacks. The American group surrendered and, instead of execution, the group was taken to Los Angeles where they remained prisoners of war until they were eventually released (Beattie 1942; Lech 2014).

Figure 5. Map of *Rancho Santa Ana del Chino* (Martino et al. 2011)

#### *American Period (1848 to present)*

The Gold Rush of 1849 would see tremendous influx of Americans and Europeans flooding into Southern California. *Rancho Santa Ana del Chino* became a popular stopover for travelers of the rush (Martino et al. 2011). The passing of the Homestead Act of 1862 continued this increase of settlers within the region, George and William Chaffey were among these early pioneers. In 1881, the Chaffey brothers believed that if the land was properly irrigated, it could be converted to profitable agriculture property. They bought over 6,000 acres of land in 1882 that was arid and covered by patches of scrub brush (City of Ontario 2018a). The Chaffey brothers designed a water system that connected miles of cement pipe from an underground water source to each parcel of land. This land would eventually become the cities of Ontario and Upland. George and William Chaffey derived the name of the city from their native province of Ontario in Canada (Galvin Preservation Associates 2007). The City of Ontario was incorporated in 1891, becoming one of the earliest established towns in San Bernardino County (City of Ontario 2018a and b). By 1903, the city was referred to as a “Model Irrigation Colony” after receiving an award at the World Fair as a “Model Colony” for innovation in water rights and technology, which assisted in attracting settlers to the City (City of Ontario 2018a). Charles Frankish, an early citizen of Ontario, guided and encouraged early development in the city by successfully attracting the Southern Pacific Railway to locate a depot in the center of town on Euclid Avenue, making it an important feature of the City. The establishment of the Southern Pacific Railroad depot transformed Ontario into an agricultural center. Ontario focused primarily on the citrus industry, but also grew walnuts, peaches, and grapes. There was a large gentry class of citrus growers who constructed many grand ornamental Victorian houses throughout the city (City of Ontario 2018b).

**Figure 6.** Citrus grove in North Ontario area, circa 1905 (Galvin Preservation Associates 2007)

Dairies began to be established in the region, known as Chino Valley, during the late 1890s and continued to dominate the area throughout the 20<sup>th</sup> century. During the 1920s and 1930s, middle European dairymen began settling in the area (Galvin and Associates 2004). In 1967, the County of San Bernardino designated 14,000 acres of land in Chino Valley as an agricultural preserve protected by the Williamson Act and the Land Conservation Act. By the 1980s, the area had more cows per acre and higher milk yields than anywhere else in the world (Galvin and Associates 2004). By the 1990s, increased demand for housing and high dairy operation costs pressured farmers in the San Bernardino Agricultural Preserve to consider relocating their dairies and annexing their land to adjoining cities. Anticipating the expiration of the Williamson Act, the area was divided, and portions were incorporated into the Cities of Ontario, Chino, and Chino Hills. The City of Ontario annexed 8,200 acres of the former San Bernardino Agriculture Preserve in 1999 and called the area the New Model Colony. The Local Agency Formation Commission (LAFCO) required the City to prepare a General Plan Amendment and EIR prior to annexation. In 1996, the City of Ontario began planning for annexation and adopted the New Model Colony General Plan Amendment and EIR in 1998 (Galvin and Associates 2004).

## METHODS

### **CALIFORNIA HISTORIC RESOURCES INVENTORY SYSTEM AND CULTURAL BACKGROUND RESEARCH**

On July 25, 2018, Allison Hill, M.A., RPA, conducted a search of the California Historical Resource Information System (CHRIS) at the South Central Coast Information Center (SCCIC), located at the California State University, Fullerton, Orange County. The record search covered the initial 84.1-acre Specific Plan Area. In April 2020, MCC staff compiled previous CHRIS research of previous nearby projects that overlap the supplemental 80.83-acre Specific Plan Area. These searches covered any previously recorded cultural resources and investigations within a 1-mile radius of the entire Specific Plan Area. The CHRIS search also included a review of the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Inventory of Historic Resources.

### **NATIVE AMERICAN OUTREACH AND BACKGROUND RESEARCH**

MCC requested a search of the Sacred Lands File from the Native American Heritage Commission (NAHC) on July 24, 2018. The Commission responded on July 25, 2018, stating that there are no known sacred lands within a 1-mile radius of the Specific Plan Area. The NAHC requested that 20 Native American tribes or individuals be contacted for further information regarding the general vicinity. MCC subsequently sent letters on August 1, 2018 to the 20 Native American contacts, requesting any information related to cultural resources or heritage sites within or adjacent to the Specific Plan Area. Additional attempts at contact by letter, email, or phone call were made on August 10, 22, and 23, 2018. These efforts represent our due diligence in information, rather than formal consultation with the Tribes. The Lead Agency will be responsible for conducting consultation as per Assembly Bill 52 or Senate Bill 18, as applicable to the Specific Plan and/or Projects within the Specific Plan Area.

### **PALEONTOLOGICAL RECORDS SEARCH**

The literature review included an examination of geologic maps and a review of relevant geological and paleontological literature to determine which geologic units are present within the Specific Plan Area and whether fossils have been recovered from those geologic units elsewhere in the region. As geologic units may extend over large geographic areas and contain similar lithologies and fossils, the literature review includes areas well beyond the current study area. The results of this literature review include an overview of the geology of the region and a discussion of the paleontological sensitivity (or potential) of the geologic units within the Specific Plan Area. A search for paleontological records was completed by staff of the Natural History Museum of Los Angeles County (LACM) in Los Angeles on August 2, 2018. The record search included a one-mile radius around the Specific Plan Area, as well as the Specific Plan Area itself, and identified any vertebrate localities in the museum's records that exist near the study area in the same or similar deposits.

### **CULTURAL AND PALEONTOLOGICAL FIELD SURVEY**

The purpose of survey is to verify the exact location of each identified cultural or paleontological resource, the condition or integrity of the resource, and identify areas of cultural or paleontological resource sensitivity. Allison Hill, MCC Archaeologist and cross-trained Paleontologist, conducted the survey of the initial 84.1-acre Specific Plan Area on July 27, 2018. The survey consisted of walking in parallel transects spaced at approximately 15-meter intervals over the parcels, while closely inspecting the ground surface. All undeveloped areas were examined for artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools or fire-affected rock), soil discoloration that might indicate the presence of a cultural midden, soil depressions and features indicative of the former presence of structures or buildings (e.g., postholes, foundations), or historic-era debris (e.g., metal, glass, ceramics). The type of sediment and land formations were also noted in order to assess the potential for paleontological sensitivity. Existing ground disturbances (e.g. cutbanks, ditches, animal burrows, etc.) were also visually inspected to get a sense of subsurface deposits and soil horizons. Representative photographs were taken of the entire study area. The supplemental 80.83-acre Specific Plan Area was determined to not need a

supplemental cultural and paleontological survey at this time.

## RESULTS

### CALIFORNIA HISTORIC RESOURCES INVENTORY SYSTEM AND CULTURAL BACKGROUND RESEARCH

The CHRIS records search identified a total of 23 cultural resources investigation that have been previously conducted within a 1-mile mile radius of the Specific Plan Area. No prior investigations of the Specific Plan Area were identified, yet seven studies took place on lands adjacent to the Specific Plan Area (see Table 1).

**Table 1.** Previous Conducted Cultural Resources Studies within 1-mile of Specific Plan Area

CHRIS Report Number	Authors	Year	Title of Study	Affiliation	Distance from Project Area
SB-00395	Hearn, Joseph E., and Ruth D. Simpson	1976	Archaeological-Historical Resources Assessment of Proposed Chino Maintenance Yard Construction	San Bernardino County Museum Association	Adjacent to Project Area

The records search identified six previously recorded cultural resources within 1-mile of the Specific Plan Area. All of these resources are historic, with no prehistoric resources previously identified within the record search buffer. No resources have been recorded within the Specific Plan Area (see Table 2).

**Table 2.** Previously Recorded Cultural Resources within 1-mile of Specific Plan Area

Primary Number	Trinomial	Age	Attributes	NRHP/CRHR	Distance from Project Area
P-36-024903	N/A	Historic	HP11-Engineering structure	unknown	Within 1 mile

**Table 3.** Previously Recorded Cultural Resources within 1-mile of Specific Plan Area

Primary Number	Trinomial	Age	Attributes	NRHP/CRHR	Distance from Project Area
P-36-025440	N/A	Historic	HP11-Engineering structure	unknown	Within 1 mile
P-36-026724	N/A	Historic	N/A	unknown	Within 1 mile
P-36-026725	N/A	Historic	HP33-Farm/ranch	unknown	Within 1 mile
P-36-026882	N/A	Historic	HP20-Canal/aqueduct	unknown	Within 1 mile
P-36-026925	N/A	Historic	AH04-Privies/dumps/trash scatters	unknown	Within 1 mile

The complete results of the CHRIS resources records searches are included as Confidential Appendix B of this report. Several additional sources were consulted for this Project as well (Table 3).

**Table 4.** Additional Sources Consulted

Source	Results
National Register of Historic Places (1979-2002 & supplements)	Negative
Historical United States Geological Survey topographic maps (USGS 2012)	Area consistently used for agricultural activities
Historical United States Department of Agriculture aerial photos	Area consistently used for agricultural activities
California Register of Historical Resources (1992-2010)	Negative
California Inventory of Historic Resources (1976-2010)	Negative
California Historical Landmarks (1995 & supplements to 2010)	Negative
California Points of Historical Interest (1992 to 2010)	Negative
Local Historical Register Listings	Negative
Bureau of Land Management General Land Office Records (BLM GO 2008)	Negative

A review of historic-era aerial photographs and maps show the initial Specific Plan Area has been consistently used for agricultural and dairy activities since the 1930s, with the supplemental Specific Plan Area utilized for agricultural by the 1950s (Figures 8-10). No structures were observed within the Specific Plan Area until the early 1980s, thus no existing buildings are considered historic.

**Figure 8.** Agricultural activities within Specific Plan Areas (depicted on 1938 aerial photograph)

**Figure 9.** Agricultural activities within Specific Plan Areas (as depicted on 1959 aerial photograph)

**Figure 10.** Agricultural and dairy activities within the Specific Plan Areas  
(as depicted on 1994 aerial photograph)

#### **NATIVE AMERICAN OUTREACH AND BACKGROUND RESEARCH**

As a result of the effort to contact the 20 Native American Tribes or individuals identified by the NAHC, MCC received ten responses. These responses came in the form of letters, emails, and phone calls. Below is a summary of the responses provided by Native American Tribes.

On August 3, 2018, MCC received an email from Sarah Bliss, Cultural Resources Manager for Twenty-Nine Palms Band of Mission Indians (TNPBMI). Ms. Bliss stated that TNPBMI was unaware of any additional cultural resources or any Tribal Cultural Resources within the Project area. TNPBMI requested any updates or changes to the Project be brought to their attention. On August 8, 2018, MCC received an email from Jessica Mauck, Cultural Resources Analyst for San Manuel Band of Mission Indians (SMBMI). Ms. Mauck stated the proposed Project Area is located just outside of Serrano ancestral territory and SMBMI would not request consulting party status or elect to participate with further development of the Project. On August 9, 2018, MCC received an email from Lacy Padilla, Archaeological Technician for Agua Caliente Band of Cahuilla Indians (ACBCI). Ms. Padilla stated the proposed Project is not located within ACBCI's Traditional Use Area and they defer to other tribes in the area.

On August 10, 2018, Robert Robinson, Chairperson and Tribal Historic Preservation Office (THPO) for Kern Valley Indian Community (KVIC), responded to MCC's outreach efforts. Mr. Robinson stated that the Project Area is outside KVIC's traditional tribal territory. KVIC recommended MCC seek comments from tribes in the area. During a phone call on August 10, 2018, Mark Cochrane, chairperson for Serrano Nation of Mission Indians, stated that the Tribe had no comment but requested to be updated should any new discoveries occur during the Project. On August 16, 2018, MCC received an email from Travis Armstrong, Tribal Historic Preservation Office for Morongo Band of Mission Indians (MBMI). Mr. Armstrong stated that the Project is outside of MBMI's ancestral territory

and/or areas of tribal affiliation or interest. MBMI requested should no contact be made with other tribal governments, to follow their Standard Development Conditions.

On August 22, 2018, follow up phone calls resulted in three additional responses. Joseph Ontiveros, head of the Cultural Resource Department for the Soboba Band of Luiseno Indians, acknowledged receipt of the letter request sent on August 1, 2018 and stated the Tribe would provide a response by August 24, 2018. To date, MCC has not received a response. Andrew Salas, Chairperson for the Gabrieleno Band of Mission Indians-Kizh Nation, indicated that the project is located in a culturally sensitive area that is part of the Gabrieleno Band of Mission Indians-Kizh Nation ancestral territory. Based on traditional and historical information, Mr. Salas recommends both archaeological and Tribal monitoring for the project. In addition, Mr. Salas requested that MCC include in this report that: the Gabrieleno Band of Mission Indians-Kizh Nation would like to be the primary tribe to consult on the project because the project is located in their ancestral territory; that the Tribe wishes to be in contact with the lead agency for consultation; and that the Tribe would like to draft mitigation language for tribal cultural resources as Mr. Salas anticipates encountering prehistoric and historic cultural resources. On August 23, 2018, Brian Etsitty, acting THPO for the Colorado River Indian Tribes of the Colorado River Indian Reservation, indicated the tribe had no comment regarding the project.

On August 30, 2018 MCC received a response from Anthony Morales, Chairperson for the Gabrieleno/Tongva San Gabriel Band of Mission Indians. Mr. Morales indicated that the project is located within proximity to multiple areas that are culturally significant to the Tribe. He explained that Euclid Ave, the Pomona Freeway, and the Chino Valley freeway are considered important historic and prehistoric tribal routes located within proximity to important water sources like the Santa Ana River and Prado Dam. Based on this traditional and historical knowledge, Mr. Morales recommends archaeological and Tribal monitoring for the project.

As of August 30, 2018, MCC has not received any additional responses from the remaining NAHC-listed groups or individuals we contacted for information. Should MCC receive additional responses once the final report is submitted, the information will be passed on to EPD Solutions, Inc. to be added to the report as an addendum. NAHC and Native American correspondence materials, including our communication attempts, are provided as Appendix C.

#### **PALEONTOLOGICAL RECORDS SEARCH**

The locality search at LACM did not yield any fossil localities within 1 mile of the Project Area and no fossil localities within the Project Area (See Appendix D) (McLeod 2018). The geological units mapped within the entirety of the Project Area is comprised of younger Quaternary alluvium (McLeod 2018). While these deposits typically do not contain significant vertebrate fossils within the uppermost layers, it is likely they are underlain in this area by older Quaternary deposits at relatively shallow depth. The closest vertebrate fossil locality from similar sediments is LACM 7811, which is located due east of the Project Area, and west of Mira Loma, California. This locality produced a fossil specimen of whipsnake (*Maticophis*) at a depth of nine to eleven ft below surface (McLeod 2018). The next closest vertebrate fossil locality from Older Quaternary deposits is LACM 1207, located south-southeast of the Specific Plan Area on the northwestern side of Corona, California. This locality produced fossil specimen of deer (*Odocoileus*) (McLeod 2018). Additional literature was consulted, including The University of California Museum of Paleontology (UCMP)'s Miocene Mammal Mapping Project (MioMap), with no fossil localities within the area of the Specific Plan (Carrasco et al. 2005).

#### **CULTURAL AND PALEONTOLOGICAL FIELD SURVEY RESULTS**

During the course of fieldwork, survey conditions were generally poor. The majority of the initial Specific Plan Area (68.6 acres) was inaccessible to intensive level survey, due to agricultural and dairy activities (Figure 11). The areas that were surveyed intensively (15.5 acres) had ground visibility ranging from fair (50%) to good (approximately 75%) with most of the landscaping a combination of manure and annual grasses. However, the initial Specific Plan

Area was surveyed opportunistically, from multiple viewpoints within and around the perimeter of the proposed area. As previously stated, the supplemental 80.83-acre Specific Plan Area to the east was determined as not requiring additional survey efforts at this time. The entire Specific Plan Area has been repeatedly and significantly altered and disturbed by over 80 years of agricultural/dairy operations. Modern refuse was observed throughout the Specific Plan Area. The visual observation of sediment included tan fine loam with small pebble and cobble inclusions that became muddy with increase organic content when wet and with cattle presence. This is consistent with the mapping of younger Quaternary alluvium deposits. No cultural or paleontological resources were observed during the survey. Representative photos of the area are found below (Figures 12-17).

**Figure 15.** Overview of initial Specific Plan Area from southwest corner (View Northeast)

**Figure 16.** Representative photo of sediment throughout initial Specific Plan Area (View North)

**Figure 17.** Overview of initial Specific Plan Area (View Northeast)

## CONCLUSIONS AND RECOMMENDATIONS

### CULTURAL RESOURCES CONCLUSIONS

The Phase I cultural resource assessment of the Specific Plan Area included a CHRIS records search, NAHC outreach, background research, a field pedestrian survey and site visit. The records search results indicated no previously recorded resources within the Specific Plan Area and six historic-era resources within a 1-mile radius. During the field survey, no cultural resources were encountered.

### CULTURAL RESOURCES RECOMMENDATIONS

Based on the results of the cultural resources search and survey, the proposed Specific Plan Area is considered to have a low sensitivity for presence of prehistoric or historical archaeological deposits or features. MCC recommends **No Mitigation is Needed**. While we do not recommend additional mitigation, MCC does recommend setting a plan in place to expediently address inadvertent discoveries and human remains (as described below), should these be encountered during construction activities.

### INADVERTENT DISCOVERIES

Despite actions taken to ensure that all cultural resources are located prior to construction, including record searches and field surveying, there still remains the possibility that undiscovered, buried archaeological resources might be encountered during construction. In the event that these resources are inadvertently discovered during ground-disturbing activities, work must be halted within 50 feet of the find until it can be evaluated by a qualified archaeologist. Construction activities could continue in other areas. If the discovery proves to be significant, additional work, such as data recovery excavation or fossil recovery, may be warranted and would be discussed in consultation with the appropriate regulatory agency(ies).

### HUMAN REMAINS

Procedures of conduct following the discovery of human remains on non-federal lands have been mandated by California Health and Safety Code §7050.5, PRC §5097.98 and the California Code of Regulations (CCR) §15064.5(e). According to the provisions in CEQA, should human remains be encountered, all work in the immediate vicinity of the burial must cease, and any necessary steps to insure the integrity of the immediate area must be taken. The Riverside County Coroner will be immediately notified. The Coroner must then determine whether the remains are Native American. If the Coroner determines the remains are Native American, the Coroner has 24 hours to notify the NAHC, who will, in turn, notify the person they identify as the most likely descendent (MLD) of any human remains. Further actions will be determined, in part, by the desires of the MLD. The MLD has 48 hours to make recommendations regarding the disposition of the remains following notification from the NAHC of the discovery. If the MLD does not make recommendations within 48 hours, the owner shall, with appropriate dignity, reinter the remains in an area of the property secure from further disturbance. Alternatively, if the owner does not accept the MLD's recommendations, the owner or the descendent may request mediation by the NAHC.

### PALEONTOLOGICAL RESOURCES CONCLUSIONS

The Phase I paleontological resource assessment of the Specific Plan Area included a locality records search, literature review, and a field pedestrian survey. No significant paleontological resources were identified within the direct Specific Plan Area during the locality search or the field survey. Geological units mapped within the area are comprised of younger Quaternary Alluvium, derived from San Bernardino Mountains to the north. While these deposits typically do not contain significant vertebrate fossils within the uppermost layers, it is likely there are underlying sediments of older Quaternary deposits at unknown depths. There are nearby localities from similar sedimentary deposits found within the proposed Specific Plan Area. Therefore, the area is considered low to moderate sensitivity for paleontological resources.

### **PALEONTOLOGICAL RESOURCES RECOMMENDATIONS**

Based on the above findings, MCC recommends that for each Project proposed within the Specific Plan, review of grading and infrastructure plans take place prior as part of the environmental review process. Periodic paleontological spot checks are recommended for any excavation exceeding a depth of ten feet below surface to determine if older, paleontologically sensitive sediments are present. If present, full time monitoring should be implemented. Shallow excavations do not require monitoring.

In the case of deep excavations, prior to the start of construction, a paleontological resources monitoring plan (PRMP) should be prepared and implemented. It is recommended the Project's PRMP implement the following procedures:

- A trained and qualified paleontological monitor should perform spot-check and/or monitoring of any excavations on the Project that have the potential to impact paleontological resources in undisturbed native sediments below ten feet in depth. The monitor will have the ability to redirect construction activities to ensure avoidance of adverse impacts to paleontological resources.
- The Project paleontologist may re-evaluate the necessity for paleontological monitoring after examination of the affected sediments during excavation, with approval from Lead Agency and Client representatives.
- Any potentially significant fossils observed shall be collected and recorded in conjunction with best management practices and SVP professional standards.
- Any fossils recovered during mitigation should be deposited in an accredited and permanent scientific institution for the benefit of current and future generations.
- A report documenting the results of the monitoring, including any salvage activities and the significance of any fossils, will be prepared and submitted to the appropriate personnel.

## Appendix A: Qualifications

Tria Belcourt, M.A., RPA  
President and Principal Environmental Specialist

Tria Belcourt oversees and is responsible for the entire work process at Material Culture Consulting. She is responsible for planning, supervising, and overseeing field projects, including responsibility for the professional quality of evaluations and recommendations. Tria has primary accountability for the technical completeness and competence of work conducted by her staff. She is responsible for development of work plans and/or research designs, for performance of crew chiefs, for selection standards and limitations on work assignments of crew members, for analysis and interpretation of field data, for integration of fieldwork results into comparative regional perspectives, and for preparation of reports. Tria's advanced academic training and more than sixteen years of professional archaeological experience has included rigorous training and application of anthropological and archaeological theory and methods, and in recording, collecting, handling, analyzing, evaluating, and reporting cultural property data, relative to the type and scope of work proposed.

Tria has been an archaeological project manager and principal investigator for over nine years, leading and managing several complex compliance projects throughout the State of California and in Southern Nevada, which have involved each step of cultural resource compliance and management. Prior to this, she spent six years as a field technician and crew chief on projects throughout California and the Southeastern United States. Her experience includes conducting background research, field survey, resource testing and formal NRHP/CRHR evaluation, data recovery plan development and implementation. She has prepared hundreds of technical reports for all of the above to state and federal standards, including following BLM standards for GIS spatial data management and technical reporting – ranging from simple clearance forms, to letter reports, to extensive data recovery reports. She was the lead preparer of the Fort Irwin Integrated Cultural Resource Management Plan (2009-2013) and has also prepared several cultural resource management plans for state regulated projects. She has overseen and conducted archaeological monitoring and management of unanticipated discovery of resources, including Native American human remains on federal lands (and repatriation of the remains), and reported the results and outcomes of cultural resource monitoring efforts in lengthy technical reports. Finally, Tria regularly provides third party and QA/QC review of cultural resource technical documents, due to her keen understanding of state and federal regulations and laws governing the management of cultural resources throughout the state of California.

#### EDUCATION

2014	Graduate Certificate in Environmental Management of Military Lands, Colorado State University
2010	Professional Certification in CEQA/NEPA, ICF International Corporation
2009	M.A. in Anthropology, University of Florida Gainesville, Florida Professional Certification in GIS
2006	B.A. in Anthropology, Magna Cum Laude, University of California, Los Angeles, California

#### AFFILIATIONS/CERTIFICATIONS/TRAINING

- Society for Historical Archaeology (SHA)
- Society for California Archaeology (SCA)

#### UTILITY SECTOR EXPERIENCE

***SCE Transmission Line Rating and Remediation Project (TLRR) – Control Silver Peak 66kV Subtransmission, Kern and Los Angeles Counties, California. Cultural Resource Inventory Assessment (October 2016- present).*** Ms. Belcourt provides project management and leadership for this SCE project, as the Principal Investigator for Archaeology, under contract to Arcadis (2016-2018) and Environmental Intelligence (2018-present). MCC is tasked with all aspects of cultural resources assessments including records searches, surveys, maintaining and generating GIS data according to SCE Schema, obtaining federal and state permits for cultural resources studies, and technical reporting.

***SCE Transmission Line Rating and Remediation Project (TLRR) - Kern River 66kV, Kern and Los Angeles Counties, California. Cultural Resource Inventory Assessment (October 2016- present).*** Ms. Belcourt provides project management and leadership for this SCE project, as the Principal Investigator for Archaeology, under contract to Arcadis (2016-present). MCC is tasked with all aspects of cultural resources assessments including records searches, surveys, maintaining and generating GIS data according to SCE Schema, obtaining federal and state permits for cultural resources studies, and technical reporting.

***SCE Transmission Line Rating and Remediation Project (TLRR) – Eldorado Pisgah Lugo 220kV Subtransmission, Kern and Los Angeles Counties, California. Cultural Resource Inventory Assessment (October 2016- present).*** Ms. Belcourt provides project management and leadership for this SCE project, as the Principal Investigator for Archaeology, under contract to Arcadis (2016-present). MCC is tasked with all aspects of cultural resources assessments including records searches, surveys, maintaining and generating GIS data according to SCE Schema, obtaining federal and state permits for cultural resources studies, and technical reporting.

***SCE Transmission Line Rating and Remediation Project (TLRR) – Control Haiwee 115kV Subtransmission, Kern and Los Angeles Counties, California. Cultural Resource Inventory Assessment (April 2017- present).*** Ms. Belcourt provides project management and leadership for this SCE project, as the Principal Investigator for Archaeology, under contract to Arcadis (2016-2018) and to SWCA (2018-present). MCC is tasked with all aspects of cultural resources assessments including records searches, surveys, maintaining and generating GIS data according to SCE Schema, obtaining federal and state permits for cultural resources studies, and technical reporting.

***SCE Transmission Line Rating and Remediation Project (TLRR) – Ivanpah Coolwater Kramer Inyokern 115kV Subtransmission, Kern and Los Angeles Counties, California. Cultural Resource Inventory Assessment (April 2017- present).*** Ms. Belcourt provides project management and leadership for this SCE project, as the Principal Investigator for Archaeology, under contract to Arcadis (2016-2018) and to SWCA (2018-present). MCC is tasked with all aspects of cultural resources assessments including records searches, surveys, maintaining and generating GIS data according to SCE Schema, obtaining federal and state permits for cultural resources studies, and technical reporting.

***Pacific Gas and Electric Company (PG&E), NERC Alert Program – Archaeological Principal Investigator; throughout California; 2015 – Present.*** Belcourt provides oversight of all task orders and project management of on-call task orders involving cultural resource desktop reviews, records searches and field reviews for the PG&E NERC Alert program: tracking and reporting efforts, maintaining project schedule, and timely submittal of data to prime contractor (Arcadis).

***Southern California Edison (SCE), On-Call and Emergency Projects – Archaeological Principal Investigator and Project Manager; throughout California, 2013 – Present.*** Belcourt has provided oversight of over 200 task orders for on-call and emergency projects to date, involving cultural resource desktop reviews, records searches and field reviews for deteriorated poles, system upgrades, initial studies to support capital projects, and monitoring support to replace facilities due to natural disasters. This high-volume program includes preparing and submitting budgets, managing support staff and overseeing work, tracking and reporting efforts, maintaining project schedules, and preparing technical reports and GIS datasets for submittal to prime contractor (SWCA).

***Southern California Edison (SCE), Large Capital Projects – Archaeological Principal Investigator and Project Manager; throughout California, 2014 – Present.*** Belcourt has provided oversight of over 20 task orders for major projects to date, involving cultural resources for this contract with SWCA, Environmental Intelligence and ICF. This includes preparing and submitting budgets, managing support staff and overseeing work, tracking and reporting efforts, maintaining project schedule, and preparing technical reports and GIS datasets for submittal to prime contractors.

***Southern California Edison (SCE), Small Capital Projects – Archaeological Principal Investigator and Project Manager; throughout California, 2014 – Present.*** Belcourt provides oversight of all task orders and project management of task orders involving cultural resources for this contract with Environmental Intelligence and ICF. This includes preparing and submitting budgets, managing support staff and overseeing work, tracking and reporting efforts, maintaining project schedule, and preparing technical reports and GIS datasets for submittal to prime contractors.

***Southern California Edison (SCE), Coolwater Lugo Transmission Project — Environmental Project Manager; San Bernardino County, California; 2014 – 2015.*** Belcourt provided oversight of all project management on CWLTP: tracking and reporting efforts of subconsultants (Pacific Legacy, Paleo Solutions and Urbana Preservation and Planning), maintaining project schedule and timely submittal of project deliverables to agency reviewers. Served as communication facilitator between SCE and BLM/CPUC agency reviewers. Provided final review of the Cultural Resources Technical Report (which included over 1,000 cultural resources) and the Historic Built Environment Report - prior to draft submittal to BLM.

***SCE, Eldorado Ivanpah Transmission Project – In-house Consultant for Archaeology; San Bernardino County, California and Clark County, Nevada; 2010-2012.*** Belcourt provided complex regulatory oversight and project management regarding cultural and paleontological resource management. She developed compliance training to inform and guide construction activities and major capital project teams. She also developed and implemented internal cultural resource management programs based on project mitigation measures. Tria coordinated with BLM archaeologists on discovery and management of previously unknown cultural resources identified during construction. She provided environmental analyses, technical reports, and clearance documentation for over 20 project modifications during construction without delay to project. Developed the cultural resources geodatabase for EITP and coordinated regularly with the project GIS team.

***Silver State South Substation, In-house Consultant for Archaeology; Southern California Edison, Clark County, NV; 2010-2012.***

Provided regulatory oversight and project management regarding cultural and paleontological resource management during project licensing and scoping. Identified potential impacts to cultural and paleontological resources, developing appropriate mitigation measures in preparation for and projecting alternative conclusions.

***Tehachapi Renewable Transmission Project, Multiple Roles; Southern California Edison, Segments 1-3 and Segments 6-11, Kern, Los Angeles and Orange County, CA; 2009 - Present.***

Tria provided service to this project over seven years in multiple roles – archaeological field monitor, project coordinator, in-house consultant at SCE, and principal investigator. She provided regulatory oversight and project management regarding cultural and paleontological resource management for all segments of TRTP. Developed and implemented internal cultural resource management programs based on the mitigation measures in the Final Environmental Impact Report/Environmental Impact Statement (FEIR/EIS) for TRTP, and for the existing Special Use Permits and Record of Decision for TRTP, issued by the Angeles National Forest (ANF). Oversaw preparation of the Historic Properties Treatment Plans, fieldwork and technical report preparation for two large-scale Phase III Data Recovery excavations on Angeles National Forest. Coordinated with ANF archaeologists on discovery and management of previously unknown cultural resources identified during construction. Provided cultural resources analyses and clearance documentation, including technical reports, for over 100 project modifications during construction without delay to project. Finally, Tria was responsible for maintaining the geospatial data for the project within the SCE cultural resources geodatabase TRTP and coordinated with the project GIS team.

***Desert Tortoise Habitat Conservation Plan Area, Principal Investigator; Cadiz Inc., San Bernardino County, CA; 2013.***

Oversaw records search to identify the extent of previous cultural resources surveys and all previously recorded prehistoric and historic resources within the 7,500-acre Desert Tortoise Habitat Conservation Plan (HCP) area (Project Area) located on lands administered by the BLM Needles Field Office in unincorporated San Bernardino County, California.

## **SOLAR SECTOR EXPERIENCE**

***Ecoplexus California Correctional Institution Solar Project, Tehachapi, Kern County, California. Cultural and Paleontological Assessments (April 2018 – present).***

Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, coordinated AB52 consultation between the State of California and local tribes, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus Ironwood State Prison and Chuckawalla Valley State Prison Solar Project, City of Blythe, Riverside County.***

***Cultural and Paleontological Assessments (June 2018 – present).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, coordinated AB52 consultation between the State of California and local tribes, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus California State Prison Centinela Solar Project, City of Imperial, Imperial County, California. Cultural and Paleontological Assessments (August 2017 – April 2018).***

Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, coordinated AB52 consultation between the State of California and local tribes, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus Calipatria State Prison Solar Project, City of Calipatria, Imperial County, California. Cultural and Paleontological Assessments (August 2017 – April 2018).***

Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, coordinated AB52 consultation between the State of California and local tribes, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus RJ Donovan State Prison Solar Project, San Diego, San Diego County, California. Cultural and Paleontological Assessments (March 2018 – April 2018).***

Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus Salinas Valley State Prison Solar Project, City of Soledad, Monterey County, California. Cultural and Paleontological Assessments (March 2018 – April 2018).***

Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus Correctional Training Facility Soledad Project, City of Soledad, Monterey County, California. Cultural and Paleontological Assessments (March 2018 – April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***SDG&E Cameron Substation Photovoltaic Project, San Diego, San Diego County, California. Cultural and Paleontological Assessments (September 2017 – present).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, facilitated Native American consultation between County of San Diego and local tribes, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Beard Solar Project, Dustin Acres, Kern County, California. Cultural and Paleontological Assessments (March 2018- April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Broadman Solar Project, Livermore, Alameda County, California. Cultural and Paleontological Assessments (February 2018- March 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Nachtigall Solar Project, Wasco, Kern County, California. Cultural and Paleontological Assessments (March 2018-April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Rocha Solar Project, Fuller Acres, Kern County, California. Cultural and Paleontological Assessments (March 2018-April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Shafter Solar Project, City of Shafter, Kern County, California. Cultural and Paleontological Assessments (March 2018-present).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Anderson Twisselman Solar Project, Lost Hills, Kern County, California. Cultural and Paleontological Assessments (March 2018-April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Weedpatch Solar Project, Kern County, California. Cultural and Paleontological Assessments (March 2018-present).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

Jennifer Kelly, M.Sc.  
Paleontological Principal Investigator and Project  
Manager

---

Jennifer Kelly has experience in all aspects of paleontology. She has extensive experience with monitoring, salvage, fieldwork, project management, and report writing, as well as volunteer experience from the La Brea Tar Pits/Page Museum and the Cooper Center of Orange County (Paleontology department) and field experience as a Staff Geologist for Leighton Geotechnical. Her expertise is Geology, and she has her M.S. in Geological Sciences, emphasis in Geochemistry.

Jennifer has taught lab courses in paleontology and general geology, and also assisted with field mapping classes. Jennifer is HAZWOPER 40-hour certified and a registered Orange County paleontologist. She has authored and co-authored more than 100 paleontological compliance documents, including PRMPs, EIR, EIS, PEA, treatment plans, final monitoring reports, survey reports, and other compliance documents, in compliance with NEPA, CEQA, Caltrans and city and county laws, ordinances, regulations, and statutes.

