Problem Descriptions:  
 TEI JOB NUMBER 3857  
 BUILDING 10 TRUCK YARD  
 100-YEAR STORM EVENT

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
 TOTAL CATCHMENT AREA (ACRES) = 3.25  
 SOIL-LOSS RATE, Fm, (INCH/HR) = 0.042  
 LOW LOSS FRACTION = 0.079  
 TIME OF CONCENTRATION (MIN.) = 6.30  
 SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
 USER SPECIFIED RAINFALL VALUES ARE USED  
 RETURN FREQUENCY (YEARS) = 100  
 5-MINUTE POINT RAINFALL VALUE (INCHES) = 0.38  
 30-MINUTE POINT RAINFALL VALUE (INCHES) = 0.75  
 1-HOUR POINT RAINFALL VALUE (INCHES) = 1.00  
 3-HOUR POINT RAINFALL VALUE (INCHES) = 1.90  
 6-HOUR POINT RAINFALL VALUE (INCHES) = 3.00  
 24-HOUR POINT RAINFALL VALUE (INCHES) = 6.00

TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 1.35  
 TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.28

Problem Descriptions:  
TEI JOB NUMBER 3857  
BUILDING 10 TRUCK YARD

100-YEAR STORM EVENT

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
 TOTAL CATCHMENT AREA(ACRES) = 3.25  
 SOIL-LOSS RATE, Fm, (INCH/HR) = 0.042  
 LOW LOSS FRACTION = 0.079  
 TIME OF CONCENTRATION (MIN.) = 6.30  
 SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
 USER SPECIFIED RAINFALL VALUES ARE USED  
 RETURN FREQUENCY (YEARS) = 100  
 5-MINUTE POINT RAINFALL VALUE (INCHES) = 0.38  
 30-MINUTE POINT RAINFALL VALUE (INCHES) = 0.75  
 1-HOUR POINT RAINFALL VALUE (INCHES) = 1.00  
 3-HOUR POINT RAINFALL VALUE (INCHES) = 1.90  
 6-HOUR POINT RAINFALL VALUE (INCHES) = 3.00  
 24-HOUR POINT RAINFALL VALUE (INCHES) = 6.00

TOTAL CATCHMENT RUNOFF VOLUME (ACRE-FEET) = 1.35  
 TOTAL CATCHMENT SOIL-LOSS VOLUME (ACRE-FEET) = 0.28

-----  
 TIME DURATION (minutes) OF PERCENTILES OF ESTIMATED PEAK FLOW RATE:  
 (Note: 100% of Peak Flow Rate estimate assumed to have  
 an instantaneous time duration)

Percentile of Estimated Peak Flow Rate	Duration (minutes)
0%	1442.7
10%	132.3
20%	18.9
30%	6.3
40%	6.3
50%	6.3
60%	6.3
70%	6.3
80%	6.3
90%	6.3

Problem Descriptions:  
 TEI JOB NUMBER 3857  
 BUILDING 10 TRUCK YARD  
 100-YEAR STORM EVENT

=====

FLOW-THROUGH DETENTION BASIN MODEL

SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 CONSTANT HYDROGRAPH TIME UNIT (MINUTES) = 6.300  
 DEAD STORAGE (AF) = 0.00  
 SPECIFIED DEAD STORAGE (AF) FILLED = 0.00  
 ASSUMED INITIAL DEPTH (FEET) IN STORAGE BASIN = 0.00

DEPTH-VS.-STORAGE AND DEPTH-VS.-DISCHARGE INFORMATION:

TOTAL NUMBER OF BASIN DEPTH INFORMATION ENTRIES = 4

* (FEET)	(ACRE-FEET)	OUTFLOW (CFS)	** (FEET)	**BASIN-DEPTH STORAGE (ACRE-FEET)	OUTFLOW (CFS)
* 0.000	0.000	0.000**	0.220	0.010	9.300*
* 0.420	0.020	10.100**	0.620	0.060	10.800*

BASIN STORAGE, OUTFLOW AND DEPTH ROUTING VALUES:

INTERVAL NUMBER	DEPTH (FEET)	{S-O*DT/2} (ACRE-FEET)	{S+O*DT/2} (ACRE-FEET)
1	0.00	0.00000	0.00000
2	0.22	-0.03035	0.05035
3	0.42	-0.02382	0.06382
4	0.62	0.01314	0.10686

WHERE S=STORAGE (AF) ; O=OUTFLOW (AF/MIN.) ; DT=UNIT INTERVAL (MIN.)

DETENTION BASIN ROUTING RESULTS:

NOTE: COMPUTED BASIN DEPTH, OUTFLOW, AND STORAGE QUANTITIES OCCUR AT THE GIVEN TIME. BASIN INFLOW VALUES REPRESENT THE AVERAGE INFLOW DURING THE RECENT HYDROGRAPH UNIT INTERVAL.

TIME (HRS)	DEAD-STORAGE FILLED (AF)	INFLOW (CFS)	EFFECTIVE DEPTH (FT)	OUTFLOW (CFS)	EFFECTIVE VOLUME (AF)

\*\*\*\*\* DESCRIPTION OF STUDY \*\*\*\*\*  
\* TEI JOB NO 3857 \*  
\* BUILDING 11 SOUTH \*  
\* 100-YEAR STORM EVENT \*  
\*\*\*\*\*

FILE NAME: W:\3857\BLDG11S.DAT  
TIME/DATE OF STUDY: 09:45 12/28/2021

\*\*\*\*\*

FLOW PROCESS FROM NODE 160.00 TO NODE 165.00 IS CODE = 1

-----  
>>>>SUBAREA RUNOFF (UNIT-HYDROGRAPH ANALYSIS)<<<<<  
=====

(UNIT-HYDROGRAPH ADDED TO STREAM #1)

WATERSHED AREA = 10.400 ACRES  
BASEFLOW = 0.000 CFS/SQUARE-MILE  
\*USER ENTERED "LAG" TIME = 0.160 HOURS  
CAUTION: LAG TIME IS LESS THAN 0.50 HOURS.  
THE 5-MINUTE PERIOD UH MODEL (USED IN THIS COMPUTER PROGRAM)  
MAY BE TOO LARGE FOR PEAK FLOW ESTIMATES.  
VALLEY(DEVELOPED) S-GRAPH SELECTED  
MAXIMUM WATERSHED LOSS RATE(INCH/HOUR) = 0.042  
LOW LOSS FRACTION = 0.079  
\*HYDROGRAPH MODEL #1 SPECIFIED\*

SPECIFIED PEAK 5-MINUTES RAINFALL(INCH)= 0.38  
SPECIFIED PEAK 30-MINUTES RAINFALL(INCH)= 0.75  
SPECIFIED PEAK 1-HOUR RAINFALL(INCH) = 1.00  
SPECIFIED PEAK 3-HOUR RAINFALL(INCH) = 1.90  
SPECIFIED PEAK 6-HOUR RAINFALL(INCH) = 3.00  
SPECIFIED PEAK 24-HOUR RAINFALL(INCH) = 6.00

PRECIPITATION DEPTH-AREA REDUCTION FACTORS:  
5-MINUTE FACTOR = 1.000  
30-MINUTE FACTOR = 1.000  
1-HOUR FACTOR = 1.000  
3-HOUR FACTOR = 1.000  
6-HOUR FACTOR = 1.000  
24-HOUR FACTOR = 1.000

UNIT HYDROGRAPH TIME UNIT = 5.000 MINUTES  
UNIT INTERVAL PERCENTAGE OF LAG-TIME = 52.083

=====

UNIT HYDROGRAPH DETERMINATION

-----

INTERVAL NUMBER	"S" GRAPH MEAN VALUES	UNIT HYDROGRAPH ORDINATES(CFS)
1	4.818	6.060
2	32.056	34.259
3	71.281	49.335
4	91.414	25.322
5	97.580	7.756
6	98.965	1.741
7	99.516	0.693
8	99.806	0.365
9	99.952	0.183
10	100.000	0.061

-----  
TOTAL SOIL-LOSS VOLUME(ACRE-FEET) = 0.3768  
TOTAL STORM RUNOFF VOLUME(ACRE-FEET) = 4.8206

-----  
TIME DURATION(minutes) OF PERCENTILES OF ESTIMATED PEAK FLOW RATE:  
(Note: 100% of Peak Flow Rate estimate assumed to have  
an instantaneous time duration)

Percentile of Estimated Peak Flow Rate	Duration (minutes)
0%	1475.0
10%	370.0
20%	65.0
30%	30.0
40%	20.0
50%	15.0
60%	15.0
70%	10.0
80%	10.0
90%	5.0

\*\*\*\*\*

FLOW PROCESS FROM NODE 160.00 TO NODE 165.00 IS CODE = 3.1

>>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<<

ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1  
 THROUGH A FLOW-THROUGH DETENTION BASIN  
 SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 DEAD STORAGE(AF) = 0.000  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.000  
 SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET = 0.000  
 DETENTION BASIN CONSTANT LOSS RATE(CFS) = 0.00

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.45	3.10	0.100
3	0.65	3.30	0.240
4	0.85	3.60	0.450
5	1.25	3.70	0.690
6	1.45	3.90	0.980

=====

MODIFIED-PULS BASIN ROUTING MODEL RESULTS(5-MINUTE COMPUTATION INTERVALS):  
 (Note: Computed EFFECTIVE DEPTH and VOLUME are estimated at the clock time;  
 MEAN OUTFLOW is the average value during the unit interval.)

CLOCK TIME (HRS)	DEAD-STORAGE FILLED(AF)	INFLOW (CFS)	LOSS (CFS)	EFFECTIVE DEPTH(FT)	MEAN OUTFLOW (CFS)	EFFECTIVE VOLUME(AF)

PROCESS SUMMARY OF STORAGE:

INFLOW VOLUME = 4.821 AF  
BASIN STORAGE = 0.000 AF (WITH 0.000 AF INITIALLY FILLED)  
OUTFLOW VOLUME = 4.821 AF  
LOSS VOLUME = 0.000 AF

-----  
>>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<<<  
-----

ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1  
 THROUGH A FLOW-THROUGH DETENTION BASIN  
 SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 DEAD STORAGE(AF) = 0.000  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.000  
 SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET = 0.000  
 DETENTION BASIN CONSTANT LOSS RATE(CFS) = 0.00

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.17	1.10	0.010
3	0.37	1.12	0.090
4	0.57	1.20	0.300
5	0.77	1.30	0.630
6	0.97	1.40	1.040
7	1.17	1.42	1.520

FLOW PROCESS FROM NODE 180.00 TO NODE 184.00 IS CODE = 3.1

>>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<<

ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1 THROUGH A FLOW-THROUGH DETENTION BASIN SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:

DEAD STORAGE(AF) = 0.000  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.000  
 SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET = 0.000  
 DETENTION BASIN CONSTANT LOSS RATE(CFS) = 0.00

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.20	1.80	0.010
3	0.40	1.90	0.060
4	0.60	2.10	0.180
5	0.80	2.20	0.360
6	1.00	2.30	0.590
7	1.20	2.40	0.860
8	1.40	2.50	1.180
9	1.60	2.60	1.530

===== MODIFIED-PULS BASIN ROUTING MODEL RESULTS(5-MINUTE COMPUTATION INTERVALS): (Note: Computed EFFECTIVE DEPTH and VOLUME are estimated at the clock time; MEAN OUTFLOW is the average value during the unit interval.)

CLOCK TIME (HRS)	DEAD-STORAGE FILLED(AF)	INFLOW (CFS)	LOSS (CFS)	EFFECTIVE DEPTH(FT)	MEAN OUTFLOW (CFS)	EFFECTIVE VOLUME(AF)

-----  
>>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<<  
-----

ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1  
 THROUGH A FLOW-THROUGH DETENTION BASIN  
 SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 DEAD STORAGE(AF) = 0.000  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.000  
 SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET = 0.000  
 DETENTION BASIN CONSTANT LOSS RATE(CFS) = 0.00

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.11	1.10	0.010
3	0.31	1.12	0.050
4	0.51	1.20	0.210
5	0.71	1.30	0.510
6	0.91	1.40	0.900
7	1.11	1.42	1.360

## Preliminary Water Quality Management Plan (PWQMP)

For compliance with Santa Ana Regional Water Quality Control Board  
Order Number R8-2010-0036 (NPDES Permit No. CAS618036)

**Project Name:** Ontario Ranch Business Park Phase #2

**Ontario Project #:** PDEV21-XXX

**Applicant Name:** Euclid Land Ventures, LLC

**Applicant Address:** 4450 MacArthur Boulevard, Suite 100  
Newport Beach, CA 92660

**Project Address:** Merrill and Sultana, Ontario, CA

**Project Size (acres):** 71.70 Acres

**Project Description:** Light Industrial

---

**1st Submittal Date:** 01/11/2022

# Preliminary Water Quality Management Plan (PWQMP)

## 1. Introduction

The Preliminary Water Quality Management Plan (PWQMP) is a planning tool to improve integration of required water quality elements, stormwater management, water conservation, rainwater harvesting and re-use, and flood management in land use planning and the City’s development process. The Preliminary WQMP will assist project applicants and planners in properly designing and laying out project sites so that water quality may be incorporated in the most effective manner and at the lowest cost for the developer.

The San Bernardino County Municipal Separate Storm Sewer System Permit (MS4 Permit) requires project-specific Water Quality Management plans (WQMP) to be prepared for all priority new development and significant redevelopment projects listed in Section 2 of this document. The MS4 Permit stipulates that the City of Ontario require priority project applicants to submit a Preliminary project-specific WQMP, as early as possible, during the environmental review or planning phase of a development project and that the Preliminary WQMP be approved prior to the issuance of land use entitlement.

## 2. Priority Projects (requiring a Preliminary WQMP)

Land Use entitlement shall not be issued for any of the listed projects, below, until a Preliminary WQMP has been approved by the City’s Engineering Department. For construction projects not going through entitlement, a Preliminary and Final project specific WQMP shall be approved, prior to the issuance of construction permits:

Check the appropriate project category below, for this project:

**Check  
below**

### Project Categories

	<p>1. All significant re-development projects. Significant re-development is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site subject to discretionary approval of the Permittee. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing developed site, and the existing development was not subject to WQMP requirements, the numeric sizing criteria discussed below applies only to the addition or replacement, and not to the entire developed site. Where redevelopment results in an increase of fifty percent or more of the impervious surfaces of a previously existing developed site, the numeric sizing criteria applies to the entire development (new and existing).</p>
<p><b>X</b></p>	<p>2. New development projects that create 10,000 square feet or more of impervious surface (collectively over the entire project site) including commercial, industrial, residential housing subdivisions (i.e., detached single family home subdivisions, multi-family attached subdivisions or townhomes, condominiums, apartments, etc.), mixed-use, and public projects. This category includes development projects on public and private land, which fall under the planning and building authority of the permitting agency.</p>

**Check below**

**Project Categories**

	3. Automotive repair shops (with SIC codes 5013, 5014, 5541, 7532- 7534, 7536-7539).
	4. Restaurants and Food Service Establishments where the land area of development is 5,000 square feet or more.
	5. Developments of 2,500 square feet of impervious surface or more adjacent to (within 200 feet) or discharging directly into environmentally sensitive areas (ESA's) such as areas designated in the Ocean Plan as areas of special biological significance or waterbodies listed on the CWA Section 303(d) list of impaired waters.
X	6. Parking lots of 5,000 square feet or more exposed to storm water. Parking lot is defined as land area or facility for the temporary storage of motor vehicles.
	7. Retail Gasoline Outlets (RGOs) that are either 5,000 sq ft or more or have a projected average daily traffic of 100 or more vehicles per day.
	8. *This project is not covered under any of the categories listed above.

\* If the development is not covered under any of the project categories listed in Section 2, the project is not required to design and install Site Design/LID BMPs or Treatment Control BMPs to treat the design storm event (Design Capture Volume) described in Section 4.

**3. Preliminary WQMP Objectives**

Through a combination of Site Design/LID BMPs (where feasible), Source Control, and/or Treatment Control BMPs, project-specific WQMPs shall address all identified pollutants and hydrologic conditions of concern from new development and significant re-development projects for the categories of projects (priority projects) listed in Section 2. Under each type of BMP, listed below, please indicate which BMPs are planned to be implemented and included in the Final WQMP for the project:

**A. Site Design/LID (Low Impact Design) for Reducing Stormwater Runoff:**

The MS4 Permit requires each priority development project to infiltrate, harvest and use, evapotranspire, or bio-treat the runoff from a 2-yr, 24-hour storm event, DCV, (Design Capture Volume). If site conditions do not permit infiltration, harvest and use, evapotranspiration, and/or bio-treatment of the entire Design Capture Volume, at the project site, Site Design/LID techniques are required to be implemented to the Maximum Extent Practicable, at the project site, and the remainder of the DCV shall be infiltrated, harvested, bio-treated or treated by alternative measures. Project applicants shall submit a Preliminary WQMP that documents the LID/Site Design BMPs, proposed for the project. Please indicate, in the table below, which Site Design/LID BMPs will be utilized on this project to accomplish this requirement:

Site Design/LID Practice	Planned	Not Planned
Provide at least the minimum effective area required for LID BMPs, to comply with the WQMP (see Table 3-1 below).		<b>X<sup>1</sup></b>
Grade parking lot areas/drive aisles/roof drains to sheet flow runoff into landscaped swales, via curb cuts or zero-face curbs or otherwise disconnect direct drainage from MS4.		<b>X<sup>1</sup></b>
Design landscaped areas as swales and grade to accept runoff from building roofs, parking lots and project roadways.		<b>X<sup>1</sup></b>
Install surface retention basins or infiltration trenches to receive impervious area runoff.		<b>X<sup>2</sup></b>
Install pervious pavement in parking stalls, alleys, driveways, gutters, walkways, trails or patios.		<b>X<sup>2</sup></b>
Install underground stormwater retention chambers where downstream landscaped areas are limited.	<b>X</b>	
Install approved Stormwater Drywells in detention areas.		<b>X<sup>2</sup></b>
Construct streets, sidewalks, and parking lot stalls to the minimum widths necessary.	<b>X</b>	
Install on-site Biotreatment basins/trenches with underdrains, where soil type is poorly draining.		<b>X<sup>2</sup></b>
Install "Engineered Soil" to increase uptake/soil storage capacity and/or evapotranspiration.		<b>X<sup>2</sup></b>
Install Rainwater Harvesting/Use Equipment.		<b>X<sup>3</sup></b>
Regional LID BMP facilities are installed, off-site, with the capacity and conveyances to accept post-development storm water runoff from this project and reserved capacity allocation credits have been assigned to the project, in a Certificate or other legally binding document, attached herein		<b>X<sup>2</sup></b>

<sup>1</sup> Project capable of treating the full DCV onsite and not required to demonstrate this site design.

<sup>2</sup> The site will be captured and treated by the proposed underground infiltration facilities.

<sup>3</sup> Concept not utilized because the impervious area is much greater than landscape.

Table 3-1 Minimum Effective Area<sup>1</sup> Required for LID BMPs (surface + subsurface facilities) for Project WQMP to Demonstrate Infeasibility<sup>2</sup> (% of site)

Project Type	New Development	Re-Development
SF/MF Residential < 7 du/ac	10%	5%
SF/MF Residential < 7 - 18 du/ac	7%	3.5%
SF/MF Residential > 18 du/ac	5%	2.5%
Mixed Use, Commercial/Industrial w/FAR< 1.0	10%	5%
Mixed Use, Commercial/Industrial w/FAR 1.0-2.0	7%	3.5%
Mixed Use, Commercial/Industrial w/FAR> 2.0	5%	2.5%
Podium (parking under > 75% of project)	3%	1.5%
Zoning allowing development to property lines	2%	1%
Transit Oriented Development <sup>3</sup>	5%	2.5%
Parking	5%	2.5%

<sup>1</sup> “Effective area” is defined as land area which 1) is suitable for a retention/infiltration BMP (based on infeasibility criteria) and 2) is located down-gradient from building roof or paved areas, so that it may receive gravity flow runoff.

<sup>2</sup> Criteria only required if the project WQMP seeks to demonstrate that the full DCV cannot be feasibly managed on-site.

<sup>3</sup> Transit oriented development is defined as a project with development center within one half mile of a mass transit center.

Key: du/ac = dwelling units/acre, FAR = Floor Area Ratio = ratio of gross floor area of building to gross lot area, MF = Multi Family, SF = Single Family

**B. Source Control BMPs** – The following BMPs are designed to control stormwater pollutants and runoff water at the location where it is generated. Please indicate which of the listed BMPs are planned to be implemented for the project:

Source Control BMPs	Planned	Not Planned
Minimize non-stormwater site runoff through efficient irrigation system design and controllers.	X	
Minimize trash and debris in storm runoff through a regular parking lot, storage yard and roadway sweeping program.	X	
Provide proper covers/roofs and secondary containment for outside material storage & work areas.		X <sup>1</sup>
Provide solid roofs over all trash enclosures.	X	
Site Owner(s)/Property Manager/HOA or POA will be familiar with the project WQMP and stormwater BMPs.	X	
Owner or HOA or POA to provide Education/Training of site occupants and employees on stormwater BMPs.	X	
Install stormwater placards/stenciled messages with a “No Dumping” message on all on-site/off-site storm drain inlets.	X	
Provide contained equipment/vehicle wash rack areas that discharge to sanitary sewer.		X <sup>2</sup>

<sup>1</sup> Not applicable. No outside material storage or work areas. Secondary containment not needed.

<sup>2</sup> Not applicable, no vehicle wash areas.

**C. Treatment Control BMPs** – The following BMPs are designed to control stormwater pollutants where it is not feasible to install on-site or off-site Site Design/LID BMPs, with the requisite capacity to treat the Design Capture Volume for identified Pollutants of Concern or where pretreatment of stormwater runoff is required, ahead of infiltration BMPs. Please indicate which of the listed BMPs are planned to be implemented for the project:

Treatment Control BMP	Planned	Not Planned
Gravity Separator devices for pretreatment of sediment, trash/litter or Oil & Grease	<b>X</b>	
Proprietary Biofiltration vaults/devices		<b>X</b>
Media Cartridge Filtration Vaults		<b>X</b>
Proprietary Filter Inserts for on-site storm drain inlets or retention basin/trench overflow drains		<b>X</b>

**4. Volume-based calculation (approximate) for sizing on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities**

- 1) After calculating the “Watershed Imperviousness Ratio”, *i*, which is equal to the percent of impervious area in each Drainage Management Area, divided by 100, calculate the composite runoff coefficient  $C_{BMP}$  for the Drainage Area above using the following equation:

$$C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04$$

where:  $C_{BMP}$  = composite runoff coefficient; and,  
*i* = watershed imperviousness ratio.

- 3) Determine the area-averaged “6-hour Mean Storm Rainfall”,  $P_6$ , for the Drainage Area. This is calculated by multiplying the area averaged 2-year 1-hour value (0.5”-0.6”) by the appropriate regression coefficient (1.4807). The 2-yr, 1-hr value for southern Ontario is approximately to 0.5” ( $P_6 = 0.5 \cdot 1.4807 = 0.74$  and northern Ontario is approximately 0.6” in/hr ( $P_6 = 0.6 \cdot 1.4807 = 0.89$ ).
- 4) Determine the appropriate drawdown time. Use the regression constant  $a = 1.582$  for 24 hours and  $a = 1.963$  for 48 hours. *Note: Regression constants are provided for both 24 hour and 48-hour drawdown times; however, 48-hour drawdown times should be used in most areas of California. Drawdown times in excess of 48 hours should be used with caution as vector breeding can be a problem after water has stood in excess of 72 hours. (Use of the 24-hour drawdown time should be limited to drainage areas with coarse soils (Class ‘A’ soils that readily drain.)*
- 5) Calculate the “Maximized Detention Volume”,  $P_0$ , using the following equation:

$$P_0 = a \cdot C_{BMP} \cdot P_6$$

where:  $P_0$  = Maximized Detention Volume, in inches

$a = 1.582$  for 24 hour and  $a = 1.963$  for 48-hour drawdown,  
**C<sub>BMP</sub>** = composite runoff coefficient; and,  
**P<sub>6</sub>** = 6-hour Mean Storm Rainfall, in inches

6) Calculate the “Target Capture Volume”,  $V_0$ , using the following equation:

$$V_0 = (P_0 \cdot A) / 12$$

where: **V<sub>0</sub>** = Target Capture Volume, in acre-feet  
**P<sub>0</sub>** = Maximized Detention Volume, in inches; and,  
**A** = BMP Drainage Area, in acres

**Project Volume-based calculation (approximate) for planned on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities:**

Variable	Factor/Formula	DA 1	DA 2	DA 3	DA 4
Impervious surface/total surface, ratio	(i)	0.95	0.95	0.95	0.95
C <sub>BMP</sub> = runoff coefficient	$0.858i^3 - 0.78i^2 + 0.774i + 0.04$	0.807	0.807	0.807	0.807
P <sub>6</sub>	**P <sub>6</sub> = 2-yr, 1-hr depth*1.4807 =	0.848	0.848	0.848	0.848
Detention Volume (acre inches)	$P_0 = a * C_{BMP} * P_6 =$	1.34	1.34	1.34	1.34
Drawdown rate of basin/trench (a)	1.963 for 48-hr drawdown =	1.963	1.963	1.963	1.963
Project Total Area (acre)	(A)	3.75	4.10	3.45	16.15
Design Capture Volume in cu. ft.	$V_0 = [(P_0 * A)/12]$ *43560 =	18,295	20,003	16,832	78,792
Runoff Volume infiltrated in first 3 hours of storm (not applicable for underground systems)	Vol= in/hr/12 x ft <sup>2</sup> of infiltration area x 3 hrs	n/a	n/a	n/a	n/a
Retention Volume provided in cubic feet.	*Retention capacity of basins, trenches, underground storage or biotreatment basin	19,745	21,445	18,047	84,038

Variable	Factor/Formula	DA 5	DA 6	DA 7
Impervious surface/total surface, ratio	(i)	0.95	0.95	0.95
C <sub>BMP</sub> = runoff coefficient	$0.858i^3 - 0.78i^2 + 0.774i + 0.04$	0.807	0.807	0.807
P <sub>6</sub>	**P <sub>6</sub> = 2-yr, 1-hr depth*1.4807 =	0.848	0.848	0.848
Detention Volume (acre inches)	P <sub>0</sub> = a * C <sub>BMP</sub> * P <sub>6</sub> =	1.34	1.34	1.34
Drawdown rate of basin/trench (a)	1.963 for 48-hr drawdown =	1.963	1.963	1.963
Project Total Area (acre)	(A)	12.20	12.05	17.65
Design Capture Volume in cu. ft.	V <sub>0</sub> = [(P <sub>0</sub> * A)/12] *43560 =	59,521	58,789	86,110
Runoff Volume infiltrated in first 3 hours of storm (not applicable for underground systems)	Vol= in/hr/12 x ft <sup>2</sup> of infiltration area x 3 hrs	n/a	n/a	n/a
Retention Volume provided in cubic feet.	*Retention capacity of basins, trenches, underground storage or biotreatment basin	63,381	62,830	91,751

\*Volume retained utilizing an underground infiltration facility. Refer to the DCV Calculations section for calculations.

\*\*For P<sub>6</sub> value, use site coordinates and NOAA website to determine project's average 2-yr, 1-hr rainfall depth, at: [http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca\\_pfds.html](http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html) .

## 5. Flow-Based calculation (approximate) for sizing on-site or off-site Biotreatment facilities and proprietary treatment technology BMPs:

- 1) After calculating the "Watershed Imperviousness Ratio", i, which is equal to the percent of impervious area in each Drainage Management Area divided by 100, calculate the composite runoff coefficient C<sub>BMP</sub> for the Drainage Area above using the following equation:

$$C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04$$

where: C<sub>BMP</sub> = composite runoff coefficient; and,  
i = watershed imperviousness ratio.

- 2) Determine BMP design rainfall intensity, I<sub>BMP</sub>, using the project site geo-coordinates and the NOAA website to determine project's average 2-yr, 1-hr rainfall intensity, at:

[http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca\\_pfds.html](http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html) .Multiply this value by 0.2787 (regression coefficient for Ontario) and a minimum safety factor of 2.

- 4) Calculate the target BMP flowrate, Q, using the following formula (for each DMA <50 acres\*):

$$Q = C_{BMP} \cdot I_{BMP} \cdot A$$

Where: Q = flow in cfs (Cubic feet per second)  
 $I_{BMP}$  = BMP design rainfall intensity, in/hr  
 A = Drainage Area in acres

\*For DMAs >50 acres, with  $C_{BMP} < 0.5$ , the project applicant shall use the unit hydrograph method specified in the San Bernardino County Hydrology Manual, using the design storm pattern with rainfall return frequency such that the peak 1-hr rainfall intensity equals the 85<sup>th</sup> percentile 1-hr rainfall, multiplied by 2.

**Project Flow-based calculation (approximate) for planned on-site or off-site flow-based Biotreatment facilities or Stormwater Treatment BMPs:**

Variable	Factor/Formula	DA 1	DA 2	DA 3	DA 4
Impervious surface/ total surface, ratio	(i)	0.95	0.95	0.95	0.95
$C_{BMP}$ = composite runoff coefficient	$0.858i^3 + 0.78i^2 + 0.774i + 0.04$	0.81	0.81	0.81	0.81
$I_{BMP}$	$I_{BMP} = 2\text{-yr, 1-hr storm intensity} * 0.2787 * \text{safety factor}$	0.319	0.319	0.319	0.319
Drainage area (ac)	$A = \text{DMA sq ft} / 43,560$	3.75	4.10	3.45	16.15
Target BMP flowrate	$Q = C_{BMP} * I_{BMP} * A$	0.97	1.06	0.89	4.16

Variable	Factor/Formula	DA 5	DA 6	DA 7
Impervious surface/ total surface, ratio	(i)	0.95	0.95	0.95
$C_{BMP}$ = composite runoff coefficient	$0.858i^3 + 0.78i^2 + 0.774i + 0.04$	0.81	0.81	0.81
$I_{BMP}$	$I_{BMP} = 2\text{-yr, 1-hr storm intensity} * 0.2787 * \text{safety factor}$	0.319	0.319	0.319
Drainage area (ac)	$A = \text{DMA sq ft} / 43,560$	12.20	12.05	17.65
Target BMP flowrate	$Q = C_{BMP} * I_{BMP} * A$	3.14	3.11	4.55

**6. Hydrologic Conditions of Concern (HCOC) and use of the on-line San Bernardino County HCOC Map for determining necessary mitigation steps necessary if there are HCOCs downstream of a project:**

Project applicants may access the on-line HCOC Map at: <http://permitrack.sbcounty.gov/WAP/>. The map will indicate any hydrology concerns with downstream waterways that are hydraulically connected to the project and will indicate if there are any approved regional projects downstream that could be utilized for off-site mitigation of HCOCs. Please indicate here if the project will or will not be able to retain/infiltrate, harvest and use or biotreat and detain the DCV, on-site, as calculated in Section 4 and if there are HCOCs identified downstream of the project:

Retain or Harvest/Use the DCV on site?	Yes	<b>X</b>	No	
Biotreat the DCV but not infiltrate the runoff?	Yes		No	<b>X</b>
HCOCs identified downstream of site?	Yes		No	<b>X</b>

If the entire DCV will not be retained on site, the DCV is biotreated but not infiltrated or additional detention capacity is needed to address identified HCOCs, downstream of the site, please list here, what additional mitigation measures will be utilized (on-site or off-site) to address HCOCs (see Section 4.2.1-4.2.3 of the SB County WQMP Technical Guidance):

---

HCOCs not applicable on site. However, based on the conclusion that hydromodifications for the street improvements associated for this project are not feasible, the volume reduction needed to meet HCOC requirements from the street improvements will be addressed on site.

---

**7. Site Plan and Conceptual Grading/Drainage Plan requirements for submission with the Preliminary WQMP:**

Provide a Site Plan and Conceptual Grading/Drainage Plan along with this Preliminary WQMP, which conceptually shows the proposed locations of buildings, homes, parking lots, parks, new paved roadways, landscaped areas, drainage patterns and drainage sub-areas, methods of conveyance, proposed retention/infiltration, harvest & use or biotreatment facilities that are planned for installation. Where it is determined to be infeasible to capture and detain design storm runoff volumes, on-site, please include other design features, as described in Section 3, above. Include numbered or lettered notes on the Site Plan with a legend detailing other BMPs, as described in Section 3.

**8. BMP Maintenance and Funding Mechanism & Description:**

---

Ownership of the project will be held with Euclid Land Venture, LLC. Long term maintenance will be the responsibility of the owner. This includes BMP maintenance, catch basin inspection, storm drain maintenance (on-site), efficient irrigation and landscape maintenance, and etcetera until the property is sold or transferred.

---

**9. Acknowledgment:**

As the property owner or developer, I understand that this project is required to install and implement permanent LID Storm Water Best Management Practices pursuant to the requirements of the San Bernardino County MS4 Permit and to document those BMPs in the submittal of a Water Quality Management Plan, which is binding on any current or successive owners of this property.

Yes	<b>X</b>	No	
-----	----------	----	--

**10. Exemption Signature:**

As the property owner or developer, I understand that this project is not required by the San Bernardino County MS4 Permit to install and implement permanent LID Storm Water Best Management Practices and will not be required to submit a Water Quality Management Plan.

**CDS2020-5-C DESIGN NOTES**

CDS2020-5-C RATED TREATMENT CAPACITY IS 1.1 CFS (31.2 L/S), OR PER LOCAL REGULATIONS. MAXIMUM HYDRAULIC INTERNAL BYPASS CAPACITY IS 14.0 CFS (398 L/S). IF THE SITE CONDITIONS EXCEED 14.0 CFS (398 L/S), AN UPSTREAM BYPASS STRUCTURE IS REQUIRED.

THE STANDARD CDS2020-5-C CONFIGURATION IS SHOWN. ALTERNATE CONFIGURATIONS ARE AVAILABLE AND ARE LISTED BELOW. SOME CONFIGURATIONS MAY BE COMBINED TO SUIT SITE REQUIREMENTS.

CONFIGURATION DESCRIPTION	
GRATED INLET ONLY (NO INLET PIPE)	
GRATED INLET WITH INLET PIPE OR PIPES	
CURB INLET ONLY (NO INLET PIPE)	
CURB INLET WITH INLET PIPE OR PIPES	
SEPARATE OIL BAFFLE (SINGLE INLET PIPE REQUIRED FOR THIS CONFIGURATION)	
SEDIMENT WEIR FOR NUDE / NUCAT CONFORMING UNITS	

**PLAN VIEW B-B**  
N.T.S.

**FRAME AND COVER**  
(DIAMETER VARIES)  
N.T.S.

SITE SPECIFIC DATA REQUIREMENTS			
STRUCTURE ID			
WATER QUALITY FLOW RATE (CFS OR L/S)	*		
PEAK FLOW RATE (CFS OR L/S)	*		
RETURN PERIOD OF PEAK FLOW (YRS)	*		
SCREEN APERTURE (2400 OR 4700)	*		
PIPE DATA			
INLET PIPE 1	IE	MATERIAL	DIAMETER
INLET PIPE 2	*	*	*
OUTLET PIPE	*	*	*
RIM ELEVATION			
ANTI-FLOTATION BALLAST	WIDTH	HEIGHT	
NOTES/SPECIAL REQUIREMENTS:			
*PER ENGINEER OF RECORD			

**GENERAL NOTES**

- CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
- DIMENSIONS MARKED WITH ( ) ARE REFERENCE DIMENSIONS. ACTUAL DIMENSIONS MAY VARY.
- FOR FABRICATION DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHTS, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. [www.contech-cpi.com](http://www.contech-cpi.com)
- CDS WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING.
- STRUCTURE SHALL MEET ASBTO H202 AND CASTINGS SHALL MEET H202 (ASBTO M 300) LOAD RATING, ASSURING GROUNDWATER ELEVATION AT OR BELOW THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION.
- PVC HYDRAULIC SHEAR PLATE IS PLACED ON SHELF AT BOTTOM OF SCREEN CYLINDER. REMOVE AND REPLACE AS NECESSARY DURING MAINTENANCE CLEANING.

**INSTALLATION NOTES**

- ANY SUB-BASE BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
- CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CDS MANHOLE STRUCTURE (LIFTING CLIPPERS PROVIDED).
- CONTRACTOR TO ADD JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS, AND ASSEMBLE STRUCTURE.
- CONTRACTOR TO PROVIDE RIGID, AND GROUT PIPES. MATCH PIPE INVERTS WITH ELEVATIONS SHOWN.
- CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.

<sup>1</sup> Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS). Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values. Please refer to NOAA Atlas 14 document for more information.

Estimates from the table in CSV format:

DCV		18,295	cu-ft
DCV		0.420	acre-ft

## MAXWELL IV DRAINAGE SYSTEM CALCULATIONS (DA 1)

### Given:

Measured Percolation Rate =	0.3670	cfs
Safety Factor =	2	
Design Percolation Rate =	0.1835	cfs
Design Capture Volume (DCV) =	18,295	ft <sup>3</sup>
Required Drawdown Time =	48	hours
Minimum Depth to Infiltration =	10	ft
Groundwater Depth for Design =	100+	ft
Rock Porosity =	40%	
Duration of Storm When Infiltrating is Occuring as Basin is Filling =	3	hours
Drywell Chamber Diameter =	4	ft
Drywell Chamber Area =	12.57	ft <sup>2</sup>
Drywell Chamber Depth =	25	ft
Drywell Rock Shaft Diameter =	4	ft
Drywell Rock Shaft Area =	12.57	ft <sup>2</sup>
Drywell Rock Shaft Depth =	35	ft

### Volume of disposal for each drywell based on various time frames are included below.

48 hours =	31,709	ft <sup>3</sup>	<i>Design Percolation Rate x Drawdown Time x (3600 sec/1 hour)</i>
3 hours =	1,982	ft <sup>3</sup>	<i>Design Percolation Rate x Drawdown Time x (3600 sec/1 hour)</i>

### Volume provided in each drywell

Volume Provided =	490	ft <sup>3</sup>	<i>(Drywell Chamber Depth x Drywell Chamber Area) + (Drywell Rock Shaft Depth x Drywell Rock Shaft Area x Rock Porosity)</i>
-------------------	-----	-----------------	------------------------------------------------------------------------------------------------------------------------------

### Maxwell System Design

# of Drywells Provided =	1	
Total Volume Provided in Drywells =	490	ft <sup>3</sup>
Total Volume Infiltrated in 48 hours =	31,709	ft <sup>3</sup>
Total Volume Infiltrated in 3 hours =	1,982	ft <sup>3</sup>
Total Infiltration Flowrate =	0.1835	cfs

The DCV will be stored in an underground system while the DCV infiltrates via drywells.

The DCV will be stored in an underground system while the DCV infiltrates via drywells.

