PAGE 1  
 \*\*\* MODELOPTs: RegDEFAULT CONC ELEV URBAN ADJ\_U\*

\*\*\* MODEL SETUP OPTIONS SUMMARY

\*\*\*

\*\*Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

\*\*NO GAS DEPOSITION Data Provided.  
 \*\*NO PARTICLE DEPOSITION Data Provided.  
 \*\*Model Uses NO DRY DEPLETION. DRYDPLT = F  
 \*\*Model Uses NO WET DEPLETION. WETDPLT = F

\*\*Model Uses URBAN Dispersion Algorithm for the SBL for 4624 Source(s),  
 for Total of 1 Urban Area(s):  
 Urban Population = 2035210.0 ; Urban Roughness Length = 1.000 m

\*\*Model Uses Regulatory DEFAULT Options:

SOL\_operations\_rev2.ADO

1. Stack-tip Downwash.
2. Model Accounts for ELEVated Terrain Effects.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Assumed.

\*\*Other Options Specified:

ADJ\_U\* - Use ADJ\_U\* option for SBL in AERMET  
CCVR\_Sub - Meteorological data includes CCVR substitutions  
TEMP\_Sub - Meteorological data includes TEMP substitutions

\*\*Model Assumes No FLAGPOLE Receptor Heights.

\*\*The User Specified a Pollutant Type of: PM\_10

\*\*Model Calculates 2 Short Term Average(s) of: 1-HR 24-HR  
and Calculates PERIOD Averages

\*\*This Run Includes: 4624 Source(s); 1 Source Group(s); and 458  
Receptor(s)

with: 0 POINT(s), including  
0 POINTCAP(s) and 0 POINTHOR(s)  
and: 4624 VOLUME source(s)  
and: 0 AREA type source(s)  
and: 0 LINE source(s)  
and: 0 RLINE/RLINEXT source(s)  
and: 0 OPENPIT source(s)  
and: 0 BUOYANT LINE source(s) with 0 line(s)

\*\*Model Set To Continue RUNNING After the Setup Testing.

\*\*The AERMET Input Meteorological Data Version Date: 16216

\*\*Output Options Selected:

Model Outputs Tables of PERIOD Averages by Receptor  
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE  
Keyword)  
Model Outputs External File(s) of High Values for Plotting (PLOTFILE  
Keyword)  
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE  
Keyword)

\*\*NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours  
m for Missing  
Hours

and Missing Hours

\*\*Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 198.00 ; Decay  
 Coef. = 0.000 ; Rot. Angle = 0.0  
 Emission Units = GRAMS/SEC ;  
 Emission Rate Unit Factor = 0.10000E+07  
 Output Units = MICROGRAMS/M\*\*3

\*\*Approximate Storage Requirements of Model = 5.5 MB of RAM.

\*\*Input Runstream File: aermod.inp

\*\*Output Print File: aermod.out

\*\*Detailed Error/Message File: SOL\_operations\_rev2.err

\*\*File for Summary of Results: SOL\_operations\_rev2.sum

## **APPENDIX B3**

### **GREENHOUSE GAS EMISSIONS MODEL DATA**

South Ontario Logistics Center Phase 1 - No Mitigation - San Bernardino-South Coast County, Annual

**South Ontario Logistics Center Phase 1 - No Mitigation**  
**San Bernardino-South Coast County, Annual**

**1.0 Project Characteristics**

**1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Industrial Park	601.13	1000sqft	13.80	601,128.00	0
Refrigerated Warehouse-No Rail	334.31	1000sqft	7.67	334,315.00	0
Unrefrigerated Warehouse-No Rail	2,237.34	1000sqft	51.36	2,237,337.00	0
Parking Lot	1,888.52	1000sqft	43.35	1,888,524.00	0
City Park	14.61	Acre	14.61	616,896.00	0

**1.2 Other Project Characteristics**

<b>Urbanization</b>	Urban	<b>Wind Speed (m/s)</b>	2.2	<b>Precipitation Freq (Days)</b>	32
<b>Climate Zone</b>	10			<b>Operational Year</b>	2023
<b>Utility Company</b>	Southern California Edison				
<b>CO2 Intensity (lb/MWhr)</b>	510.44	<b>CH4 Intensity (lb/MWhr)</b>	0.029	<b>N2O Intensity (lb/MWhr)</b>	0.006

**1.3 User Entered Comments & Non-Default Data**

South Ontario Logistics Center Phase 1 - No Mitigation - San Bernardino-South Coast County, Annual

Project Characteristics - Adjusted per the SCE 2018 Corporate Responsibility and Sustainability Report. The report provides intensity factor of CO2e, the CO2 intensity factor is calculated as  $513 \cdot 25 \cdot 0.029 \cdot 298 \cdot 0.00617 = 510.44$  to avoid double counting.

Land Use - Site landscaping identified as "City Park" 616,896 sf. "Parking Lot" includes all parking spaces, truck stalls, loading docks, and drive aisles 1,888,524 sf

Construction Phase - Anticipated Construction Schedule. Building Construction, Paving, and Architectural Coating sub-phases are anticipated to overlap.

Demolition - includes demo of both phase 1 and phase 2 areas, estimated using GIS and aerial imagery

Grading - Site Balanced, no import/export of soil

Architectural Coating - SCAQMD Rule 1113 - low VOC paint

Vehicle Trips - total ADT = 7288: 5830 autos and 1458 trucks. auto trip rate under Industrial Park land use  $5830/601.128 \text{ ksf} = 9.6984336114770897379593031766945$ , truck trip rate shown under unrefrigerated w/h  $1402/2237.337 \text{ ksf} = 0.62663782881166315132677821892723$

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2023 with SAFE Rule

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2023 with SAFE Rule

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2023 with SAFE Rule

Area Coating - SCAQMD Rule 1113 - Low VOC paint

Energy Use -

Construction Off-road Equipment Mitigation - SCAQMD rule 403

Mobile Commute Mitigation -

Energy Mitigation - 2019 standards will reduce nonresidential energy use by 30% over 2016 standard, due mainly to lighting upgrades.

Water Mitigation - water reduction consistent with latest building code

Waste Mitigation - AB 939 - divert at least 50% of solid waste from landfills

Operational Off-Road Equipment - Assume 12 electric forklifts per building (96 total), 1 yard truck per building (8 total) 200 hp average

Fleet Mix - Refer to TIA for Fleet Mix, cars under industrial park, trucks under unrefrigerated warehouse

**1.3 User Entered Comments & Non-Default Data**

South Ontario Logistics Center Phase 1 - with Mitigation - San Bernardino-South Coast County, Annual

Project Characteristics - Adjusted per the SCE 2018 Corporate Responsibility and Sustainability Report. The report provides intensity factor of CO2e, the CO2 intensity factor is calculated as  $513-25 \times 0.029 - 298 \times 0.00617 = 510.44$  to avoid double counting.

Land Use - Site landscaping identified as "City Park" 616,896 sf. "Parking Lot" includes all parking spaces, truck stalls, loading docks, and drive aisles 1,888,524 sf

Construction Phase - Anticipated Construction Schedule. Building Construction, Paving, and Architectural Coating sub-phases are anticipated to overlap.

Demolition - includes demo of both phase 1 and phase 2 areas, estimated using GIS and aerial imagery

Grading - Site Balanced, no import/export of soil

Architectural Coating - The Project shall utilize "Super-Compliant" low VOC paints. Super-Compliant low VOC paints shall be no more than 10g/L of VOC

Vehicle Trips - total ADT = 7288: 5830 autos and 1458 trucks. auto trip rate under Industrial Park land use  $5830/601.128 \text{ ksf} = 9.6984336114770897379593031766945$ , truck trip rate shown under unrefrigerated w/h  $1402/2237.337 \text{ ksf} = 0.62663782881166315132677821892723$

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2023 with SAFE Rule

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2023 with SAFE Rule

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2023 with SAFE Rule

Area Coating - SCAQMD Rule 1113 - Low VOC paint

Energy Use -

Construction Off-road Equipment Mitigation - SCAQMD rule 403

Mobile Commute Mitigation - Require TDM program

Area Mitigation - The Project shall utilize "Super-Compliant" low VOC paints. Super-Compliant low VOC paints shall be no more than 10g/L of VOC

Energy Mitigation - 2019 standards will reduce nonresidential energy use by 30% over 2016 standard, due mainly to lighting upgrades.

Water Mitigation - water reduction consistent with latest building code

Waste Mitigation - AB 939 - divert at least 50% of solid waste from landfills

Operational Off-Road Equipment - Assume 12 electric forklifts per building (96 total)

Fleet Mix - Refer to TIA for Fleet Mix

**1.3 User Entered Comments & Non-Default Data**

South Ontario Logistics Center Phase 2 - No Mitigation - San Bernardino-South Coast County, Annual

Project Characteristics - Adjusted per the SCE 2018 Corporate Responsibility and Sustainability Report. The report provides intensity factor of CO2e, the CO2 intensity factor is calculated as  $513 \cdot 25 \cdot 0.029 \cdot 298 \cdot 0.00617 = 510.44$  to avoid double counting

Land Use - Site landscaping identified as "City Park" 439,564 sf. "Parking Lot" includes all parking spaces, truck stalls, loading docks, and drive aisles 1,321,176 sf

Construction Phase - Anticipated Construction Schedule. Building Construction, Paving, and Architectural Coating sub-phases are anticipated to overlap. Demo occurs during phase 1

Grading - Site Balanced, No import/export of soil

Architectural Coating - Rule 1113

Vehicle Trips - total ADT = 5214: 4178 autos and 1036 trucks. auto trip rate under Industrial Park land use  $4178/474.107$  ksf= $8.8123567042882724785755114351824$ , truck trip rate shown under unrefrigerated w/h  $1036/1536.163$  ksf =  $0.67440759867279709249604371411107$

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2024 and SAFE Rule

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2024 and SAFE Rule

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2024 and SAFE Rule

Area Coating - Rule 1113

Energy Use -

Construction Off-road Equipment Mitigation - SCAQMD Rule 403

Energy Mitigation - 2019 standards will reduce nonresidential energy use by 30% over 2016 standard, due mainly to lighting upgrades

Water Mitigation - water reduction consistent with latest building code

Waste Mitigation - AB 939 - divert at least 50% of solid waste from landfills

Operational Off-Road Equipment - Assume 96 forklifts, same as Phase 1. Assume 8 yard trucks, same as phase 1, 200 hp

Fleet Mix - Refer to TIA for Fleet Mix

**1.3 User Entered Comments & Non-Default Data**

South Ontario Logistics Center Phase 2 - With Mitigation - San Bernardino-South Coast County, Annual

Project Characteristics - Adjusted per the SCE 2018 Corporate Responsibility and Sustainability Report. The report provides intensity factor of CO2e, the CO2 intensity factor is calculated as  $513 \cdot 25 \cdot 0.029 \cdot 298 \cdot 0.00617 = 510.44$  to avoid double counting

Land Use - Site landscaping identified as "City Park" 439,564 sf. "Parking Lot" includes all parking spaces, truck stalls, loading docks, and drive aisles 1,321,176 sf

Construction Phase - Anticipated Construction Schedule. Building Construction, Paving, and Architectural Coating sub-phases are anticipated to overlap. Demo occurs during phase 1

Grading - Site Balanced, No import/export of soil

Architectural Coating - The Project shall utilize "Super-Compliant" low VOC paints. Super-Compliant low VOC paints shall be no more than 10g/L of VOC

Vehicle Trips - total ADT = 5214: 4178 autos and 1036 trucks. auto trip rate under Industrial Park land use  $4178/474.107 \text{ ksf} = 8.8123567042882724785755114351824$ , truck trip rate shown under unrefrigerated w/h  $1036/1536.163 \text{ ksf} = 0.67440759867279709249604371411107$

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2024 and SAFE Rule

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2024 and SAFE Rule

Vehicle Emission Factors - EMFAC2017 San Bernardino (SC) 2024 and SAFE Rule

Area Coating - The Project shall utilize "Super-Compliant" low VOC paints. Super-Compliant low VOC paints shall be no more than 10g/L of VOC

Energy Use -

Construction Off-road Equipment Mitigation - SCAQMD Rule 403

Mobile Commute Mitigation - Require TDM program

Area Mitigation - The Project shall utilize "Super-Compliant" low VOC paints. Super-Compliant low VOC paints shall be no more than 10g/L of VOC

Energy Mitigation - 2019 standards will reduce nonresidential energy use by 30% over 2016 standard, due mainly to lighting upgrades

Water Mitigation - water reduction consistent with latest building code

Waste Mitigation - AB 939 - divert at least 50% of solid waste from landfills

Operational Off-Road Equipment - Assume 96 electric forklifts, same as Phase 1

Fleet Mix - Refer to TIA for Fleet Mix

## 1.0 Introduction

EPD Solutions, Inc. contracted Hernandez Environmental Services (HES) to conduct a General Biological Assessment (GBA) on Assessor's Parcel Numbers (APNs) 1054-081-03, 1054-071-01, 1054-071-02, 1054-241-01, 1054-241-02, 1054-311-01, 1054-311-02, 1054-091-01, 1054-091-02, 1054-101-01, 1054-101-02, 1054-231-01, 1054-231-02, 1054-321-01, 1054-321-02, 1054-051-01, 1054-051-02, 1054-061-01, 1054-061-02, 1054-251-01, 1054-251-02, 1054-301-01, and 1054-301-02, located in the city of Ontario, San Bernardino County, California. The purpose of the GBA is to document the presence/absence of sensitive resources that may be present on the site, to document existing habitats, and generally address biological questions that may be needed for project approval. This GBA will present the results obtained from the September 21, 2018 and March 12, 2020 field surveys and will provide recommendations to mitigate potential biological impacts from project activities.

### 1.1 Project Site Location

The approximately 225.61-acre project site is located south of Eucalyptus Avenue, north of Merrill Avenue, and east of Grove Avenue, in the city of Ontario, San Bernardino County, California (Figure 1). Specifically, the site is located within the Santa Ana del Chino Land Grant of the *Prado Dam 7.5'* U.S. Geological Survey (USGS) topographic quadrangle (Figure 2). Surrounding land uses include agricultural uses to the north, east, and west. The Chino Airport lies to the south of the site. The entire 225.61-acre site has been disturbed by agricultural use.

### 1.2 Project Description

The proposed project consists of the construction of an industrial park consisting of warehouse and office buildings. The proposed project also includes associated parking, detention basins, access roads, and utilities (Figure 3). The proposed industrial park development will impact 126.8-acres of the project site.

## 2.0 Methodology

### 2.1 Literature Review

HES conducted a literature review and reviewed aerial photographs and topographic maps of the project site and surrounding areas. The *Prado Dam 7.5'* USGS topographic quadrangle and eight surrounding quadrangles were used to identify sensitive species in the California Natural Diversity Data Base (CNDDDB). Additional resources reviewed during the literature search included the United States Fish and Wildlife (USFWS) Endangered Species Lists, and the California Native Plant Society's (CNPS) Rare plant lists to obtain species information for the project area.

## 2.2 Field Survey

On September 21, 2018 and March 12, 2020, HES conducted field surveys of the approximate 225.61-acre project site. On September 21, 2018, the ambient temperature during the field survey was 80° Fahrenheit, sunny, with zero to three mile per hour winds from the southwest. On March 12, 2020 the ambient temperature was 54° Fahrenheit, cloudy, with zero to four mph winds from the south. The purpose of the field surveys was to document the existing habitat conditions, obtain plant and animal species information, view the surrounding uses, assess the potential for state and federal waters, assess potential for wildlife movement corridors, and if critical habitat is present, assess for the presence of constituent elements.

The entire 225.61-acre project site was surveyed. Linear transects approximately 50 feet apart were walked for 100 percent coverage. In areas that were inaccessible the biologist visually inspected habitats with binoculars. All species observed were recorded and Global Positioning System (GPS) waypoints were taken to delineate specific habitat types, species locations, state or federal waters, or any other information that would be useful for the assessment of the project site. A comprehensive list of all plant and wildlife species that were detected during the field survey within the project site is included in Appendix A. Sensitive plant and wildlife species with the potential to occur within the project area are listed in Appendix B. Representative site photographs were taken and are included within Appendix C.

## 3.0 Existing Conditions and Results

### 3.1 Environmental Setting

The approximately 225.61-acre project site consists of an active dairy farm and agricultural fields. At the time of the surveys, the agricultural fields were fallow. The entire site has been disturbed by agricultural use and no native habitat was present. The project site also contains a large complex of man-made stock/retention ponds and channels. Elevations on the site range from 647 feet above mean sea level (AMSL) to 674 feet AMSL. Surrounding land uses include agricultural uses to the north, east, and west. The Chino Airport lies to the south of the site.

### 3.2 Soils

Four soil classes are identified to occur on the project site by the USDA Web Soil Survey (Appendix D). Soils at the project site are classified as:

- Chino silt loam (Cb)
- Grangeville fine sandy loam (Gr);
- Hilmar loamy fine sand (Hr); and
- Tujunga loamy sand (TuB), 0 to 5 percent slopes.

### 3.3 Plant and Habitat Communities

The project site is dominated by four habitat types, including 95.52 acres of agriculture fields, 107.45 acres of disturbed agriculture infrastructure, 19.0 acres of stock/retention ponds and channels, and 3.64 acres of eucalyptus woodland. Following are descriptions of each habitat type.

#### 3.3.1 Agriculture Fields

The project site contains approximately 95.52 acres of agriculture fields. These fields are currently fallow. The agriculture fields are disturbed and dominated by non-native species of grasses and plants. Species observed include *Avena* sp., *Bromus* sp., Russian thistle (*Salsola tragus*) and alfalfa (*Medicago sativa*).

#### 3.3.2 Disturbed Agriculture Infrastructure

The project site contains approximately 107.45 acres of disturbed agriculture infrastructure. These areas contain no native habitat and are currently used for containing livestock. These areas are mostly developed with agricultural use structures or residential buildings. Vegetation within these areas consists of non-native ornamental plant species.

#### 3.3.2 Stock/Retention Ponds and Channels

The project site contains approximately 19.0 acres of areas stock/retention ponds and channels. These ponds and channels are man-made and fed by wells. The ponds are dry and dominated by upland species such as bromus and Russian thistle, but the stock pond drainage channels did contain grasses such as Bermuda (*Cynodon dactylon*) and curly dock (*Rumex crispus*).

#### 3.3.3 Eucalyptus Woodland

The project site contains approximately 3.64 acres of eucalyptus woodland (*Eucalyptus globulus*). These areas are found in rows throughout the site.

## 4.0 Sensitive Biological Resources

### 4.1 Threatened and Endangered Species

A total of 47 sensitive species of plants and 59 sensitive species of animals have the potential to occur on or within the vicinity of the project area. These include those species listed or candidates for listing by the USFWS, California Department of Fish and Wildlife (CDFW) and CNPS. All habitats with the potential to be used by sensitive species were evaluated during the site visit and a determination has been made for the presence or probability of presence within this report. This section will address those species listed as Candidate, Rare, Threatened, or Endangered under the state and federal endangered species laws. Other special status species will be reported in Appendix B and individually discussed in the Recommendations Section of this report.