#### Education

2012 M.Sc. in Geology, California State University, Long Beach, California  
2005 B.S., Geology (preliminary work for entry to M.S. Geology Program), California State University, Long Beach  
2004 B.A., Theater Arts, California State University, Long Beach

#### Certifications and Training

- 40 Hour Certification for HAZWOPER training under 29 CFR 1910.120, CA (2013 – 2014)
- Orange County Certified Paleontologist
- San Diego County Certified Paleontologist

#### Recent Professional Experience in California

***Paleontological Principal Investigator and Project Manager, Harvill Industrial Project, City of Jurupa Valley, Riverside County, California (2017-present).*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation for this project, and prepared the Paleontological Resources Impact Mitigation Plan (PRIMP). Kelly also oversees the paleontological monitoring program for this Project. This project is ongoing and is scheduled to be complete in 2020.

***Paleontological Principal Investigator and Project Manager, Rider Commerce Center Project, Unincorporated Riverside County, California (2018-present).*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation for this project, and prepared the Paleontological Resources Impact Mitigation Plan (PRIMP). Kelly also oversees the paleontological monitoring program for this Project. This project is ongoing and is scheduled to be complete in 2020.

***Paleontological Principal Investigator and Project Manager, Ontario Ranch Logistic Center, City of Ontario, County of San Bernardino, California (2018-present)*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation for this project, and authored the PRIMP for this project. Kelly also oversees the paleontological monitoring program for this Project. This project is ongoing and is scheduled to be complete in 2021.

***Paleontological Principal Investigator and Project Manager, Saddleback College, City of Mission Viejo, Orange County (2018-present)*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation for this project, prepared the Paleontological Resources Impact Mitigation Plan (PRIMP), and

oversaw the paleontological monitoring program detailed in the PRIMP. Kelly is currently co-authoring the final paleontological mitigation report. This project is in the final stages and is scheduled to be completed 2020.

### Private Development Sector Experience

***Paleontological Principal Investigator and Project Manager, Proposed Alta Vista Specific Plan Project, SC Development, City of Placentia, Orange County (2017).*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation relating to Paleontological resources for this project.

***Paleontological Principal Investigator and Project Manager, Magnolia Tank Farm Project, SLF-HB Magnolia, LLC, City of Huntington Beach, Orange County (2017).*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation relating to Paleontological resources for this project.

***Paleontological Principal Investigator and Project Manager, Santa Fe Springs Apartment Project, Clearwater Communities, City of Whittier, Los Angeles County (2017).*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation relating to Paleontological resources for this project.

***Paleontological Principal Investigator and Project Manager, Rider Business Center Project, Capstone Advisor, Unincorporated Riverside County (2017).*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation relating to Paleontological resources for this project.

***Paleontological Principal Investigator and Project Manager, Los Olivos French Valley Project, Newland Homes LLC, Unincorporated Riverside County (2017).*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation relating to Paleontological resources for this project.

***Paleontological Principal Investigator and Project Manager, Veteran's Village Community Development Project, UHC LLC, Cathedral City, Riverside County (2017).*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation relating to Paleontological resources for this project.

***Paleontological Principal Investigator and Project Manager, Colony Commerce East Project, CapRock Partners, City of Ontario, San Bernardino County (2016).*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation relating to Paleontological resources for this project.

***Paleontological Principal Investigator and Project Manager, Jurupa Valley Medical Clinic Project, Boureston Company, City of Jurupa Valley, Riverside County (2016).*** Ms. Kelly coordinated all surveying, preparation of compliance and environmental documentation relating to Paleontological resources for this project.

### Renewable Energy Sector Experience

***Paleontological Project Manager, Tehachapi Renewable Transmission Project (TRTP), Southern California Edison (SCE), Kern County, Los Angeles County, San Bernardino County (2009-2015).*** Ms. Kelly conducted and led surveys along this project's right of way. She was also in charge of scheduling monitoring crews during grading in areas of paleontological sensitivity, managing and reviewing log sheets, and tracking data that is incorporated to final reports. Ms. Kelly played a valuable role with scheduling for the project's needs. She monitored, surveyed, and reported on all paleontological facets of this project as the Lead Paleontological Monitor for segment 3B, which was located near Rosamond, and for segments 4-11 which extended into Los Angeles and San Bernardino Counties. She authored more than 10 of the compliance reports for this project. She also performed monitoring on every segment of this Project.

***Paleontological Project Manager, West of Devers Transmission Line Project, SCE, Riverside County, California (2009-2016).*** Ms. Kelly provided all project management and paleontological related services. This included proper BLM authorization and permitting to conduct surveying and a research design for field reconnaissance related to PEA, EIS/EIR documentation for the proposed transmission line. She assisted with managing documentation with laws relating to paleontological resources, among which are CEQA and NEPA compliance.

Material Culture Consulting

Sent by Email: tria@materialcultureconsulting.com

Re: EPD Eucalyptus Ontario, San Bernardino County

Dear Ms. Belcourt,

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not preclude the presence of cultural resources in any project area. Other sources for cultural resources should also be contacted for information regarding known and/or recorded sites.

Enclosed is a list of Native Americans tribes who may have knowledge of cultural resources in the project area. I suggest you contact all of those indicated, if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these tribes, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact me at 916-573-1033 or frank.lienert@nahc.ca.gov.

Sincerely,

A handwritten signature in blue ink, appearing to read "Frank Lienert".

Frank Lienert  
Associate Governmental Program Analyst

July 30, 2018

**EXAMPLE LETTER**

**RE: Proposed Ontario Commerce Center Project, City of Ontario; Prado Dam USGS Quadrangle, San Bernardino County, California.**

**Greetings,**

This Project proposes to convert multiple parcels of land into an industrial park near the City of Ontario, unincorporated San Bernardino County, California (see attached map). Material Culture Consulting, Inc (MCC) is conducting the cultural resources review of the project to support preparation of the environmental documents. As part of our background research, we would like to request your input on potential cultural resources within the project area. This request is not part of any formal local, state, or federal consultation process.

Our firm contacted the Native American Heritage Commission (NAHC) on July 19, 2018 to request review of the Sacred Lands File and for a list of tribes with traditional lands and/or cultural places within the area. The NAHC responded on July 25, 2018, stating that the Sacred Lands File review resulted in negative results, and provided your contact information as part of the list. We understand that negative results do not preclude the existence of cultural resources, and that a tribe may be the only source of information regarding the existence of a tribal cultural resource, which is why we are contacting you.

**Project Location and Description**

The proposed project is located at the northeast corner of the intersection of Euclid Avenue and Merrill Avenue, bounded by Eucalyptus Avenue to the north, Sultana Avenue to the east, Euclid Avenue to the west, and Merrill Avenue to the south (see attached map). The area of potential impact (API) includes a total of approximately 84.1 acres and located within Section 21 of Township 2 South and Range 7 West (San Bernardino Base Meridian).

Please respond at your earliest convenience if you wish to share any knowledge of cultural resources within or adjacent to the API. Any information, concerns, or recommendations regarding cultural resources within the API can be shared with me via telephone, email, or via standard mail. Thank you very much for your assistance.

Kindest regards,

A handwritten signature in black ink, appearing to read "Tria Belcourt", is written over a horizontal line.

Tria Belcourt, M.A., RPA

 CEQA Due Diligence Native American Contact Log  
 August 2018  
 Page 1 of 4

Name/Affiliation	Date and Method of 1st Contact	Date of 1 <sup>st</sup> Follow Up Attempt	Date of 2 <sup>nd</sup> Follow-Up Attempt	Results	MCC Response
Joseph Hamilton, Chairman Ramona Band of Cahuilla	August 1, 2018- letter sent via USPS	August 10, 2018-via email	August 22, 2018-via phone	Phone number reached Tribal administrative assistant who transferred call to a John Gomez, a project director responsible for cultural resource responses. Left a voicemail for Mr. Gomez stating company name, purpose for call, and how we can be reached.	No response required
Darrell Mike, Chairperson Twenty-Nine Palms Band of Mission Indians	August 1, 2018- letter sent via USPS	Not necessary	Not necessary	Email received on August 3, 2018 from Sarah Bliss, Cultural Resources Manager: THPO is not aware of any additional cultural resources or any Tribal Cultural Resources within the Project Area. The Tribe requests any updates or changes to the Project should they occur.	MCC thanked the Tribe for their response and noted requests will be included within the report.
Anthony Madrigal, Jr., THPO Twenty-Nine Palms Band of Mission Indians	August 1, 2018- letter sent via USPS	Not necessary	Not necessary	See response above	See response above
Charles F. Wood, Chairperson Chemehuevi Indian Tribe	August 1, 2018- letter sent via USPS	August 10, 2018-via email	August 22, 2018-via phone	Phone number reached a Tribal administrative assistant who indicated Chairperson Wood was in budget meetings until 2 pm. The call was transferred to Mr. Wood's voicemail. A message was left stating company name, purpose for call, and how we can be reached.	No response required
Timothy Williams, Chairperson Fort Mojave Indian Tribe	August 1, 2018- letter sent via USPS	August 10, 2018-via *message left*	August 22, 2018-via phone	The phone rang for two minutes with no answer and no voicemail. Did not reach Mr. Williams via phone.	No response required

Ontario Commerce Center Project  
 CEQA Due Diligence Native American Contact Log  
 August 2018  
 Page 2 of 4

Dennis Patch, Chairman Colorado River Indian Tribes of the Colorado River Indian Reservation	August 1, 2018- letter sent via USPS	August 10, 2018-via email	August 22, 2018-via phone	On August 22, 2018 the phone call connected to the tribal office which transferred the call to the secretary for the chairman's office. There was no answer, so a voicemail was left stating company name, purpose for call, and how we can be reached. A follow up phone call to the THPO office on August 23, 2018 reached acting THPO Brian Etsitty. Mr. Etsitty indicated that the Tribe had no comment regarding the project.	MCC thanked the Tribe for their response and noted requests will be included within the report.
Anthony Morales, Chairperson Gabrieleno/Tongva San Gabriel Band of Mission Indians	August 1, 2018- letter sent via USPS	August 10, 2018-via email	August 22, 2018-via phone	Phone call went to Mr. Morales's voicemail. On August 30, Mr. Morales informed MCC that the project is in the vicinity of important prehistoric and historic tribal routes and water sources. The tribe indicated that the heightened sensitivity warrants archaeological and Tribal monitoring by their tribe.	MCC thanked the Tribe for their response and noted request will be included within the report.
Sandone Goad, Chairperson Gabrielino/Tongva Nation	August 1, 2018- letter sent via USPS	August 10, 2018-via email	August 22, 2018-via phone	Phone call went to Ms. Goad's voicemail. A message was left stating the company name, the purpose of the call, and where we can be reached.	No response required
Lee Clauss, Director-CRM Dept. San Manuel Band of Mission Indians	August 1, 2018- letter sent via USPS	Not necessary	Not necessary	Email received on August 8, 2018 from Jessica Mauck, Cultural Resources Analyst stated: Proposed Project area is located just outside of Serrano ancestral territory and SMBMI will not request consulting party status or elect to participate with further development of the Project.	MCC thanked the Tribe for their response and noted requests will be included within the report.
Lynn Valbuena San Manuel Band of Mission Indians	August 1, 2018- letter sent via USPS	Not necessary	Not necessary	See response above	See response above
Patricia Garcia-Plotkin, Director/THPO Agua Caliente Band of Cahuilla Indians	August 1, 2018- letter sent via USPS	Not necessary	Not necessary	Emailed received on August 9, 2018 from Lacy Padilla, Archaeological Technician: Project is not located within the Tribe's Traditional Use Area. ACBCI defers to other Tribes in the area.	MCC thanked the Tribe for their response and noted requests will be included within the report.

Hello,

For the Ontario Commerce Center Project, the Twenty-Nine Palms Band of Mission Indians Tribal Historic Preservation Office (THPO) is not aware of any additional cultural resources or any Tribal Cultural Resources, as defined California Public Resources Code § 21074 (a) (1) (A)-(B) within the project area. If there are any updates or changes to the project please notify the Tribe.

If you have any questions, please do not hesitate to contact the Tribal Historic Preservation Office at (760) 775-3259 or by email: [TNPConsultation@29palmsbomi-nsn.gov](mailto:TNPConsultation@29palmsbomi-nsn.gov).

Thank you,

Hi Tria,

Thank you for contacting the San Manuel Band of Mission Indians (SMBMI) regarding the above referenced projects. SMBMI appreciates the opportunity to review the project documentation, which was received by our Cultural Resources Management Department on 8 August 2018. The proposed project areas, and the City of Chino, are located just outside of Serrano ancestral territory and, as such, SMBMI will not request consulting party status or elect to participate in the scoping, development, and/or review of documents created pursuant to these legal and regulatory mandates.

Regards,

Dear,  
Sonia Sifuentes  
Material Culture Consulting

The project is outside of Morongo's ancestral territory and/or areas of tribal affiliation or interest.

Should you fail to make contact with other tribal governments, we ask that you please follow the Standard Development Conditions in the attached letter.

Sincerely,

Tribal Historic Preservation Office  
Morongo Band of Mission Indians  
Email: [thpo@morongo-nsn.gov](mailto:thpo@morongo-nsn.gov)  
Phone: (951) 755-5059

MORONGO  
BAND OF  
MISSION  
INDIANS

A SOVEREIGN NATION

### Standard Development Conditions

The Morongo Band of Mission Indians asks that you impose specific conditions regarding cultural and/or archaeological resources and buried cultural materials on any development plans or entitlement applications as follows:

1. If human remains are encountered during grading and other construction excavation, work in the immediate vicinity shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5.
2. In the event that Native American cultural resources are discovered during project development/construction, all work in the immediate vicinity of the find shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the overall project may continue during this assessment period.
  - a. If significant Native American cultural resources are discovered, for which a Treatment Plan must be prepared, the developer or his archaeologist shall contact the Morongo Band of Mission Indians.
  - b. If requested by the Tribe<sup>1</sup>, the developer or the project archaeologist shall, in good faith, consult on the discovery and its disposition (e.g. avoidance, preservation, return of artifacts to tribe, etc.).

---

<sup>1</sup> The Morongo Band of Mission Indians realizes that there may be additional tribes claiming cultural affiliation to the area; however, Morongo can only speak for itself. The Tribe has no objection if the archaeologist wishes to consult with other tribes and if the city wishes to revise the condition to recognize other tribes.

re: Paleontological resources for the proposed Eucalyptus Ontario Project, in the City of Ontario, San Bernardino County, project area

Dear Julia:

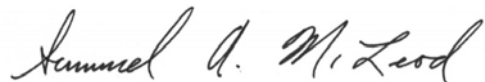

I have conducted a thorough check of our paleontology collection records for the locality and specimen data for the proposed Eucalyptus Ontario Project, in the City of Ontario, San Bernardino County, project area as outlined on the portion of the Prado Dam USGS topographic quadrangle map that you sent to me via e-mail on 19 July 2018. We do not have any vertebrate fossil localities that lie within the proposed project area boundaries, but we do have localities nearby from sedimentary deposits similar to those that occur at depth in the proposed project area.

The entire proposed project area has surface deposits that consist of younger Quaternary Alluvium, derived broadly as alluvial fan deposits from the San Bernardino Mountains to the north. These deposits typically do not contain significant vertebrate fossils in the uppermost layers, but at relatively shallow depth there are probably older Quaternary deposits that may well contain significant vertebrate fossils. Our closest fossil vertebrate locality from similar older Quaternary deposits is LACM 7811, just south of due east of southern-most portion of the proposed project area west of Mira Loma east of Archibald Avenue along Sumner Road north of Cloverdale Road, that produced a fossil specimen of whipsnake, *Masticophis*, at a depth of 9 to 11 feet below the surface. Further to the south-southeast of the proposed project area, on the northwestern side of Corona west of Cota Street between Railroad Street and Harrington Street, our vertebrate fossil locality LACM 1207 produced a fossil specimen of deer, *Odocoileus*.

Shallow excavations in the younger Quaternary Alluvium exposed throughout the proposed project area are unlikely to uncover significant fossil vertebrate remains. Deeper excavations there that extend down into the older Quaternary sediments, however, may well encounter significant vertebrate fossils. Any substantial excavations in the proposed project area, therefore, should be monitored closely to quickly and professionally recover any fossil remains while not impeding development. Sediment samples should also be collected from the finer-grained deposits in the proposed project area and processed to determine their small fossil potential. Any fossils collected should be placed in an accredited scientific institution for the benefit of current and future generations.

This records search covers only the vertebrate paleontology records of the Natural History Museum of Los Angeles County. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Sincerely,

A handwritten signature in cursive script that reads "Samuel A. McLeod". The signature is written in black ink and is positioned below the word "Sincerely,".

Samuel A. McLeod, Ph.D.

e. Other Locational Data: (e.g., parcel #, directions to resource, elevation, etc., as appropriate) Elevation: 667 feet asl

Located approximately one-half mile east of the intersection of Euclid Avenue and Eucalyptus Avenue, on the south side of the two-lane road.

**\*P3a. Description:** Per information from the San Bernardino County Assessor's Office, this dairy operation was established in 1976 on approximately 76.66 acres of land. The dairy operation included two, single-family residences, and associated pens and structures for holding livestock. An aerial photograph from 1966 shows that there were not any built-environment resources located within the subject parcels.

**Dairy Barn:** The dairy barn was constructed as part of a large-scale dairy operation. The barn is set on a north-south axis as is usual for dairy barns along Eucalyptus Avenue. The dairy barn is comprised of two sections; the north section contains the office for the dairy manager, and equipment for the milking parlor and milk storage. The south section has the automated milking parlor with the individual stations set in a herringbone formation. The north portion of the building has a rectangular mass approximately 62 feet wide and 37 feet long. The exterior of the north portion of the building was constructed with concrete masonry units (cmu), and is clad in a stucco finish. The north portion is devoid of any superfluous ornamentation or architectural features, and has no cultural or other decorative features that tie it visually to the residences on the property. The north portion of the dairy barn has a medium pitch gable roof set on a north-south axis. Pedestrian doors are situated on the north, east, and south elevation of the northern block, and sliding, metal unit windows provide the fenestration on those elevations as well. Large, steel tanks are set along the west elevation of the northern section, and the roof has been removed from where the tanks are set. A poured concrete, circular driveway with dimensions to allow large tanker trucks access to the front of the building, provides egress from Eucalyptus Avenue. **Property Type:** Large Capacity Dairy Farm

**Applicable Criteria:** None

The following text is excerpted from *The City of Ontario's Historic Context for the New Model Colony Area*, prepared by Galvin & Associates for the City of Ontario Planning Department in September 2004.

In 1967, the County of San Bernardino designated 14,000 acres of agricultural land in the Chino Valley, located in the southwest area of San Bernardino County, an agricultural preserve. This agricultural land, which has been protected by Williamson Act contracts and the 1965 Land Conservation Act, has been farmed primarily by Dutch, French Basque and Portuguese dairy farmers for the last 50 years.

In the 1990s, as dairy operation costs escalated and the demand for housing in the region swelled, development pressures mounted and the process of incorporating this area into adjacent cities began. Anticipating the expiration of the Williamson Act contracts, this area was divided and portions were incorporated into three adjacent cities. In 1999, 8,200 acres were annexed by the City of Ontario; in 2003, 5,000 acres were annexed by the City of Chino, referred to as the Preserve; and the City of Chino Hills annexed the remaining few hundred acres of land.

The City of Ontario named their portion of the former San Bernardino County Agricultural Preserve the *New Model Colony* (NMC) after the original *Model Colony of Ontario* established by the Chaffey Brothers, William and George Jr., in 1882. Over time, the New Model Colony area has been known as Santa Ana Del Chino, the Chino Valley, the Chino Basin, and the San Bernardino Agricultural Preserve or Ag Preserve. It consists of an expansive area of flat arid land that was historically sandy desert. In 2004, the NMC survey area included 711 parcels of predominately open agricultural land scattered with single-family homes and farm buildings. (See Continuation Sheet for additional text.) (See Continuation Sheet for additional text.)

B11. Additional Resource Attributes: None.

**CONTINUATION SHEET**

\*Recorded by: Pamela Daly, M.S.H.P.

\*Date: September 4, 2020

Continuation  Update

**P3. Description, continued:**

**Dairy Barn**, continued: The milking parlor is a rectangular-massed building approximately 42 feet wide and 78 feet long. The cows enter from the pens at the south of the dairy barn and pass through the washing bays before entering the milking parlor stalls, where they are attached to automatic milking machinery. This part of the building is partially open sided, and covered with a corrugated metal, medium-pitch gable roof. The roof is supported by steel beams set vertically along the stucco-clad concrete partial walls that form the exterior, load bearing walls of the milking parlor building.

**Houses – East and West:**

There are two, single-family residences located on the property. They are located to the east and west of the dairy barn. The houses are identical except for the attached, two-car garage of the East House is situated on the west elevation, and the garage of the West House is attached to its east elevation. The attached garages are accessed by the main circular driveway.

The subject houses are cross-hipped roof sub-types of Ranch house style of residential architecture. The houses have square-massing, measuring approximately 42 feet wide by 42 feet long, for an approximate square footage of 1,764 of living space. Automobile garages are attached to the elevations of the houses that face the dairy barn and the attached garages measure approximately 30 feet wide by 26 feet long. The main blocks of the houses are covered by low-pitched pyramidal roofs, as are the garages as well. The house roofs have wide overhanging eaves, and along the south elevations of both houses a 13-foot wide flat roof extends from the main block to create a patio cover along the south elevation of the house. The front entrances to the houses are situated on the north elevations within a porch created by the overhanging eaves of a cross-hipped extension from the main roof. Concrete brick support columns are set at the northwest and northeast corners of the north eave of the extension, and this creates a porch overhang for the formal entrance. The houses are fenestrated with modern composite sliding windows units, and sliding door units set in the south elevations providing access to the backyards. The larger window units have four-inch wide flat board surrounds. The houses are clad with a stucco finish, and a water-table of concrete bricks runs along the elevations that face the front of the property. Each house has an exterior chimney constructed with concrete brick. The East house also has a gable roofed, unattached two-car garage situated on the southern edge of the driveway to the attached garage. The unattached garage has a stucco exterior similar to the houses and dairy barn. The houses are set well back from Eucalyptus Avenue, and have nicely landscaped lawns and modest gardens.

The cross-hipped roof Ranch style houses associated with the addresses of 7417 and 7511 Eucalyptus Avenue meet the criteria to be considered “1960s through 1980s Ranch” style houses within the historic context of the New Model Colony. The identically designed houses reflect a very modest, Ranch style single-family residence constructed in the mid-1970s. The subject Ranch houses, constructed in 1976, have no visible design association to its original roots as a design derived from the houses found on the historic ranchos in nineteenth-century California. The Ranch style houses constructed after World War II were popular for their sprawling layouts and rustic feel as represented by the use of rough board-and-batten siding, brick, slumped mortar on many houses set on landscaped lots. The subject houses at 7417 and 7511 Eucalyptus Avenue meet, but do not rise above being modest examples of a 1970s Ranch style cross-hipped house design that was widely constructed in California during the same time period. The subject houses present no visible ties, through any use of architectural features and/or design, to the rural and dairy use of the property

**Cattle pens:** The cattle pens were designed using feedlot fencing around a large section of land, with the large pens divided into various sized pens that can hold from just a few cows to more than 200 head. The tubular steel fencing is embedded in concrete footing and a concrete apron and/or concrete trough extends away from the fencing on the outside of the pen to allow an area for the feed to be laid out for each pen. The headlocks along the feed troughs appear to be from Albers Dairy Equipment. Albers Dairy Equipment was established by Teo Albers, Sr., the brother of Jacob N. Albers.

**Cattle shade pole structures:** Cattle covers have shed roofs that are supported by a system of steel poles, with a roof height ranging between approximately 10 feet tall to 18 feet tall. The sheds roofs are approximately 16 feet to 22 feet in width, and range from 30 feet to almost 250 feet long. At this dairy, the holding area for cows before they enter the wash station and milking parlor has multiple connected shade structures that provide approximately 7,125 square feet of shaded pen space. There are sixteen pole structures situated within the cattle pens on the subject property, and these provide over 1,000 yards of cattle sheds. (See Continuation Sheet for additional text.)

**CONTINUATION SHEET**

\*Recorded by: Pamela Daly, M.S.H.P.

\*Date: September 4, 2020

Continuation  Update

**P.3. Description, continued:**

**Hay cover pole structures:** There are multiple pole structures with shed roofs located in a north-south alignment between the cattle pens. There are ten hay covers, and these pole structures are similar in construction to the cattle shade structures.

**Manure pit:** There is a wet manure capture structure situated at the very southern end of the cattle pens that measures 390 feet long by 80 feet wide. This structure is usually dug to a depth of approximately 8' to be filled with the liquid runoff from the cattle pens. On a routine basis, the pit is drained to be recycled as liquid fertilizer.

**Feed sorter:** The feed sorter is situated at the southeast end of the cattle pens, and accessed by a driveway that runs along the east boundary of the property. The feed sorter has a rectangular footprint, and measures approximately 118' long by 58' wide, with the west façade open for access to the feed bins. It has a concrete foundation and half-walls separating the various feed types. The structure is covered by a shed roof, and plywood side walls enclosing the bays.

**Covered parking area:** Located along the eastern boundary of the property is a parking area 80 feet long covered by a shed roof shade structure approximately 20 feet wide. The roof and siding are comprised of corrugated metal panels, and the structure is supported by steel posts.

**Accessory storage building:** Located immediately south of the covered parking structure, this storage structure is comprised of a gable roof structure, with galvanized metal walls and roof, that measures approximately 26 feet long (north-south) by 22 feet wide, and is 22 feet high at its peak. The structure appears to be used for general farm use as it has a pedestrian door and an overhead garage door on its west elevation.

**CONTINUATION SHEET**

\*Recorded by: Pamela Daly, M.S.H.P.

\*Date: September 4, 2020

Continuation  Update

**B.10. Statement of Significance, continued:**

During the Rancho Period in the history of Southern California, large land grants were given to influential citizens leading to European settlement of ranchos for raising cattle in the San Bernardino Valley. The Rancho period lasted from 1834 until the Mexican War of 1846. Colonists were encouraged to settle in the San Bernardino Valley to help protect the region from such raids. Recipients of the land grants included Spanish gentlemen (dons) from many of the first families of California, such as the Lugos, Sepulvedas, Yorbas, Bandinis, Tapias, Palomares, and Picos.

One of the largest land grants in the area was Rancho Santa Ana del Chino, which encompassed the New Model Colony project study area. In 1841, the Spanish governor Alvarado granted the 22,000-acre Rancho Santa Ana del Chino to his uncle, Antonio Maria Lugo.

Located on a sloping plateau at the base of the 10,000-foot Mt. San Antonio, the City of Ontario, California, was named for Ontario, Canada by George Chaffey, a Canadian-born engineer who came to Riverside in 1880. He and his brother William acquired 1000 acres of the Garcia Rancho in 1881 which they intended to subdivide into small fruit farms. The Chaffey's purchased an additional 6,000 acres that would become the cities of Ontario and Upland. One of the keys to the Chaffey's success as developers was their creation of a "mutual water company" in which each landowner became a stockholder. Ontario was incorporated on December 10, 1891.

Chino's beginning can be traced to Isaac William's Rancho Santa Ana del Chino, known for its cattle and fine horses, its sugar beet factory, its dairy farms, and its truck farms in the early days. After Williams died the Chino Ranch suffered difficult times until the ranch and some additional lands were purchased by Richard Gird in 1881. Gird imported dairy cattle and built up a herd of 200 milk cows, which was the start of Chino's more recent role as a dairy center of Southern California. In 1887 he subdivided half the ranch and set aside the town site of Chino.

The first herds of good cows to reach California were those led or driven across the plains by the gold-seekers of 1849. The cows were fed or grazed along the trail and contributed to the family menu on the way. These cows were the foundation stock of pioneer dairy efforts in the foothills and mountain valleys of the Sierra Nevada. During the late 1840s and early 1850s, Sacramento was the center of California's cattle market. It was during this period that dairying became an established industry in California.

The scientist, Louis Pasteur, discovered in 1865 that heating milk to 140 degrees Fahrenheit for 20 minutes would destroy germs of tuberculosis, typhoid fever and other pathogenic organisms. Due to his discovery, the milk manufacturing industry began to develop in other areas related to the dairy industry such as supply machinery and equipment for milk pasteurizing plants, coolers, pasteurizers, bottling machines and a score of other products.

In the 1880s, dairying was largely confined to Humboldt County, Pt. Reyes Peninsula, the coastal section of San Luis Obispo and the mountain pastures of the Lake Tahoe region. In the early 1890s, the first farm separators (mechanical milk separators) were introduced into California.

There are three distinct phases in dairy farming in Southern California. The first phase was from 1900-1930 and consisted of free grazing of the cattle. The first dairies before 1930s were small family concerns, consisting of five or six acres. During the 1920s, the dairies gravitated to the southeastern part of Los Angeles County around Paramount, Artesia, and Bellflower.

The second phase of dairying, from 1931-1949 saw a change from free grazing dairying to dry-lot dairying with the mechanization of milking. Prior to World War II, dairies were widely dispersed throughout Los Angeles County. Large clusters of dairies were found in areas such as Torrance, Artesia, El Monte and the San Fernando Valley. During this period much of the feed and fodder was available from the local area, and dairies usually occupied the less valuable land that was not suited to citrus or truck farms raising vegetables for market.

The third phase of dairying in Southern California took place between 1950 and 1969. One of the paradoxes of the 1950s Los Angeles milk industry is that the rapidly growing human population and industry of Los Angeles County after the end of World War II, squeezed the dairymen into smaller and smaller areas, forcing the dairy industry to produce milk more economically than before the squeeze began. The dairy farmers moved to new dairies to take advantage of mechanization; their old barns were not large enough for the new machinery.

Dairies first came to the Chino Valley in the late 1890s, mostly on rented land. The Chino Valley was a good location for dairy farming because of its vast areas to cultivate hay and its sunshine, fertile soil, and water supply. In the late 1950s and early 1960s many housing developments began in Westminster and Cypress and dairymen started to buy farm land in the Chino Valley which had been used mostly for growing grapes. By 1957, more than 135 dairies were located in the Chino Valley area. (See additional text on Continuation Page)

\*Recorded by: Pamela Daly, M.S.H.P.

\*Date: September 4, 2020

Continuation  Update

**B.10. Statement of Significance, continued:**

In moving to the Chino Valley area, the dairymen established the most efficient and modern dairies in the nation. By 1979, the largest concentration of dairies in the world was located in the approximately 18 square miles that comprise the Chino Valley. Sixty percent of the milk produced in the State of California was produced in this area.

Dairy farming in the Chino Valley, between 1950 and 1969, consisted of the introduction of scientific feeding and breeding, resulting in larger herds and more productive dairy operations. The dairy properties that developed during 1950-1969 are located on very large parcels or on properties that comprise multiple smaller parcels. The average size for a property associated with this context is approximately forty (40) acres or more. As the mechanization of dairying advanced, the size of the parcel increased as the dairy farmer was capable of milking more cattle. The layout of the dairy property also changed as the dairy operation began to introduce new farming equipment for the mechanization process.

With the technology of the new milking systems (of the 1950s-60s) one man easily could milk 450 cows twice a day. Machines could handle more cows, consequently, the herds increased in size again. Also, the dairy farmers from this period were able to afford more land after selling their dairies for premium prices in the highly valued inner-city areas of Los Angeles County, and could consequently increase the size of their operations and upgrade their milking facilities as the cost of land in the Chino Valley area was far less costly.

At present, the subject 76.6-acre project area is comprised of four legal parcels that are owned by Pacific Commodities, LLC. The dairy operations are being leased to Gerben Hettinga Dairy #2 (a subsidiary of Sarah Farms Corporation based in Texas.) The history and evaluation of the subject property is based upon a review of historic aerial photographs dating from 1938 to 2002 that provide a view of buildings and structures on the parcels in the subject area; San Bernardino County Assessor's Office data; historic newspaper articles; and census information.

Jacob Nicolas Albers immigrated to the United States in 1929 when he was just 20 years old. He is recorded as living in a rural area of Fresno, California, in 1935, before establishing a dairy operation in Buena Park by 1940. Within a few years, Jacob and Nellie have relocated to a dairy property at 614 West Artesia Street, in Artesia, Los Angeles County. In 1948, Jacob is joined by Teo (Teunis) Albers and his family at the property on West Artesia Street. (Due to the closeness in the ages of Jacob and Teo, they may have been brothers or cousins.) Jacob and Nellie eventually settle at a dairy farm property at 19510 Pioneer Boulevard in Artesia, and in 1960 is noted as being a Councilman in the City of Artesia. Teo Albers, Sr. would establish the Albers Manufacturing Company that specialized in dairy industry equipment. Albers Manufacturing Company is the "originator" of the self-locking stanchion, used to hold cows while they are feeding and in the milking stations.

The Assessor's records for the subject parcels present Jacob and Nellie Albers as the owners of the unimproved land in the Chino Valley dairy area in 1976. It appears they sold the land to Theodor Z. and Felice Miller in 1976. All the improvements on the property were constructed on the property in 1976, but it is unknown if Theodor and Felice lived or worked on the land. In 1976, both Theodor and Felice would have been 57 years old. They may have had adult children or other family members who were active in operating a large dairy operation, and this may explain why two, identical houses were constructed on the site. (Usually, a larger residence was constructed for the dairy owner, while the manager's house was smaller in size.)

Based on Assessor's records, the property fell into receivership in 1988, and was quickly acquired by Joseph A. Borba and his wife Doleen. Joseph A. Borba was one of George A. Borba Sr.'s three brothers, and Kyle Borba, the agent of Pacific Commodities LLC (the current owner of the property) is Joseph A. Borba's grandson. At the time that Joseph and Doleen acquired the subject property, they would have 68 years old, so it is highly likely that the actual dairy operations were conducted by Joseph Borba's children, grandchildren, or members of the extended Borba family.

(Sources: Ancestry.com for "Jacob Nicolas Albers", "Theodor Z. Miller", "Joseph A. Borba". Resources include 1930 and 1940 U.S. Census records, World War II draft card for "Jacob N. Albers", Immigration Record for "Jacob N. Albers", City Directories and Voter Registration Records for Albers, Borba, and Miller.)

In assessing the historical significance of the subject property, federal, state, and local significance criteria were applied. The subject property is not currently listed in either the National Register of Historic Places, California Register of Historical Resources, or as a City of Ontario Historic Landmark.

**National Register and California Register**

**Criteria A/1:** Pursuant to the National Register and/or California Register criterion relating to the subject property's association with significant historical events that exemplify broad patterns of our history, the subject property does not qualify as a significant resource under Criteria A/1. (See Continuation Sheet for additional text.)