# **HCOOC CALCULATIONS**

## Form 4.2-2 of HCOC Assessment

Does project have the potential to cause or contribute to an HCOC in a downstream channel:  Yes  No

Go to: <http://sbcounty.permitrack.com/WAP/>

If "Yes", then complete HCOC assessment of site hydrology for 2yr storm event using Forms 4.2-3 through 4.2-5 and insert results below (Forms 4.2-3 through 4.2-5 may be replaced by computer software analysis based on the San Bernardino County Hydrology Manual)

If "No," then proceed to Section 4.3 Project Conformance Analysis

Condition	Runoff Volume (ft <sup>3</sup> )	Time of Concentration (min)	Peak Runoff (cfs)
<b>Pre-developed</b>	<sup>1</sup> 263,994 <i>Form 4.2-3 Item 12</i>	<sup>2</sup> N/A <i>Form 4.2-4 Item 13</i>	<sup>3</sup> N/A <i>Form 4.2-5 Item 10</i>
<b>Post-developed</b>	<sup>4</sup> 561,973 <i>Form 4.2-3 Item 13</i>	<sup>5</sup> N/A <i>Form 4.2-4 Item 14</i>	<sup>6</sup> N/A <i>Form 4.2-5 Item 14</i>
<b>Difference</b>	<sup>7</sup> 297,979 <i>Item 4 – Item 1</i>	<sup>8</sup> N/A <i>Item 5 – Item 2</i>	<sup>9</sup> N/A <i>Item 6 – Item 3</i>
<b>Difference</b> (as % of pre-developed)	<sup>10</sup> 113% <i>Item 7 / Item 1</i>	<sup>11</sup> N/A <i>Item 8 / Item 2</i>	<sup>12</sup> N/A <i>Item 9 / Item 3</i>

To meet HCOC requirements, a mitigation volume must be achieved by using LID and/or hydromodification mitigation BMPs. The mitigation volume is approximately 269,880 cu-ft ((0.95 \* 561,973) – 263,994). The total volume being detained by underground CMP, proprietary biofiltration devices and biofiltration areas is 370,947 cu-ft, which is greater than the mitigation volume needed. As a result, the mitigation volume has been contained by the proposed BMPs. Since the mitigation volume has been met, it is physically impossible for the project to avoid increasing the time of concentration and reducing peak runoff by more than five percent of pre-development conditions (see Section 5.6.1 of the Technical Guidance Document for more information).

### Form 4.2-3 HCOC Assessment for Runoff Volume

Attention: Mr. Jeff Johnston  
Senior Vice President

Project No.: **19G248-3**

Subject: **Results of Infiltration Testing**  
Ontario Ranch Business Park: Phase II  
SEC Eucalyptus Avenue and Sultana Avenue  
Ontario, California

Reference: Geotechnical Investigation, Proposed Commercial/Industrial Building, SEC Eucalyptus Avenue and Sultana Avenue, Ontario, California, prepared by Southern California Geotechnical, Inc. (SCG) for Real Estate Development Associates, SCG Project No. 19G248-2.

Mr. Johnston:

In accordance with your request, we have conducted infiltration testing at the subject site. We are pleased to present this report summarizing the results of the infiltration testing and our design recommendations.

### **Scope of Services**

The scope of services performed for this project was in general accordance with our Proposal No. 21P242R, dated May 19, 2021. The scope of services included site reconnaissance, subsurface exploration, field testing, and engineering analysis to determine the infiltration rates of the on-site soils. The infiltration testing was performed in general accordance with the guidelines published in the Riverside County – Low Impact Development BMP Design Handbook – Section 2.3 of Appendix A, prepared for the Riverside County Department of Environmental Health (RCDEH), dated December, 2013. The San Bernardino County standards defer to the guidelines published by the RCDEH.

### **Site and Project Description**

The subject site is located at the southeast corner of Eucalyptus Avenue and Sultana Avenue in Ontario, California. The site is bounded to the north by Eucalyptus Avenue, to the west by a Sultana Avenue easement, to the south by Merrill Avenue, and to the east by a Campus Avenue easement. The general location of the site is illustrated on the Site Location Map, enclosed as Plate 1 in Appendix A of this report.

The subject site consists of a rectangular shaped parcel, 75± acres in size. The site is currently developed as a dairy farm. The northeastern portion of the site is developed with cattle pens with multiple canopy structures, farm houses, and structures associated with milking activities. The

buildings appear to be single-story structures of wood frame construction and the canopies appear to be of metal frame construction. We expect that all of these structures are supported on conventional shallow foundations. Ground surface cover in the northeastern portion of the site structures generally consists of turf grass, asphaltic concrete, and concrete pavements surrounding the farm houses and the other structures, manure in the cattle pen areas, and exposed soils with sparse native grass and weed growth in the remaining areas. The northwestern portion and southern one-third of the site are planted with row crops.

Detailed topographic information was not available at the time of this report. Based on visual observations made at the time of the subsurface investigation and from elevation information obtained from Google Earth, the overall site topography generally slopes downward to the southwest at a gradient of  $1\pm$  percent.

### **Proposed Development**

A conceptual site plan (Scheme 10A) was provided by the client. Based on this plan, the existing structures will be demolished in order to facilitate the construction of the new development. As a part of the new development, six (6) new commercial/industrial buildings will be constructed at the subject site. The buildings will be identified as follows:

- Building 8 –  $67,380\pm\text{ft}^2$  in size located in the northwest corner of the site;
- Building 9 –  $61,300\pm\text{ft}^2$  in size located in the north area of the site;
- Building 10 –  $83,110\pm\text{ft}^2$  in size located in the northeast area of the site;
- Building 11 –  $352,830\pm\text{ft}^2$  in size located in the north-central area of the site;
- Building 12 –  $530,460\pm\text{ft}^2$  in size located in the central area of the site;
- Building 13 –  $427,160\pm\text{ft}^2$  in size located in south areas of the site.

All of the buildings will include dock-high doors along a portion of at least one of the building walls. The buildings will be surrounded by asphaltic concrete pavements in the parking and drive lane areas, Portland cement concrete pavements in the loading dock areas, and new concrete flatwork and landscaped planters throughout the site.

We understand that the proposed development will include on-site stormwater infiltration. The infiltration system is expected to consist of a series of below-grade chamber located in the proposed parking areas throughout the site. The bottom of the chamber systems are proposed to be  $10$  to  $13\pm$  feet below existing site grades. The approximate locations of the infiltration systems are included within Plate 2 of this report.

### **Concurrent Study**

SCG concurrently conducted a geotechnical investigation at the subject site, referenced above. As a part of this study, ten (10) were advanced to depths of  $25$  to  $60\pm$  feet below the existing site grades. Additionally, six (6) trenches were excavated using a rubber-tire backhoe to depths of  $5$  to  $10\pm$  feet below existing site grades. Asphaltic Concrete (AC) pavements were encountered at the ground surface of Boring Nos. B-7, B-10, and B-12, measuring  $2$  to  $4\pm$  inches of AC with  $0$  to  $4\pm$  inches of Aggregate Base (AB). Additionally,  $1\pm$  foot of open graded gravel pavement was encountered at the ground surface of Boring No. B-6. Artificial fill soils were encountered at the ground surface or beneath the pavements at Boring Nos. B-6, B-7, B-9, B-10, B-11, and B-

12, extending to depths of 2½ to 4½± feet below existing site grades. In addition, fill soils were encountered at the ground surface of Trench Nos. T-7, T-9, and T-10, extending to depths of 1½ to 2± feet below existing site grades. The artificial fill soils consist of loose to medium dense silty fine sands and medium dense clayey fine sands. Additionally, stiff to very stiff silty clays with occasional porosity were encountered within the fill soils. Disturbed alluvial soils were encountered at the ground surface or beneath the fill soils at Trench Nos. T-5, T-6, and T-8, extending to depths of 1 to 5± feet below existing site grades. The disturbed alluvium consists of loose to very loose silty fine sands, loose fine sandy silts, and dense fine sandy silts. Native alluvial soils were encountered at the ground surface or beneath the fill at all of the boring and trench locations. The near surface alluvium at depths less than 20 feet generally consists of loose to dense fine sandy silts and silty fine sands, medium dense fine and fine to medium sands, medium stiff to stiff clayey silts, medium stiff to very stiff fine sandy clays, and medium stiff to hard silty clays. At depths greater than 20 feet, the alluvium consists of medium dense fine to coarse sands, clayey fine sands, and fine sands. In addition, dense fine sandy silts, medium dense to dense silty fine sands, very dense silty fine to medium sands, medium stiff to hard silty clays, stiff silts, and very stiff to hard fine sandy clays. Variable iron oxide staining and calcareous veining were observed within the alluvial strata. Additionally, trace quantities of medium to coarse sand, silts, clays were occasionally observed throughout the various alluvial strata.

Free water was not encountered during the drilling of any of the borings or excavation of any of the trenches. Based on the lack of any water within the borings, and the moisture contents of the recovered soil samples, the static groundwater is considered to have been present at a depth in excess of 60± feet at the time of the subsurface exploration.

As part of our research, we reviewed available groundwater data in order to determine regional groundwater depths. Recent water level data was obtained from the California State Water Resources Control Board, GeoTracker website, <http://geotracker.waterboards.ca.gov/>. Available data for monitoring wells, located approximately 4,200± feet west from the site, indicate a high groundwater level of 83± feet below ground surface.

## **Subsurface Exploration**

### Scope of Exploration

The subsurface exploration performed for the infiltration testing consisted of twelve (12) infiltration test borings, advanced to depths of 12 to 15± feet below the existing site grades. These borings were advanced using a truck-mounted drilling rig, equipped with 8-inch-diameter hollow-stem augers. The borings were logged during drilling by a member of our staff. The approximate locations of the infiltration test borings (identified as I-1 and I-12) are indicated on the Infiltration Test Location Plan, enclosed as Plate 2 of this report.

Upon the completion of the infiltration test borings, the bottom of each test boring was covered with 2± inches of clean ¾-inch gravel. A sufficient length of 3-inch-diameter perforated PVC casing was then placed into each test hole so that the PVC casing extended from the bottom of the test hole to the ground surface. Clean ¾-inch gravel was then installed in the annulus surrounding the PVC casing.

## Geotechnical Conditions

### Artificial Fill

Artificial fill soils were encountered at the ground surface at most of the infiltration boring locations except Infiltration Boring Nos. I-6 and I-10, extending to depths of 3 to 5½± below the existing site grades. The fill soils generally consist of loose to medium dense fine sandy silts and silty fine sands with varying amounts of fine to coarse sand and clay content. The fill soils possess a disturbed mottled appearance and some organic matter content resulting in their classification as artificial fill. Infiltration Boring Nos. I-11 and I-12 possessed very stiff and dense soils in the upper 3 feet of fill.

### Alluvium

Native alluvial soils were encountered beneath the fill soils at most infiltration boring locations. At Infiltration Boring Nos. I-6 and I-10 artificial soils were encountered at the ground surface extending to at least the maximum depth explored of 12 to 15± feet below the existing site grades. The upper alluvial soils generally consist of loose to medium dense silty fine sands and fine sandy silts. The lower alluvial soils generally consist of medium stiff to stiff clayey silts to silty clays and medium dense fine sandy silts. The Boring Logs, which illustrate the conditions encountered at the boring locations, are included with this report.

### **Infiltration Testing**

As previously mentioned, the infiltration testing was performed in general accordance with the guidelines published in Riverside County – Low Impact Development BMP Design Handbook – Section 2.3 of Appendix A, which has been adopted by San Bernardino County.

### Pre-soaking

In accordance with the county infiltration standards for sandy soils, all infiltration test borings were pre-soaked 2 hours prior to the infiltration testing or until all of the water had percolated through the test holes. The pre-soaking process consisted of filling test borings by inverting a full 5-gallon bottle of clear water supported over each hole so that the water flow into the hole holds constant at a level at least 5 times the hole's radius above the gravel at the bottom of each hole. Pre-soaking was completed after all of the water had percolated through the test holes.

### Infiltration Testing

Following the pre-soaking process of the infiltration test borings, SCG performed the infiltration testing. Each test hole was filled with water to a depth of at least 5 times the hole's radius above the gravel at the bottom of the test holes. In accordance with the San Bernardino County guidelines, since "non-sandy soils" were encountered at the bottom of all of the infiltration test borings (where less than 6 inches of water infiltrated into the surrounding soils for two consecutive 25-minute readings), readings were taken at 30-minute intervals for a total of 6 hours at each test location. After each reading, water was added to the borings so that the depth of the water was at least 5 times the radius of the hole. The water level readings are presented on

the spreadsheets enclosed with this report. The infiltration rates for each of the timed intervals are also tabulated on the spreadsheets.

The infiltration rates from the test are tabulated in inches per hour. In accordance with the typically accepted practice, it is recommended that the most conservative reading from the latter part of the infiltration tests be used as the design infiltration rate. The rates are summarized below:

<u>Infiltration Test No.</u>	<u>Depth (feet)</u>	<u>Soil Description</u>	<u>Infiltration Rate (inches/hour)</u>
I-1	15	Yellow Brown Clayey Silt, little fine Sand	0.49
I-2	15	Light Green fine Sandy Silt	0.41
I-3	15	Green Gray fine Sandy Silt	0.31
I-4	15	Brown Silty Clay, little fine Sand, trace medium Sand	0.00
I-5	12	Light Brown Silty Clay, little fine Sand	0.00
I-6	12	Light Brown Clayey Silt, trace fine Sand	0.31
I-7	15	Light Brown fine Sandy Silt, little fine Sand, trace Clay	0.08
I-8	12	Gray Brown fine Sandy Silt	0.00
I-9	15	Light Brown fine Sandy Clay	0.00
I-10	15	Brown Silty fine Sand, little medium Sand	0.16
I-11	15	Brown fine Sandy Silt, trace medium Sand, trace Clay	0.00
I-12	15	Brown fine Sandy Silt, trace Clay	0.49

## **Laboratory Testing**

### **Moisture Content**

The moisture contents for the recovered soil samples within the borings were determined in accordance with ASTM D-2216 and are expressed as a percentage of the dry weight. These test results are presented on the Boring Logs.

### **Grain Size Analysis**

The grain size distribution of selected soils collected from the base of each infiltration test boring have been determined using a range of wire mesh screens. These tests were performed in general accordance with ASTM D-422 and/or ASTM D-1140. The weight of the portion of the sample retained on each screen is recorded and the percentage finer or coarser of the total weight is calculated. The results of these tests are presented on Plates C-1 and C-12 of this report.

## **Design Recommendations**

Twelve (12) infiltration tests were performed at the subject site. As noted above, the infiltration rates at these locations vary from 0.00 to 0.49 inches per hour. The relatively high silt and clay content of the on-site soils resulted in either no infiltration or low infiltration rates at the infiltration test locations. **Based on the existing site conditions and on the infiltration rates measured for the tested locations and depths, the on-site soils are generally not considered feasible for infiltration. Therefore, infiltration is not recommended for this site.**

## **Construction Considerations**

The infiltration rate presented in this report is specific to the tested location and tested depth. Infiltration rates can be significantly reduced if the soils are exposed to excessive disturbance or compaction during construction. Therefore, the subgrade soils within the proposed infiltration system area should not be overexcavated, undercut or compacted in any significant manner. **It is recommended that a note to this effect be added to the project plans and/or specifications.**

## **General Comments**

This report has been prepared as an instrument of service for use by the client in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, structural engineer, and/or civil engineer. The design of the proposed storm water infiltration system is the responsibility of the civil engineer. The role of the geotechnical engineer is limited to determination of infiltration rate only. By using the design infiltration rate contained herein, the civil engineer agrees to indemnify, defend, and hold harmless the geotechnical engineer for all aspects of the design and performance of the proposed storm water infiltration system. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between boring locations and testing depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also

recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted. The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

**Closure**

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

SOUTHERN CALIFORNIA GEOTECHNICAL, INC.

# BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

## COLUMN DESCRIPTIONS

- DEPTH:** Distance in feet below the ground surface.
- SAMPLE:** Sample Type as depicted above.
- BLOW COUNT:** Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.
- POCKET PEN.:** Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.
- GRAPHIC LOG:** Graphic Soil Symbol as depicted on the following page.
- DRY DENSITY:** Dry density of an undisturbed or relatively undisturbed sample in lbs/ft<sup>3</sup>.
- MOISTURE CONTENT:** Moisture content of a soil sample, expressed as a percentage of the dry weight.
- LIQUID LIMIT:** The moisture content above which a soil behaves as a liquid.
- PLASTIC LIMIT:** The moisture content above which a soil behaves as a plastic.
- PASSING #200 SIEVE:** The percentage of the sample finer than the #200 standard sieve.
- UNCONFINED SHEAR:** The shear strength of a cohesive soil sample, as measured in the unconfined state.

12	Initial	1:10 PM	30.00	13.10	0.24	1.78	0.49
	Final	1:40 PM		13.34			

Per County Standards, Infiltration Rate calculated as follows:

Where:

$$Q = \frac{\Delta H(60r)}{\Delta t(r + 2H_{avg})}$$

- Q = Infiltration Rate (in inches per hour)
- ΔH = Change in Height (Water Level) over the time interval
- r = Test Hole (Borehole) Radius
- Δt = Time Interval
- H<sub>avg</sub> = Average Head Height over the time interval

Per County Standards, Infiltration Rate calculated as follows:

Where:

$$Q = \frac{\Delta H(60r)}{\Delta t(r + 2H_{avg})}$$

- Q = Infiltration Rate (in inches per hour)
- ΔH = Change in Height (Water Level) over the time interval
- r = Test Hole (Borehole) Radius
- Δt = Time Interval
- H<sub>avg</sub> = Average Head Height over the time interval

	Final	2:45 PM		13.26			

Per County Standards, Infiltration Rate calculated as follows:

Where:

$$Q = \frac{\Delta H(60r)}{\Delta t(r + 2H_{avg})}$$

Q = Infiltration Rate (in inches per hour)  
 ΔH = Change in Height (Water Level) over the time interval  
 r = Test Hole (Borehole) Radius  
 Δt = Time Interval  
 H<sub>avg</sub> = Average Head Height over the time interval

# 1 INTRODUCTION

This report presents the results of the traffic analysis (TA) for the proposed Ontario Ranch Business Park (“Project”), which is located north of Merrill Avenue between Campus Avenue and Grove Avenue in the City of Ontario. The Project’s location relative the surrounding area is shown on Exhibit 1-1.

The purpose of this TA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and where necessary recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. This traffic study has been prepared in accordance with the San Bernardino County Congestion Management Program (CMP) Guidelines for CMP Traffic Impact Analysis Reports (Appendix B, 2016 Update) and consultation with City staff during the traffic study scoping process. (1) (2) The City approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TA.

## 1.1 SUMMARY OF FINDINGS

The Project is to construct the following improvements as design features in conjunction with development of the site:

- Project to install stop sign for egress traffic from the proposed Project at all driveways.
- The Project will construct Merrill Avenue from Sultana Avenue to Campus Avenue at its ultimate half-section width as a 4-lane collector (108-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.
- The Project will construct Eucalyptus Avenue from Sultana Avenue to Campus Avenue at its ultimate half-section width as a 4-lane collector (108-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.
- The Project will construct Sultana Avenue from Eucalyptus Avenue to Merrill Avenue at its ultimate half-section width as a 2-lane local street (84-foot ultimate right-of-way) plus one lane (southbound) in compliance with the circulation recommendations found in City of Ontario General Plan.
- The Project will construct Campus Avenue from Eucalyptus Avenue to Merrill Avenue at its ultimate half-section width as a 4-lane minor arterial (108-foot ultimate right-of-way) plus one lane (northbound) in compliance with the circulation recommendations found in City of Ontario General Plan.

Additional details and intersection lane geometrics are provided in Section 1.6 *Recommendations* of this report.

### EXHIBIT 1-1: LOCATION MAP

## 1.2 PROJECT OVERVIEW

Exhibit 1-2 illustrates the preliminary Project site plan. The Project anticipates development over a single phase and is expected to be fully built and operational by 2023. For purposes of this analysis, the following mix of land uses are assumed for Project buildout, which represent a reasonable mix of industrial and business park uses that would be permitted by the Project:

- Industrial: 913,053 square feet of high-cube fulfillment center warehouse use, 179,135 square feet of high-cube cold storage warehouse, and 320,551 square feet of general warehousing use.
- Business Park: 227,951 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses (as would fall under ITE Land Use Code 130).
- **Total of 1,640,690 square feet**

Access to the proposed Project would be provided to Merrill Avenue, Eucalyptus Avenue, Campus Avenue, and Sultana Avenue. Merrill Avenue will serve as the primary travel route for heavy trucks to and from the Project consistent with other projects in the immediate vicinity.

It should be noted, although the square footages above are higher than the square footages of the buildings shown on Exhibit 1-2, the square footages above will be utilized for the purposes of the traffic analysis as it provides a conservative approach and will provide flexibility in the event site plan is adjusted.

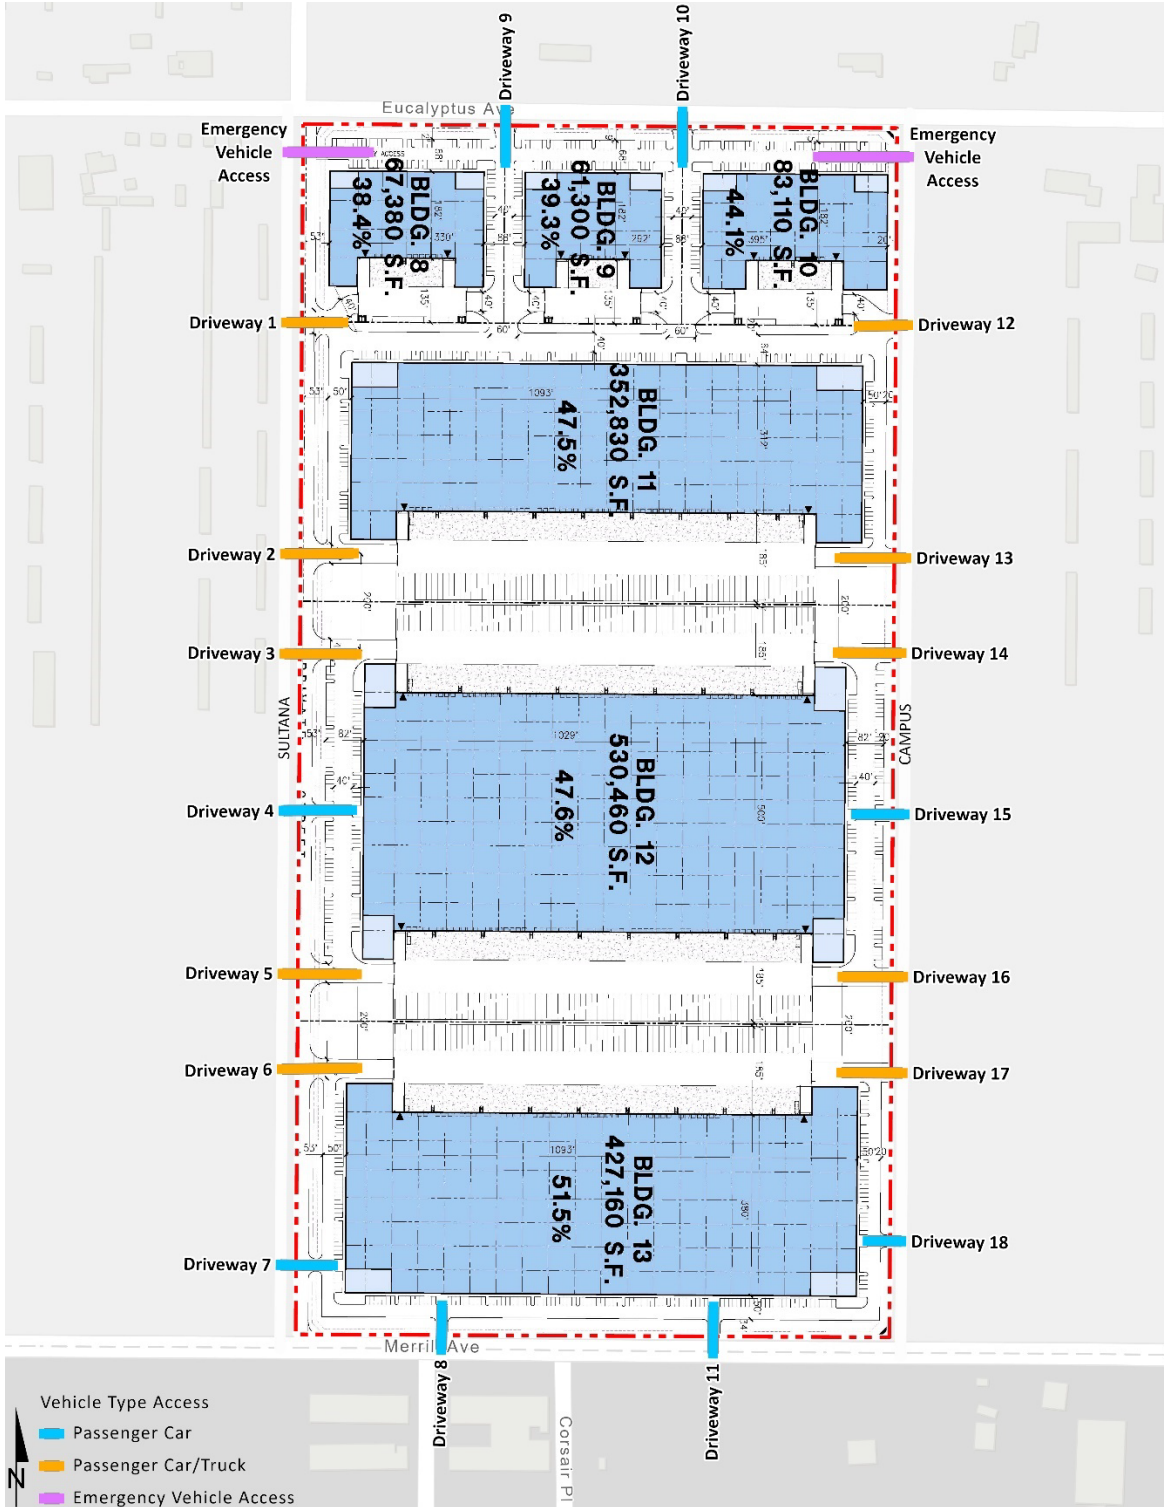

Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10<sup>th</sup> Edition, 2017 and the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019). (3) (4) The proposed Project is anticipated to generate a total of 3,656 trip-ends per day, 274 AM peak hour trips, and 323 PM peak hour trips (in actual vehicles). The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

## 1.3 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential deficiencies to traffic and circulation have been assessed for each of the following conditions:

- Existing (2021)
- Existing plus Project (E+P)
- Opening Year Cumulative (2023) Without Project
- Opening Year Cumulative (2023) With Project
- Horizon Year (2040) Without Project
- Horizon Year (2040) With Project

EXHIBIT 1-2: PRELIMINARY SITE PLAN

### 1.3.1 EXISTING (2021) CONDITIONS

Information for Existing (2021) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared. An ambient growth rate of 2% per year has been utilized for the 2019 traffic counts to reflect 2021 traffic conditions. See Section 3.7 *Existing Traffic Counts* for a detailed discussion on the methodology.

### 1.3.2 EXISTING PLUS PROJECT CONDITIONS

The Existing plus Project (E+P) analysis determines traffic deficiencies that would occur on the existing roadway system with the addition of Project traffic. E+P traffic conditions have been evaluated in order to determine any potential off-site improvements.

### 1.3.3 OPENING YEAR CUMULATIVE (2023) CONDITIONS

The Opening Year Cumulative conditions analysis determines the potential near-term cumulative circulation system deficiencies. To account for background traffic growth, traffic associated with other known cumulative development projects in conjunction with an ambient growth factor from Existing conditions of 2% per year (compounded annually) are included for Opening Year Cumulative (2023) traffic conditions. Opening Year Cumulative traffic conditions have been evaluated for the proposed Project. This comprehensive list was compiled from information provided by the City of Ontario and other near-by agencies.

### 1.3.4 HORIZON YEAR (2040) CONDITIONS

Traffic projections for Horizon Year (2040) with Project conditions were derived from the San Bernardino Transportation Analysis Model (SBTAM) modified to represent buildout of the City of Ontario. The Horizon Year (2040) conditions analysis will be utilized to determine if improvements funded through regional transportation mitigation fee programs, such as the City's Development Impact Fee (DIF) program, or other approved funding mechanisms can accommodate the long-range cumulative traffic at the target level of service (LOS) identified by the City of Ontario (lead agency). It should be noted that the City of Ontario has updated their DIF program to also include appropriate contributions towards regionally significant improvements that have been identified via the San Bernardino County CMP regional fee program study. If the planned and funded improvements can provide the target LOS, then the Project's payment into established fee programs will be considered as an improvement to address deficiencies. Other improvements needed beyond the "funded" improvements (such as localized improvements to non-DIF facilities) are identified as such.

## 1.4 STUDY AREA

To ensure that this TA satisfies the City of Ontario’s traffic study requirements, Urban Crossroads, Inc. prepared a project traffic study scoping package for review by City staff prior to the preparation of this report. The Agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology.

### 1.4.1 INTERSECTIONS

The following 52 study area intersections shown on Exhibit 1-3 and listed on Table 1-1 were selected for this TIA based on consultation with City of Ontario staff. The “50 peak hour trip” criterion utilized by the City of Ontario is consistent with the methodology employed by the County of San Bernardino, and generally represents a minimum number of trips at which a typical intersection would have the potential to be affected by a given development proposal. Although each intersection may have unique operating characteristics, this traffic engineering rule of thumb is a widely utilized tool for estimating a potential area of influence (i.e., study area). The “50 peak hour trip” criterion is also utilized by the City of Eastvale. Other analysis intersections, within the adjacent cities were not selected for evaluation as the Project is anticipated to contribute less than 50 peak hour trips.

**TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS**

ID	Intersection Location	Jurisdiction	SBCTA CMP?
1	Euclid Av. (SR-83) & SR-60 WB Ramps	Ontario, Caltrans	Yes

The intent of a CMP is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. Study area intersections that are identified as CMP facilities in the County of San Bernardino per the San Bernardino County Transportation Authority (SBCTA) CMP are indicated on Table 1-1. (1)

EXHIBIT 1-3: LOCATION MAP (1 OF 2)

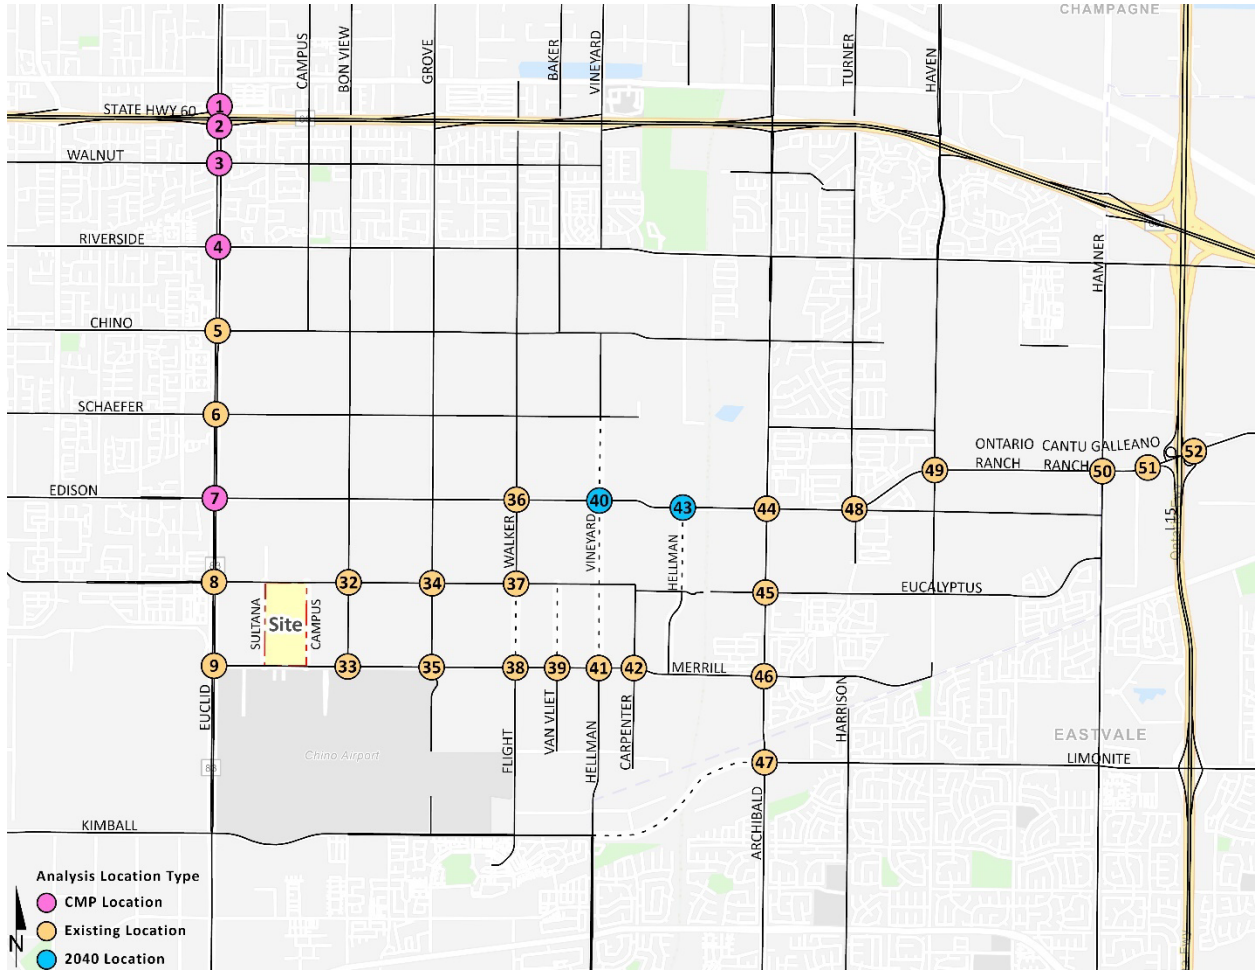

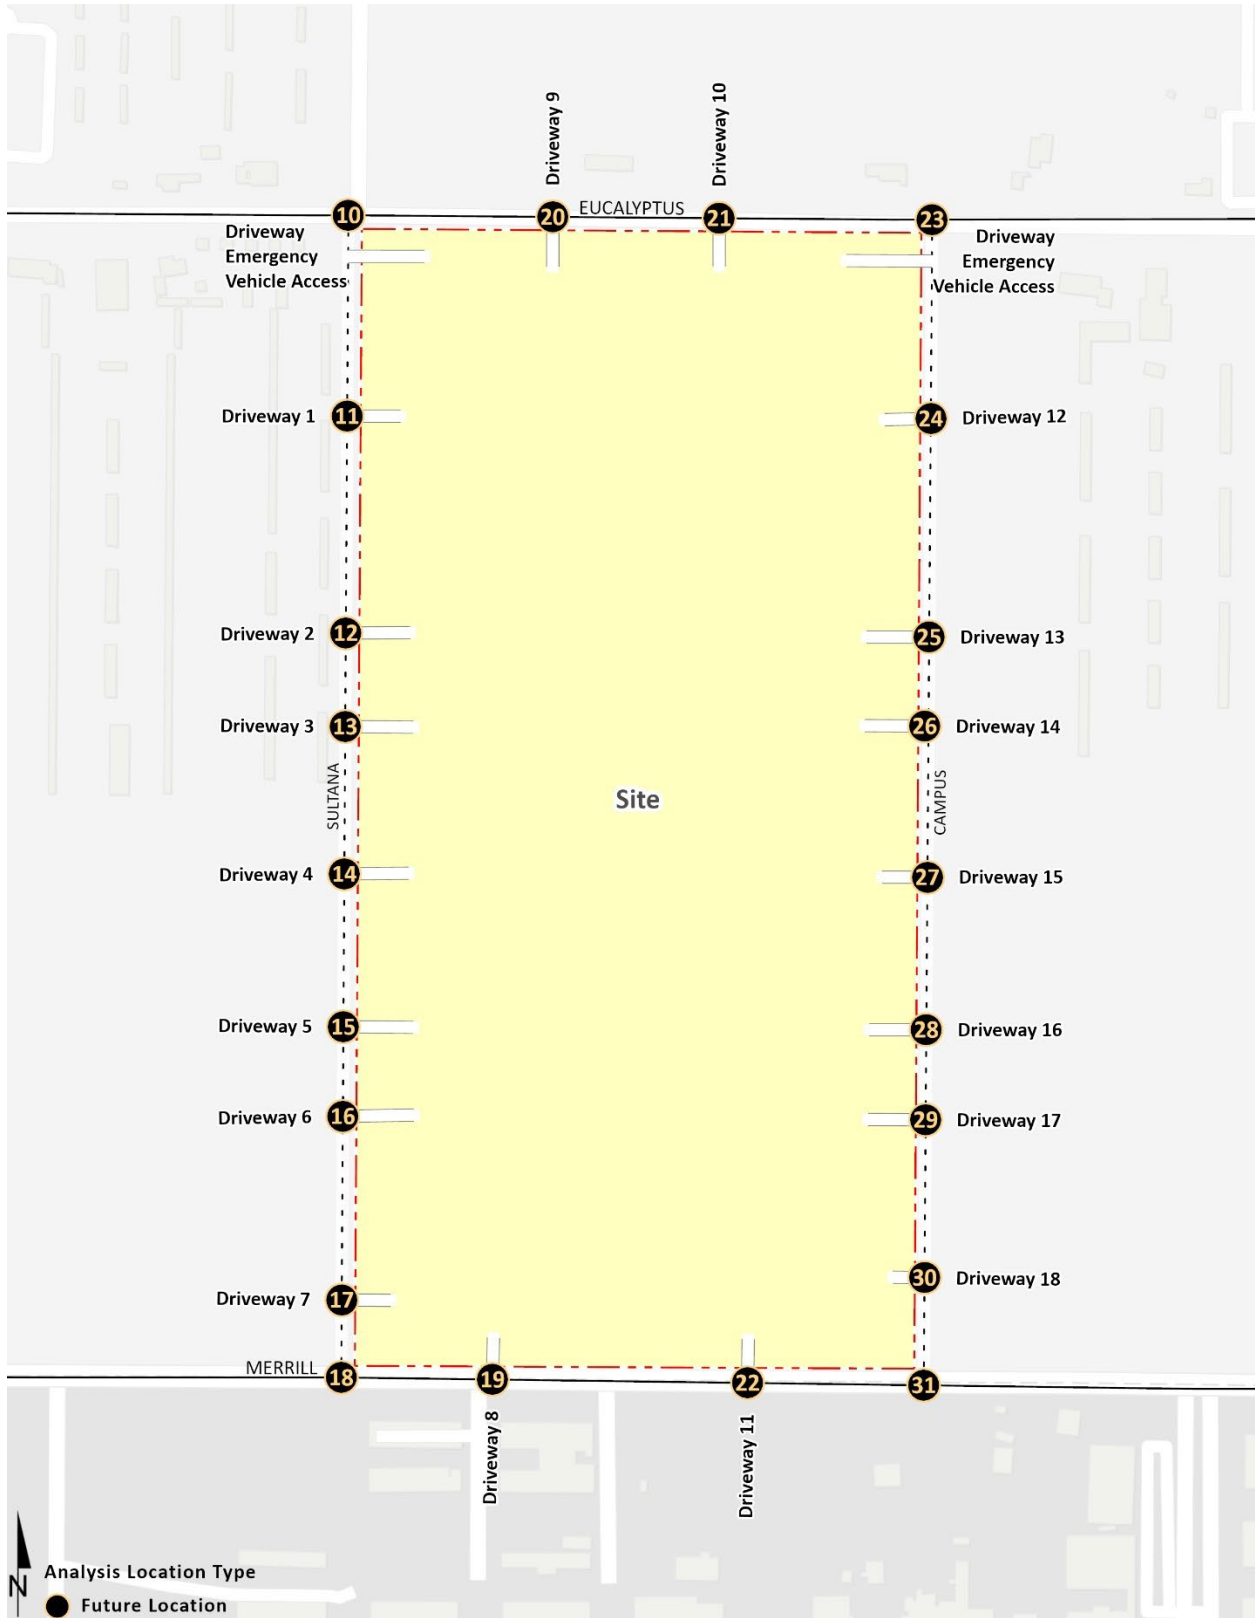

EXHIBIT 1-3: LOCATION MAP (2 OF 2)

## 1.5 PROJECT DEFICIENCIES

This section provides a summary of Project deficiencies. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 5 *E+P Traffic Analysis*, Section 6 *Opening Year Cumulative (2023)*, and Section 7 *Horizon Year (2040) Traffic Analysis* includes the detailed analysis. A summary of LOS results for all analysis scenarios is presented on Table 1-2.