#### 4.1.1 Threatened and Endangered Plants

A total of 17 plant species are listed as state and/or federal Threatened, Endangered, or Candidate species; are 1B.1 listed plants on the CNPS Rare Plant Inventory; or have been found to have a potential to exist on the project site. Below are descriptions of these species:

##### *Chaparral sand-verbena*

Chaparral sand-verbena (*Abronia villosa* var. *aurita*) is ranked 1B.1 in the CNPS rare plant inventory. It is found in sandy areas of chaparral, coastal sage scrub, and desert dunes habitats. No habitat for this species is present on the project site. **This species is not considered to be present.**

##### *Braunton's milk-vetch*

Braunton's milk-vetch (*Astragalus brauntonii*) is a federally listed endangered species and is ranked 1B.1 in the CNPS rare plant inventory. It is usually found in recently burned or disturbed areas, usually on sandstone with carbonate layers. Its habitat includes chaparral, coastal sage scrub, valley, and foothill grassland. No habitat for this species is present on the project site. **This species is not considered to be present.**

##### *Malibu baccharis*

Malibu baccharis (*Baccharis malibuensis*) is ranked 1B.1 in the CNPS rare plant inventory. It is found in Conejo volcanic substrates and often on exposed roadcuts. It sometimes occupies oak woodland habitat and grows at elevations of 150 to 320 meters. Its habitat includes chaparral, cismontane woodland, coastal sage scrub, and riparian woodland. No habitat for this species is present on the project site. **This species is not considered to be present.**

##### *Nevin's barberry*

Nevin's barberry (*Berberis nevinii*) is a federally and state listed endangered species and is ranked 1B.1 in the CNPS rare plant inventory. It is typically found on steep, north facing slopes

or in low grade sandy washes. Its habitat includes chaparral, cismontane woodland, coastal sage scrub, and riparian scrub. No habitat for this species is present on the project site. **This species is not considered to be present.**

#### *Lucky morning-glory*

Lucky morning-glory (*Calystegia felix*) is ranked 1B.1 in the CNPS rare plant inventory. It is often found in disturbed sites near the coast, at marsh edges. It is also found in alkaline soils and sometimes with saltgrass. This species is sometimes found on the margins of vernal pools. Its habitat includes meadow and seep, and riparian scrub. No habitat for this species is present on the project site. **This species is not considered to be present.**

#### *Southern tarplant*

Southern tarplant (*Centromadia parryi* ssp. *australis*) is ranked 1B.1 in the CNPS rare plant inventory. It is often found on disturbed sites near the coast, This species prefers marsh edges. It also grows in alkaline soils, sometimes with saltgrass, and on vernal pool margins. Habitats associated with this plant include: marsh and swamp, salt marsh, valley and foothill grassland, vernal pool, and wetland. No habitat for this species is present on the project site. **This species is not considered to be present.**

#### *Smooth tarplant*

Smooth tarplant (*Centromadia pungens* ssp. *laevis*) is ranked 1B.1 in the CNPS rare plant inventory. Its habitat includes alkali playa, chenopod scrub, meadows and seeps, riparian woodlands, wetlands, and valley and foothill grasslands. No habitat for this species is present on the project site. **This species is not considered to be present.**

#### *San Fernando Valley spineflower*

San Fernando Valley spineflower (*Chorizanthe parryi* var. *Fernandina*) is a federally proposed threatened species, a state listed endangered species, and is ranked 1B.1 in the CNPS rare plant inventory. It is found in sandy soils. Its habitat includes coastal sage scrub, and valley and foothill grassland. No habitat for this species is present on the project site. **This species is not considered to be present.**

#### *Parry's spineflower*

Parry's spineflower (*Chorizanthe parryi* var. *parryi*) is ranked 1B.1 in the CNPS rare plant inventory. The species occurs in dry, sandy soils on dry slopes and flats, sometimes at the interface of two vegetations types, such as chaparral and oak woodland. Its habitat includes coastal sage scrub, chaparral, cismontane woodland, valley and foothill grassland. No habitat for this species is present on the project site. **This species is not considered to be present.**

#### *Slender-horned spineflower*

Slender - horned spineflower (*Dodecahema leptoceras*) is a federally and state listed endangered species and is ranked 1B.1 in the CNPS rare plant inventory. This species is typically found near flood deposited terraces and washes. Its habitat includes chaparral, cismontane woodland, and

coastal sage scrub (alluvial fan sage scrub). No habitat for this species is present on the project site. **This species is not considered to be present.**

*Santa Ana River woollystar*

Santa Ana River woollystar (*Eriastrum densifolium ssp. sanctorum*) is a federally and state listed endangered species and is ranked 1B.1 in the CNPS rare plant inventory. It is typically found in sandy soils on river floodplains or terraced fluvial deposits. Its habitat includes chaparral and coastal sage scrub. No habitat for this species is present on the project site. **This species is not considered to be present.**

*Tecate cypress*

Tecate cypress (*Hesperocyparis forbesii*) is ranked 1B.1 in the CNPS rare plant inventory. It is found on clay or gabbro, primarily on north-facing slopes and in groves often associated with chaparral habitat. Its habitat includes closed-cone coniferous forest, and chaparral. No habitat for this species is present on the project site. **This species is not considered to be present.**

*Mesa horkelia*

Mesa horkelia (*Horkelia cuneate var. puberula*) is ranked 1B.1 in the CNPS rare plant inventory. It is typically found in sandy or gravelly sites. Its habitat includes chaparral, cismontane woodland, and coastal sage scrub. No habitat for this species is present on the project site. **This species is not considered to be present.**

*Jokerst's monardella*

Jokerst's monardella (*Monardella australis ssp. jokerstii*) is ranked 1B.1 in the CNPS rare plant inventory. It is found on steep scree or talus slopes between breccia. Its habitat includes chaparral, and lower montane coniferous forest. No habitat for this species is present on the project site. **This species is not considered to be present.**

*Gambel's water cress*

Gambel's water cress (*Nasturtium gambelii*) is federally listed endangered species, a state listed threatened species, and is ranked 1B.1 in the CNPS rare plant inventory. It is found in freshwater and brackish marshes at the margins of lakes and along streams, in or just above the water level. Its habitat includes brackish marsh, freshwater marsh, marsh and swamp, and wetland. No marshes or swamps are present on the project site. Only dry, man-made stock ponds are present on the project site. **This species is not considered to be present.**

*Allen's pentachaeta*

Allen's pentachaeta (*Pentachaeta aurea ssp. allenii*) is ranked 1B.1 in the CNPS rare plant inventory. It is found on openings in scrub or grassland areas. Its habitat includes coastal sage scrub, and valley and foothill grassland. No habitat for this species is present on the project site. **This species is not considered to be present.**

*Brand's star phacelia*

Brand's star phacelia (*Phacelia stellaris*) is ranked 1B.1 in the CNPS rare plant inventory. Its habitat includes coastal dunes and coastal sage scrub. No habitat for this species is present on the project site. **This species is not considered to be present.**

## 4.1.2 Threatened and Endangered Animals

A total of 27 animal species that are listed as state and/or federal Threatened, Endangered, or Candidate will be reviewed in this section. Sensitive species which have a potential to occur will also be discussed in this section. All sensitive species within a 5-mile radius of project area were reviewed and a complete list of those species are discussed within Appendix B. Below are descriptions of these species:

*Tricolored blackbird*

Tricolored blackbird (*Agelaius tricolor*) is a state listed threatened species and listed by the CDFW as a species of special concern. Its habitat includes freshwater marsh, marsh and swamps, and wetland. This species is largely endemic to California and is most numerous in and around the Central Valley. This species requires open accessible water, protected nesting substrate, and a foraging area with insect prey within a few kilometers of the colony. There is potential habitat for this species to be present in the stock ponds if vegetation is allowed to grow around the perimeters. **Potential to be present.**

*Grasshopper sparrow*

Grasshopper sparrow (*Ammodramus savannarum*) is a CDFW Species of Special Concern. It favors native grasslands with a mix of grasses, forbs, and scattered shrubs. Its habitat includes valley and foothill grassland. There is potential habitat for this species to be present in the fallow fields. **Potential to be present.**

*Arroyo Toad*

Arroyo Toad (*Anaxyrus californicus*) is a federally listed endangered species and a CDFW Species of Special Concern. The most favorable breeding habitat for this species consists of slow-moving shallow pools, nearby sandbars, and adjacent stream terraces. Its habitat includes desert wash, riparian scrub, riparian woodland, south coast flowing waters, and south coast standing waters. There is no habitat for this species on the project site. **This species is not considered to be present.**

*Southern California legless lizard*

Southern California legless lizard (*Anniella stebbinsi*) is a CDFW Species of Special Concern. It is found in a variety of habitats, generally around moist, loose soil. This species is generally found south of the Transverse Range, extending to northwestern Baja California, with disjunct populations found in the Tehachapi and Piute Mountains in Kern County. Its habitat includes

broadleaved upland forest, chaparral, coastal dunes, and coastal sage scrub. There is no habitat for this species present on the proposed project site. **This species is not considered to be present.**

#### *Great blue heron*

Great blue heron (*Ardea Herodias*) is a CDF Sensitive Species. It is found in rookery sites near foraging areas. It is a colonial nester in tall trees, cliffsides, and sequestered spots on marshes. Its habitat includes brackish marsh, estuary, freshwater marsh, marsh and swamp, riparian forest, and wetland. There is potential habitat for this species to be present in the stock ponds. **Potential to be present.**

#### *California glossy snake*

California glossy snake (*Arizona elegans occidentalis*) is a CDFW Species of Special Concern. This species is found in arid scrub, rocky washes, grassland and chaparral habitats, often with loose or sandy soils. There is potential habitat for this species to be present on the project site. **Potential to be present.**

#### *Burrowing owl*

Burrowing owl (*Athene cunicularia*) is a CDFW Species of Special Concern. Its habitat includes coastal prairie, coastal sage scrub, Great Basin grassland, Great Basin scrub, Mojavean desert scrub, Sonoran desert scrub, and valley and foothill grassland. This species is typically found in open and dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. It is a subterranean nester and is dependent upon burrowing mammals, most notably the California ground squirrel (*Otospermophilus beecheyi*). There is potential habitat for this species to be present on the fallow agricultural fields on the project site. **Potential to be present.**

#### *San Diego fairy shrimp*

San Diego fairy shrimp (*Branchinecta sandiegonensis*) is a federally listed endangered species. This species is found in chaparral, coastal sage scrub, vernal pool, and wetland habitats. The project site consists of a disturbed agriculture area. There is no habitat for this species on the project site. **The species is not considered to be present.**

#### *Swainson's hawk*

Swainson's hawk (*Buteo swainsoni*) is a state listed threatened species. This species favors open grasslands for foraging but also occurs in agricultural settings. It relies on scattered stands of trees near agricultural fields and grasslands for nesting sites. Its habitats include great basin grassland, riparian forest, riparian woodland, and valley and foothill grassland. There is potential habitat for this species to be present on the project site. **Potential to be present.**

*Santa Ana sucker*

Santa Ana sucker (*Catostomus santaanae*) is a federally listed threatened species. Its habitat includes aquatic and south coast flowing waters. This species prefers sand-rubble-boulder bottoms, cool and clear water, and algae. It is endemic to the Los Angeles Basin south coastal streams. The project site does not contain suitable habitat for this species. **This species is not considered to be present.**

*Western yellow-billed cuckoo*

Western yellow-billed cuckoo (*Coccyzus americanus occidentalis*) is a federally listed threatened and state listed endangered species. This species typically nests in riparian jungles of willows, often mixed with cottonwoods, with a lower story of blackberry, nettles, or wild grape. It is found in riparian forest habitat. The project site does not contain suitable habitat for this species. **This species is not considered to be present.**

*Yellow rail*

Yellow rail (*Coturnicops noveboracensis*) is a CDFW Species of Special Concern. It is a summer resident in eastern Sierra Nevada in Mono County. Its habitat includes freshwater marsh and meadow and seep. There is potential habitat for this species to be present in the stock ponds if vegetation is allowed to grow. **Potential to be present.**

*San Bernardino kangaroo rat*

San Bernardino kangaroo rat (*Dipodomys merriami parvus*) is a federally listed endangered species, state listed candidate endangered, and a CDFW Species of Special Concern. It is found in alluvial fan sage scrub habitat. This species is found on sandy loam substrates, characteristic of alluvial fans and flood plains. It needs early to intermediate seral stages. The project site does not contain suitable habitat for this species. **This species is not considered to be present.**

*Stephen's kangaroo rat*

Stephens' kangaroo rat (*Dipodomys stephensi*) is a federally listed endangered and state listed threatened species. This species is found in coastal sage scrub with sparse vegetation cover, and in valley and foothill grasslands. This species prefers buckwheat, chamise, brome grass, and filaree, and will burrow into firm soil. The project site does not contain suitable habitat for this species. **This species is not considered to be present.**

*Southwestern willow flycatcher*

Southwestern willow flycatcher (*Empidonax traillii extimus*) is a federally and state listed endangered species. It is found in riparian woodland habitat in southern California. The project site does not contain suitable habitat for this species. **This species is not considered to be present.**

*Western pond turtle*

Western pond turtle (*Emys marmorata*) is a CDFW Species of Special Concern. This species needs basking sites and suitable upland habitat consisting of sandy banks or grassy open fields up to 0.5 kilometers from water for egg-laying. It is a thoroughly aquatic turtle of ponds, marshes, rivers, streams, and irrigation ditches, usually with aquatic vegetation, below 6000 feet in elevation. There is potential habitat for this species to be present in the stock ponds. **Potential to be present.**

*California horned lark*

California horned lark (*Eremophila alpestris actia*) is listed on the CDFW Watch List. It is found in coastal regions, chiefly from Sonoma County to San Diego County, as well as in parts of the San Joaquin Valley and east to foothills. This species is found in areas with short-grass prairie, “bald” hills, mountain meadows, open coastal plains, fallow grain fields, and/or alkali flats. There is potential habitat for this species to be present on the project site. **Potential to be present.**

*Western mastiff bat*

Western mastiff bat (*Eumops perotis californicus*) is a CDFW Species of Special Concern. It roosts in crevices in cliff faces, high buildings, trees, and tunnels. It is found in open, semi-arid to arid habitats. Its habitat includes chaparral, cismontane woodland, coastal sage scrub, and valley and foothill grassland. There is potential habitat for this species to be present on the project site. **Potential to be present.**

*Quino checkerspot butterfly*

Quino checkerspot butterfly (*Euphydryas editha quino*) is a federally listed endangered species. It is found in chaparral and coastal sage scrub. This species requires high densities of food plants, including *Plantago erecta*, *P. insularis*, and *Orthocarpus purpureus*. The project site does not have suitable habitat for this species. **This species is not considered to be present.**

*Merlin*

Merlin (*Falco columbarius*) is listed on the CDFW Watch List. It is found in areas with clumps of trees or windbreaks for roosting. Its habitat includes estuary, Great Basin grassland, and valley and foothill grassland. There is potential habitat for this species to be present on the project site. **Potential to be present.**

*Bald eagle*

Bald eagle (*Haliaeetus leucocephalus*) is a state listed endangered and CDFW fully protected species. This species is found in lower montane coniferous forest and old-growth. They nest in large old-growth or tress with open branches, especially ponderosa pine (*Pinus ponderosa*). The project site does not contain suitable habitat for this species. **This species is not considered to be present.**

*California black rail*

California black rail (*Laterallus jamaicensis coturniculus*) is a state listed threatened species and is a CDFW Fully Protected Species. It inhabits freshwater marshes, wet meadows, and shallow margins of saltwater marshes bordering larger bays. This species needs water depths of about one inch that do not fluctuate throughout the year and dense vegetation for nesting habitat. Its habitat includes brackish marsh, freshwater marsh, marsh and swamp, salt marsh, and wetland. The project site does not have suitable habitat for this species. **This species is not considered to be present.**

*Steelhead-southern California DPS*

Steelhead-southern California DPS (*Oncorhynchus mykiss irideus* pop. 10) is a federally listed endangered species. This species is likely to have greater physiological tolerances to warmer water and more variable conditions. Its habitats include aquatic and south coast flowing waters. The project site does not have suitable habitat for this species. **This species is not considered to be present.**

*Coastal California gnatcatcher*

Coastal California gnatcatcher (*Polioptila californica californica*) is a federally listed threatened species and CDFW Species of Special Concern. This species is found in coastal bluff scrub and coastal scrub habitat. This species is typically found in low, coastal sage scrub in arid washes, on mesas and slopes. The project site does not have suitable habitat for this species. **This species is not considered to be present.**

*Delhi Sands flower-loving fly*

Delhi Sands flower-loving fly (*Rhaphiomidas terminates abdominalis*) is a federally listed endangered species. It requires fine, sandy soils, often with wholly or partly consolidated dunes and sparse vegetation. It is found only in areas of the Delhi Sands formation in southwestern San Bernardino and northwestern Riverside counties. The project site does not have suitable habitat for this species. **This species is not considered to be present.**

*California least tern*

California least tern (*Sternula antillarum browni*) is a state and federally listed endangered species and a CDFW Fully Protected Species. It nests along the coast from San Francisco Bay South to northern Baja California. Its habitat includes alkali playa and wetland. The project site does not have suitable habitat for this species. **This species is not considered to be present.**

*Least Bell's vireo*

Least Bell's vireo (*Vireo bellii pusillus*) is a federal and state listed endangered species. This species is found in riparian forest, riparian scrub, and riparian woodland. Nesting habitat of this species is restricted to willow and/or mulefat dominated riparian scrub along permanent or nearly permanent streams. The project site does not contain suitable habitat for this species. **This species is not considered to be present.**

## 4.2 Species with other Special Status Listings

Species which are listed as California Species of Special Concern or are not on the CDFW List of Rare plants have all been evaluated and the results can be reviewed in Appendix B to this report. Any of these species which are present or have a potential to exist in the project area will have mitigation measures to avoid or minimize impacts in the Recommendations section of this report.

## 4.3 Critical Habitats

Critical habitat is defined as areas of land, water, and air space that contain the physical and biological features essential for the survival and recovery of endangered and threatened species. Designated critical habitat includes sites for breeding and rearing, movement or migration, feeding, roosting, cover, and shelter. Critical habitat is designated by USFWS for endangered and threatened species per the federal ESA (16 U.S.C. § 1533 (a)(3)), and to the extent prudent and determinable. Special management of critical habitat, including measures for water quality and quantity, host animals and plants, food availability, pollinators, sunlight, and specific soil types is required to ensure the long-term survival and recovery of the identified species. Critical habitat designation delineates all suitable habitat for the species, whether or not it is occupied. The project site is not located within or adjacent to designated critical habitat for endangered species.

## 4.4 Nesting Birds

Migratory non-game native bird species are protected under the federal Migratory Bird Treaty Act. Additionally, Sections 3503, 3503.5, and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests. The project site contains non-native structures, grasses, shrubs and trees including 3.64 acres of Eucalyptus woodland that can support nesting songbirds or raptors and can be used by nesting song birds or raptors during the nesting bird season of February 1 to September 15.

## 4.5 Wildlife Movement Corridors

Wildlife movement corridors can be local or regional in scale; their functions may vary temporally and spatially based on conditions and species present. Wildlife corridors represent areas where wildlife movement is concentrated due to natural or anthropogenic constraints. Local corridors provide access to resources such as food, water, and shelter. Animals use these corridors, which are often hillsides or riparian areas, to move between different habitats. Regional corridors provide these functions and link two or more large habitat areas. They provide avenues for wildlife dispersal, migration, and contact between otherwise distinct populations.

The project site is not located within a designated wildlife corridor or linkage. The project site consists of a dairy farm and agricultural fields. Bon view Avenue crosses the central portion of the site from north to south. The site is surrounded by agricultural fields to the north, east, and

west. Chino Airport lies to the south. The project site is surrounded by development and/or existing agricultural and livestock land uses. Further, the site is separated from regional wildlife movement corridors associated with the Prado Dam Flood Control Basin and Santa Ana River. Therefore, the project site does not function as a wildlife movement corridor.

#### **4.6 City, County, Regional, State, or Federal Conservation Plans**

The project site is not within any state or federal Habitat Conservation Plans or Habitat Conservation Plans. The Ontario Plan is a Policy Plan that serves as the City of Ontario's General Plan.

The project site is located within the boundaries of the City's Ontario Plan. The Ontario Plan's Environmental Resources Element outlines goals and policies related to Water & Wastewater, Solid Waste & Recycling, Energy, Air Quality, and Biological, Agricultural & Mineral Resources. The biological goal is to protect high value habitat. The Ontario Plan includes policies to support the protection of biological resources through habitat conservation areas and to comply with state and federal regulations regarding protected species.

The City's Municipal Code, Volume II, Chapter 2 contains a provision for "Parkway Tree Regulations" (Ordinance 1664), to preserve parkway trees and to regulate the maintenance and removal of such trees. Parkway is defined as "...that portion of any public street right-of-way between the right-of-way boundary line and the curb line, and also the area enclosed within the curblines of a medial divider." The property owner abutting upon public rights-of-way is responsible to water any tree located in the parkway and for trimming that can be done from the ground to preserve the neat appearance and non-obstructed use of the parkway, while the City is responsible for all major pruning. Removal or relocation of any parkway tree requires prior authorization from the Public Works Agency of the City through a permit process, and planting of a replacement tree, whenever feasible, shall be a condition included in any permit issued by the City for the removal of any parkway tree. Alternatively, a cash-in-lieu deposit may be accepted by the City as an alternate to the actual planting of any required parkway tree based on a fair value established by the Public Facilities Manager.