**B.10. Statement of Significance, continued:**

**NR-CR Criteria A/1, continued:** While the history of the subject property with the development of the dairy industry in Chino Valley-Ontario is important, the property was not specifically identified in our research as the site of an event important to the history of large-scale dairy farming in California, or the United States. There is no evidence that the subject property is eligible for listing under National Register Criterion A or California Register Criterion 1.

**Criteria B/2:** Pursuant to National Register and California Register criteria relating to the subject property's association with the lives of persons significant in our past, the property does not qualify as a significant resource under National Register Criterion B or California Register Criterion 2. This criterion is used to determine if a person important to the history dairy farming in the United States and/or California is *directly* associated with the subject property. Research has not revealed that there were important persons associated with the property before 1975 (45 years ago.) The property does not appear to have become part of the extended Borba Family holdings until 1988.

**Criteria C/3:** Pursuant to the National Register and California Register criteria relating to the distinctive characteristics of a type, period, region, or method of construction, the subject property does not appears to be eligible for listing as a significant Large Capacity Dairy under National Register Criterion C or California Register Criterion 3. The property is an example of a Large Capacity Dairy constructed in Ontario in 1976. The design of a Large Capacity Dairy had been developed over 50 years of both technical improvements in milking machinery and the handling of dairy cows. The Large Capacity Dairies were simply an expansion of the dairy operations built soon after World War II, which brought together the improved hygienics of milking operations with the use of mechanical milking parlors. Large-scale dairy farms had been established, constructed, and operated in Southern California and the Chino Valley Dairy region since the early 1950s, and the subject dairy operation was not found to be a pioneer of large-scale dairy management. The Millers built an operation in 1976 whose success was insured by following the example of the layout and management of other regional farms and industry guidelines. The subject property does not present any significant contributions to the history of Large Capacity Dairies, constructed in the New Model Colony Area between 1950 and 1969, and is not eligible for listing as a significant property under Criterion C/3.

**City of Ontario Criteria**

The subject property was constructed in 1976, which is outside of the time parameters of "Post 1950 to 1969" timeframe to be considered under the criterion for a "Scientific, Large Capacity Dairy" farm as presented in the *City of Ontario's Historic Context for the New Model Colony Area*. While the property possesses the physical attributes of a large-scale dairy operation, it does not meet the age criterion to be considered a contributor to the history of dairy farming in the City of Ontario.

Prior to 1950, the dairy farms in the Chino Valley area were primarily owned and operated by a single family, with some hired hands to supplement the family's involvement. Even with the advent of modern milking equipment, improved feeding and animal husbandry, the dairy farms continued to resemble those of the early twentieth-century, with the cows able graze in pastures and the farms make a visual connection to the early days of settlement in Ontario and the Chino Valley.

After World War II, the pressure from urban development, high price of land, and loss of interest by the younger generations of dairy farmers, forced dairy farmers in the New Model Colony Area to adapt to the modern livestock business plan of operating, what is called in common terminology, a factory farm. The dairy operation on the subject property can accommodate approximately 1,500 head of cattle on the property, with approximately 1,000 head being milked on a daily basis due to the improvement of technology. A factory farm is considered:

*An operation is defined as an animal feeding operation, or AFO, if the facility confines, stables, or feeds animals for 45 days or more in a 12-month period, and a ground cover of vegetation is not sustained over at least 50 percent of the confinement area.* An operation is defined as a concentrated animal feeding operation, or CAFO, if it meets the definition of an AFO and also confines more than 1,000 animal units (1,000 animal units is equal to 700 dairy cows). (United State Department of Agriculture (USDA) <https://www.nrcs.usda.gov/wps/portal/nrcs/main/national/plantsanimals/livestock/afo/>)

**Criterion a.:** Evaluating the property under the City of Ontario criteria for historic landmarks, the property of the subject property has not been found to exemplify or reflect special elements of the City's history. The "Post 1950 [to 1969], Scientific, Large Capacity Dairies" were identified in the "New Model Colony Historic Context" not for their contribution to the post World War II development of the City of Ontario, but rather that the advancements of dairy management and technology allowed for farmers to milk a greater number of cows in a 24-hour period. (See Continuation Sheet for additional text.)

\*Date: September 4, 2020

Continuation  Update

**B.10. Statement of Significance, continued:**

**City of Ontario Criteria, continued:**

Criterion a, continued: The buildings and structures on the subject property were constructed in 1976, outside the period of significance for "Scientific, Large Capacity Dairies" in the New Model Colony Area.

Criterion b.: The subject property has not been identified with persons or events significant in state or national history. In 1988, Joseph A. and Doleen Borba were recorded as owners of the property, but their exact involvement with the dairy operation on the property are unknown. While many members of the extended Borba were very active in Chino Valley dairy community, both in civic and industry activities, we have not found any important contributions made in association with this property.

Criterion c.: The built-environment resources of the subject property were not constructed within the period of significance for "Post 1950 [to 1969], Scientific, Large Capacity Dairies" in the New Model Colony Area. These types of large-scale dairy operations were being constructed across California, and in many parts of the United States, since the end of World War II. Per the USDA, there are over 450,000 AFOs in the United States in 2017, of which dairy operations make up a large percentage of the total number.

Criterion d.: While the subject does present the physical and architectural attributes of a Large Capacity Dairy, it was constructed in 1976 and is therefore outside the period of significance for a "Post 1950 [to 1969] Scientific, Large Capacity Dairy" in the New Model Colony Area. The design of the dairy facility on the subject property had no impact on the future of architectural or agricultural development of dairy farms in Ontario or the Chino Valley in the last quarter of the twentieth-century.

Criterion e.: The buildings and structures of the subject property do not exhibit noteworthy examples of the use of indigenous materials or craftsmanship.

Criterion f.: The subject property does not embody elements that represent significant dairy technology, or design of a factory farm, constructed in the 1970s. The dairy operation presents the type of large scale, dry lot, milking operation widely used across California where urban growth pushes against agrarian interests. (And why the Williamson Act was enacted to protect agricultural and open space land.)

Criterion g.: The subject property is not located in a unique location. The farm is just one of many that are still located in the Chino Valley-Ontario area.

Criterion h.: The subject property was constructed outside of the period of significance for a "Post 1950 [to 1969] Scientific, Large Capacity Dairy" in the New Model Colony Area, and is not a rare example of a large capacity dairy in Ontario or California. Large capacity dairies continue to operate across California, and many are constructed based upon the same basic physical design, but are being outfitted with technologically advanced milking, animal husbandry, and herd control devices.

The subject property has not been identified as a contributing member of any identified Historic District of thematically related groupings of Large Capacity Dairy farms constructed after 1969 in the New Model Colony Area.

(See Continuation Sheet for additional text.)

\*Date: September 4, 2020

Continuation  Update

**B.10. Statement of Significance, continued:**

**Evaluation of the Ranch style houses of the subject property per National Register, California Register Criteria**

The East and West Houses of the subject property were constructed in 1976, and have not met the sufficient age (50 years) to be evaluated as historic resources for listing in the National Register or California Register. In addition, the East and West Houses do not meet Criterion G of the National Register as buildings of *exceptional importance* that have achieved significance within the past 50 years.

Nonetheless, evaluated under Criterion A/1, the East and West Houses of the subject property have not been found to have been associated with events that have made a significant contribution to the broad pattern of dairy farm ranch houses, or to the cultural history of dairy farming, in Chino Valley-Ontario, California, or the United States.

Under Criterion B/2, the East and West Houses of the subject property have not been found to have been directly, or remotely, associated with persons important to the dairy farm industry in Ontario, California, or the United States prior to 1988.

Under Criterion C/3, the East and West Houses of the subject property have not been found to present sufficient character-defining features of "1960s through 1980s" Ranch style houses of high artistic values, or designs that contribute to the national or regional discussion regarding Ranch style houses constructed in 1976.

**City of Ontario Criteria:**

As noted above, the East and West Houses have not achieved sufficient age to be evaluated for historical significance as Ranch style dwellings in the New Model Colony area, or the City of Ontario.

Nonetheless, under criteria established by the City of Ontario, the East and West Houses do not possess the level, and number, of character-defining features that are necessary for the buildings to be considered good examples of "1960s through 1980s" Ranch style house as defined under the *New Model Colony Historic Context*. The East and West Houses do not possess asbestos/composition roof shingles; aluminum-framed windows set to present a strong horizontal alignment; lack of a low-pitch gable or cross-gable roof system; large, single-light picture windows; plain metal- or wood-post porch supports; concrete slab front porch situated under a long, narrow shed roof along the front façade; use of decorative stone and masonry; arch patterns along the walkways; wide surrounds around the main and entry windows; stylized double doors with ornate panels and ornamental oversized hardware.

Criterion a: The East and West Houses of the subject property do not exemplify or reflect special elements of the City or New Model Colony's history.

Criterion b: The East and West Houses of the subject property have not been identified with persons or events significant in local, state, or national history.

Criterion c: The East and West Houses of the subject property do not represent the work of a notable builder, designer, architect, or artist.

Criterion d: The East and West Houses of the subject property do not possess sufficient character-defining features to embody the distinguishing architectural features of a "1960s through 1980s" Ranch style residence, or method of construction.

Criterion e: The East and West Houses of the subject property are not noteworthy examples of the use of indigenous materials or craftsmanship.

Criterion f: The East and West Houses of the subject property do not embody elements that represent a significant structural, engineering, or architectural achievement or innovation.

Criterion g: The East and West Houses of the subject property do not have a unique location, a singular physical characteristic, or are established and familiar visual features of a neighborhood, or community in the City.

Criterion h: The East and West Houses of the subject property are not rare examples of an architectural or historical type of residential construction in the City, region, state, or nation.

**LOCATION MAP**

## **NATIVE AMERICAN CONSULTATION**

## **NAHC CONSULTATION**

## NATIVE AMERICAN HERITAGE COMMISSION

June 30, 2021

Alexis Vaughn  
City of Ontario

Via Email to: [avaughn@ontarioca.gov](mailto:avaughn@ontarioca.gov)

**Re: Native American Consultation, Pursuant to Senate Bill 18, Government Code §65352.3 and §65352.4, General Plan Amendment (File No. PGPA21-001) Specific Plan Amendment (File No. PSPA21-002) Project, San Bernardino County**

Dear Ms. Vaughn:

Attached is a consultation list of tribes with traditional lands or cultural places located within the boundaries of the above referenced counties.

Government Code §65352.3 and §65352.4 require local governments to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose of avoiding, protecting, and/or mitigating impacts to cultural places when creating or amending General Plans, Specific Plans and Community Plans.

The law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction. The NAHC believes that this is the best practice to ensure that tribes are consulted commensurate with the intent of the law.

The NAHC also believes that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:
  - A listing of any and all known cultural resources that have already been recorded or are adjacent to the APE, such as known archaeological sites;
  - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
  - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the APE; and
  - If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.
2. The results of any archaeological inventory survey that was conducted, including:
  - Any report that may contain site forms, site significance, and suggested mitigation measures.

CHAIRPERSON

California 95691  
(916) 373-3710  
[nahc@nahc.ca.gov](mailto:nahc@nahc.ca.gov)  
[NAHC.ca.gov](http://NAHC.ca.gov)

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code §6254.10.

3. The result of the Sacred Lands File (SLF) check conducted through the Native American Heritage Commission. The request form can be found at <http://nahc.ca.gov/wp-content/uploads/2015/08/Local-Government-Tribal-Consultation-List-Request-Form-Update.pdf>.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event, that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we are able to assure that our consultation list remains current.

If you have any questions or need additional information, please contact me at my email address:

[Andrew.Green@nahc.ca.gov](mailto:Andrew.Green@nahc.ca.gov).

Sincerely,

Andrew Green  
Cultural Resources Analyst

This list is only applicable for consultation with Native American tribes under Government Code Sections 65352.3 and 65352.4 et seq for the proposed General Plan Amendment (File No. PGPA21-001) Specific Plan Amendment (File No. PSPA21-002) Project, San Bernardino County.

**SAMPLE AB 52 CONSULTATION LETTER**

# CITY OF ONTARIO

## MEMORANDUM

**TO:** Gabrieleno Band of Mission Indians - Kizh Nation, Andrew Salas

**FROM:** Alexis Vaughn, Assistant Planner

**DATE:** July 2, 2021

**SUBJECT:** AB 52 NOTIFICATION – Ontario Ranch Business Park Specific Plan Amendment/Nos. PSPA21-002 & PGPA21-001

---

The City of Ontario is evaluating a proposed Specific Plan Amendment and General Plan Amendment, along with future Development Plan(s), Tentative Parcel Map(s), and a Development Agreement ("Specific Plan Amendment" or "project"). The project is described below and illustrated on the attached maps. The project is subject to the California Environmental Quality Act (CEQA). In accordance with Assembly Bill 52 (Public Resources Code Section 21080.3.1), California Native American Tribes may request consultation regarding possible significant effects that implementation of the proposed project may have on tribal cultural resources. A request for consultation must be received within 30 days of the date of this letter. The request must be in writing to the City of Ontario and must identify a lead contact person. If consultation is requested, the City of Ontario will begin the consultation process within 30 days. This notification was prepared by Kimley-Horn and Associates, Inc. on behalf of the City of Ontario.

The project and contact information are provided below:

**Project Name/File No.: Ontario Ranch Business Park Specific Plan Amendment  
(File Nos. PSPA21 002 & PGPA21-001)**

**Project Location:** The project site is bound by Eucalyptus Avenue to the north, existing right-of-way for the future Campus Avenue extension to the east, Merrill Avenue to the south, and unimproved right-of-way for Sultana Avenue to the west. Regional location and local vicinity maps are provided in Exhibit 1, Regional Location Map and Exhibit 2, Vicinity Map, respectively. The project site is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. Regional access is available to the Project site via State Route 83 (SR-83; Euclid Avenue), which is adjacent to the project site, State Route 60 (SR-60) approximately three miles to the north, Interstate 15 (I-15) approximately five miles to the east, and State Route 71 (SR-71) approximately three miles to the southwest. SR-71 connects the project to State Route 91 (SR-91) in unincorporated Riverside County, which is approximately seven miles to the south. The attached exhibits depict the regional location of the site (Exhibit 1); the project vicinity (Exhibit 2); existing and proposed General Plan land use designations (Exhibit 3); and, USGS Map (Exhibit 4).

The proposed Project site consists of eight parcels that are associated with the San Bernardino County Assessor’s Parcel Numbers (APNs) presented in Table 1.

**Table 1: Assessor’s Parcel Numbers**

1054-041-01	1054-041-02
1054-031-01	1054-031-02
1054-261-01	1054-261-02
1054-291-01	1054-291-02

**Project Description:** The proposed project site is currently developed as an operational dairy farm. The site contains two single-family residential structures, a dairy barn, a storage structure, approximately 10 feed storage barns, and numerous livestock corrals. There are large existing retention ponds that collect surface waste accumulations from the dairy farming practices, including animal wastes. Several above-ground storage tanks are present which store housing fuel, water, fresh milk, and livestock feed along with various mechanical systems for dairy production practices. The remainder of the site is used as irrigated cropland with berms located along the site perimeter. The site currently takes access off of Eucalyptus Avenue. The site is fenced with tubular metal fencing.

The project includes a General Plan Amendment and Specific Plan Amendment. Future Applications will include a Development Agreement, Development Plan(s), and Tentative Parcel Map(s) to allow development of approximately 1.6 million square feet (sf) of industrial and business park land uses on the 71.68-acre site, as described further below. The project is an extension of the Ontario Ranch Business Park Specific Plan project, which was approved September 15, 2020, to allow for development of an industrial and business park on eleven parcels covering 85.6 acres in the City of Ontario. The Ontario Ranch Business Park Specific Plan project included eight warehouse buildings ranging from 46,900 sf to 618,353 sf, totaling a maximum development of 1,905,027 sf of warehouse and office uses. This project will extend the Ontario Ranch Business Park Specific Plan boundary and would annex the abutting approximately 72 acres to the east. The project consists of two planning areas (PAs) adding to the Ontario Ranch Business Park Specific Plan. The proposed PAs 3 and 4 would allow for a total of 1,640,690 sf of industrial and business park uses. The Development Plan currently proposes the construction of six industrial concrete tilt-up warehouse buildings. PA 3 will consist of three buildings utilized for warehousing and ancillary office space, totaling 227,951 sf. PA 4 will consist of industrial and warehousing uses, totaling 1,412,739 sf. The EIR will evaluate the project at a “subsequent level.”

The associated EIR will evaluate the total maximum allowable development in the Specific Plan area while still remaining less than The Ontario Plan allowance. The maximum development under the Specific Plan Amendment consists of 1,640,690 sf of industrial and business park land uses and associated on-site and off-site infrastructure improvements. The Specific Plan serves to implement The Ontario Plan General Plan for the land covered by the Specific Plan and provides zoning regulations for development of the project site through adopted permitted land uses, development standards, infrastructure requirements and implementation requirements for the development within the Specific Plan boundaries. Per the Specific Plan Amendment and EIR, the floor area ratios (FARs) analyzed are less than that which The Ontario Plan allows.

The following summarizes the discretionary approvals to be evaluated in the EIR as part of the Project review and approval process by the City of Ontario.

**General Plan Amendment (GPA).** The proposed GPA would amend the City’s General Plan Land Use Map by changing the existing land use designations of the 71.68-acre Project site from 18 acres of “Business Park” and 54 acres of “Low-Medium Density Residential” to 11.63 acres of “Business Park” and 60.06 acres of “General Industrial,” to facilitate development of the project site.

As part of Senate Bill (SB) 330, an additional GPA will be processed concurrently to increase density elsewhere in the City to achieve no net loss of unit capacity.

**Ontario Ranch Business Park Specific Plan Amendment (SPA).** The SPA proposes a comprehensive land use plan, circulation plan, streetscape plan, infrastructure service plan, grading plan, maintenance plan, phasing plan, design guidelines, development regulations, and implementation measures to guide the development of the 71.68-acre site into a master-planned industrial/business park. The SPA consists of two PAs which would accommodate a variety of commercial, office, technology, manufacturing, and warehouse/ distribution uses. Furthermore, the SPA site is within the Chino Airport’s airport influence area (AIA) but outside the Chino Airport zoning overlay. Land use compatibility assessments are part of the Chino Airport Master Plan. The Project site is within Safety Zone 6, Traffic Pattern Zone of the Chino Airport Overlay (Generic Safety Zones for General Aviation Airports from the Caltrans Division of Aeronautics – California Airport Land Use Planning Handbook). Safety Zone 6 compatibility criteria prohibit people-intensive uses such as stadiums, large daycare centers, hospitals, and nursing homes. In the San Bernardino County Chino Airport Comprehensive Land Use Plan, the site is within Safety Zone III, Traffic Pattern/Overflight Zone. Light industrial and manufacturing uses are acceptable within this zone, provided that they do not generate any visual, electronic, or physical hazards to aircraft. The Airport Land Use Compatibility Plan (ALUCP) for Chino Airport provides additional guidance for development around Chino Airport. The SPA site is not within an existing or current airport noise hazard zone and is in Zone D as designated in the ALUCP.

Furthermore, the SPA site is within the Ontario Airport’s AIA. Land use compatibility assessments for Ontario Airport are included in the facilities Master Plan and ALUCP. The SPA site for the Ontario Airport is not within a safety zone, a noise impact zone, or an airspace protection zone. The SPA site is within an overflight notification zone requiring a real estate transaction disclosure for residential properties; a requirement that does not apply to the SPA site.

The SPA would allow for a maximum buildout of up to 1,640,690 sf of building space for these PAs. PAs 3 and 4 would be located south of Eucalyptus Avenue and north of Merrill Avenue, which is east of Sultana Avenue, and west of Campus Avenue.

- **Business Park:** The SPA would allow up to 227,951 sf of Business Park floor area, consisting of a maximum of 0.45 FAR, less than The Ontario Plan’s standard of 0.60 FAR. PA 3 would comprise 11.63 acres and could be developed with business park buildings with uses such as offices, technology centers, research and development, enterprises, light manufacturing, and warehouse/distribution uses.
- **General Industrial:** The SPA would allow up to 1,412,739 sf of Industrial building space to be constructed within PA 4, consisting of a maximum of 0.54 FAR, as opposed to The Ontario Plan’s standard of 0.55 FAR. PA 4 would comprise 60.06 acres and would allow for the development of uses such as general light industrial, manufacturing, warehouse/distribution, and e-commerce fulfillment center operations.

**Housing Accountability Act (Senate Bill [SB] 330):** The EIR will include evaluation of “replacement housing” in accordance with SB 330, the Housing Crisis Act of 2019 (Government Code Section 6300). SB 330 requires in part that, where a development project results in reducing the number of housing units allowed under existing zoning, the City must concurrently rezone other parcels such that there is no “net loss” of the total allowable housing development in the City. The City has evaluated the proposed project and has determined that it would result in “loss” of approximately 479 low- to moderate-density housing units. The EIR will evaluate the potential environmental impacts of rezoning a proposed replacement site situated along Grove Avenue approximately 5.0 miles from the Project site, for higher density residential uses at a programmatic level, as no specific development has been proposed for the proposed replacement site and no site-specific applications have been submitted to the City at this time.

**Background:** The City is preparing a Subsequent Environmental Impact Report (SEIR) for the project and will be incorporating project-specific mitigation measures along with standard The Ontario Plan (General Plan) set mitigation measures from the Certified Environmental Impact Report (CEIR) prepared for The Ontario Plan that was adopted in 2010. At minimum, the following Cultural Resources mitigation measures will be required for the project:

1. Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be an historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented.
2. In the event of the accidental discovery or recognition of any human remains during excavation/construction, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been contacted and any required investigation or required Native American consultation has been completed.

**General Plan FEIR Cultural Resources Mitigation Measures:**

- 5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals.
- 5-2 In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in-situ preservation plan, based on the recommendation of a qualified cultural preservation expert. The Mitigation plan shall include the following requirements:
  - a) Archaeologist and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.
  - b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.
  - c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/ Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification,

radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.

**Cultural Resources Analysis:** The project is required to prepare a cultural resources impact analysis, the results of which will be included in the project EIR. In March 2020, a phase 1 cultural and paleontological resources assessment records search was provided by the Material Culture Consulting group. A copy of the report's Appendix B: Cultural Resources Records Search Results is enclosed. Further research will need to occur for Phase 2 of the Specific Plan area, should it be developed in the future.

**Lead Agency Contact:** Alexis Vaughn, City of Ontario, 303 East "B" Street, Ontario, California 91764.

Should you have any questions regarding this matter, or require additional information or further clarification, please feel free to contact me by telephone at (909) 395-2416 or by e-mail at [avaughn@ontarioca.gov](mailto:avaughn@ontarioca.gov). Thank you in advance for your timely attention to this matter.

Respectfully,

# CITY OF ONTARIO

## MEMORANDUM

**TO:** Gabrieleno Band of Mission Indians - Kizh Nation, Andrew Salas

**FROM:** Alexis Vaughn, Assistant Planner

**DATE:** July 2, 2021

**SUBJECT:** SB 18 NOTIFICATION – Ontario Ranch Business Park Specific Plan Amendment/Nos. PSPA21-002 & PGPA21-001

---

In an effort to preserve and protect California Native American traditional tribal cultural places, the City of Ontario invites you to consult on the proposed Specific Plan Amendment and General Plan Amendment, pursuant to Government Code Section 65352.3. The City of Ontario recognizes that the proposed project may have impacts to potential cultural resources and encourages tribal participation. It is important for the City and local Tribes to collaborate efforts in order to preserve cultural resources through the local planning process. This notification was prepared by Kimley-Horn and Associates, Inc. on behalf of the City of Ontario.

The project and contact information are provided below:

**Project Name/File No.: Ontario Ranch Business Park Specific Plan Amendment  
(File Nos. PSPA21-001 & PGPA21-001)**

**Project Location:** The project site is bound by Eucalyptus Avenue to the north, existing right-of-way for the future Campus Avenue extension to the east, Merrill Avenue to the south, and unimproved right-of-way for Sultana Avenue to the west. Regional location and local vicinity maps are provided in Exhibit 1, Regional Location Map and Exhibit 2, Vicinity Map, respectively. The project site is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. Regional access is available to the Project site via State Route 83 (SR-83; Euclid Avenue), which is adjacent to the project site, State Route 60 (SR-60) approximately three miles to the north, Interstate 15 (I-15) approximately five miles to the east, and State Route 71 (SR-71) approximately three miles to the southwest. SR-71 connects the project to State Route 91 (SR-91) in unincorporated Riverside County, which is approximately seven miles to the south. The attached exhibits depict the regional location of the site (Exhibit 1); the project vicinity (Exhibit 2); existing and proposed General Plan land use designations (Exhibit 3); and, USGS Map (Exhibit 4).

The proposed Project site consists of eight parcels that are associated with the San Bernardino County Assessor's Parcel Numbers (APNs) presented in Table 1.

**Table 1: Assessor Parcel Numbers**

1054-041-01	1054-041-02
1054-031-01	1054-031-02
1054-261-01	1054-261-02
1054-291-01	1054-291-02

**Project Description:** The proposed project site is currently developed as an operational dairy farm. The site contains two single-family residential structures, a dairy barn, a storage structure, approximately 10 feed storage barns, and numerous livestock corrals. There are large existing retention ponds that collect surface waste accumulations from the dairy farming practices, including animal wastes. Several above-ground storage tanks are present which store housing fuel, water, fresh milk, and livestock feed along with various mechanical systems for dairy production practices. The remainder of the site is used as irrigated cropland with berms located along the site perimeter. The site currently takes access off of Eucalyptus Avenue. The site is fenced with tubular metal fencing.

The project includes a General Plan Amendment and Specific Plan Amendment. Future Applicants will include a Development Agreement, Development Plan(s), and Tentative Parcel Map(s) in the future to allow development of approximately 1.6 million square feet (sf) of industrial and business park land uses on the 71.68-acre site, as described further below. The project is an extension of the Ontario Ranch Business Park Specific Plan boundary, which was approved September 15, 2020, to allow for development of an industrial and business park on eleven parcels covering 85.6 acres in the City of Ontario. The Ontario Ranch Business Park Specific Plan project included eight warehouse buildings ranging from 46,900 sf to 618,353 sf, totaling a maximum development of 1,905,027 sf of warehouse and office uses. This project will extend the Ontario Ranch Business Park Specific Plan project and would annex the abutting approximately 72 acres to the east. The project consists of two planning areas (PAs) adding to the Ontario Ranch Business Park Specific Plan. The proposed PAs 3 and 4 would allow for a total of 1,640,690 sf of industrial and business park uses. The Development Plan currently proposes the construction of six industrial concrete tilt-up warehouse buildings. PA 3 will consist of three buildings utilized for warehousing and ancillary office space, totaling 227,951 sf. PA 4 will consist of industrial and warehousing uses, totaling 1,412,739 sf.

The Environmental Impact Report (EIR) will evaluate the project at a “subsequent level.” The associated EIR will evaluate the total maximum allowable development in the Specific Plan area while still remaining less than The Ontario Plan allowance. The maximum development under the Specific Plan Amendment consists of 1,640,690 sf of industrial and business park land uses and associated on-site and off-site infrastructure improvements. The Specific Plan serves to implement The Ontario Plan General Plan for the land covered by the Specific Plan and provides zoning regulations for development of the project site through adopted permitted land uses, development standards, infrastructure requirements and implementation requirements for the development within the Specific Plan boundaries. Per the Specific Plan Amendment and EIR, the floor area ratios (FARs) analyzed are less than that which The Ontario Plan allows.

The following summarizes the discretionary approvals to be evaluated in the EIR as part of the Project review and approval process by the City of Ontario.

**General Plan Amendment (GPA).** The proposed GPA would amend the City’s General Plan Land Use Map by changing the existing land use designations of the 71.68-acre Project site from 18 acres of “Business Park” and 54 acres of “Low-Medium Density Residential” to 11.63 acres of “Business Park” and 60.06 acres of “General Industrial,” to facilitate development of the project site.

As part of Senate Bill (SB) 330, an additional GPA will be processed concurrently to increase density elsewhere in the City to achieve no net loss of unit capacity.

**Ontario Ranch Business Park Specific Plan Amendment (SPA).** The SPA proposes a comprehensive land use plan, circulation plan, streetscape plan, infrastructure service plan, grading plan, maintenance plan, phasing plan, design guidelines, development regulations, and implementation measures to guide the development of the 71.68-acre site into a master-planned industrial/business park. The SPA consists of two PAs which would accommodate a variety of commercial, office, technology, manufacturing, and warehouse/distribution uses. The SPA site is within the Chino Airport's airport influence area (AIA) but outside the Chino Airport zoning overlay. Land use compatibility assessments are part of the Chino Airport Master Plan. The Project site is within Safety Zone 6, Traffic Pattern Zone of the Chino Airport Overlay (Generic Safety Zones for General Aviation Airports from the Caltrans Division of Aeronautics – California Airport Land Use Planning Handbook). Safety Zone 6 compatibility criteria prohibit people intensive uses such as stadiums, large daycare centers, hospitals, and nursing homes. In the San Bernardino County Chino Airport Comprehensive Land Use Plan, the site is within Safety Zone III, Traffic Pattern/Overflight Zone. Light industrial and manufacturing uses are acceptable within this zone, provided that they do not generate any visual, electronic, or physical hazards to aircraft. The Airport Land Use Compatibility Plan (ALUCP) for Chino Airport provides additional guidance for development around Chino Airport. The SPA site is not within an existing or current airport noise hazard zone and is in Zone D as designated in the ALUCP.

Furthermore, the SPA site is within the Ontario Airport's AIA. Land use compatibility assessments for Ontario Airport are included in the facilities Master Plan and ALUCP. The SPA site is not within a safety zone, a noise impact zone, or an airspace protection zone. The SPA site is within an overflight notification zone requiring a real estate transaction disclosure for residential properties; a requirement that does not apply to the SPA site.

The SPA would allow for a maximum buildout of up to 1,640,690 sf of floor area for these PAs. PAs 3 and 4 would be located south of Eucalyptus Avenue and north of Merrill Avenue, which is east of the Sultana Avenue and west of Campus Avenue.

- **Business Park:** The SPA would allow up to 227,951 sf of Business Park floor area, consisting of a maximum of 0.45 FAR, less than The Ontario Plan's standard of 0.60 FAR. PA 3 would comprise 11.63 acres and could be developed with business park buildings with uses such as offices, technology centers, research and development, enterprises, light manufacturing, and warehouse/distribution uses.
- **General Industrial:** The SPA would allow up to 1,412,739 sf of Industrial building space to be constructed within PA 4, consisting of a maximum of 0.54 FAR, as opposed to The Ontario Plan's standard of 0.55 FAR. PA 4 would comprise 60.06 acres and would allow for the development of uses such as general light industrial, manufacturing, warehouse/distribution, and e-commerce fulfillment center operations.

**Housing Accountability Act (Senate Bill [SB] 330):** The EIR will include evaluation of "replacement housing" in accordance with SB 330, the Housing Crisis Act of 2019 (Government Code Section 6300). SB 330 requires in part, that where a development project results in reducing the number of housing units allowed under existing zoning, the City must concurrently rezone other parcels such that there is no "net loss" of the total allowable housing development in the City. The City has evaluated the proposed project and has determined that it would result in "loss" of approximately 479 low- to moderate-density housing units. The EIR will evaluate the potential environmental impacts of rezoning a proposed replacement site

situated along Grove Avenue approximately 5.0 miles from the Project site, for higher density residential uses at a programmatic level, as no specific development has been proposed for the proposed replacement site and no site-specific applications have been submitted to the City at this time.

**Background:** The City is preparing a Subsequent EIR (SEIR) for the project and will be incorporating project-specific mitigation measures along with standard The Ontario Plan (General Plan) set mitigation measures from the Certified Environmental Impact Report (CEIR) prepared for The Ontario Plan that was adopted in 2010. At minimum, the following Cultural Resources mitigation measures will be required for the project:

1. Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be an historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, avoidance or other appropriate measures shall be implemented.
2. In the event of the accidental discovery or recognition of any human remains during excavation/construction, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been contacted and any required investigation or required Native American consultation has been completed.

**General Plan FEIR Cultural Resources Mitigation Measures:**

- 5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals.
- 5-2 In areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in-situ preservation plan, based on the recommendation of a qualified cultural preservation expert. The Mitigation plan shall include the following requirements:
- a) Archaeologist and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.
  - b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.

I would like to assure you that the City of Ontario will enforce all above mitigation measures as set forth in the General Plan FEIR. In addition, project specific mitigations measures identified in the project's EIR will also be enforced.

**Lead Agency Contact:** Alexis Vaughn, City of Ontario, 303 East "B" Street, Ontario, California 91764.

In accordance with Government Code section 65352.3 (a)(2), please respond to this request for consultation within 90 days following receipt of this notification.

Should you have any questions regarding this matter, or require additional information or further clarification, please feel free to contact me by telephone at (909) 395-2416 or by e-mail at [avaughn@ontarioca.gov](mailto:avaughn@ontarioca.gov). Thank you in advance for your timely attention to this matter.

Respectfully,

Gentlemen:

In accordance with your request, we have conducted a geotechnical feasibility study at the subject site. We are pleased to present this report summarizing the conclusions and recommendations developed from our investigation.

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

**SOUTHERN CALIFORNIA GEOTECHNICAL, INC.**

# 1.0 EXECUTIVE SUMMARY

---

Presented below is a brief summary of the conclusions and recommendations of this investigation. Since this summary is not all inclusive, it should be read in complete context with the entire report.