### 1.5.1 EXISTING (2021) CONDITIONS

The existing study area intersections are currently operating at acceptable LOS during the peak hours with the exception of the following intersections:

- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS E PM peak hour only
- Grove Avenue & Eucalyptus Avenue (#34) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#35) – LOS F AM peak hour; LOS E PM peak hour
- Carpenter Avenue & Merrill Avenue (#42) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#47) – LOS E AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#50) – LOS F PM peak hour only

### 1.5.2 E+P CONDITIONS

There are no additional study area intersections are anticipated to operate at an unacceptable LOS, in addition to those identified for Existing traffic conditions.

### 1.5.3 OPENING YEAR CUMULATIVE (2023) CONDITIONS

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2023) Without Project traffic conditions:

- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Edison Avenue (#7) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Merrill Avenue (#9) – LOS E AM peak hour; LOS F PM peak hour
- Sultana Avenue & Merrill Avenue (#18) – LOS E AM peak hour only
- Bon View Avenue & Merrill Avenue (#33) – LOS F PM peak hour only
- Grove Avenue & Eucalyptus Avenue (#34) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F AM and PM peak hours
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Carpenter Avenue & Merrill Avenue (#42) – LOS F AM and PM peak hours
- Archibald Avenue & Merrill Avenue (#46) – LOS F PM peak hour only
- Archibald Avenue & Limonite Avenue (#47) – LOS F AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#50) – LOS E AM peak hour; LOS F PM peak hour

● = A - D   ● = E   ● = F

The following study area intersection is anticipated to operate at a deficient LOS during both peak hours for Opening Year Cumulative (2023) With Project traffic conditions with the addition of Project Buildout traffic, in addition to the locations identified previously for Opening Year Cumulative (2023) Without Project traffic conditions.

- Campus Avenue & Merrill Avenue (#31) – LOS E AM peak hour; LOS F PM peak hour

#### 1.5.4 HORIZON YEAR (2040) CONDITIONS

The following additional study area intersections are anticipated to operate at an unacceptable LOS under Horizon Year (2040) Without Project traffic conditions:

- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#1) –LOS E AM and PM peak hours
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#2) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#5) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Schaefer Avenue (#6) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#7) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#8) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Merrill Avenue (#9) – LOS F AM and PM peak hours
- Sultana Avenue & Eucalyptus Avenue (#10) – LOS F PM peak hour only
- Sultana Avenue & Merrill Avenue (#18) – LOS F AM and PM peak hours
- Campus Avenue & Eucalyptus Avenue (#23) – LOS E PM peak hour only
- Campus Avenue & Merrill Avenue (#31) – LOS F AM and PM peak hours
- Bon View Avenue & Eucalyptus Avenue (#32) – LOS F PM peak hour only
- Bon View Avenue & Merrill Avenue (#33) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#34) – LOS F AM and PM peak hours
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F AM and PM peak hours
- Walker Avenue & Eucalyptus Avenue (#37) – LOS F AM and PM peak hours
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Van Vliet Avenue/Baker Avenue & Merrill Avenue (#39) – LOS F PM peak hour only
- Vineyard Avenue & Edison Avenue (#40) – LOS F PM peak hour only
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#41) – LOS F AM and PM peak hours
- Carpenter Avenue & Merrill Avenue (#42) – LOS F AM and PM peak hours
- Hellman Avenue & Edison Avenue (#43) – LOS F AM and PM peak hours
- Archibald Avenue & Ontario Ranch Road (#44) – LOS F AM and PM peak hours
- Archibald Avenue & Eucalyptus Avenue (#45) – LOS F AM and PM peak hours
- Archibald Avenue & Merrill Avenue (#46) – LOS F AM and PM peak hours

- Archibald Avenue & Limonite Avenue (#47) – LOS F AM and PM peak hours
- Turner Avenue & Ontario Ranch Road (#48) – LOS F AM and PM peak hours
- Haven Avenue & Ontario Ranch Road (#49) – LOS F AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#50) – LOS F AM and PM peak hours

There are no additional study area intersections anticipated to operate at a deficient LOS during one or both peak hours for Horizon Year (2040) With Project traffic conditions with the addition of Project traffic, in addition to the locations identified above for Horizon Year (2040) Without Project traffic conditions.

## 1.6 RECOMMENDATIONS

### 1.6.1 SITE ACCESS AND SITE ADJACENT ROADWAY RECOMMENDATIONS

The following recommendations are based on the improvements needed to accommodate site access. Exhibit 1-4 shows the site adjacent recommendations for off-site improvement recommendations.

**Recommendation 1 – Sultana Avenue & Eucalyptus Avenue (#10)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a shared left-right turn lane.
- Project to construct a westbound left turn lane.

**Recommendation 2 – Sultana Avenue & Driveway 1 (#11)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a shared left-right turn lane.

**Recommendation 3 – Sultana Avenue & Driveway 2 (#12)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a shared left-right turn lane.

**Recommendation 4 – Sultana Avenue & Driveway 3 (#13)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a shared left-right turn lane.

**Recommendation 5 – Sultana Avenue & Driveway 4 (#14)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a shared left-right turn lane.

**Recommendation 6 – Sultana Avenue & Driveway 5 (#15)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a shared left-right turn lane.

EXHIBIT 1-4: SITE ADJACENT ROADWAY AND SITE RECOMMENDATIONS (1 OF 2)

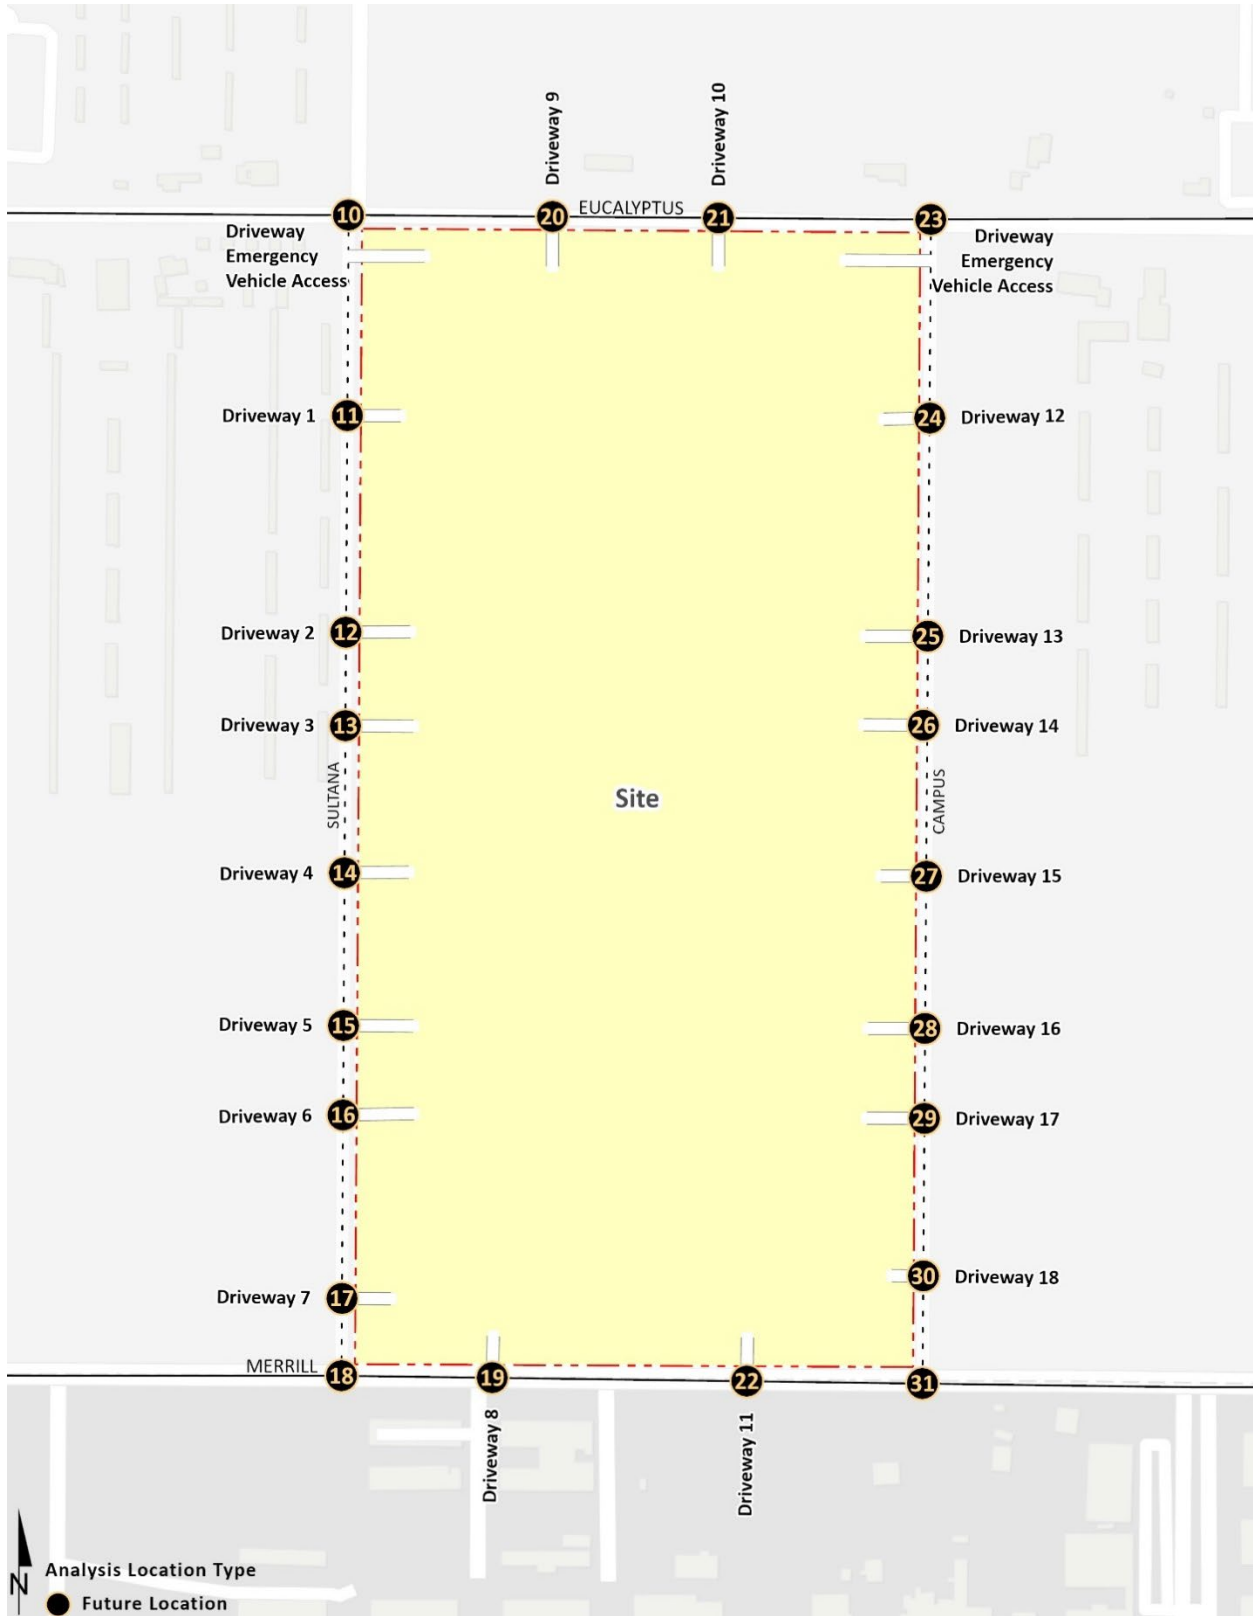

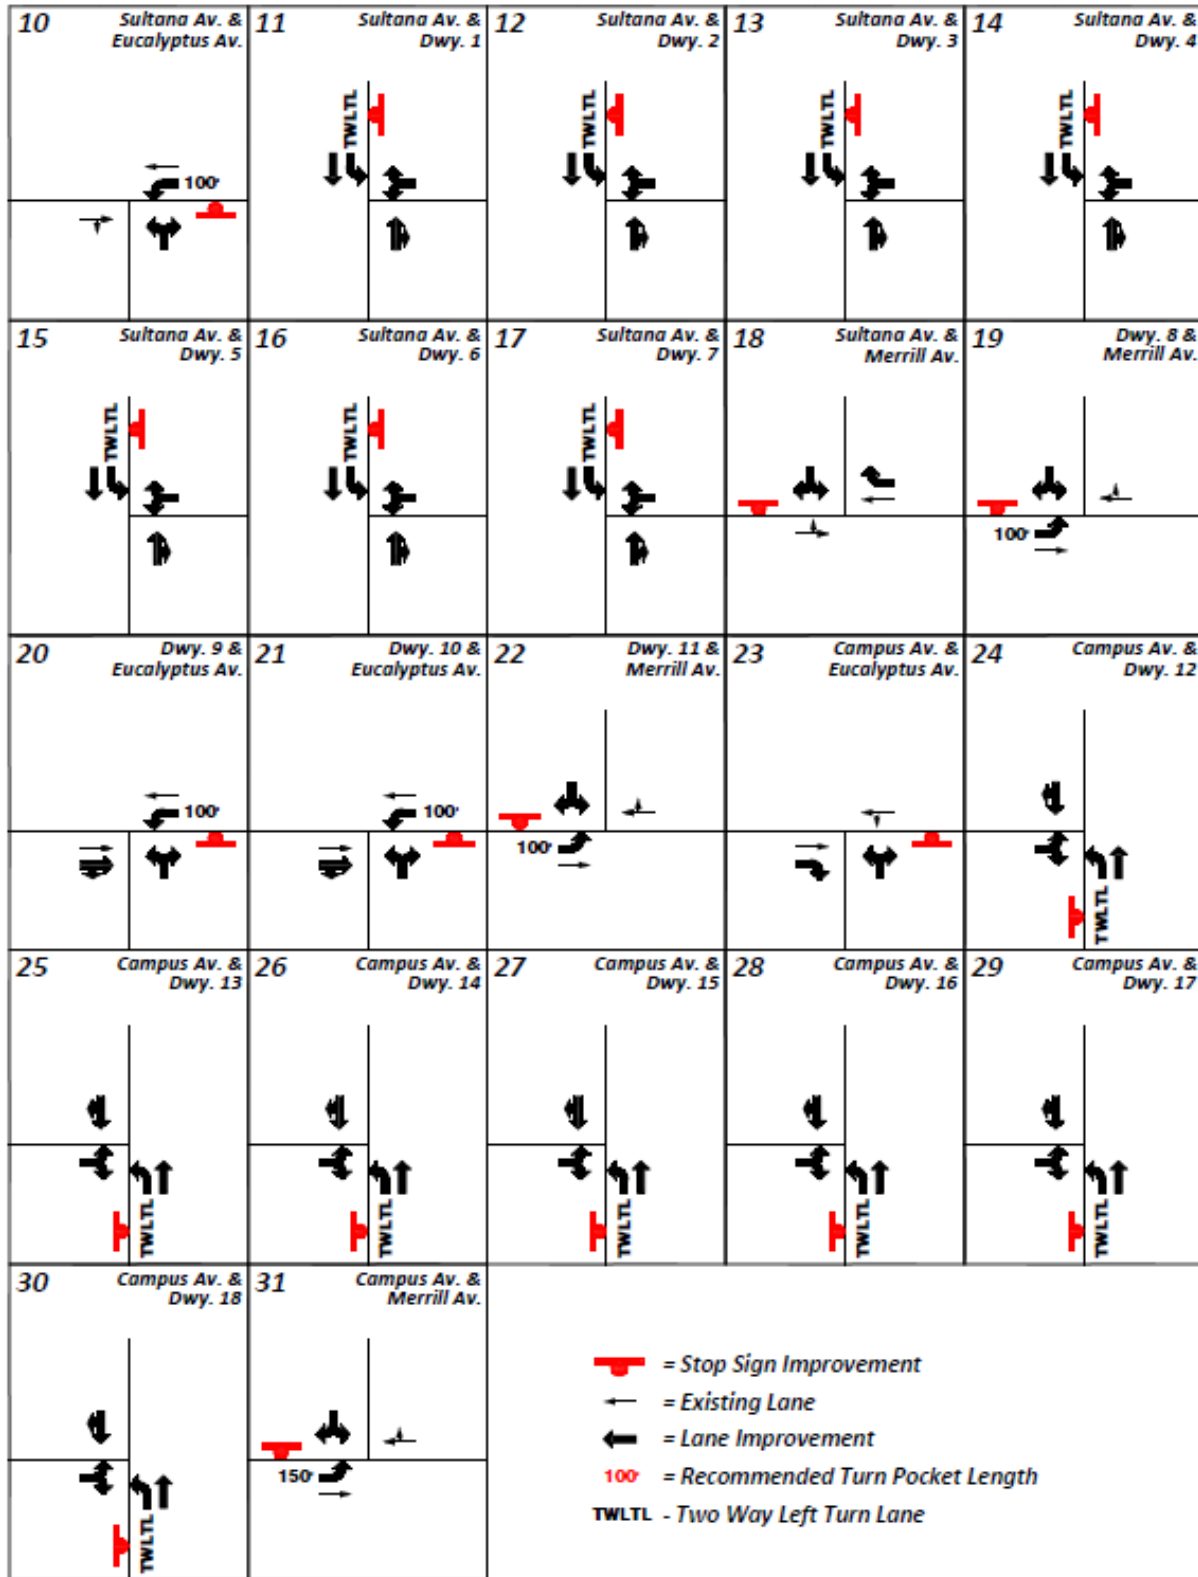

EXHIBIT 1-4: SITE ADJACENT ROADWAY AND SITE RECOMMENDATIONS (2 OF 2)

**Recommendation 7 – Sultana Avenue & Driveway 6 (#16)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a shared left-right turn lane.

**Recommendation 8 – Sultana Avenue & Driveway 7 (#17)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a shared left-right turn lane.

**Recommendation 9 – Sultana Av. & Merrill Avenue (#18)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the southbound approach and a shared left-right turn lane.
- Project to construct a westbound right turn lane.

**Recommendation 10 – Driveway 8 & Merrill Avenue (#19)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the southbound approach and a shared left-right turn lane.
- Project to construct an eastbound left turn lane.

**Recommendation 11 – Driveway 9 & Eucalyptus Avenue (#20)** – The following improvements are recommended:

- Project to install a stop control on the northbound approach and a shared left-right lane.
- Project to construct an eastbound shared through-right turn lane.
- Project to construct a westbound left turn lane.

**Recommendation 12 – Driveway 10 & Eucalyptus Avenue (#21)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a shared left-right lane.
- Project to construct an eastbound shared through-right turn lane.
- Project to construct a westbound left turn lane.

**Recommendation 13 – Driveway 11 & Merrill Avenue (#22)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the southbound approach and a shared left-right turn lane.
- Project to construct an eastbound left turn lane.

**Recommendation 14 – Campus Avenue & Eucalyptus Av. (#23)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a shared left-right turn lane.
- Project to construct an eastbound right turn lane.

**Recommendation 15 – Campus Avenue & Driveway 12 (#24)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.

**Recommendation 16 – Campus Avenue & Driveway 13 (#25)** – The following improvements are recommended:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.

**Recommendation 17 – Campus Avenue & Driveway 14 (#26)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.

**Recommendation 18 – Campus Avenue & Driveway 15 (#27)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.

**Recommendation 19 – Campus Avenue & Driveway 16 (#28)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.

**Recommendation 20 – Campus Avenue & Driveway 17 (#29)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.

**Recommendation 21 – Campus Avenue & Driveway 18 (#30)** – The following improvements are recommended to accommodate site access:

- Project to install a stop control on the eastbound approach and a shared left-right turn lane.

**Recommendation 22 – Campus Avenue & Merrill Avenue (#31)** – The following improvements are recommended to accommodate site access:

- Project to install a stop control on the southbound approach and a shared left-right turn lane.
- Project to construct an eastbound left turn lane.

**Recommendation 23 – Merrill Avenue** – Merrill Avenue is an east-west oriented roadway located along the Project’s southern boundary. Project to construct Merrill Avenue from Sultana Avenue to Campus Avenue at its ultimate half-section width as a 4-lane collector (108-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 24 – Eucalyptus Avenue** – Eucalyptus Avenue is an east-west oriented roadway located along the Project’s northern boundary. Project to construct Eucalyptus Avenue from Sultana Avenue to Campus Avenue at its ultimate half-section width as a 4-lane collector (108-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 25 – Sultana Avenue** – Sultana Avenue is a north-south oriented roadway located on the Project’s western boundary. Project to construct Sultana Avenue from Eucalyptus

Avenue to Merrill Avenue at its ultimate half-section width as a 2-lane local street (84-foot ultimate right-of-way) plus one lane (southbound) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 26 – Campus Avenue** – Campus Avenue is a north-south oriented roadway located on the Project’s eastern boundary. Project to construct Campus Avenue from Merrill Avenue to Eucalyptus Avenue at its ultimate half-section width as a 4-lane minor arterial (108-foot ultimate right-of-way) plus one lane (northbound) in compliance with the circulation recommendations found in City of Ontario General Plan.

On-site traffic signing and striping should be implemented agreeable with the provisions of the California Department of Transportation (Caltrans) California Manual on Uniform Traffic Control Devices (CA MUTCD) and in conjunction with detailed construction plans for the Project site.

Sight distance at each project access point should be reviewed with respect to standard Caltrans and City of Ontario sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

### 1.6.2 OFF-SITE RECOMMENDATIONS

The recommended improvements needed to address the cumulative deficiencies identified under Existing (2021), Opening Year Cumulative (2023), and Horizon Year (2040) traffic conditions are summarized in Table 1-3. For those improvements listed in Table 1-3 and not constructed as part of the Project, the Project Applicant’s responsibility for the Project’s contributions towards deficient intersections is fulfilled through payment of fees (e.g., DIF) or fair share that would be assigned to construction of the identified recommended improvements. Please refer to Section 8 *Local and Regional Funding Mechanisms*.

Table 1-3 also summarizes the applicable cost associated with each of the recommended improvements based on the preliminary construction cost estimates found in Appendix G of the San Bernardino County CMP in conjunction with a cost escalation factor of 1.568 to reflect current (2021) costs. A rough order of magnitude cost has been prepared to determine the appropriate contribution value based upon the Project’s fair share of traffic as part of the project approval process. Based on the Project fair share percentages, the Project’s fair share cost is estimated at \$308,307. These estimates are a rough order of magnitude only as they are intended only for disclosure purposes and do not imply any legal responsibility or formula for contributions or mitigation.

**Recommendation 27** – Prior to the issuance of building permits, the Project Applicant shall pay the Project’s fair share amount of \$308,307 for the improvements identified in Table 1-3 at intersections located within the City of Ontario, or as agreed to by the City and Project Applicant.

TABLE 1-3: SUMMARY OF IMPROVEMENTS RECOMMENDED TO MEET CITY OF ONTARIO OR SURROUNDING AGENCY LOS REQUIREMENTS (1 OF 5)

#	Intersection Location	Jurisdiction	E+P	2024 With Project	2040 With Project	Improvements in City DIF?¹	DIF Project #	Project Responsibility⁵	Total Cost²,³,⁴	Fair Share %⁴	Fair Share Cost⁵

<b>Total Project Fair Share Contribution to the City of Ontario (non-DIF/other)<sup>6</sup></b>										<b>\$308,307</b>	

<sup>1</sup> Improvements included in City of Ontario DIF program for local, regional and specific plan components.  
<sup>2</sup> Costs have been estimated using the data provided in Appendix "G" of the CMP (2003 Update) for preliminary construction costs.  
<sup>3</sup> Appendix "G" costs escalated by a factor of 1.568 per City direction except Traffic Signals.  
<sup>4</sup> Program improvements constructed by project may be eligible for fee credit, at discretion of City. See Table 8-2 for Fair Share Calculations.  
<sup>5</sup> Rough order of magnitude cost estimate.  
<sup>6</sup> Total project fair share contribution consists of the improvements which are not already included in the City-wide DIF for those intersections wholly or partially within the City of Ontario.  
<sup>7</sup> Improvements are anticipated to be constructed as part of the SR-60 Freeway/Archibald Avenue interchange improvements.  
<sup>8</sup> Improvement includes modifying the traffic signal to run the northbound and southbound left turns as lead-lag, with the northbound left turn running as lag.

This Page Intentionally Left Blank

## 2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with City of Ontario's Traffic Study Guidelines.

### 2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

### 2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 6<sup>th</sup> Edition Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (5) The HCM uses different procedures depending on the type of intersection control.

#### 2.2.1 SIGNALIZED INTERSECTIONS

##### ***City of Ontario, City of Chino, City of Eastvale, City of Jurupa Valley***

The City of Ontario, City of Chino, City of Eastvale, and City of Jurupa Valley require signalized intersection operations analysis based on the methodology described in the HCM. (5) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described on Table 2-1.

**TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS**

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F	F

Source: HCM (6<sup>th</sup> Edition)

Consistent with Appendix B of the San Bernardino County CMP, the following saturation flow rates, in vehicles per hour green per lane (vphgpl), will be utilized in the traffic analysis for signalized intersections:

*Existing and Opening Year Cumulative Traffic Conditions:*

- Exclusive through: 1800 vphgpl
- Exclusive left: 1700 vphgpl
- Exclusive right: 1800 vphgpl
- Exclusive dual left: 1600 vphgpl
- Exclusive triple left: 1500 vphgpl

*Horizon Year (2040) Traffic Conditions:*

- Exclusive through: 1900 vphgpl
- Exclusive left: 1800 vphgpl
- Exclusive dual left: 1700 vphgpl
- Exclusive right: 1900 vphgpl
- Exclusive dual right: 1800 vphgpl
- Exclusive triple left: 1600 vphgpl or less

The traffic modeling and signal timing optimization software package Synchro (Version 11) has been utilized to analyze signalized intersections within the City of Ontario, City of Chino, City of

Eastvale, and City of Jurupa Valley. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g.,  $PHF = [Hourly\ Volume] / [4 \times Peak\ 15\text{-minute}\ Flow\ Rate]$ ). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (5)

**California Department of Transportation (Caltrans)**

The traffic modeling and signal timing optimization software package Synchro (Version 11) has also been utilized to analyze signalized intersections under Caltrans’ jurisdiction, which include interchange to arterial ramps (i.e., SR-60 Freeway ramps at Euclid Avenue (SR-83), I-15 Freeway ramps at Cantu Galleano Ranch Road). (2) Euclid Avenue (SR-83) is also under Caltrans’ jurisdiction and intersections along Euclid Avenue (SR-83) have been evaluated per Caltrans’ guidelines. Signal timing for the freeway arterial-to-ramp intersections and intersections along Euclid Avenue (SR-83) have been obtained from Caltrans District 8 and were utilized for the purposes of this analysis.

**2.2.2 UNSIGNALIZED INTERSECTIONS**

The City of Ontario, City of Chino, City of Eastvale, and City of Jurupa Valley require the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (5) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

**TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS**

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

Source: HCM (6<sup>th</sup> Edition)

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. Per HCM, the worst individual turning movement (typically on the side-street) is reported for the overall intersection’s delay at cross-street stop-controlled intersections. For all-way stop controlled intersections, LOS is computed for the intersection as a whole.

**2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY**

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TIA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (6)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (6) Specifically, this TA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Warrant 3 is appropriate to use for this TIA because it provides specialized warrant criteria for intersections with rural characteristics (e.g., located in communities with populations of less than 10,000 persons or with adjacent major streets operating above 40 miles per hour). For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection.

Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets.

Traffic signal warrant analyses were performed for the following study area intersection shown on Table 2-3:

**TABLE 2-3: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS**

ID	Intersection Location	Jurisdiction	SBCTA CMP?
10	Sultana Av. & Eucalyptus Av.	Ontario	No
11	Sultana Av. & Driveway 1	Ontario	No
12	Sultana Av. & Driveway 2	Ontario	No
13	Sultana Av. & Driveway 3	Ontario	No
14	Sultana Av. & Driveway 4	Ontario	No
15	Sultana Av. & Driveway 5	Ontario	No
16	Sultana Av. & Driveway 6	Ontario	No
17	Sultana Av. & Driveway 7	Ontario	No
18	Sultana Av. & Merrill Av.	Chino, Ontario	No

ID	Intersection Location	Jurisdiction	SBCTA CMP?
19	Driveway 8 & Merrill Av.	Chino, Ontario	No
20	Driveway 9 & Eucalyptus Av.	Ontario	No
21	Driveway 10 & Eucalyptus Av.	Ontario	No
22	Driveway 11 & Merrill Av.	Chino, Ontario	No
23	Campus Av. & Eucalyptus	Chino, Caltrans	No
24	Campus Av & Driveway 12	Ontario	No
25	Campus Av & Driveway 13	Ontario	No
26	Campus Av & Driveway 14	Ontario	No
27	Campus Av & Driveway 15	Ontario	No
28	Campus Av & Driveway 16	Ontario	No
29	Campus Av & Driveway 17	Ontario	No
30	Campus Av & Driveway 18	Ontario	No
31	Campus Av. & Merrill Av.	Chino, Caltrans	No
32	Bon View Av. & Eucalyptus Av.	Ontario	No
33	Bon View Av. & Merrill Av.	Chino, Ontario	No
34	Grove Av. & Eucalyptus Av.	Ontario	No
35	Grove Av. & Merrill Av.	Chino, Ontario	No
36	Walker Av. & Edison Av.	Ontario	No
38	Walker Av./Flight Av. & Merrill Av.	Chino, Ontario	No
39	Baker Av./Van Vliet Av. & Merrill Av.	Ontario	No
41	Vineyard Av./Hellman Av. & Merrill Av.	Chino, Ontario	No
42	Carpenter Av. & Merrill Av.	Chino, Ontario	No

Although unsignalized, traffic signal warrants have not been evaluated at the intersections of Driveway 2 on Bon View Avenue, Driveway 3 and Driveway 5 on Merrill Avenue, Driveway 6 and Driveway 8 on Eucalyptus Avenue, and Driveway 10 and Driveway 12 on Grove Avenue since these intersections are anticipated to have restricted access (right-in/right-out only) and would therefore not be suitable locations for installing a traffic signal.

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Analysis*, Section 6 *Opening Year Cumulative (2023) Traffic Analysis*, and Section 7 *Horizon Year (2040) Traffic Analysis* of this report. It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

## 2.4 FREEWAY OFF-RAMP QUEUING ANALYSIS

The study area for this TA includes the following freeway-to-arterial interchanges:

- Euclid Avenue (SR-83) & SR-60 Freeway
- I-15 Freeway & Cantu Galleano Ranch Road

The 95<sup>th</sup> percentile queuing of vehicles has been assessed at the off-ramps to determine potential queuing deficiencies at the freeway ramp intersections at the interchanges identified above. Specifically, the queuing analysis is utilized to identify any potential queuing and “spill back” onto the SR-60 or I-15 Freeway mainline from the off-ramps.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential deficiencies/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations at the ramps have been based upon the 95<sup>th</sup> percentile queue resulting from the Synchro progression analysis. There are two footnotes which appear on the Synchro outputs. One footnote indicates if the 95<sup>th</sup> percentile cycle exceeds capacity. Traffic is simulated for two complete cycles of the 95<sup>th</sup> percentile traffic in Synchro in order to account for the effects of spillover between cycles. In practice, the 95<sup>th</sup> percentile queue shown will rarely be exceeded and the queues shown with the footnote are acceptable for the design of storage bays. The other footnote indicates whether or not the volume for the 95<sup>th</sup> percentile queue is metered by an upstream signal. In many cases, the 95<sup>th</sup> percentile queue will not be experienced and may potentially be less than the 50<sup>th</sup> percentile queue due to upstream metering. If the upstream intersection is at or near capacity, the 50<sup>th</sup> percentile queue represents the maximum queue experienced.

A vehicle is considered queued whenever it is traveling at less than 10 feet/second. A vehicle will only become queued when it is either at the stop bar or behind another queued vehicle. The 95<sup>th</sup> percentile queue is the maximum back of queue with 95<sup>th</sup> percentile traffic volumes during the peak hour and is derived from the average queue plus 1.65 standard deviations. The queue length reported is for the lane with the highest queue in the lane group. The 95<sup>th</sup> percentile queue is not necessarily ever observed it is simply based on statistical calculations.

## 2.5 MINIMUM ACCEPTABLE LEVELS OF SERVICE (LOS)

Minimum Acceptable LOS and associated definitions of intersection deficiencies has been obtained from each of the applicable surrounding jurisdictions.

### 2.5.1 CITY OF ONTARIO

Per the Ontario Plan’s Policy M-1, the City of Ontario utilizes a minimum acceptable LOS of LOS E, where feasible. (7)

### 2.5.2 CITY OF CHINO

According to the City of Chino’s General Plan Objective TRA-1.2/Policy P1, LOS D is the minimum acceptable condition that should be maintained during the peak commute hours, where feasible. (8)

### **2.5.3 CITY OF EASTVALE**

The City of Eastvale General Plan Policy C-10 sets a standard of LOS C with LOS D as acceptable in commercial and employment areas and at intersections of any combination of major highways, urban arterials, secondary highways, or freeway ramps. (9) Based on this criterion, where feasible, LOS D is the minimum acceptable LOS at each of the study intersections within the City of Eastvale.

### **2.5.4 CITY OF JURUPA VALLEY**

Per the City of Jurupa Valley's General Plan Policy ME 1.1, the City of Jurupa Valley utilizes a minimum acceptable LOS of LOS D at all intersections, except where flexibility is warranted based on a multi-modal LOS evaluation, or where LOS E is deemed appropriate to accommodate complete streets/multi-modal facilities. (10)

### **2.5.5 CMP**

The CMP definition of deficiency is based on maintaining a level of service standard of LOS E or better, where feasible, except where an existing LOS F condition is identified in the CMP document. However, in an effort to overstate as opposed to understate potential deficiencies, LOS D has been utilized for the CMP intersections for the purposes of this analysis, unless the intersection is located in the City of Ontario (which uses LOS E). (1)

### **2.5.6 CALTRANS**

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State Highway System (SHS) facilities, however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. (2) If an existing State highway facility is operating at less than this target LOS, the existing LOS should be maintained. In general, the region-wide goal for an acceptable LOS on all freeways and intersections is LOS D. Consistent with the City of Ontario LOS threshold of LOS D and in excess of the City of Ontario stated LOS threshold of LOS E, LOS D will be used as the target LOS.

## 2.6 DEFICIENCY CRITERIA

To determine whether the addition of project traffic at a study intersection would result in a traffic deficiency, the following will be utilized:

- When the Without Project condition is at or better than LOS D (or LOS E for CMP intersections and intersections located in the City of Ontario) (i.e., acceptable LOS), and project-generated traffic causes deterioration below LOS D/LOS E (i.e., unacceptable LOS), a deficiency is deemed to occur.

When the Without Project condition is already below LOS D/LOS E (i.e., unacceptable LOS), the Project will be responsible for improving its deficiency to acceptable levels of service. Thus, for intersections operating at unacceptable LOS during either the AM and/or PM peak hour, improvements have been identified to improve the deficiencies of the Project to an intersection LOS that is equal to or better than Without Project conditions (see Table 2-6).

The Project’s contribution to a deficiency can be reduced if the Project is required to implement or fund its fair share of improvements designed to alleviate its contribution to the deficient condition.

**TABLE 2-6: DEFICIENCY CRITERIA**

Without Project Level of Service	Level of Service	Deficient?	Improvement Required?
<b>City of Ontario</b>			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D-E	No	No
E	E	No	No
A-E	F	Yes	Yes, bring LOS to E or better
F	F	Yes	Yes, bring LOS to E or better
<b>City of Chino, City of Eastvale, City of Jurupa Valley</b>			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D	No	No
A-D	E or F	Yes	Yes, bring LOS to D or better
E	E	Yes	Yes, bring LOS to D or better
E	F	Yes	Yes, bring LOS to D or better
F	F	Yes	Yes, bring LOS to D or better

In the event that an intersection is operating at or is forecast to operate at a deficient LOS, the CMP guidelines have defined a series of steps to be completed to determine the Project's contribution to the deficiency of intersections, which has been applied to both CMP and non-CMP study area intersections. The steps are as follows:

- Determine the improvements necessary to achieve an acceptable service level,
- Calculate the Project's share in the future traffic volume projections for the peak hours,
- Estimate the cost to implement recommended improvements, and
- Calculate the Project's fair-share contribution to improve the Project's traffic deficiencies

## 2.7 PROJECT FAIR SHARE CALCULATION METHODOLOGY

In cases where this TA identifies that the Project would contribute additional traffic volumes to traffic deficiencies, Project fair share costs of improvements necessary to address deficiencies have been identified. The Project's fair share cost of improvements is determined based on the following equation, which is the ratio of Project traffic to new traffic, and new traffic is total future (Horizon Year) traffic less existing baseline traffic:

$$\text{Project Fair Share \%} = \frac{\text{Project (2040) AM/PM Traffic}}{\text{(2040 With Project AM/PM Total Traffic - Existing AM/PM Traffic)}}$$

The project fair share percentage has been calculated for both the AM peak hour and PM peak hour and the highest of the two has been selected. The Project fair share contribution calculations are presented in Section 8 *Local and Regional Funding Mechanisms* of this TIA. The cost of implementing the improvements shown on Table 1-3 have been estimated based on the preliminary construction cost estimates found in Appendix G of the San Bernardino County CMP in conjunction with a total cost escalation factor of 1.568 to more closely approximate current (2021) costs. These cost estimates have been utilized in conjunction with the Project fair share percentages to determine the Project's fair share cost of the recommended improvements (see Table 8-2). These estimates are a rough order of magnitude only as they are intended only for discussion purposes and do not imply any legal responsibility or formula for contributions or physical improvements. If any analyzed intersections and roadway improvements fall outside of the jurisdiction of the City, the City does not have the authority to construct or demand the construction of such improvements. For this reason, the payment of fair share fees for the improvements identified in Table 1-3 is considered infeasible and therefore results in a significant and unavoidable impact for those locations outside of the City.