#### **4.7 State and Federal Jurisdictional Drainages**

The project site contains approximately 19 acres of stock/retention ponds and channels. These ponds and channels are man-made, for agricultural use, and fed by wells. The man-made ponds and channels are not connected to a natural stream, nor do they divert natural flow from any river, stream or lake.

Since the source of the water for these man-made features are not part of a natural stream, river, or lake, the stock ponds are not considered jurisdictional under the CDFW Lake and Streambed Alteration Program. The program states: "An entity shall not substantially divert or obstruct the

natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake...". Therefore, the stock ponds on the project site are not a "natural flow" of a stream, river, or lake, and would not be considered jurisdictional by CDFW.

Further, the man-made stock ponds are not adjacent to and are not considered Waters of the United States (WUS), which receives no hydrologic flow. The stock ponds are isolated features that are not tributary to nor do they have a significant nexus (biological, chemical, or physical connection) to traditional navigable waters of the United States. Therefore, the man-made ponds on the project site would not be considered federally jurisdictional under the Clean Water Act.

## 5.0 Project Impacts

### 5.1 Impacts to Existing Habitats

Implementation of the proposed project will impact approximately 126.80-acre project site, including 48 acres of agriculture fields, 61.8 acres of disturbed agriculture infrastructure, and 17.0 acres of stock/retention ponds and channels.

### 5.2 Impacts to Sensitive Species

#### 5.2.1 Plant Species

As identified in Section 4.1.1 (above), no special-status plant species were detected on the site during the reconnaissance surveys and no special-status plant species are expected to occur on the site due to lack of suitable habitat. Longstanding weed abatement/fire break discing and other anthropogenic disturbances have likely altered soil chemistry and other substrate characteristics such that on-site soils may not currently be capable of supporting sensitive plant species. Therefore, the development of the Project would not result in a substantial adverse effect, either directly or through habitat modification, on any plant species identified as a candidate, sensitive or special status species in local or regional plans, policies, or regulation or by the CDFW or USFWS. Hence, no significant impact to special-status plant species or their habitat would occur.

#### 5.2.2 Animals

As identified in Section 4.1.2 (above), the species discussed below have been determined to have the potential to occur on site. Project activities were evaluated to determine the potential for impacts to these species.

##### *Tricolored blackbird*

Tricolored blackbird is a state listed candidate endangered species and listed by the CDFW as a species of special concern. There is potential habitat for this species present on this site. This potential habitat is found around the man-made stock ponds if vegetation is allowed to grow or if

vegetation is present. The proposed project has the potential to result in impacts to this species. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to this species are less than significant.

#### *Grasshopper sparrow*

Grasshopper sparrow (*Ammodramus savannarum*) is a CDFW Species of Special Concern. There is potential habitat for this species to be present in the stock ponds. The proposed project has the potential to result in impacts to this species. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to this species are less than significant.

#### *Great blue heron*

Great blue heron is a CDF Sensitive Species. There is potential habitat for this species to be present in the stock ponds. The proposed project has the potential to result in impacts to this species. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to this species are less than significant.

#### *California glossy snake*

California glossy snake (*Arizona elegans occidentalis*) is a CDFW Species of Special Concern. There is potential habitat for this species to be present on the project site. The proposed project has the potential to result in impacts to this species. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to this species are less than significant.

#### *Burrowing owl*

Burrowing owl is a CDFW Species of Special Concern. There is potential habitat for this species to be present on the project site. The proposed project has the potential to result in impacts to this species. Protocol burrowing owl surveys are recommended to determine the presence and use of the site by burrowing owls.

#### *Swainson's hawk*

Swainson's hawk is a state listed threatened species. There is potential habitat including the for this species to be present on the project site. The proposed project has the potential to result in impacts to this species. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to this species are less than significant.

#### *Yellow rail*

Yellow rail (*Coturnicops noveboracensis*) is a CDFW Species of Special Concern. There is potential habitat for this species to be present in the stock ponds. This potential habitat is found around the man-made stock ponds if vegetation is allowed to grow or if vegetation is present. The proposed project has the potential to result in impacts to this species. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to this species are less than significant.

*Western pond turtle*

Western pond turtle is a CDFW Species of Special Concern. There is potential habitat for this species to be present in the stock ponds. The proposed project has the potential to result in impacts to this species. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to this species are less than significant.

*California horned lark*

California horned lark is listed on the CDFW Watch List. There is potential habitat for this species to be present on the project site. The proposed project has the potential to result in impacts to this species. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to this species are less than significant.

*Western mastiff bat*

Western mastiff bat is a CDFW Species of Special Concern. There is potential habitat for this species to be present on the project site. The proposed project has the potential to result in impacts to this species. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to this species are less than significant.

*Merlin*

Merlin is listed on the CDFW Watch List. There is potential habitat for this species to be present on the project site. The proposed project has the potential to result in impacts to this species. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to this species are less than significant.

### **5.3 Impacts to Nesting Birds**

Potential impacts to nesting birds may occur if ground disturbing activities or vegetation removal occur during the bird nesting season of February 1 through September 15. Implementation of the measures identified in the Recommendations section of this report will ensure that potential impacts to nesting birds are less than significant.

### **5.4 Impacts to Critical Habitat**

The project is not located within designated federal critical habitat. No impact to critical habitat is expected.

### **5.5 Impacts to Wildlife Movement Corridors**

The project site does not contain any wildlife movement corridors. No impacts are expected.

## 5.6 Conflict with Local Policies or Ordinances Protecting Biological Resources

The Ontario Plan supports the protection of high value habitat areas by establishing habitat conservation areas and complying with state and federal regulations regarding protected species. Since the project site does not support high value habitats or protected species, the project will not conflict with these policies.

The City's Municipal Code has a provision to protect parkway trees within public rights-of-way and requires a permit to remove or relocate any trees, and planting of replacement trees or a cash-in-lieu fee compensation for any tree removed. Should the project result in the removal of trees that are considered parkway trees, a permit will be required.

## 5.7 Conflict with the Provisions of an Adopted Habitat Conservation Plan, Natural Community Conservation Plan, or Other Approved Local, Regional, or State Habitat Conservation plan

No impacts to any adopted Habitat Conservation Plan, Natural Community Conservation Plan, or Other Approved Local, Regional, or State Habitat Conservation plan are anticipated.

## 6.0 Recommendations

In order to mitigate any potential impacts from project activities, the project should incorporate the following recommendations:

### 6.1 Sensitive Species

Tricolored blackbird, Grasshopper sparrow, Great blue heron, Swainson's hawk, Yellow rail, California horned lark, Merlin

- It is recommended that vegetation removal be conducted outside of the nesting season for migratory birds to avoid direct impacts.
- If vegetation removal will occur during the migratory bird nesting season, between February 1 and September 15, it is recommended that pre-construction nesting bird surveys be performed within three days prior to vegetation removal.
- If active nests are found during nesting bird surveys, they shall be flagged. A 250-foot buffer shall be fenced around song bird nests and a 500-foot buffer shall be fenced around raptor nests.
- A biological monitor shall visit the site once a week during ground disturbing activities to ensure all fencing is in place and no sensitive species are being impacted

### California glossy snake

- Three days prior to any ground disturbing activities or vegetation removal, a qualified biological monitor should conduct a preconstruction survey to identify any sensitive biological resources. Any reptile species that may be present within the project area shall be relocated outside of the impact areas.
- Biological monitors shall be on-call to relocate any reptile or amphibian that is encountered during construction activities.

### Burrowing owl

- A protocol burrowing owl survey is recommended to determine the presence and use of the site by burrowing owls.

### Western mastiff bat

- Prior to implementation of project activities, a qualified biologist shall be retained to determine whether potential roosting sites for special-status bats may be affected. Specifically, the agriculture buildings used for sheltering bovines.
- If potential roosting sites are identified, a preconstruction survey shall be conducted prior to the end of April to determine the presence or absence of roosting bats. If the survey does not identify the presence of occupied roosts, no further action is necessary.
- If day roosts or maternity roosts occupied by special-status bat species are documented within construction areas, the bats shall be safely flushed from the sites where roosting habitat is planned to be removed prior to the month of May (maternity roosts are generally occupied from May to August) and prior to the onset of construction activities. The removal of the roosting sites shall occur during the time of day when the roost is unoccupied. The loss of each roost will be compensated for by the construction and installation of two bat boxes suitable to the bat species and colony size excluded from the original roosting site. The bat boxes shall be installed in the vicinity prior to removal of the original day/maternity roost sites. A detailed program for bat flushing, roosting site removal, and installation of bat boxes shall be developed in consultation with a qualified biologist.

### Western pond turtle

- Within 14 days prior to the onset of construction activities, a qualified biologist shall conduct pre-construction surveys for western pond turtle within all areas that fall within 100 feet of any suitable aquatic and upland nesting habitat for this species (stock/retention

ponds). If western pond turtles are observed during the pre-construction survey, the California Department of Fish and Wildlife shall be contacted. If no Western pond turtles are observed during the preconstruction survey, then construction activities may begin. If construction is delayed or halted for more than 30 days, another pre-construction survey for western pond turtle shall be conducted. Within seven days of the pre-construction survey, a report of findings from the survey shall be submitted to the California Department of Fish and Wildlife.

- During construction, a qualified biological monitor who has been approved by the California Department of Fish and Wildlife to relocate western pond turtles shall be onsite to ensure that no western pond turtles are harmed. If western pond turtles are observed in the construction area at any time during construction, the onsite biological monitor shall be notified and construction in the vicinity of the sighting shall be halted until such a time as a turtle has been removed from the construction zone and relocated by an approved biologist. If a sighting occurs during construction, the biologist shall prepare a report of the event and submit it to California Department of Fish and Wildlife.

## 7.0 Certification

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

## Species List

### Plant List

<i>Amaranthus albus</i>	Tumbleweed
<i>Ambrosia psilostachya</i>	Western ragweed
<i>Amsinckia intermedia</i>	Common fiddleneck
<i>Brassica nigra</i>	Black mustard
<i>Brassica tournefortii</i>	Saharan mustard
<i>Calystegia</i> sp.	Bindweed
<i>Carex</i> sp.	Sedges
<i>Cynodon dactylon</i>	Bermuda grass
<i>Chenopodium album</i>	Lambs quarters
<i>Datura stramonium</i>	Jimson weed
<i>Erigeron canadensis</i>	Horseweed
<i>Eucalyptus globulus</i>	Blue gum
<i>Euphorbia maculate</i>	Spotted spurge
<i>Helianthus annus</i>	Common sunflower
<i>Heterotheca grandiflora</i>	Telegraph weed
<i>Hordeum murinum</i>	Foxtail barley
<i>Juncus</i> sp.	Rushes
<i>Malva parviflora</i>	Cheeseweed
<i>Medicago sativa</i>	Alfalfa
<i>Nicotina glauca</i>	Tree tobacco
<i>Salsola tragus</i>	Russian thistle
<i>Schismus barbatus</i>	Common Mediterranean grass
<i>Sisymbrium irio</i>	London rocket
<i>Tamarix</i> spp.	Tamarisk
<i>Tribulus terrestris</i>	Puncture weed
<i>Zea</i> sp.	Maiz

## **Animal List**

*Buteo jamaicensis*

*Cathartes aura*

*Charadrius vociferus*

*Corvus brachyrhynchos*

*Corvus corax*

*Euphagus cyanocephalus*

*Haemorhous mexicanus*

*Himantopus mexicanus*

*Hirundo rustica*

*Melospiza crissalis*

*Otospermophilus beecheyi*

*Sayornis nigricans*

*Sayornis saya*

*Streptopelia decaocto*

*Tyrannus verticalis*

*Uta stansburiana*

*Zenaidura macroura*

*Zonotrichia leucophrys*

Red-tailed hawk

Turkey Vulture

Killdeer

American crow

Raven

Brewer's Blackbird

House finch

Black-necked stilt

Barn swallow

California towhee

California ground squirrel

Black phoebe

Say's phoebe

Eurasian collared dove

Western kingbird

Common side-blotched Lizard

Mourning Dove

White-crowned sparrow

## **APPENDIX B**

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
<i>Abronia villosa</i> var. <i>aurita</i>	chaparral sand-verbena	Dicots	None	None	1B.1	BLM_S-Sensitive   SB_RSABG-Rancho Santa Ana Botanic Garden   USFS_S-Sensitive	Chaparral   Coastal scrub   Desert dunes	Chaparral, coastal scrub, desert dunes.	Sandy areas. -60-1570 m.	No habitat for this species. <b>Not present.</b>
<i>Astragalus brauntonii</i>	Braunton's milk-vetch	Dicots	Endangered	None	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden   SB_SBBG-Santa Barbara Botanic Garden	Chaparral   Coastal scrub   Limestone   Valley & foothill grassland	Chaparral, coastal scrub, valley and foothill grassland.	Recent burns or disturbed areas; usually on sandstone with carbonate layers. Soil specialist; requires shallow soils to defeat pocket gophers and open areas, preferably on hilltops, saddles or bowls between hills. 3-640 m.	No habitat for this species. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Atriplex coulteri	Coulter's saltbush	Dicots	None	None	1B.2	SB_RSABG-Rancho Santa Ana Botanic Garden	Coastal bluff scrub   Coastal dunes   Coastal scrub   Valley & foothill grassland	Coastal bluff scrub, coastal dunes, coastal scrub, valley and foothill grassland.	Ocean bluffs, ridgetops, as well as alkaline low places. Alkaline or clay soils. 2-460 m.	No habitat for this species. <b>Not present.</b>
Baccharis malibuensis	Malibu baccharis	Dicots	None	None	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral   Cismontane woodland   Coastal scrub   Riparian woodland	Coastal scrub, chaparral, cismontane woodland, riparian woodland.	In Conejo volcanic substrates, often on exposed roadcuts. Sometimes occupies oak woodland habitat. 150-320 m.	No habitat for this species. <b>Not present.</b>
Berberis nevinii	Nevin's barberry	Dicots	Endangered	Endangered	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden   SB_SBBG-Santa Barbara Botanic Garden	Chaparral   Cismontane woodland   Coastal scrub   Riparian scrub	Chaparral, cismontane woodland, coastal scrub, riparian scrub.	On steep, N-facing slopes or in low grade sandy washes. 90-1590 m.	No habitat for this species. Not present.
California Walnut Woodland	California Walnut Woodland	Woodland	None	None			Cismontane woodland			<b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Calochortus plummerae	Plummer's mariposa-lily	Monocots	None	None	4.2	SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral   Cismontane woodland   Coastal scrub   Lower montane coniferous forest   Valley & foothill grassland	Coastal scrub, chaparral, valley and foothill grassland, cismontane woodland, lower montane coniferous forest.	Occurs on rocky and sandy sites, usually of granitic or alluvial material. Can be very common after fire. 60-2500 m.	No habitat for this species. <b>Not present.</b>
Calochortus weedii var. intermedius	intermediate mariposa-lily	Monocots	None	None	1B.2	SB_RSABG-Rancho Santa Ana Botanic Garden   USFS_S-Sensitive	Chaparral   Coastal scrub   Valley & foothill grassland	Coastal scrub, chaparral, valley and foothill grassland.	Dry, rocky calcareous slopes and rock outcrops. 60-1575 m.	No habitat for this species. <b>Not present.</b>
Calystegia felix	lucky morning-glory	Dicots	None	None	1B.1		Meadow & seep   Riparian scrub	Meadows and seeps, riparian scrub.	Sometimes alkaline, alluvial. 9-205 m.	No habitat for this species. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
<i>Centromadia parryi</i> ssp. <i>australis</i>	southern tarplant	Dicots	None	None	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Marsh & swamp   Salt marsh   Valley & foothill grassland   Vernal pool   Wetland	Marshes and swamps (margins), valley and foothill grassland, vernal pools.	Often in disturbed sites near the coast at marsh edges; also in alkaline soils sometimes with saltgrass. Sometimes on vernal pool margins. 0-975 m.	No habitat for this species. <b>Not present.</b>
<i>Centromadia pungens</i> ssp. <i>laevis</i>	smooth tarplant	Dicots	None	None	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Alkali playa   Chenopod scrub   Meadow & seep   Riparian woodland   Valley & foothill grassland   Wetland	Valley and foothill grassland, chenopod scrub, meadows and seeps, playas, riparian woodland.	Alkali meadow, alkali scrub; also in disturbed places. 5-1170 m.	No habitat for this species. <b>Not present.</b>
<i>Chorizanthe parryi</i> var. <i>fernandina</i>	San Fernando Valley spineflower	Dicots	Proposed Threatened	Endangered	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden   USFS_S-Sensitive	Coastal scrub   Valley & foothill grassland	Coastal scrub, valley and foothill grassland.	Sandy soils. 15-1015 m.	No habitat for this species. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Chorizanthe parryi var. parryi	Parry's spineflower	Dicots	None	None	1B.1	BLM_S-Sensitive   SB_RSABG-Rancho Santa Ana Botanic Garden   USFS_S-Sensitive	Chaparral   Cismontane woodland   Coastal scrub   Valley & foothill grassland	Coastal scrub, chaparral, cismontane woodland, valley and foothill grassland.	Dry slopes and flats; sometimes at interface of 2 vegetation types, such as chaparral and oak woodland. Dry, sandy soils. 90-1220 m.	No habitat for this species. <b>Not present.</b>
Chorizanthe polygonoides var. longispina	long-spined spineflower	Dicots	None	None	1B.2	BLM_S-Sensitive   SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral   Coastal scrub   Meadow & seep   Ultramafic   Valley & foothill grassland   Vernal pool	Chaparral, coastal scrub, meadows and seeps, valley and foothill grassland, vernal pools.	Gabbroic clay. 30-1630 m.	No habitat for this species. <b>Not present.</b>
Cladium californicum	California saw-grass	Monocots	None	None	2B.2	SB_RSABG-Rancho Santa Ana Botanic Garden   USFS_S-Sensitive	Alkali marsh   Freshwater marsh   Meadow & seep   Wetland	Meadows and seeps, marshes and swamps (alkaline or freshwater).	Freshwater or alkaline moist habitats. -20-2135 m.	No meadows or seeps present. Just man-made stock ponds. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Dodecahema leptoceras	slender-horned spineflower	Dicots	Endangered	Endangered	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral   Cismontane woodland   Coastal scrub	Chaparral, cismontane woodland, coastal scrub (alluvial fan sage scrub).	Flood deposited terraces and washes; associates include Encelia, Dalea, Lepidospartum, etc. Sandy soils. 200-765 m.	No habitat for this species. <b>Not present.</b>
Dudleya multicaulis	many-stemmed dudleya	Dicots	None	None	1B.2	BLM_S-Sensitive   SB_RSABG-Rancho Santa Ana Botanic Garden   USFS_S-Sensitive	Chaparral   Coastal scrub   Valley & foothill grassland	Chaparral, coastal scrub, valley and foothill grassland.	In heavy, often clayey soils or grassy slopes. 1-910 m.	No habitat for this species. <b>Not present.</b>
Eriastrum densifolium ssp. sanctorum	Santa Ana River woollystar	Dicots	Endangered	Endangered	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral   Coastal scrub	Coastal scrub, chaparral.	In sandy soils on river floodplains or terraced fluvial deposits. 180-705 m.	No habitat for this species. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Hesperocyparis forbesii	Tecate cypress	Gymnosperms	None	None	1B.1	BLM_S-Sensitive   SB_CRES-San Diego Zoo CRES Native Gene Seed Bank   SB_RSABG-Rancho Santa Ana Botanic Garden   SB_UCSC-UC Santa Cruz   SB_USDA-US Dept of Agriculture   USFS_S-Sensitive	Chaparral   Closed-cone coniferous forest	Closed-cone coniferous forest, chaparral.	Primarily on north-facing slopes; groves often associated with chaparral. On clay or gabbro. 60-1650 m.	No habitat for this species. <b>Not present.</b>
Horkelia cuneata var. puberula	mesa horkelia	Dicots	None	None	1B.1	USFS_S-Sensitive	Chaparral   Cismontane woodland   Coastal scrub	Chaparral, cismontane woodland, coastal scrub.	Sandy or gravelly sites. 15-1645 m.	No habitat for this species. <b>Not present.</b>
Lepechinia cardiophylla	heart-leaved pitcher sage	Dicots	None	None	1B.2	SB_RSABG-Rancho Santa Ana Botanic Garden   USFS_S-Sensitive	Chaparral   Cismontane woodland   Closed-cone coniferous forest	Closed-cone coniferous forest, chaparral, cismontane woodland.	115-1345 m.	No habitat for this species. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Lepidium virginicum var. robinsonii	Robinson's pepper-grass	Dicots	None	None	4.3		Chaparral   Coastal scrub	Chaparral, coastal scrub.	Dry soils, shrubland. 4-1435 m.	No habitat for this species. <b>Not present.</b>
Monardella australis ssp. jokerstii	Jokerst's monardella	Dicots	None	None	1B.1	USFS_S-Sensitive	Chaparral   Lower montane coniferous forest	Lower montane coniferous forest, chapparal.	Steep scree or talus slopes between breccia. Secondary alluvial benches along drainages and washes. 210-1740 m.	No habitat for this species. <b>Not present.</b>
Monardella hypoleuca ssp. intermedia	intermediate monardella	Dicots	None	None	1B.3		Chaparral   Cismontane woodland   Lower montane coniferous forest	Chaparral, cismontane woodland, lower montane coniferous forest (sometimes).	Often in steep, brushy areas. 195-1675 m.	No habitat for this species. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Muhlenbergia californica	California muhly	Monocots	None	None	4.3		Chaparral   Coastal scrub   Lower montane coniferous forest   Meadow & seep	Coastal scrub, chaparral, lower montane coniferous forest, meadows and seeps.	Usually found near streams or seeps. 100-2000 m.	No habitat for this species. <b>Not present.</b>
Muhlenbergia utilis	aparejo grass	Monocots	None	None	2B.2		Chaparral   Cismontane woodland   Coastal scrub   Marsh & swamp   Meadow & seep   Ultramafic	Meadows and seeps, marshes and swamps, chaparral, coastal scrub, cismontane woodland.	Sometimes alkaline, sometimes serpentinite. 25-2325 m.	No habitat for this species. Not present.
Nasturtium gambelii	Gambel's water cress	Dicots	Endangered	Threatened	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden   SB_SBBG-Santa Barbara Botanic Garden	Brackish marsh   Freshwater marsh   Marsh & swamp   Wetland	Marshes and swamps.	Freshwater and brackish marshes at the margins of lakes and along streams, in or just above the water level. 5-305 m.	No marshes or swamps present. Just man-made stock ponds. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Navarretia prostrata	prostrate vernal pool navarretia	Dicots	None	None	1B.2		Coastal scrub   Meadow & seep   Valley & foothill grassland   Vernal pool   Wetland	Coastal scrub, valley and foothill grassland, vernal pools, meadows and seeps.	Alkaline soils in grassland, or in vernal pools. Mesic, alkaline sites. 3-1235 m.	No habitat for this species. <b>Not present.</b>
Nolina cismontana	chaparral nolina	Monocots	None	None	1B.2	SB_RSABG-Rancho Santa Ana Botanic Garden   SB_SBBG-Santa Barbara Botanic Garden   USFS_S-Sensitive	Chaparral   Coastal scrub   Ultramafic	Chaparral, coastal scrub.	Primarily on sandstone and shale substrates; also known from gabbro. 140-1100 m.	No habitat for this species. <b>Not present.</b>
Penstemon californicus	California beardtongue	Dicots	None	None	1B.2	SB_RSABG-Rancho Santa Ana Botanic Garden   SB_USDA-US Dept of Agriculture   USFS_S-Sensitive	Chaparral   Lower montane coniferous forest   Pinon & juniper woodlands	Chaparral, lower montane coniferous forest, pinyon and juniper woodland.	Stony slopes and shrubby openings; sandy or granitic soils. 240-2290 m.	No habitat for this species. <b>Not present.</b>
Pentachaeta aurea ssp. allenii	Allen's pentachaeta	Dicots	None	None	1B.1		Coastal scrub   Valley & foothill grassland	Valley and foothill grasslands, coastal scrub.	Openings in scrub or grassland. 75-520 m.	No habitat for this species. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Phacelia keckii	Santiago Peak phacelia	Dicots	None	None	1B.3	USFS_S-Sensitive	Chaparral   Closed-cone coniferous forest	Closed-cone coniferous forest, chaparral.	Open areas, sometimes along creeks. 545-1525 m.	No habitat for this species. <b>Not present.</b>
Phacelia stellaris	Brand's star phacelia	Dicots	None	None	1B.1	SB_RSABG-Rancho Santa Ana Botanic Garden	Coastal dunes   Coastal scrub	Coastal scrub, coastal dunes.	Open areas. 3-370 m.	No habitat for this species. <b>Not present.</b>
Pseudognaphalium leucocephalum	white rabbit-tobacco	Dicots	None	None	2B.2		Chaparral   Cismontane woodland   Coastal scrub   Riparian woodland	Riparian woodland, cismontane woodland, coastal scrub, chaparral.	Sandy, gravelly sites. 35-515 m.	No habitat for this species. <b>Not present.</b>
Riversidian Alluvial Fan Sage Scrub	Riversidian Alluvial Fan Sage Scrub	Scrub	None	None			Coastal scrub			<b>Not present.</b>
Senecio aphanactis	chaparral ragwort	Dicots	None	None	2B.2	SB_RSABG-Rancho Santa Ana Botanic Garden	Chaparral   Cismontane woodland   Coastal scrub	Chaparral, cismontane woodland, coastal scrub.	Drying alkaline flats. 20-1020 m.	No habitat for this species. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Sidalcea neomexicana	salt spring checkerbloom	Dicots	None	None	2B.2	USFS_S-Sensitive	Alkali playa   Chaparral   Coastal scrub   Lower montane coniferous forest   Mojavean desert scrub   Wetland	Playas, chaparral, coastal scrub, lower montane coniferous forest, Mojavean desert scrub.	Alkali springs and marshes. 3-2380 m.	No habitat for this species. <b>Not present.</b>
Southern Coast Live Oak Riparian Forest	Southern Coast Live Oak Riparian Forest	Riparian	None	None			Riparian forest			<b>Not present.</b>
Southern Cottonwood Willow Riparian Forest	Southern Cottonwood Willow Riparian Forest	Riparian	None	None			Riparian forest			<b>Not present.</b>
Southern Interior Cypress Forest	Southern Interior Cypress Forest	Forest	None	None			Closed-cone coniferous forest			<b>Not present.</b>
Southern Riparian Forest	Southern Riparian Forest	Riparian	None	None			Riparian forest			<b>Not present.</b>
Southern Riparian Scrub	Southern Riparian Scrub	Riparian	None	None			Riparian scrub			<b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Southern Sycamore Alder Riparian Woodland	Southern Sycamore Alder Riparian Woodland	Riparian	None	None			Riparian woodland			<b>Not present.</b>
Southern Willow Scrub	Southern Willow Scrub	Riparian	None	None			Riparian scrub			<b>Not present.</b>
Symphytotric hum defoliatum	San Bernardino aster	Dicots	None	None	1B.2	BLM_S-Sensitive   USFS_S-Sensitive	Cismontane woodland   Coastal scrub   Lower montane coniferous forest   Marsh & swamp   Meadow & seep   Valley & foothill grassland	Meadows and seeps, cismontane woodland, coastal scrub, lower montane coniferous forest, marshes and swamps, valley and foothill grassland.	Vernally mesic grassland or near ditches, streams and springs; disturbed areas. 3-2045 m.	No habitat for this species. <b>Not present.</b>
Thysanocarpus rigidus	rigid fringe pod	Dicots	None	None	1B.2	BLM_S-Sensitive   USFS_S-Sensitive	Pinon & juniper woodlands	Pinyon and juniper woodland.	Dry, rocky slopes and ridges of oak and pine woodland in arid mountain ranges. 425-2165	No habitat for this species. <b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	Rplant Rank	OthrStatus	Habitats	GenHab	MicroHab	Presence/Absence
Walnut Forest	Walnut Forest	Forest	None	None			Broadleaved upland forest			<b>Not present.</b>