It should be noted that this investigation was focused on determining the geotechnical feasibility of the proposed development. **This report is not a design-level investigation. Future studies will be necessary to refine the preliminary design parameters that are presented within this report.**

## **Preliminary Geotechnical Design Considerations and Recommendations**

- Demolition of the existing structures should include all foundations, floor slabs, utilities, septic systems, and any other subsurface improvements that will not remain in place for use with the new development. Debris resultant from demolition should be disposed of offsite. Alternatively, concrete and asphalt debris may be pulverized to a maximum 2-inch particle size, well mixed with the on-site soils, and incorporated into new structural fills.
- Site stripping should remove all vegetation, organic soils, and root masses. The active cattle pen areas should be stripped of any manure. In addition, organic topsoil was encountered at the trench locations performed within the planted areas of the site. These highly organic soils extend to depths of 6 to 12± inches at the trench locations. All of the manure, vegetation, and any organic topsoil should be removed from the site or be placed in nonstructural areas of the site, such as landscape planters.
- Some of the soils in the upper 2 to 3± feet, located beneath the highly organic topsoil in the planted areas, possess organic contents greater than 3 percent. It may be feasible to use these soils in fills, provided that they are cleaned of appreciable organic materials and can be blended with the underlying soils in order to reduce the organic content to less than 3 percent throughout.
- The near-surface soils possess low to medium expansion potentials.
- The near-surface soils are considered to be corrosive to ferrous metals, including ductile iron pipe.
- Existing undocumented fill soils were encountered at most of the boring and trench locations, extending to depths of 1½ to 8½± feet.
- The proposed development is considered to be feasible with respect to the geotechnical conditions encountered at the boring and trench locations at the site. However, remedial grading will be necessary in order to support the proposed structures on conventional shallow foundation systems. Preliminary remedial grading and foundation design recommendations have been provided herein, based on the preliminary site plan, assumed site grading, and assumed foundation loads.
- Remedial grading should be performed within the proposed building area, to remove the undocumented fill soils, as well as the upper portion of the alluvial soils, and replace these materials as structural compacted fill.
- Preliminarily, the overexcavation within the building area is also recommended to extend to a depth of at least 4 to 6 feet below existing site grades. The overexcavation should also extend to a depth of at least 3 feet below bearing grade within the influence zones of any new foundations. Deeper overexcavation will be necessary in localized areas to remove

undocumented fill soils. These recommendations are subject to review and may be revised based on the results of the design-level geotechnical investigation.

- Preliminarily, the new parking area subgrade soils are recommended to be scarified to a depth of 12± inches, moisture conditioned or air dried to within 2 to 4 percent above the optimum moisture content and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density.

### Preliminary Foundation Design Recommendations

- Conventional shallow foundations, supported in newly placed compacted fill.
- 2,000 to 3,000 lbs/ft<sup>2</sup> maximum allowable soil bearing pressure.
- The design of the foundations will depend on the results of the future design-level geotechnical study. Minimum reinforcement consisting of four (4) to six (6) No. 5 rebars in strip footings. Additional reinforcement may be necessary for structural considerations.

### Preliminary Floor Slab Design Recommendations

- Conventional slab-on-grade, minimum 6 to 7 inches thick.
- The design of the floor slabs will depend on the results of the future design-level geotechnical study. Based on the presence of low to medium expansive soils, a reinforced floor slabs will likely be necessary. The actual thickness and reinforcement of the floor slabs should be determined by the structural engineer.

### Preliminary Pavement Design Recommendations

<b>ASPHALT PAVEMENTS (R = 10)</b>					
<b>Materials</b>	<b>Thickness (inches)</b>				
	Automobile Parking (TI = 4.0)	Automobile Drive Lanes (TI = 5.0)	Truck Traffic		
			(TI = 6.0)	(TI = 7.0)	(TI = 8.0)

<b>PORTLAND CEMENT CONCRETE PAVEMENTS (R= 10)</b>			
<b>Materials</b>	<b>Thickness (inches)</b>		
	Automobile and Light Truck Traffic (TI = 5.0 & 6.0)	Truck Traffic	
		(TI = 7.0)	(TI = 8.0)
PCC	5	5½	7
Compacted Subgrade (95% minimum compaction)	12	12	12

## **2.0 SCOPE OF SERVICES**

---

The scope of services performed for this project was in general accordance with our Proposal No. 19P455, dated December 23, 2019. The scope of services included a visual site reconnaissance, subsurface exploration, field and laboratory testing, and geotechnical engineering analysis to determine the geotechnical feasibility of the proposed development. The evaluation of the environmental aspects of this site was beyond the scope of services for this geotechnical feasibility study.

## **3.0 SITE AND PROJECT DESCRIPTION**

---

### **3.1 Site Conditions**

The subject site is located at the southeast corner of Eucalyptus Avenue and Sultana Avenue in Ontario, California. The site is bounded to the north by Eucalyptus Avenue, to the west by a Sultana Avenue easement, to the south by Merrill Avenue, and to the east by a Campus Avenue easement. The general location of the site is illustrated on the Site Location Map, enclosed as Plate 1 in Appendix A of this report.

The subject site consists of a rectangular shaped parcel, 75± acres in size. The site is currently developed as an operational dairy farm. The northeastern portion of the site is developed with cattle pens with multiple canopy structures, farm houses, and structures associated with milking activities. The buildings appear to be single-story structures of wood frame construction and the canopies appear to be of metal frame construction. We expect that all of these structures are supported on conventional shallow foundations. Ground surface cover in the northeastern portion of the site structures generally consists of turf grass, asphaltic concrete, and concrete pavements surrounding the farm houses and the other structures, manure in the cattle pen areas, and exposed soils with sparse native grass and weed growth in the remaining areas. The northwestern portion and southern one-third of the site are planted with row crops.

Detailed topographic information was not available at the time of this report. Based on visual observations made at the time of the subsurface investigation and from elevation information obtained from Google Earth, the overall site topography generally slopes downward to the southwest at a gradient of 1± percent.

### **3.2 Proposed Development**

No conceptual site plan was available at the time of this report. Based on similar projects in the area and our conversations with the client, we expect that the proposed development will consist of one (1) commercial/industrial building approximately 1,000,000 to 1,250,000 ft<sup>2</sup> in size. We expect that the new building will possess dock-high doors on at least one side. We expect that the building will be surrounded by asphaltic concrete pavements in the parking and drive areas, Portland cement concrete pavements in the truck court areas, areas of concrete flatwork, and landscape planters.

Detailed structural information has not been provided. It is assumed that the new building will be a single-story structure of tilt-up concrete construction, typically supported on a conventional shallow foundation system with concrete slab-on-grade floor. Based on the assumed construction, maximum column and wall loads are expected to be on the order of 100 kips and 4 to 7 kips per linear foot, respectively.

No significant amounts of below grade construction, such as basements or crawl spaces, are expected to be included in the proposed development. Based on the assumed topography, cuts

and fills of 12 to 15± feet are expected to be necessary to achieve the proposed site grades.

## **4.0 SUBSURFACE EXPLORATION**

---

### **4.1 Scope of Exploration/Sampling Methods**

The subsurface exploration conducted for this project consisted of three (3) borings (identified as Boring Nos. B-1 through B-3) advanced to depths of 35 to 40± feet below the existing site grades. Additionally, four (4) trenches were excavated to depths of 6½ to 10± feet below the existing site grades. All of the borings and trenches were logged during drilling by a member of our staff.

The borings were advanced with hollow-stem augers, by a conventional truck-mounted drilling rig. The trenches were excavated using a backhoe with a 24-inch-wide bucket. Representative bulk and relatively undisturbed soil samples were taken during drilling. Relatively undisturbed soil samples were taken with a split barrel "California Sampler" containing a series of one-inch-long, 2.416±-inch-diameter brass rings. This sampling method is described in ASTM Test Method D-3550. Samples were also taken using a 1.4± inch inside diameter split spoon sampler, in general accordance with ASTM D-1586. Both of these samplers are driven into the ground with successive blows of a 140-pound weight falling 30 inches. The blow counts obtained during driving are recorded for further analysis. Bulk samples were collected in plastic bags to retain their original moisture content. The relatively undisturbed ring samples were placed in molded plastic sleeves that were then sealed and transported to our laboratory.

The approximate boring and trench locations are indicated on the Boring and Trench Location Plan, included as Plate 2 in Appendix A of this report. The Boring and Trench Logs, which illustrate the conditions encountered at the boring and trench locations, as well as the results of some of the laboratory testing, are included in Appendix B.

### **4.2 Geotechnical Conditions**

#### Topsoil

Highly organic topsoil materials were encountered at the trench locations performed in the planted areas on the site. At Trench Nos. T-1, T-2, and T-4, these materials were approximately 6 to 12± inches in thickness. These materials generally consist of silty fine sands and contain abundant fine root fibers and/or other fibrous organic material.

#### Artificial Fill

Artificial fill soils were encountered at the ground surface at all of the boring locations and at Trench No. T-3. The fill soils encountered at the boring and trench locations extend to depths of 1½ to 8½± feet and consist of loose to medium dense silty fine sands and fine sandy silts, and medium stiff to stiff clayey sands and sandy clays with occasional silty clays. The fills soils encountered in the planted areas of the site contain appreciable roots and organic fibers. The fill

soils generally possess a disturbed appearance and some samples possess minor debris content, such as asphaltic concrete fragments, resulting in their classification as artificial fill.

### Alluvium

Native alluvial soils were encountered beneath the fill at all of the boring locations and beneath the topsoil or fill materials at all of the trench locations. The near surface alluvium generally consists of loose to medium dense silty fine sands to fine sandy silts, fine to medium sands, clayey fine sands and medium stiff to stiff fine sandy clays, silty clays, and clayey silts. Dense silty sands were encountered between depths of  $38\frac{1}{2}\pm$  feet and the maximum depth explored of  $40\pm$  feet in two of the boring locations.

### Groundwater

Free water was not encountered during the drilling of any of the borings. Based on the lack of any water within the borings, and the moisture contents of the recovered soil samples, the static groundwater is considered to have been present at a depth in excess of  $30\pm$  feet at the time of the subsurface exploration.

As part of our research, we reviewed available groundwater data in order to determine regional groundwater depths. Recent water level data was obtained from the California State Water Resources Control Board, GeoTracker website, <http://geotracker.waterboards.ca.gov/>. Available data for monitoring wells, located approximately 4,200± feet west from the site, indicate high groundwater levels ranging from  $83\pm$  feet below ground surface.

## **5.0 LABORATORY TESTING**

---

The soil samples recovered from the subsurface exploration were returned to our laboratory for further testing to determine selected physical and engineering properties of the soils. The tests are briefly discussed below. It should be noted that the test results are specific to the actual samples tested, and variations could be expected at other locations and depths.

### Classification

All recovered soil samples were classified using the Unified Soil Classification System (USCS), in accordance with ASTM D-2488. The field identifications were then supplemented with additional visual classifications and/or by laboratory testing. The USCS classifications are shown on the Boring Logs and are periodically referenced throughout this report.

### Dry Density and Moisture Content

The density has been determined for selected relatively undisturbed ring samples. These densities were determined in general accordance with the method presented in ASTM D-2937. The results are recorded as dry unit weight in pounds per cubic foot. The moisture contents are determined in accordance with ASTM D-2216, and are expressed as a percentage of the dry weight. These test results are presented on the Boring and Trench Logs.

### Consolidation

Selected soil samples have been tested to determine their consolidation potential, in accordance with ASTM D-2435. The testing apparatus is designed to accept either natural or remolded samples in a one-inch high ring, approximately 2.416 inches in diameter. Each sample is then loaded incrementally in a geometric progression and the resulting deflection is recorded at selected time intervals. Porous stones are in contact with the top and bottom of the sample to permit the addition or release of pore water. The samples are typically inundated with water at an intermediate load to determine their potential for collapse or heave. The results of the consolidation testing are plotted on Plates C-1 through C-4 in Appendix C of this report.

### Maximum Dry Density and Optimum Moisture Content

A representative bulk sample was tested to determine its maximum dry density and optimum moisture content. The results have been obtained using the Modified Proctor procedure, per ASTM D-1557, and are presented on Plate C-5 in Appendix C of this report. This test is generally used for comparison with the in-situ densities of undisturbed field samples, and for later compaction testing. Additional testing of other soil types or soil mixes may be necessary at a later date.

### Soluble Sulfates

Representative samples of the near-surface soils were submitted to a subcontracted analytical laboratory for determination of soluble sulfate content. Soluble sulfates are naturally present in soils, and if the concentration is high enough, can result in degradation of concrete which comes

into contact with these soils. The results of our soluble sulfate testing are presented below, and are discussed further in a subsequent section of this report.

<b><u>Sample Identification</u></b>	<b><u>Soluble Sulfates (%)</u></b>	<b><u>Sulfate Classification</u></b>
B-2 @ 0 to 5 feet	0.032	Not Applicable (S0)
T-1 @ 0 to 5 feet	0.003	Not Applicable (S0)
T-4 @ 0 to 5 feet	0.002	Not Applicable (S0)

### Corrosivity Testing

Representative bulk samples of the near-surface soils were submitted to a subcontracted analytical laboratory for determination of electrical resistivity, pH, and chloride concentrations. The resistivity of the soils is a measure of their potential to attack buried metal improvements such as utility lines. The results of the resistivity and pH testing are presented below:

<b><u>Sample Identification</u></b>	<b><u>Resistivity</u></b> (ohm-cm)	<b><u>pH</u></b>	<b><u>Chlorides</u></b> (mg/kg)
B-2 @ 0 to 5 feet	1,320	7.2	125
T-1 @ 0 to 5 feet	2,880	8.0	16
T-4 @ 0 to 5 feet	2,080	7.7	24

### Expansion Index

The expansion potential of the on-site soils was determined in general accordance with ASTM D-4829 as required by the California Building Code (CBC). The testing apparatus is designed to accept a 4-inch diameter, 1-in high, remolded sample. The sample is initially remolded to 50± 1 percent saturation and then loaded with a surcharge equivalent to 144 pounds per square foot. The sample is then inundated with water, and allowed to swell against the surcharge. The resultant swell or consolidation is recorded after a 24-hour period. The results of the EI testing are as follows:

<b><u>Sample Identification</u></b>	<b><u>Expansion Index</u></b>	<b><u>Expansive Potential</u></b>
B-1 @ 0 to 5 feet	45	Low
T-1 @ 0 to 5 feet	53	Medium

### Organic Content Testing

Selected soil samples have been tested to determine their organic content, in accordance with ASTM Test Method 2974. The results of the testing are as follows:

<b><u>Sample Identification</u></b>	<b><u>Organic Content (%)</u></b>
T-1 @ 0 to 6 inches	13.5
T-1 @ 6 to 12 inches	5.4
T-1 @ 12 to 18 inches	3.8

**Sample Identification**

**Organic Content (%)**

T-1 @ 18 to 24 inches	2.8
T-1 @ 30 to 36 inches	2.1
T-2 @ 0 to 6 inches	2.2
T-2 @ 6 to 12 inches	2.6
T-2 @ 12 to 18 inches	2.9
T-2 @ 18 to 24 inches	4.6
T-2 @ 24 to 30 inches	1.5
T-2 @ 30 to 36 inches	1.5
T-3 @ 0 to 6 inches	26.4
T-3 @ 6 to 12 inches	15.4
T-3 @ 12 to 18 inches	6.2
T-3 @ 18 to 24 inches	2.7
T-3 @ 24 to 30 feet	2.0
T-4 @ 0 to 6 inches	21.1
T-4 @ 6 to 12 inches	10.3
T-4 @ 12 to 18 inches	6.2
T-4 @ 18 to 24 inches	4.7
T-4 @ 30 to 36 inches	2.9

## **6.0 CONCLUSIONS AND RECOMMENDATIONS**

---

Based on the results of our review, field exploration, laboratory testing and geotechnical analysis, the proposed development is considered feasible from a geotechnical standpoint. **Based on the preliminary nature of this investigation, further geotechnical investigation(s) will be required prior to construction of the proposed development.** The preliminary recommendations contained in this report should be taken into the design, construction, and grading considerations. The recommendations are contingent upon all grading and foundation construction activities being monitored by the geotechnical engineer of record.

The Grading Guide Specifications, included as Appendix D, should be considered part of this report, and should be incorporated into the project specifications. The contractor and/or owner of the development should bring to the attention of the geotechnical engineer any conditions that differ from those stated in this report, or which may be detrimental for the development.

### **6.1 Seismic Design Considerations**

The subject site is located in an area which is subject to strong ground motions due to earthquakes. The performance of a site-specific seismic hazards analysis was beyond the scope of this investigation. However, numerous faults capable of producing significant ground motions are located near the subject site. Due to economic considerations, it is not generally considered reasonable to design a structure that is not susceptible to earthquake damage. Therefore, significant damage to structures may be unavoidable during large earthquakes. The proposed structures should, however, be designed to resist structural collapse and thereby provide reasonable protection from serious injury, catastrophic property damage and loss of life.

#### Faulting and Seismicity

Research of available maps indicates that the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, SCG did not identify any evidence of faulting during the geotechnical investigation. Therefore, the possibility of significant fault rupture on the site is considered to be low.

#### Seismic Design Parameters

The California Building Code (CBC) provides procedures for earthquake resistant structural design that include considerations for on-site soil conditions, occupancy, and the configuration of the structure including the structural system and height. The seismic design parameters presented below are based on the soil profile and the proximity of known faults with respect to the subject site.

Based on standards in place at the time of this report, the proposed development is expected to be designed in accordance with the requirements of the 2019 edition of the California Building Code (CBC), which was adopted on January 1, 2020.

The 2019 CBC Seismic Design Parameters have been generated using the SEAOC/OSHPD Seismic Design Maps Tool, a web-based software application available at the website [www.seismicmaps.org](http://www.seismicmaps.org). This software application calculates seismic design parameters in accordance with several building code reference documents, including ASCE 7-16, upon which the 2019 CBC is based. The application utilizes a database of risk-targeted maximum considered earthquake ( $MCE_R$ ) site accelerations at 0.01-degree intervals for each of the code documents. The tables below were created using data obtained from the application. The output generated from this program is included as Plate E-1 in Appendix E of this report.

The 2019 CBC requires that a site-specific ground motion study be performed in accordance with Section 11.4.8 of ASCE 7-16 for Site Class D sites with a mapped  $S_1$  value greater than 0.2. However, Section 11.4.8 of ASCE 7-16 also indicates an exception to the requirement for a site-specific ground motion hazard analysis for certain structures on Site Class D sites. The commentary for Section 11 of ASCE 7-16 (Page 534 of Section C11 of ASCE 7-16) indicates that "In general, this exception effectively limits the requirements for site-specific hazard analysis to very tall and or flexible structures at Site Class D sites." **Based on our understanding of the proposed development, the seismic design parameters presented below were calculated assuming that the exception in Section 11.4.8 applies to the proposed structure at this site. However, the structural engineer should verify that this exception is applicable to the proposed structure.** Based on the exception, the spectral response accelerations presented below were calculated using the site coefficients ( $F_a$  and  $F_v$ ) from Tables 1613.2.3(1) and 1613.2.3(2) presented in Section 16.4.4 of the 2019 CBC.

### 2019 CBC SEISMIC DESIGN PARAMETERS

Parameter		Value
Mapped Spectral Acceleration at 0.2 sec Period	$S_s$	1.668
Mapped Spectral Acceleration at 1.0 sec Period	$S_1$	0.597
Site Class	---	D
Site Modified Spectral Acceleration at 0.2 sec Period	$S_{MS}$	1.668
Site Modified Spectral Acceleration at 1.0 sec Period	$S_{M1}$	1.017
Design Spectral Acceleration at 0.2 sec Period	$S_{DS}$	1.112
Design Spectral Acceleration at 1.0 sec Period	$S_{D1}$	0.678

It should be noted that the site coefficient  $F_v$  and the parameters  $S_{M1}$  and  $S_{D1}$  were not included in the SEAOC/OSHPD Seismic Design Maps Tool output for the 2019 CBC. We calculated these parameters-based on Table 1613.2.3(2) in Section 16.4.4 of the 2019 CBC using the value of  $S_1$  obtained from the Seismic Design Maps Tool, assuming that a site-specific ground motion hazards analysis is not required for the proposed buildings at this site.

### Liquefaction

Liquefaction is the loss of strength in generally cohesionless, saturated soils when the pore-water pressure induced in the soil by a seismic event becomes equal to or exceeds the overburden pressure. The primary factors which influence the potential for liquefaction include groundwater table elevation, soil type and plasticity characteristics, relative density of the soil, initial confining

pressure, and intensity and duration of ground shaking. The depth within which the occurrence of liquefaction may impact surface improvements is generally identified as the upper 50 feet below the existing ground surface. Liquefaction potential is greater in saturated, loose, poorly graded fine sands with a mean ( $d_{50}$ ) grain size in the range of 0.075 to 0.2 mm (Seed and Idriss, 1971). Non-sensitive clayey (cohesive) soils which possess a plasticity index of at least 18 (Bray and Sancio, 2006) are generally not considered to be susceptible to liquefaction, nor are those soils which are above the historic static groundwater table.

Research of the San Bernardino County Land Use Services website indicates that the subject site is not located within a zone of liquefaction susceptibility. In addition, the subsurface conditions at the boring locations are not considered to be conducive to liquefaction. Based on the mapping performed by San Bernardino County and the conditions encountered at the boring and trench locations, liquefaction is not considered to be a design concern for this project.

## **6.2 Geotechnical Design Considerations**

### General

Although not encountered at the boring and trench locations, the active cattle pen areas visually observed to be covered with manure at the ground surface. Organic topsoil was also encountered at the trench locations performed with the planted areas of the site. These highly organic soils extend to depths of 6 to 12± inches at the trench locations. All of the manure and any organic topsoil should be removed from the site or utilized in non-structural areas, such as landscape planters.

Additionally, some of the soils in the upper 2 to 3± feet, located beneath the highly organic topsoil in the planted areas, possess organic contents greater than 3 percent. The fill soils at Trench No. T-3 also possess organic contents in excess of 3 percent. It may be feasible to use these soils in fills, provided that they are cleaned of highly organic materials and can be blended with the underlying soils in order to reduce the organic content to less than 3 percent throughout.

Artificial fill soils were encountered at all of the borings and one of the trench locations, extending to depths of 1½ to 8½± feet. These fill soils vary in strength and composition, and some samples include varying amounts of debris, including brick fragments. Based on their variable strengths and composition, the existing fill soils encountered at Trench No. T-3 and the boring locations are considered to represent undocumented fill.

The undocumented fill soils and the upper portion of the near surface native alluvium are not considered suitable for support of the new structure, in their present condition. Remedial grading will be necessary within the proposed building areas in order to remove and replace the existing fill and a portion of the near-surface alluvium as compacted structural fill.

### Settlement

The remedial grading should be performed to remove the existing undocumented fill soils as well as a portion of the near-surface native alluvium, and replace these materials as compacted structural fill. The overexcavation should extend to a sufficient depth so that the native soils that

will remain in place below the recommended depth of overexcavation will not be subject to significant load increases from the foundations of the new structures. Provided that the remedial grading is completed, the post-construction static settlements can be limited within tolerable limits.

### Soluble Sulfates

The results of the soluble sulfate testing, as discussed in Section 5.0 of this report, indicate soluble sulfate concentrations between 0.002 and 0.032 percent. These concentrations are considered to be negligible with respect to the American Concrete Institute (ACI) Publication 318-05 Building Code Requirements for Structural Concrete and Commentary, Section 4.3. Therefore, specialized concrete mix designs are not considered to be necessary, with regard to sulfate protection purposes. We recommend that additional soluble sulfate testing be conducted during the design-level geotechnical investigation and at the completion of rough grading to verify the soluble sulfate concentrations of the soils which are present at the proposed building pad grades.

### Expansion

The composition of the near surface soils at this site ranges from sands, silty sands, and sandy silts to silty clays, sandy clays, and clayey silts. Laboratory testing performed on representative samples of these materials indicate that they possess low to medium expansion potentials (EI = 43 to 52). Based on the presence of potentially expansive soils, special care should be taken to properly moisture condition and maintain adequate moisture content within all subgrade soils as well as newly placed fill soils. The preliminary foundation and floor slab design recommendations contained within this feasibility study are made in consideration of the expansion index test results. We recommend that additional expansion index testing be performed at the time of the design-level geotechnical investigation.

### Organic Content

We recommend that all manure and any organic topsoil be removed during initial site stripping. Manure was observed in the cattle pen areas. The near surface soils extending to depths of 6 to 12± inches in the planted areas generally consist of highly organic topsoil. Therefore, grubbing and segregating of the manure in the cattle pens and the highly organic soils in the planted areas will be necessary prior to grading. These soils should be removed from the site or reutilized in nonstructural areas, such as landscape planters. Any additional organic materials encountered in buried fills should also be segregated during grading.

The results of laboratory testing performed on near-surface soils beneath the organic topsoil (within the planted areas) indicates that soils within the upper 1 to 2± feet possess organic contents ranging from 2.8 to 6.2 percent. The soils present between depths of 2 and 3± possess organic contents ranging between 1.5 and 2.9 percent. It is considered feasible to use most of these soils, not including the manure and organic topsoil, in the upper 2 to 3± in structural fills, provided that these soils are cleaned of all apparent vegetation or highly organic material and thoroughly blended with the inorganic soils from greater depths at the site. Based on our experience with similar projects in the vicinity of the project site, a final mixture containing less than 3 percent organic content is acceptable for the project site. It is recommended that additional organic testing be conducted during the design-level geotechnical investigation and at the

completion of rough grading of the building pads in order to verify that the organic contents of the blended on-site soils are within the acceptable limits.

### Corrosion Potential

The results of laboratory testing indicate that the tested samples of the near surface soils possess resistivity values ranging between 1,320 to 2,880 ohm-cm, and pH values ranging between 7.2 to 8.0. These test results have been evaluated in accordance with guidelines published by the Ductile Iron Pipe Research Association (DIPRA). The DIPRA guidelines consist of a point system by which characteristics of the soils are used to quantify the corrosivity characteristics of the site. Resistivity, pH, Sulfides, and redox potential are factors that enter into the evaluation procedure. Relative soil moisture content is also considered. **Based on these factors, and utilizing the DIPRA procedure, the on-site soils are considered to be severely corrosive to ductile iron pipe. Therefore, protection for embedded metal improvements is expected to be required.** Since SCG does not practice in the area of corrosion engineering, the client may also wish to contact a corrosion engineer to provide a more thorough evaluation.

The results of chloride content testing indicate that the on-site soils possess chloride concentrations ranging between 16 to 125 parts per million (ppm). The Caltrans Memo to Designers 10-5, Protection of Reinforcement Against Corrosion Due to Chlorides, Acids and Sulfates, dated June 2010, indicates that soils possessing chloride concentrations greater than 500 ppm are considered to be corrosive. The chloride concentrations present in the soils tested are not considered to constitute a "corrosive" exposure to steel reinforcement within reinforced concrete. However, based on our experience with other dairy projects, soils present in cattle pen areas may possess chloride concentrations above 500 ppm. **Therefore, we recommend that additional chloride content testing be performed on soils located within the cattle pen areas at the time of the design level investigation.**

### Shrinkage/Subsidence

Removal and recompaction of the near-surface native fill soils is estimated to result in an average shrinkage of 7 to 17 percent. Additional exploration during the design level investigation will help to refine the potential shrinkage estimate. It should be noted that the potential shrinkage estimates are based on dry density testing performed on small-diameter samples taken at the boring locations. If a more accurate and precise shrinkage estimate is desired, SCG can perform a shrinkage study involving several excavated test-pits where in-place densities are determined using in-situ testing methods instead of laboratory density testing on small-diameter samples. Please contact SCG for details and a cost estimate regarding a shrinkage study, if desired.

Minor ground subsidence is expected to occur in the soils below the zone of removal, due to settlement and machinery working. The subsidence is estimated to be 0.10 feet.

These estimates are based on previous experience and the subsurface conditions encountered at the boring locations. The actual amount of subsidence is expected to be variable and will be dependent on the type of machinery used, repetitions of use, and dynamic effects, all of which are difficult to assess precisely.

## Grading and Foundation Plan Review

No grading or foundation plans were available at the time of this report. It is therefore recommended that we be provided with copies of the preliminary plans, when they become available, for review with regard to the conclusions, recommendations, and assumptions contained within this report. These plans should also be made available prior to performance of the design level geotechnical investigation.

### **6.3 Preliminary Site Grading Recommendations**

The preliminary grading recommendations presented below are based on the design details that were available at the time of this report, and the subsurface conditions encountered at our boring and trench locations. These recommendations are general in nature, and should be confirmed as part of the design level geotechnical investigation.

#### Site Stripping and Demolition

Initial site stripping should include removal of all manure, highly organic soils, and any surficial vegetation. The actual extent of site stripping should be determined in the field by the geotechnical engineer, based on the organic content and stability of the materials encountered.

The proposed development will require demolition of the existing buildings, dairy structures and pavements. Additionally, any existing improvements that will not remain in place for use with the new development should be removed in their entirety. This should include all foundations, floor slabs, utilities, and any other subsurface improvements associated with the existing structures. The existing pavements are not expected to be reused with the new development. Debris resultant from demolition should be disposed of offsite. Alternatively, concrete and asphalt debris may be pulverized to a maximum 2-inch particle size, well mixed with the on-site soils, and incorporated into new structural fills or it may be crushed and made into CMB, if desired.

#### Treatment of Existing Soils: Building Pads

Remedial grading will be necessary within the proposed building pad areas to remove all of the existing undocumented fill soils and near-surface alluvial soils and to provide a uniform blanket of compacted fill upon which to support the proposed structures. Based on the conditions at the boring and trench locations, the depths of fill of range from 1½ to 8½± feet below ground surface. The actual depth of overexcavation should be refined during the design level geotechnical investigation. On a preliminary basis, overexcavation to depths of 4 to 6± feet below existing site grades should be anticipated, with localized areas of deeper excavation to remove deeper undocumented fills. Within foundation influence zones, overexcavation to depths of about 3± feet below foundation bearing grade will be necessary. Please note that adverse geotechnical conditions encountered during the design level investigation could result in additional overexcavation requirements.

The overexcavation areas should extend at least 5 feet beyond the building perimeters and foundations, and to an extent equal to the depth of fill below the new foundations. If the proposed structures incorporate any exterior columns (such as for a canopy or overhang) the overexcavation should also encompass these areas.

**Based on conditions encountered at the exploratory boring locations, very moist soils will be encountered at or near the base of the recommended overexcavation.**

Stabilization of the exposed overexcavation subgrade soils is likely to be necessary. Scarification and air drying of these materials may be sufficient to obtain a stable subgrade. However, if highly unstable soils are identified, and if the construction schedule does not allow for delays associated with drying, mechanical stabilization, usually consisting of coarse crushed stone or geotextile, could be necessary. In this event, the geotechnical engineer should be contacted for supplementary recommendations. Chemical stabilization using lime or cement may also be an acceptable alternative.

Treatment of Existing Soils: Retaining Walls and Site Walls

Although not indicated on the site plan, it may be necessary to construct some small retaining walls or site walls at or near the existing surface grade. Overexcavation will also be necessary in these areas to remove the existing fill soils and lower strength alluvium. The overexcavation depth should be expected to be on the order of 2 to 3 feet below proposed foundation bearing grade.

Treatment of Existing Soils: Parking and Drive Areas

Based on economic considerations, overexcavation of the existing soils in the new parking and drive areas is not considered warranted, with the exception of areas where lower strength, or unstable soils are identified by the geotechnical engineer during grading.

Subgrade preparation in the new parking areas should initially consist of removal of all soils disturbed during stripping and demolition operations. The geotechnical engineer should then evaluate the subgrade to identify any areas of additional unsuitable soils. The subgrade soils should then be scarified to a depth of 12± inches, moisture conditioned to within 2 to 4 percent above the optimum moisture content, and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. Based on the presence of variable strength soils throughout the site, it is expected that some isolated areas of additional overexcavation may be required to remove zones of lower strength, unsuitable soils.

The grading recommendations presented above for the proposed parking and drive areas assume that the owner and/or developer can tolerate minor amounts of settlement within the proposed parking areas. The grading recommendations presented above do not mitigate the extent of undocumented fill soils and low strength alluvium in the parking areas. As such, settlement and associated pavement distress could occur. Typically, repair of such distressed areas involves significantly lower costs than completely mitigating these soils at the time of construction. If the owner cannot tolerate the risk of such settlements, the parking and drive areas should be overexcavated to a depth of 2 feet below proposed pavement subgrade elevation, with the resulting soils replaced as compacted structural fill.

Fill Placement

- Fill soils should be placed in thin (6± inches), near-horizontal lifts, moisture conditioned or air dried to within 2 to 4 percent above the optimum moisture content and compacted.
- On-site soils may be used for fill provided they are cleaned of any debris to the satisfaction of the geotechnical engineer.

- All grading and fill placement activities should be completed in accordance with the requirements of the CBC and the grading code of the city of Ontario.
- All fill soils should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Fill soils should be well mixed.
- Compaction tests should be performed periodically by the geotechnical engineer as random verification of compaction and moisture content. These tests are intended to aid the contractor. Since the tests are taken at discrete locations and depths, they may not be indicative of the entire fill and therefore should not relieve the contractor of his responsibility to meet the job specifications.

#### Imported Structural Fill

All imported structural fill should consist of very low expansive ( $EI < 20$ ), well graded soils possessing at least 10 percent fines (that portion of the sample passing the No. 200 sieve). Additional specifications for structural fill are presented in the Grading Guide Specifications, included as Appendix D.

#### Utility Trench Backfill

In general, all utility trench backfill should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Compacted trench backfill should conform to the requirements of the local grading code, and more restrictive requirements may be indicated by the city of Ontario. All utility trench backfills should be witnessed by the geotechnical engineer. The trench backfill soils should be compaction tested where possible; probed and visually evaluated elsewhere.

Utility trenches which parallel a footing, and extending below a 1h:1v plane projected from the outside edge of the footing should be backfilled with structural fill soils, compacted to at least 90 percent of the ASTM D-1557 standard. Pea gravel backfill should not be used for these trenches.

### **6.4 Preliminary Construction Considerations**

#### Excavation Considerations

The near-surface soils generally consist of a variety of materials, including sands, silts, and clays. These materials may be subject to minor caving within shallow excavations. Where caving occurs within shallow excavations, flattened excavation slopes may be sufficient to provide excavation stability. On a preliminary basis, the inclination of temporary slopes should not exceed 2h:1v. Deeper excavations may require some form of external stabilization such as shoring or bracing. Maintaining adequate moisture content within the near-surface soils will improve excavation stability. All excavation activities on this site should be conducted in accordance with Cal-OSHA regulations.

#### Moisture Sensitive Subgrade Soils

The near-surface soils possess very high moisture contents and contain appreciable amounts of silt and clay. These materials will become unstable if exposed to significant moisture infiltration or disturbance by construction traffic. In addition, based on their granular content, some of the

on-site soils will also be susceptible to erosion. The site should, therefore, be graded to prevent ponding of surface water and to prevent water from running into excavations.

**Allowances should be made for costs and delays associated with drying the on-site soils or import of a drier, less moisture sensitive fill material.** Grading during wet or cool weather may also increase the depth of overexcavation in the pad areas as well as the need for and/or the thickness of the crushed stone stabilization layer, discussed in Section 6.3 of this report.

#### Groundwater

Based on the conditions encountered in the borings and trenches, groundwater is not present within 40± feet of the ground surface. Based on the anticipated depth to groundwater, it is not expected that the groundwater will affect excavations for the foundations or utilities.