This Page Intentionally Left Blank

### 3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Ontario General Plan Circulation Network, and a review of existing peak hour intersection operations, off-ramp queueing, and traffic signal warrant analyses.

#### 3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with City of Ontario staff (Appendix 1.1), the study area includes a total of 52 existing and future intersections as shown previously on Exhibit 1-2. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

#### 3.2 CITY OF ONTARIO GENERAL PLAN CIRCULATION ELEMENT

As noted previously, the Project site is located within the City of Ontario. The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the City of Ontario General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the City of Ontario General Plan Circulation Element and Exhibit 3-3 illustrates the City of Ontario General Plan roadway cross-sections.

The study area roadways that are classified as 8-lane Other Principal Arterials are identified as having four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 8-lane Other Principal Arterials:

- Euclid Avenue (SR-83) from the SR-60 Freeway to Merrill Avenue
- Edison Avenue/Ontario Ranch Road from Euclid Avenue (SR-83) to Hamner Avenue
- Hamner Avenue from the SR-60 Freeway to Bellegrave Avenue

The study area roadways that are classified as 6-lane Other Principal Arterials are identified as having three lanes of travel in each direction and a 14-foot curbed or painted median. The following study area roadways within the City of Ontario are classified as 6-lane Other Principal Arterials:

- Grove Avenue north of Riverside Drive
- Vineyard Avenue from the SR-60 Freeway to Merrill Avenue
- Archibald Avenue north of Bellegrave Avenue

The study area roadways that are classified as 4-lane Other Principal Arterials are identified as having two lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 4-lane Other Principal Arterials:

- Grove Avenue north of Merrill Avenue
- Haven Avenue from Riverside Drive to Bellegrave Avenue

**EXHIBIT 3-3: CITY OF ONTARIO GENERAL PLAN ROADWAY CROSS-SECTIONS**

SOURCE: CITY OF ONTARIO

The study area roadway that is classified as a 6-lane Minor Arterial is identified as having three lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Minor Arterial:

- Riverside Drive

The study area roadway that is classified as a 4-lane Minor Arterial is identified as having two lanes of travel in each direction and a 14-foot median. The following study area roadway within the City of Ontario is classified as a 4-lane Minor Arterial:

- Bellegrave Avenue from Haven Avenue to Hamner Avenue

The study area roadways that are classified as Collector Streets are identified as having two to four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as Collector Streets:

- Walnut Street
- Chino Avenue
- Schaefer Avenue
- Eucalyptus Avenue
- Merrill Avenue
- Bon View Avenue
- Walker Avenue
- Hellman Avenue
- Turner Avenue

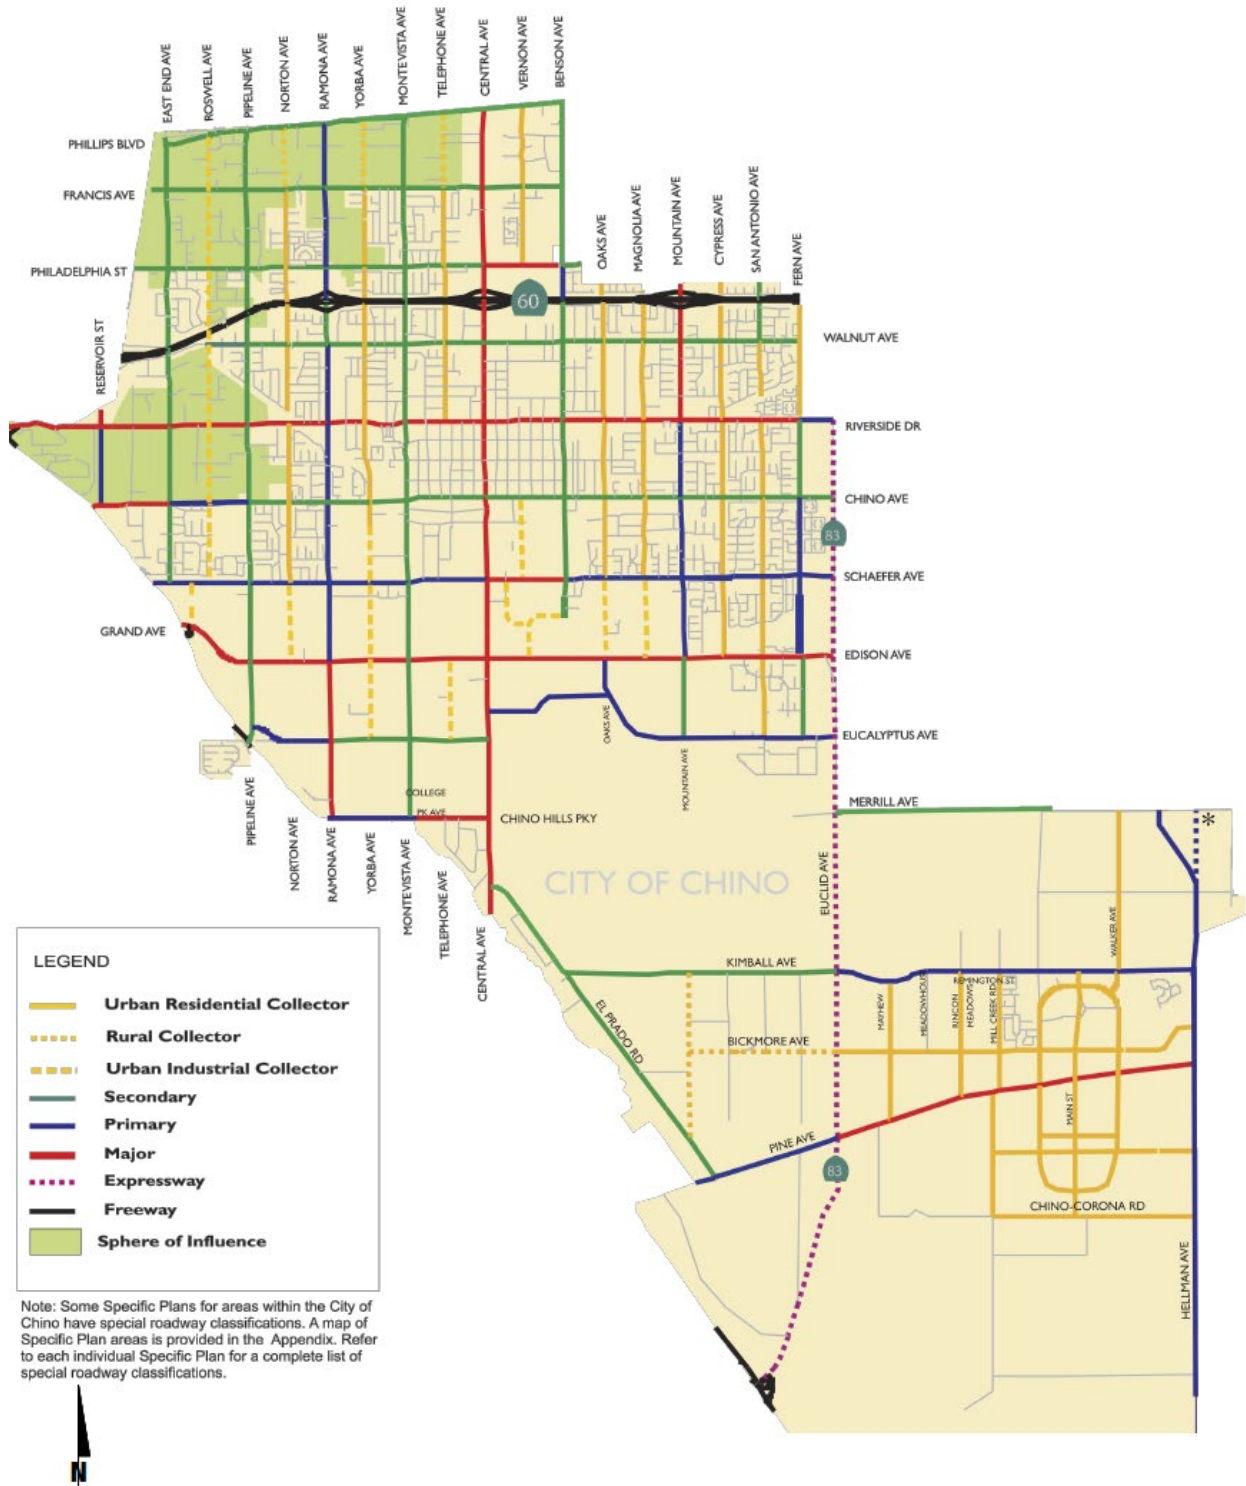

### **3.3 CITY OF CHINO, CITY OF EASTVALE, CITY OF JURUPA VALLEY GENERAL PLAN CIRCULATION ELEMENT**

Exhibits 3-4 and 3-5 show the City of Chino General Plan Circulation Element and roadway cross-sections, respectively. Exhibits 3-6 and 3-7 show the City of Eastvale General Plan Circulation Element and roadway cross-sections, respectively. Lastly, Exhibits 3-8 and 3-9 show the City of Jurupa Valley General Plan Circulation Element and roadway cross-sections, respectively.

### **3.4 TRUCK ROUTES**

The City of Ontario designated truck route map is shown on Exhibit 3-10. Euclid Avenue (SR-83), Edison Avenue/Ontario Ranch Road, Merrill Avenue, Archibald Avenue, and Hamner Avenue/Milliken Avenue are designated as Truck Routes in the City of Ontario. The designated truck route map has been utilized to route truck traffic for the proposed Project and cumulative development projects throughout the study area.

EXHIBIT 3-4: CITY OF CHINO GENERAL PLAN CIRCULATION ELEMENT

**EXHIBIT 3-5: CITY OF CHINO GENERAL PLAN ROADWAY CROSS-SECTIONS (1 OF 2)**

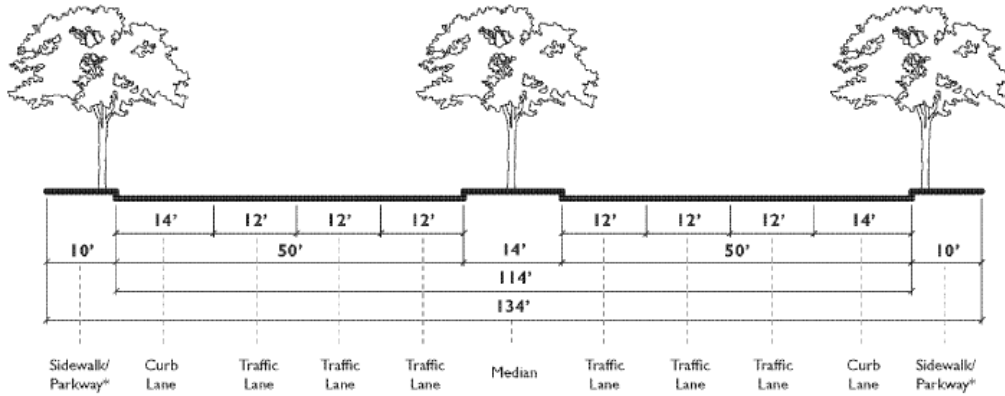

**Major Arterial (Expressway): Typical 8 Lane**

Provides 8 traffic lanes and a wide median without parking

**Major Arterial: Minimum 8 Lane**

Provides 8 traffic lanes and 2 bicycle lanes separated by a median without parking

**Major Arterial: Minimum 6 Lane**

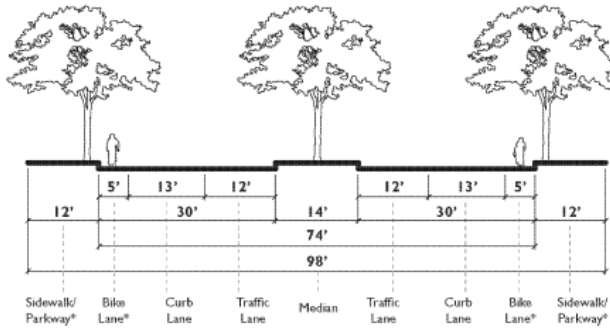

Provides 6 traffic lanes and 2 bicycle lanes separated by a median without parking

The City of Chino designated truck route map is shown on Exhibit 3-11. Riverside Drive, Edison Avenue (SR-83), Merrill Avenue, Flight Avenue, and Hellman Avenue are some of the designated City of Chino truck routes within the study area while Euclid Avenue (SR-83) is designated as a State Truck Route. The designated truck route map has been utilized to route study area truck traffic.

### **3.5 BICYCLE, EQUESTRIAN, & PEDESTRIAN FACILITIES**

Field observations indicate nominal pedestrian and bicycle activity within the study area. Exhibit 3-12 illustrates the City of Ontario future planned bicycle facilities, which proposes Class II and Multipurpose Trails along Merrill Avenue and Campus Avenue adjacent to the Project and the Cucamonga Creek Multipurpose Trail located east of the Project. A Multipurpose Trail is also proposed along Grove Avenue. Exhibit 3-13 illustrates City of Chino future bicycle facilities, which proposes Class I bicycle facilities along Hellman Avenue and Kimball Avenue near the vicinity of the site and Class II or II bicycle facilities along Euclid Avenue (SR-83). Exhibit 3-14 illustrates the City of Eastvale trails and bikeway systems. Existing pedestrian facilities within the study area are shown on Exhibit 3-15.

### **3.6 TRANSIT SERVICE**

The study area within the City of Ontario is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. Based on a review of the existing transit routes within the vicinity of the proposed Project, Omnitrans Route 81 operates on Riverside Drive north of the site. However, there are no existing bus routes near the vicinity of the Project. The Riverside Transit Authority (RTA) serves the City of Eastvale (and other areas of Riverside County). Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the applicant work in conjunction with Omnitrans to potentially provide additional bus service to the site. Existing transit routes in the vicinity of the study area are illustrated on Exhibit 3-16.

### **3.7 EXISTING TRAFFIC COUNTS**

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in January 2019. Historic traffic counts have been utilized for this analysis in an effort to be consistent with other traffic studies along the Merrill Avenue corridor. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

**EXHIBIT 3-16: EXISTING TRANSIT ROUTES**

The weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1.

The traffic counts collected in January 2019 include the following vehicle classifications: Passenger Cars, 2-Axle Trucks, 2-Axle Trucks, and 4 or More Axle Trucks. To represent the effect of large trucks, buses and recreational vehicles have on traffic flow; all trucks were converted into passenger car equivalent (PCE). By their size alone, these vehicles occupy the same space as two or more passenger cars. In addition, the time it takes for them to accelerate and slow-down is much longer than for passenger cars and varies depending on the type of vehicle and number of axles. For the purpose of this analysis, a PCE factor of 1.5 has been applied to 2-axle trucks, 2.0 for 3-axle trucks, and 3.0 for 4+-axle trucks to estimate each turning movement. These factors are consistent with the values recommended for use in the CMP.

Due to the school and business closures associated with the currently ongoing COVID-19 pandemic, traffic counts were not collected since the traffic volumes would likely be understated. As such and pursuant to discussions with City staff, a 5% per year growth rate for turning movements along major roadways (i.e., Archibald Avenue, Euclid Avenue, Limonite Avenue) and a 2% per year growth rate for all other movements have been utilized to conservatively reflect 2021 conditions.

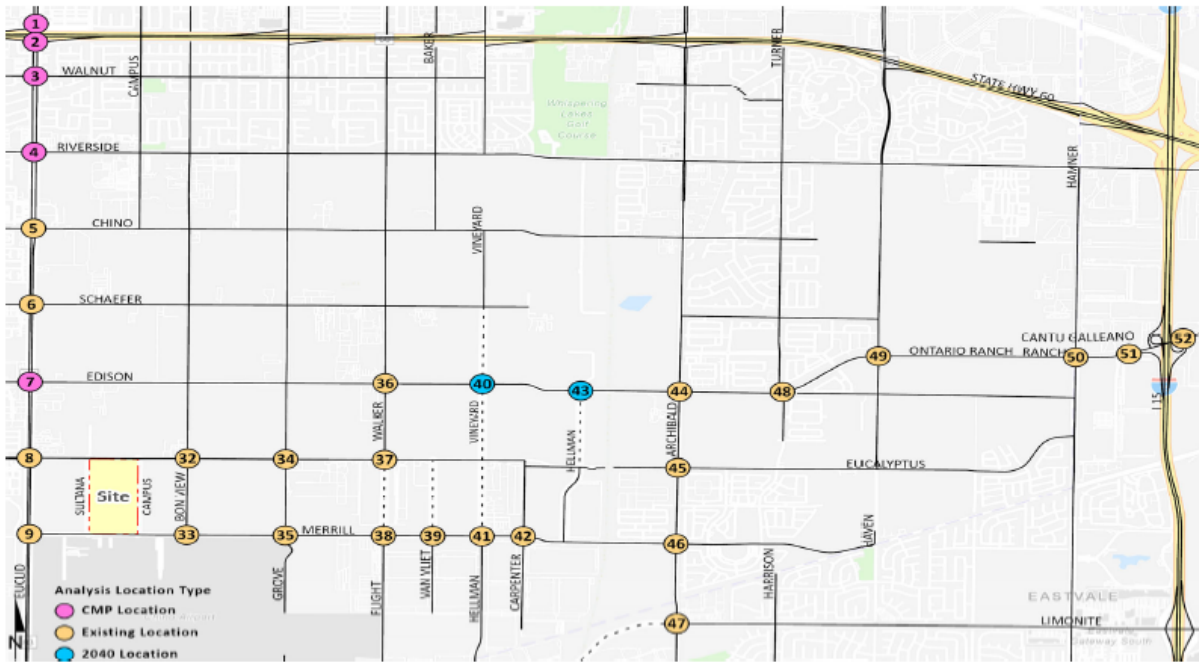

Existing weekday ADT volumes are shown on Exhibit 3-17. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

$$\text{Weekday PM Peak Hour (Approach Volume + Exit Volume)} \times 12.55 = \text{Leg Volume}$$

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 7.97 percent. As such, the above equation utilizing a factor of 12.55 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 7.97 percent (i.e.,  $1/0.0797 = 12.55$ ) and was assumed to sufficiently estimate average daily traffic (ADT) volumes for planning-level analyses. Existing weekday AM and weekday PM peak hour intersection volumes (in actual vehicles) are shown on Exhibit 3-17. The peak hour operations analyses utilize PCE volumes per the City's Traffic Study Guidelines (PCE volumes are included in the appendices with the HCM operations analysis worksheets for each applicable analysis scenario).

**BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; d= Defacto Right Turn Lane

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal

<sup>4</sup> Minimum acceptable LOS for each applicable jurisdiction.

### 3.8 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized on Table 3-1, which indicates that all existing study area intersections are currently operating at acceptable LOS during the peak hours with exception to the following:

- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS E PM peak hour only
- Grove Avenue & Eucalyptus Avenue (#34) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#35) – LOS F AM peak hour; LOS E PM peak hour
- Carpenter Avenue & Merrill Avenue (#42) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#47) – LOS E AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#50) – LOS F PM peak hour only

The intersection operations analysis worksheets are included in Appendix 3.2 of this TA.

### 3.9 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The following study area intersections currently warrant a traffic signal for Existing traffic conditions:

- Grove Avenue & Eucalyptus Avenue (#34)
- Grove Avenue & Merrill Avenue (#35)

- Walker Avenue/Flight Avenue & Merrill Avenue (#38)
- Carpenter Avenue & Merrill Avenue (#42)

Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.3.

### 3.10 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the study area intersections along the SR-60 Freeway, and I-15 Freeway to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the SR-60, and I-15 Freeway mainlines. Queuing analysis findings are presented on Table 3-2. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown on Table 3-2, there are no movements that are currently experiencing queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows. Worksheets for Existing traffic conditions off-ramp queuing analysis are provided in Appendix 3.4.

**TABLE 3-2: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR EXISTING (2021) CONDITIONS**

#	Intersection	Movement	Available Stacking Distance (Feet)	95th Percentile Queue (Feet) <sup>3</sup>		Acceptable? <sup>1</sup>	
				AM Peak Hour	PM Peak Hour	AM	PM
1	Euclid Avenue (SR-83) & SR-60 WB Ramps	WBL	400	323 <sup>2</sup>	287	Yes	Yes
		WBL/T/R	1,430	331 <sup>2</sup>	294	Yes	Yes
		WBR	400	216	217	Yes	Yes
2	Euclid Avenue (SR-83) & SR-60 EB Ramps	EBL	900	386 <sup>2</sup>	375 <sup>2</sup>	Yes	Yes
		EBT/R	1,270	303 <sup>2</sup>	315 <sup>2</sup>	Yes	Yes
51	I-15 SB Ramps & Cantu Galleano	SBL	1,440	110	94	Yes	Yes
		SBL/R	560	371 <sup>2</sup>	204	Yes	Yes
		SBR	460	280 <sup>2</sup>	183	Yes	Yes
52	I-15 NB Ramps & Cantu Galleano	NBL	1,680	91	67	Yes	Yes
		NBR	440	52	45	Yes	Yes

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

## 4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network. The proposed Project is anticipated to be developed by the Year 2023 in a single phase.

The proposed Project includes the following mix of land uses are assumed, which represent a reasonable mix of industrial and business park uses that would be permitted by the Project:

- Industrial: 913,053 square feet of high-cube fulfillment center warehouse use, 179,135 square feet of high-cube cold storage warehouse, and 320,551 square feet of general warehousing use.
- Business Park: 227,951 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses (as would fall under ITE Land Use Code 130).
- **Total of 1,640,690 square feet**

### 4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development.

Trip generation rates for the Project are shown on Table 4-1 for both actual vehicles and PCE. The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project in actual vehicles and PCE are shown in Table 4-2 and Table 4-3, respectively. The trip generation rates used for this analysis are based upon information collected by the ITE as provided in their Trip Generation Manual (10<sup>th</sup> Edition, 2017) and the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019). (3) (4)

<sup>1</sup> TSF = thousand square feet

For purposes of this analysis, the following ITE land use codes and vehicle mixes have been utilized:

- High-Cube Fulfillment Center Warehouse has been used to derive site specific trip generation estimates for up to 913,053 square feet of the proposed Project. The ITE Trip Generation Manual (2017) has trip generation rates for high-cube fulfillment center use (ITE land use code 155), however, these rates are unreliable because they are based on limited data (i.e., one to two surveyed sites) and the ITE Trip Generation Manual recommends the use of local data sources where available. As such, the trip-generation statistics published in the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019) which was commissioned by the Western Riverside Council of Governments (WRCOG) in support of the Transportation Uniform Mitigation Fee (TUMF) update, has been utilized for the high-cube fulfillment center use. The WSP trip generation rates were published in January 2019 and are based on data collected at 11 local high-cube fulfillment center sites. However, the WSP study does not include a split for inbound and outbound vehicles, as such, the inbound and outbound splits per the ITE High-Cube Warehouse Vehicle Trip Generation Analysis (October 2016) have been utilized. (11)
- ITE land use code 150 (Warehousing) has been used to derive site specific trip generation estimates for up to 320,551 square feet of the proposed Project. The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (12) This study provides the following vehicle mix: AM Peak Hour: 87.0% passenger cars and 13.0% trucks; PM Peak Hour: 85.0% passenger cars and 15.0% trucks; Weekday Daily: 73.0% passenger cars and 27.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for up to 179,135 square feet. High-cube cold storage warehouses include warehouses characterized by the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. High-cube cold storage warehouses are facilities typified by temperature-controlled environments for frozen food or other perishable products. The High-Cube Cold Storage Warehouse vehicle mix (passenger cars versus trucks) has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (12) This study provides the following vehicle mix: AM Peak Hour: 73.0% passenger cars and 27.0% trucks; PM Peak Hour: 77.0% passenger cars and 23.0% trucks; Weekday Daily: 65.0% passenger cars and 35.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 34.7%; 3-Axle = 11.0%; 4+-Axle = 54.3%.
- Because the peak hour trip generation rates collected for the "business park" land use category by the ITE as provided in their Trip Generation Manual, 10<sup>th</sup> Edition, 2017 (ITE land use code 770) are based on limited data (i.e., a single surveyed site) that does not have the same physical or operational characteristics as the range of uses permitted in the Business Park buildings, the trip generation rates for ITE land use code 130 (Industrial Park) have been used to derive site specific trip generation estimates for up to 227,951 square feet of business park uses proposed for the Project). The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (12) This study provides the following vehicle mix: AM Peak Hour: 88.0% passenger cars and 12.0% trucks; PM Peak Hour: 90.0% passenger cars and 10.0% trucks; Weekday Daily: 85.0% passenger cars and 15.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

Finally, PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles) for the Project. PCEs allow the typical “real-world” mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in Appendix B of the San Bernardino County Congestion Management Program (CMP), 2016 Update.

As shown on Table 4-2, the proposed Project is anticipated to generate a total of 3,656 two-way trips per day, with 274 AM peak hour trips and 323 PM peak hour trips (in actual vehicles). For the purposes of the operations analysis, the PCE trip generation shown in Table 4-3 has been utilized.

## 4.2 PROJECT TRIP DISTRIBUTION

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The trip distribution pattern of passenger cars is heavily influenced by the geographical location of the site, the location of surrounding uses, and the proximity to the regional freeway system. The trip distribution pattern for truck traffic is also influenced by the local truck routes approved by the City of Ontario, City of Chino, City of Eastvale, City of Jurupa Valley, and Caltrans. Given these differences, separate trip distributions were generated for both passenger cars and truck trips.

The Opening Year Cumulative distribution patterns utilize the existing roadway system in relation to the Horizon Year trip distribution patterns, which assumes future roadway connections. The Project trip distribution patterns are also affected by near-term development patterns in the vicinity of the Project site. The extension of Limonite Avenue/Kimball Avenue extension between Hellman Avenue and Archibald Avenue, and the Merrill Avenue extension to Bellegrave Avenue have also been assumed for Horizon Year conditions only.

Exhibit 4-1 illustrates the truck trip distribution patterns for Opening Year Cumulative and Horizon Year conditions. As shown on Exhibit 4-1, trucks are anticipated to utilize designated truck routes such as Merrill Avenue, Euclid Avenue (SR-83), Archibald Avenue, Edison Avenue/Ontario Ranch Road, and Limonite Avenue to reach regional freeways such as the SR-60, and I-15 Freeways. These travel patterns are not anticipated to change with the addition of new future facilities for Horizon Year traffic conditions.

Exhibit 4-2 illustrates the Opening Year Cumulative passenger car trip distribution patterns. The Opening Year Cumulative passenger car trip distribution patterns are based on a SBTAM select zone run for a zone wholly or partially containing the Project, with modifications to utilize existing roadways. Exhibit 4-3 illustrates the passenger car trip distribution patterns for Horizon Year traffic conditions which is based on a SBTAM select zone run of the Project.

**EXHIBIT 4-1: PROJECT (TRUCK) TRIP DISTRIBUTION (1 OF 2)**

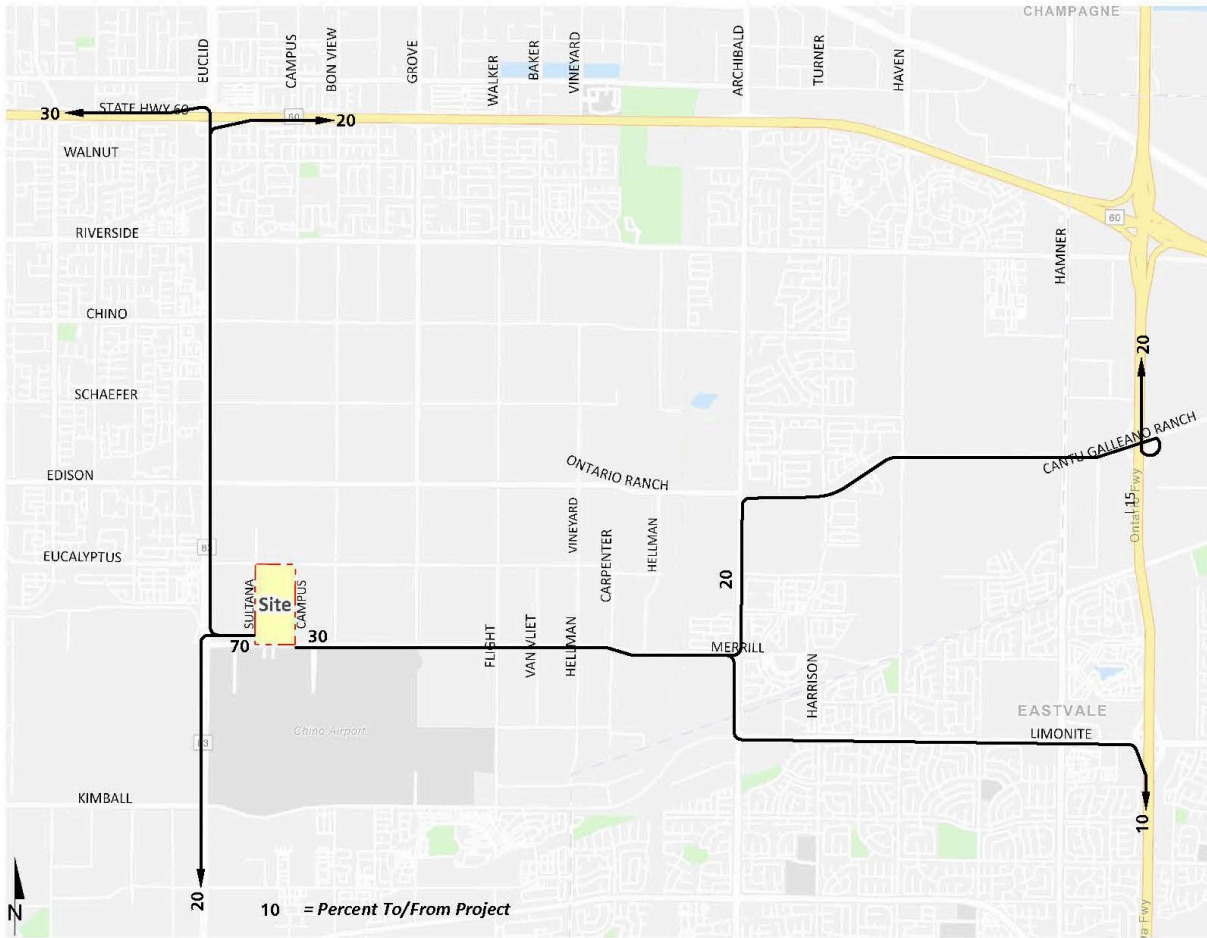

EXHIBIT 4-1: PROJECT (TRUCK) TRIP DISTRIBUTION (2 OF 2)

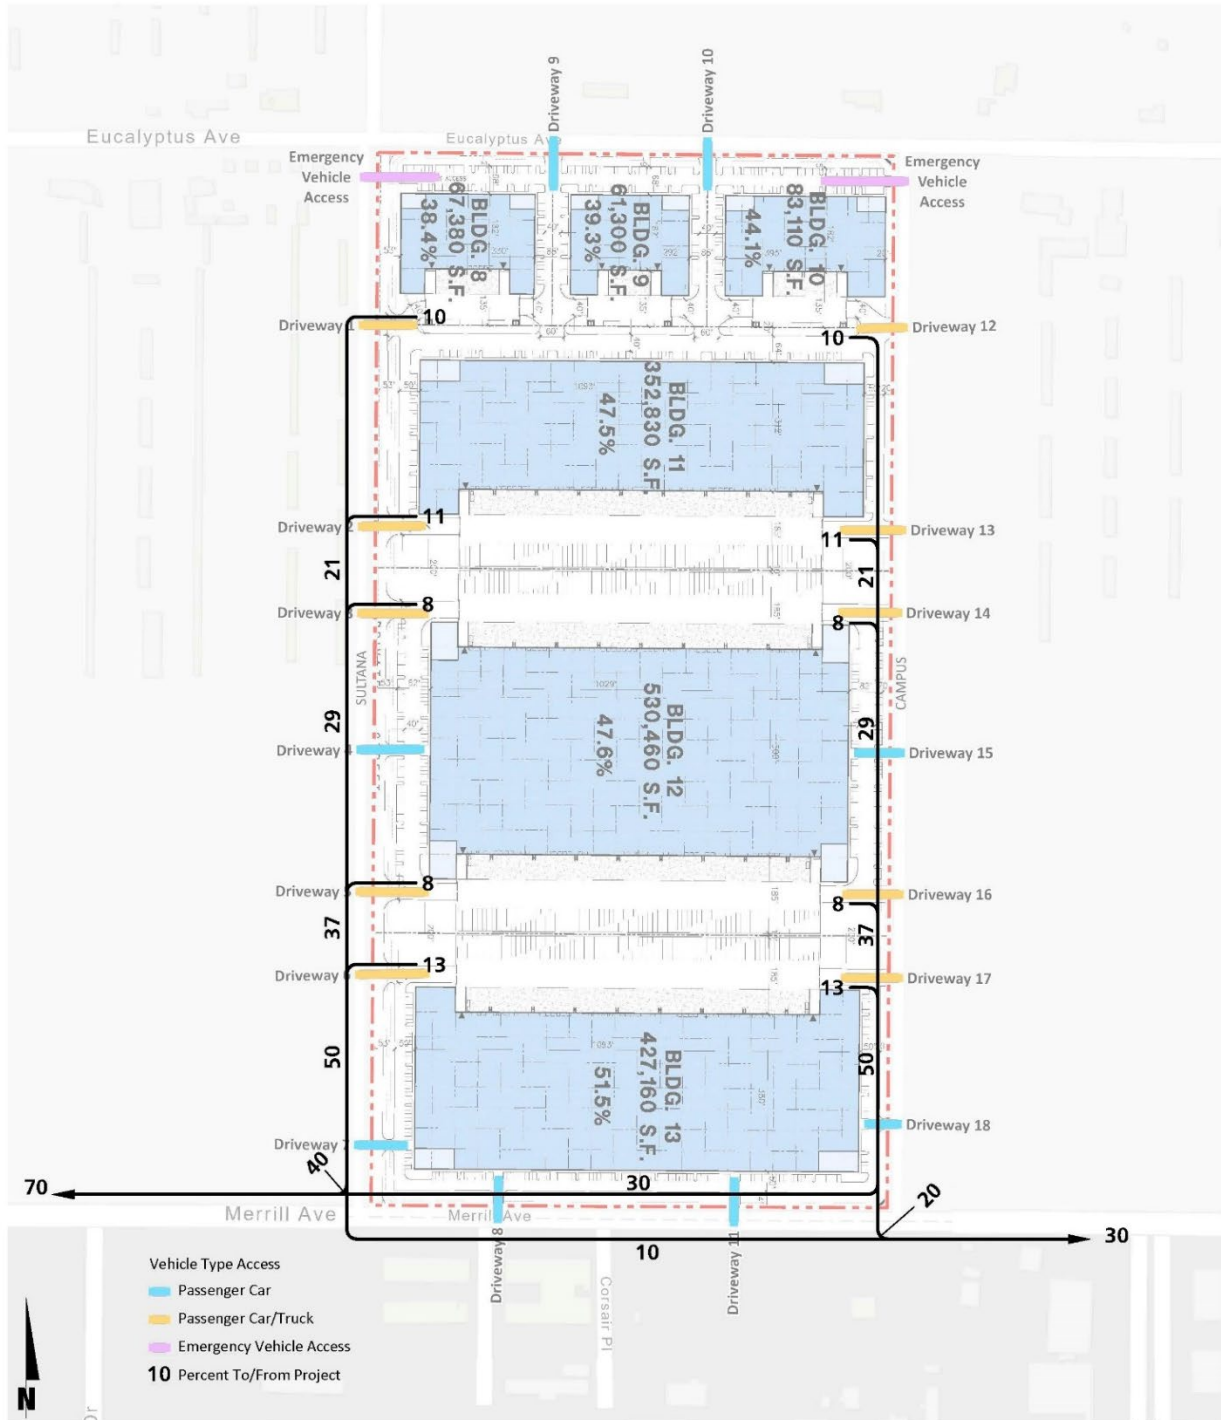

EXHIBIT 4-2: PROJECT (OPENING YEAR PASSENGER CAR) TRIP DISTRIBUTION (1 OF 2)

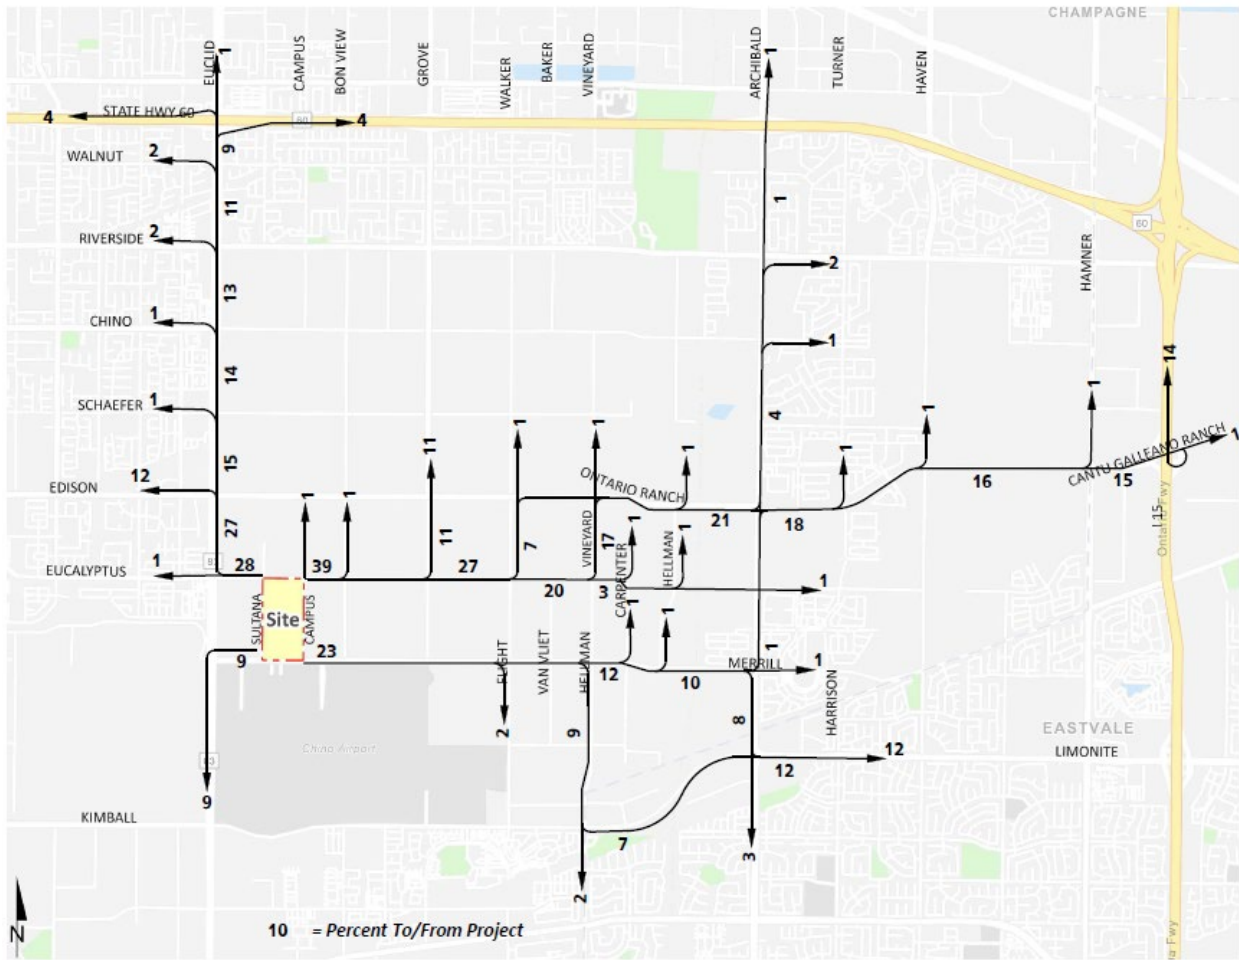

EXHIBIT 4-2: PROJECT (OPENING YEAR PASSENGER CAR) TRIP DISTRIBUTION (2 OF 2)