Scientific Name	Common Name	Taxon Group	Federal List	State List	OthrStatus	Habitats	GenHab	MicroHab	Presence/ Absence
Accipiter cooperii	Cooper's hawk	Birds	None	None	CDFW_WL-Watch List   IUCN_LC-Least Concern	Cismontane woodland   Riparian forest   Riparian woodland   Upper montane coniferous forest	Woodland, chiefly of open, interrupted or marginal type.	Nest sites mainly in riparian growths of deciduous trees, as in canyon bottoms on river flood-plains; also, live oaks.	No habitat for this species present. <b>Not present.</b>
Agelaius tricolor	tricolored blackbird	Birds	None	Threatened	BLM_S-Sensitive   CDFW_SSC-Species of Special Concern   IUCN_EN-Endangered   NABCI_RWL-Red Watch List   USFWS_BCC-Birds of Conservation Concern	Freshwater marsh   Marsh & swamp   Swamp   Wetland	Highly colonial species, most numerous in Central Valley & vicinity. Largely endemic to California.	Requires open water, protected nesting substrate, and foraging area with insect prey within a few km of the colony.	Habitat is present in the stock ponds. <b>Potential to be present.</b>
Aimophila ruficeps canescens	southern California rufous-crowned sparrow	Birds	None	None	CDFW_WL-Watch List	Chaparral   Coastal scrub	Resident in Southern California coastal sage scrub and sparse mixed chaparral.	Frequents relatively steep, often rocky hillsides with grass and forb patches.	No habitat for this species present. <b>Not present.</b>

Ammodramus savannarum	grasshopper sparrow	Birds	None	None	CDFW_SSC- Species of Special Concern   IUCN_LC-Least Concern	Valley & foothill grassland	Dense grasslands on rolling hills, lowland plains, in valleys and on hillsides on lower mountain slopes.	Favors native grasslands with a mix of grasses, forbs and scattered shrubs. Loosely colonial when nesting.	Habitat is present in the stock ponds. <b>Potential to be present.</b>
Anaxyrus californicus	arroyo toad	Amphibians	Endangered	None	CDFW_SSC- Species of Special Concern   IUCN_EN- Endangered	Desert wash   Riparian scrub   Riparian woodland   South coast flowing waters   South coast standing waters	Semi-arid regions near washes or intermittent streams, including valley- foothill and desert riparian, desert wash, etc.	Rivers with sandy banks, willows, cottonwoods, and sycamores; loose, gravelly areas of streams in drier parts of range.	No habitat for this species present. <b>Not present.</b>

<p>Anniella stebbinsi</p>	<p>southern California legless lizard</p>	<p>Reptiles</p>	<p>None</p>	<p>None</p>	<p>CDFW_SSC- Species of Special Concern   USFS_S-Sensitive</p>	<p>Broadleaved upland forest   Chaparral   Coastal dunes   Coastal scrub</p>	<p>Generally south of the Transverse Range, extending to northwestern Baja California. Occurs in sandy or loose loamy soils under sparse vegetation. Disjunct populations in the Tehachapi and Piute Mountains in Kern County.</p>	<p>Variety of habitats; generally in moist, loose soil. They prefer soils with a high moisture content.</p>	<p>No habitat for this species present. <b>Not present.</b></p>
<p>Antrozous pallidus</p>	<p>pallid bat</p>	<p>Mammals</p>	<p>None</p>	<p>None</p>	<p>BLM_S-Sensitive   CDFW_SSC- Species of Special Concern   IUCN_LC-Least Concern   USFS_S-Sensitive   WBWG_H-High Priority</p>	<p>Chaparral   Coastal scrub   Desert wash   Great Basin grassland   Great Basin scrub   Mojavean desert scrub   Riparian woodland   Sonoran desert scrub   Upper montane coniferous forest   Valley &amp; foothill grassland</p>	<p>Deserts, grasslands, shrublands, woodlands and forests. Most common in open, dry habitats with rocky areas for roosting.</p>	<p>Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.</p>	<p>No habitat for this species present. <b>Not present.</b></p>

<p>Aquila chrysaetos</p>	<p>golden eagle</p>	<p>Birds</p>	<p>None</p>	<p>None</p>	<p>BLM_S-Sensitive   CDF_S-Sensitive   CDFW_FP-Fully Protected   CDFW_WL-Watch List   IUCN_LC-Least Concern   USFWS_BCC-Birds of Conservation Concern</p>	<p>Broadleaved upland forest   Cismontane woodland   Coastal prairie   Great Basin grassland   Great Basin scrub   Lower montane coniferous forest   Pinon &amp; juniper woodlands   Upper montane coniferous forest   Valley &amp; foothill grassland</p>	<p>Rolling foothills, mountain areas, sage-juniper flats, and desert.</p>	<p>Cliff-walled canyons provide nesting habitat in most parts of range; also, large trees in open areas.</p>	<p>No habitat for this species present. <b>Not present.</b></p>
<p>Ardea herodias</p>	<p>great blue heron</p>	<p>Birds</p>	<p>None</p>	<p>None</p>	<p>CDF_S-Sensitive   IUCN_LC-Least Concern</p>	<p>Brackish marsh   Estuary   Freshwater marsh   Marsh &amp; swamp   Riparian forest   Wetland</p>	<p>Colonial nester in tall trees, cliffsides, and sequestered spots on marshes.</p>	<p>Rookery sites in close proximity to foraging areas: marshes, lake margins, tide-flats, rivers and streams, wet meadows.</p>	<p>Habitat is present in the stock ponds. <b>Potential to be present.</b></p>

Arizona elegans occidentalis	California glossy snake	Reptiles	None	None	CDFW_SSC- Species of Special Concern		Patchily distributed from the eastern portion of San Francisco Bay, southern San Joaquin Valley, and the Coast, Transverse, and Peninsular ranges, south to Baja California.	Generalist reported from a range of scrub and grassland habitats, often with loose or sandy soils.	Habitat is present. <b>Potential to be present.</b>
Artemisiospiza belli belli	Bell's sage sparrow	Birds	None	None	CDFW_WL- Watch List   USFWS_BCC- Birds of Conservation Concern	Chaparral   Coastal scrub	Nests in chaparral dominated by fairly dense stands of chamise. Found in coastal sage scrub in south of range.	Nest located on the ground beneath a shrub or in a shrub 6-18 inches above ground. Territories about 50 yds apart.	No habitat for this species present. <b>Not present.</b>

Asio otus	long-eared owl	Birds	None	None	CDFW_SSC-Species of Special Concern   IUCN_LC-Least Concern	Cismontane woodland   Great Basin scrub   Riparian forest   Riparian woodland   Upper montane coniferous forest	Riparian bottomlands grown to tall willows and cottonwoods; also, belts of live oak paralleling stream courses.	Require adjacent open land, productive of mice and the presence of old nests of crows, hawks, or magpies for breeding.	No habitat for this species present. <b>Not present.</b>
Aspidoscelis hyperythra	orange-throated whiptail	Reptiles	None	None	CDFW_WL-Watch List   IUCN_LC-Least Concern   USFS_S-Sensitive	Chaparral   Cismontane woodland   Coastal scrub	Inhabits low-elevation coastal scrub, chaparral, and valley-foothill hardwood habitats.	Prefers washes and other sandy areas with patches of brush and rocks. Perennial plants necessary for its major food: termites.	No habitat for this species present. <b>Not present.</b>
Aspidoscelis tigris stejnegeri	coastal whiptail	Reptiles	None	None	CDFW_SSC-Species of Special Concern		Found in deserts and semi-arid areas with sparse vegetation and open areas. Also found in woodland & riparian areas.	Ground may be firm soil, sandy, or rocky.	No habitat for this species present. <b>Not present.</b>

Athene cunicularia	burrowing owl	Birds	None	None	BLM_S-Sensitive   CDFW_SSC-Species of Special Concern   IUCN_LC-Least Concern   USFWS_BCC-Birds of Conservation Concern	Coastal prairie   Coastal scrub   Great Basin grassland   Great Basin scrub   Mojavean desert scrub   Sonoran desert scrub   Valley & foothill grassland	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation.	Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	Habitat is present. <b>Potential to be present.</b>
Branchinecta sandiegonensis	San Diego fairy shrimp	Crustaceans	Endangered	None	IUCN_EN-Endangered	Chaparral   Coastal scrub   Vernal pool   Wetland	Endemic to San Diego and Orange County mesas.	Vernal pools.	Project area is disturbed agriculture area. No habitat for this species present. <b>Not present.</b>

Buteo swainsoni	Swainson's hawk	Birds	None	Threatened	BLM_S-Sensitive   IUCN_LC-Least Concern   USFWS_BCC-Birds of Conservation Concern	Great Basin grassland   Riparian forest   Riparian woodland   Valley & foothill grassland	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, & agricultural or ranch lands with groves or lines of trees.	Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	Habitat is present. <b>Potential to be present.</b>
Campylorhynchus brunneicapillus sandiegensis	coastal cactus wren	Birds	None	None	CDFW_SSC-Species of Special Concern   USFS_S-Sensitive   USFWS_BCC-Birds of Conservation Concern	Coastal scrub	Southern California coastal sage scrub.	Wrens require tall opuntia cactus for nesting and roosting.	No habitat for this species present. <b>Not present.</b>
Catostomus santaanae	Santa Ana sucker	Fish	Threatened	None	AFS_TH-Threatened   IUCN_VU-Vulnerable	Aquatic   South coast flowing waters	Endemic to Los Angeles Basin south coastal streams.	Habitat generalists, but prefer sand-rubble-boulder bottoms, cool, clear water, and algae.	No habitat for this species present. <b>Not present.</b>

Chaetodipus fallax fallax	northwestern San Diego pocket mouse	Mammals	None	None	CDFW_SSC-Species of Special Concern	Chaparral   Coastal scrub	Coastal scrub, chaparral, grasslands, sagebrush, etc. in western San Diego County.	Sandy, herbaceous areas, usually in association with rocks or coarse gravel.	No habitat for this species present. <b>Not present.</b>
Choeronycteris mexicana	Mexican long-tongued bat	Mammals	None	None	CDFW_SSC-Species of Special Concern   IUCN_NT-Near Threatened   WBWG_H-High Priority	Pinon & juniper woodlands   Riparian scrub   Sonoran thorn woodland	Occasionally found in San Diego County, which is on the periphery of their range.	Feeds on nectar and pollen of night-blooming succulents. Roosts in relatively well-lit caves, and in and around buildings.	No habitat for this species present. <b>Not present.</b>
Coccyzus americanus occidentalis	western yellow-billed cuckoo	Birds	Threatened	Endangered	BLM_S-Sensitive   NABCI_RWL-Red Watch List   USFS_S-Sensitive   USFWS_BCC-Birds of Conservation Concern	Riparian forest	Riparian forest nester, along the broad, lower flood-bottoms of larger river systems.	Nests in riparian jungles of willow, often mixed with cottonwoods, with lower story of blackberry, nettles, or wild grape.	No habitat for this species present. <b>Not present.</b>
Coleonyx variegatus abbotti	San Diego banded gecko	Reptiles	None	None	CDFW_SSC-Species of Special Concern	Chaparral   Coastal scrub	Coastal & cismontane Southern California.	Found in granite or rocky outcrops in coastal scrub and chaparral habitats.	No habitat for this species present. <b>Not present.</b>

Coturnicops noveboracensis	yellow rail	Birds	None	None	CDFW_SSC-Species of Special Concern   IUCN_LC-Least Concern   NABCI_RWL-Red Watch List   USFS_S-Sensitive   USFWS_BCC-Birds of Conservation Concern	Freshwater marsh   Meadow & seep	Summer resident in eastern Sierra Nevada in Mono County.	Freshwater marshlands.	Habitat is present in the stock ponds. <b>Potential to be present.</b>
Crotalus ruber	red-diamond rattlesnake	Reptiles	None	None	CDFW_SSC-Species of Special Concern   USFS_S-Sensitive	Chaparral   Mojavean desert scrub   Sonoran desert scrub	Chaparral, woodland, grassland, & desert areas from coastal San Diego County to the eastern slopes of the mountains.	Occurs in rocky areas and dense vegetation. Needs rodent burrows, cracks in rocks or surface cover objects.	No habitat for this species present. <b>Not present.</b>
Diplectrona californica	California diplectronan caddisfly	Insects	None	None		Aquatic			No stream present. <b>Not present.</b>