### **6.5 Preliminary Foundation Design and Construction Recommendations**

Based on the preceding geotechnical design considerations and preliminary grading recommendations, it is assumed that the new buildings will be underlain by newly placed structural fill soils, extending to depths of at least 3± feet below foundation bearing grade. Based on this subsurface profile, the proposed structures may be supported on conventional shallow foundations.

The foundation design parameters presented below provide anticipated ranges for the allowable soil bearing pressures. These ranges should be refined during the subsequent design level geotechnical investigation.

#### Building Foundation Design Parameters

New square and rectangular footings may be designed as follows:

- Maximum, net allowable soil bearing pressure: 2,000 to 3,000 lbs/ft<sup>2</sup>.
- Minimum longitudinal steel reinforcement within strip footings: Four (4) to Six (6) No. 5 rebars.

#### General Foundation Design Recommendations

The allowable bearing pressures presented above may be increased by one-third when considering short duration wind or seismic loads. Additional reinforcement may be necessary for structural considerations. The actual design of the foundations should be determined by the structural engineer.

#### Estimated Foundation Settlements

Typically, foundations designed in accordance with the preliminary foundation design parameters presented above will experience total and differential settlements of less than 1.0 and 0.5 inches,

respectively. A detailed settlement analysis should be conducted as part of the design level geotechnical investigation, once detailed foundation loading information is available.

### Lateral Load Resistance

Lateral load resistance will be developed by a combination of friction acting at the base of foundations and slabs and the passive earth pressure developed by footings below grade. The following friction and passive pressure may be used to resist lateral forces:

- Passive Earth Pressure: 250 to 300 lbs/ft<sup>3</sup>
- Friction Coefficient: 0.25 to 0.30

## **6.6 Preliminary Floor Slab Design and Construction Recommendations**

Subgrades which will support new floor slabs should be prepared in accordance with the recommendations contained in the ***Site Grading Recommendations*** section of this report. Preliminarily, the floors of the proposed structures may be constructed as conventional slabs-on-grade supported on newly placed structural fill. The parameters provided below should be refined during the design-level geotechnical investigation. Based on geotechnical considerations, the floor slab may be preliminarily designed as follows:

- Minimum slab thickness: 6 to 7 inches.
- Minimum slab reinforcement: Reinforced floor slabs are recommended based on the presence of low to medium expansive soils. Additional expansion index testing should be performed to confirm this recommendation at the time of the design level investigation. The actual floor slab reinforcement should be determined by the structural engineer, based upon the imposed loading.
- Slab underlayment: If moisture sensitive floor coverings will be used then minimum slab underlayment should consist of a moisture vapor barrier constructed below the entire area of the proposed slab which will incorporate such coverings. The moisture vapor barrier should meet or exceed the Class A rating as defined by ASTM E 1745-97 and have a permeance rating less than 0.01 perms as described in ASTM E 96-95 and ASTM E 154-88. A polyolefin material such as Stego® Wrap Vapor Barrier or equivalent will meet these specifications. The moisture vapor barrier should be properly constructed in accordance with all applicable manufacturer specifications. Given that a rock free subgrade is anticipated and that a capillary break is not required, sand below the barrier is not required. The need for sand and/or the amount of sand above the moisture vapor barrier should be specified by the structural engineer or concrete contractor. The selection of sand above the barrier is not a geotechnical engineering issue and hence outside our purview. Where moisture sensitive floor coverings are not anticipated, the vapor barrier may be eliminated.
- Moisture condition the floor slab subgrade soils to 2 to 4 percent above the Modified Proctor optimum moisture content, to a depth of 12 inches. The moisture content of the floor slab subgrade soils should be verified by the geotechnical engineer within 24 hours prior to concrete placement.

- Proper concrete curing techniques should be utilized to reduce the potential for slab curling or the formation of excessive shrinkage cracks.

The actual design of the floor slab should be completed by the structural engineer to verify adequate thickness and reinforcement.

## **6.7 Preliminary Retaining Wall Design and Construction Recommendations**

Although not indicated on the site plan, some small (less than 6 feet in height) retaining walls may be required to facilitate the new site grades. Retaining walls are also expected to be necessary within the truck dock areas of the proposed building. The parameters recommended for use in the design of these walls are presented below.

### Retaining Wall Design Parameters

Based on the soil conditions encountered at the boring locations, the following parameters may be used in the design of new retaining walls for this site. We have provided parameters assuming the use of on-site soils for retaining wall backfill. The near surface soils generally consist of fine sands, silty fine sands, fine sandy silts, fine sandy clays, silty clays, and clayey silts. **However, the silty clays and clayey silts possess a medium expansion potential and should not be used for retaining wall backfill.** Based on their classifications, the silty sand, clayey sand, and fine sandy silt materials are expected to possess a friction angle of at least 28 degrees when compacted to 90 percent of the ASTM-1557 maximum dry density.

If desired, SCG could provide design parameters for an alternative select backfill material behind the retaining walls. The use of select backfill material could result in lower lateral earth pressures. In order to use the design parameters for the imported select fill, this material must be placed within the entire active failure wedge. This wedge is defined as extending from the heel of the retaining wall upwards at an angle of approximately 60° from horizontal. If select backfill material behind the retaining wall is desired, SCG should be contacted for supplementary recommendations.

### RETAINING WALL DESIGN PARAMETERS

Design Parameter		Soil Type
		On-Site Silty Sands and Sandy Silts
Internal Friction Angle ( $\phi$ )		28°
Unit Weight		120 lbs/ft <sup>3</sup>
Equivalent Fluid Pressure:	Active Condition (level backfill)	43 lbs/ft <sup>3</sup>
	Active Condition (2h:1v backfill)	76 lbs/ft <sup>3</sup>
	At-Rest Condition (level backfill)	64 lbs/ft <sup>3</sup>

The active earth pressure may be used for the design of retaining walls that do not directly support structures or support soils that in turn support structures and which will be allowed to deflect. The at-rest earth pressure should be used for walls that will not be allowed to deflect such as those which will support foundation bearing soils, or which will support foundation loads directly.

Where the soils on the toe side of the retaining wall are not covered by a "hard" surface such as a structure or pavement, the upper 1 foot of soil should be neglected when calculating passive resistance due to the potential for the material to become disturbed or degraded during the life of the structure.

### Seismic Lateral Earth Pressures

In addition to the lateral earth pressures presented in the previous section, retaining walls which are more than 6 feet in height should be designed for a seismic lateral earth pressure, in accordance with the 2019 CBC. Based on the current site plan, it is not expected that any walls in excess of 6 feet in height will be required for this project. If any such walls are proposed, our office should be contacted for supplementary design recommendations.

### Backfill Material

Retaining wall backfill soils should consist of on-site sands, silty sands, and sandy silts possessing an expansion index less than 20. On-site silty clays and clayey silts should not be used to backfill retaining walls. All backfill material placed within 3 feet of the back wall face should have a particle size no greater than 3 inches. The retaining wall backfill materials should be well graded.

It is recommended that a minimum 1 foot thick layer of free-draining granular material (less than 5 percent passing the No. 200 sieve) be placed against the face of the retaining walls. This material should extend from the top of the retaining wall footing to within 1 foot of the ground surface on the back side of the retaining wall. This material should be approved by the geotechnical engineer. In lieu of the 1-foot-thick layer of free-draining material, a properly installed prefabricated drainage composite such as the MiraDRAIN 6000XL (or approved equivalent), which is specifically designed for use behind retaining walls, may be used. If the layer of free-draining material is not covered by an impermeable surface, such as a structure or pavement, a 12-inch thick layer of a low permeability soil should be placed over the backfill to reduce surface water migration to the underlying soils. The layer of free draining granular material should be separated from the backfill soils by a suitable geotextile, approved by the geotechnical engineer.

All retaining wall backfill should be placed and compacted under engineering controlled conditions in the necessary layer thicknesses to ensure an in-place density between 90 and 93 percent of the maximum dry density as determined by the Modified Proctor test (ASTM D1557). Care should be taken to avoid over-compaction of the soils behind the retaining walls, and the use of heavy compaction equipment should be avoided.

## Subsurface Drainage

As previously indicated, the retaining wall design parameters are based upon drained backfill conditions. Consequently, some form of permanent drainage system will be necessary in conjunction with the appropriate backfill material. Subsurface drainage may consist of either:

- A weep hole drainage system typically consisting of a series of 4-inch diameter holes in the wall situated slightly above the ground surface elevation on the exposed side of the wall and at an approximate 8-foot on-center spacing. The weep holes should include a 2 cubic foot pocket of open graded gravel, surrounded by an approved geotextile fabric, at each weep hole location.
- A 4-inch diameter perforated pipe surrounded by 2 cubic feet of gravel per linear foot of drain placed behind the wall, above the retaining wall footing. The gravel layer should be wrapped in a suitable geotextile fabric to reduce the potential for migration of fines. The footing drain should be extended to daylight or tied into a storm drainage system.

Weep holes or a footing drain will not be required for building stem walls.

## **6.9 Preliminary Pavement Design Parameters**

Preliminary design recommendations for pavements that will be utilized on the subject site are presented below. Grading and pavement thickness recommendations for these pavement areas should be developed during the design level geotechnical investigation.

### Pavement Subgrades

It is anticipated that the new pavements will be primarily supported on a layer of compacted structural fill, consisting of scarified, thoroughly moisture conditioned and recompacted existing soils. The near-surface soils generally consist of silty clays, clayey silts, silty sands, sandy silts and fine sands. These soils are considered to possess poor to fair pavement support characteristics with an estimated R-values ranging from 10 to 30. The subsequent pavement design is based upon an assumed R-value of 10. Any fill material imported to the site should have support characteristics equal to or greater than that of the on-site soils and be placed and compacted under engineering controlled conditions. It is recommended that R-value testing be performed at the time of the design level investigation or after the completion of rough grading. Depending upon the results of the R-value testing, it may be feasible to use thinner pavement sections in some areas of the site.

### Asphaltic Concrete

Presented below are the recommended thicknesses for new flexible pavement structures consisting of asphaltic concrete over a granular base. The pavement designs are based on the traffic indices (TI's) indicated. The client and/or civil engineer should verify that these TI's are representative of the anticipated traffic volumes. If the client and/or civil engineer determine that the expected traffic volume will exceed the applicable traffic index, we should be contacted for supplementary recommendations. The design traffic indices equate to the following approximate daily traffic volumes over a 20 year design life, assuming six operational traffic days per week.

Traffic Index	No. of Heavy Trucks per Day
4.0	0
5.0	1
6.0	3
7.0	11
8.0	35
9.0	93

For the purpose of the traffic volumes indicated above, a truck is defined as a 5-axle tractor trailer unit with one 8-kip axle and two 32-kip tandem axles. All of the traffic indices allow for 1,000 automobiles per day.

ASPHALT PAVEMENTS (R = 10)					
Materials	Thickness (inches)				
	Automobile Parking (TI = 4.0)	Automobile Drive Lanes (TI = 5.0)	Truck Traffic		
			(TI = 6.0)	(TI = 7.0)	(TI = 8.0)
Asphalt Concrete	3	3	3½	4	5
Aggregate Base	6	9	12	15	16
Compacted Subgrade	12	12	12	12	12

The aggregate base course should be compacted to at least 95 percent of the ASTM D-1557 maximum dry density. The asphaltic concrete should be compacted to at least 95 percent of the Marshall maximum density, as determined by ASTM D-2726. The aggregate base course may consist of crushed aggregate base (CAB) or crushed miscellaneous base (CMB), which is a recycled gravel, asphalt and concrete material. The gradation, R-Value, Sand Equivalent, and Percentage Wear of the CAB or CMB should comply with appropriate specifications contained in the current edition of the "Greenbook" Standard Specifications for Public Works Construction.

#### Portland Cement Concrete

The preparation of the subgrade soils within concrete pavement areas should be performed as previously described for proposed asphalt pavement areas. The minimum recommended thicknesses for the Portland Cement Concrete pavement sections are as follows:

PORTLAND CEMENT CONCRETE PAVEMENTS (R= 10)			
Materials	Thickness (inches)		
	Automobile and Light Truck Traffic (TI = 5.0 & 6.0)	Truck Traffic	
		(TI = 7.0)	(TI = 8.0)
PCC	5	5½	7
Compacted Subgrade (95% minimum compaction)	12	12	12

The concrete should have a 28-day compressive strength of at least 3,000 psi. Any reinforcement within the PCC pavements should be determined by the project structural engineer. The maximum joint spacing within all of the PCC pavements is recommended to be equal to or less than 30 times the pavement thickness.

## **7.0 GENERAL COMMENTS**

---

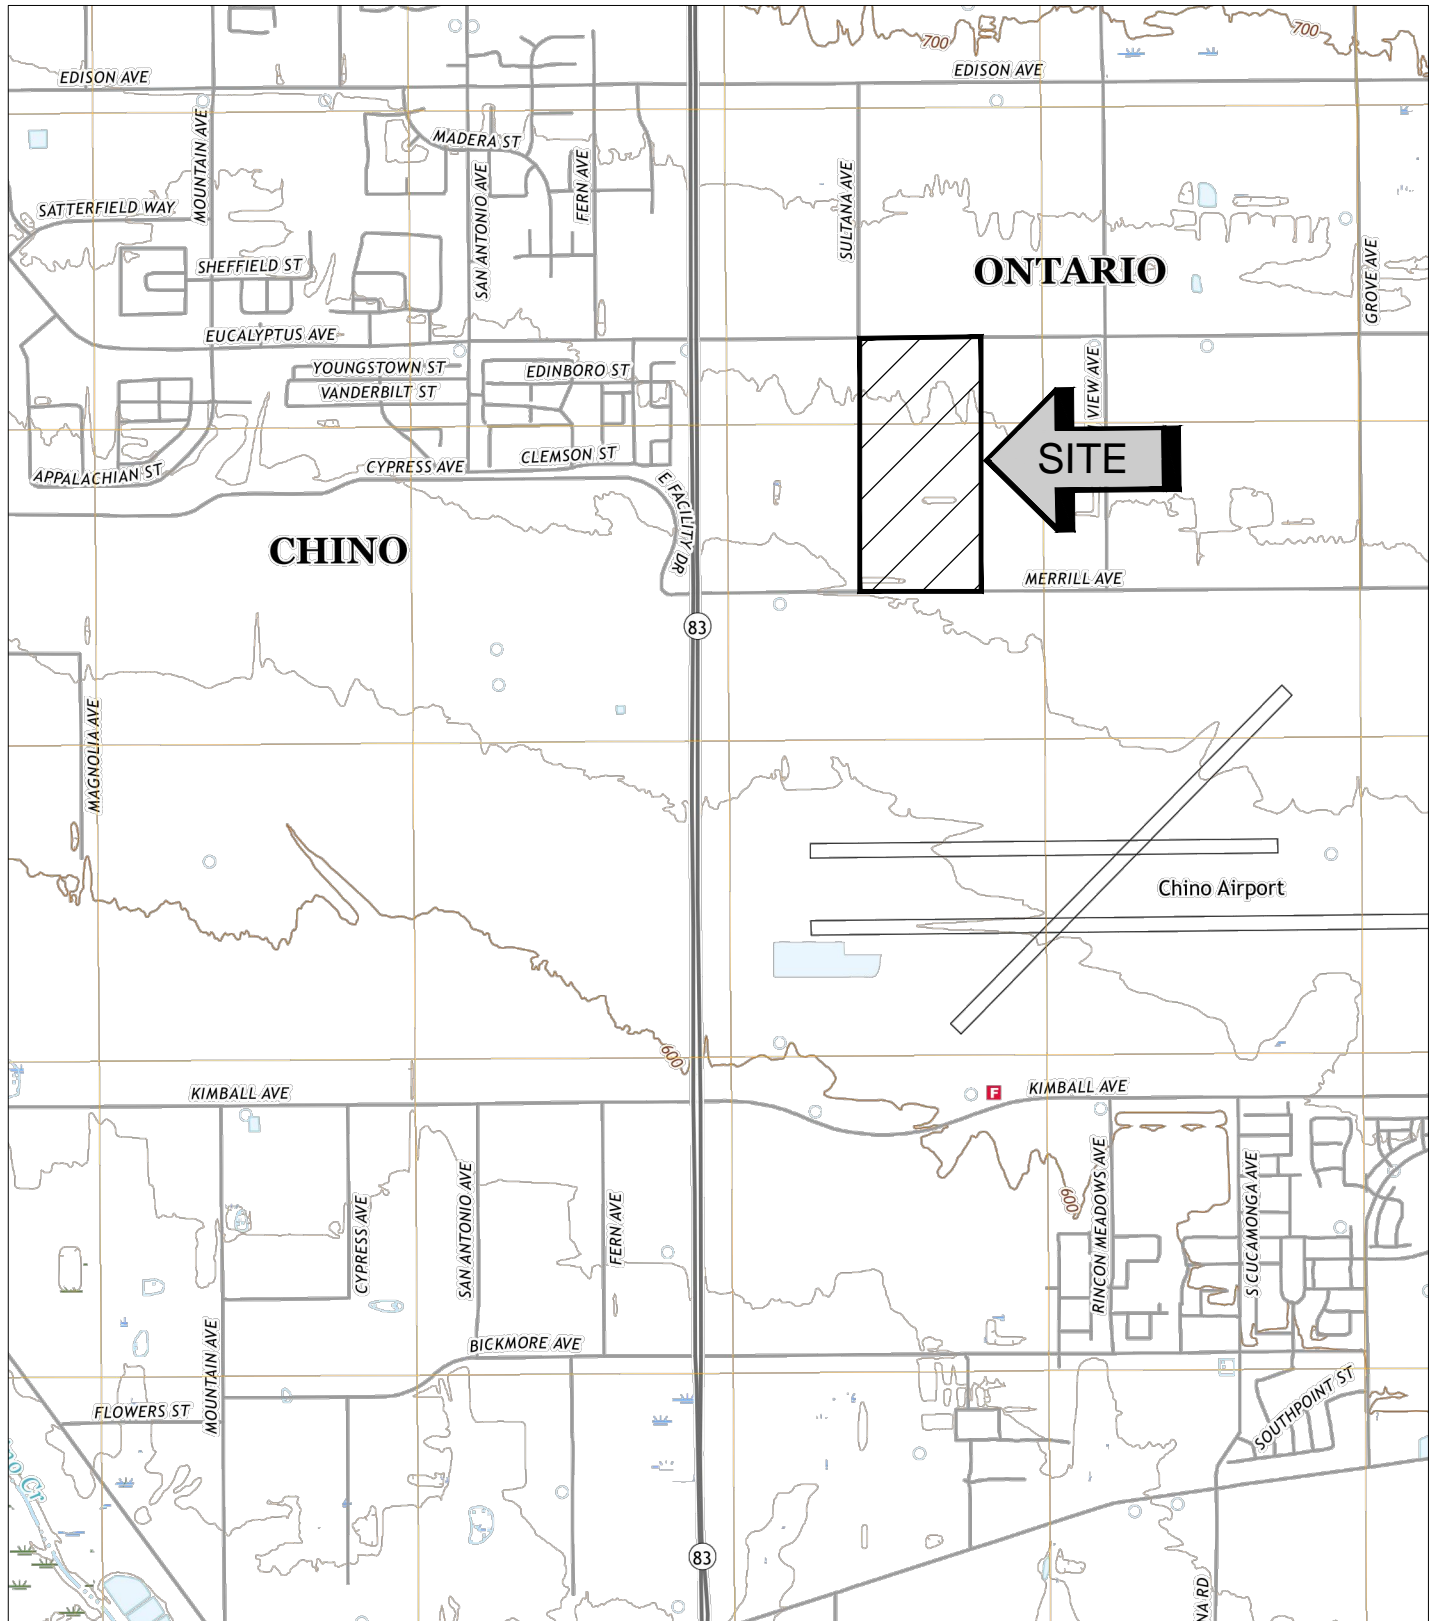

This report has been prepared as an instrument of service for use by the client, in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, civil engineer, and/or structural engineer. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur. The client(s)' reliance upon this report is subject to the Engineering Services Agreement, incorporated into our proposal for this project.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between boring locations and sample depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted.

The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

# BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

## COLUMN DESCRIPTIONS

### DEPTH:

Distance in feet below the ground surface.

### SAMPLE:

Sample Type as depicted above.

### BLOW COUNT:

Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

### POCKET PEN.:

Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

### GRAPHIC LOG:

Graphic Soil Symbol as depicted on the following page.

### DRY DENSITY:

Dry density of an undisturbed or relatively undisturbed sample in lbs/ft<sup>3</sup>.

### MOISTURE CONTENT:

Moisture content of a soil sample, expressed as a percentage of the dry weight.

### LIQUID LIMIT:

The moisture content above which a soil behaves as a liquid.

### PLASTIC LIMIT:

The moisture content above which a soil behaves as a plastic.

### PASSING #200 SIEVE:

The percentage of the sample finer than the #200 standard sieve.

### UNCONFINED SHEAR:

The shear strength of a cohesive soil sample, as measured in the unconfined state.

# APPENDIX

## **GRADING GUIDE SPECIFICATIONS**

These grading guide specifications are intended to provide typical procedures for grading operations. They are intended to supplement the recommendations contained in the geotechnical investigation report for this project. Should the recommendations in the geotechnical investigation report conflict with the grading guide specifications, the more site specific recommendations in the geotechnical investigation report will govern.

### General

- The Earthwork Contractor is responsible for the satisfactory completion of all earthwork in accordance with the plans and geotechnical reports, and in accordance with city, county, and applicable building codes.
- The Geotechnical Engineer is the representative of the Owner/Builder for the purpose of implementing the report recommendations and guidelines. These duties are not intended to relieve the Earthwork Contractor of any responsibility to perform in a workman-like manner, nor is the Geotechnical Engineer to direct the grading equipment or personnel employed by the Contractor.
- The Earthwork Contractor is required to notify the Geotechnical Engineer of the anticipated work and schedule so that testing and inspections can be provided. If necessary, work may be stopped and redone if personnel have not been scheduled in advance.
- The Earthwork Contractor is required to have suitable and sufficient equipment on the job-site to process, moisture condition, mix and compact the amount of fill being placed to the approved compaction. In addition, suitable support equipment should be available to conform with recommendations and guidelines in this report.
- Canyon cleanouts, overexcavation areas, processed ground to receive fill, key excavations, subdrains and benches should be observed by the Geotechnical Engineer prior to placement of any fill. It is the Earthwork Contractor's responsibility to notify the Geotechnical Engineer of areas that are ready for inspection.
- Excavation, filling, and subgrade preparation should be performed in a manner and sequence that will provide drainage at all times and proper control of erosion. Precipitation, springs, and seepage water encountered shall be pumped or drained to provide a suitable working surface. The Geotechnical Engineer must be informed of springs or water seepage encountered during grading or foundation construction for possible revision to the recommended construction procedures and/or installation of subdrains.

### Site Preparation

- The Earthwork Contractor is responsible for all clearing, grubbing, stripping and site preparation for the project in accordance with the recommendations of the Geotechnical Engineer.
- If any materials or areas are encountered by the Earthwork Contractor which are suspected of having toxic or environmentally sensitive contamination, the Geotechnical Engineer and Owner/Builder should be notified immediately.

- Major vegetation should be stripped and disposed of off-site. This includes trees, brush, heavy grasses and any materials considered unsuitable by the Geotechnical Engineer.
- Underground structures such as basements, cesspools or septic disposal systems, mining shafts, tunnels, wells and pipelines should be removed under the inspection of the Geotechnical Engineer and recommendations provided by the Geotechnical Engineer and/or city, county or state agencies. If such structures are known or found, the Geotechnical Engineer should be notified as soon as possible so that recommendations can be formulated.
- Any topsoil, slopewash, colluvium, alluvium and rock materials which are considered unsuitable by the Geotechnical Engineer should be removed prior to fill placement.
- Remaining voids created during site clearing caused by removal of trees, foundations basements, irrigation facilities, etc., should be excavated and filled with compacted fill.
- Subsequent to clearing and removals, areas to receive fill should be scarified to a depth of 10 to 12 inches, moisture conditioned and compacted
- The moisture condition of the processed ground should be at or slightly above the optimum moisture content as determined by the Geotechnical Engineer. Depending upon field conditions, this may require air drying or watering together with mixing and/or discing.

#### Compacted Fills

- Soil materials imported to or excavated on the property may be utilized in the fill, provided each material has been determined to be suitable in the opinion of the Geotechnical Engineer. Unless otherwise approved by the Geotechnical Engineer, all fill materials shall be free of deleterious, organic, or frozen matter, shall contain no chemicals that may result in the material being classified as "contaminated," and shall be very low to non-expansive with a maximum expansion index (EI) of 50. The top 12 inches of the compacted fill should have a maximum particle size of 3 inches, and all underlying compacted fill material a maximum 6-inch particle size, except as noted below.
- All soils should be evaluated and tested by the Geotechnical Engineer. Materials with high expansion potential, low strength, poor gradation or containing organic materials may require removal from the site or selective placement and/or mixing to the satisfaction of the Geotechnical Engineer.
- Rock fragments or rocks less than 6 inches in their largest dimensions, or as otherwise determined by the Geotechnical Engineer, may be used in compacted fill, provided the distribution and placement is satisfactory in the opinion of the Geotechnical Engineer.
- Rock fragments or rocks greater than 12 inches should be taken off-site or placed in accordance with recommendations and in areas designated as suitable by the Geotechnical Engineer. These materials should be placed in accordance with Plate D-8 of these Grading Guide Specifications and in accordance with the following recommendations:
  - Rocks 12 inches or more in diameter should be placed in rows at least 15 feet apart, 15 feet from the edge of the fill, and 10 feet or more below subgrade. Spaces should be left between each rock fragment to provide for placement and compaction of soil around the fragments.
  - Fill materials consisting of soil meeting the minimum moisture content requirements and free of oversize material should be placed between and over the rows of rock or

concrete. Ample water and compactive effort should be applied to the fill materials as they are placed in order that all of the voids between each of the fragments are filled and compacted to the specified density.

- Subsequent rows of rocks should be placed such that they are not directly above a row placed in the previous lift of fill. A minimum 5-foot offset between rows is recommended.
- To facilitate future trenching, oversized material should not be placed within the range of foundation excavations, future utilities or other underground construction unless specifically approved by the soil engineer and the developer/owner representative.
- Fill materials approved by the Geotechnical Engineer should be placed in areas previously prepared to receive fill and in evenly placed, near horizontal layers at about 6 to 8 inches in loose thickness, or as otherwise determined by the Geotechnical Engineer for the project.
- Each layer should be moisture conditioned to optimum moisture content, or slightly above, as directed by the Geotechnical Engineer. After proper mixing and/or drying, to evenly distribute the moisture, the layers should be compacted to at least 90 percent of the maximum dry density in compliance with ASTM D-1557-78 unless otherwise indicated.
- Density and moisture content testing should be performed by the Geotechnical Engineer at random intervals and locations as determined by the Geotechnical Engineer. These tests are intended as an aid to the Earthwork Contractor, so he can evaluate his workmanship, equipment effectiveness and site conditions. The Earthwork Contractor is responsible for compaction as required by the Geotechnical Report(s) and governmental agencies.
- Fill areas unused for a period of time may require moisture conditioning, processing and recompaction prior to the start of additional filling. The Earthwork Contractor should notify the Geotechnical Engineer of his intent so that an evaluation can be made.
- Fill placed on ground sloping at a 5-to-1 inclination (horizontal-to-vertical) or steeper should be benched into bedrock or other suitable materials, as directed by the Geotechnical Engineer. Typical details of benching are illustrated on Plates D-2, D-4, and D-5.
- Cut/fill transition lots should have the cut portion overexcavated to a depth of at least 3 feet and rebuilt with fill (see Plate D-1), as determined by the Geotechnical Engineer.
- All cut lots should be inspected by the Geotechnical Engineer for fracturing and other bedrock conditions. If necessary, the pads should be overexcavated to a depth of 3 feet and rebuilt with a uniform, more cohesive soil type to impede moisture penetration.
- Cut portions of pad areas above buttresses or stabilizations should be overexcavated to a depth of 3 feet and rebuilt with uniform, more cohesive compacted fill to impede moisture penetration.
- Non-structural fill adjacent to structural fill should typically be placed in unison to provide lateral support. Backfill along walls must be placed and compacted with care to ensure that excessive unbalanced lateral pressures do not develop. The type of fill material placed adjacent to below grade walls must be properly tested and approved by the Geotechnical Engineer with consideration of the lateral earth pressure used in the design.

### Foundations

- The foundation influence zone is defined as extending one foot horizontally from the outside edge of a footing, and proceeding downward at a ½ horizontal to 1 vertical (0.5:1) inclination.
- Where overexcavation beneath a footing subgrade is necessary, it should be conducted so as to encompass the entire foundation influence zone, as described above.
- Compacted fill adjacent to exterior footings should extend at least 12 inches above foundation bearing grade. Compacted fill within the interior of structures should extend to the floor subgrade elevation.

### Fill Slopes

- The placement and compaction of fill described above applies to all fill slopes. Slope compaction should be accomplished by overfilling the slope, adequately compacting the fill in even layers, including the overfilled zone and cutting the slope back to expose the compacted core
- Slope compaction may also be achieved by backrolling the slope adequately every 2 to 4 vertical feet during the filling process as well as requiring the earth moving and compaction equipment to work close to the top of the slope. Upon completion of slope construction, the slope face should be compacted with a sheepsfoot connected to a sideboom and then grid rolled. This method of slope compaction should only be used if approved by the Geotechnical Engineer.
- Sandy soils lacking in adequate cohesion may be unstable for a finished slope condition and therefore should not be placed within 15 horizontal feet of the slope face.
- All fill slopes should be keyed into bedrock or other suitable material. Fill keys should be at least 15 feet wide and inclined at 2 percent into the slope. For slopes higher than 30 feet, the fill key width should be equal to one-half the height of the slope (see Plate D-5).
- All fill keys should be cleared of loose slough material prior to geotechnical inspection and should be approved by the Geotechnical Engineer and governmental agencies prior to filling.
- The cut portion of fill over cut slopes should be made first and inspected by the Geotechnical Engineer for possible stabilization requirements. The fill portion should be adequately keyed through all surficial soils and into bedrock or suitable material. Soils should be removed from the transition zone between the cut and fill portions (see Plate D-2).

### Cut Slopes

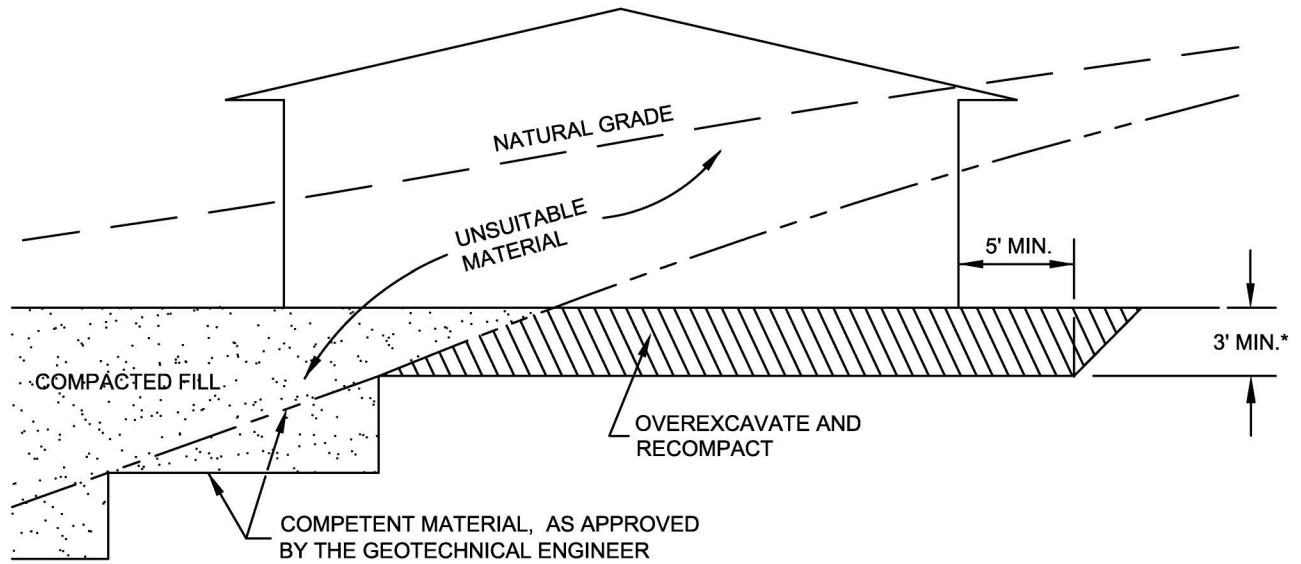

- All cut slopes should be inspected by the Geotechnical Engineer to determine the need for stabilization. The Earthwork Contractor should notify the Geotechnical Engineer when slope cutting is in progress at intervals of 10 vertical feet. Failure to notify may result in a delay in recommendations.
- Cut slopes exposing loose, cohesionless sands should be reported to the Geotechnical Engineer for possible stabilization recommendations.
- All stabilization excavations should be cleared of loose slough material prior to geotechnical inspection. Stakes should be provided by the Civil Engineer to verify the location and dimensions of the key. A typical stabilization fill detail is shown on Plate D-5.

- Stabilization key excavations should be provided with subdrains. Typical subdrain details are shown on Plates D-6.

#### Subdrains

- Subdrains may be required in canyons and swales where fill placement is proposed. Typical subdrain details for canyons are shown on Plate D-3. Subdrains should be installed after approval of removals and before filling, as determined by the Soils Engineer.
- Plastic pipe may be used for subdrains provided it is Schedule 40 or SDR 35 or equivalent. Pipe should be protected against breakage, typically by placement in a square-cut (backhoe) trench or as recommended by the manufacturer.
- Filter material for subdrains should conform to CALTRANS Specification 68-1.025 or as approved by the Geotechnical Engineer for the specific site conditions. Clean  $\frac{3}{4}$ -inch crushed rock may be used provided it is wrapped in an acceptable filter cloth and approved by the Geotechnical Engineer. Pipe diameters should be 6 inches for runs up to 500 feet and 8 inches for the downstream continuations of longer runs. Four-inch diameter pipe may be used in buttress and stabilization fills.

Dear Mr. Chute:

Enclosed please find Citadel EHS' Phase I Environmental Site Assessment Report for the above-referenced location.

The Phase I Environmental Site Assessment Report was conducted LIT-Acquisitions, LLC c/o Environmental Asset Services, Inc., in accordance with Citadel's Proposal 0611.1079.P, dated December 6, 2019, and a mutually agreed upon scope of work.