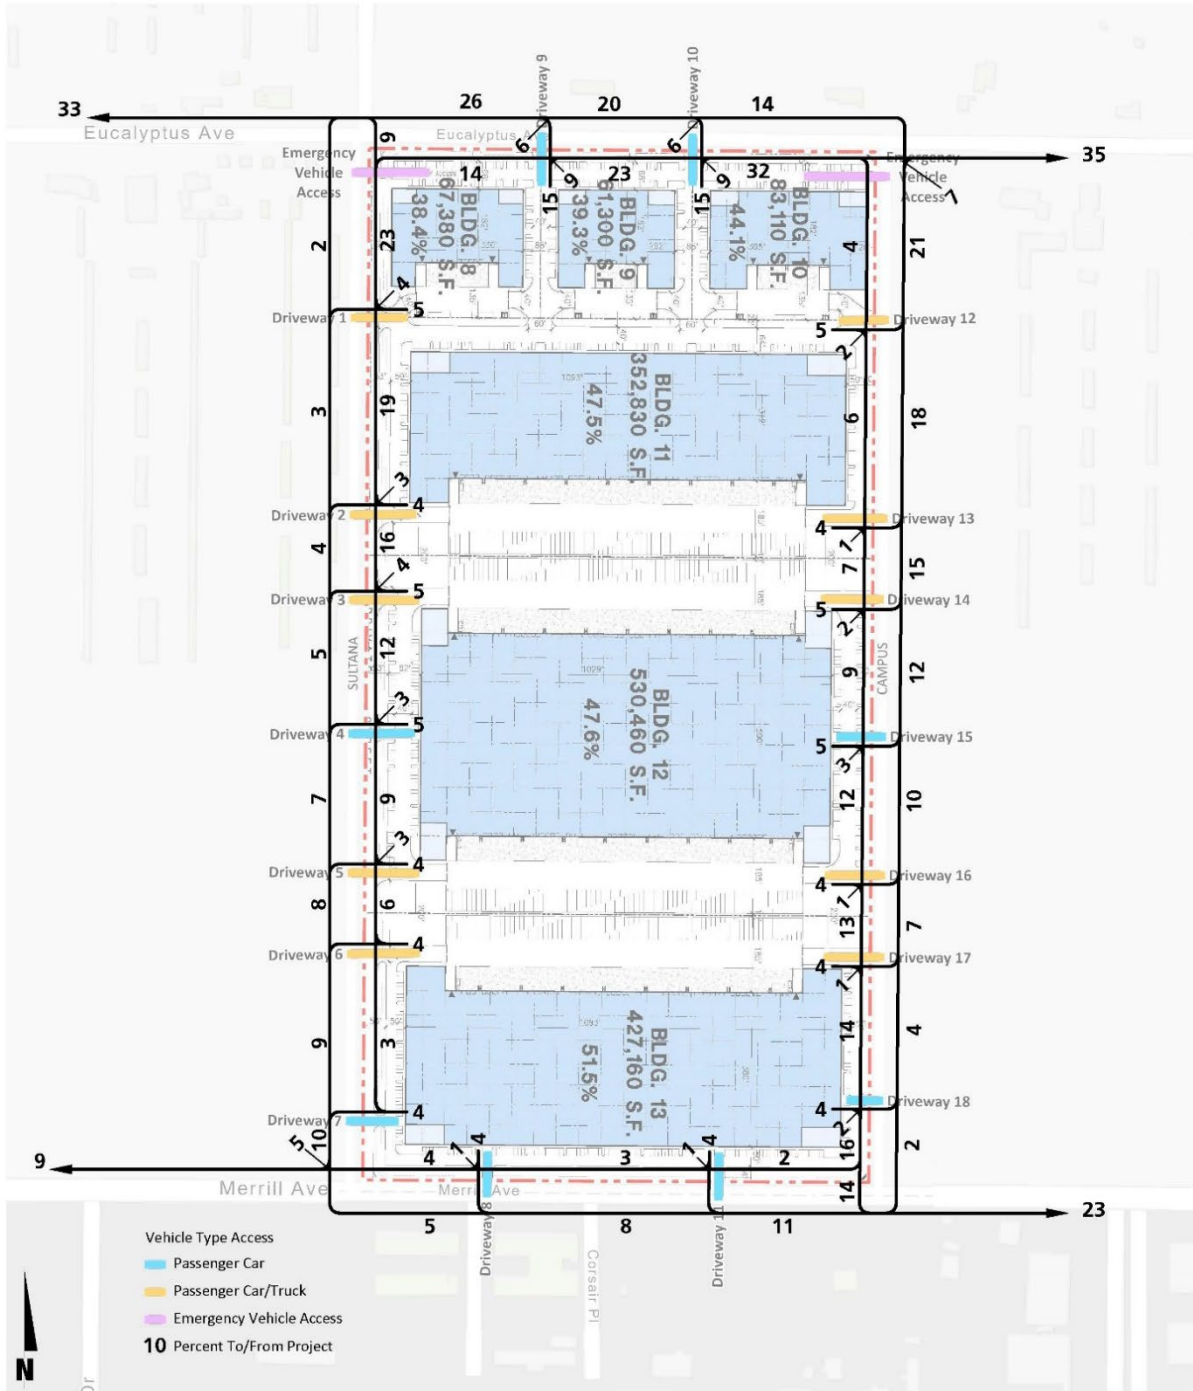

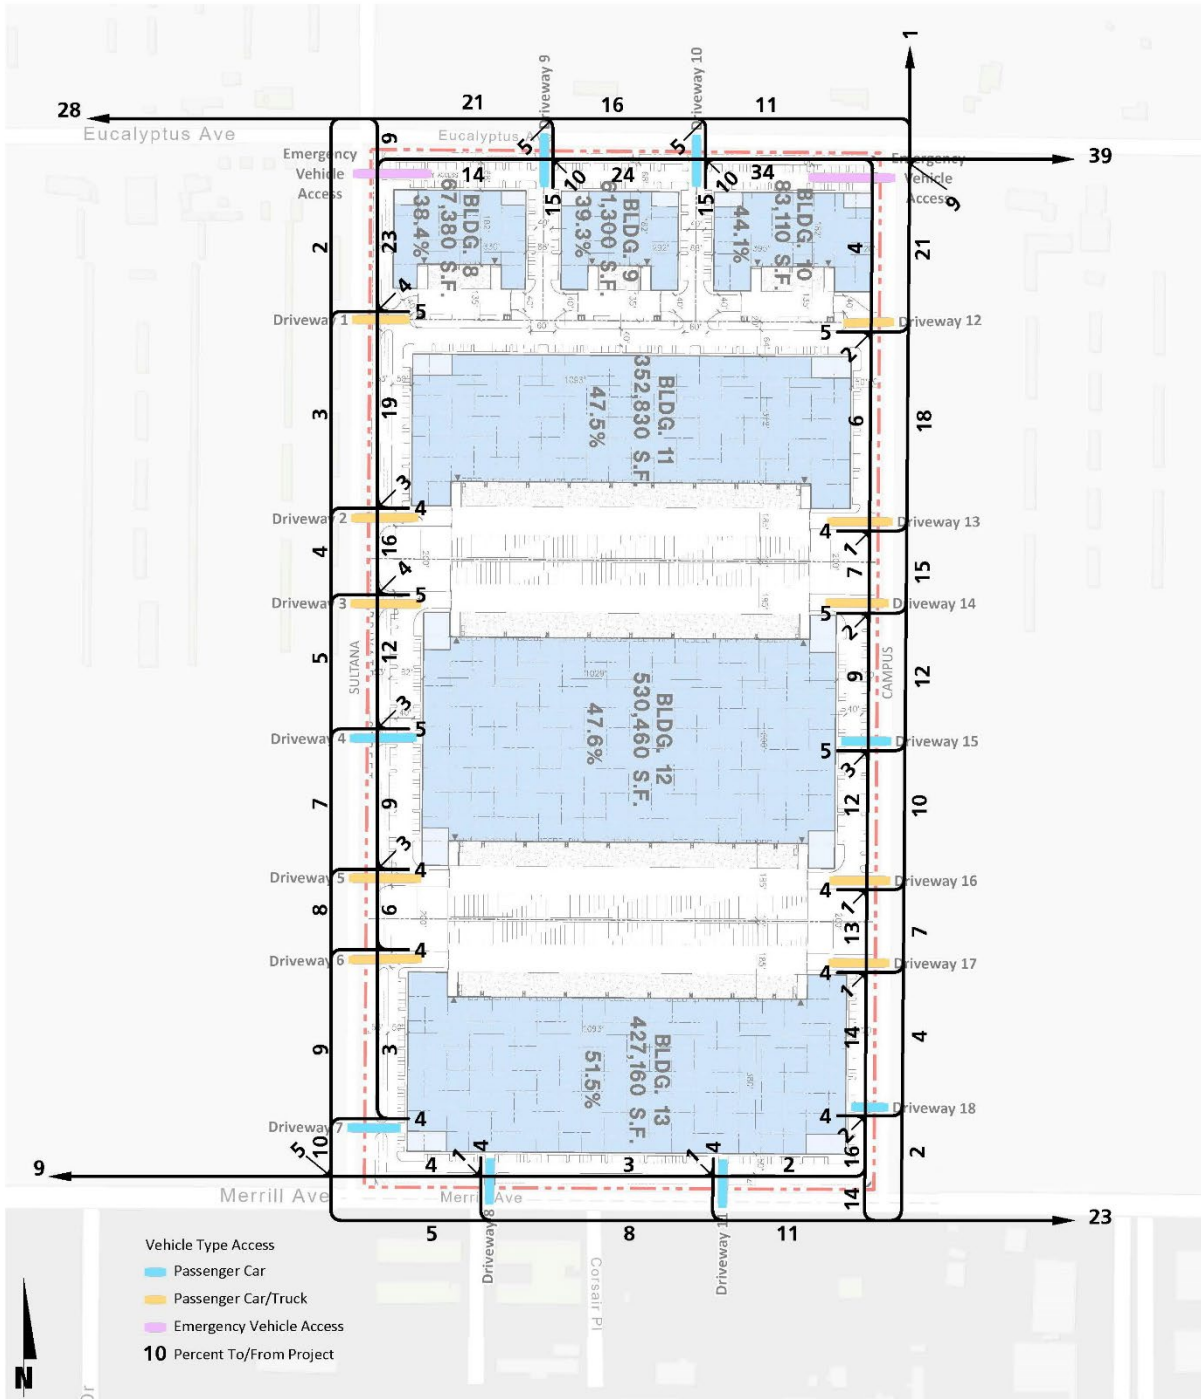

EXHIBIT 4-3: PROJECT (HORIZON YEAR PASSENGER CAR) TRIP DISTRIBUTION (2 OF 2)

### **4.3 MODAL SPLIT**

The potential for Project trips (non-truck) to be reduced by the use of public transit, walking or bicycling have not been included as part of the Project's estimated trip generation. Essentially, the Project's traffic projections are "conservative" in that these alternative travel modes would reduce the forecasted traffic volumes (non-truck trips only).

### **4.4 PROJECT TRIP ASSIGNMENT**

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movement volumes are shown on the following exhibits:

- Exhibits 4-4 for near-term Project Buildout traffic conditions
- Exhibits 4-5 for Horizon Year (2040) traffic conditions

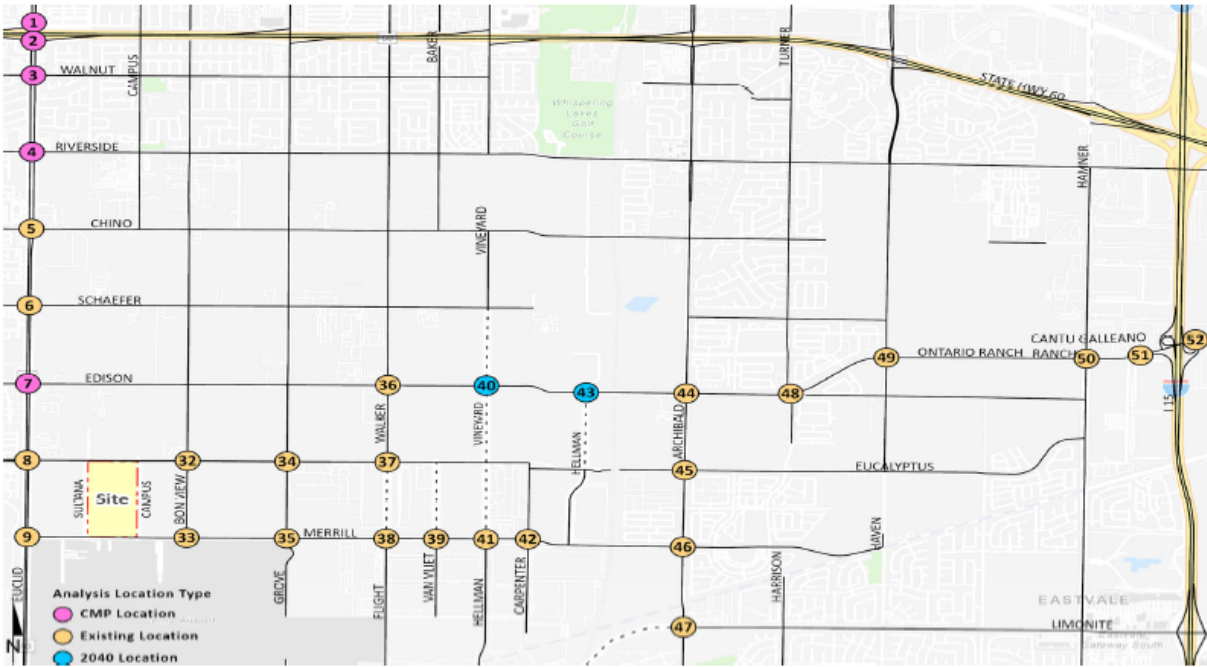

### **4.5 BACKGROUND TRAFFIC**

#### **4.5.1 OPENING YEAR CUMULATIVE CONDITIONS**

Future year traffic forecasts have been based upon background (ambient) growth at 2% per year for 2023 traffic conditions. The ambient growth factor is intended to approximate regional traffic growth. This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in addition to traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies.

Opening Year Cumulative (2023) traffic volumes are provided in Section 6 of this report. The traffic generated by the proposed Project was then manually added to the base volume to determine Opening Year Cumulative "With Project" forecasts.

## Average Daily Trips

#### 4.5.2 HORIZON YEAR (2040) CONDITIONS

The adopted Southern California Association of Governments (SCAG) 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (May 2020) growth forecasts for the City of Ontario identifies projected growth in population of 172,200 in 2016 to 269,100 in 2045, or a 56.3% increase over the 29-year period. (13) The change in population equates to roughly a 1.55% growth rate, compounded annually. Similarly, growth over the same 29-year period in households is projected to increase by 62.0%, or a 1.67% annual growth rate. Finally, growth in employment over the same 29-year period is projected to increase by 48.6%, or a 1.38% annual growth rate.

Therefore, the annual growth rate utilized for the purposes of this analysis would appear to conservatively approximate the anticipated regional growth in traffic volumes in the City of Ontario for Opening Year Cumulative and Horizon Year (2040) traffic conditions, especially when considered along with the addition of project-related traffic. As such, the growth in traffic volumes assumed in this traffic impact analysis would tend to overstate as opposed to understate the potential deficiencies to traffic and circulation. Horizon Year (2040) With Project traffic forecasts reflects buildout of the Project.

#### 4.6 CUMULATIVE DEVELOPMENT TRAFFIC

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Ontario. The cumulative projects listed are those that would generate traffic and would contribute traffic to study area intersections. The neighboring jurisdictions of Chino, Eastvale, and Jurupa Valley have also been contacted to include key projects in their respective cities.

Exhibit 4-6 illustrates the cumulative development location map. A summary of cumulative development projects and their proposed land uses are shown on Table 4-4. If applicable, the traffic generated by individual cumulative projects was manually added to the Opening Year Cumulative forecasts to ensure that traffic generated by the listed cumulative development projects on Table 4-4 are reflected as part of the background traffic. In an effort to conduct a conservative analysis, the cumulative projects are added in conjunction with the ambient growth identified in Section 4.5.1 *Background Traffic: Opening Year Cumulative Conditions*. Cumulative ADT and peak hour intersection turning movement volumes are shown on Exhibit 4-7.

## 4.7 HORIZON YEAR (2040) VOLUME DEVELOPMENT

Traffic projections for Horizon Year (2040) without Project conditions were derived from the San Bernardino Transportation Analysis Model (SBTAM) using accepted procedures for model forecast refinement and smoothing for study area intersections located within the County of San Bernardino. The current version of the SBTAM (Version 2.20, March 2019) reflects the local input in the adopted 2020 SCAG RTP within the County of San Bernardino.

The traffic forecasts reflect the area-wide growth anticipated between Existing (2021) conditions and Horizon Year (2040) traffic conditions. In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Horizon Year (2040) peak hour forecasts were refined using the model derived long range forecasts, base (validation) year model forecasts, along with existing peak hour traffic count data collected at each analysis location in January 2019. The SBTAM has a base (validation) year of 2012 and a horizon (future forecast) year of 2040. The difference in model volumes (2040-2012) defines the growth in traffic over the 28-year period. Similarly, the Riverside Transportation Analysis Model (RivTAM) has a base (validation) year of 2012 and a horizon (future forecast) year of 2040.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 785), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

The SBTAM uses an AM peak period-to-peak hour factor of 0.35 and a PM peak period-to-peak hour factor of 0.27. These factors represent the relationship of the highest single AM peak hour to the modeled 3-hour AM peak period (an even distribution would result in a factor of 0.33) and the highest single PM peak hour to the modeled 4-hour PM peak period (an even distribution would result in a factor of 0.25). The model data from RivTAM represents peak hour data and therefore did not require adjustments.

Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Horizon Year traffic conditions. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing or Opening Year Cumulative traffic conditions were not assumed as part of this analysis. As such, in conjunction with the addition of cumulative projects that are not consistent with the General Plan, additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable Horizon Year (2040) forecasts. Horizon Year (2040) turning volumes were compared to Opening Year Cumulative (2023) volumes in order to ensure a minimum growth as a part of the refinement process. The minimum growth includes any additional growth between Opening Year Cumulative (2023) and Horizon Year (2040) traffic conditions that is not accounted for by the traffic generated by cumulative development projects and ambient growth rates assumed between Existing (2021) and Opening Year Cumulative (2023) conditions. Adjustments have not

been made to study area intersections that may be affected by new future roadway connections (such as the extension of Kimball Avenue/Limonite Avenue), where travel patterns would likely get affected and forecasts may potentially decrease from the Opening Year Cumulative conditions. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the Horizon Year (2040) peak hour forecasts.

The future Horizon Year (2040) Without Project peak hour turning movements were then reviewed by Urban Crossroads, Inc. for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two adjacent driveway locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there is no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis.

The SBTAM and RivTAM do not include a truck component or have data that is unusually low. As such, in an effort to conduct a conservative analysis, the presence of trucks has been accounted for based on the manual volume adjustments made to demonstrate growth above Opening Year Cumulative (2023) traffic forecasts, which are presented and evaluated in PCE (see Section 3.7 *Existing Traffic Counts* for discussion on PCE). As such, the Horizon Year (2040) forecasts are also assumed to be in PCE for the purposes of this analysis. Post-processing worksheets for Horizon Year (2040) without Project traffic conditions are provided in Appendix 4.1.

## 5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Existing plus Project (E+P) conditions and the resulting intersection operations, off-ramp queuing, and traffic signal warrant analyses.

### 5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

### 5.2 EXISTING PLUS PROJECT TRAFFIC VOLUME FORECASTS

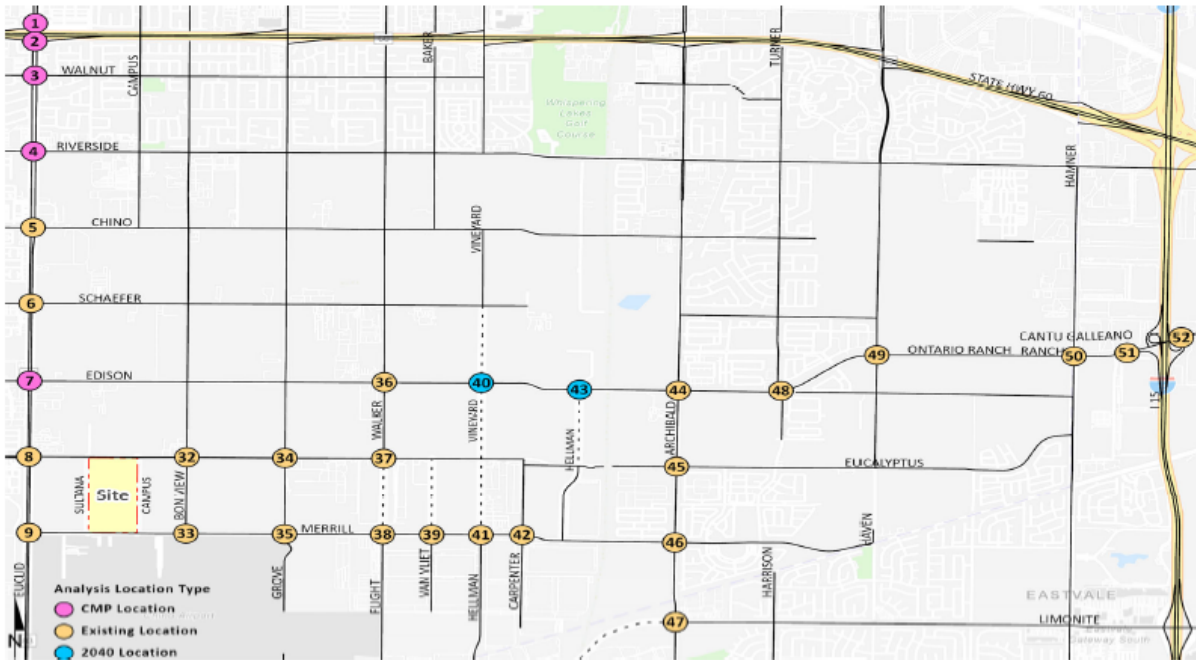

This scenario includes Existing traffic volumes plus Project traffic. The ADT and weekday AM and PM peak hour intersection turning movement volumes which can be expected for E+P traffic conditions are shown on Exhibit 5-1.

### 5.3 INTERSECTION OPERATIONS ANALYSIS

E+P peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TIA. The intersection analysis results are summarized on Table 5-1 for E+P traffic conditions, which indicate that the following no additional study area intersections are anticipated to operate at an unacceptable LOS, in addition to those identified for Existing traffic conditions.

The intersection operations analysis worksheets for E+P traffic conditions are included in Appendix 5.1 of this TA.

**BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).  
<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.  
<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement  
<sup>3</sup> Minimum acceptable LOS for each applicable jurisdiction.

### 5.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

The following study area intersections are anticipated to meet peak hour volume-based traffic signal warrants for E+P traffic conditions (see Appendix 5.2), in addition to those previously warranted under Existing traffic conditions:

- Walker Avenue & Edison Avenue (#36)

### 5.5 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for E+P are presented on Table 5-2. As shown on Table 5-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows with the addition of Project traffic. Worksheets for E+P traffic conditions off-ramp queuing analysis are provided in Appendix 5.3.

**TABLE 5-2: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR E+P CONDITIONS**

#	Intersection	Movement	Available Stacking Distance (Feet)	Existing (2021)				E+P			
				95th Percentile Queue (Feet) <sup>3</sup>		Acceptable? <sup>1</sup>		95th Percentile Queue (Feet) <sup>3</sup>		Acceptable? <sup>1</sup>	
				AM Peak	PM Peak	AM	PM	AM Peak Hour	PM Peak Hour	AM	PM
1	Euclid Avenue (SR-83) & SR-60 WB Ramps	WBL	400	323 <sup>2</sup>	287	Yes	Yes	343 <sup>2</sup>	292	Yes	Yes
		WBL/T/R	1,430	331 <sup>2</sup>	294	Yes	Yes	359 <sup>2</sup>	295	Yes	Yes
		WBR	400	216	217	Yes	Yes	225	222	Yes	Yes
2	Euclid Avenue (SR-83) & SR-60 EB Ramps	EBL	900	386 <sup>2</sup>	375 <sup>2</sup>	Yes	Yes	386 <sup>2</sup>	375 <sup>2</sup>	Yes	Yes
		EBT/R	1,270	303 <sup>2</sup>	315 <sup>2</sup>	Yes	Yes	362 <sup>2</sup>	338 <sup>2</sup>	Yes	Yes
51	I-15 SB Ramps & Cantu Galleano	SBL	1,440	110	94	Yes	Yes	110	94	Yes	Yes
		SBL/R	560	371 <sup>2</sup>	204	Yes	Yes	397 <sup>2</sup>	210	Yes	Yes
		SBR	460	280 <sup>2</sup>	183	Yes	Yes	358 <sup>2</sup>	189	Yes	Yes
52	I-15 NB Ramps & Cantu Galleano	NBL	1,680	91	67	Yes	Yes	91	67	Yes	Yes
		NBR	440	52	45	Yes	Yes	52	45	Yes	Yes

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

## 5.6 IMPROVEMENTS

This section provides a summary of Project deficiencies and identified improvements. Based on the City of Ontario deficiency criteria discussed in Section 2.6 *Deficiency Criteria*, intersections were found to be deficient.

### 5.6.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

The effectiveness of the proposed recommended improvements is presented on Table 5-2 for E+P traffic conditions. The intersection operations analysis worksheets for E+P traffic conditions, with improvements, are included in Appendix 5.4 of this TA.

**TABLE 5-3: INTERSECTION ANALYSIS FOR E+P CONDITIONS WITH IMPROVEMENTS**

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.  
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-Street Stop; TS = Traffic Signal; TS = Improvement

<sup>4</sup> Improvement includes restriping the northbound approach to provide one left turn lane, two through lanes, and one shared through-right turn lane.

<sup>5</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.

**5.6.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously on Table 5-2, there are no peak hour queuing issues anticipated at the SR-60 Freeway, and I-15 Freeway study area interchanges. As such, no improvements have been identified.

## 6 OPENING YEAR CUMULATIVE (2023) TRAFFIC CONDITIONS

This section discusses the methods used to develop Opening Year Cumulative (2023) Without and With Project traffic forecasts, and the resulting intersection operations, off-ramp queuing, and traffic signal warrant analyses.

### 6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2023) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only.

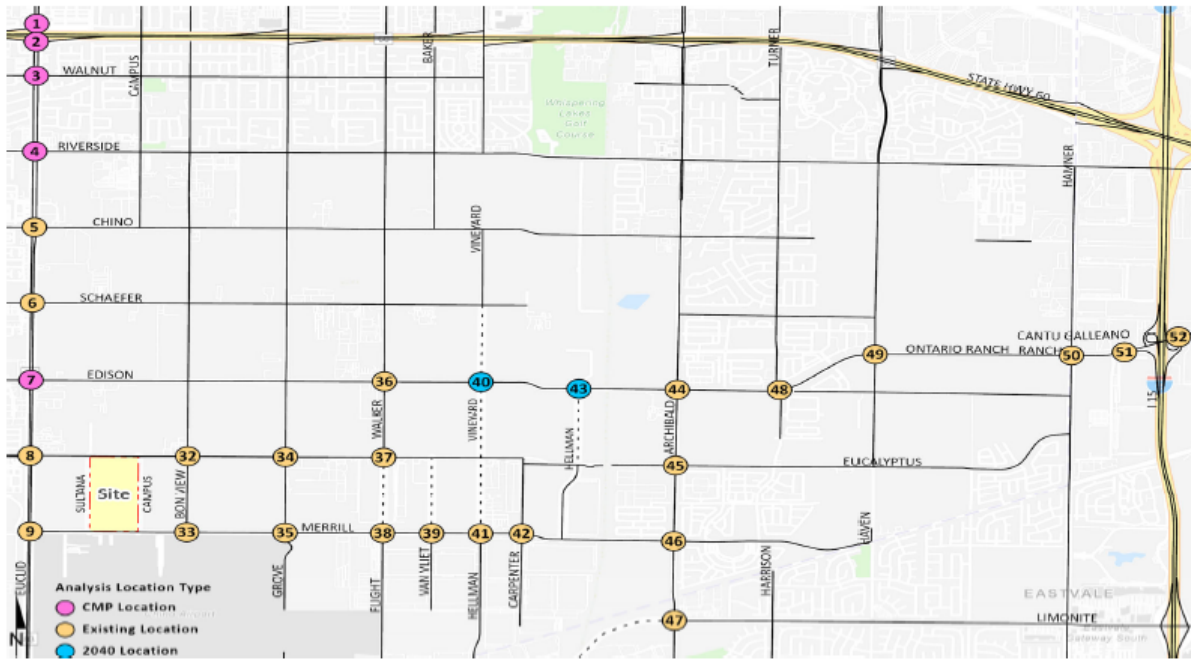

### 6.2 OPENING YEAR CUMULATIVE (2023) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus an ambient growth factor of 4.04% plus traffic from pending and approved but not yet constructed known development projects in the area. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2023) Without Project traffic conditions are shown on Exhibit 6-1.

### 6.3 OPENING YEAR CUMULATIVE (2023) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Opening Year Cumulative (2023) Without Project traffic in conjunction with the addition of Project traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2023) With Project traffic conditions are shown on Exhibit 6-2, respectively.

## 6.4 INTERSECTION OPERATIONS ANALYSIS

### 6.4.1 OPENING YEAR CUMULATIVE (2023) WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Opening Year Cumulative (2023) Without Project conditions with roadway and intersection geometrics consistent with Section 6.1 *Roadway Improvements*. As shown on Table 6-1, the following additional study area intersections are anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2023) Without Project traffic conditions:

- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Edison Avenue (#7) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Merrill Avenue (#9) – LOS E AM peak hour; LOS F PM peak hour
- Sultana Avenue & Merrill Avenue (#18) – LOS E AM peak hour only
- Bon View Avenue & Merrill Avenue (#33) – LOS F PM peak hour only
- Grove Avenue & Eucalyptus Avenue (#34) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F AM and PM peak hours
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Carpenter Avenue & Merrill Avenue (#42) – LOS F AM and PM peak hours
- Archibald Avenue & Merrill Avenue (#46) – LOS F PM peak hour only
- Archibald Avenue & Limonite Avenue (#47) – LOS F AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#50) – LOS E AM peak hour; LOS F PM peak hour

The intersection operations analysis worksheets for Opening Year Cumulative (2023) Without Project traffic conditions are included in Appendix 6.1 of this TA.

<sup>4</sup> **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

**6.4.2 OPENING YEAR CUMULATIVE (2023) WITH PROJECT TRAFFIC CONDITIONS**

As shown on Table 6-1, the following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2023) With Project traffic conditions with the addition of Project Buildout traffic, in addition to the locations identified above for Opening Year Cumulative (2023) Without Project traffic conditions.

- Campus Avenue & Merrill Avenue (#31) – LOS E AM peak hour; LOS F PM peak hour

The intersection operations analysis worksheets for Opening Year Cumulative (2023) With Project traffic conditions are included in Appendix 6.2 of this TA.

**6.5 TRAFFIC SIGNAL WARRANTS ANALYSIS**

The following additional unsignalized study area intersection is anticipated to meet a peak hour or daily volume-based traffic signal warrant under Opening Year Cumulative (2023) Without Project traffic conditions, in addition to the locations previously identified under Existing and E+P traffic conditions (see Appendix 6.3):

- Bon View Avenue & Merrill Avenue (#33)

The following additional unsignalized study area intersections anticipated to meet a peak hour or daily volume-based traffic signal warrant under Opening Year Cumulative (2023) With Project traffic conditions (see Appendix 6.4):

- Sultana Avenue & Merrill Avenue (#18)

## 6.6 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for Opening Year Cumulative (2023) Without Project and With Project traffic conditions are shown on Table 6-2. As shown on Table 6-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows under Opening Year Cumulative (2023) Without Project and With Project traffic conditions. Worksheets for Opening Year Cumulative (2023) Without and With Project traffic conditions off-ramp queuing analysis are provided in Appendices 6.5 and 6.6, respectively.

**TABLE 6-2: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR OPENING YEAR CUMULATIVE (2023) CONDITIONS**

# Intersection	Movement	Available Stacking Distance (Feet)	2023 Without Project				2023 With Project (Project Buildout)

	NBR	440	54	47	Yes	Yes	54	47	Yes	Yes

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

## 6.7 IMPROVEMENTS

### 6.7.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been identified at intersections that have been identified as deficient, in an effort to reduce each location’s peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better).

The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2023) traffic deficiencies are presented on Table 6-3. If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of City DIF fees or fair share contribution as identified on Table 1-3. Worksheets for Opening Year Cumulative (2023) Without and With Project conditions, with improvements, HCM calculation worksheets are provided in Appendix 6.7.

### 6.7.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously on Table 6-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for Opening Year Cumulative (2023) traffic conditions. As such, no improvements have been recommended.

## 7 HORIZON YEAR (2040) TRAFFIC CONDITIONS

This section discusses the methods used to develop Horizon Year (2040) Without and With Project traffic forecasts, and the resulting intersection operations, off-ramp queuing, and traffic signal warrant analyses.

### 7.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Horizon Year (2040) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages and driveways such as the northern extension of Meadow Valley Avenue on Kimball Avenue and the northern extension of Hellman Avenue north of Kimball Avenue).
- The Kimball Avenue/Limonite Avenue extension between Hellman Avenue and Archibald Avenue.
- Other parallel facilities, that although not evaluated for the purposes of this analysis, are anticipated to be in place for Horizon Year traffic conditions and would affect the travel patterns within the study area (e.g., new future roadways within the New Model Colony area such as Schaefer Avenue east of Archibald Avenue, Eucalyptus Avenue east of Archibald Avenue, Merrill Avenue east of Archibald Avenue, The Preserve Specific Plan roadway network within the City of Chino, etc.).

### 7.2 HORIZON YEAR (2040) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

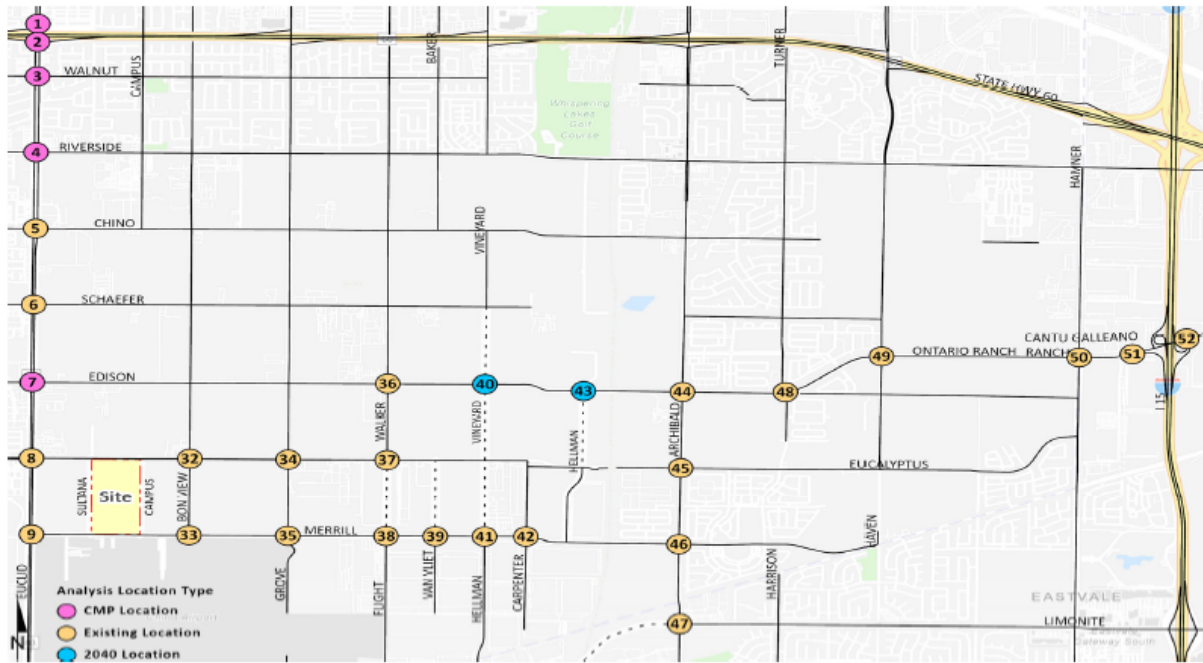

This scenario includes the refined post-process volumes obtained from the SBTAM/RivTAM (see Section 4.7 *Horizon Year (2040) Volume Development* of this TA for a detailed discussion on the post-processing methodology). The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) Without Project traffic conditions are shown on Exhibit 7-1.

### 7.3 HORIZON YEAR (2040) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM/RivTAM, plus the traffic generated by the proposed Project. Horizon Year (2040) With Project traffic forecasts assumes buildout of the Project. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) With Project traffic conditions are shown on Exhibit 7-2.

## 7.4 INTERSECTION OPERATIONS ANALYSIS

### 7.4.1 HORIZON YEAR (2040) WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Horizon Year (2040) Without Project conditions with roadway and intersection geometrics consistent with Section 7.1 *Roadway Improvements*. As shown on Table 7-1, the following additional study area intersections are anticipated to operate at an unacceptable LOS under Horizon Year (2040) Without Project traffic conditions:

- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#1) –LOS E AM and PM peak hours
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#2) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Riverside Drive (#4) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#5) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Schaefer Avenue (#6) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#7) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#8) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Merrill Avenue (#9) – LOS F AM and PM peak hours
- Sultana Avenue & Eucalyptus Avenue (#10) – LOS F PM peak hour only
- Sultana Avenue & Merrill Avenue (#18) – LOS F AM and PM peak hours
- Campus Avenue & Eucalyptus Avenue (#23) – LOS E PM peak hour only
- Campus Avenue & Merrill Avenue (#31) – LOS F AM and PM peak hours
- Bon View Avenue & Eucalyptus Avenue (#32) – LOS F PM peak hour only
- Bon View Avenue & Merrill Avenue (#33) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#34) – LOS F AM and PM peak hours
- Grove Avenue & Merrill Avenue (#35) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#36) – LOS F AM and PM peak hours
- Walker Avenue & Eucalyptus Avenue (#37) – LOS F AM and PM peak hours
- Walker Avenue/Flight Avenue & Merrill Avenue (#38) – LOS F AM and PM peak hours
- Van Vliet Avenue/Baker Avenue & Merrill Avenue (#39) – LOS F PM peak hour only
- Vineyard Avenue & Edison Avenue (#40) – LOS F PM peak hour only
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#41) – LOS F AM and PM peak hours
- Carpenter Avenue & Merrill Avenue (#42) – LOS F AM and PM peak hours
- Hellman Avenue & Edison Avenue (#43) – LOS F AM and PM peak hours
- Archibald Avenue & Ontario Ranch Road (#44) – LOS F AM and PM peak hours
- Archibald Avenue & Eucalyptus Avenue (#45) – LOS F AM and PM peak hours
- Archibald Avenue & Merrill Avenue (#46) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#47) – LOS F AM and PM peak hours

- Turner Avenue & Ontario Ranch Road (#48) – LOS F AM and PM peak hours
- Haven Avenue & Ontario Ranch Road (#49) – LOS F AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#50) – LOS F AM and PM peak hours

The intersection operations analysis worksheets for Horizon Year (2040) Without Project traffic conditions are included in Appendix 7.1 of this TA.