Dipodomys merriami parvus	San Bernardino kangaroo rat	Mammals	Endangered	Candidate Endangered	CDFW_SSC-Species of Special Concern	Coastal scrub	Alluvial scrub vegetation on sandy loam substrates characteristic of alluvial fans and flood plains.	Needs early to intermediate seral stages.	No habitat for this species present. <b>Not present.</b>
Dipodomys stephensi	Stephens' kangaroo rat	Mammals	Endangered	Threatened	IUCN_EN-Endangered	Coastal scrub   Valley & foothill grassland	Primarily annual & perennial grasslands, but also occurs in coastal scrub & sagebrush with sparse canopy cover.	Prefers buckwheat, chamise, brome grass and filaree. Will burrow into firm soil.	No habitat for this species present. <b>Not present.</b>
Elanus leucurus	white-tailed kite	Birds	None	None	BLM_S-Sensitive   CDFW_FP-Fully Protected   IUCN_LC-Least Concern	Cismontane woodland   Marsh & swamp   Riparian woodland   Valley & foothill grassland   Wetland	Rolling foothills and valley margins with scattered oaks & river bottomlands or marshes next to deciduous woodland.	Open grasslands, meadows, or marshes for foraging close to isolated, dense-topped trees for nesting and perching.	Habitat is present. <b>Potential to be present.</b>
Empidonax traillii extimus	southwestern willow flycatcher	Birds	Endangered	Endangered	NABCI_RWL-Red Watch List	Riparian woodland	Riparian woodlands in Southern California.		No habitat for this species present. <b>Not present.</b>

Emys marmorata	western pond turtle	Reptiles	None	None	BLM_S-Sensitive   CDFW_SSC-Species of Special Concern   IUCN_VU-Vulnerable   USFS_S-Sensitive	Aquatic   Artificial flowing waters   Klamath/North coast flowing waters   Klamath/North coast standing waters   Marsh & swamp   Sacramento/San Joaquin flowing waters   Sacramento/San Joaquin standing waters   South coast flowing waters   South coast standing waters   Wetland	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation.	Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying.	Habitat is present in the stock ponds. <b>Potential to be present.</b>
Eremophila alpestris actia	California horned lark	Birds	None	None	CDFW_WL-Watch List   IUCN_LC-Least Concern	Marine intertidal & splash zone communities   Meadow & seep	Coastal regions, chiefly from Sonoma County to San Diego County. Also main part of San Joaquin Valley and east to foothills.	Short-grass prairie, "bald" hills, mountain meadows, open coastal plains, fallow grain fields, alkali flats.	Habitat is present. <b>Potential to be present.</b>

Eumops perotis californicus	western mastiff bat	Mammals	None	None	BLM_S-Sensitive   CDFW_SSC-Species of Special Concern   WBWG_H-High Priority	Chaparral   Cismontane woodland   Coastal scrub   Valley & foothill grassland	Many open, semi-arid to arid habitats, including conifer & deciduous woodlands, coastal scrub, grasslands, chaparral, etc.	Roosts in crevices in cliff faces, high buildings, trees and tunnels.	Habitat is present. <b>Potential to be present.</b>
Euphydryas editha quino	quino checkerspot butterfly	Insects	Endangered	None	XERCES_CI-Critically Imperiled	Chaparral   Coastal scrub	Sunny openings within chaparral & coastal sage shrublands in parts of Riverside & San Diego counties.	Hills and mesas near the coast. Need high densities of food plants Plantago erecta, P. insularis, and Orthocarpus purpureus.	No habitat for this species present. Not present.
Falco columbarius	merlin	Birds	None	None	CDFW_WL-Watch List   IUCN_LC-Least Concern	Estuary   Great Basin grassland   Valley & foothill grassland	Seacoast, tidal estuaries, open woodlands, savannahs, edges of grasslands & deserts, farms & ranches.	Clumps of trees or windbreaks are required for roosting in open country.	Habitat is present. <b>Potential to be present.</b>

Falco peregrinus anatum	American peregrine falcon	Birds	Delisted	Delisted	CDF_S-Sensitive   CDFW_FP-Fully Protected   USFWS_BCC- Birds of Conservation Concern		Near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also, human- made structures.	Nest consists of a scrape or a depression or ledge in an open site.	No habitat for this species present. <b>Not present.</b>
Gila orcuttii	arroyo chub	Fish	None	None	AFS_VU- Vulnerable   CDFW_SSC- Species of Special Concern   USFS_S-Sensitive	Aquatic   South coast flowing waters	Native to streams from Malibu Creek to San Luis Rey River basin. Introduced into streams in Santa Clara, Ventura, Santa Ynez, Mojave & San Diego river basins.	Slow water stream sections with mud or sand bottoms. Feeds heavily on aquatic vegetation and associated invertebrates.	No habitat for this species present. <b>Not present.</b>

Haliaeetus leucocephalus	bald eagle	Birds	Delisted	Endangered	BLM_S-Sensitive   CDF_S-Sensitive   CDFW_FP-Fully Protected   IUCN_LC-Least Concern   USFS_S-Sensitive   USFWS_BCC-Birds of Conservation Concern	Lower montane coniferous forest   Oldgrowth	Ocean shore, lake margins, and rivers for both nesting and wintering. Most nests within 1 mile of water.	Nests in large, old-growth, or dominant live tree with open branches, especially ponderosa pine. Roosts communally in winter.	No habitat for this species present. <b>Not present.</b>
Icteria virens	yellow-breasted chat	Birds	None	None	CDFW_SSC-Species of Special Concern   IUCN_LC-Least Concern	Riparian forest   Riparian scrub   Riparian woodland	Summer resident; inhabits riparian thickets of willow and other brushy tangles near watercourses.	Nests in low, dense riparian, consisting of willow, blackberry, wild grape; forages and nests within 10 ft of ground.	No habitat for this species present. <b>Not present.</b>
Lasiurus xanthinus	western yellow bat	Mammals	None	None	CDFW_SSC-Species of Special Concern   IUCN_LC-Least Concern   WBWG_H-High Priority	Desert wash	Found in valley foothill riparian, desert riparian, desert wash, and palm oasis habitats.	Roosts in trees, particularly palms. Forages over water and among trees.	No habitat for this species present. <b>Not present.</b>

Laterallus jamaicensis coturniculus	California black rail	Birds	None	Threatened	BLM_S-Sensitive   CDFW_FP-Fully Protected   IUCN_NT-Near Threatened   NABCI_RWL-Red Watch List   USFWS_BCC-Birds of Conservation Concern	Brackish marsh   Freshwater marsh   Marsh & swamp   Salt marsh   Wetland	Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering larger bays.	Needs water depths of about 1 inch that do not fluctuate during the year and dense vegetation for nesting habitat.	No habitat for this species present. <b>Not present.</b>
Myotis yumanensis	Yuma myotis	Mammals	None	None	BLM_S-Sensitive   IUCN_LC-Least Concern   WBWG_LM-Low-Medium Priority	Lower montane coniferous forest   Riparian forest   Riparian woodland   Upper montane coniferous forest	Optimal habitats are open forests and woodlands with sources of water over which to feed.	Distribution is closely tied to bodies of water. Maternity colonies in caves, mines, buildings or crevices.	No habitat for this species present. <b>Not present.</b>
Neotoma lepida intermedia	San Diego desert woodrat	Mammals	None	None	CDFW_SSC-Species of Special Concern	Coastal scrub	Coastal scrub of Southern California from San Diego County to San Luis Obispo County.	Moderate to dense canopies preferred. They are particularly abundant in rock outcrops, rocky cliffs, and slopes.	No habitat for this species present. <b>Not present.</b>

Nyctinomops femorosaccus	pocketed free-tailed bat	Mammals	None	None	CDFW_SSC-Species of Special Concern   IUCN_LC-Least Concern   WBWG_M-Medium Priority	Joshua tree woodland   Pinon & juniper woodlands   Riparian scrub   Sonoran desert scrub	Variety of arid areas in Southern California; pine-juniper woodlands, desert scrub, palm oasis, desert wash, desert riparian, etc.	Rocky areas with high cliffs.	No habitat for this species present. <b>Not present.</b>
Nyctinomops macrotis	big free-tailed bat	Mammals	None	None	CDFW_SSC-Species of Special Concern   IUCN_LC-Least Concern   WBWG_MH-Medium-High Priority		Low-lying arid areas in Southern California.	Need high cliffs or rocky outcrops for roosting sites. Feeds principally on large moths.	No habitat for this species present. <b>Not present.</b>
Oncorhynchus mykiss irideus pop. 10	steelhead - southern California DPS	Fish	Endangered	None	AFS_EN-Endangered	Aquatic   South coast flowing waters	Federal listing refers to populations from Santa Maria River south to southern extent of range (San Mateo Creek in San Diego County).	Southern steelhead likely have greater physiological tolerances to warmer water and more variable conditions.	No habitat for this species present. Not present.

Perognathus longimembris brevinasus	Los Angeles pocket mouse	Mammals	None	None	CDFW_SSC- Species of Special Concern	Coastal scrub	Lower elevation grasslands and coastal sage communities in and around the Los Angeles Basin.	Open ground with fine, sandy soils. May not dig extensive burrows, hiding under weeds and dead leaves instead.	No habitat for this species present. <b>Not present.</b>
Phrynosoma blainvillii	coast horned lizard	Reptiles	None	None	BLM_S-Sensitive   CDFW_SSC- Species of Special Concern   IUCN_LC-Least Concern	Chaparral   Cismontane woodland   Coastal bluff scrub   Coastal scrub   Desert wash   Pinon & juniper woodlands   Riparian scrub   Riparian woodland   Valley & foothill grassland	Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes.	Open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	No habitat for this species present. <b>Not present.</b>
Polioptila californica californica	coastal California gnatcatcher	Birds	Threatened	None	CDFW_SSC- Species of Special Concern   NABCI_YWL- Yellow Watch List	Coastal bluff scrub   Coastal scrub	Obligate, permanent resident of coastal sage scrub below 2500 ft in Southern California.	Low, coastal sage scrub in arid washes, on mesas and slopes. Not all areas classified as coastal sage scrub are occupied.	No habitat for this species present. <b>Not present.</b>

Rhaphiomidas terminatus abdominalis	Delhi Sands flower-loving fly	Insects	Endangered	None		Interior dunes	Found only in areas of the Delhi Sands formation in southwestern San Bernardino & northwestern Riverside counties.	Requires fine, sandy soils, often with wholly or partly consolidated dunes & sparse vegetation. Oviposition req. shade.	No habitat for this species present. <b>Not present.</b>
Salvadora hexalepis virgultea	coast patch-nosed snake	Reptiles	None	None	CDFW_SSC- Species of Special Concern	Coastal scrub	Brushy or shrubby vegetation in coastal Southern California.	Require small mammal burrows for refuge and overwintering sites.	No habitat for this species present. <b>Not present.</b>
Setophaga petechia	yellow warbler	Birds	None	None	CDFW_SSC- Species of Special Concern   USFWS_BCC- Birds of Conservation Concern	Riparian forest   Riparian scrub   Riparian woodland	Riparian plant associations in close proximity to water. Also nests in montane shrubbery in open conifer forests in Cascades and Sierra Nevada.	Frequently found nesting and foraging in willow shrubs and thickets, and in other riparian plants including cottonwoods, sycamores, ash, and alders.	No habitat for this species present. <b>Not present.</b>
Southern California Arroyo Chub/Santa Ana Sucker Stream	Southern California Arroyo Chub/Santa Ana Sucker Stream	Inland Waters	None	None					No habitat for this species present. Not present.

Spea hammondii	western spadefoot	Amphibians	None	None	BLM_S-Sensitive   CDFW_SSC-Species of Special Concern   IUCN_NT-Near Threatened	Cismontane woodland   Coastal scrub   Valley & foothill grassland   Vernal pool   Wetland	Occurs primarily in grassland habitats, but can be found in valley-foothill hardwood woodlands.	Vernal pools are essential for breeding and egg-laying.	No habitat for this species present. <b>Not present.</b>
Sternula antillarum browni	California least tern	Birds	Endangered	Endangered	CDFW_FP-Fully Protected   NABCI_RWL-Red Watch List	Alkali playa   Wetland	Nests along the coast from San Francisco Bay south to northern Baja California.	Colonial breeder on bare or sparsely vegetated, flat substrates: sand beaches, alkali flats, land fills, or paved areas.	No habitat for this species present. Not present.
Taricha torosa	Coast Range newt	Amphibians	None	None	CDFW_SSC-Species of Special Concern		Coastal drainages from Mendocino County to San Diego County.	Lives in terrestrial habitats & will migrate over 1 km to breed in ponds, reservoirs & slow moving streams.	No habitat for this species present. <b>Not present.</b>

Taxidea taxus	American badger	Mammals	None	None	CDFW_SSC-Species of Special Concern   IUCN_LC-Least Concern	Alkali marsh   Alkali playa   Alpine   Alpine dwarf scrub   Bog & fen   Brackish marsh   Broadleaved upland forest   Chaparral   Chenopod scrub   Cismontane woodland   Closed-cone coniferous forest   Coastal bluff scrub   Coastal dunes   Coastal prairie   Coastal scrub   Desert dunes   Desert wash   Freshwater marsh   Great Basin grassland   Great Basin scrub   Interior dunes   lone formation   Joshua tree woodland   Limestone   Lower montane coniferous forest   Marsh &	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils.	Needs sufficient food, friable soils and open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	No habitat for this species present. <b>Not present.</b>
---------------	-----------------	---------	------	------	---	--	--	---	--

Thamnophis hammondi	two-striped gartersnake	Reptiles	None	None	BLM_S-Sensitive   CDFW_SSC-Species of Special Concern   IUCN_LC-Least Concern   USFS_S-Sensitive	Marsh & swamp   Riparian scrub   Riparian woodland   Wetland	Coastal California from vicinity of Salinas to northwest Baja California. From sea to about 7,000 ft elevation.	Highly aquatic, found in or near permanent fresh water. Often along streams with rocky beds and riparian growth.	No habitat for this species present. <b>Not present.</b>
Vireo bellii pusillus	least Bell's vireo	Birds	Endangered	Endangered	IUCN_NT-Near Threatened   NABCI_YWL-Yellow Watch List	Riparian forest   Riparian scrub   Riparian woodland	Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 ft.	Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, Baccharis, mesquite.	No habitat for this species present. <b>Not present.</b>

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

**Warning:** Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
 Web Soil Survey URL:  
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Bernardino County Southwestern Part, California  
 Survey Area Data: Version 11, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: May 10, 2018—Jun 5, 2018

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

April 15, 2020

## **Report Overview:**

This report provides an evaluation and recommendations for a variety of tree species for a group of properties located on S. Grove Avenue, Eucalyptus Avenue, Bon View Avenue, and Merrill Avenue, in the city of Ontario as further described below. The entire specific plan boundary is 222.18 acres, but the area with the proposed development and the area that this report encompasses is 130.34 acres. There are approximately (230) trees that were evaluated for this report. The purpose of this report is to provide an evaluation on the health of these trees in order to identify which trees should remain on the project site, either in their present location or if that is not possible, relocate to another area or removed with mitigation, if required. This report provides recommendations for any Heritage, Specimen or Significant trees located at the project site per the Ontario Development Code Tree Preservation Policy and Protection Measures, Section 6.05.020.

## **Location of Property:**

The entire 222.18 acre specific plan project site is located in the city of Ontario, California. The project site (130.34 ac) that this report encompasses is bordered by Grove Avenue, Eucalyptus Avenue, Bon View Avenue, and Merrill Avenue. It is located north of Merrill, south of Eucalyptus and west of Grove.

## **Study Area:**

The 130.34 ac project site was reviewed for trees but the only trees found and evaluated are located around the property 7955 Eucalyptus Avenue, in two rows lining the property of 7920 Merrill, and along Grove Avenue. The two rows of trees at 7920 Merrill Avenue seem to have been planted as a wind break and/or as a property border.

## **Species, Size and Age of Trees:**

There are approximately 16 different species of trees onsite. The majority of trees on site are the two rows of Eucalyptus globulus (Southern Blue Gum) around the address, 7920 Merrill Avenue. Based on the size of the trees, they appear to be over 50 years old. The other trees throughout the

project site are planted around five different structures that appear to be residential properties, all being around 30 years old.

The Eucalyptus globulus, commonly known as southern blue gum, is a species of Eucalyptus that are native to Australia. They may have been used as a wind break, or to designate property lines. The heights of the Eucalyptus trees vary, but majority of them are approximately 40-65 feet tall, and the average DBH (diameter at breast height) is 18”.

Using a measuring tape, trunk diameter was measured at a height of 54 inches above mean natural grade; multiple trunks were measured separately. For multi-trunk trees, each trunk was measured separately and then combined to determine the tree’s total diameter. The height of each tree was estimated from the mean natural grade to the highest branch. Also, the diameter of each tree’s canopy was estimated at its widest point. Each tree assessed was inspected and compared to an archetype tree (considered excellent on all points mentioned below) of the same species. Tree aesthetics were evaluated with respect to overall form and symmetry, crown balance, branching pattern, and broken branches.

The trees onsite were rated in condition on a scale from poor to excellent. A full list of trees including their size and condition is provided below.

**Tree Health and Condition:**

Majority of the trees onsite are in fair condition. No trees have been determined to be in excellent condition. The five residential properties have been regularly irrigated which has allowed the trees to thrive in their current place. Most of the trees are in need of pruning and some have a few failed limbs but overall the trees located around the residential properties are in fair to good condition.

The Eucalyptus rows around the Merrill address have been severely affected by drought. Majority of the trees are in decline and several are already dead. Most of the trees are also infected with Lerp Psyllid, a plant-juice sucking homopterans in the insect family. Lerp psyllid nymphs form a cover called a “lerp” which is a small white, hemispherical cap composed of solidified honeydew and wax. Psyllid nymphs and adults feed by sucking plant phloem sap. High lerp psyllid populations secrete copious honeydew and cause premature leaf drop. Extensive defoliation weakens trees, can increase tree susceptibility to damage from other insects and diseases affecting the trees and can contribute to premature death.

**City Heritage, Significant, and Specimen Trees:**

The Development code (section 6.05.020) addresses heritage trees in the city of Ontario. There are (0) types of trees that fall under the definition of a heritage tree, as noted below.

- Heritage tree – (c) a defining landmark or significant outstanding feature of a neighborhood or district, or typical of early Ontario landscapes, [i] Cinnamomum camphora [ii] Cedrus deodora, and [iii] Platanus acerifolia.

**Recommendations:**

The vast majority of trees located around the address 7920 Merrill Avenue are currently not viable to be maintained in place. This is primarily due to the fact that they have been neglected for years. The lack of irrigation and proper tree maintenance has resulted in numerous dead trees. Most of the remaining other trees appear to be in fair to good health. I have determined that the majority of the trees located around 7920 Merrill Avenue appear to be in poor condition. I recommend that any tree that is in severe decline be removed. I recommend the removal of all dead trees since they pose potential liability should they fall. I do not recommend the relocation of any trees onsite due to the condition they are currently in.

I also recommend a three year management plan be created, and an irrigation system be installed on trees that are not to be removed. However, even with the tree management plan and irrigation system, the tree may not be suitable to be maintained in place. Also, if there are any changes to the existing grade, or digging for infrastructure improvements that would damage the root system of any trees, then the removal of those trees is recommended.

**Conclusion:**

Pursuant to the Development Code Tree Preservation Policy and Protection Measures, section 6.05.020, I have determined that there are no significant or specimen trees on the project site. None of the trees onsite are in excellent condition or have a condition rating greater than 70%. I have determined that no trees need any protective measures to preserve the health of the tree during the development or redevelopment activity. I have also determined that no trees are viable candidates for relocation due to the condition they are currently in.

**SUBJECT: Results of a Focused Burrowing Owl Surveys, ±130-acre South Ontario Logistics Center Site, City of Ontario, San Bernardino County, California**

Dear Jeff:

This letter report presents results of focused surveys conducted to evaluate the presence/absence of the special-status burrowing owl (*Athene cunicularia*-BUOW) on a ±130-acre site. Please note that this ±130-acre site is located within the larger specific plan boundary of ±222 acres, however, the subject study area with the currently proposed development consists of ±130 acres. Please note that the difference in acreage from other project-related reports (±92 acres) would be programmatically analyzed at a later date, and therefore the additional acreage was not included in this focused BUOW study.