If after your review, you have any questions or require additional information, please do not hesitate to telephone me at the Citadel Office in Glendale at (818) 246-2707.

Sincerely,  
**CITADEL EHS**

Mark Drollinger, M.Eng., CSP, CHMM, EIT

Citadel EHS (Citadel) was contracted by LIT-Acquisitions, LLC (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) for the James Borba Dairy / GH Dairy No. 2 located at 7475 Eucalyptus Avenue in the City of Ontario, San Bernardino County, California; hereinafter referred to as the "Site."

## Current Site Conditions

The Site consists of two single-family residential structures with a dairy barn located between the residences; a detached garage; a dry grain/feed storage shed; an equipment storage shed; approximately 10 hay storage sheds; and approximately 13 canopies/sheds associated with the corrals for the housing of the cattle. A retention pond is located south of the corrals. The retention pond collects surface wastes from across the Site, as well as provides a potential dumping area for other dairy and animal-related wastes. The remaining areas of the Site appear as irrigated cropland. At the time of the Site reconnaissance, the Site was occupied by GH Dairy No. 2. A low-lying part of the cropland was observed in the southwest corner of the Site during the Site reconnaissance. Due to recent rain events, this low-lying area appeared to be a retention pond. However, according to the Site representative, this area is typically empty and dry about 80 to 90 percent of the time and water is pumped out after rain events.

The following provides the Assessor Parcel Numbers (APNs), associated addresses and brief description of the parcels associated with the Site:

APN (PARCEL)	ASSOCIATED ADDRESSES	DESCRIPTION
1054-041-01-0000 (Parcel A)	None	Parcel A is approximately 9.03 acres in size and is located in the northwest corner of the Site. The parcel consists of irrigated cropland and several corrals.
1054-041-02-0000 (Parcel B)	7417 and 7475 Eucalyptus Avenue	Parcel B is approximately 9.15 acres in size and is located in the northeast corner of the Site, east of Parcel A. The parcel consists of two single-family residences with attached garages; a detached garage; a dairy barn with silos and tanks for storage of milk and water, respectively; several corrals; and associated landscaping.
1054-031-01-0000 (Parcel C)	None	Parcel C is approximately 9.54 acres in size and is located along the west boundary of the Site, south of Parcel A. The parcel consists of irrigated cropland and several corrals.
1054-031-02-0000 (Parcel D)	None	Parcel D is approximately 9.59 acres in size and is located along the east boundary of the Site, south of Parcel B. The parcel consists of hay storage sheds and several corrals.
1054-261-01-0000 (Parcel E)	None	Parcel E is approximately 9.54 acres in size and is located along the west boundary of the Site, south of Parcel C. The parcel consists of irrigated cropland, hay and equipment storage sheds, and several corrals.
1054-261-02-0000 (Parcel F)	None	Parcel F is approximately 9.59 acres in size and is located along the east boundary of the Site, south of Parcel D. The parcel consists of irrigated cropland; hay and feed storage sheds and areas; two 1,000-gallon aboveground storage tanks (ASTs); a retention pond; and several corrals.
1054-291-01-0000 (Parcel G)	None	Parcel G is approximately 9.03 acres in size and is located in the southwest corner of the Site and south of Parcel E. The parcel consists of irrigated cropland. The low-lying part of the cropland is located in the southwest corner of the parcel.
1054-291-02-0000 (Parcel H)	None	Parcel H is approximately 9.14 acres in size and is located in the southeast corner of the Site and south of Parcel F. The parcel consists of irrigated cropland.

Equipment throughout the Site include ASTs for storage of diesel, grain/feed, and water; one potable water well; milking machines and pumping system; silos for storage of milk; air compressors; boilers; and pole-mounted transformers. In general, the Site appeared to be well maintained and the building/ground conditions appeared to be in good condition.

## Site History

A review of historical sources showed that the Site was generally agricultural/undeveloped as early as 1902. Eucalyptus Avenue and Merrill Avenue appeared developed by 1902. The Site remained generally agricultural until at least 1981 with the development of the current dairy farm.

Properties in the vicinity appeared generally undeveloped in 1902:

- Properties north of the Site appeared developed with an orchard by 1938. The two current residences appear developed by 1966. The properties north of the Site appeared in their current configuration by 1994 with the development of a retention pond.
- Properties east of the Site appeared generally agricultural until the development of the current dairy barn and associated structures by 1975. Additional canopies were completed by 1987 and by 2009.
- Properties west of the Site appeared generally agricultural until the development of a small structure, likely a residence or farm-related, along Eucalyptus Avenue by 1975. The current dairy barn appeared developed by 1987.
- Properties south of the Site appeared developed with hangars along with a large exterior plane storage/parking area by 1946—these were likely occupied by Cal-Aero Primary School and Cal-Aero Flight Academy. By 1973, this area was occupied as part of the Chino Airport. Several of the hangars were demolished by 1975.

## Environmental Database

The Site was identified on the following environmental databases: HIST UST, SWEEPS UST, CA FID UST, UST, WDS, CERS, CERS HAZ WASTE, FINDS, CIWQS, ENF, and San Bern. Co. Permit.

The Site was identified on the historical underground storage tank (UST) databases under Ted Miller Dairy. According to information provided by EDR, a 6,000-gallon UST was located at the Site. No further information was provided. The Site was also identified on the current UST database under AG-Borba, Joe. No further information was provided.

The Site was identified on the Facility Index System/Facility Registry System (FINDS) database. FINDS contains facility information and “pointers” to other sources. The Site was identified on this database due to the following references:

- California Enviroview – California Integrated Water Quality System (CIWQS) database for confined animal feeding operations;
- California Enviroview – California Environmental Reporting System (CERS) as a Risk Management Plan (RMP) reporter; and
- National Pollutant Discharge Elimination System (NPDES) – Compliance Information System (ICIS) for concentrated animal feeding operation and NPDES permit.

The Site was identified on the Waste Discharge System (WDS) database as an agricultural facility with designated/influent or solid wastes that pose a significant threat to water quality (dairy waste ponds). The Site was listed on the Water Board Enforcement Action Listings (ENF) for a notice of violation, issued on January 30, 2009, for failure to submit the 2008 annual report on time.

The Site was also identified on the San Bernardino County Permit database with an active hazardous materials (four to 10 chemicals) permit and on CERS as a chemical storage facility. Evaluations by regulatory agencies have been performed since 1987. No violations have been reported with the exception of violations identified in 2008, 2009, 2013, and 2016. The violations issued in 2016 were related to business plans submittals; returned to compliance in August 2017.

No information was provided concerning the remaining violations; however, the violations were listed as historical.

The appearance of the Site on the historic and current UST databases may be an environmental concern. No further information was provided regarding the status of the UST.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, no historical releases of petroleum products from a LUST occurred within 0.25-mile and upgradient of the Site. There are no properties within 0.125-mile and upgradient or cross-gradient of the Site that are listed on the Historical Gas Station and Dry Cleaners databases. However, the Chino Airport property is located south of the Site and was identified as occupied by Flite Craft from as early as 1986 as an aircraft and heavy equipment repair services. This property will be further discussed in the Regulatory Agencies section below.

### Regulatory Agencies

The GeoTracker Database is the California State Water Resources Control Board's (SWRCB) Internet-accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. The Site was not identified in the database. According to GeoTracker, the nearest Cleanup Program Site (CPS) is the Chino Airport (Airport), located at 7000 Merrill Avenue, located south of the Site. The primary chemicals of concern (COCs) in the groundwater at this CPS include trichloroethene (TCE); 1,2,3-trichloropropane (1,2,3-TCP); cis-1,2-dichloroethane; and 1,1-dichloroethene.

According to the Semiannual Groundwater Monitoring Report, dated March 19, 2019, and prepared by Tetra Tech, portions of the Airport have functioned as an airfield since the early 1940s. Since the 1960s, the County of San Bernardino has operated the Airport as a public airport for commercial, industrial, and general aviation use. Past and present uses include a flight academy; aircraft sales and storage; modification of military aircraft; various manufacturing; crop dusting; aircraft restoration; maintenance repair shops; aircraft painting, stripping, and washing; fire retardant chemical mixing and loading; US Forest Service aircraft maintenance and operations; and aircraft museums. According to the report, three areas of concern (AOCs) were identified. These AOCs are located approximately 350 feet south of the Site; 675 feet south-southwest of the Site; and 900 feet southeast of the Site. Based on the drawing depicting the TCE and 1,2,3-TCP groundwater plumes, the TCE plume is approximately 300 feet south of the Site. The nearest monitoring well, CAMW1, is located approximately 60 feet south of the Site and designated as an upgradient background well. Local groundwater flow direction was estimated toward the southeast and southwest. According to the report, no COCs have been detected in the background well to date. Based on the reviewed data, this CPS is not expected to be a significant environmental concern to the Site. However, due to the emerging contaminants of per- and polyfluoroalkyl substances (PFAS) including perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), the proximity of the Airport to the Site may be a future environmental concern. No records were found for the sampling of PFAS compounds at this time; however, this may be requested and included in future groundwater monitoring events.

### RECOGNIZED ENVIRONMENTAL CONDITIONS

According to American Society for Testing and Materials (ASTM) Standard of Practice E1527-13, REC fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A recognized environmental condition, or REC, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A controlled REC, or CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An historical REC, or HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on our review of these databases, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC were identified. Citadel identified the following environmental concerns:

- The Site was identified on the historical and current UST databases for a 6,000-gallon diesel UST. Mr. Hein Hettinga had no knowledge of any on-Site USTs. Citadel submitted a request to the San Bernardino County Fire Department (SBCFD) for further information; however, SBCFD has not yet responded to the request. The UST represents a REC. Citadel recommends reviewing available files at the SBCFD. If the UST has not yet been removed, Citadel recommends the proper removal of the UST and a subsurface investigation to determine if the UST had impacted the subsurface.
- During the Site reconnaissance, two elevated ASTs were observed at the Site. The elevated ASTs were located on a gravel surface. No secondary containment was observed under the ASTs. Some staining was observed beneath the ASTs. The observed staining by the ASTs represent a REC; however, the staining would likely be localized to this area. Citadel recommends the removal of the ASTs prior to Site redevelopment and preparation of a soil management plan to manage the stained soils during redevelopment.
- The retention ponds collect surface wastes from across the Site, as well as provide a potential dumping area for other dairy and animal-related wastes. Due to the potential for chemical constituents to accumulate in the ponds and become trapped in the sediment, Citadel recommends conducting a limited subsurface assessment of the sediments after the ponds have been drained to evaluate the sediments for chemical risks to human health and the environment.

- The Airport may be considered an off-Site REC due to its role as an emergent chemical of concern.

No evidence for designating the Site as a HREC or CREC from reviews of historical documents and present Site conditions was found.

## NON-ASTM SCOPE CONSIDERATIONS

---

The current Site building was constructed prior to bans using asbestos-containing building materials (ACBMs), lead-based paint (LBP), and polychlorinated biphenyls (PCBs) in electrical equipment came into effect in 1989, 1978, and 1978, respectively. No testing is known to have been performed to evaluate for the presence of ACBMs or PCBs at the Site.

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for San Bernardino County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 14 tests were conducted within the 91710 zip code for the presence of radon. Of these, none was found to contain radon in excess of the EPA's action level of 4.0 pCi/L.

One potable well was observed on-Site. Per FEMA Flood Insurance Rate Map No. number 06071C9335H, the Site and adjacent properties are located within areas in which flood hazards are undetermined but possible (Zone D). According to the NWI database, wetland areas are located within the Site.

## ESA SHELF LIFE

---

**Date of ESA Report:** January 10, 2020

**Date of Site Inspection:** January 2, 2020

**Date Interview was performed:** January 2, 2020

**Date Records Review was performed:** January 2, 2020

**Date Lien Search was performed:** December 20, 2019

## 1.0 INTRODUCTION

Citadel EHS (Citadel) was contracted by LIT-Acquisitions, LLC (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) for the James Borba Dairy / GH Dairy No. 2 located at 7475 Eucalyptus Avenue in the City of Ontario, San Bernardino County, California; hereinafter referred to as the "Site."

### 1.1 PURPOSE

The purpose of the Phase I ESA was to review past and present land use practices and to evaluate the presence, or likely presence, of any hazardous substances or petroleum products that have been discharged into the property's structure, ground, groundwater, or surface water. This qualitative assessment was accomplished by review of current and readily available information regarding past and current land use for indications of the manufacture, generation, use, storage and/or disposal of hazardous substances at the Site. A Site visit was also conducted to observe existing Site conditions. This report provides the results of the Phase I ESA performed.

### 1.2 INVOLVED PARTIES

The involved party(s) in this study, to the best of our knowledge, is LIT-Acquisitions, LLC.

Citadel understands that this Phase I ESA is being requested in conjunction with due diligence activities by LIT-Acquisitions, LLC. Citadel recognizes that this report is to be used exclusively by LIT-Acquisitions, LLC and its lenders, and assigns. It is a report upon which LIT-Acquisitions, LLC and its lenders, and assigns, can rely.

This assessment and report were prepared on behalf of and for the exclusive use of LIT-Acquisitions, LLC, their lenders, and assigns solely for its use and reliance, subject to the terms and conditions agreed upon between Citadel and the Client.

### 1.3 SCOPE OF SERVICES

This Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-13 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The scope of services for this assessment consisted of the following:

- Δ Performed a Site inspection to verify current Site conditions, and check for visible evidence of previously disposed and/or currently present hazardous waste, surface contamination, underground and above ground storage tanks (USTs/ASTs), suspect polychlorinated biphenyls (PCBs), and other potential environmental hazards.
- Δ Conducted a visual survey of the adjacent properties and the immediate vicinity to determine if any nearby sites posed a significant environmental threat to the Site.
- Δ Reviewed currently and readily available documents, including maps, aerial photographs, governmental databases of known hazardous waste sites and underground tanks, other consultant reports (if any), fire insurance maps, and other accessible records.

- Δ Reviewed results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.
- Δ Consulted with appropriate governmental agencies having jurisdiction relative to the past history of the property, complaints or incidents in the immediate area, and permits that may have been issued.
- Δ Prepared a Phase I report, inclusive of our findings and recommendations, with applicable illustrations and documentation.

The scope of services outlined above is generally considered sufficient to properly assess the Site based on the data search, reasonably ascertainable documents, and Site inspection.

## 2.0 GENERAL SITE CHARACTERISTICS

### 2.1 LOCATION

The rectangular-shaped Site is located approximately 2.75 miles south of the California State Route 60 (SR 60) Freeway, locally referred to as the Pomona Freeway; and 2.4 miles northwest of the State Route 71 (SR 71) Freeway, locally referred to as the Chino Valley Freeway. The Site is bounded by Eucalyptus Avenue to the north, dairy farms to the east and west, and Merrill Avenue to the south. The general Site vicinity is occupied by dairy farms and agricultural properties. Chino Airport is located south of the Site.

According to the U.S. Geological Survey (USGS) Prado Dam Quadrangle (7.5 Minute Series), dated 2012, the Site is at an elevation of approximately 654 feet above mean sea level (AMSL) and appears to slope to the south-southwest. The Site is located at approximate coordinates of 33° 59' 12.21" North Latitude and 117° 38' 35.69" West Longitude.

A Site Location Map identified as Figure 1 is included in Appendix A.

### 2.2 SITE DESCRIPTION

According to the County of San Bernardino Assessor's Parcel Maps, the Site is comprised of eight parcels, encompassing approximately 74.5 acres of land. The parcels are legally identified as Assessor's Parcel Numbers (APNs) 1054-041-01-0000; 1054-041-02-0000; 1054-031-01-0000; 1054-031-02-0000; 1054-261-01-0000; 1054-261-02-0000; 1054-291-01-0000; and 1054-291-02-0000.

The Site consists of two single-family residential structures with a dairy barn located between the residences; a detached garage; a dry grain/feed storage shed; an equipment storage shed; approximately 10 hay storage sheds; and approximately 13 canopies/sheds associated with the corrals for the housing of the cattle. A retention pond is located south of the corrals. The retention pond collect surface wastes from across the Site, as well as provide a potential dumping area for other dairy and animal-related wastes. The remaining areas of the Site appear as irrigated cropland. Berms are located along the perimeter of the Site. At the time of the Site reconnaissance, the Site was occupied by GH Dairy No. 2. A low-lying part of the cropland was observed in the southwest corner of the Site during the Site reconnaissance. Due to recent rain events, this low-lying area appeared to be a retention pond. However, according to the Site

representative, this area is typically empty and dry about 80 to 90 percent of the time and water is pumped out after rain events.

The following provides the APNs, associated addresses and brief description of the parcels associated with the Site:

APN (PARCEL)	ASSOCIATED ADDRESSES	DESCRIPTION
1054-041-01-0000 (Parcel A)	None	Parcel A is approximately 9.03 acres in size and is located in the northwest corner of the Site. The parcel consists of irrigated cropland and several corrals.
1054-041-02-0000 (Parcel B)	7417 and 7475 Eucalyptus Avenue	Parcel B is approximately 9.15 acres in size and is located in the northeast corner of the Site, east of Parcel A. The parcel consists of two single-family residences with attached garages; a detached garage; a dairy barn with silos and tanks for storage of milk and water, respectively; several corrals; and associated landscaping.
1054-031-01-0000 (Parcel C)	None	Parcel C is approximately 9.54 acres in size and is located along the west boundary of the Site, south of Parcel A. The parcel consists of irrigated cropland and several corrals.
1054-031-02-0000 (Parcel D)	None	Parcel D is approximately 9.59 acres in size and is located along the east boundary of the Site, south of Parcel B. The parcel consists of hay storage sheds and several corrals.
1054-261-01-0000 (Parcel E)	None	Parcel E is approximately 9.54 acres in size and is located along the west boundary of the Site, south of Parcel C. The parcel consists of irrigated cropland, hay and equipment storage sheds, and several corrals.
1054-261-02-0000 (Parcel F)	None)	Parcel F is approximately 9.59 acres in size and is located along the east boundary of the Site, south of Parcel D. The parcel consists of irrigated cropland; hay and feed storage sheds and areas; two 1,000-gallon aboveground storage tanks (ASTs); a retention pond; and several corrals.
1054-291-01-0000 (Parcel G)	None	Parcel G is approximately 9.03 acres in size and is located in the southwest corner of the Site and south of Parcel E. The parcel consists of irrigated cropland. The low-lying part of the cropland is located in the southwest corner of the parcel.
1054-291-02-0000 (Parcel H)	None	Parcel H is approximately 9.14 acres in size and is located in the southeast corner of the Site and south of Parcel F. The parcel consists of irrigated cropland.

Equipment throughout the Site include ASTs for storage of diesel, grain/feed, and water; one potable water well; milking machines and pumping system; silos for storage of milk; air compressors; boilers; and pole-mounted transformers. In general, the Site appeared to be well maintained and the building/ground conditions appeared to be in good condition.

A Site Plan is included as Figure 2 in Appendix A. Select photographs of the Site and vicinity is included as Appendix B.

## 2.3 ADJACENT PROPERTIES

The immediately surrounding properties of the Site consist of the following:

Direction from Site	Address – Tenant/Use
North	7388 and 7511 Eucalyptus Avenue – Single-family residences with irrigated cropland
East	7565 Eucalyptus Avenue – Chino Valley Dairy, a dairy farm
South	7565 Eucalyptus Avenue – Various hangars associated with the Chino Airport
West	7233 Eucalyptus Avenue – Legend Dairy Farm

## 2.4 UTILITIES

Electrical service is supplied to the Site by Southern California Edison. Natural gas is supplied to the Site by The Gas Company. General rubbish (non-hazardous) is removed from the Site on a regular basis by a contracted waste hauler.

## 3.0 ENVIRONMENTAL SETTING

### 3.1 PHYSICAL SITE CHARACTERISTICS

Based upon the National Geodetic Vertical Datum (NGVD) of 1929, the Site is at an elevation of approximately 654 feet AMSL. Regional topography in the area of the Site appears to slope to the south-southwest.

### 3.2 GEOLOGIC CONDITIONS AND SOILS

The Site is mapped on the geologic map of the Yorba Linda and Prado Dam quadrangles, California (Dibblee and Ehrenspeck, 2001) as Holocene aged surficial sediments (Qa) described as undissected alluvial gravel, sand, and silt of valleys and floodplains. The United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) National Cooperative Soil Survey identifies the Site soils as Chino series, described as silt loam and somewhat poorly drained with moderate infiltration rates.

### 3.3 GROUNDWATER/HYDROGEOLOGICAL CONDITIONS

The Site is located in the Upper Santa Ana Valley Groundwater Basin, Chino Subbasin (No. 8-2.01) as determined by the Department of Water (DWP, 2004). The subbasin is bounded by the impermeable rocks of the San Gabriel Mountains and the Cucamonga fault to the north; the Rialto-Colton fault to the east; the contact with impermeable rocks forming the Jurupa Mountains and low divides connecting the exposures to the southeast; the contact with impermeable rocks of the Puente Hills and the Chino fault to the south; and the San Jose fault to the west. San Antonio Creek and Cucamonga Creek drain the surface of the subbasin southward to join Santa Ana River.

The water-bearing units include the alluvial-fan deposits from the Holocene age and the interfingering finer, alluvial-fan deposits and coarser, fluvial deposits from the Pleistocene age. Groundwater recharge occurs by direct infiltration or precipitation on the subbasin floor, by infiltration of surface flow, and by underflow of groundwater from adjacent basins. The five recharge facilities include Deer Creek, Day Creek, East Etiwanda, San Sevaine, and Victoria.

Citadel reviewed the GeoTracker database of sites that have had releases of fuels, solvents, or other material into the soil and groundwater to obtain information regarding depth to first ground water in the Site vicinity. This database is maintained by the California Regional Water Quality

Control Board. Information was obtained from this database for the Chino Airport, located at 7000 Merrill Avenue, approximately 60 feet south of the Site. According to the Semiannual Groundwater Monitoring Report, Summer and Fall 2018, prepared by Tetra Tech and dated March 2019, depth to groundwater at the nearest monitoring, CAMW1, located approximately 85 feet south of the Site was measured at 63.71 feet below ground surface (bgs) on October 17, 2018. Local groundwater flow direction was estimated toward the southeast and southwest.

---

### 3.4 WETLANDS AND FLOOD ZONE

Citadel reviewed information for the presence of wetlands and flood zone areas at the Site and within ½-mile from the Site. Information from the National Wetlands Inventory (NWI) database is provided by the United States Fish and Wildlife Service, and Flood Insurance Rate Map (FIRM) is published by the Federal Emergency Management Agency (FEMA).

Based on information obtained and reviewed by Citadel:

- According to the NWI database, a freshwater pond of 0.43 acre is located in the location of the retention pond. The identified wetland is classified as PUBFx, which is described as a Palustrine System and Unconsolidated Bottom Class that is semipermanently flooded and excavated.
- Per FEMA Flood Insurance Rate Map No. number 06071C9335H, the Site and adjacent properties are located within areas in which flood hazards are undetermined but possible (Zone D).

---

## 4.0 SITE RECONNAISSANCE

Citadel representative Ms. Shirley Lee conducted the Phase I ESA reconnaissance on January 2, 2020. Ms. Lee was accompanied by Mr. Hein Hettinga, son of the owner of GH Dairy No. 2. The Site reconnaissance consisted of an inspection of the Site and a perimeter survey of the surrounding properties. Findings from the Site inspection, research and perimeter survey are presented below.

---

### 4.1 ON-SITE STORAGE TANKS

The following ASTs were observed during the Site reconnaissance:

- Two 1,000-gallon diesel elevated ASTs to fuel tractors and equipment;
- One approximately 100-gallon diesel generator belly tank;
- One 7,000-gallon and one 12,000-gallon silos to store fresh milk;
- One 1,000-gallon tank to store overflow of fresh milk;
- One 3,000-gallon and two 4,000-gallon tanks/silos to store liquid feed; and
- Two 8,000-gallon water tanks associated with the water well.

At the time of the Site reconnaissance, the elevated ASTs were located on a gravel surface. No secondary containment was observed under the ASTs. Some staining was observed beneath the ASTs, which may be an environmental concern.

No current underground storage of hazardous materials was identified during the Site reconnaissance. However, according to reviewed environmental databases, the Site was

identified on the historical and current UST databases. Mr. Hettinga had no knowledge of any on-site USTs. The former UST may be an environmental concern.

---

## 4.2 IDENTIFIED HAZARDOUS MATERIALS

Citadel inspected the Site for current chemical and hazardous waste storage and handling practices. Citadel observed limited quantities of hazardous materials used throughout the Site for equipment and building maintenance purposes. In addition to the limited quantities of hazardous materials used for equipment and building maintenance, the following hazardous materials were observed at the dairy barn:

- Two 55-gallon containers of Io-Shield, an iodine barrier teat dip;
- Two 55-gallon containers of Mandate, a CIP acid sanitizer for dairy and food processing equipment;
- Two 55-gallon containers of HD PL-10 Plus, an acid cleaner;
- Two 30-gallon containers Dyne, a pipeline detergent-germicide for dairy;
- Three 55-gallon containers of Multi-chlor, a sodium hypochlorite solution; and
- One 55-gallon container of Clean Max, a chlorinated alkaline cleaner.

No secondary containment was observed beneath the drums. The hazardous materials observed at the Site are not expected to represent a significant environmental concern.

---

## 4.3 ASBESTOS CONTAINING MATERIALS

The EPA issued a final rule under Section 6 of Toxic Substances Control Act (TSCA) banning most asbestos-containing building materials (ACBMs) in 1989. The ban on ACBMs was vacated in 1991 allowing some building materials to continue to contain asbestos. The applicability of the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP, 40 CFR Chapter 61, Subpart M) apply to the owner or operator of a facility where an inspection for the presence of asbestos-containing materials (ACM), including Category I (asbestos containing packings, gaskets, resilient floor coverings and asphalt roofing products), and Category II (all remaining types of non-friable asbestos containing material not included in Category I that when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure), non-friable ACM must occur prior to the commencement of demolition or renovation activities.

Based on the estimated construction year for the Site buildings, asbestos-containing building materials (ACBMs) were likely used in the construction of the Site buildings. A survey for ACMs was not conducted as part of this Phase I ESA.

---

## 4.4 LEAD PAINTS

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has greater than or equal to one milligram per square centimeter ( $\text{mg}/\text{cm}^2$ ) (5,000 microgram per gram ( $\mu\text{g}/\text{g}$ ) or 5,000 parts per million (ppm)) of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from  $0.5 \text{ mg}/\text{cm}^2$  to  $2.0 \text{ mg}/\text{cm}^2$ . The US Consumer Product Safety Commission (16 Code of Federal Regulations CFR 1303) banned paint containing more than 0.06% lead for residential use in 1978. Buildings built before 1978 are much more likely to have LBP.

Based on the estimated construction year for the Site buildings, lead-based paints were possibly used within the Site buildings. A survey for lead containing materials was not conducted as part of this Phase I ESA.

---

#### 4.5 POLYCHLORINATED BIPHENYLS

Typical sources of polychlorinated biphenyls (PCBs) include electrical transformer cooling oils, fluorescent light fixture ballasts and hydraulic oil. In 1976, the U.S. EPA banned the manufacture and sale of PCB-containing transformers. Prior to this date, transformers were frequently filled with a dielectric fluid containing PCB-laden oil. By 1985, the US EPA required that commercial property owners with transformers containing more than 500 parts per million (ppm) PCBs must register the transformer with the local fire department, provide exterior labeling, and remove combustible materials within 16 feet (40 Code of Federal Regulations 761.30: "Fire Rule").

Three pole-mounted transformers were observed throughout the Site. No PCB labels were observed. No staining or leaks were observed from the transformers.

---

#### 4.6 RADIOACTIVE MAN-MADE MATERIALS

Many public and private office buildings in the United States have self-luminescent tritium exit signs that contain radioactive materials. While these do not constitute a REC, the exit signs must be properly identified to ensure proper handling and disposal practices. No exit signs were observed during the Site reconnaissance.

---

#### 4.7 PITS, PONDS, AND LAGOONS

No pits or lagoons were visually observed during the Site reconnaissance or reported to be historically present at the Site. A retention pond is located south of the corrals at Parcel F. According to Mr. Hettinga, the retention pond is regularly maintained and cleaned annually. The retention ponds collect surface water from across the Site, as well as provide a potential dumping area for other dairy and animal-related wastes.

A low-lying part of the cropland was observed in the southwest corner of the Site during the Site reconnaissance. Due to recent rain events, this low-lying area appeared to be a retention pond. However, according to the Site representative, this area is typically empty and dry about 80 to 90 percent of the time and water is pumped out after rain events.

Floor drains were observed in the cow washing and milking area located at the dairy barn. Wastewater is transported from drains via pipes to the retention pond located south of the corrals.

---

#### 4.8 SEPTIC TANKS AND CESSPOOLS

No cesspools were visually observed during the Site reconnaissance or reported to have been historically present on the Site. Evidence a septic tank was observed in the northeast portion of the Site. According to Mr. Hettinga, the septic tank is associated with the dairy barn and that additional septic tanks are located by the residences; however, access to the residences was not provided. While the septic tanks do not represent a significant environmental concern, the septic tanks should be properly disposed during redevelopment.

---

#### 4.9 WELLS, CISTERNS, SUMPS AND DRAINS

No cisterns or sumps were visually observed during the Site reconnaissance or reported to have been historically present on the Site. One water well was observed at the Site. According to Mr. Hettinga, the water well provides drinking water to the Site. The water well is not expected to represent a significant environmental concern.

---

#### 4.10 WASTEWATER INTERCEPTORS / GREASE INTERCEPTORS

No wastewater or grease interceptors were visually observed during the Site reconnaissance or reported to be historically present at the Site.

---

#### 4.11 DRINKING WATER

The on-Site water well is used to supply drinking water for the Site.

---

#### 4.12 RADON

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of potential indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L). Region 9 includes Arizona, California Hawaii, Nevada, Pacific Islands, and 148 Tribal Nations.

The Federal EPA Radon Zone for San Bernardino County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 14 tests were conducted within the 91710 zip code for the presence of radon. Of these, none was found to contain radon in excess of the EPA's action level of 4.0 pCi/L.

Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

---

### 5.0 SITE HISTORY

---

The purpose of the records review is to obtain and review reasonably ascertainable/standard sources that will help identify any RECs in connection with the property. Reasonably ascertainable records from standard sources is (1) information that is publicly available, (2) information that is obtainable from its source within reasonable time and cost constraints, and (3) information that is practically reviewable.

Reasonable time and cost means that the information will be provided by the source within 20 calendar days of receiving a written, telephone, or in-person request at no more than a nominal cost intended to cover the source's cost of retrieving and duplicating the information. Information that can only be reviewed by a visit to the source is reasonably ascertainable if the visit is permitted by the source within 20 days of request.

To investigate the history of the Site, Citadel reviewed select historic aerial photographs, building permits, city directories, and Sanborn Fire Insurance Maps provided by Environmental Data Resources Inc. (EDR). In addition, Citadel reviewed client-supplied information, and oil and gas

maps, and Citadel interviewed selected individuals regarding historic Site use. Citadel's reviews of these reports and interviews are discussed below.

---

## 5.1 HISTORICAL AERIAL PHOTOGRAPHS

Historical aerial photographs of the Site and vicinity were obtained from EDR to ascertain historical land uses and to identify any evidence of hazardous material generation or storage. Thirteen aerial photographs dating from 1938 to 2016 were reviewed. Below are brief descriptions of observations made from the aerial photographs of the Site and vicinity.

### 1938, 1946, 1948, and 1953 Aerial Photographs

The Site appears agricultural. Eucalyptus Avenue and Merrill Avenue appear developed north and south of the Site, respectively. Properties surrounding the Site appear generally agricultural/undeveloped with the exception of several small structures in the current location of a single-family residence northwest of the Site.

By 1946, properties south of the Site appear developed with rows of structures, likely hangars, along with a large exterior plane storage/parking area. By 1948, the exterior plane storage/parking area appears vacant.

### 1959 Aerial Photograph

The Site and properties to the north and west of the Site appear relatively unchanged. Properties east and south of the Site were not shown on this map.

### 1966 Aerial Photograph

The Site and properties to the east and west of the Site appear relatively unchanged. Properties north of the Site appear developed with the two current residences along Eucalyptus Avenue. Several of the previously identified hangars at the properties south of the Site appear to have been demolished.

### 1975 Aerial Photographs

The Site and properties to the north and west of the Site appear relatively unchanged. A small structure, likely a residence or farm-related, appears developed at the adjoining property west of the Site, along Eucalyptus Avenue. The property east of the Site appear developed with the current dairy barn along with canopies for several corrals.

### 1987, 1989, 1990, 1994, 2006, and 2009 Aerial Photographs

The Site appears developed with the current residences, dairy barn, canopies associated with corrals, and a retention pond. The remaining portions of the Site (west and southeast portions of the Site) appear relatively unchanged. Additional canopies appear developed at the adjoining property east of the Site. In addition, the dairy barns west and northwest of the Site appear developed in their current configuration. Properties north and south of the Site appear relatively unchanged with the exception of the development of additional hangars further southeast of the Site.

By 1994, the properties north of the Site appear relatively unchanged with the exception of the development of a retention pond.

### 2012 and 2016 Aerial Photographs

The Site appears relatively unchanged with the exception of the appearance of an addition retention pond in the southwest corner of the Site. Properties in the vicinity appear relatively unchanged.

Copies of the Aerial Photographs provided by EDR can be found in Appendix C.

---

### 5.2 HISTORIC BUILDING PERMITS

EDR provides a listing of building permits for the Site and adjoining properties, if available. Permit information was not available. Citadel contacted the City of Ontario to review building permits. According to the City of Ontario, no permits were associated with the Site addresses. In addition, Citadel contacted the County of San Bernardino for any information regarding building permits. One permit was found for the Site; the residences were re-roofed in 1993. No further information was provided.

A copy of the EDR Building Permit Report and select copies of the reviewed building permits are included as Appendix D.

---

### 5.3 HISTORICAL FIRE INSURANCE MAPS

Citadel requested that EDR review its collection of Sanborn Fire Insurance Maps for potential coverage of the Site and vicinity. Sanborn Maps were not available for the Site.

A copy of the EDR Sanborn Insurance Map Report is included as Appendix E.

---

### 5.4 HISTORICAL CITY DIRECTORIES

City directories were researched by EDR in order to identify previous Site tenants and/or neighboring properties with a potential for hazardous materials generation and/or storage. EDR researched city directory listings from 1922 through 2014 (non-inclusive) and provided their search results to Citadel for review. The following table summarizes information provided by the city directory search.