#### **7.4.2 HORIZON YEAR (2040) WITH PROJECT TRAFFIC CONDITIONS**

As shown on Table 7-1, no additional study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Horizon Year (2040) With Project traffic conditions with the addition of Project traffic, in addition to the locations identified above for Horizon Year (2040) Without Project traffic conditions.

The intersection operations analysis worksheets for Horizon Year (2040) With Project traffic conditions are included in Appendix 7.2 of this TA.

### **7.5 TRAFFIC SIGNAL WARRANTS ANALYSIS**

The following study area intersections are anticipated to meet peak hour or planning level (ADT) volume-based traffic signal warrants for Horizon Year (2040) Without Project traffic conditions (see Appendix 7.3), in addition to those previously warranted under Existing, E+P, and Opening Year Cumulative traffic conditions:

- Campus Avenue & Merrill Avenue (#31)
- Bon View Avenue & Eucalyptus Avenue (#32)
- Walker Avenue & Eucalyptus Avenue (#37)
- Van Vliet Avenue/Baker Avenue & Merrill Avenue (#39)
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#40)

The following additional study area intersections anticipated to meet planning level (ADT) volume-based traffic signal warrant for Horizon Year (2040) With Project traffic conditions (see Appendix 7.4), in addition to those previously warranted under Horizon Year (2040) Without Project traffic conditions:

- Sultana Avenue & Eucalyptus Avenue (#10)

**BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).  
<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.  
<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

### 7.6 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for Horizon Year (2040) Without and With Project traffic conditions are shown on Table 7-2. As shown on Table 7-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows under Horizon Year (2040) Without and With Project traffic conditions. Worksheets for Horizon Year (2040) Without and With Project traffic conditions off-ramp queuing analysis are provided in Appendices 7.5 and 7.6, respectively.

**TABLE 7-2: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR HORIZON YEAR (2040) CONDITIONS**

52	I-15 NB Ramps & Cantu Galleano	NBL	1,680	135 <sup>2</sup>	159 <sup>2</sup>	Yes	Yes	146 <sup>2</sup>	159 <sup>2</sup>	Yes	Yes
		NBR	440	57	56	Yes	Yes	589	56	Yes <sup>3</sup>	Yes

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.  
<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.  
<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

## **7.7 IMPROVEMENTS**

### **7.7.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS**

Improvement strategies have been identified at intersections that have been identified as deficient, in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D/E or better). The effectiveness of the recommended improvement strategies to address Horizon Year (2040) traffic deficiencies are presented on Table 7-3. If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of City DIF fees or fair share contribution as identified on Table 1-3.

Worksheets for Horizon Year (2040) Without and With Project conditions, with improvements, HCM calculation worksheets are provided in Appendix 7.7, respectively.

### **7.7.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously on Table 7-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for Horizon Year (2040) traffic conditions. As such, no improvements have been identified.

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.  
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free Right Turn Lane; d = Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; TS = Improvement

<sup>4</sup> Improvement consists of modifying the traffic signal to extend the cycle length to 120 seconds. No other physical improvements are recommended.

<sup>5</sup> Assumes signalization of the intersection and the buildout of the east leg.

<sup>6</sup> Improvement includes modifying the coordinated cycle length from 90 seconds to 120 seconds.

<sup>7</sup> Improvement consists of modifying the traffic signal to extend the cycle length to 130 seconds.

## 8 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the City of Ontario are funded through a combination of construction of improvements, development impact fee programs or fair share contributions, such as the City of Ontario DIF program. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

### 8.1 CITY OF ONTARIO DEVELOPMENT IMPACT FEE PROGRAM

The City of Ontario has created its own local DIF program to impose and collect fees from new residential, commercial, and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF includes regional improvements to comply with Measure "I." The fee schedule was last updated in January 2020 and is reviewed/adjusted annually based upon changes in the construction cost index (CCI). Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list. The City also uses this data to ensure that the improvements listed on the facilities list are constructed before the LOS falls below the LOS performance standards adopted by the City. In this way, the improvements are constructed before the LOS falls below the City's LOS performance thresholds.

The Project Applicant will be subject to the City's DIF fee program and will pay the requisite City DIF fees at the rates then in effect pursuant to the City's ordinance. The Project Applicant's payment of the requisite DIF at the rates then in effect, pursuant to the City DIF Program, would satisfy the Project's proportional improvement requirements at potentially affected DIF-funded facilities.

**TABLE 8-1: ESTIMATED FEE OBLIGATION**

Fee Reference	Light Industrial (\$ PER SQ. FT.)
Industrial: Regional and Local Streets	\$3.002/SF
Business Park: Regional and Local Streets	\$5.824/SF

\* Ontario Ranch DIF rates effective as of January 1, 2020.

**Fee Calculation**

Program	Category	Unit Cost	Units/Sq.Ft.	Local Circulation
Local/Regional Impacts	Industrial	\$3.00	1,412,739	\$4,238,500
	Business Park	\$5.82	227,951	\$1,327,587
<b>Total Transportation Impact Fees</b>				<b>\$5,566,086</b>

## 8.2 MEASURE “I” FUNDS

In 2004, the voters of San Bernardino County approved the 30-year extension of Measure “I,” a one-half of one percent sales tax on retail transactions, through the year 2040, for transportation projects including, but not limited to, infrastructure improvements, commuter rail, public transit, and other identified improvements. The Measure “I” extension requires that a regional traffic impact fee be created to ensure development is paying its fair share. A regional Nexus study was prepared by SBCTA and concluded that each jurisdiction should include a regional fee component in their local programs in order to meet the Measure “I” requirement. The regional component assigns specific facilities and cost sharing formulas to each jurisdiction and was most recently updated in November 2011. Revenues collected through these programs are used in tandem with Measure “I” funds to deliver projects identified in the Nexus Study. While Measure “I” is a self-executing sales tax administered by SBCTA, it bears discussion here because the funds raised through Measure “I” have funded in the past and will continue to fund new transportation facilities in San Bernardino County.

## 8.3 FAIR SHARE CONTRIBUTION

Project improvement may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City’s discretion).

When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, has been provided on Table 8-2 for the applicable deficient study area intersections.

These fees are collected with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases.

**APPROVED TRAFFIC STUDY SCOPING AGREEMENT**

This Page Intentionally Left Blank

June 16, 2021

Mr. Jay Bautista  
City of Ontario  
303 E. B Street  
Ontario, CA 91764

**SUBJECT: SCOPING ASSUMPTIONS FOR THE ONTARIO RANCH BUSINESS PARK TRAFFIC ANALYSIS**

Dear Mr. Jay Bautista:

Urban Crossroads, Inc. has conducted an initial assessment of the proposed Ontario Ranch Business Park development (**Project**) to establish a traffic analysis (**TA**) scope of work that would be prepared in support of a Project Environmental Impact Report (**EIR**). It should be noted, the proposed Project is part of a specific plan amendment to the Ontario Rancho Business Park Specific Plan. The Project is located on the northwest corner of Campus Avenue and Merrill Avenue in the City of Ontario. The following memo outlines the project-related trip generation, trip distribution patterns, proposed study area and analysis scenarios expected to be included in the Project traffic analysis.

## **PROJECT DESCRIPTION**

Exhibit 1 illustrates the location map for the proposed Project and Exhibit 2 shows the preliminary site plan. The proposed Project is anticipated to be developed in one phase with an opening year of 2023. For purposes of scoping the TA, the following mix of land uses are assumed, which represent a reasonable mix of industrial and business park uses that would be permitted by the Project:

- Industrial: 913,053 square feet of high-cube fulfillment center warehouse use, 179,135 square feet of high-cube cold storage warehouse, and 320,551 square feet of general warehousing use.
- Business Park: 227,951 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses (as would fall under ITE Land Use Code 130).
- **Total of 1,640,690 square feet**

It should be noted, although the square footages above are higher than the square footages of the buildings shown on Exhibit 2, the square footages above will be utilized for the purposes of the traffic analysis as it provides a conservative approach and will provide flexibility in the event site plan is adjusted.

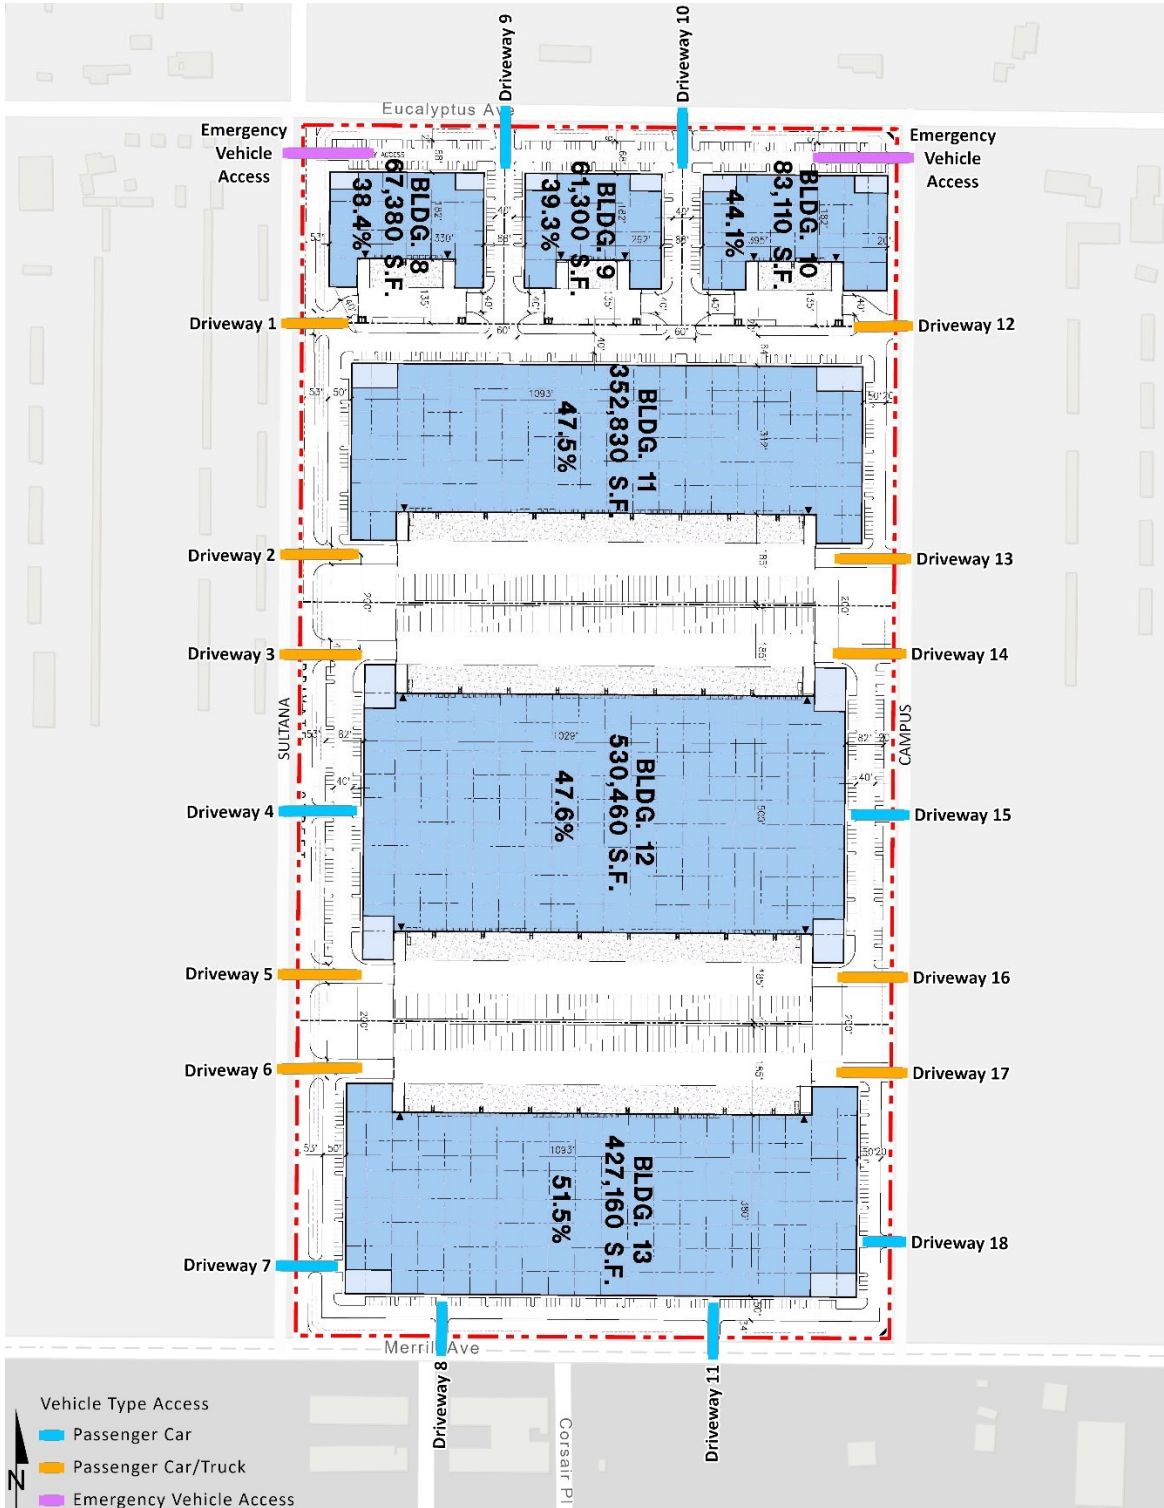

Access to the proposed Project would be provided to Merrill Avenue, Eucalyptus Avenue, Campus Avenue, and Sultana Avenue. Merrill Avenue will serve as the primary travel route for heavy trucks to and from the Project consistent with other projects in the immediate vicinity. Exhibit 3 illustrates the Project with respect to the proposed study area.

**EXHIBIT 1: LOCATION MAP**

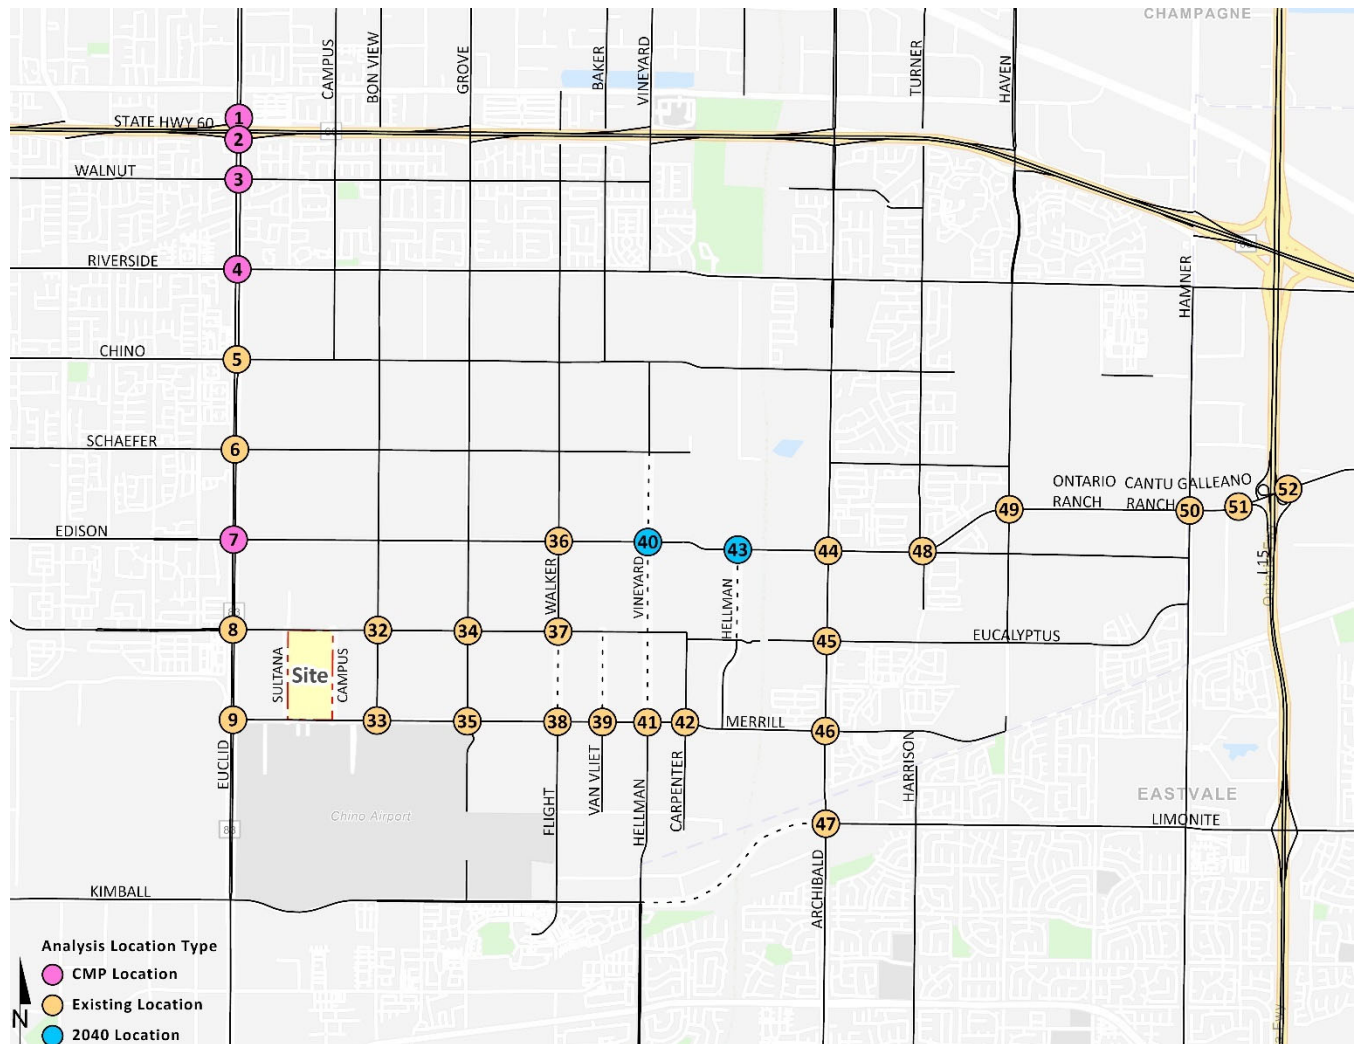

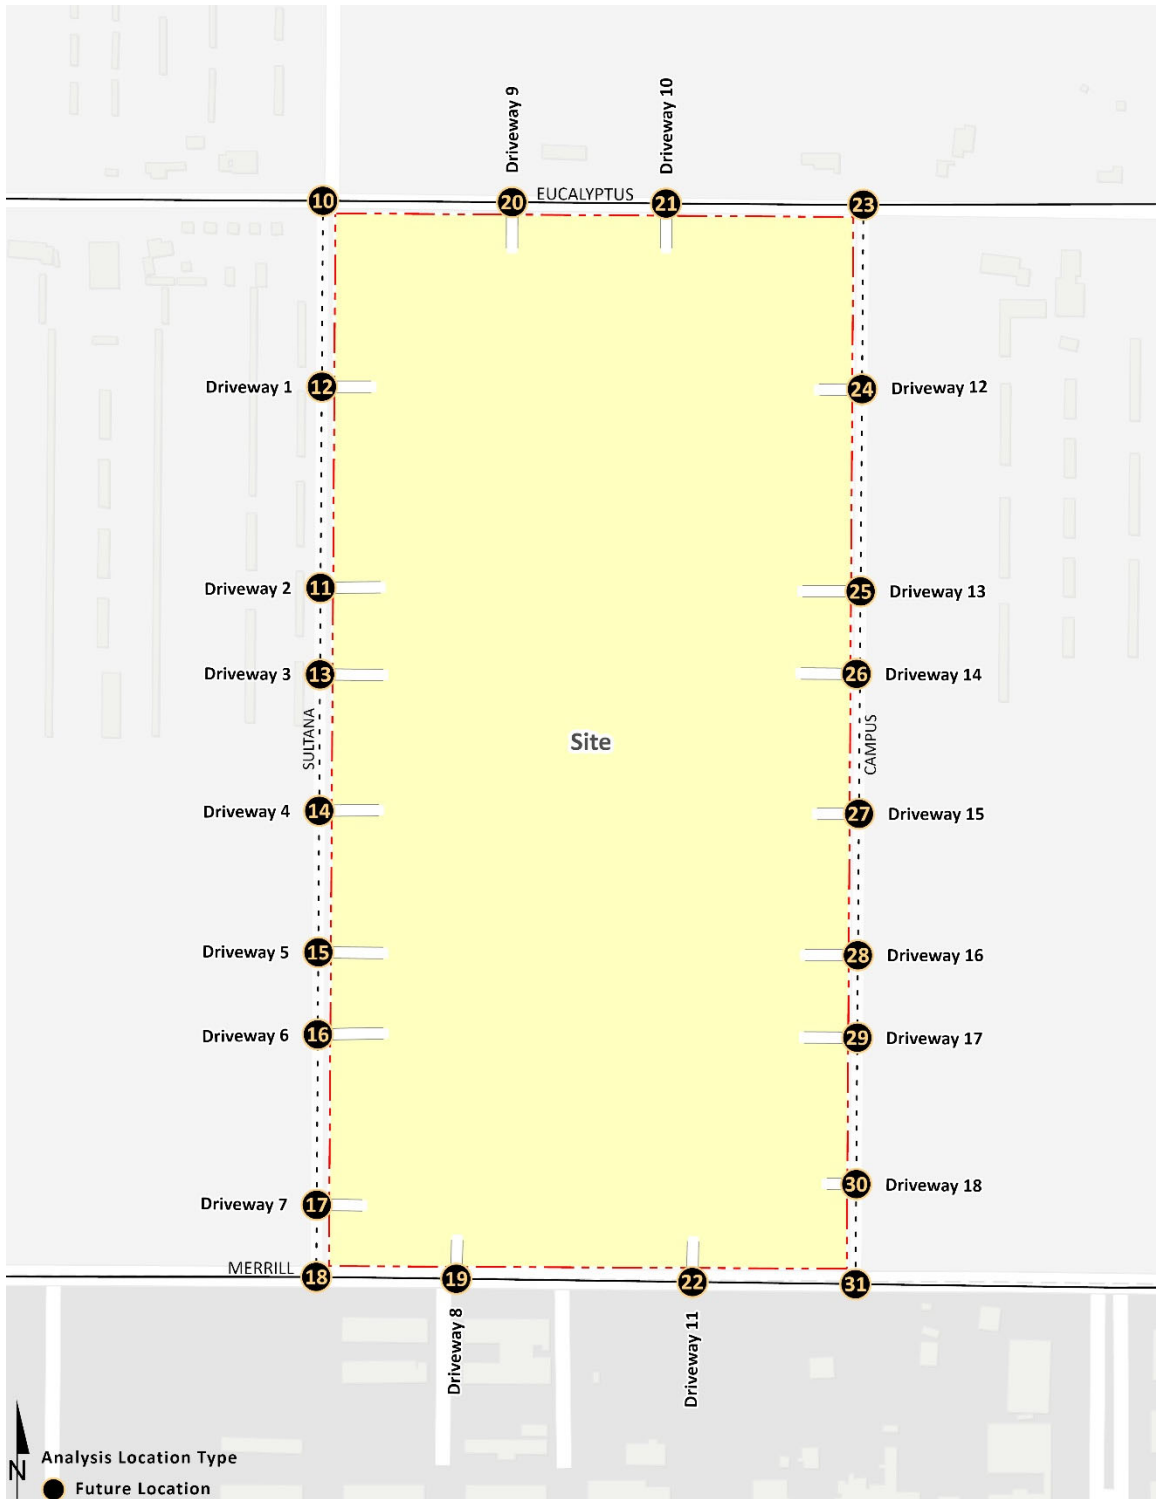

**EXHIBIT 2: PRELIMINARY SITE PLAN**

**EXHIBIT 3: STUDY AREA**

## PROPOSED ANALYSIS SCENARIOS

The following analysis scenarios are proposed based on planned development phasing:

- Existing (2021)
- Existing plus Project
- Opening Year Cumulative (2023) Without Project
- Opening Year Cumulative (2023) With Project
- Horizon Year (2040) Without Project – With Limonite Avenue Extension
- Horizon Year (2040) With Project – With Limonite Avenue Extension

## EXISTING COUNT DATA

Due to the currently ongoing COVID-19 pandemic, schools and businesses within the study area may be closed or operating at less than full capacity. As such, traffic counts collected in 2019, in conjunction with an ambient growth rate, will be utilized to reflect existing 2021 baseline conditions. The ambient growth rate will be 5% per year, compounded annually, for turning movements along major arterials (such as Pine Avenue, Euclid Avenue, Archibald Avenue, Limonite Avenue) and 2% per year, compounded annually, for all other movements. The 5% and 2% growth rates are based on a comparison of historical traffic counts for the study area intersections collected in 2018, 2017, and 2016. Based on this comparison, the annual growth rate for the study area intersections averaged between 2% per year and 5% at turning movements along major arterials. This proposed methodology is consistent with other recent studies in the area.

## AMBIENT GROWTH

Future year traffic forecasts will be based upon a background (ambient) growth of 2% per year, compounded annually. The growth factor for Opening Year Cumulative (2023) traffic conditions will be 4.04% (or  $1.02^2$  years).

## TRIP GENERATION

Trip generation represents the amount of traffic that is attracted and produced by a development, and is based upon the specific land uses planned for a given project. Trip generation rates for the Project are shown in Table 1 for both passenger car equivalent (PCE) and actual vehicles. The trip generation rates used for this analysis are based upon information collected by the Institute of Transportation Engineers (ITE) as provided in their Trip Generation Manual (10<sup>th</sup> Edition, 2017) and the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019).

<sup>1</sup> Trip Generation Source: Institute of Transportation Engineers (ITE), *Trip Generation Manual*, Tenth Edition (2017).

<sup>2</sup> TSF = thousand square feet

<sup>3</sup> Vehicle Mix Source: *High Cube Warehouse Trip Generation Study*, WSP, January 29, 2019.

Inbound and outbound split source: *High Cube Warehouse Vehicle Trip Generation Analysis*, October 2016, ITE.

<sup>4</sup> The Specific Plan allows for the Business Park area to be developed with merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses. However, the Business Park (ITE Land Use Code 770) land use has trip generation rates for the peak hours is based on limited data (i.e., one surveyed site). As such, the trip generation rates for ITE Land Use Code 130 has been utilized for the business park portion of the Project.

<sup>5</sup> Vehicle Mix Source: ITE *Trip Generation Handbook Supplement* (2020), Appendix C.

Vehicle Mix Source: Institute of Transportation Engineers (ITE), *Trip Generation Handbook*, Third Edition (September 2017).

Truck Mix Source: South Coast Air Quality Management District (SCAQMD) *Warehouse Truck Trip Study Data Results and Usage* (2014).

Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.

Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.

Normalized % - With Cold Storage: 34.7% 2-Axle trucks, 11.0% 3-Axle trucks, 54.3% 4-Axle trucks.

<sup>6</sup> Vehicle Mix Source: ITE *Trip Generation Handbook* (3rd Edition, 2017).

Truck Mix Source: South Coast Air Quality Management District (SCAQMD) *Warehouse Truck Trip Study Data Results and Usage* (2014).

For purposes of this analysis, the following ITE land use codes and vehicle mixes have been utilized:

- High-Cube Fulfillment Center Warehouse has been used to derive site specific trip generation estimates for up to 913,053 square feet of the proposed Project. The ITE Trip Generation Manual (2017) has trip generation rates for high-cube fulfillment center use (ITE land use code 155), however, these rates are unreliable because they are based on limited data (i.e., one to two surveyed sites) and the ITE Trip Generation Manual recommends the use of local data sources where available. As such, the trip-generation statistics published in the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019) which was commissioned by the Western Riverside Council of Governments (WRCOG) in support of the Transportation Uniform Mitigation Fee (TUMF) update, has been utilized for the high-cube fulfillment center use. The WSP trip generation rates were published in January 2019 and are based on data collected at 11 local high-cube fulfillment center sites. However, the WSP study does not include a split for inbound and outbound vehicles, as such, the inbound and outbound splits per the ITE High-Cube Warehouse Vehicle Trip Generation Analysis (October 2016) have been utilized.
- ITE land use code 150 (Warehousing) has been used to derive site specific trip generation estimates for up to 320,551 square feet of the proposed Project. The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (17) This study provides the following vehicle mix: AM Peak Hour: 87.0% passenger cars and 13.0% trucks; PM Peak Hour: 85.0% passenger cars and 15.0% trucks; Weekday Daily: 73.0% passenger cars and 27.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for up to 179,135 square feet. High-cube cold storage warehouses include warehouses characterized by the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. High-cube cold storage warehouses are facilities typified by temperature-controlled environments for frozen food or other perishable products. The High-Cube Cold Storage Warehouse vehicle mix (passenger cars versus trucks) has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (17) This study provides the following vehicle mix: AM Peak Hour: 73.0% passenger cars and 27.0% trucks; PM Peak Hour: 77.0% passenger cars and 23.0% trucks; Weekday Daily: 65.0% passenger cars and 35.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 34.7%; 3-Axle = 11.0%; 4+-Axle = 54.3%.
- Because the peak hour trip generation rates collected for the "business park" land use category by the ITE as provided in their Trip Generation Manual, 10<sup>th</sup> Edition, 2017 (ITE land use code 770) are based on limited data (i.e., a single surveyed site) that does not have the same physical or operational characteristics as the range of uses permitted in the Business Park buildings, the trip generation rates for ITE land use code 130 (Industrial Park) have been used to derive site specific

trip generation estimates for up to 227,951 square feet of business park uses proposed for the Project). The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (17) This study provides the following vehicle mix: AM Peak Hour: 88.0% passenger cars and 12.0% trucks; PM Peak Hour: 90.0% passenger cars and 10.0% trucks; Weekday Daily: 85.0% passenger cars and 15.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

Finally, PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles) for the Project. PCEs allow the typical "real-world" mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in Appendix B of the San Bernardino County Congestion Management Program (CMP), 2016 Update.

The trip generation summary illustrating daily and peak hour trip generation estimates for the proposed Project in actual vehicles are shown on Table 2, and Table 3 shows the trip generation summary based on PCE. As shown on Table 2, the proposed Project is anticipated to generate a total of 3,624 actual vehicle trip-ends per day with 273 AM peak hour trips and 321 PM peak hour trips. For the purposes of the operations analyses, the PCE trip generation shown in Table 3 will be utilized.

## **TRIP DISTRIBUTION**

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The Existing plus Project and Opening Year Cumulative trip distribution patterns utilize the existing roadway system while the Horizon Year trip distribution patterns assumes future roadway connections based on the City of Ontario General Plan (and those of surrounding agencies).

Exhibit 3 illustrates the truck trip distribution patterns for Existing plus Project, Opening Year Cumulative and Horizon Year conditions. As shown on Exhibit 4, trucks are anticipated to utilize designated truck routes such as Merrill Avenue to Euclid Avenue (SR-83), Ontario Ranch Road, and Limonite Avenue to reach regional State highways such as the SR-71, SR-60, and I-15 Freeways. These travel patterns are not anticipated to change with the addition of new future facilities for Horizon Year traffic conditions. Exhibit 5 illustrates the Existing plus Project and Opening Year Cumulative passenger car trip distribution patterns that are based on a San Bernardino Transportation Analysis Model (SBTAM) select zone run for a zone wholly or partially containing the Project, with modifications to utilize existing roadways.

Exhibit 6 illustrates the passenger car trip distribution patterns for Horizon Year (With Limonite Avenue Extension) traffic conditions. The passenger car trip distribution patterns are based on a SBTAM select zone run.

**TABLE 2: PROJECT TRIP GENERATION SUMMARY (ACTUAL VEHICLES)**

Land Use	Quantity <sup>2</sup> Units <sup>1</sup>	AM Peak Hour			PM Peak Hour			Daily