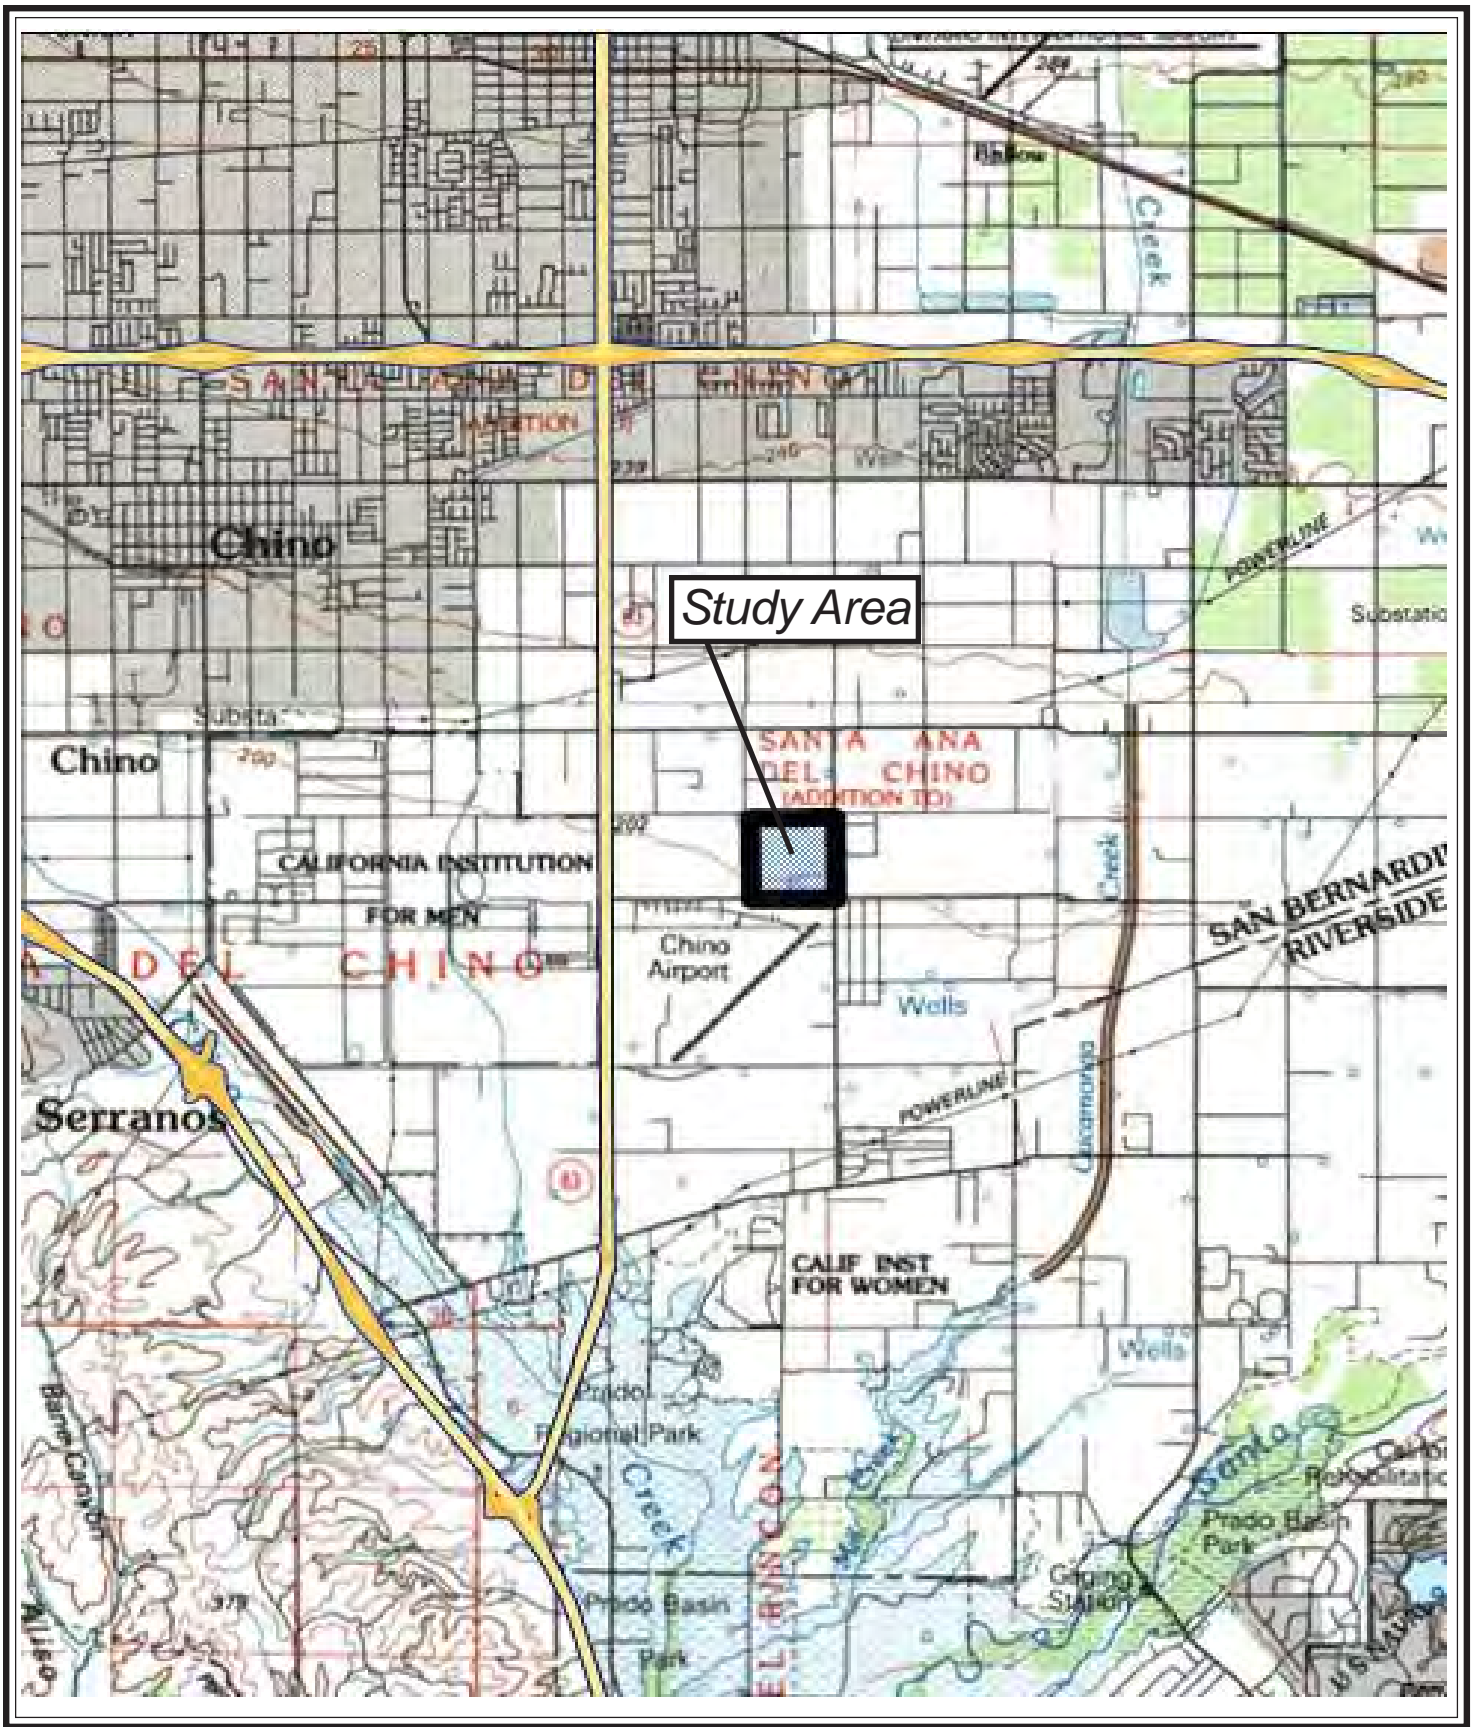

### **Introduction**

The project site is located in San Bernardino County, California (**Plate 1**). Specifically, the site is located in the City of Ontario north of Merrill Avenue, south of Eucalyptus Avenue, east of Bon View Avenue, and west of Grove Avenue. The site occurs on the "Prado Dam" California USGS 7.5-minute quadrangle map, Township 2 South, Range 7 West (**Plate 2**).

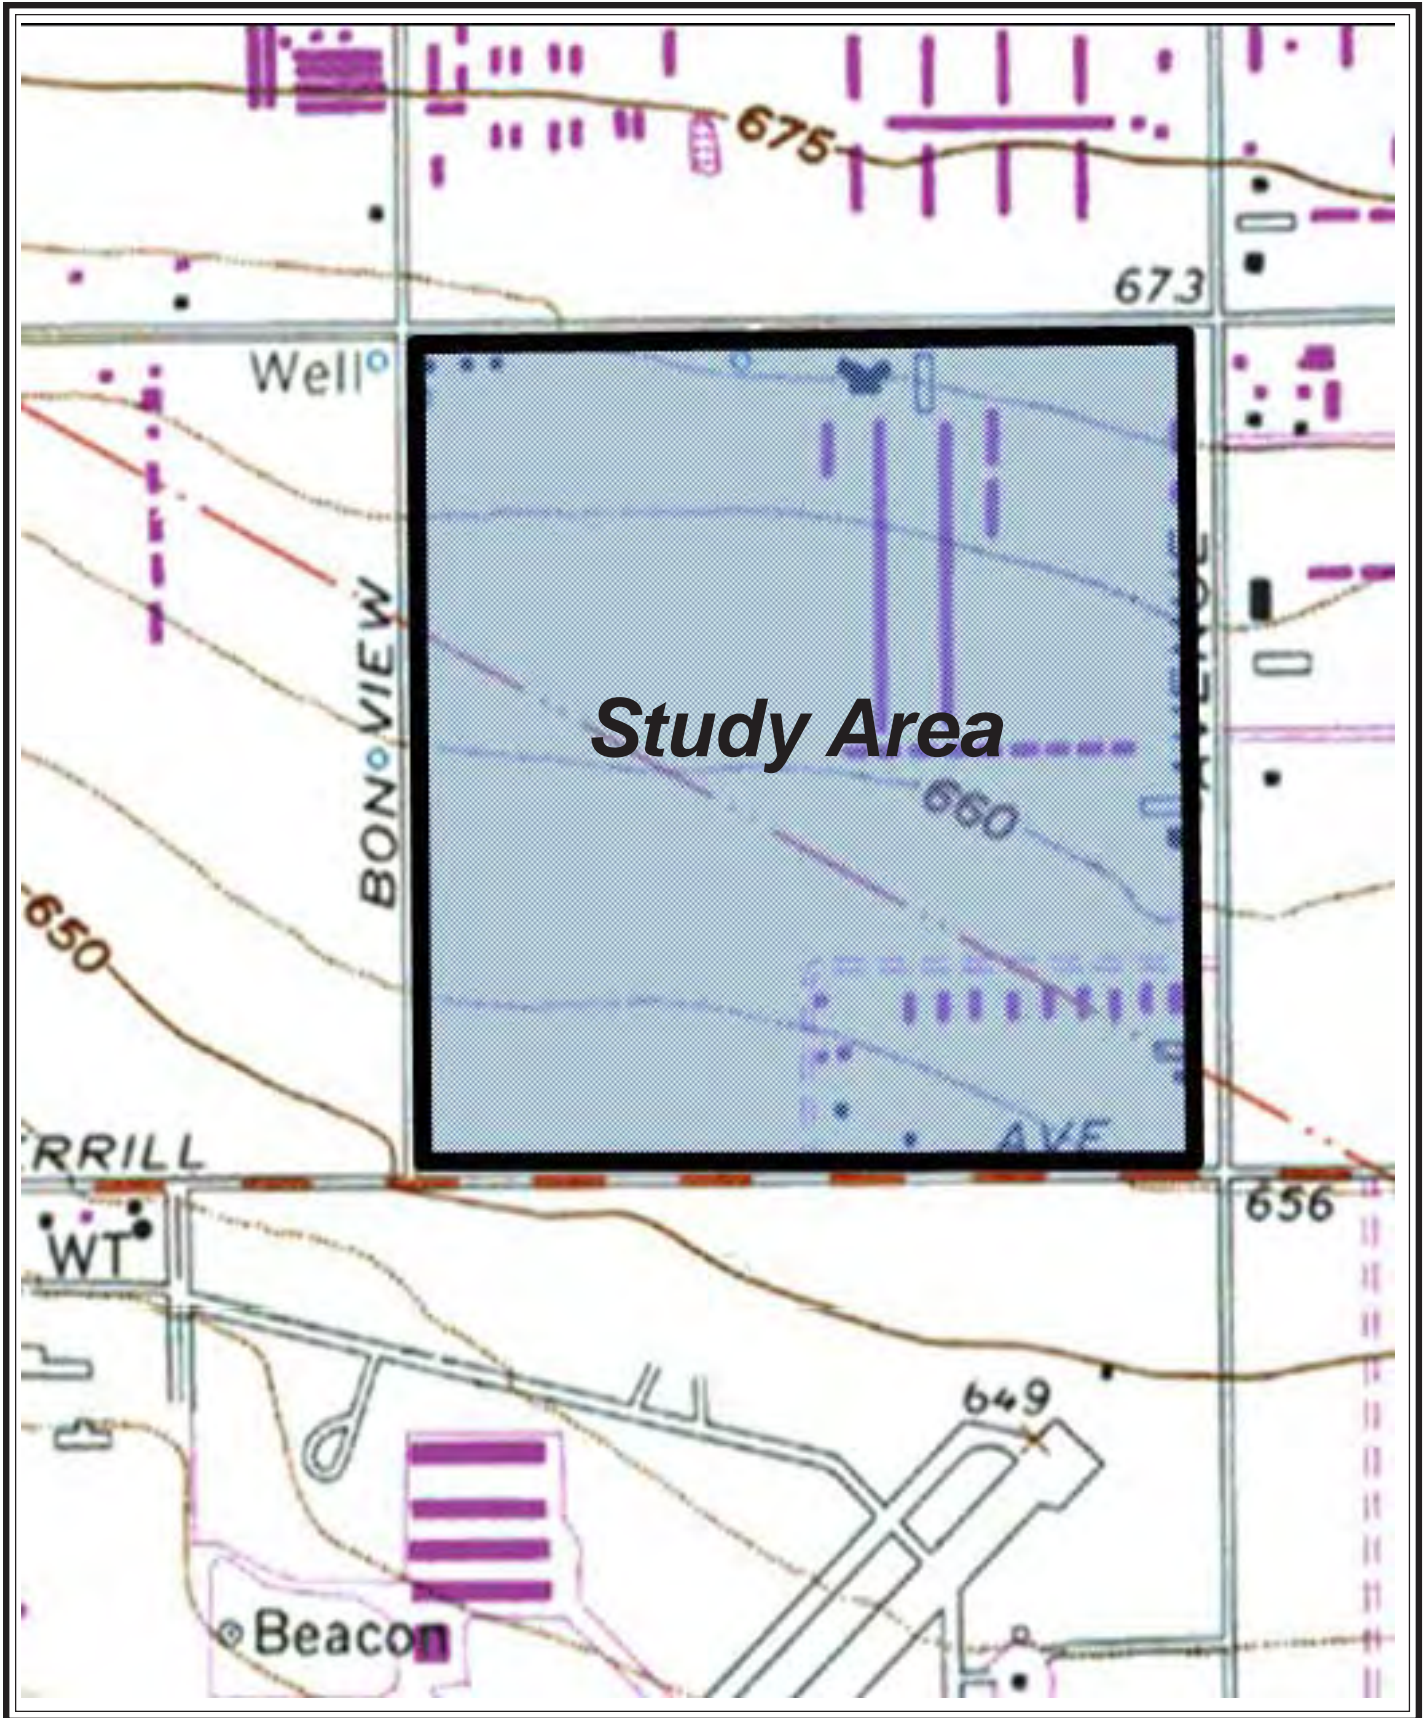

Projects proposed in the area that contain potentially suitable habitat to support sensitive biological resources must demonstrate to reviewing agencies [e.g., U.S. Fish and Wildlife Service (FWS), California Department of Fish and Game (CDFG-more recently Department of Fish and Wildlife or CDFW), County of San Bernardino (County), City of Ontario (City)] that potential project-related impacts to sensitive biological resources are adequately addressed and mitigated pursuant to the California Environmental Quality Act (CEQA) and other environmental regulations as part of project approval. For the purposes of this report, both the 1995 CDFG Staff Report on Burrowing Owl Mitigation and the 2012 CDFG Staff Report on Burrowing Owl Mitigation are referenced to provide background information.

### **Selected Species Overview / Regulatory Background**

The **western burrowing owl** is considered a California Species of Special Concern, Federal Species of Concern, Partners in Flight Priority Bird Species, and Fish and Wildlife Service Species of Management Concern because of declines of suitable habitat, as well as localized and statewide population declines (CDFG 1995, 2012). Burrowing owls range across most of western North America. In coastal southern California, they occur in annual and perennial grasslands, agricultural areas, and coastal dunes. Habitat characteristics also include deserts and arid scrublands that contain low-growing vegetation (Zarn 1974). It is believed that burrowing owls may potentially occur wherever there are ground squirrel (e.g., *Spermophilus beecheyi*) colonies as this owl uses ground squirrel burrows throughout the year. Burrows are the essential component of burrowing owl habitat (CDFG 1995), however, burrowing owls are also known to use artificial burrows under certain circumstances such as abandoned concrete structures and debris piles. The BUOW generally prefers moderately to heavily grazed grasslands for nesting and

**Site Vicinity**

South Ontario Logistics Center Site

roosting and avoids recently cultivated/disc'd fields. BUOW may utilize multiple burrows/sites throughout the year (e.g., small seasonal migrations), although in central and southern California, owls are predominantly non-migratory (CBOC 2000).

While this special-status species is not protected by state or federal endangered species acts, take, possession or destruction of individual burrowing owls, their nests and eggs is prohibited under CDFG code sections 3503, 3503.5 and 3513, as well as the federal Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S.C. 703-711). Under CEQA, goals would consist of measures that would avoid, minimize and mitigate impacts to a less than significant level. For individual projects, mitigation must be roughly proportional to the level of impacts, including cumulative impacts, in accordance with the provisions of CEQA (CEQA Guidelines, §§ 15126.4(a)(4)(B), 15064, 15065, and 16355). If it were later determined that active nests would be lost as a result of site-preparation, it would be in conflict with these regulations, and could also be considered a significant impact under CEQA without mitigation. In order to avoid violation of the MBTA and CDFG Code requirements, CDFG guidelines (1995, 2012) suggest that project-related disturbances at active nesting territories be reduced or eliminated during the BUOW nesting/breeding cycle (typically February 1 to August 31). Accordingly, construction should take place, as much as possible, outside of the breeding season for BUOW (i.e., construction between September 1 to January 31) to avoid or reduce potential impacts to this species. However, BUOW nesting activity is variable, and as such the time frame should be adjusted accordingly based on specific site information.

Owl survival can be adversely affected by disturbance (e.g., foraging habitat loss) even when impacts to individual birds and nest/burrows are avoided (CDFG 1995). Recommended restricted activity dates and setback distances by level of disturbance for burrowing owls (Scobie and Faminow 2000 in 03/7/12 CDFG BUOW Staff Report) are provided below in Table 1.

**Table 1- CDFG Recommended Restricted Activity Dates and Setback Distances by Level of Disturbance for BUOW**

Location	Time of Year	Level of Disturbance		
		Low	Medium	High
Nesting sites	April 1-Aug 15	200 m*	500 m	500 m
Nesting sites	Aug 16-Oct 15	200 m	200 m	500 m
Nesting sites	Oct 16-Mar 31	50 m	100 m	500 m

\*meters (m). Table and text excerpted directly from 2012 CDFG BUOW Staff Report

Note: Based on existing vegetation, human development, and land uses in an area, resource managers may decide to allow human development or resource extraction closer to these area/sites than recommended above. However, if it is decided to allow activities closer than the setback distances recommended, a broad-scale, long-term, scientifically-rigorous monitoring program ensures that burrowing owls are not detrimentally affected by alternative approaches.