<b>7417 EUCALYPTUS AVENUE</b>	
1980, 1985	Ted Miller Dairy
<b>7475 EUCALYPTUS AVENUE</b>	
1990, 1996, 2003	Joe Borba Dairy
2008	Not identified

A copy of the EDR City Directory Abstract is included as Appendix F.

---

### 5.5 CLIENT-SUPPLIED ENVIRONMENTAL INFORMATION

Citadel was not provided with any previous environmental documents.

## 5.6 HISTORICAL TOPOGRAPHIC MAPS

Historical topographic maps were provided by EDR in order to identify natural features and changes in development over a long period of time. The topographic maps provides the user with a regional view of changes to the Site and vicinity that other historical databases such as aerial photographs may not provide. EDR provided topographic maps dating from 1902 through 2012 (non-inclusive) for review.

### 1902 (Corona) Topographic Map

A road appears developed in the southwest corner of the Site, traversing in a northwest-southeast trajectory. The road continues across the adjoining parcel to the west. Eucalyptus Avenue and Merrill Avenue appears developed north and south of the Site, respectively. Unidentified road also appears developed east and west of the Site. Nearby properties appear generally undeveloped with the exception of several small structures developed further north of the Site.

### 1933 (Prado) and 1941 (Prado) Topographic Maps

The on-Site road appears to have been removed. The previously identified roads along the east and west boundaries of the Site are no longer shown. The remaining portions of the Site and nearby properties appear relatively unchanged with the exception of two small structures developed northeast and northwest of the Site, along Eucalyptus Avenue.

### 1942 (Corona) Topographic Map

The Site and adjacent properties were not shown on this map.

### 1947 (Corona) Topographic Map

The Site and nearby properties to the east, south, and west appear relatively unchanged. An orchard appears developed north/northeast of the Site. Several small structures, likely residences and/or farm-related, appear developed north and northwest of the Site, along Eucalyptus Avenue.

### 1949 (Prado Dam) and 1950 (Prado Dam) Topographic Maps

The Site and the adjoining properties east and west of the Site appear relatively unchanged. The properties south of the Site appear to be occupied by Cal-Aero Primary School and Cal-Aero Flight Academy (deactivated). Properties north of the Site appear relatively unchanged with the exception that several structures appear to have been demolished.

### 1973 (Prado Dam) Topographic Map

The Site and the adjoining properties east and west of the Site appear relatively unchanged. The two current residences appear developed north of the Site. Properties south of the Site now appear as part of the Chino Airport; an area marked for sewage disposal appears developed approximately 0.65 mile south of the Site. A water tower appears located southeast of the Site.

### 1981 (Prado Dam) Topographic Map

The Site appears developed with six small structures in the northeast portion of the Site, 10 canopies associated with corrals south of these structures, and one small structure southwest of the canopies. The small structures appear to be the current residences and dairy barn, along with additional sheds and canopies. The adjoining property east of the Site appears developed with the current dairy-farm related structures. The adjoining property west of the Site appears developed with a small structure along Eucalyptus Avenue. Properties north and south of the Site appear relatively unchanged.

#### 2012 (Prado Dam) Topographic Map

Structures are not featured on this map.

Copies of the historical topographic maps provided by EDR are included as Appendix H.

---

### 5.7 HISTORIC OIL AND GAS MAPS

Citadel reviewed information available on-line through the California Department of Conservation's website. The Division of Oil, Gas & Geothermal Resources (DOGGR) Online Mapping System (DOMS) shows that there are no oil wells within a two-mile radius of the Site.

---

### 5.8 INTERVIEWS

Citadel interviewed Mr. Hein Hettinga, son of the owner of GH Dairy No. 2, during the Site reconnaissance. Mr. Hettinga was not aware of any historic or current environmental concerns or hazards at the Site.

---

### 5.9 ENVIRONMENTAL LIEN

Citadel contracted with EDR to perform an Environmental Lien Search for the Site. The Environmental Lien Search report reviewed did not identify any current environmental liens or other activity and use limitations (AUL) for the Site. A deed, dated April 7, 2003, was included in the report. The deed granted the Site (identifying all eight APNs) from B&B Dairy LLC to Pacific Commodities LLC.

A copy of the environmental lien and AUL search will be found in Appendix I.

---

### 5.10 SUMMARY OF SITE HISTORY

A review of historical sources showed that the Site was generally agricultural/undeveloped as early as 1902. Eucalyptus Avenue and Merrill Avenue appeared developed by 1902. The Site remained generally agricultural until at least 1981 with the development of the current dairy farm.

Properties in the vicinity appeared generally undeveloped in 1902:

- Properties north of the Site appeared developed with an orchard by 1938. The two current residences appear developed by 1966. The properties north of the Site appeared in their current configuration by 1994 with the development of a retention pond.

- Properties east of the Site appeared generally agricultural until the development of the current dairy barn and associated structures by 1975. Additional canopies were completed by 1987 and by 2009.
- Properties west of the Site appeared generally agricultural until the development of a small structure, likely a residence or farm-related, along Eucalyptus Avenue by 1975. The current dairy barn appeared developed by 1987.
- Properties south of the Site appeared developed with hangars along with a large exterior plane storage/parking area by 1946—these were likely occupied by Cal-Aero Primary School and Cal-Aero Flight Academy. By 1973, this area was occupied as part of the Chino Airport. Several of the hangars were demolished by 1975.

## 6.0 REGULATORY AGENCY REVIEW

### 6.1 DATABASE REVIEW

As part of the Phase I ESA, Citadel utilized EDR of Milford, Connecticut, as an information source for regulatory agency database records.

The following summary of the database information is divided into two columns. The first column lists sites as identified and located by EDR within the specified distance of the Site. The second column lists orphan sites, which could not be located by EDR due to incomplete and/or inaccurate address information included in the USEPA/state databases, which Citadel identified as potentially lying within the search distance.

Although locations of the orphan sites are frequently unknown, Citadel attempts to evaluate the potential adverse environmental impact that these facilities may have on the Site. This evaluation consists of reviewing street names in an effort to learn whether the street on which the Site is located lies within the search distance of the subject property, a drive-by view of surrounding properties during the Site visit, and evaluating the Site type and information provided by government agencies. The orphan sites included in the following table are those Citadel identified as potentially located within the identified search distance.

Database	Radius	No. of Plottable Sites	Orphan
National Priorities List	1 mile	0	0
RCRA Corrective Action Treatment/Storage/Disposal (TSD) Facilities (CORRACTS)	1 mile	0	0
Delisted National Priorities List	1 mile	0	0
CERCLIS Sites	½ mile	2	0
CERCLIS No Further Remedial Action Planned (NFRAP) Sites	½ mile	0	0
RCRA Non-Corrective Action TSD Facilities	½ mile	0	0
State/Tribal Voluntary Cleanup Sites	½ mile	0	0
State/Tribal Leaking Registered Storage Tank Sites	½ mile	6	2
State/Tribal Brownfield Sites/CERCLIS Equivalent	1 mile	2	0

Database	Radius	No. of Plottable Sites	Orphan
Historic CORTESE List	½ mile	2	1
State/Tribal Solid Waste Landfill Sites/Facilities	½ mile	2	0
Federal/State/Tribal Engineering Controls Registries	½ mile	0	0
Federal/State/Tribal Institutional Controls Registries	½ mile	0	0
RCRA Large Quantity Generators	¼ mile	1	0
RCRA Small Quantity Generators	¼ mile	7	0
RCRA Non Generators	¼ mile	15	0
State/Tribal Registered Storage Tank Sites	¼ mile	8	0
HIST UST	¼ mile	7	0
CA FID UST	¼ mile	3	1
SWEEPS UST	¼ mile	4	0
Facility Index System (FINDS)	Site	2	0
HAZNET	Site	0	1

A brief discussion of select facilities and their database listings are included following the table. The full report provided by EDR and reviewed by Citadel can be found in Appendix J.

EDR Listing of Adjoining Properties <sup>1</sup>			
Facility Name	Facility Address	Distance From Site	Database Reference
Ted Miller Dairy	7475 Eucalyptus Avenue	Target Property	HIST UST, SWEEPS UST, CA FID UST
AG Borba, Joe	7475 Eucalyptus Avenue	Target Property	UST
Lindsey Borba Dairy	7475 Eucalyptus Avenue	Target Property	WDS
GH Dairy No. 2	7475 Eucalyptus Avenue	Target Property	CERS HAZ WASTE, San Bern. Co. Permit, CERS, FINDS
GH Dairy No. 2	7417 Eucalyptus Avenue	Target Property	CERS, FINDS, ENF, CIWQS
Legend Dairy #1	7233 Eucalyptus Avenue	Adjoining Property – West of Site	San Bern. Co. Permit, CERS
Chino Valley Dairy	7565 Eucalyptus Avenue	Adjoining Property – East of Site	CERS TANK, EMI, ENF, San Bern. Co. Permit, CIWQS, CERS

The Site was identified on the following environmental databases: HIST UST, SWEEPS UST, CA FID UST, UST, WDS, CERS, CERS HAZ WASTE, FINDS, CIWQS, ENF, and San Bern. Co. Permit.

<sup>1</sup> Distance and direction from Site assigned by EDR. Actual distance and direction from the Site boundary may vary.

The Site was identified on the historical UST databases under Ted Miller Dairy. According to information provided by EDR, a 6,000-gallon UST was located at the Site. No further information was provided. The Site was also identified on the current UST database under AG-Borba, Joe. No further information was provided.

The Site was identified on the Facility Index System/Facility Registry System (FINDS) database. FINDS contains facility information and "pointers" to other sources. The Site was identified on this database due to the following references:

- California Enviroview – California Integrated Water Quality System (CIWQS) database for confined animal feeding operations;
- California Enviroview – California Environmental Reporting System (CERS) as a Risk Management Plan (RMP) reporter; and
- National Pollutant Discharge Elimination System (NPDES) – Compliance Information System (ICIS) for concentrated animal feeding operation and NPDES permit.

The Site was identified on the Waste Discharge System (WDS) database as an agricultural facility with designated/influent or solid wastes that pose a significant threat to water quality (dairy waste ponds). The Site was listed on the Water Board Enforcement Action Listings (ENF) for a notice of violation, issued on January 30, 2009, for failure to submit the 2008 annual report on time.

The Site was also identified on the San Bernardino County Permit database with an active hazardous materials (four to 10 chemicals) permit and on CERS as a chemical storage facility. Evaluations by regulatory agencies have been performed since 1987. No violations have been reported with the exception of violations identified in 2008, 2009, 2013, and 2016. The violations issued in 2016 were related to business plans submittals; returned to compliance in August 2017. No information was provided concerning the remaining violations; however, the violations were listed as historical.

The appearance of the Site on the historic and current UST databases may be an environmental concern. No further information was provided regarding the status of the UST.

#### Adjoining Properties

The adjoining property west of the Site was identified on the San Bernardino County Permit with an active hazardous materials (four to 10 chemicals) permit and on CERS as a chemical storage facility. These listings do not represent a significant environmental concern to the Site.

The adjoining property east of the Site was identified on the San Bernardino County Permit with an active hazardous materials (four to 10 chemicals) permit and on CERS as a chemical storage facility with an AST. The AST likely associated with a backup generator. These listings do not represent a significant environmental concern to the Site.

#### Orphan Sites

EDR identified 10 orphan sites in its report and includes two listing in the LUST database; one listing in the HIST CORTESE database (Hazardous Waste and Substances Site List); six listings on the Clandestine Drug Labs (CDLs) database; one listing on a historical UST database; one listing on the HAZNET database. The Site was not identified as an orphan site.

Maps showing the location of these facilities and additional information are provided in the Government Records Report in Appendix J.

## 6.2 VAPOR ENCROACHMENT CONDITION

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Tier 1 screening begins with the default area of concern (AOC) defined by the approximate minimum search distances adjusted as appropriate for local conditions, and then determining if known or suspected contaminated properties with contaminants of concern (COCs) exist within the established AOC. The default AOC is one third of a mile around the TP for COCs and one-tenth of a mile for petroleum hydrocarbon COCs. The AOC is measured from the TP boundary to a contaminated property with known or suspected COC contamination of soil or groundwater or both. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment, based on factors like groundwater flow direction, subsurface characteristics, surficial features and man-made features.

If groundwater flow direction is known or can be inferred from the Phase I ESA investigation of the TP, the default AOC in the down-gradient direction may be reduced to the area within the critical distance of 100 feet. The AOC in the cross-gradient direction may also be reduced, depending upon the critical distance and the width of the COC-contaminated plume associated with a known or likely COC-contaminated property located in a cross-gradient direction from the TP. The critical distance is the lineal distance in any direction between the nearest edge of the contaminated plume and the nearest TP boundary, and is equal to 100 feet for COCs or 30 feet for dissolved petroleum hydrocarbon COCs.

For a COC-contaminated property identified in Tier 1 located down-gradient from the TP, it is not necessary to have information on migrating groundwater contaminated plume dimensions as the critical distance is measured from the nearest TP boundary to the source of contamination at the off-site down-gradient property. In this case, the AOC may be reduced to the area within the critical distance.

For a contaminated property identified in Tier 1 located crossgradient from the TP, the AOC will be the area within the critical distance plus one half of a reasonable estimation of the contaminated plume width (at the point nearest the closest TP boundary) that might be associated with the nearby known or suspected COC-contaminated property (that is, the COC-contaminated property where the groundwater contamination originated). The environmental professional's judgment and experience can be used to estimate the width of the COC-contaminated plume that might be associated with the nearby known or suspected COC-contaminated property. If it is not possible to estimate the contaminated plume width, then the AOC cannot be reduced in the cross-gradient direction.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, no historical releases of petroleum products from a LUST occurred within 0.25-mile and upgradient of the Site. There are no properties within 0.125-mile and upgradient or cross-gradient of the Site that are listed on the Historical Gas Station and Dry Cleaners databases. However, the Chino Airport property is located south of the Site and was identified as occupied by Flite Craft from as early as 1986 as an aircraft and heavy equipment repair services. This property will be further discussed in Section 6.3.

A copy of the vapor encroachment screen provided by EDR is included as Appendix K.

---

### 6.3 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the Site.

#### **BUILDING DEPARTMENT**

Citadel contacted the City of Ontario Building Department for information regarding the Site in order to identify historical tenants and property use. According to the City of Ontario, no permits were associated with the Site address.

#### **FIRE DEPARTMENT**

Citadel submitted a records request to the San Bernardino County Fire Department (SBCFD) for information regarding the Site to identify historical tenants and property use. The SBCFD has not yet responded to Citadel's request.

#### **AIR QUALITY MANAGEMENT DISTRICT**

Citadel reviewed information available on-line through the South Coast Air Quality Management District's Facility Information Detail (FIND) database. The Site was identified on the database as GH Dairy No. 2 (Facility ID 185103). No permits were found; however, an application for a dairy form was submitted on June 30, 2017; and an application for large confined animal feed operation was submitted on October 30, 2018. No further information was provided; no notices of violation or to comply were reported.

#### **REGIONAL WATER QUALITY CONTROL BOARD**

The GeoTracker Database is the California State Water Resources Control Board's (SWRCB) Internet-accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. The Site was not identified in the database. According to GeoTracker, the nearest Cleanup Program Site (CPS) is the Chino Airport (Airport), located at 7000 Merrill Avenue, located south of the Site. The primary chemicals of concern (COCs) in the groundwater at this CPS include trichloroethene (TCE); 1,2,3-trichloropropane (1,2,3-TCP); cis-1,2-dichloroethane; and 1,1-dichloroethene.

According to the Semiannual Groundwater Monitoring Report, dated March 19, 2019, and prepared by Tetra Tech, portions of the Airport have functioned as an airfield since the early 1940s. Since the 1960, the County of San Bernardino has operated the Airport as a public airport for commercial, industrial, and general aviation use. Past and present uses include a flight academy; aircraft sales and storage; modification of military aircraft; various manufacturing; crop dusting; aircraft restoration; maintenance repair shops; aircraft painting, stripping, and washing; fire retardant chemical mixing and loading; US Forest Service aircraft maintenance and operations; and aircraft museums. According to the report, three areas of concern (AOCs) were identified. These AOCs are located approximately 350 feet south of the Site; 675 feet south-southwest of the Site; and 900 feet southeast of the Site. Based on the drawing depicting the TCE and 1,2,3-TCP groundwater plumes, the TCE plume is approximately 300 feet south of the Site. The nearest monitoring well, CAMW1, is located approximately 60 feet south of the Site and designated as an upgradient background well. Local groundwater flow direction was estimated toward the southeast and southwest. According to the report, no COCs have been detected in the background well to date. Based on the reviewed data, this CPS is not expected to be a significant environmental concern to the Site. However, due to the emerging contaminants of per- and polyfluoroalkyl substances (PFAS) including perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), the proximity of the Airport to the Site may be a future environmental concern. No records were found for the sampling of PFAS compounds at this time; however, this may be requested and included in future groundwater monitoring events.

## 7.0 DATA GAPS

A data gap is a lack of or inability to obtain information despite good faith efforts to gather such information. A data failure is a failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful.

The following data gap has been identified during this investigation:

- Additional governmental agencies that are not included in the Government Records report may maintain information regarding environmental conditions at the Site and nearby facilities. A request has been sent to the SBCFD. At the time of this report, the SBCFD has not yet responded.

Citadel believes that the most significant potential sources for on-site contamination have been identified by other means during the current investigation.

## 8.0 FINDINGS

Citadel was contracted by LIT-Acquisitions, LLC (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) for the James Borba Dairy / GH Dairy No. 2 located at 7475 Eucalyptus Avenue in the City of Ontario, San Bernardino County, California; hereinafter referred to as the "Site."

### Current Site Conditions

The Site consists of two single-family residential structures with a dairy barn located between the residences; a detached garage; a dry grain/feed storage shed; an equipment storage shed; approximately 10 hay storage sheds; and approximately 13 canopies/sheds associated with the corrals for the housing of the cattle. A retention pond is located south of the corrals. The retention

pond collect surface wastes from across the Site, as well as provide a potential dumping area for other dairy and animal-related wastes. The remaining areas of the Site appear as irrigated cropland. Berms are located along the perimeter of the Site. At the time of the Site reconnaissance, the Site was occupied by GH Dairy No. 2. A low-lying part of the cropland was observed in the southwest corner of the Site during the Site reconnaissance. Due to recent rain events, this low-lying area appeared to be a retention pond. However, according to the Site representative, this area is typically empty and dry about 80 to 90 percent of the time and water is pumped out after rain events.

The following provides the APNs, associated addresses and brief description of the parcels associated with the Site:

APN (PARCEL)	ASSOCIATED ADDRESSES	DESCRIPTION
1054-041-01-0000 (Parcel A)	None	Parcel A is approximately 9.03 acres in size and is located in the northwest corner of the Site. The parcel consists of irrigated cropland and several corrals.
1054-041-02-0000 (Parcel B)	7417 and 7475 Eucalyptus Avenue	Parcel B is approximately 9.15 acres in size and is located in the northeast corner of the Site, east of Parcel A. The parcel consists of two single-family residences with attached garages; a detached garage; a dairy barn with silos and tanks for storage of milk and water, respectively; several corrals; and associated landscaping.
1054-031-01-0000 (Parcel C)	None	Parcel C is approximately 9.54 acres in size and is located along the west boundary of the Site, south of Parcel A. The parcel consists of irrigated cropland and several corrals.
1054-031-02-0000 (Parcel D)	None	Parcel D is approximately 9.59 acres in size and is located along the east boundary of the Site, south of Parcel B. The parcel consists of hay storage sheds and several corrals.
1054-261-01-0000 (Parcel E)	None	Parcel E is approximately 9.54 acres in size and is located along the west boundary of the Site, south of Parcel C. The parcel consists of irrigated cropland, hay and equipment storage sheds, and several corrals.
1054-261-02-0000 (Parcel F)	None	Parcel F is approximately 9.59 acres in size and is located along the east boundary of the Site, south of Parcel D. The parcel consists of irrigated cropland; hay and feed storage sheds and areas; two 1,000-gallon ASTs; a retention pond; and several corrals.
1054-291-01-0000 (Parcel G)	None	Parcel G is approximately 9.03 acres in size and is located in the southwest corner of the Site and south of Parcel E. The parcel consists of irrigated cropland. The low-lying part of the cropland is located in the southwest corner of the parcel.
1054-291-02-0000 (Parcel H)	None	Parcel H is approximately 9.14 acres in size and is located in the southeast corner of the Site and south of Parcel F. The parcel consists of irrigated cropland.

Equipment throughout the Site include ASTs for storage of diesel, grain/feed, and water; one potable water well; milking machines and pumping system; silos for storage of milk; air compressors; boilers; and pole-mounted transformers. In general, the Site appeared to be well maintained and the building/ground conditions appeared to be in good condition.

### Site History

A review of historical sources showed that the Site was generally agricultural/undeveloped as early as 1902. Eucalyptus Avenue and Merrill Avenue appeared developed by 1902. The Site remained generally agricultural until at least 1981 with the development of the current dairy farm.

Properties in the vicinity appeared generally undeveloped in 1902.

- Properties north of the Site appeared developed with an orchard by 1938. The two current residences appear developed by 1966. The properties north of the Site appeared in their current configuration by 1994 with the development of a retention pond.
- Properties east of the Site appeared generally agricultural until the development of the current dairy barn and associated structures by 1975. Additional canopies were completed by 1987 and by 2009.
- Properties west of the Site appeared generally agricultural until the development of a small structure, likely a residence or farm-related, along Eucalyptus Avenue by 1975. The current dairy barn appeared developed by 1987.
- Properties south of the Site appeared developed with hangars along with a large exterior plane storage/parking area by 1946—these were likely occupied by Cal-Aero Primary School and Cal-Aero Flight Academy. By 1973, this area was occupied as part of the Chino Airport. Several of the hangars were demolished by 1975.

### Environmental Database

The Site was identified on the following environmental databases: HIST UST, SWEEPS UST, CA FID UST, UST, WDS, CERS, CERS HAZ WASTE, FINDS, CIWQS, ENF, and San Bern. Co. Permit.

The Site was identified on the historical UST databases under Ted Miller Dairy. According to information provided by EDR, a 6,000-gallon UST was located at the Site. No further information was provided. The Site was also identified on the current UST database under AG-Borba, Joe. No further information was provided.

The Site was identified on the FINDS database. FINDS contains facility information and “pointers” to other sources. The Site was identified on this database due to the following references:

- California Enviroview – CIWQS database for confined animal feeding operations;
- California Enviroview – CERS as a RMP reporter; and
- NPDES – ICIS for concentrated animal feeding operation and NPDES permit.

The Site was identified on the WDS database as an agricultural facility with designated/influent or solid wastes that pose a significant threat to water quality (dairy waste ponds). The Site was listed on the Water Board ENF Listings for a notice of violation, issued on January 30, 2009, for failure to submit the 2008 annual report on time.

The Site was also identified on the San Bernardino County Permit database with an active hazardous materials (four to 10 chemicals) permit and on CERS as a chemical storage facility. Evaluations by regulatory agencies have been performed since 1987. No violations have been reported with the exception of violations identified in 2008, 2009, 2013, and 2016. The violations issued in 2016 were related to business plans submittals; returned to compliance in August 2017. No information was provided concerning the remaining violations; however, the violations were listed as historical.

The appearance of the Site on the historic and current UST databases may be an environmental concern. No further information was provided regarding the status of the UST.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, no historical releases of petroleum products from a LUST occurred within 0.25-mile and upgradient of the Site. There are no properties within 0.125-mile and upgradient or cross-gradient of the Site that are listed on the Historical Gas Station and Dry Cleaners databases. However, the Chino Airport property is located south of the Site and was identified as occupied by Flite Craft from as early as 1986 as an aircraft and heavy equipment repair services. This property will be further discussed in the Regulatory Agencies section below.

### Regulatory Agencies

The GeoTracker Database is the California SWRCB Internet-accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. The Site was not identified in the database. According to GeoTracker, the nearest CPS is the Airport, located at 7000 Merrill Avenue, located south of the Site. The primary COC in the groundwater at this CPS include TCE; 1,2,3-TCP; cis-1,2-dichloroethane; and 1,1-dichloroethene.

According to the Semiannual Groundwater Monitoring Report, dated March 19, 2019, and prepared by Tetra Tech, portions of the Airport have functioned as an airfield since the early 1940s. Since the 1960, the County of San Bernardino has operated the Airport as a public airport for commercial, industrial, and general aviation use. Past and present uses include a flight academy; aircraft sales and storage; modification of military aircraft; various manufacturing; crop dusting; aircraft restoration; maintenance repair shops; aircraft painting, stripping, and washing; fire retardant chemical mixing and loading; US Forest Service aircraft maintenance and operations; and aircraft museums. According to the report, three AOCs were identified. These AOCs are located approximately 350 feet south of the Site; 675 feet south-southwest of the Site; and 900 feet southeast of the Site. Based on the drawing depicting the TCE and 1,2,3-TCP groundwater plumes, the TCE plume is approximately 300 feet south of the Site. The nearest monitoring well, CAMW1, is located approximately 60 feet south of the Site and designated as an upgradient background well. Local groundwater flow direction was estimated toward the southeast and southwest. According to the report, no COCs have been detected in the background well to date. Based on the reviewed data, this CPS is not expected to be a significant environmental concern to the Site. However, due to the emerging contaminants of per- and PFAS including PFOA and PFOS, the proximity of the Airport to the Site may be a future environmental concern. No records were found for the sampling of PFAS compounds at this time; however, this may be requested and included in future groundwater monitoring events.

## 9.0 CONCLUSIONS AND RECOMMENDATIONS

According to ASTM Standard of Practice E1527-13, RECs fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A REC, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not RECs.

A controlled REC, or CREC, is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An historical REC, or HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on our review of these databases, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC were identified. Citadel identified the following environmental concerns:

- The Site was identified on the historical and current UST databases for a 6,000-gallon diesel UST. Mr. Hein Hettinga had no knowledge of any on-Site USTs. Citadel submitted a request to the SBCFD for further information; however, SBCFD has not yet responded to the request. The UST represents a REC. Citadel recommends reviewing available files at the SBCFD. If the UST has not yet been removed, Citadel recommends the proper removal of the UST and a subsurface investigation to determine if the UST had impacted the subsurface.
- During the Site reconnaissance, two elevated ASTs were observed at the Site. The elevated ASTs were located on a gravel surface. No secondary containment was observed under the ASTs. Some staining was observed beneath the ASTs. The observed staining by the ASTs represent a REC; however, the staining would likely be localized to this area. Citadel recommends the removal of the ASTs prior to Site redevelopment and preparation of a soil management plan to manage the stained soils during redevelopment.

- The retention ponds collect surface wastes from across the Site, as well as provide a potential dumping area for other dairy and animal-related wastes. Due to the potential for chemical constituents to accumulate in the ponds and become trapped in the sediment, Citadel recommends conducting a limited subsurface assessment of the sediments after the ponds have been drained to evaluate the sediments for chemical risks to human health and the environment.
- The Airport may be considered an off-Site REC due to its role as an emergent chemical of concern.

No evidence for designating the Site as a HREC or CREC from reviews of historical documents and present Site conditions was found.

Citadel recommends that the tenant follow best management practices, in conformance with all appropriate current regulations, in regards to potential use of regulated hazardous materials and/or waste generated during everyday operations. Citadel recommends that the water well be abandoned and removed prior to Site development.

The current Site building was constructed prior to bans using ACBMs, LBP, and PCBs in electrical equipment came into effect in 1989, 1978, and 1978, respectively. No testing is known to have been performed to evaluate for the presence of ACBMs or PCBs at the Site. Prior to renovation or demolition of building components, particularly roofing materials, Citadel recommends that the Client perform a comprehensive survey for ACBMs and LBP prior to renovation or demolition activities. Such surveys should be performed to identify if ACBMs or LBP are present and to ensure proper handling and disposal and to allow for measures to protect both worker and building occupant safety during routine building maintenance, renovation or demolition.

## 10.0 LIMITATIONS

The information and opinions rendered in this report are exclusively for use by the Client. Citadel will not distribute this report without the Client's written consent, except as may be required by law or court order. The recommendations expressed in this report took into consideration the purpose and scope of this limited assignment. We accept responsibility for the competent performance of our duties in executing the assignment and preparing this report in accordance with the normal standards of our profession, but disclaim any responsibility for consequential damages resulting from inaccuracies in information provided by the Client, federal, state, county, or local regulatory agencies.

## 12.0 PROFESSIONAL CERTIFICATION

Citadel has completed a Phase I ESA for the James Borba Dairy / GH Dairy No. 2 located at 7475 Eucalyptus Avenue in the City of Ontario, San Bernardino County, California. The Phase I ESA was performed at the Client's request in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-2013 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The independent conclusions represent our professional judgment based on information and data available to Citadel during the course of this project. Information regarding historical and present operations, conditions and test data provided by the Client or their representative, is assumed to be correct and complete. The conclusions presented by this Phase I ESA are based on information provided to Citadel and from observations and perceived conditions existing on the date of the site reconnaissance.

In expressing the opinions stated in this report, Citadel has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional. Documentation provided by the Client, Client-designated representatives, interested third-parties, or from the public domain, and referenced in preparation of the Phase I ESA report, have been assimilated with the understanding that Citadel assumes no responsibility or liability for their accuracy.

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by the final All Appropriate Inquiry (AAI) Rule published in 40 CFR Part 312.10 (November 1, 2013). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting described in this Phase I ESA. I have developed and performed the AAI in conformance with the standard and care of this Rule.

# EDR BUILDING PERMIT REPORT

## About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

## ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

## Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

## EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Citadel Environmental Services on Dec 19, 2019.

### **TARGET PROPERTY**

7475 Eucalyptus Avenue  
Chino, CA 91710

### **SEARCH METHODS**

EDR searches available lists for both the Target Property and Surrounding Properties.

### **RESEARCH SUMMARY**

Building permits identified: **NO PERMITS IDENTIFIED**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

## TARGET PROPERTY FINDINGS

### TARGET PROPERTY DETAIL

7475 Eucalyptus Avenue  
Chino, CA 91710

No Permits Found

## ADJOINING PROPERTY FINDINGS

### ADJOINING PROPERTY DETAIL

The following Adjoining Property addresses were researched for this report. Detailed findings are provided for each address.

No Permits Found

## GLOSSARY

### General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other common reasons for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

## GLOSSARY

### Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

### Sample Building Permit Data

Date: Nov 09, 2000

Permit Type: Bldg -

New Permit Number: 101000000405

Status: Valuation: \$1,000,000.00

Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Citadel Environmental Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## Certified Sanborn Results:

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Contact: Shirley Lee

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Citadel Environmental Services were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

**Search Results:**

**Coordinates:**

<b>P.O.#</b>	NA	<b>Latitude:</b>	33.986725 33° 59' 12" North
<b>Project:</b>	0611.1079.0	<b>Longitude:</b>	-117.6432 -117° 38' 36" West
		<b>UTM Zone:</b>	Zone 11 North
		<b>UTM X Meters:</b>	440592.16
		<b>UTM Y Meters:</b>	3760870.48
		<b>Elevation:</b>	654.37' above sea level

## **EDR Environmental Lien and AUL Search**

**James Borba Dairy**

7475 Eucalyptus Avenue  
Chino, CA 91710

Inquiry Number: 5912552.7  
December 20, 2019

## EDR Environmental Lien and AUL Search

## EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

***Thank you for your business.***

Please contact EDR at 1-800-352-0050  
with any questions or comments.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on

## EXECUTIVE SUMMARY

the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/25/2019 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/24/2019 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/29/2019 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

GH DAIRY #2 Registry ID:: 110065377103	7417 EUCALYPTUS	0 - 1/8 (0.001 mi.)	B8	21

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 09/23/2019 has revealed that there is 1 Cortese site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTATES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 2 HIST CORTESE sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

CIWQS: The California Integrated Water Quality System (CIWQS) is a computer system used by the State and Regional Water Quality Control Boards to track information about places of environmental interest, manage permits and other orders, track inspections, and manage violations and enforcement activities.

A review of the CIWQS list, as provided by EDR, and dated 09/03/2019 has revealed that there is 1 CIWQS site within approximately 0.001 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>GH DAIRY #2</i>	<i>7417 EUCALYPTUS AVEN</i>	<i>0 - 1/8 (0.001 mi.)</i>	<i>B9</i>	<i>21</i>

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 08/14/2019 has revealed that there is 1 CERS site within approximately 0.001 miles of the target property.

WDS:  
 Name: LINDSEY BORBA DAIRY  
 Address: 7475 EUCALYPTUS  
 City: CHINO  
 Facility ID: Santa Ana River 365684001  
 Facility Type: Agricultural - Facility that treats and/or disposes of the wastes associated with confined and concentrated animal feeding, confined animal feeding, confined animal holding, confined and concentrated aquatic animal production facilities, and aquaculture. the treatment and/or disposal of agricultural return water is included in this category.

Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

NPDES Number: CAG018001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

Subregion: 8

Facility Telephone: Not reported  
 Facility Contact: Not reported  
 Agency Name: BORBA JOE & LINDSEY  
 Agency Address: 14651 SO. GROVE  
 Agency City,St,Zip: CHINO 91710  
 Agency Contact: JOE BORBA  
 Agency Telephone: Not reported  
 Agency Type: Private  
 SIC Code: 241  
 SIC Code 2: Not reported

Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).

Primary Waste: SLDWST  
 Waste Type2: N  
 Waste2: Solid Wastes  
 Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).

Secondary Waste: Washwater Waste (Product washwater wastes: E.G., photo reuse wastewater, vegetable washwater)

Secondary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).

Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The facility is not a POTW.  
 Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic

issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Violation Description: Failure to have a UST Response Plan available on site.  
Violation Notes: Per inspection on August 25, 2017, violations remain outstanding. CERS elements were submitted to CERS on 9/20/17, however the tank installation date and manufacturer are still incorrect in CERS. The plan also indicates that there is no fill tube shut off valve. The tank does have a fill tube shut off valve and that must be indicated in CERS.