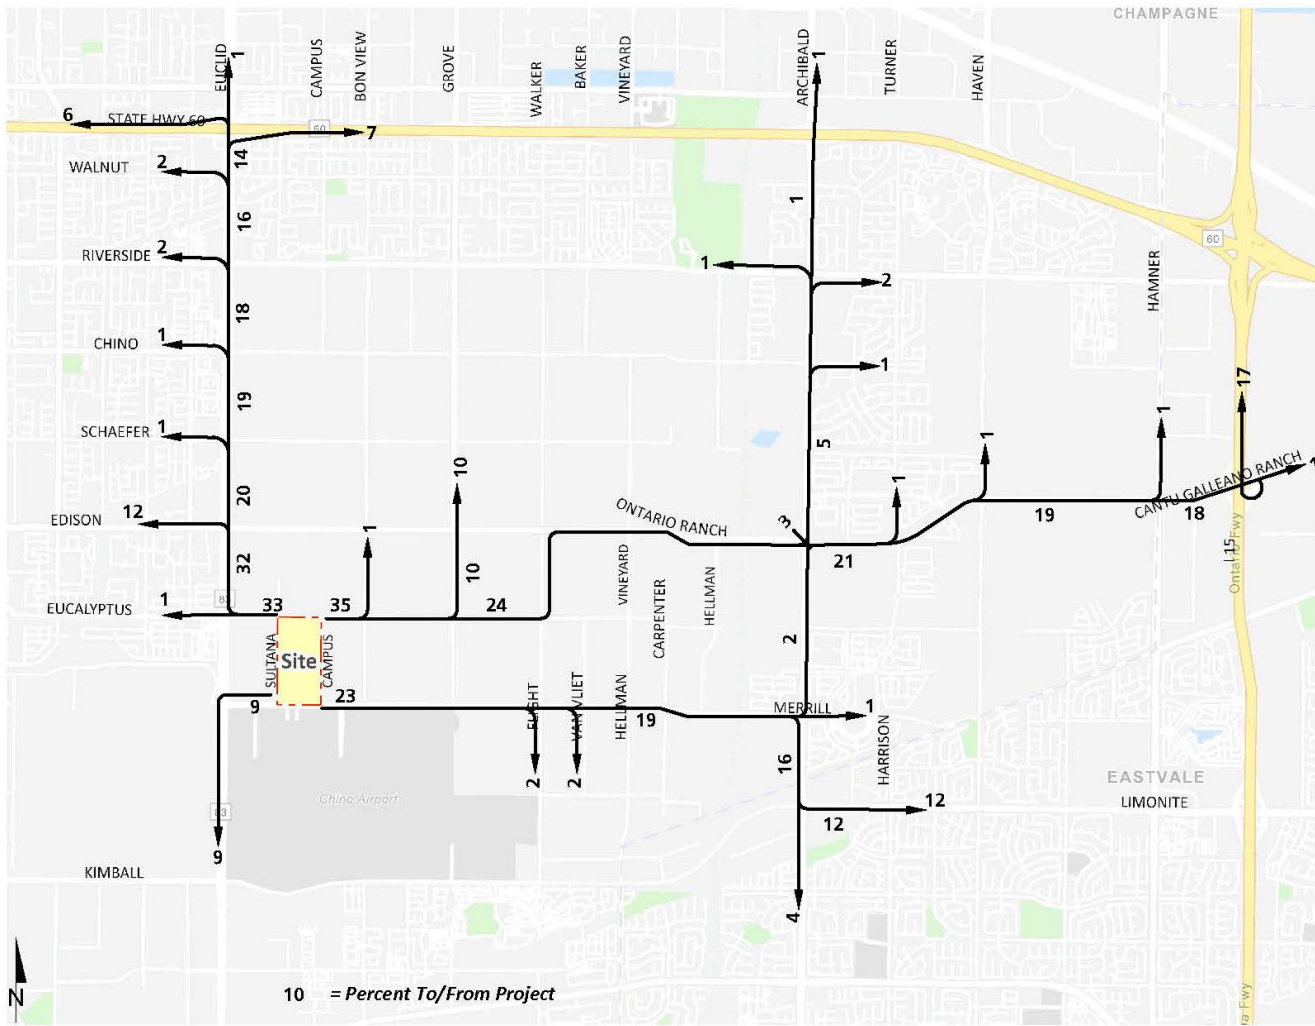

**EXHIBIT 4: PROJECT (TRUCK) TRIP DISTRIBUTION**

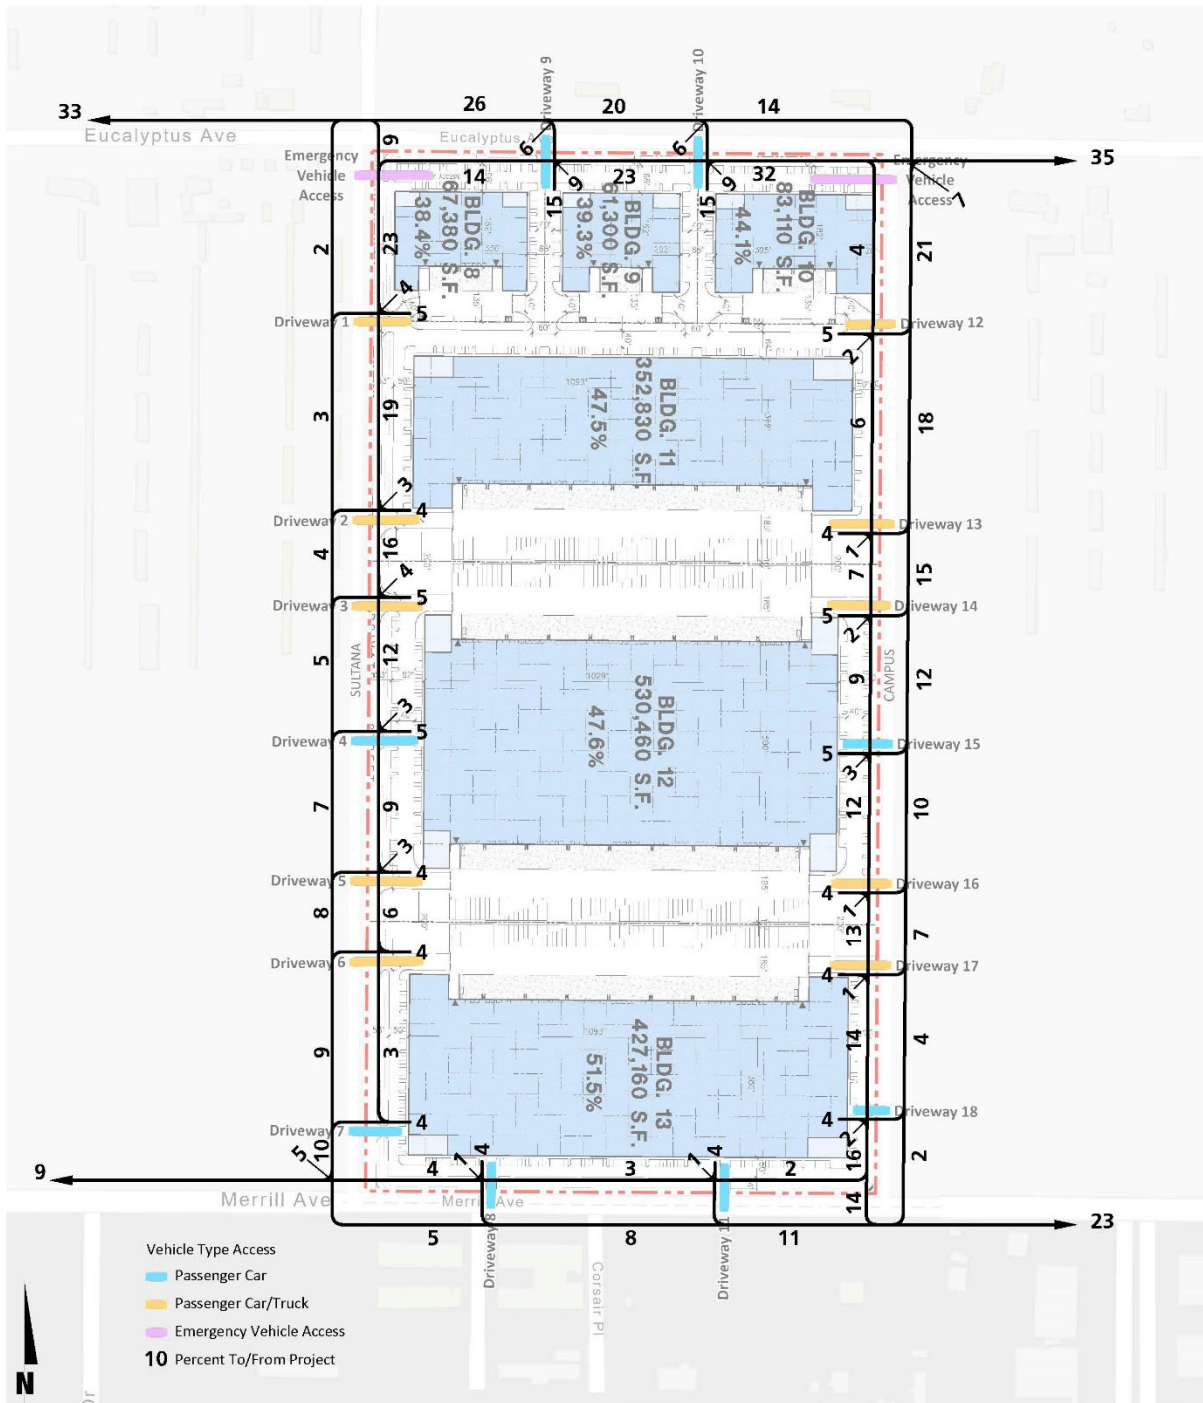

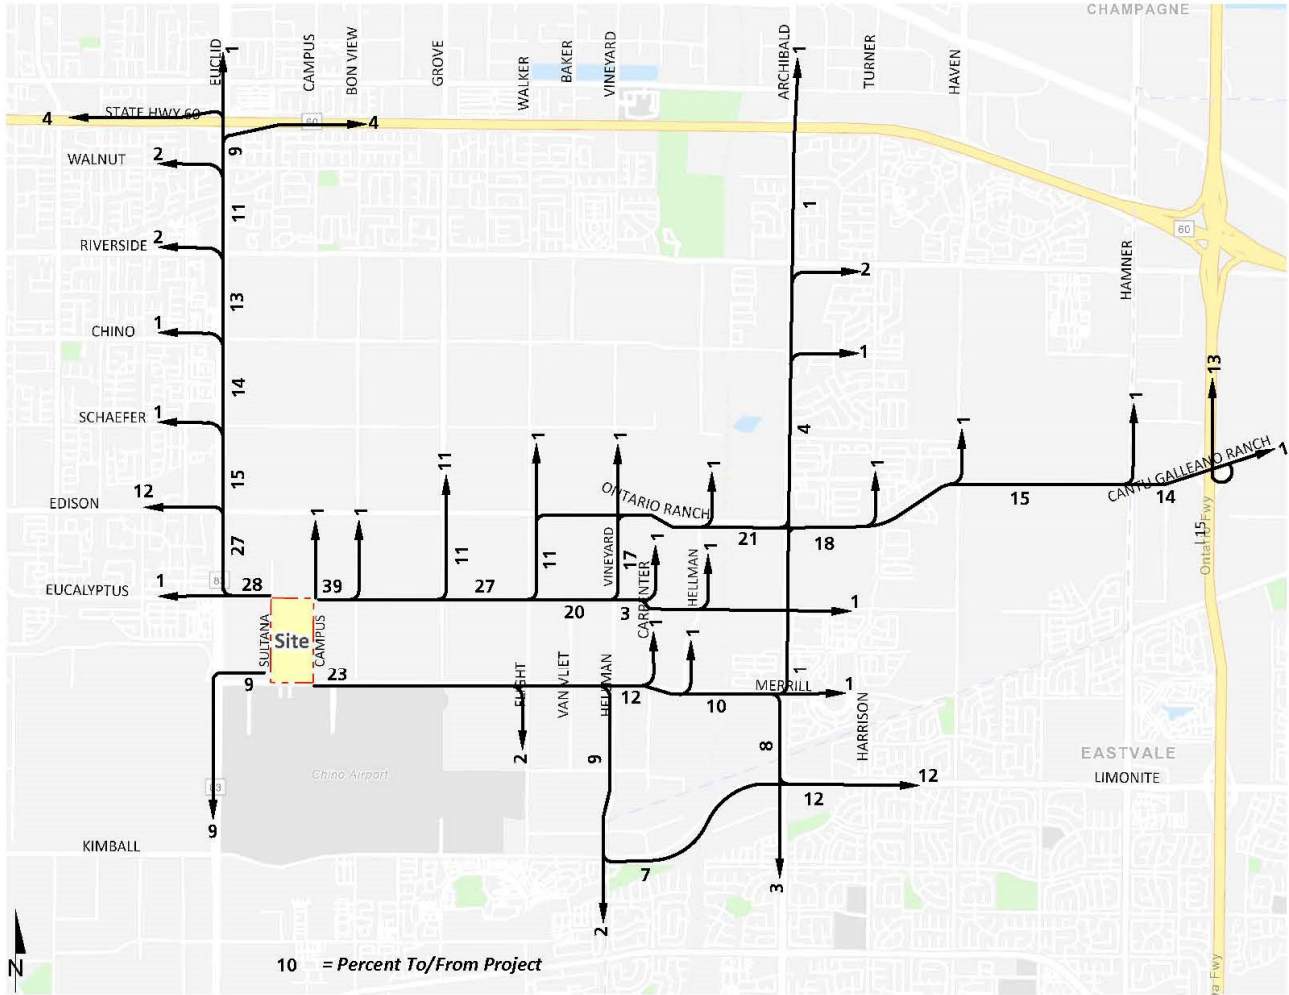

**EXHIBIT 5: PROJECT (PASSENGER CAR-E+P AND OPENING YEAR) TRIP DISTRIBUTION**

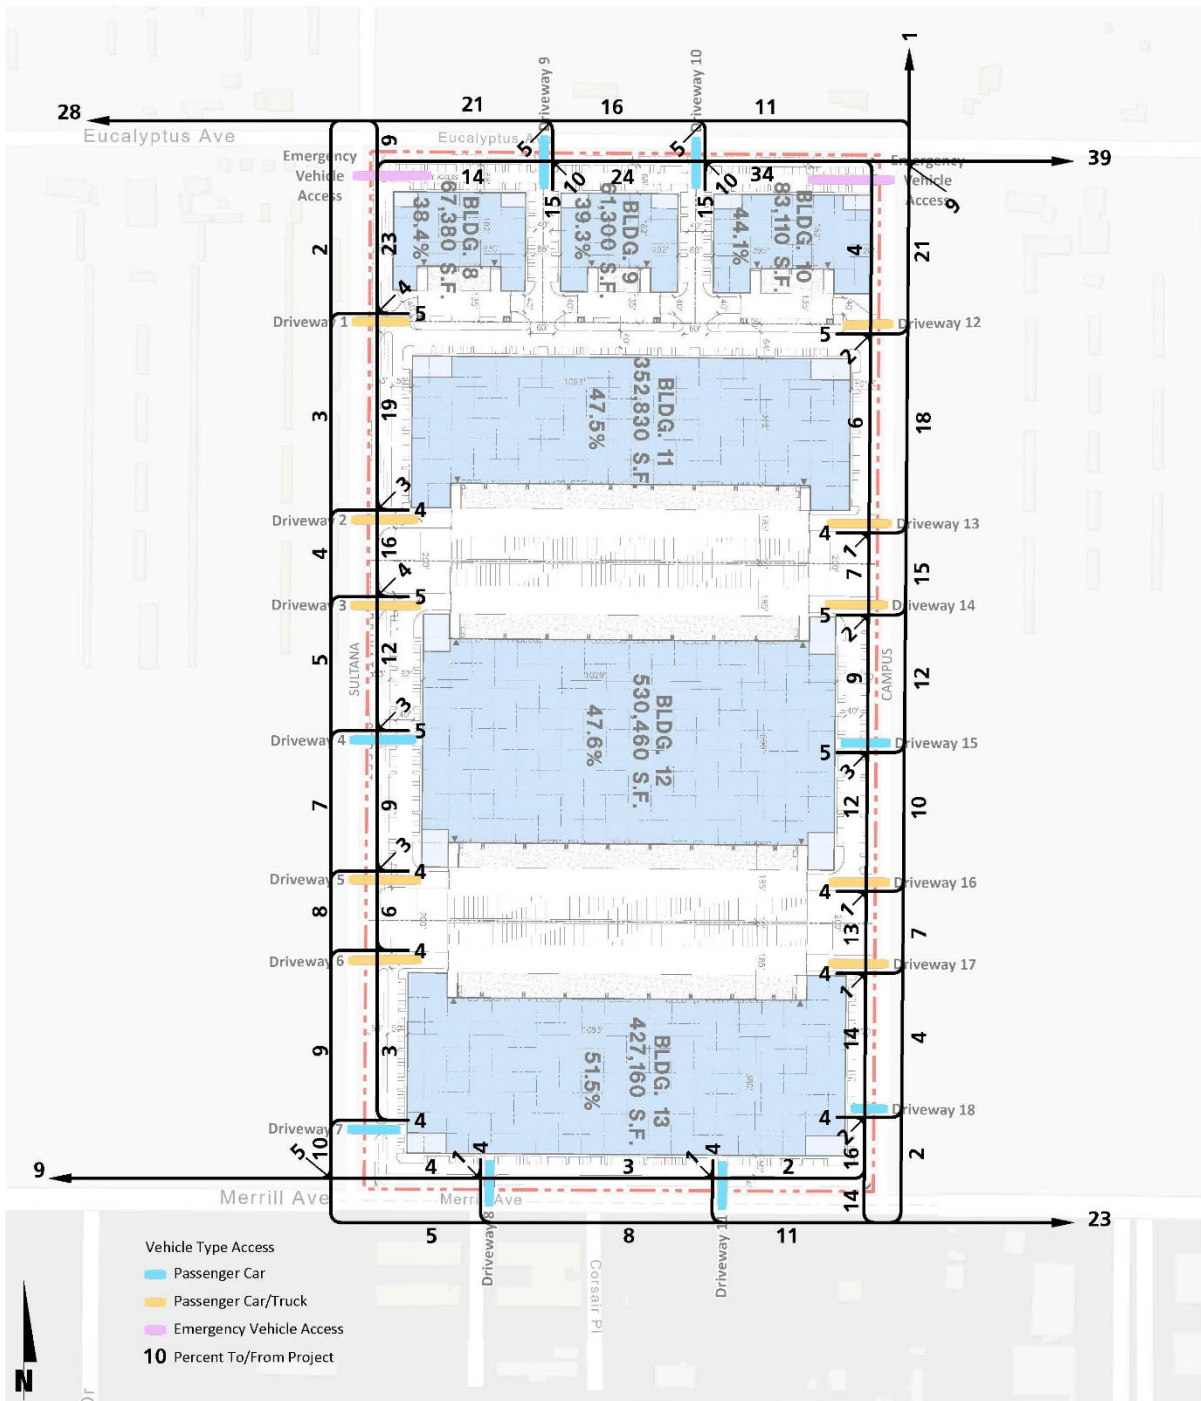

**EXHIBIT 6: PROJECT (PASSENGER CAR-HORIZON YEAR) TRIP DISTRIBUTION**

Mr. Jay Bautista  
City of Ontario  
June 16, 2021  
Page 18 of 23

## **INTERSECTION ANALYSIS LOCATIONS**

Exhibit 2 depicts the recommended intersection analysis locations, based upon the Project trip generation and trip distribution patterns included as part of this letter. The recommended intersection analysis locations are based on the highest Project traffic contribution presented for either Opening Year Cumulative or Horizon Year scenarios (i.e., 50 peak hour trip criteria).

The San Bernardino County Transportation Authority (SBCTA) Congestion Management Program (CMP) intersections, where applicable, are illustrated on Exhibit 2. The general preparation of the traffic study for this Project will continue to be in conformance with the typical requirements of the San Bernardino County CMP.

## **VEHICLE MILES TRAVELLED (VMT)**

The VMT thresholds and methodology outlined in the City of Ontario's May 2020 VMT guidelines will be utilized to conduct the VMT analysis for the Project. The VMT analysis will be prepared and submitted under separate cover.

## **OPEN ITEMS – CUMULATIVE DEVELOPMENT PROJECTS**

It is requested that the City of Ontario review and provide updated cumulative projects from those shown on Exhibit 7 and listed on Table 4.

If you have any questions, please contact me directly at (949) 861-0177.

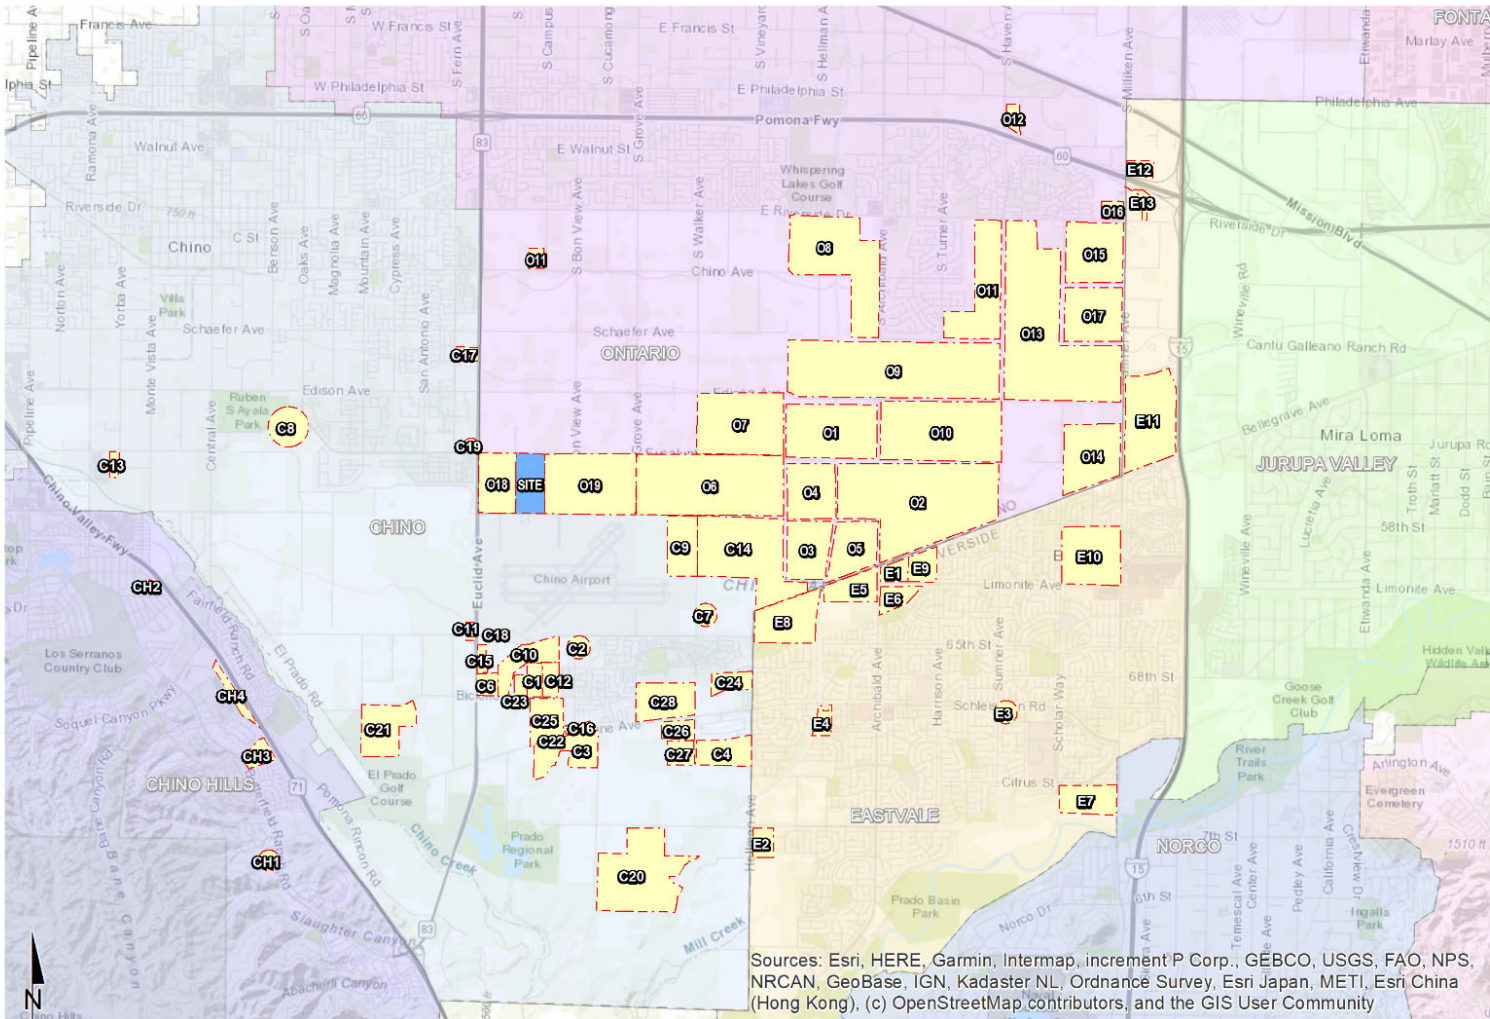

Respectfully submitted,

URBAN CROSSROADS, INC.

Charlene So, PE  
Associate Principal

INTERSECTION TURNING MOVEMENT COUNTS

PREPARED BY: AirtmTD LLC, tel: 714 253 7888 cse@airtmd.com

DATE: 1/22/19  
TUESDAY

LOCATION: NORTH & SOUTH:  
EAST & WEST:

Chino  
SR-71 NB Ramps  
Euclid

PROJECT #: SC2056  
LOCATION #: 6  
CONTROL: SIGNAL

Table with columns: CLASS 4 (4 OR MORE AXLE TRUCKS), NOTES, and movement arrows (N, S, E, W, etc.)

Table with columns: NORTHBOUND (SR-71 NB Ramps), SOUTHBOUND (SR-71 NB Ramps), EASTBOUND (Euclid), and WESTBOUND (Euclid). Rows include LANE, NL, NT, NR, SL, ST, SR, EL, ET, ER, WL, WT, WR, and TOTAL.

Table for AM period (7:00 AM to 9:45 AM). Columns: LANE, VOLUMES, APPROACH %, APP/D/DEPART, and TOTAL. Includes data for SR-71 NB Ramps and Euclid.

Table for AM U-TURNS and RTOR (NRR, SRR, ERR, WRR) with counts for NB, SB, EB, WB, TTL.

Table for PM period (10:00 PM to 5:45 PM). Columns: LANE, VOLUMES, APPROACH %, APP/D/DEPART, and TOTAL. Includes data for SR-71 NB Ramps and Euclid.

Table for PM U-TURNS and RTOR (NRR, SRR, ERR, WRR) with counts for NB, SB, EB, WB, TTL.

INTERSECTION TURNING MOVEMENT COUNTS

PREPARED BY: AmInd LLC Tel: 714 253 7888 c@amind.com

Project #: SC20/4  
Pipeline

Location #: 5  
Control: SIGNAL

DATE: Wed Jan 30, 19  
LOCATION: NORTH & SOUTH  
EAST & WEST: Grand

☐ Add U-Turns to Left Turns

Main data table with columns for direction (Northbound, Southbound, Eastbound, Westbound), movement (Lanes, Left, Thru, Right), and counts. Includes summary rows for Grand and Pipeline.

U-TURNS table with columns for direction and movement, showing counts for left turns.

R/TOR table with columns for direction and movement, showing counts for right-of-way turns.

Summary table for Grand and Pipeline counts, including totals for each direction.

Summary table for Grand and Pipeline counts, including totals for each direction.

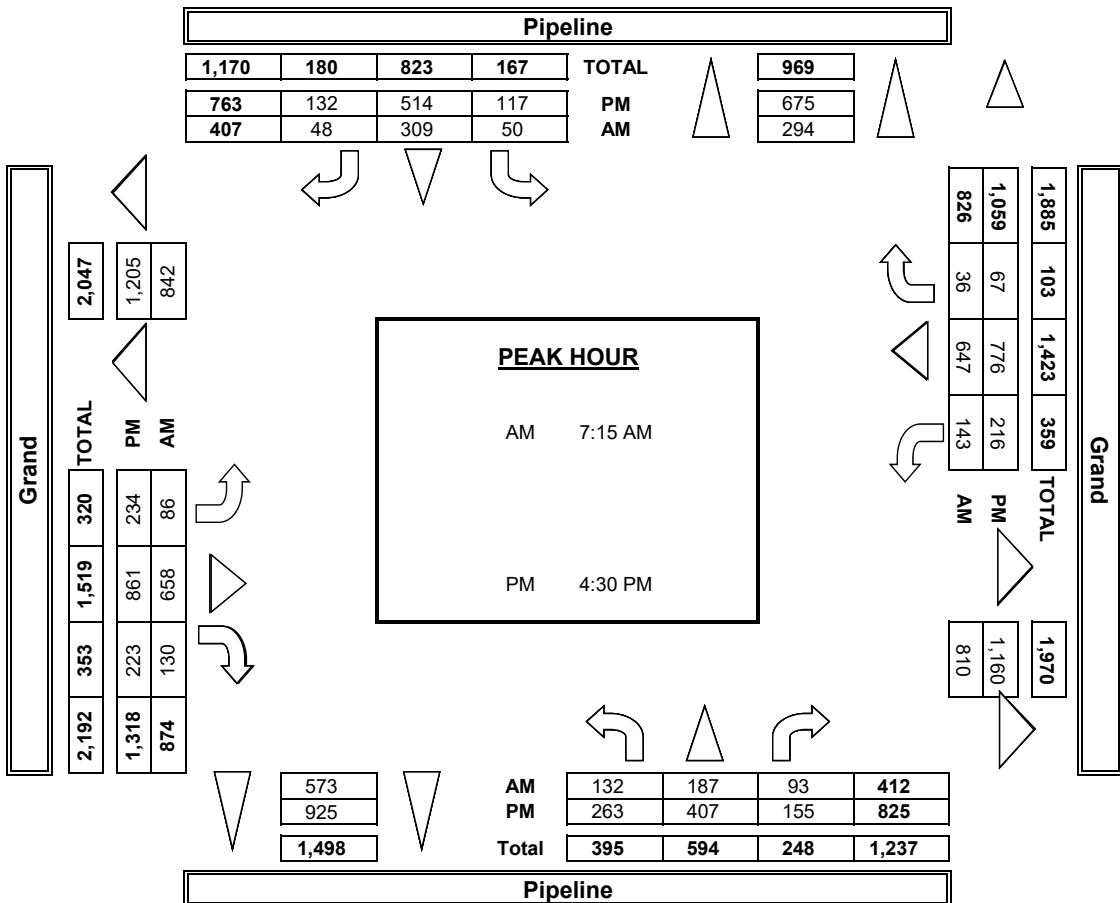

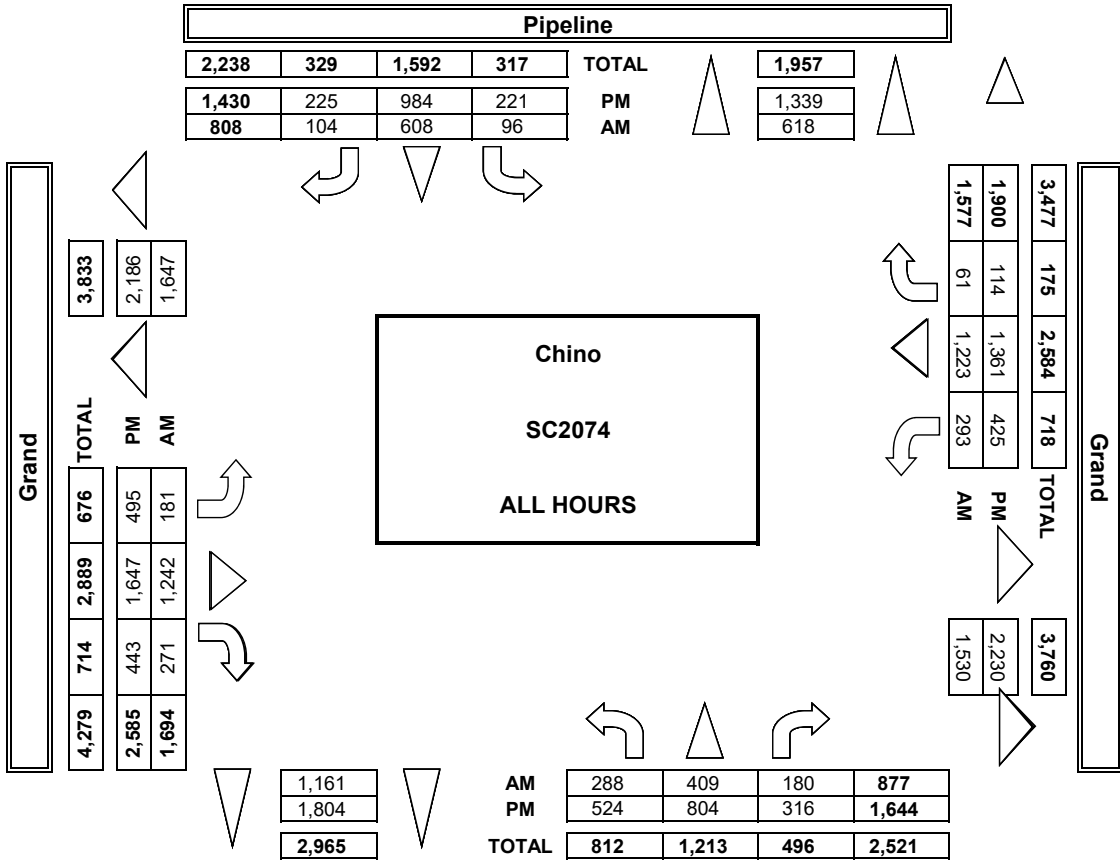

Table with columns for time (AM, PM) and counts for various movements.

Table with columns for direction (E, W, S, N) and counts for various movements.

Table with columns for direction (E, W, S, N) and counts for various movements.

Table with columns for direction (ES, WS, SS, NS) and counts for various movements.

PREPARED BY: AmTid LLC Tel: 714 253 7888 c@amtid.com

PROJECT #: SC0074
LOCATION #: 12
CONTROL: SIGNAL

NOTES:

Added U-turns to left turns

Main data table with columns for Northbound, Southbound, Eastbound, Westbound, and RTOR (Right Turn on Red). Rows include volume percentages, approach percentages, and peak hour factors for AM and PM periods.

AM Volume Data Table: Rows for times 7:00 AM to 9:45 AM, columns for Volumes and Approach %.

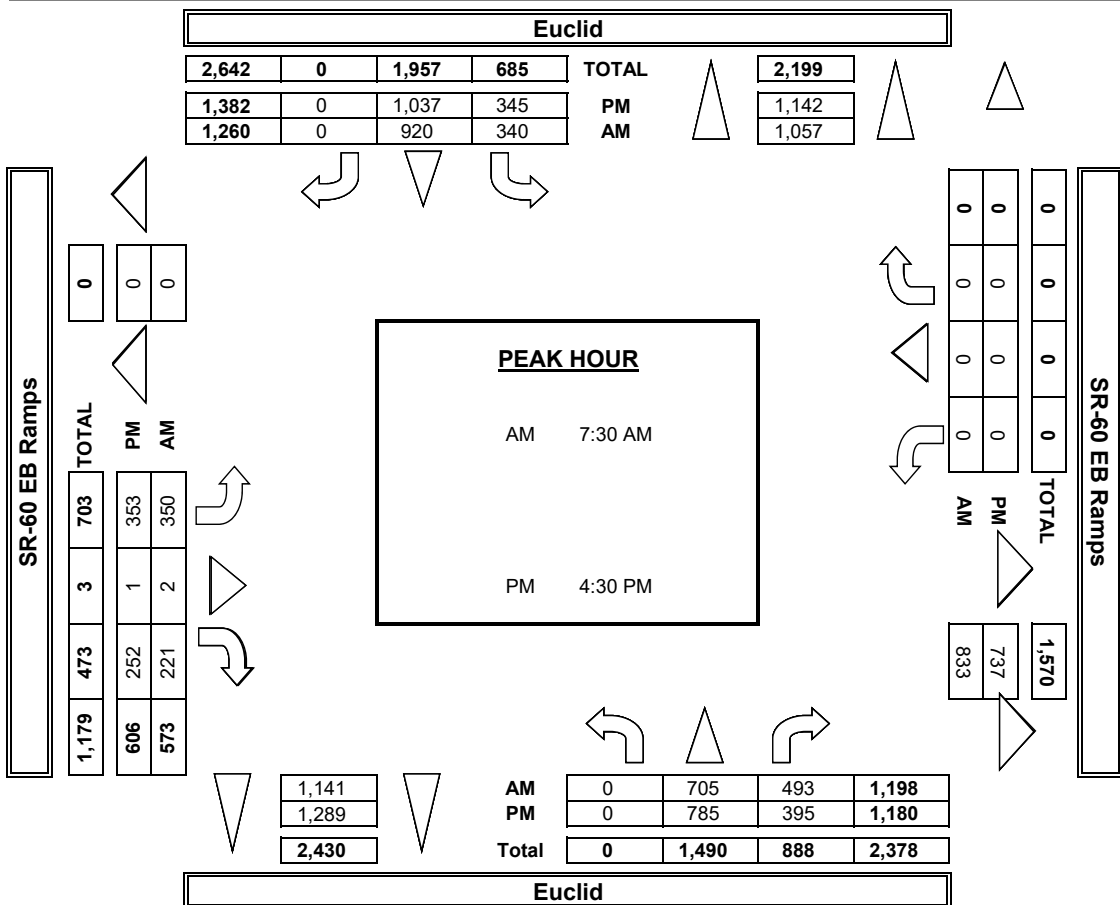

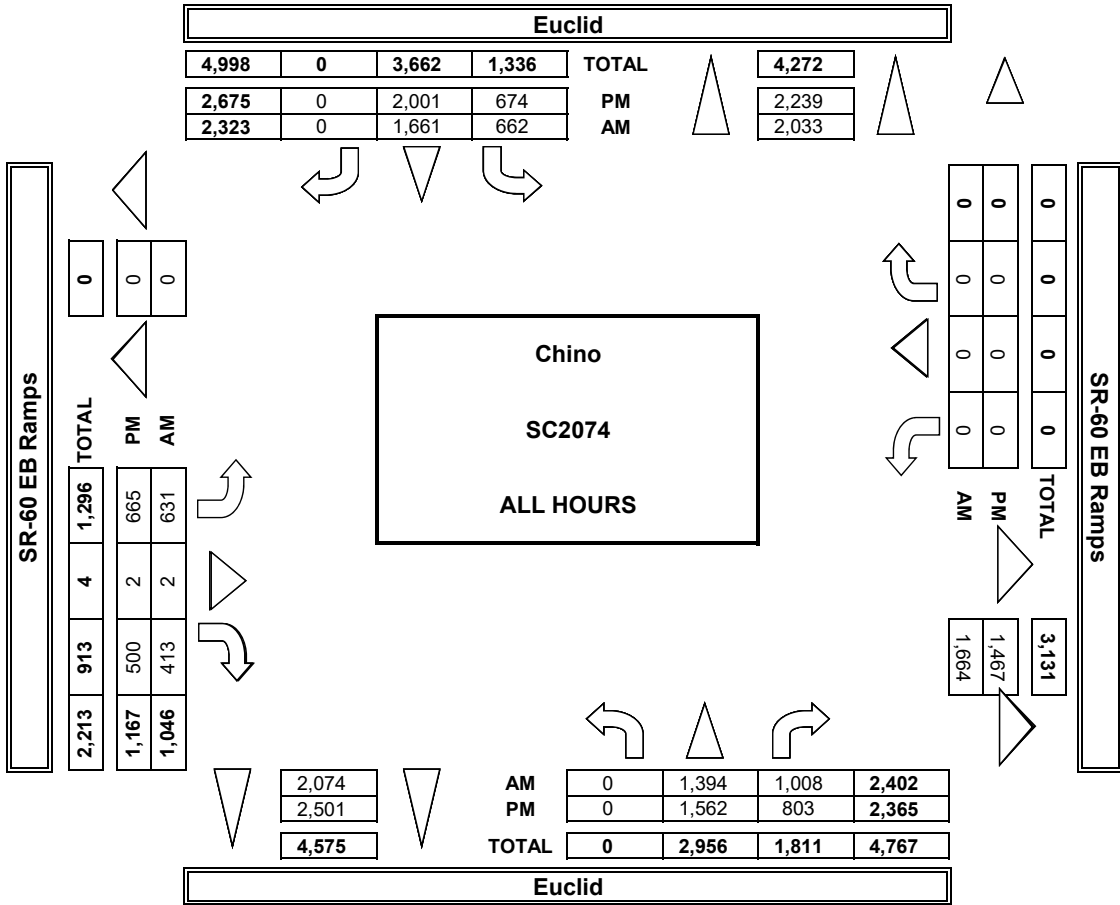

ALL PED AND BIKE Table: Columns for E Side, W Side, S Side, N Side, and Total counts.

PEDESTRIAN CROSSINGS Table: Columns for E Side, W Side, S Side, N Side, and Total counts.

BICYCLE CROSSINGS Table: Columns for ES, WS, SS, NS, and Total counts.

NOTES:

Add U-Turns to Left Turns

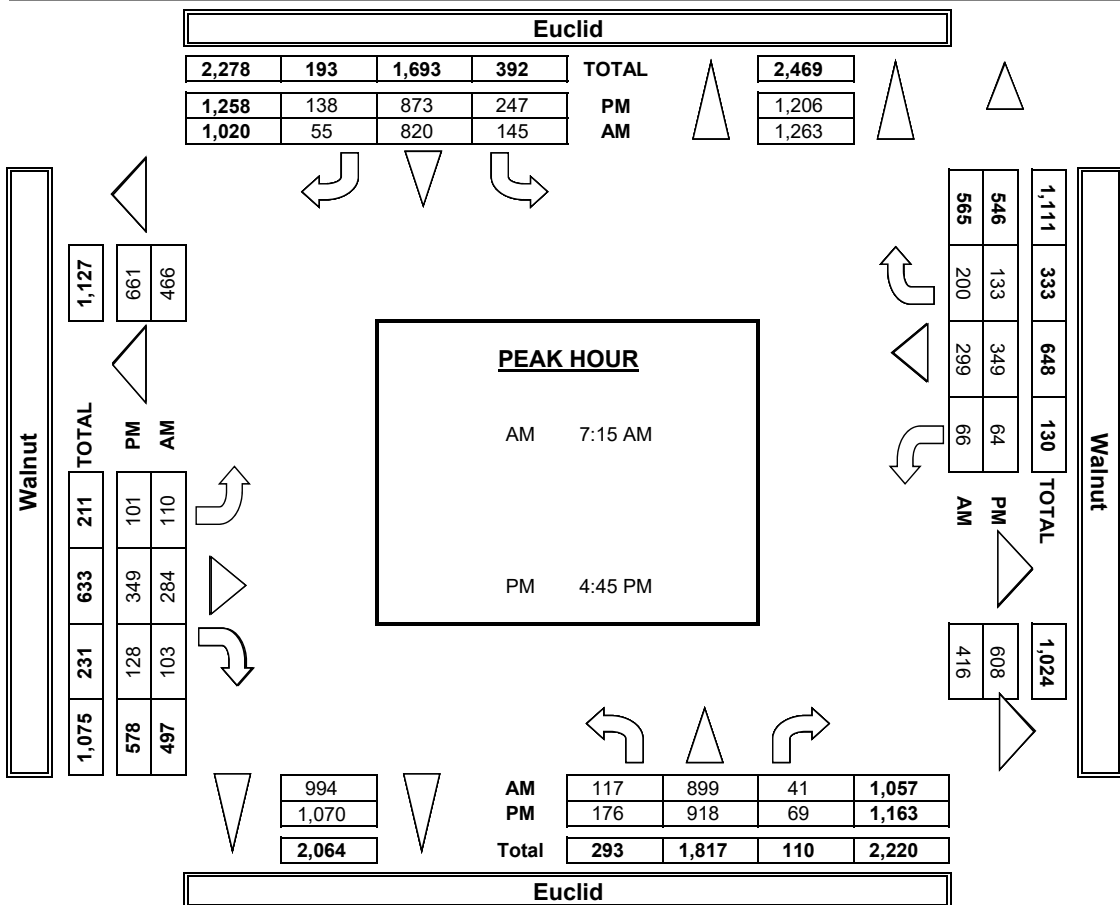

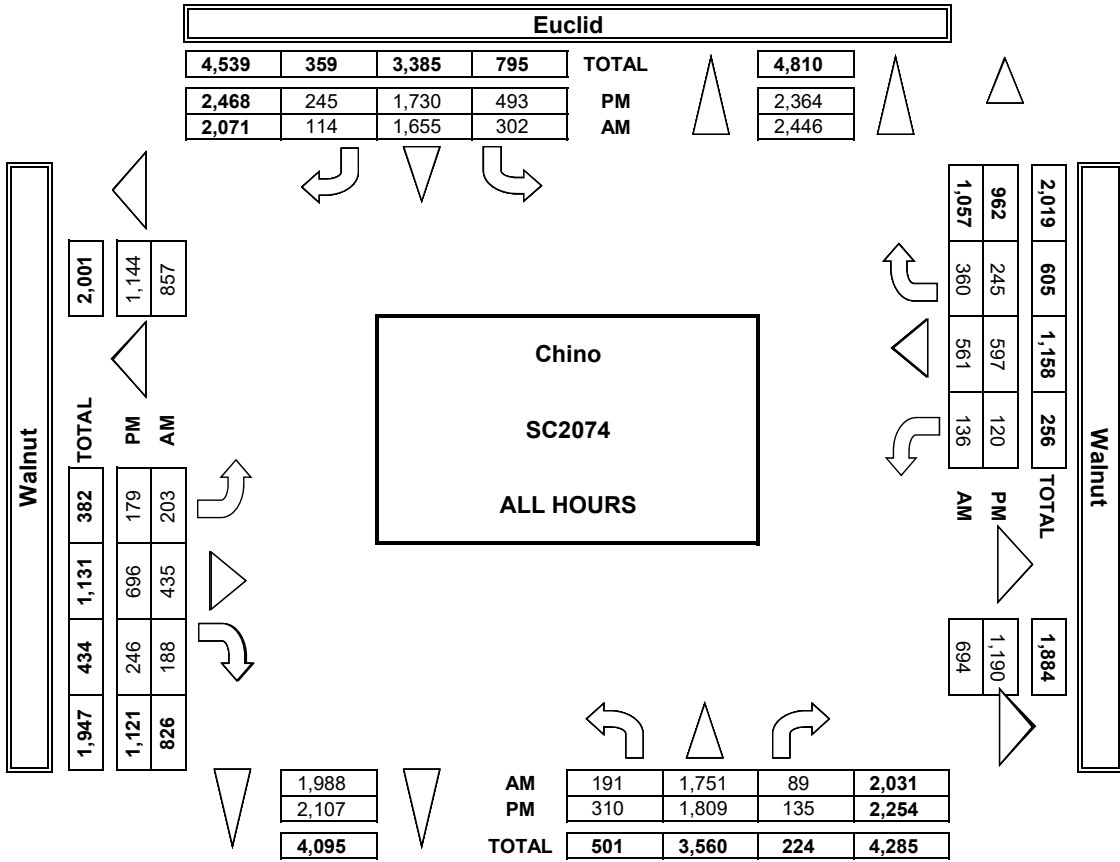

Summary table for signal timing and control parameters including lane counts and flow directions.