Mitigation measures detailed in the CDFG 1995 staff report include: (1) preservation of habitat, (2) artificial burrow construction, and (3) provide funding for long-term management and monitoring of protected mitigation lands. Mitigation measures successfully implemented for this species also include giving the Service/CDFW right of first refusal for actively relocating any BUOW present. Currently occupied receiving sites may be available where this species has a greater chance of successful long-term relocation. Other minimization measures include eliminating actions that reduce burrowing owl forage and burrowing surrogates (e.g. ground squirrel), or introduce/facilitate burrowing owl predators. Actions that could influence these factors include reducing livestock grazing rates and/or changing the timing or duration of grazing or vegetation management that could result in less suitable habitat (CDFG 2012).

Implementation of avoidance and minimization measures would be triggered by positive owl presence on the site where project activities would occur. The development of avoidance and minimization

approaches would be developed by monitoring. BUOW may re-colonize a site after only a few days. Time lapses (i.e. construction delays) between project activities would trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance (CDFG 2012). Should eggs or fledglings be discovered in any owl burrow or native nest, these resources cannot be disturbed (pursuant to CDFW guidelines) until the young have hatched and fledged (matured to a stage that they can leave the nest on their own). Take of active nests should always be avoided. If owls must be moved away from the disturbance area, passive relocation techniques (where applicable outside of the breeding season before breeding behavior is exhibited and after the burrow is confirmed empty by site surveillance) should be used rather than trapping (CDFG 2012). If burrow exclusion and/or burrow closure is implemented, BUOWs should not be excluded from burrows unless or until: (1) a Burrowing Owl Exclusion Plan is developed and approved by the applicable local CDFW office; and (2) permanent loss of occupied burrow(s) and habitat is mitigated in accordance with the Mitigating Impacts (CDFG 2012).

## ***Methodology***

### ***Review of Existing Information***

Existing documentation pertinent to the distribution and habitat requirements of the burrowing owl was reviewed and analyzed. This included a review of: (1) the California Natural Diversity Data Base (CNDDDB 2019), (2) both the 1995 CDFG Staff Report on Burrowing Owl Mitigation and the 2012 CDFG Staff Report on Burrowing Owl Mitigation, and (3) other literature pertaining to habitat requirements of the BUOW as referenced herein.

### ***2019 Focused BUOW Surveys***

The BUOW surveys were conducted in accordance with the March 7, 2012 CDFG Staff Report on Burrowing Owl Mitigation. These guidelines include searches for BUOW, burrows (natural and artificial), and BUOW sign by walking parallel transects (where feasible) through suitable habitat over the entire survey area [i.e., the project site and within a 150 meter (500 feet) buffer area where feasible or at least by visual means]. Upon arrival at the survey area and prior to initiating the walking surveys, the biologist used binoculars and/or spotting scope to scan suitable habitat. Ecological Sciences' Principal Biologist, Scott Cameron, initiated the first of four total focused breeding season BUOW surveys on April 15, 2019. Subsequent surveys were conducted on May 11, June 16, and July 6. Mr. Cameron has extensive experience conducting habitat assessments and focused burrowing owl surveys over the past 25 years, and has recorded numerous BUOW over the course of 100+ surveys throughout southern California. Mr. Cameron has also conducted passive relocation activities, used burrow probes, and conducted burrow closing procedures for multiple projects.

Per the Staff Report, the breeding season BUOW surveys included a review of pertinent information of the project site and vicinity and a series of four focused burrowing owl surveys conducted according to the 2012 California Department of Fish and Game (CDFG April 7, 2012) Staff Report on Burrowing Owl Mitigation. The Staff reports requires at least one site visit between 15 February and 15 April, and a minimum of three survey visits, at least three weeks apart, between 15 April and 15 July, with at least one visit after 15 June. Surveys would be conducted by walking straight-line transects spaced 7 meters (23 feet) to 20 meters (65 feet) apart, adjusting for vegetation height and density using standard auditory and visual means. At the start of each transect and, at least, every 100 m (328 feet), the entire visible project area would be scanned for BUOW using binoculars. During walking surveys, a record of all potential burrows used by burrowing owls as determined by the presence of one or more burrowing owls, pellets, prey remains, whitewash, or decoration would be recorded. Surveys should not be conducted when wind speed is >20 kilometers/hour (>12.5 miles/hour), and/or if there is precipitation or dense fog. Surveys have greater detection probability if conducted when ambient temperatures are >20° Celsius (>68° Fahrenheit), <12 km/hr winds (<7.5 miles/hr), and cloud cover is <75%. Surveys would be conducted between morning civil twilight and 10:00 a.m. and two hours before sunset until evening civil twilight

(highest detection probabilities). It is assumed that a copy of this report would be forwarded to the lead agency at the discretion of the project applicant in order to comply with conditions of approval (where applicable).

Focused BUOW surveys were conducted to determine if the BUOW was foraging on or adjacent to the site. Transects were spaced to allow 100 percent visual coverage of the ground surface. The distance between transect center lines was no more than 20 meters ( $\pm 65$  feet) and were reduced (as necessary) to account for differences in terrain, vegetation density, and ground surface visibility. Periodic stops along each transect (generally at 100 meter intervals) and at the end of each transect were implemented to scan the site for BUOW with binoculars. Suitable burrows were examined for sign of BUOW use such as the presence of owl pellets, prey remains, or feathers at burrow entrances. Suitable burrows (burrows that are open and wide enough for owl use), regardless if owl sign was recorded, were noted. Burrows (where present) were inspected with the aid of a mirror to better view burrow interiors. Per protocol, surveys were conducted during weather that was conducive to observing owls outside their burrows and detecting BUOW sign. Focused surveys were conducted two hours before sunset until evening civil twilight (highest detection probabilities). Weather conditions through the survey period included clear skies, scattered clouds, and partly cloudy (<50% cover), 1-8 mph variable breezes, and air temperatures ranging between 60-78 °F. Accordingly, weather conditions were conducive for above-ground BUOW activity. Daily temperatures and timing are presented in Table 2.

**Table 2- Daily Weather Conditions/Surveyor (2019)**

### **Existing Biological Environment**

The subject site is characterized primarily as an active dairy operation. The site contains several single-family residences, multiple dairy-related structures (sheds, corrals, etc.), feeding preparation areas, numerous waste ponds/basins, cultivated/disc'd areas, manure spreading areas, and debris dumping areas. The ruderal/disturbed areas support mostly invasive, non-native annual species. Manure, associated with the ongoing dairy operation, is present throughout most of the site. Cattle feeding areas were barren ground covered in manure and mud. Surrounding land uses include agricultural areas similar to the subject site. **Plate 3** schematically illustrates site features. **Plate 4** illustrates survey and buffer areas.

### **Vegetation**

Ruderal plants recorded on site included various non-native grasses and weedy species such as foxtail chess (*Bromus madritensis* spp. *rubens*), ripgut grass (*Bromus diandrus*), Bermuda grass (*Cynodon dactylon*), Mediterranean grass (*Schismus barbatus*), filaree (*Erodium* sp.), Lamb's quarter's (*Chenopodium album*), milk thistle (*Silybum marianum*), Russian thistle (*Salsola tragus*), puncture vine (*Tribulus terrestris*), black mustard (*Brassica nigra*), cheeseweed (*Malva parviflora*), nettle (*Urtica* sp.), tree tobacco (*Nicotiana glauca*), and gum (*Eucalyptus* sp.).

## ***Project and Buffer Areas***

South Ontario Logistics Center Site

## Survey Results

No direct BUOW observations were recorded during the April-July 2019 focused BUOW breeding season surveys. None of the potential burrows inspected during the survey were determined to be currently occupied by BUOW based on absence of BUOW observations and sign (feathers, pellets, fecal material, prey remains, etc.) at or near burrow entrances/aprons. BUOW were also not observed utilizing the site or adjacent areas for foraging purposes (adjacent areas to south viewed by binocular only-Chino Airport). The project site and adjacent buffer areas support potentially suitable BUOW habitat outside those areas exposed to recurring and extensive disturbances associated with routine dairy operations.

Avian species observed on site included turkey vulture (*Cathartes aura*), red-tailed hawk (*Buteo jamaicensis*), common raven (*Corvus corax*), American crow (*Corvus brachyrhynchos*), killdeer (*Charadrius vociferus*), European starling (*Sturnus vulgaris*), rock pigeon (*Columba livia*), mourning dove (*Zenaida macroura*), northern mockingbird (*Mimus polyglottos*), Brewer's blackbird (*Euphagus cyanocephalus*), western meadowlark (*Sturnella neglecta*), house finch (*Carpodacus mexicanus*), and house sparrow (*Passer domesticus*). Mammal species directly observed, or of which sign was detected, included California ground squirrel (*Spermophilus beecheyi*), desert cottontail (*Sylvilagus auduboni*), and pocket gopher (*Thomomys bottae*).

Despite that fact that the site has been exposed to long-standing disturbances, BUOW often occur in less than optimal and/or disturbed conditions. If it were later determined that active nests of BUOW would be lost as a result of site-preparation, it could result in CEQA significant adverse impacts and would be in conflict with CDFW code sections. Although no BUOW were recorded on or adjacent to the site, it is recommended by CDFW to complete an initial take avoidance survey no less than 14 days prior to initiating ground disturbance activities. Implementation of avoidance and minimization measures would be triggered by positive owl presence on the site where project activities would occur. The development of avoidance and minimization approaches would be evaluated by monitoring burrowing owls (if present on site). BUOW may re-colonize a site after only a few days. Time lapses between project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance (CDFW 2012).

---

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this biological survey, and that the facts, statements, and information presented herein are true and correct to the best of my knowledge and belief.

Sincerely,

Ecological Sciences, Inc.

Scott D. Cameron  
Principal Biologist

## MANAGEMENT SUMMARY

Euclid Land Ventures, LLC (Proponent) proposes the development of new warehouse facilities, as supporting preparation of the Specific Plan and Project (hereto after referred to as Project or Project Area). The Specific Plan is located on 222.18 acres of land with proposed development on only 130.34 acres at the southwest corner of Eucalyptus Avenue and South Grove Avenue, and 80 acres for programmatic analysis located across the south west corner of Eucalyptus Avenue and Bon View Avenue and the northeast corner of Merrill Ave. and S. Grove Ave., in the City of Ontario, San Bernardino County. Material Culture Consulting, Inc. (MCC) was initially retained by EPD Solutions, Inc. (EPD) to conduct a Phase I cultural and paleontological resource investigation of 142 acres of the Specific Plan Area in July 2018. These assessments were conducted in accordance with the California Environmental Quality Act (CEQA), along with local regulations and guidelines. This assessment included a cultural records search of the California Historical Resources Information System (CHRIS), a locality search at the National History Museum of Los Angeles County (LACM), an examination of geological maps and paleontological literature, a search of the Sacred Lands File by the Native American Heritage Commission (NAHC), outreach efforts with Native American tribal representatives, and a pedestrian survey. In January 2020, MCC was retained by the EPD to conduct a supplemental assessment of an expanded Project Area encompassing an additional 80 acres. This assessment included an additional CHRIS records search and notification of the expanded area to Native American tribal representatives identified by the NAHC. A survey was not conducted for the 80-acre expansion as it was only being programmatically analyzed. Should the 80 acres be developed in the future, a formal survey will need to be conducted.

The SLF search did not identify any previously known cultural resources within the entire Specific Plan Area. On October 24 and November 12, 2018, MCC sent informational letters and maps to Native American representatives designated by the NAHC and local Native American representatives known by MCC to have an interest in the area. Nine Native American Tribes and/or individuals were identified by the NAHC as contacts for knowledge of cultural resources in the Project Area. In addition, 13 individuals not identified by the NAHC, but known to MCC to have interest in the area were contacted. Additional attempts at contact by letter, email, or phone call were made on November 12, and November 27, 2018. MCC did not conduct formal consultation with the Native American representatives. As a result of this outreach effort, MCC received six responses from Native American Tribes or individuals. No specific cultural resources were identified in the responses; however, three Native American Tribes stated an interest in the Project and provided comments. On January 30, 2020, MCC sent informational letters and maps of the expanded Project Area to the nine Native American Tribes and/or individuals identified by the NAHC as contacts to have knowledge of cultural resources in the Project Area. MCC did not conduct formal consultation with the Native American representatives. As a result of this additional outreach effort, MCC received one response from Morongo Band of Mission Indians regarding the extended Project Area. No specific cultural resources were identified in the response. MCC did not conduct formal consultation with the Native American representatives. These results are summarized in the Native American outreach and Background Research section of this report and in Appendix C.

The CHRIS records searches in 2018 and 2020 identified nineteen cultural resources investigations previously conducted within a 1-mile radius buffer around the entire Specific Plan Area, none of which are located within or adjacent to the Specific Plan Area. The cultural records search identified nine previously recorded cultural resources within a 1-mile radius of the Specific Plan Area. A review of historical aerial photographs and maps show the entire Specific Plan Area has been consistently used for agricultural and dairy activities since the 1930s. These historic aerials and maps depict structures located in the northwestern corner of the initial Project Area and at least one structure near the northeastern corner of the Project Area since the early 1930s.

The Specific Plan Area is comprised of younger Quaternary Alluvium, derived broadly from the San Bernardino Mountains to the north. These deposits typically do not contain significant vertebrate fossils within the uppermost layers, however, it is likely that the Specific Plan Area is underlain by older Quaternary deposits at an unknown depth. No previously recorded fossil localities are located within one mile of the Project Area.

Judy Cardoza, MCC Archaeologist and Cross-Trained Paleontologist, conducted the cultural and paleontological survey of the Specific Plan Area on September 21, 2018. During fieldwork, survey conditions were generally poor with majority of the Specific Plan Area (130.34 acres) utilized by ongoing agricultural activities and dairy cattle pasture / enclosures. The property has been previously disturbed by agricultural and dairy operations conducted by the current owners. A total of seven historic structures were identified during the survey, comprising the George Borba & Sons Dairy. The recordation and assessment of this property was conducted by Pamela Daly, MSHP, and found to be ineligible for the California Register of Historical Resources and the National Register of Historical Resources. No paleontological resources were observed during the survey. An additional survey for the supplemental assessment was deemed not necessary due to the area only being programmatically analyzed.

Based on the above findings, the probability of encountering significant cultural or paleontological resources within the Specific Plan Area is considered low. MCC recommends no further mitigation measures prior to implementation of projects within the Specific Plan. While we do not recommend additional mitigation, we do recommend including a section in the Specific Plan which addresses inadvertent discoveries of cultural materials and/or human remains, should these be encountered during any projects within the Specific Plan Area.

Excavation extending more than ten feet below surface has the potential to impact the paleontologically sensitive older Quaternary sediments. If excavation associated with this project extends deeper than ten feet below surface, MCC recommends that a paleontological resource mitigation program be put in place to monitor, salvage, and curate any recovered fossils associated with the current study area, should these be unearthed during ground disturbance associated with any project within the Specific Plan Area.

A copy of this report will be permanently filed with the SCCIC at California State University, Fullerton. All notes, photographs, correspondence and other materials related to this Project are located at MCC, Inc located in Pomona, California.

## INTRODUCTION

Euclid Land Ventures, LLC (Proponent) proposes the development of new warehouse facilities, as supporting preparation of the Specific Plan and Project (hereto after referred to as Project or Project Area). The Specific Plan is located on 222.18 acres of land, with proposed development on only 130.34 acres at the southwest corner of Eucalyptus Avenue and South Grove Avenue, and 80 acres for programmatic analysis located across the south west corner of Eucalyptus Avenue and Bon View Avenue and the northeast corner of Merrill Ave. and S. Grove Ave., in the City of Ontario, San Bernardino County. Material Culture Consulting, Inc. (MCC) was initially retained by EPD Solutions, Inc. (EPD) to conduct a Phase I cultural and paleontological resource investigation of the 142 acre Specific Plan Area in July 2018. These assessments were conducted in accordance with the California Environmental Quality Act (CEQA), along with local regulations and guidelines. This assessment included a cultural records search of the California Historical Resources Information System (CHRIS), a locality search at the National History Museum of Los Angeles County (LACM), an examination of geological maps and paleontological literature, a search of the Sacred Lands File by the Native American Heritage Commission (NAHC), outreach efforts with Native American tribal representatives, and a pedestrian survey. In January 2020, MCC was retained by the EPD to conduct a supplemental assessment of an expanded Project Area encompassing an additional 80 acres. This assessment included an additional CHRIS records search and notification of the expanded area to Native American tribal representatives identified by the NAHC. A survey was not conducted for the 80-acre expansion as it was only being programmaticaly analyzed. Should the 80 acres be developed in the future, a formal survey will need to be conducted.

### PROJECT LOCATION AND DESCRIPTION

The proposed Specific Plan is located at the northwest corner of Eucalyptus Avenue and South Grove Avenue and the southwest corner of Eucalyptus Avenue and Bon View Avenue, in the City of Ontario, San Bernardino County, California (Figures 1 and 2). The Specific Plan Area is bounded by Eucalyptus Avenue to the north, dairy farms to the west, by Merrill Avenue to the south, and South Grove Avenue to the east, and intersected by Bon View Avenue (Figure 3). Specifically, this Specific Plan Area is located on Section 20 of the USGS 7.5-minute Prado Dam, California topographic map, Township 2 South, Range 7 West (Figure 2). The Specific Plan Area consists of twenty-one parcels, identified as Assessor's Parcel Numbers (APNs) 1054-081-03, 1054-091-01, 02; 1054-071-01, -02, and 1054-241-01, -02, 1054-101-01, -02, 1054-231-01, -02, 1054-311-01, -02, 1054-051-010, 1054-061-01, 1054-251-01, 1054-30-101, 1054-051-02, 1054-061-02, 1054-251-02, 1054-301-02. Presently, the Specific Plan Area contains an operational dairy farm and single-family residences. The Project proposes the construction of eight buildings consisting of warehouses and office locations. Currently, no major utilities connect to undeveloped projects within the Specific Plan Area and projected onsite improvements will include storm drains, water quality systems, a sewer main and sewer lines, water lines, and dry utility connections

### PROJECT PERSONNEL

Tria Belcourt, M.A., RPA, President of MCC, served as the Project Manager and Principal Archaeologist for the study. Ms. Belcourt oversaw the project and performed editorial review of this report. Belcourt is a Registered Professional Archaeologist (RPA) with a M.A. in Anthropology from the University of Florida, a B.A. in Anthropology from the University of California at Los Angeles with over twelve years of experience in California archaeology and 8 years of experience overseeing paleontological assessments in California (See Appendix A). Jennifer Kelly, M.S., served as the Principal Investigator for Paleontology for the study. Ms. Kelly conducted the paleontological resource literature and map reviews, oversaw the field study, and prepared the paleontological sections of the report. Ms. Kelly has a M.Sc. in Geology from California State University, Long Beach, and has over ten years of experience in environmental and paleontological compliance in California (See Appendix A). Pamela Daly, MSHP, conducted the historical resource survey and evaluation. Ms. Daly has over 30 years of experience as an architectural historian and is especially familiar with the requirements of the City of Ontario. Judy Cardoza, MCC

Archaeologist and Cross-trained Paleontologist, conducted the records search and field survey. Julia Carvajal, B.S., provided co-authorship of this report and GIS support for this study. Sonia Sifuentes, M.Sc, RPA, provided co-authorship of this report.

## REGULATORY ENVIRONMENT

The current study is subject to local and state laws and regulations regarding cultural and paleontological resources. These regulations require the identification of cultural and paleontological resources within the Specific Plan Area which should be considered during the planning stage of new Projects; include application review for Projects that would potentially involve land disturbance; provide Project-level standard conditions of approval that address unanticipated discoveries; and provide requirements to develop specific mitigation measures if resources are encountered during any development activity. Specific governing legislation and regulations include the following:

### **CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)**

CEQA declares that it is state policy to "take all action necessary to provide the people of this state with...historic environmental qualities." It further states that public or private Projects financed or approved by the state are subject to environmental review by the state. All such Projects, unless entitled to an exemption, may proceed only after this requirement has been satisfied. CEQA requires detailed studies that analyze the environmental impacts of a proposed Project. In the event that a Project is determined to have a potential significant environmental impact, CEQA requires that alternative plans and mitigation measures be considered. CEQA includes historic and archaeological resources as integral features of the environment.