 Status Date: 03/17/2011  
 Global Id: T10000002398  
 Lead Agency: SANTA ANA RWQCB (REGION 8)  
 Lead Agency Case Number: Not reported  
 Latitude: 33.9771752582545  
 Longitude: -117.647438049316  
 Case Type: Cleanup Program Site  
 Case Worker: PAH  
 Local Agency: Not reported  
 RB Case Number: Not reported  
 File Location: Regional Board  
 Potential Media Affected: Soil  
 Potential Contaminants of Concern: Benzene, Toluene, Xylene, Other Petroleum  
 Site History: In the afternoon of July 22, 2010, three buried drums were discovered during trenching for installation of a storm drain pipeline for a new facility for SCE. Additional drums were discovered during the response activities. By sunset, eight buried drums had been removed from the excavation. The drums did not have lids and contained soil that had been placed on top of other materials. The contents of the drums were field tested using a HazCat chemical identification kit, and determined to be a non-explosive, flammable, non-corrosive, organic resin-type material. The eight drums were placed in a roll-off bin. Two more drums were visible in the excavation, but were left in place due to limited remaining daylight. Samples were

MAP FINDINGS

**VAN'S MOBILE TRUCK SERVICE, INC. (Continued)**

**S103956204**

collected of the soil, the material in the drums, and the liquid in one of the drums. The samples were delivered to Microbac Laboratory in Riverside, and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total petroleum hydrocarbons (TPH) carbon range, polynuclear aromatic hydrocarbons (PAHs), CAM17 metals, and flashpoint (only the liquid sample). The analytical results indicated that high concentrations of benzene were present in all of the samples. Also detected were toluene, ethylbenzene, xylene, styrene, 1,2,4-trimethylbenzene, and naphthalene. On July 28, 2010, a geophysical survey was conducted in an effort to locate any additional buried drums. During the survey, several areas to the east and west of the original excavation were marked as possible targets for further investigation. Excavation and removal of additional drums was conducted between August 16 and August 25, 2010. A total of 51 drums, several aluminum canisters and pieces of wood were removed from the excavation and placed in roll-off-bins. Excavated soil was stockpiled and covered with plastic sheeting. Additional soil was excavated from beneath the drums, placed in stockpiles and covered. The resulting excavation measured approximately 100 feet from east to west and 20 feet from north to south. The bottom of the excavation varied from 10 to 15 feet below ground surface. Patricia Hannon of Board Staff observed the collection of the final confirmation soil samples on August 26, 2010. Staff from the U.S. EPA and the California Department of Toxic Substances Control were also present. The samples were submitted to a California certified laboratory for analysis as per the TCRAP. The analytical results for the soil samples showed only very low concentrations of benzene (<1 to 1.28 micrograms/kilogram (a%g/kg)), ethylbenzene (<1 to 2.24 a%g/kg), xylene (<1 to 28.8 a%g/kg), 1,3,5 trimethylbenzene (<5 to 55.4 a%g/kg), naphthalene (<5 to 10.9 a%g/kg), TPH gasoline range (<1 to 4.71 milligrams/kilogram (mg/kg)), TPH diesel range <1 to 123 mg/kg, and TPH motor oil range (<1 to 355 mg/kg).

**Facility Status: Open - Remediation**  
 Status Date: 05/16/2017  
 Global Id: SL208634049  
 Lead Agency: SANTA ANA RWQCB (REGION 8)  
 Lead Agency Case Number: Not reported  
 Latitude: 33.9804492902876  
 Longitude: -117.645871639252  
 Case Type: Cleanup Program Site  
 Case Worker: PAH  
 Local Agency: Not reported  
 RB Case Number: 2086300  
 File Location: Regional Board  
 Potential Media Affected: Aquifer used for drinking water supply  
 Potential Contaminants of Concern: 1,2,3-Trichloropropane (TCP), Dichloroethene (DCE), Trichloroethylene (TCE)  
 Site History: The primary chemicals of concern in the groundwater at the site are trichloroethene, 1,2,3-trichloropropane, cis-1,2-dichloroethene, 1,2-dichloroethane, and 1,1-dichloroethene. Offsite plume characterization field activities were initiated in 2007. Twelve cone penetrometer testing (CPT)/direct push borings were advanced to investigate the below grade lithology, and to determine the horizontal and vertical extent of the VOCs in the groundwater in the vicinity of the site. Eleven additional direct push borings were also advanced, and water samples were collected. The soils encountered consisted of silts, sands, gravels and some clay lenses. The depth to groundwater ranged from 25 to 50 feet below ground surface (bgs), with the depth to water decreasing toward the south. Groundwater was detected at approximately 50 feet bgs at the Kimball Avenue boring location, approximately 30 to 45 feet bgs at the Bickmore Avenue boring locations and approximately 25 to 35 feet bgs at the Pine Avenue boring locations. The local groundwater flow direction is toward the southeast. Based on the results of the investigation in 2007, nine nested groundwater monitoring wells were installed in 2008 at three locations along the axis of the plume. Three wells were installed at each location to monitor the shallow (approximately 35 to 96 feet bgs), intermediate (approximately 91 to 146 feet bgs) and deep (approximately 206 to 309 feet bgs) groundwater zones.

Title:	Oral Communication on 01/04/2007 on lack of BMPs
Description:	Facility requested a 2nd inspection NONA approval. On arrival, all the requested vehicle parts, oil drums, and open trash containers are not placed under roof, or under covers. Tires had been moved into large containers, but a few tires are still sitting outside. NONA approval denied until the requested clean-ups are completed.

Title: Oral Communication on 05/08/2008 for Lack of BMPs and Housekeeping  
Description: There are still 55-gal drums, partially filled with mix fluids (waste oils, waste detergents, and unknown fluid), two 5,500-gal totes filled with waste oil, without secondary containment nor under cover. Waste water from the washing areas collected along the south side of the property, pooling all the way to the front side of the property.

Expiration Date: 09/30/2003

**CERS:**

Name: CDCR-HERMAN G. STARK YTH CORRTNL FA  
Address: 15180 S EUCLID AVE  
City,State,Zip: CHINO, CA 91710  
Site ID: 36019  
CERS ID: 10045183  
CERS Description: Chemical Storage Facilities

**Violations:**

Site ID: 36019  
Site Name: CDCR-HERMAN G. STARK YTH CORRTNL FA  
Violation Date: 02-18-2016  
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2  
Violation Description: Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.  
Violation Notes: Returned to compliance on 03/07/2016. The business plan submitted via CERS on 10/01/2015 requires revision. Observed hazardous materials inventory to be missing the location and applicable information such as CAS numbers and or mixture components. Furthermore, observed site map to be missing access and exit points, emergency shutoffs, evacuation staging areas, and emergency response equipment.  
Violation Division: San Bernardino County Fire Department  
Violation Program: HMRRP  
Violation Source: CERS

Site ID: 36019  
Site Name: CDCR-HERMAN G. STARK YTH CORRTNL FA  
Violation Date: 02-18-2016  
Citation: HSC 6.67 Multiple - California Health and Safety Code, Chapter 6.67, Section(s) Multiple  
Violation Description: APSA Program - Administration/Documentation - General  
Violation Notes: Returned to compliance on 02/18/2016. Observed (2) 55 gallon drums of mineral oil with missing secondary containment spill pallet. The violation was corrected at the time of the inspection by operator. Operator provided a new secondary containment spill pallet with sufficient capacity to contain the size of the biggest container (plus precipitation) to the drums of mineral oil at the time of the inspection.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: N/A
Date Made Active in Reports: 11/20/2019	Last EDR Contact: 12/10/2019
Number of Days to Update: 13	Next Scheduled EDR Contact: 01/13/2020
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: N/A
Date Made Active in Reports: 11/20/2019	Last EDR Contact: 12/09/2019
Number of Days to Update: 13	Next Scheduled EDR Contact: 01/13/2020
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2019  
Date Data Arrived at EDR: 11/07/2019  
Date Made Active in Reports: 11/20/2019

Last EDR Contact: 10/04/2019  
Next Scheduled EDR Contact: 01/13/2020  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2019  
Date Data Arrived at EDR: 11/07/2019

Last EDR Contact: 12/09/2019  
Next Scheduled EDR Contact: 01/27/2020  
Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/25/2019	Source: EPA
Date Data Arrived at EDR: 11/07/2019	Telephone: 800-424-9346
Date Made Active in Reports: 11/21/2019	Last EDR Contact: 12/09/2019
Number of Days to Update: 14	Next Scheduled EDR Contact: 01/27/2020
	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 06/24/2019	Source: EPA
Date Data Arrived at EDR: 06/26/2019	Telephone: 800-424-9346
Date Made Active in Reports: 10/17/2019	Last EDR Contact: 12/16/2019
Number of Days to Update: 113	Next Scheduled EDR Contact: 04/06/2020
	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/24/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/26/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 10/17/2019	Last EDR Contact: 12/16/2019
Number of Days to Update: 113	Next Scheduled EDR Contact: 04/06/2020
	Data Release Frequency: Quarterly

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/24/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/26/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 10/17/2019	Last EDR Contact: 12/16/2019
Number of Days to Update: 113	Next Scheduled EDR Contact: 04/06/2020
	Data Release Frequency: Quarterly

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/24/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/26/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 10/17/2019	Last EDR Contact: 12/16/2019
Number of Days to Update: 113	Next Scheduled EDR Contact: 04/06/2020
	Data Release Frequency: Quarterly

### RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/24/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/26/2019	Telephone: (415) 495-8895
Date Made Active in Reports: 10/17/2019	Last EDR Contact: 12/16/2019
Number of Days to Update: 113	Next Scheduled EDR Contact: 04/06/2020
	Data Release Frequency: Quarterly

### ***Federal institutional controls / engineering controls registries***

#### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 08/13/2019	Source: Department of the Navy
Date Data Arrived at EDR: 08/20/2019	Telephone: 843-820-7326
Date Made Active in Reports: 08/26/2019	Last EDR Contact: 11/07/2019
Number of Days to Update: 6	Next Scheduled EDR Contact: 02/24/2020
	Data Release Frequency: Varies

#### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 08/19/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/20/2019	Telephone: 703-603-0695
Date Made Active in Reports: 08/26/2019	Last EDR Contact: 11/22/2019
Number of Days to Update: 6	Next Scheduled EDR Contact: 03/09/2020
	Data Release Frequency: Varies

#### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 08/19/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/20/2019	Telephone: 703-603-0695
Date Made Active in Reports: 08/26/2019	Last EDR Contact: 11/22/2019

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **Federal ERNS list**

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/09/2019  
Date Data Arrived at EDR: 09/09/2019  
Date Made Active in Reports: 09/23/2019  
Number of Days to Update: 14

Source: National Response Center, United States Coast Guard  
Telephone: 202-267-2180  
Last EDR Contact: 12/19/2019  
Next Scheduled EDR Contact: 04/06/2020  
Data Release Frequency: Quarterly

## **State- and tribal - equivalent NPL**

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 07/29/2019  
Date Data Arrived at EDR: 07/31/2019  
Date Made Active in Reports: 10/08/2019  
Number of Days to Update: 69

Source: Department of Toxic Substances Control  
Telephone: 916-323-3400  
Last EDR Contact: 10/29/2019  
Next Scheduled EDR Contact: 02/10/2020  
Data Release Frequency: Quarterly

## **State- and tribal - equivalent CERCLIS**

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 07/29/2019  
Date Data Arrived at EDR: 07/31/2019  
Date Made Active in Reports: 10/08/2019  
Number of Days to Update: 69

Source: Department of Toxic Substances Control  
Telephone: 916-323-3400  
Last EDR Contact: 10/29/2019  
Next Scheduled EDR Contact: 02/10/2020  
Data Release Frequency: Quarterly

## **State and tribal landfill and/or solid waste disposal site lists**

SWF/LF (SWIS): Solid Waste Information System

Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 08/12/2019  
Date Data Arrived at EDR: 08/13/2019  
Date Made Active in Reports: 10/09/2019  
Number of Days to Update: 57

Source: Department of Resources Recycling and Recovery  
Telephone: 916-341-6320

Number of Days to Update: 28	Next Scheduled EDR Contact: 01/09/2012
	Data Release Frequency: No Update Planned

## LUST REG 8: Leaking Underground Storage Tanks

California Regional Water Quality Control Board Santa Ana Region (8). For more current information, please refer to the State Water Resources Control Board's LUST database.

Date of Government Version: 02/14/2005	Source: California Regional Water Quality Control Board Santa Ana Region (8)
Date Data Arrived at EDR: 02/15/2005	Telephone: 909-782-4496
Date Made Active in Reports: 03/28/2005	Last EDR Contact: 08/15/2011
Number of Days to Update: 41	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

## LUST REG 7: Leaking Underground Storage Tank Case Listing

Leaking Underground Storage Tank locations. Imperial, Riverside, San Diego, Santa Barbara counties.

Date of Government Version: 02/26/2004	Source: California Regional Water Quality Control Board Colorado River Basin Region (7)
Date Data Arrived at EDR: 02/26/2004	Telephone: 760-776-8943
Date Made Active in Reports: 03/24/2004	Last EDR Contact: 08/01/2011
Number of Days to Update: 27	Next Scheduled EDR Contact: 11/14/2011
	Data Release Frequency: No Update Planned

## LUST REG 5: Leaking Underground Storage Tank Database

Leaking Underground Storage Tank locations. Alameda, Alpine, Amador, Butte, Colusa, Contra Costa, Calveras, El Dorado, Fresno, Glenn, Kern, Kings, Lake, Lassen, Madera, Mariposa, Merced, Modoc, Napa, Nevada, Placer, Plumas, Sacramento, San Joaquin, Shasta, Solano, Stanislaus, Sutter, Tehama, Tulare, Tuolumne, Yolo, Yuba counties.

Date of Government Version: 07/01/2008	Source: California Regional Water Quality Control Board Central Valley Region (5)
Date Data Arrived at EDR: 07/22/2008	Telephone: 916-464-4834
Date Made Active in Reports: 07/31/2008	Last EDR Contact: 07/01/2011
Number of Days to Update: 9	Next Scheduled EDR Contact: 10/17/2011
	Data Release Frequency: No Update Planned

## LUST REG 4: Underground Storage Tank Leak List

Los Angeles, Ventura counties. For more current information, please refer to the State Water Resources Control Board's LUST database.

Date of Government Version: 09/07/2004	Source: California Regional Water Quality Control Board Los Angeles Region (4)
Date Data Arrived at EDR: 09/07/2004	Telephone: 213-576-6710
Date Made Active in Reports: 10/12/2004	Last EDR Contact: 09/06/2011
Number of Days to Update: 35	Next Scheduled EDR Contact: 12/19/2011
	Data Release Frequency: No Update Planned

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## LUST REG 3: Leaking Underground Storage Tank Database

Leaking Underground Storage Tank locations. Monterey, San Benito, San Luis Obispo, Santa Barbara, Santa Cruz counties.

Date of Government Version: 05/19/2003	Source: California Regional Water Quality Control Board Central Coast Region (3)
Date Data Arrived at EDR: 05/19/2003	Telephone: 805-542-4786
Date Made Active in Reports: 06/02/2003	Last EDR Contact: 07/18/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 10/31/2011
	Data Release Frequency: No Update Planned

## LUST REG 2: Fuel Leak List

Leaking Underground Storage Tank locations. Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, Sonoma counties.

Date of Government Version: 09/30/2004	Source: California Regional Water Quality Control Board San Francisco Bay Region (2)
Date Data Arrived at EDR: 10/20/2004	Telephone: 510-622-2433

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 06/03/2019

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 06/11/2019  
Date Data Arrived at EDR: 06/13/2019

## **Local Land Records**

### LIENS: Environmental Liens Listing

A listing of property locations with environmental liens for California where DTSC is a lien holder.

Date of Government Version: 08/29/2019	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 08/30/2019	Telephone: 916-323-3400
Date Made Active in Reports: 10/29/2019	Last EDR Contact: 12/02/2019
Number of Days to Update: 60	Next Scheduled EDR Contact: 03/16/2020
	Data Release Frequency: Varies

### LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 10/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/07/2019	Telephone: 202-564-6023
Date Made Active in Reports: 11/20/2019	Last EDR Contact: 12/10/2019
Number of Days to Update: 13	Next Scheduled EDR Contact: 01/13/2020
	Data Release Frequency: Semi-Annually

### DEED: Deed Restriction Listing

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 09/03/2019	Source: DTSC and SWRCB
Date Data Arrived at EDR: 09/04/2019	Telephone: 916-323-3400

## Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

	Data Release Frequency: N/A

### SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Data Release Frequency: Varies

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Date of Government Version: 09/10/2019

Number of Days to Update: 59	Next Scheduled EDR Contact: 02/24/2020
	Data Release Frequency: Varies

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2017	Source: California Environmental Protection Agency
Date Data Arrived at EDR: 05/29/2019	Telephone: 916-255-1136

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Such information has been reprinted with the permission of Endeavor Business Media.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Northwest Map: 5619074 ONTARIO, CA  
Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06071C9335H	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06037C1750F	FEMA FIRM Flood data
06071C8620H	FEMA FIRM Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
PRADO DAM	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: CHINO

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	16 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	16 inches	59 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

#### California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

### RADON

#### State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by EDR. The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600).

<b>STANDARD ENVIRONMENTAL RECORDS</b>	<b>Default Area of Concern (Miles)*</b>	<b>property</b>	<b>1/10</b>	<b>&gt; 1/10</b>

SIC Code 2: Not Reported

Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).

Primary Waste: SLDWST

Waste Type2: N

Waste2: Solid Wastes

Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).

Secondary Waste: Washwater Waste (Product washwater wastes: E.G., photo reuse wastewater, vegetable washwater)

Secondary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).

Design Flow: 0

Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The facility is not a POTW.

Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

**Environmental Interest/Information System:**

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

## INTRODUCTION

### A: PROJECT LOCATION

The project site is located on the east side of Sultana Avenue, south of Eucalyptus Avenue and north of Merrill Avenue in the City of Ontario, California. Please see next page for vicinity map.

### B: STUDY PURPOSE

The purpose of this study is to determine 25-year and 100-year, existing and proposed condition peak flow rates from the project site.

### C: PROJECT STAFF:

Thienes Engineering staff involved in this study include:

Reinhard Stenzel  
Kristie Ferronato

## DISCUSSION

The project site encompasses approximately 71.7 acres. Proposed improvements to the site include six industrial buildings ranging from 61,300 square feet to 530,460 square feet. There will be a truck yard adjacent to each building and vehicle parking lots scattered throughout the project site. Proposed landscaping will be along the site's property lines and scattered throughout the site. Public storm drains will be constructed, by others, in Eucalyptus Avenue (to intercept northerly street flow prior to entering the site), Sultana Avenue (per master drainage plan, fronting the site), Merrill Avenue (also per master drainage plan and fronting the site), and Campus Drive (also per master drainage plan and fronting the site).

### Master Plan Hydrology

Per the City of Ontario's Master Plan of Drainage dated March 2012 by Hunsaker & Associates, the project site is tabled to a proposed Master Plan storm drain in Merrill Avenue (MERL-XIV-1), a 9.5ft by 9.5ft reinforced concrete box tributary to an existing earthen channel adjacent to Euclid Avenue south of Merrill Avenue.

Although the master plan storm drains adjacent to the project site will be constructed, by others, the ultimate discharge location downstream in Euclid Avenue is currently not fully improved. The existing earthen channel adjacent to Euclid Avenue does not have the capacity to convey Master Plan peak flow rates. Therefore, proposed condition discharge from the project site to Euclid Avenue via proposed Master Plan storm drains will be limited to existing condition 25-year runoffs from the site, with the difference between existing condition 25-year runoff and proposed condition 100-year runoff detained onsite.

Please see Appendix "A" for the City's Master Plan of Drainage and other pertinent reference materials.

### Existing Condition

The project site is currently developed with two residential homes in the northeast portion, a dairy pasture south of the residential homes along the east property line, and an agricultural field on the majority of the site. The site generally drains southerly towards Merrill Avenue. There is a ditch just north of the south property lines, which detains and conveys the runoff to the westerly property. The site ultimately drains to the earthen channel adjacent to Euclid Avenue. The 25-year and 100-year existing condition peak flow rates from this area are approximately 49.5 cfs and 85.1 cfs, respectively.

See Appendix "B" for existing condition hydrology calculations and Appendix "D" for existing condition hydrology map.

## Proposed Condition

In general, proposed condition runoff from the project site will surface drain to proposed catch basins throughout the site. B.M.P. flows tributary to each catch basin will be conveyed via proposed storm drains from the catch basin to a Debris Separating Baffle Box (D.S.B.B.) for pre-treatment, then to a set of 96-inch C.M.P.'s for main water quality treatment. Once water quality volume has been met, when the 96-inch C.M.P.'s are full, higher flows at the catch basins will be conveyed away from the project site via a larger onsite storm drain system. The proposed onsite storm drain system will be sufficiently sized to limit proposed condition project site discharge to less than existing condition 25-year discharge. Flows beyond the allowable rate will be forced to temporarily detain above ground in the proposed truck yards throughout the site, and then slowly released via the proposed onsite storm drain at a rate below the existing condition 25-year discharge. See "Detention Analysis" section below for more details regarding detention in truck yards.

The proposed Building 8, Building 9, and Building 10 will drain to their southerly truck yards (Nodes 100-132) drain to catch basins in the truck yards. Runoff from the vehicle parking and drives will be collected and conveyed to the storm drain in the truck yard. Runoff is then conveyed westerly via a proposed onsite storm drain south of the proposed buildings. The total proposed condition 25-year and 100-year peak flow rates from this area to the proposed onsite storm drain system, are approximately 23.5 cfs and 30.0 cfs, respectively. The proposed onsite storm drain will convey the runoff from the site southerly towards the proposed, by Westland, public storm drain in Merrill Avenue.

The northwest portion of the Building 11 will drain to the vehicle parking lots (Nodes 140-142), the storm drain will convey the runoff westerly, where it will confluence with the onsite system (Node 143). The total proposed condition 25-year and 100-year peak flow rates are approximately 7.6 cfs and 9.8 cfs, respectively. The northeast portion of Building 11 will drain to the northern vehicle parking lots (Nodes 150-151). A proposed storm drain system will convey flow southerly then westerly through the truck yard. The southern portion of building 11 will also drain to the truckyard (Nodes 160-165). The total proposed condition 25-year and 100-year peak flow rates are approximately 21.1 cfs and 27.2 cfs, respectively.

The north portion of Building 12 will drain to the northern truck yard (Nodes 170-177). The total proposed condition 25-year and 100-year peak flow rates are approximately 27.5 cfs and 35.5 cfs, respectively. The southern portion of the building 12 will drain to the south truck yard (Nodes 180-184). The total proposed condition 25-year and 100-year peak flow rates are approximately 18.5 cfs and 23.7 cfs, respectively. The storm drains for Building 12 will join the storm drain conveying the runoff southerly towards public storm drain in Merrill Avenue.

The northeast portion of Building 13 will drain to the northeast vehicle parking lot. The storm drain will convey the runoff northerly towards the north truck yard for Building 13. This will also collect the runoff from the eastern vehicle parking along the east side of Building 13. The northern portion of Building 13 will drain to the northern truck yard

(Nodes 190-207). The total proposed condition 25-year and 100-year peak flow rates are approximately 29.6 cfs and 37.9 cfs, respectively. The southern portion of the Building 12 will drain to the south vehicle parking lot (Nodes 210-212). The total proposed condition 25-year and 100-year peak flow rates are approximately 7.6 cfs and 9.8 cfs, respectively. The storm drains for Building 12 will join the storm drain conveying the runoff southerly towards public storm drain in Merrill Avenue.

The total proposed condition 25-year and 100-year runoffs from the project site tributary to the proposed Merrill Avenue storm drain, via onsite storm drain are approximately 127.0 cfs and 162.7 cfs. There are areas of landscape which sheet drain into the adjacent streets which will be collect by the public storm drain system.

See Appendix "B" for proposed condition hydrology calculations and Appendix "D" for proposed condition hydrology map.

### Detention Analysis

As previously mentioned, proposed condition discharge to the Merrill Avenue storm drain from the project site will be limited to existing condition 25-year runoff. Proposed onsite truck yards will be utilized to detain the difference between existing condition 25-year runoff and proposed condition 100-year runoff.

See Appendix "C" for detention calculations for each onsite truck yard. The following is a summary of required detention volume and post-detention 100-year discharge for each truck yard.

Truck Yard	Node	Area	Volume	Ponding Depth	Q100 Tributary	Q100 Discharge
Building 8	132	3.45 ac.	0.11 ac-ft	0.80 ft	9.50 cfs	2.3 cfs
Building 9	122	4.10 ac.	0.12 ac-ft	0.88 ft	11.50 cfs	3.7 cfs
Building 10	111	3.55 ac.	0.05 ac-ft	0.58 ft	11.40 cfs	8.0 cfs
Building 11 south	155	10.40 ac.	0.85 ac-ft	1.36 ft	24.6 cfs	3.9 cfs
Building 12 north	167	12.20 ac.	2.98 ac-ft	1.69 ft	34.4 cfs	1.6 cfs
Building 12 south	174	10.25 ac.	1.33 ac-ft	1.48 ft	24.2 cfs	2.5 cfs
Building 13 north	197	13.30 ac.	3.39 ac-ft	1.83 ft	39.3 cfs	1.7 cfs

Total Q100 Discharge from truck yards = 23.7 cfs

With onsite detention, the total proposed condition 100-year discharge from the project site to Merrill Avenue will be approximately 49.9 cfs (23.7 cfs from truck yards + 9.8 cfs from the undetained northerly portion of Building 11 and parking lots, Nodes 140-142 + 6.6 cfs from westerly undetained parking lots, Nodes 167, 179, 186, and 209 + 9.8 cfs from south portion of Building 13 and the southwesterly undetained parking lot, Node 210-213). This is comparable to the existing condition 25-year discharge (49.5 cfs) from the site to Merrill Avenue.

See the following table for runoffs from the entire project site under existing and proposed conditions, for 25-year and 100-year storm events.

	Existing 25-Year	Existing 100-Year	Proposed 25-Year	Proposed 100-Year Without Detention	Proposed 100-Year With Detention
Site Runoff	49.5 cfs	85.1 cfs	127.0 cfs	162.7 cfs	49.9 cfs

Storm drain pipe sizes and hydraulics will be determined during final design phase to limit the proposed condition 100-year site discharge to the existing condition 25-year discharge.

### Methodology

Hydrology calculations were computed using San Bernardino County Rational Method program (by AES Software). The soil type is “B” per the San Bernardino County Hydrology Manual. The San Bernardino County Small Area Unit Hydrograph Model (also by AES Software) was used for detention calculations. See Appendix “A” for reference materials.

### Water Quality

The project proposes 96-inch underground perforated CMP systems and Maxwell IV drywells. A hydrodynamic separator, serving as pretreatment, will be provided upstream of every CMP system. Roof and surface runoff will sheet flow into inlets where stormwater will get intercepted into the CMP and drywell systems for water quality treatment. These systems will utilize infiltration as their primary form of treatment. These systems store stormwater runoff until it gradually exfiltrates into the underlying soil. Pollutant removal occurs through the infiltration of runoff and the adsorption of pollutants into the soil. This practice has high pollutant removal efficiency and can also help recharge groundwater, thus helping to maintain low flows in stream systems.

Problem Descriptions:

TEI JOB NUMBER 3857  
 PONDING IN BUILDING 8 TRUCK YARD  
 100-YEAR STORM EVENT  
 -----

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
 TOTAL CATCHMENT AREA (ACRES) = 3.45  
 SOIL-LOSS RATE, Fm, (INCH/HR) = 0.042  
 LOW LOSS FRACTION = 0.079  
 TIME OF CONCENTRATION (MIN.) = 9.30  
 SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
 USER SPECIFIED RAINFALL VALUES ARE USED  
 RETURN FREQUENCY (YEARS) = 100  
 5-MINUTE POINT RAINFALL VALUE (INCHES) = 0.38  
 30-MINUTE POINT RAINFALL VALUE (INCHES) = 0.75  
 1-HOUR POINT RAINFALL VALUE (INCHES) = 1.00  
 3-HOUR POINT RAINFALL VALUE (INCHES) = 1.90  
 6-HOUR POINT RAINFALL VALUE (INCHES) = 3.00  
 24-HOUR POINT RAINFALL VALUE (INCHES) = 6.00  
 -----

TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 1.43  
 TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.30  
 -----

Problem Descriptions:  
 TEI JOB NUMBER 3857  
 PONDING IN BUILDING 8 TRUCK YARD  
 100-YEAR STORM EVENT

=====

FLOW-THROUGH DETENTION BASIN MODEL

SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 CONSTANT HYDROGRAPH TIME UNIT(MINUTES) = 9.300  
 DEAD STORAGE (AF) = 0.00  
 SPECIFIED DEAD STORAGE (AF) FILLED = 0.00  
 ASSUMED INITIAL DEPTH(FEET) IN STORAGE BASIN = 0.00

DEPTH-VS.-STORAGE AND DEPTH-VS.-DISCHARGE INFORMATION:

TOTAL NUMBER OF BASIN DEPTH INFORMATION ENTRIES = 8

* (FEET)	(ACRE-FEET)	STORAGE (AF)	OUTFLOW (CFS)	** (FEET)	(ACRE-FEET)	**STORAGE (AF)	OUTFLOW (CFS)
* 0.000	0.000	0.000	0.000**	0.090	0.010	0.010	1.800*
* 0.290	0.010	0.010	1.900**	0.490	0.030	0.030	2.100*
* 0.690	0.080	0.080	2.200**	0.890	0.150	0.150	2.300*
* 1.090	0.230	0.230	2.400**	1.290	0.330	0.330	2.500*

BASIN STORAGE, OUTFLOW AND DEPTH ROUTING VALUES:

INTERVAL NUMBER	DEPTH (FEET)	{S-O*DT/2} (ACRE-FEET)	{S+O*DT/2} (ACRE-FEET)
1	0.00	0.00000	0.00000

7	1.09	0.21463	0.24537
8	1.29	0.31399	0.34601

WHERE S=STORAGE (AF) ; O=OUTFLOW (AF/MIN.) ; DT=UNIT INTERVAL (MIN.)

DETENTION BASIN ROUTING RESULTS:

NOTE: COMPUTED BASIN DEPTH, OUTFLOW, AND STORAGE QUANTITIES OCCUR AT THE GIVEN TIME. BASIN INFLOW VALUES REPRESENT THE AVERAGE INFLOW DURING THE RECENT HYDROGRAPH UNIT INTERVAL.

TIME (HRS)	DEAD-STORAGE FILLED (AF)	INFLOW (CFS)	EFFECTIVE DEPTH (FT)	OUTFLOW (CFS)	EFFECTIVE VOLUME (AF)

\*\*\*\*\*

-----  
 Problem Descriptions:

TEI JOB NUMBER 3857  
 PONDING IN BUILDING 9 TRUCK YARD  
 100-YEAR STORM EVENT  
 -----

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
 TOTAL CATCHMENT AREA (ACRES) = 4.10  
 SOIL-LOSS RATE, Fm, (INCH/HR) = 0.042  
 LOW LOSS FRACTION = 0.079  
 TIME OF CONCENTRATION (MIN.) = 9.00  
 SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
 USER SPECIFIED RAINFALL VALUES ARE USED  
 RETURN FREQUENCY (YEARS) = 100  
 5-MINUTE POINT RAINFALL VALUE (INCHES) = 0.38  
 30-MINUTE POINT RAINFALL VALUE (INCHES) = 0.75  
 1-HOUR POINT RAINFALL VALUE (INCHES) = 1.00  
 3-HOUR POINT RAINFALL VALUE (INCHES) = 1.90  
 6-HOUR POINT RAINFALL VALUE (INCHES) = 3.00  
 24-HOUR POINT RAINFALL VALUE (INCHES) = 6.00

-----  
 TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 1.70  
 TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.35

\*\*\*\*\*

Problem Descriptions:  
 TEI JOB NUMBER 3857  
 PONDING IN BUILDING 9 TRUCK YARD  
 100-YEAR STORM EVENT

=====

FLOW-THROUGH DETENTION BASIN MODEL

SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 CONSTANT HYDROGRAPH TIME UNIT (MINUTES) = 9.000  
 DEAD STORAGE (AF) = 0.00  
 SPECIFIED DEAD STORAGE (AF) FILLED = 0.00  
 ASSUMED INITIAL DEPTH (FEET) IN STORAGE BASIN = 0.00

DEPTH-VS.-STORAGE AND DEPTH-VS.-DISCHARGE INFORMATION:

TOTAL NUMBER OF BASIN DEPTH INFORMATION ENTRIES = 7

* (FEET)	(ACRE-FEET)	STORAGE (ACRE-FEET)	OUTFLOW (CFS)	** (FEET)	**BASIN-DEPTH (FEET)	STORAGE (ACRE-FEET)	OUTFLOW (CFS)	*
* 0.000	0.000	0.000	0.000**	0.110	0.010	2.900*		
* 0.310	0.010	3.100**	0.510	0.030	3.300*			
* 0.710	0.080	3.600**	0.910	0.130	3.700*			
* 1.110	0.200	3.900**						

-----

BASIN STORAGE, OUTFLOW AND DEPTH ROUTING VALUES:

INTERVAL NUMBER	DEPTH (FEET)	{S-O*DT/2} (ACRE-FEET)	{S+O*DT/2} (ACRE-FEET)
1	0.00	0.00000	0.00000

4	0.51	0.00955	0.05045
5	0.71	0.05769	0.10231
6	0.91	0.10707	0.15293
7	1.11	0.17583	0.22417

WHERE S=STORAGE (AF) ; O=OUTFLOW (AF/MIN.) ; DT=UNIT INTERVAL (MIN.)

-----

DETENTION BASIN ROUTING RESULTS:

NOTE: COMPUTED BASIN DEPTH, OUTFLOW, AND STORAGE QUANTITIES OCCUR AT THE GIVEN TIME. BASIN INFLOW VALUES REPRESENT THE AVERAGE INFLOW DURING THE RECENT HYDROGRAPH UNIT INTERVAL.

TIME (HRS)	DEAD-STORAGE FILLED (AF)	INFLOW (CFS)	EFFECTIVE DEPTH (FT)	OUTFLOW (CFS)	EFFECTIVE VOLUME (AF)

\*\*\*\*\*  
 -----

Problem Descriptions:  
 TEI JOB NUMBER 3857  
 BUILDING 10 TRUCK YARD  
 100-YEAR STORM EVENT  
 -----

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
 TOTAL CATCHMENT AREA (ACRES) = 3.25  
 SOIL-LOSS RATE, Fm, (INCH/HR) = 0.042  
 LOW LOSS FRACTION = 0.079  
 TIME OF CONCENTRATION (MIN.) = 6.30  
 SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
 USER SPECIFIED RAINFALL VALUES ARE USED  
 RETURN FREQUENCY (YEARS) = 100  
 5-MINUTE POINT RAINFALL VALUE (INCHES) = 0.38  
 30-MINUTE POINT RAINFALL VALUE (INCHES) = 0.75  
 1-HOUR POINT RAINFALL VALUE (INCHES) = 1.00  
 3-HOUR POINT RAINFALL VALUE (INCHES) = 1.90  
 6-HOUR POINT RAINFALL VALUE (INCHES) = 3.00  
 24-HOUR POINT RAINFALL VALUE (INCHES) = 6.00

-----  
 TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 1.35  
 TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.28

\*\*\*\*\*