Main data table showing turning movement counts for Northbound, Southbound, Eastbound, and Westbound traffic at the intersection of Euclid and Walnut. Columns include direction, lane, movement type, count, and percentage.

Table for Pedestrian and Bicycle Crossings. It includes data for all pedestrian and bicycle movements across the intersection from all directions.

Add U-Turns to Left Turns

Table with columns for Northbound, Southbound, Eastbound, and Westbound. Rows include Lanes (NL, NT, NR, SL, ST, SR), Volumes, Approach %, Peak Hr Factor, and App/Dpe/Part. Includes a summary row for Euclid facility.

Table with columns for RTOR (NRR, SR, ERR, WRR) and U-TURNS (NB, SB, EB, WB, TTL). Rows show counts for each movement.

Summary table with columns for RTOR (NRR, SR, ERR, WRR) and U-TURNS (NB, SB, EB, WB, TTL). Rows show totals for Euclid facility.

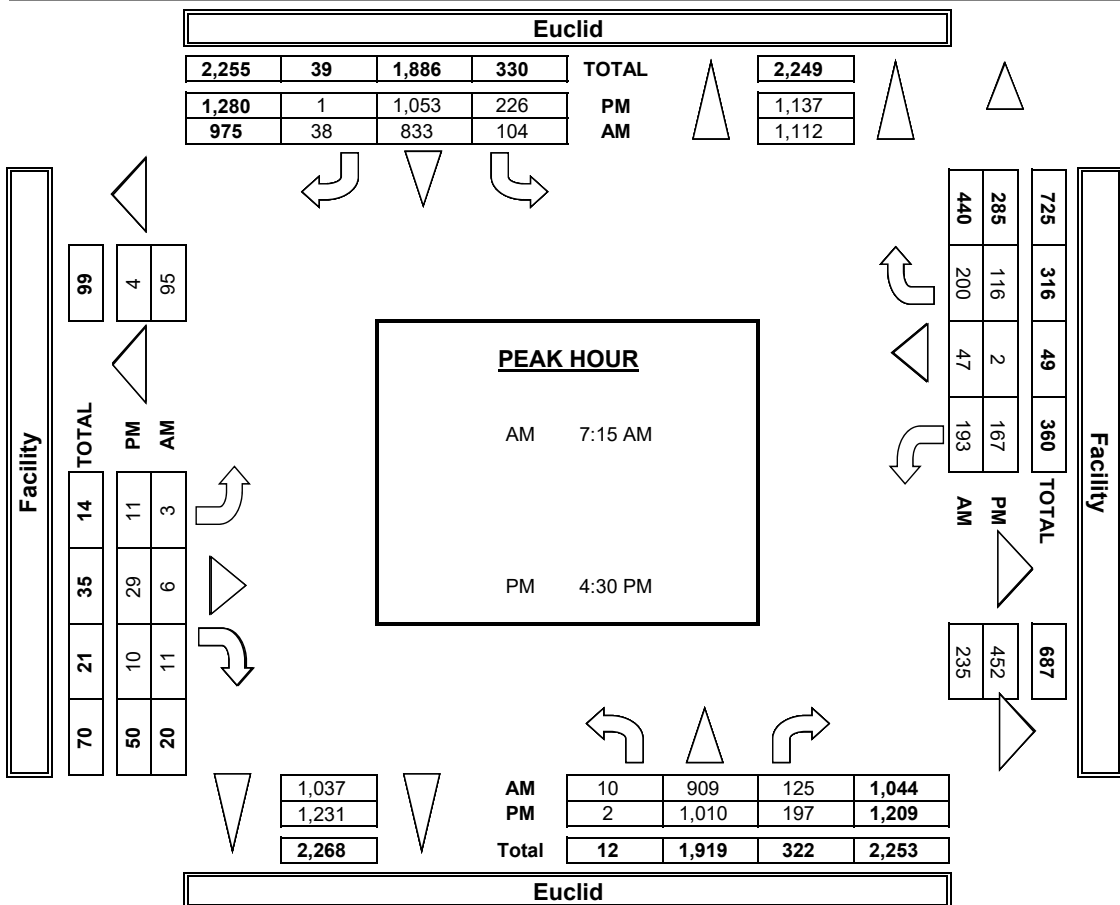

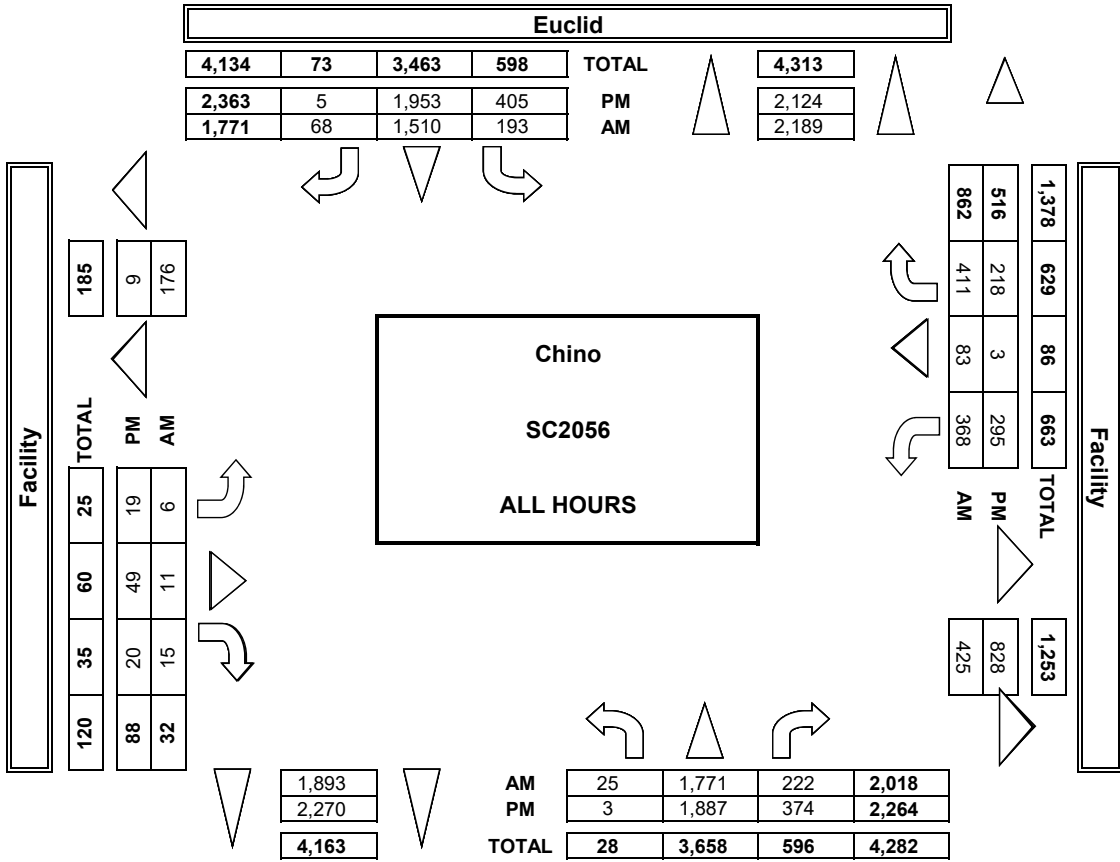

Table with columns for AM and PM. Rows include time slots from 7:00 AM to 5:45 PM and a TOTAL row.

Table with columns for ALL PED AND BIKE. Rows include E SIDE, W SIDE, S SIDE, N SIDE, and TOTAL.

Table with columns for PEDESTRIAN CROSSINGS. Rows include E SIDE, W SIDE, S SIDE, N SIDE, and TOTAL.

Table with columns for BICYCLE CROSSINGS. Rows include ES, WS, SS, NS, and TOTAL.

NOTES: Table with columns for movement types (THRU, LEFT, RIGHT, etc.) and counts.

Added U-turns to Left Turns

Main data table with columns for AM, PM, and AP/DEPART periods. Rows include VOLUMES, APPROACH %, PEAK HR FACTOR, and BEGIN PEAK HR for both Northbound and Southbound directions.

RTOR table showing counts for Northbound Right Turn, Opposing Right Turn, and Opposing Left Turn movements.

U-TURNS table showing counts for Northbound and Southbound U-turn movements.

AM (Morning) table with columns for time intervals from 7:00 AM to 9:45 AM and rows for E, S, W, N sides.

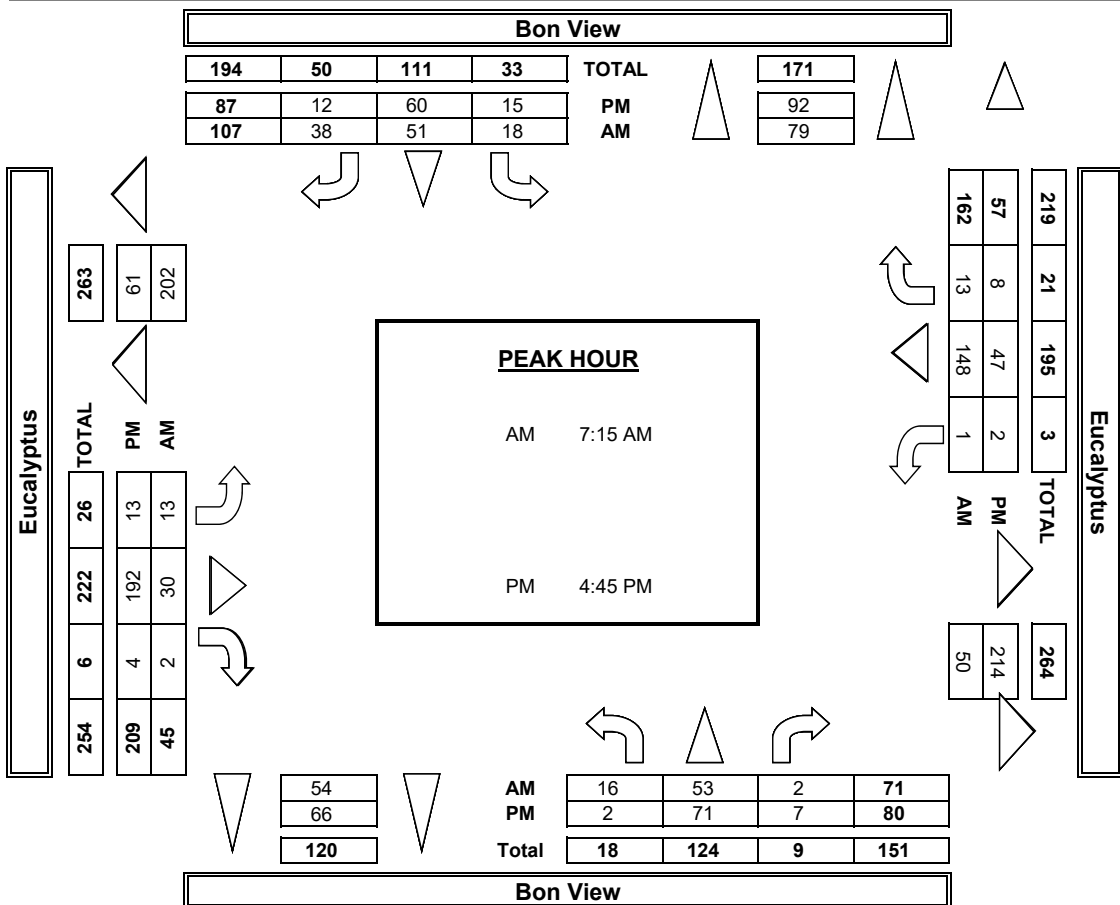

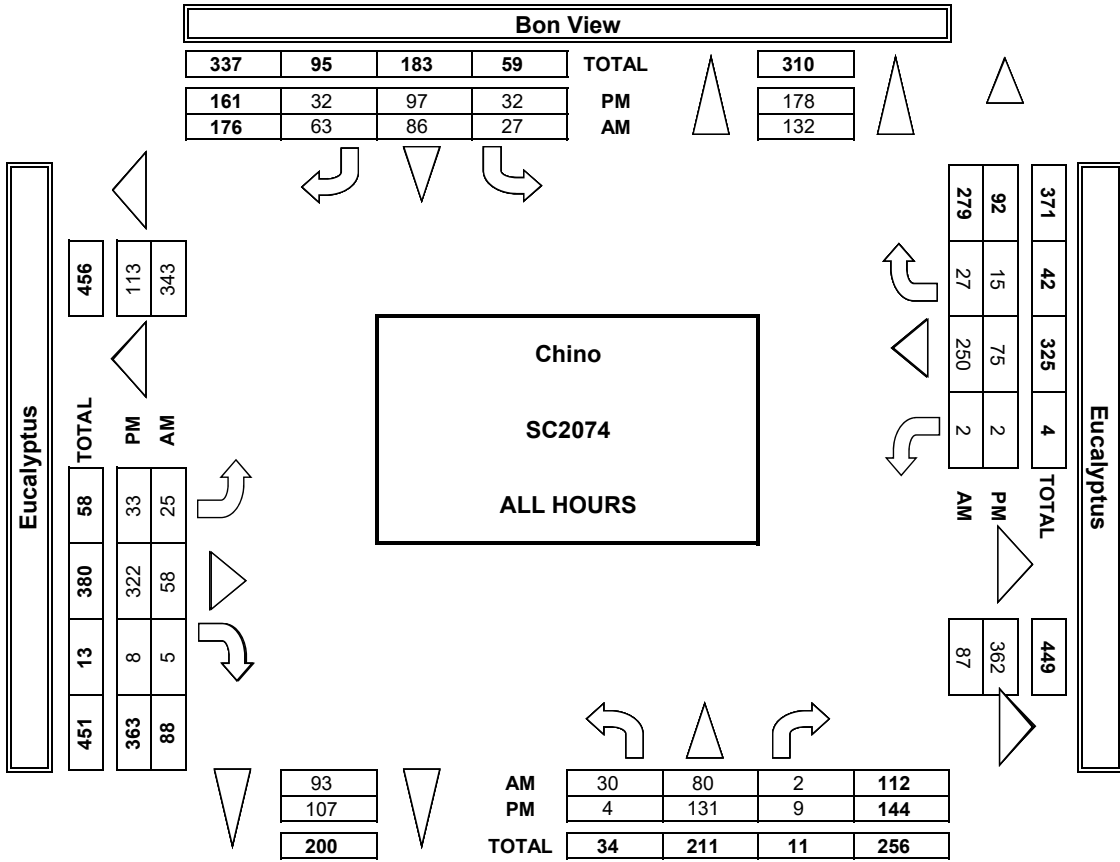

ALL PED AND BIKE table with columns for E, W, S, N sides and a TOTAL row.

PEDESTRIAN CROSSINGS table with columns for E, W, S, N sides and a TOTAL row.

BICYCLE CROSSINGS table with columns for ES, WS, SS, NS sides and a TOTAL row.

NOTES:

Table with columns for Lanes (NL, NT, NR, SL, ST, SR, EL, ET, ER, WL, WT, WR, TOTAL) and rows for Northbound, Southbound, Eastbound, and Westbound directions.

Table showing U-TURNS counts for NB, SB, EB, WB, and TTL directions.

Main data table for PM (Peak) period. Columns include time slots (7:00 AM to 5:45 PM), VOLUMES, APPROACH %, BEGIN PEAK HR, and PEAK HR FACTOR. Rows are organized by direction (Northbound, Southbound, Eastbound, Westbound).

Main data table for AM (Afternoon) period. Columns include time slots (7:15 AM to 9:45 AM), VOLUMES, APPROACH %, BEGIN PEAK HR, and PEAK HR FACTOR. Rows are organized by direction (Northbound, Southbound, Eastbound, Westbound).

Summary table for PM period with columns for direction and total volume.

Summary table for AM period with columns for direction and total volume.

Summary table for U-TURNS with columns for direction and total volume.

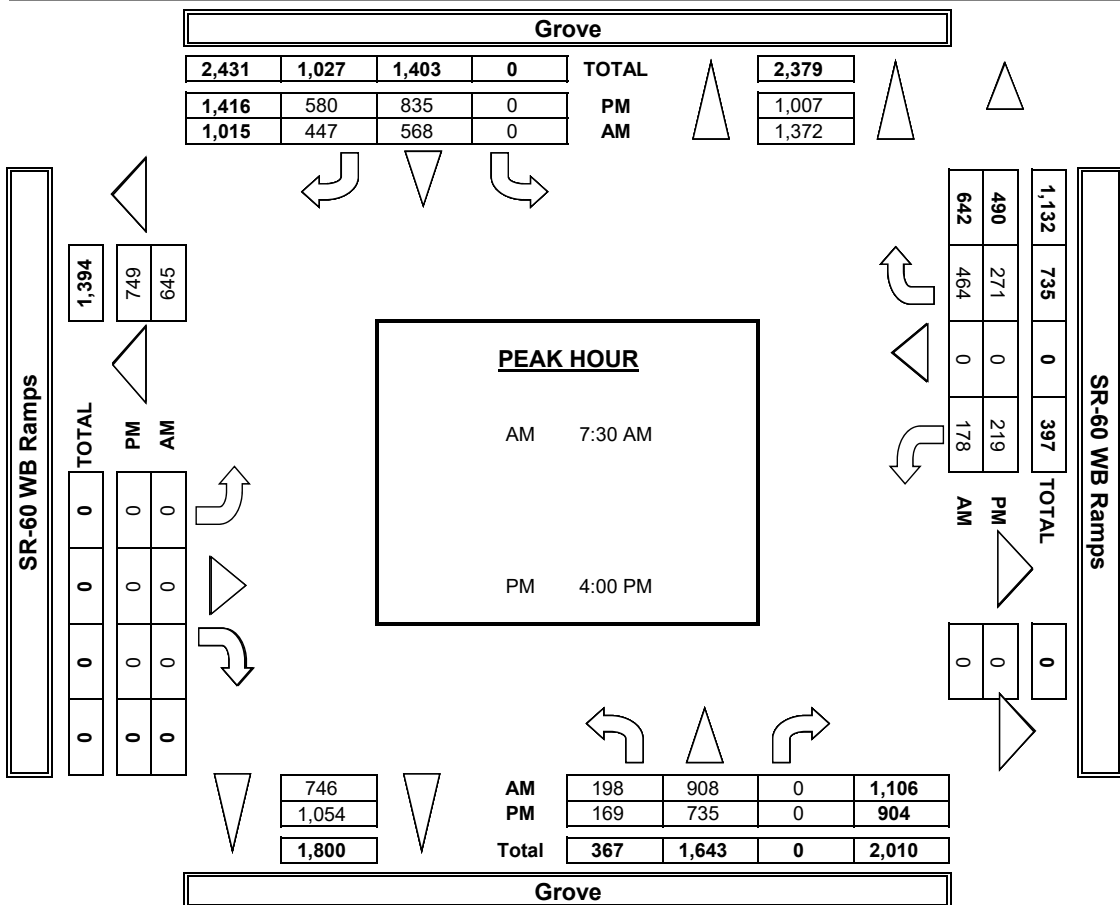

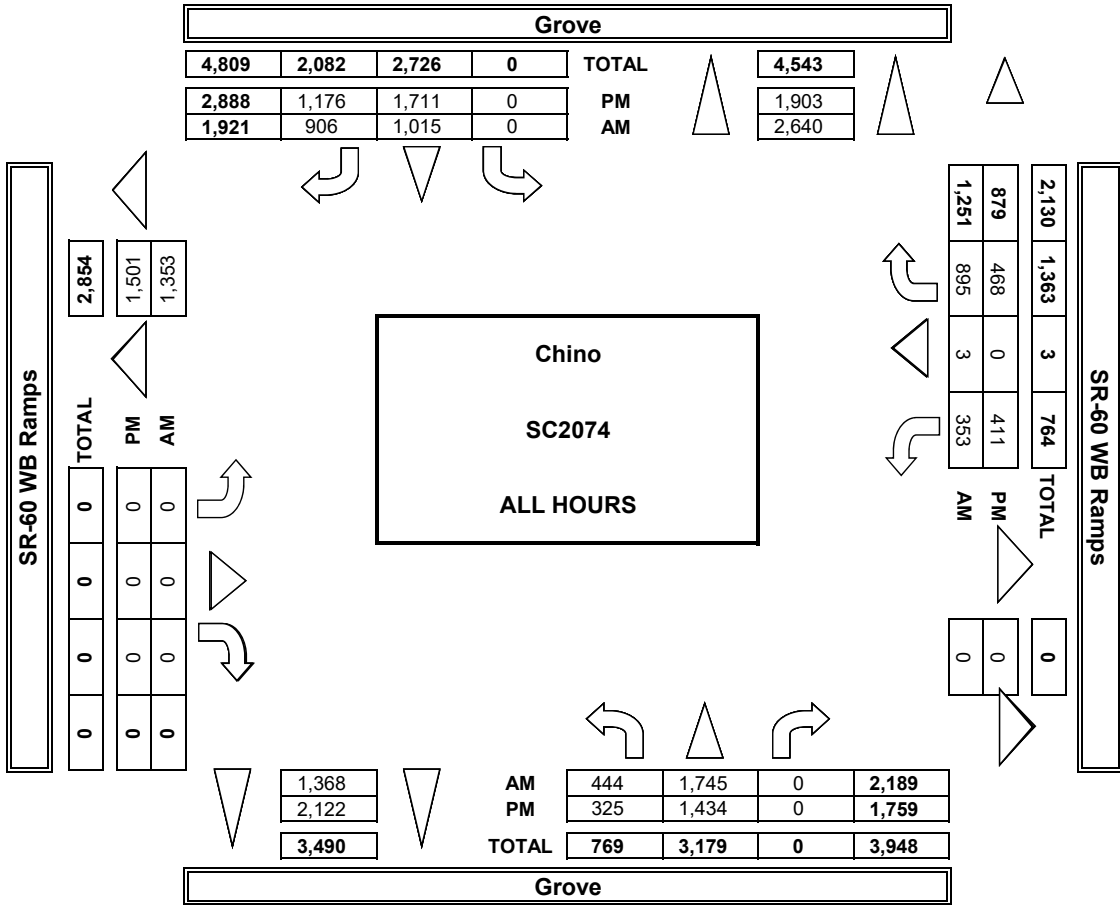

Summary table for RTOR (Right Turn Overlap Ratio) with columns for direction and total volume.

INTERSECTION TURNING MOVEMENT COUNTS

PREPARED BY: Almid LLC, Tel: 714 253 7888 c@amid.com

SC07/4

DATE: Wed, Jan 30, 19

LOCATION: NORTH & SOUTH; EAST & WEST;

Chino Walker Edison

PROJECT #: 36; LOCATION #: CONTROL:

STOP N/S

Add U-Turns to Left Turns

RTOR

NOTES:

Table with columns for direction (NORTHBOUND, SOUTHBOUND, EASTBOUND, WESTBOUND) and movement (NL, NT, NR, SL, ST, SR, EL, ET, ER, WL, WT, WR, TOTAL).

Table with columns for movement (NB, SB, EB, WB, TTL) and count.

Table with columns for movement (NRR, SRR, ERR, WRR) and count.

Main data table showing traffic counts and percentages for various time periods (7:00 AM to 9:45 AM) and directions (Northbound, Southbound, Eastbound, Westbound).

Summary table for RTOR and other metrics.

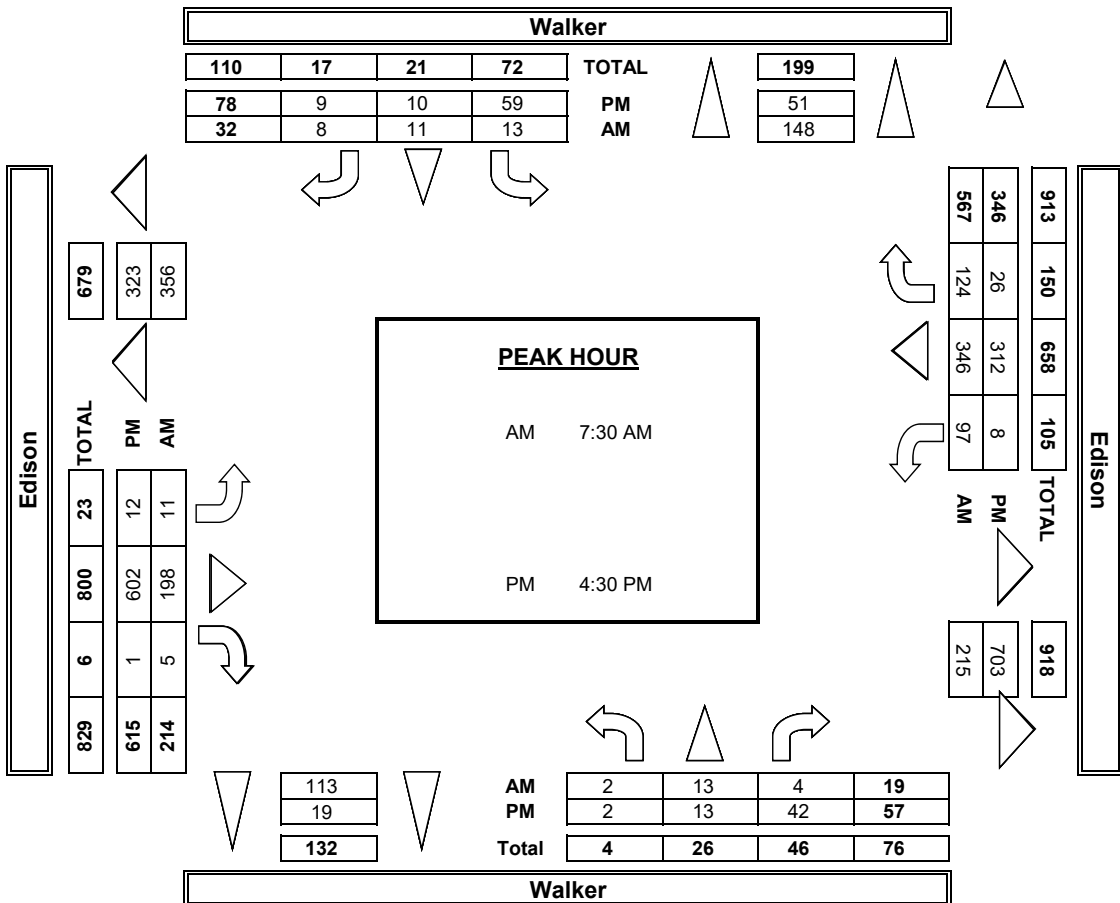

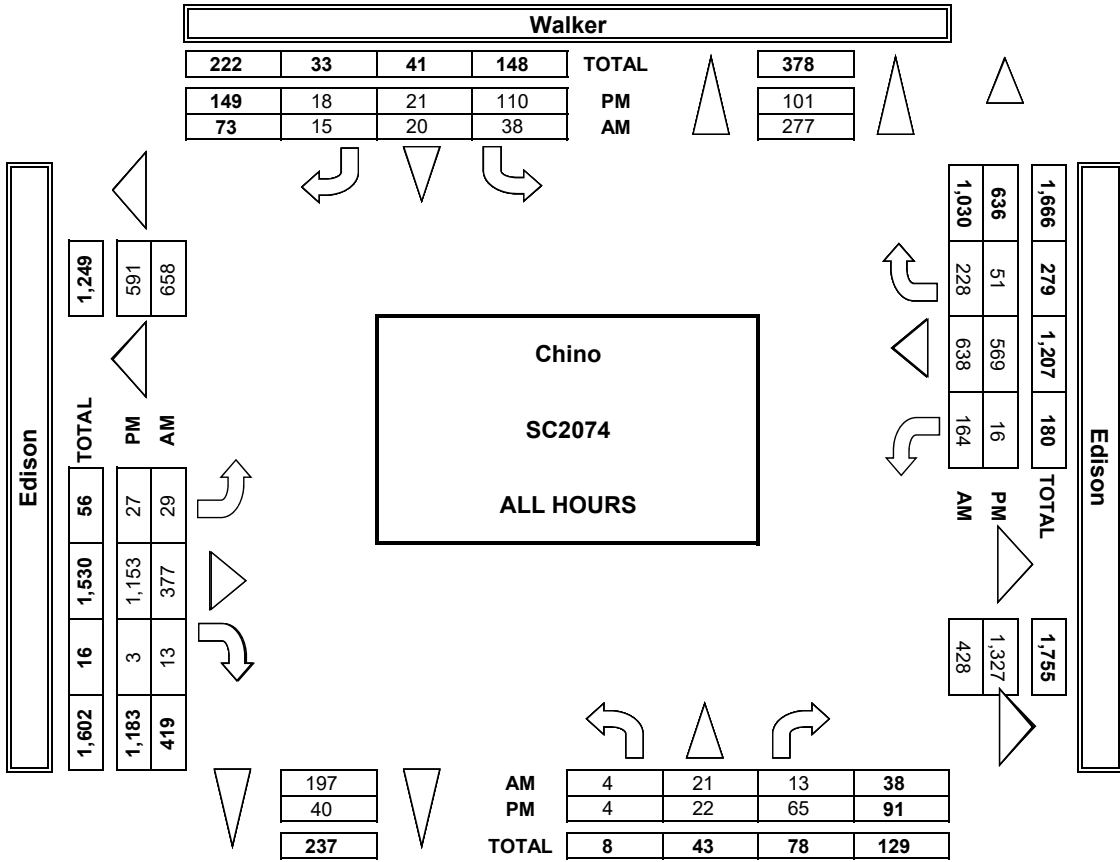

Table for AM direction showing traffic counts and percentages by time interval.

Table for ALL PED AND BIKE direction showing traffic counts and percentages by time interval.

Table for PEDESTRIAN CROSSINGS direction showing traffic counts and percentages by time interval.

Table for BICYCLE CROSSINGS direction showing traffic counts and percentages by time interval.

Add U-Turns to Left Turns

Table with columns for Northbound, Southbound, Eastbound, and Westbound lanes. Rows include Lanes, Volumes, Approach %, and Peak Hour Factor for AM and PM periods.

U-TURNS table with columns for NB, SB, EB, WB, TTL and counts for each.

RTOB table with columns for NRR, SRR, ERR, WRR and counts for each.

Main data table for Limonite and Scholar sides, including VOLUMES, APPROACH %, and PEAK HR FACTOR for AM and PM.

U-TURNS table for Limonite and Scholar sides.

RTOB table for Limonite and Scholar sides.

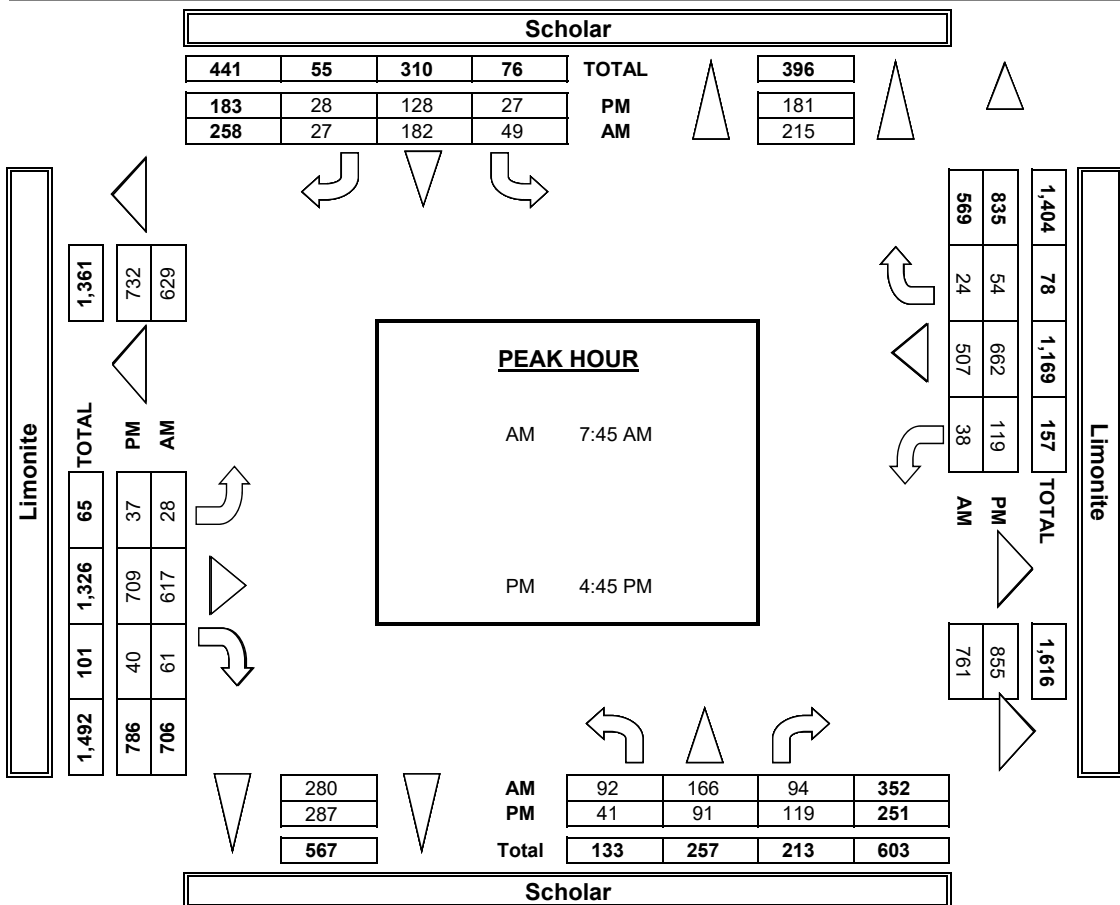

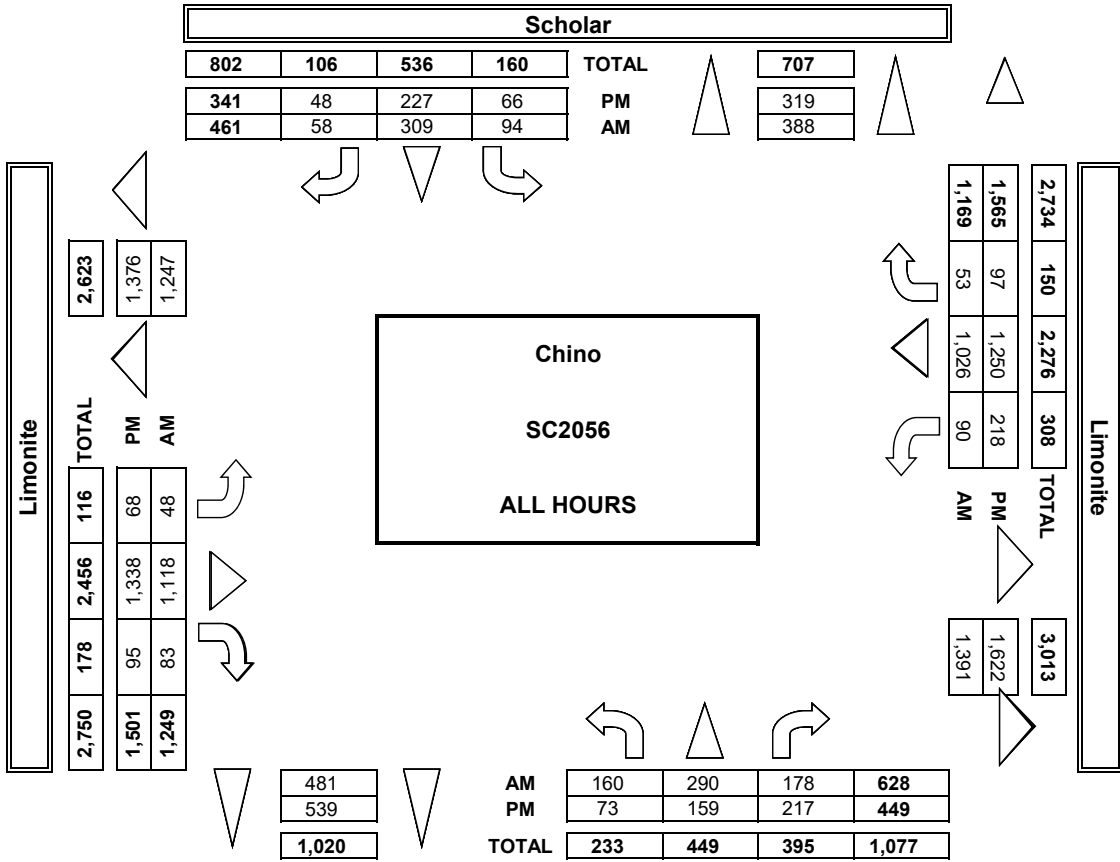

AM and PM summary table for Limonite and Scholar sides.

ALL PED AND BIKE table with columns for E SIDE, W SIDE, S SIDE, N SIDE, and TOTAL.

PEDESTRIAN CROSSINGS table with columns for E SIDE, W SIDE, S SIDE, N SIDE, and TOTAL.

BICYCLE CROSSINGS table with columns for ES, WS, SS, NS, and TOTAL.

Intersection Summary

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.