CEQA requires a designated lead agency to determine whether a Project may have a significant impact on historical resources. A historical resource is defined as a resource listed in, or determined to be eligible for listing in, the California Register of Historical Resources (CRHR) (Section 21084.1); a resource included in a local register of historical resources (Section 15064.5(a)(2)); or any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant (Section 15064.5 (a)(3)). Public Resources Code (PRC) Section 5024.1, Section 15064.5 of the Guidelines, and Sections 21083.2 and 21084.1 of the Statutes of CEQA were used as one of the basic guidelines for the current cultural resources study. PRC Section 5024.1 directs evaluation of historical resources to determine their eligibility for listing on the CRHR.

The purpose of the register is to maintain listings of the state's historical resources. The criteria for listing resources on the CRHR were expressly developed to be in accordance with previously established criteria developed for listing on the NRHP, enumerated above, and require similar protection to what NHPA Section 106 mandates for historic properties. According to Public Resources Code (PRC) Section 5024.1(c)(1-4), a resource is considered historically significant if it meets at least one of the following criteria:

1. Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States;
2. Associated with the lives of persons important to local, California or national history;
3. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values; or
4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

In addition to having significance, resources must retain integrity. Integrity is the authenticity of a historical resource's physical identity as evidenced by the survival of characteristics or historic fabric that existed during the resource's period of significance. Alterations to a resource or changes in its use over time may have historical, cultural, or architectural significance. Simply, resources must retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. A resource that has lost its historic character or appearance may still have sufficient integrity for the California Register, if,

under Criterion 4, it maintains the potential to yield significant scientific or historical information or specific data. Note that California Historical Landmarks with numbers 770 or higher are automatically included in the CRHR.

Under CEQA, if an archeological site is not a significant “historical resource” but meets the definition of a “unique archeological resource” as defined in PRC Section 21083.2, then it should be treated in accordance with the provisions of that section. A unique archaeological resource is defined in PRC Section 21083.2(g) as follows:

An archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

Resources that neither meet any of these criteria for listing on the NRHP or CRHR nor qualify as a “unique archaeological resource” under CEQA PRC Section 21083.2 are viewed as not significant. Under CEQA, “A non-unique archaeological resource need be given no further consideration, other than the simple recording of its existence by the lead agency if it so elects” [PRC Section 21083.2(h)].

Impacts to historical resources that alter the characteristics that qualify the historical resource for listing on the CRHR are considered to be a significant impact. Impacts to a historical resource are considered significant if the Project activities physically destroy or damage all or part of a resource; change the character of the use of the resource or physical feature within the setting of the resource which contribute to its significance; or introduce visual, atmospheric, or audible elements that diminish the integrity of significant features of the resource. If it can be demonstrated that a Project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (Section 21083.2 (a), (b), and (c)).

#### **CALIFORNIA HISTORICAL LANDMARKS AND POINTS OF HISTORICAL INTEREST**

Historical landmarks are sites, buildings, features, or events that are of statewide significance and have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other value. In order to be considered a California Historical Landmark, the landmark must meet at least one of the following criteria:

- 1) Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States;
- 2) Associated with the lives of persons important to local, California, or national history;
- 3) Embodies the distinctive characteristics of a type, period, region, or method of construction; represents the work of a master; or possesses high artistic values;
- 4) Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

If a site is primarily of local or countywide interest, it may meet the criteria for the California Point of Historical Interest Program. Points of Historical Interest are sites, buildings, features, or events that are of local (city or county) significance and have anthropological, cultural, military, political, architectural, economic, scientific or technical, religious, experimental, or other value. To be eligible for designation as a Point of Historical Interest, a

resource must meet at least one of the following criteria:

1. The first, last, only, or most significant of its type in the local geographic region (city or county);
2. Associated with an individual or group having a profound influence on the history of the local area;
3. A prototype of, or an outstanding example of, a period, style, architectural movement or construction; or
4. One of the more notable works or the best surviving work in the local region of a pioneer architect, designer, or master builder.

Points of Historical Interest designated after December 1997 and recommended by the State Historical Resources Commission are also listed in the California Register. No historical resource may be designated as both a Landmark and a Point of Interest. If a Point of Interest is subsequently granted status as a Landmark, the Point of Interest designation will be retired.

## PALEONTOLOGY

As defined by Society for Vertebrate Paleontology (SVP), paleontological resources means any fossilized remains, traces, or imprints of prehistoric plants and/or animals which are preserved in or on the earth's crust that can provide information about the history of past life on the planet (2009). Generally, any resource greater than 5,000 years old is considered to be a fossil and are considered a nonrenewable resource that are subject to impacts from land development (SVP, 2010). Paleontological resources are important scientific and educational resources because they are used to:

- 1) Document the evolutionary history of now extinct organisms to study any associated evolution patterns and/or speciation;
- 2) Reconstruct the environments, climate change, and/or paleoecological relationships these organism lived in; and
- 3) Determine the relative geologic age of the strata in which the resources occur and any geological events that resulted in the deposition of the sediments that formed the strata.

Fossil resources vary widely in their relative abundance and distribution and not all are regarded as significant. Vertebrate fossils, whether preserved remains or track ways, are classed as significant by most state and federal agencies and professional groups (and are specifically protected under the California Public Resources Code). In some cases, fossils of plants or invertebrate animals are also considered significant and can provide important information about ancient local environments. Assessment of significance is also subject to the California Environmental Quality Act (CEQA) criterion that the resource constitutes a "unique paleontological resource or site." A significant paleontological resource is considered to be of scientific interest if it is a rare or previously unknown species, it is of high quality and well-preserved, it preserves a previously unknown anatomical or other characteristic, provides new information about the history of life on earth, or has an identified educational or recreational value. Paleontological resources that may be considered not to have scientific significance include those that lack provenience or context, lack physical integrity due to decay or natural erosion, or that are overly redundant or are otherwise not useful for research. Vertebrate fossil remains and traces include bone, scales, scutes, skin impressions, burrows, tracks, tail drag marks, vertebrate coprolites (feces), gastroliths (stomach stones), or other physical evidence of past vertebrate life or activities (BLM 2016). The full significance of fossil specimens or fossil assemblages cannot be accurately predicted before they are collected, and in many cases, before they are prepared in the laboratory and compared with previously collected material.

Pre-construction assessment of significance associated with an area or formation must be made based on previous finds, characteristics of the sediments, and other methods that can be used to determine paleoenvironmental conditions. A separate issue is the potential of a given geographic area or geologic unit to preserve fossils. Information that can contribute to assessment of this potential includes:

- 1) The existence of known fossil localities or documented absence of fossils nearby and in the same geologic unit (e.g. "Formation" or one of its subunits);
- 2) Observation of fossils within the Project vicinity;
- 3) The nature of sedimentary deposits in the area of interest, compared with those of similar deposits known elsewhere (size of particles, clasts and sedimentary structures conducive or non-conducive to fossil inclusion) that may favor or disfavor inclusion of fossils; and
- 4) Sedimentology details, and known geologic history, of the sedimentary unit of interest in terms of the environments in which the sediments were deposited, and assessment of the favorability of those environments for the probable preservation of fossils.

As so defined, significant paleontological resources are determined to be fossils or assemblages of fossils that are unique, unusual, rare, uncommon, or diagnostically important. Significant fossils can include remains of large to very small aquatic and terrestrial vertebrates or remains of plants and animals previously not represented in certain portions of the stratigraphy. Assemblages of fossils that might aid stratigraphic correlation, particularly those offering data for the interpretation of tectonic events, geomorphologic evolution, and paleoclimatology are also critically important (Scott and Springer 2003; Scott et al. 2004).

#### **SAN BERNARDINO COUNTY DEVELOPMENT CODE**

The San Bernardino County Development Code shall be implemented regarding the mitigation of paleontological resources. The County of San Bernardino's Development Code (§82.12.010-050 regarding Cultural Resources and §82.20.010-040 regarding Paleontological Resources) requires evaluation of potential cultural and paleontological resources as part of its CEQA review of proposed projects. It also defines the requirements for a qualified technical specialist in both disciplines. The County additionally requires a project proposed within the Cultural and Paleontological Resources Overlay to include a report prepared by a qualified professional that determines, through appropriate investigation, the presence or absence of cultural or paleontological resources on the project site and within the project area. The report must also recommend appropriate recovery or protection measures. The Overlay may be applied to areas (determined by records searches at appropriate institutions) where cultural or paleontological resources are known to have been produced or are likely to be present.

#### **CITY OF ONTARIO GENERAL PLAN**

The City of Ontario General Plan Community Design Element contains several policies (CD4-1 through CD4-7) were developed to meet the City's goals regarding management of cultural and paleontological resources. CD4-1 applies to the current study as an effort to update the known information on the project area, as it has not been surveyed or examined in the past ten years:

CD4-1 Cultural Resource Management. Update and maintain an inventory of historic sites and buildings, professional collections, artifacts, manuscripts, photographs, documents, maps, and other archives.

CD4-2 Collaboration with Property Owners and Developers. Educate and collaborate with property owners and developers to implement strategies and best practices that preserve the character of our historic buildings, streetscapes, and neighborhoods.

CD4-3 Collaboration with Outside Agencies. Pursue opportunities to team with other agencies, local organizations, and nonprofits in order to preserve and promote Ontario's heritage.

CD4-4 Incentives. Use the Mills Act and other federal, state, regional, and local programs to assist property owners with the preservation of select properties and structures.

CD4-5 Adaptive Reuse. Actively promote and support the adaptive reuse of historic sites and buildings to preserve and maintain their viability.

CD4-6 Promotion of Public Involvement in Preservation. Engage in programs to publicize and promote the City's and the public's involvement in preservation efforts.

CD4-7 Public Outreach. Provide opportunities for our residents to research and learn about the history of Ontario through the Planning Department, Museum of History and Art, Ontario, and the Robert E. Ellingwood Model Colony History Room.

In 2003, the City of Ontario was designated by the State of California Office of Historic Preservation as a Certified Local Government (CLG). This program was created to encourage the preservation of historic resources through the city's municipal code, Article 26 Historic Preservation Ordinance. The ordinance is designed for those property owners who wish to have their property designated as a Historic Landmark or a Contributor to a Historic District. Any historical resource may be designated a Historical Landmark by the City Council if:

1. It meets the criteria for listing in the National Register Historic Places; or
2. It meets the criteria for listing in the California Register of Historic Resources; or
3. It meets one or more of the following criteria:
  - A. It exemplifies or reflects special elements of the City's history;
  - B. It is identified with persons or events significant in local, state, or national history;
  - C. It is representative of the work of a notable builder, designer, architect, or artist;
  - D. It embodies distinguishing architectural characteristics of a style, type, period or method of construction;
  - E. It is noteworthy example of the use of indigenous materials or craftsmanship;
  - F. It embodies elements that represent a significant structural, engineering, or architectural achievement or innovation;
  - G. It has a unique location, a singular physical characteristic, or is an established and familiar visual feature of a neighborhood, community of the City; or
  - H. It is one of the few remaining examples in the City, region, state, or nation possessing distinguishing characteristics of an architectural or historical type or specimen.

## BACKGROUND

### ENVIRONMENTAL SETTING

The Project Area is located 5.2 miles south of the downtown area of the City of Ontario, bounded by Eucalyptus Avenue to the north, by dairy farm to the west, by Merrill Avenue to the south, South Grove Avenue to the east, and bisected by Bon View Avenue. North of the Project is a mixture of dairy/agricultural and service commercial properties, and Chino Airport located to the south. The city of Ontario is located in southwest San Bernardino County in southern California and lies within the northern extent of the Santa Ana Valley, a sub-portion of the larger San Bernardino Valley. The subject site is located within the Chino Basin. The Prado Basin is situated within the upper Santa Ana Valley of the Peninsular Ranges Geomorphic Province (Norris and Webb 1976). The city of Ontario lies within the broad alluvial fan originating from the southern flank of the San Gabriel Mountains, and dips gradually southward to the confluence of San Antonio Channel, Cucamonga Channel/Mill Creek, and the Santa Ana River at the Prado Dam Flood Control Basin in Riverside County. The Santa Ana River flows to the south of the City and Cucamonga Creek and Deer Creek traverse north to south through the City. The Project Area is flat with elevation averaging approximately 202 meters (m) (662 ft) above mean sea level (AMSL). The entire project area has been disturbed by the development of Dairy Farms, currently located within the Project's boundary. Currently, vegetation within the Project Area is characterized as primarily agricultural and commercial landscaping with no native vegetation observed.

### PALEONTOLOGICAL SETTING

The Project Area is situated in the San Bernardino Basin, adjacent to the Transverse Ranges Geomorphic Province. This province is comprised of a series of mountain ranges that run transverse to most mountain ranges in southern California – roughly east/west trending. The mountains within the province, including the San Gabriel and San Bernardino mountains to the north and northeast, were uplifted by tectonic activity, and provide a major sedimentary source for the alluvium basins of the adjacent areas (Critelli et al. 1995). The geologic units underlying this project are mapped entirely as younger Quaternary alluvium (Qyfa) dating from the late Holocene to Pleistocene (Jennings et al. 1977) (Figure 4). These deposits derived broadly as alluvial fan deposits from the San Bernardino Mountains to the north (McLeod 2018).

*Young Quaternary alluvium (Qyfa)* are Holocene to late Pleistocene-aged alluvial fan deposit that typically consists of river and stream derived sediments. The sediments are comprised of slightly consolidated gray-hued arkosic, sandy and gravel -sand deposits derived from local Peninsular Ranges batholith granitic bodies (Morton 2003).

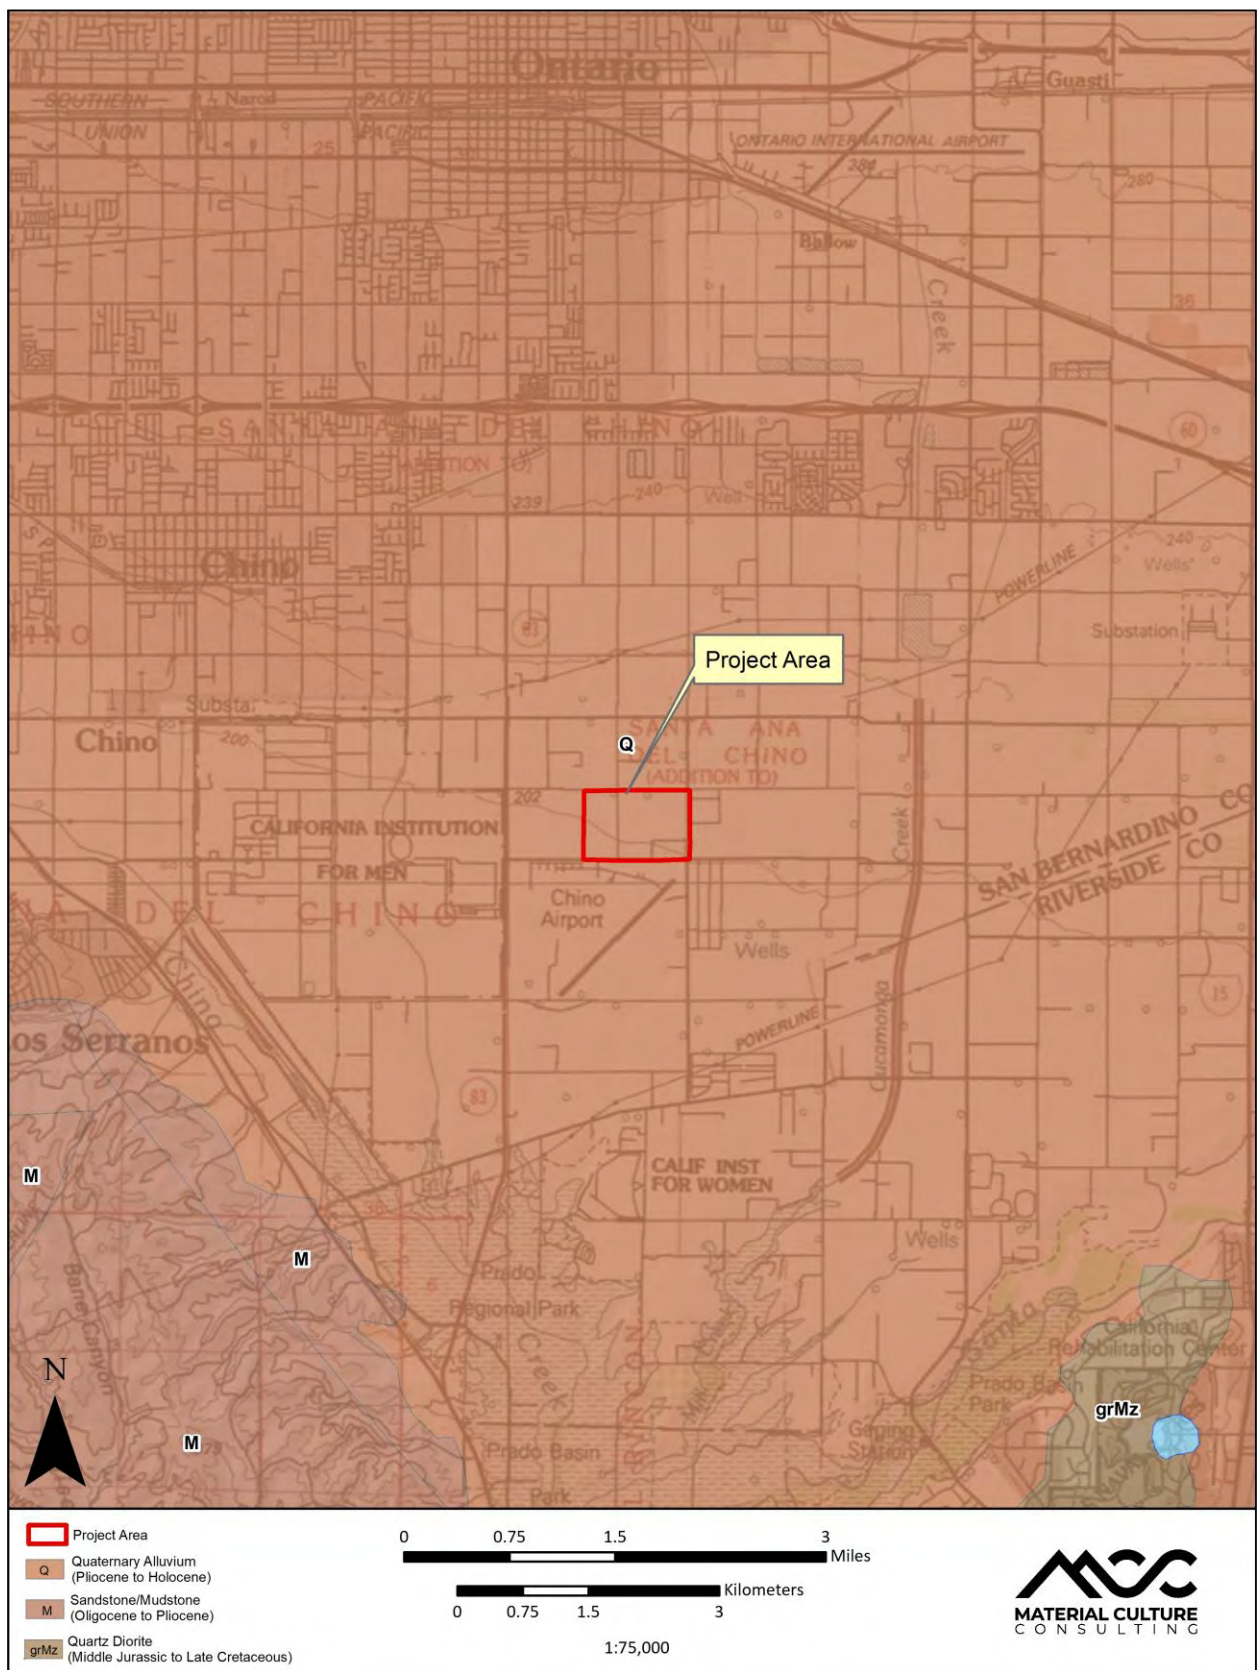

Figure 4. Geological Map of Project Area (1:75,000; compiled by USGS in open source PDF format)

## PREHISTORIC CONTEXT

Most researchers agree that the earliest occupation for the Ontario area dates to the early Holocene (11,000 to 8,000 years ago). The following discussion of the cultural history of San Bernardino County references the San Dieguito Complex, the Milling Stone Horizon, the Encinitas Tradition, the La Jolla Complex, the Pauma Complex, and the San Luis Rey Complex, since these culture sequences have been used to describe archaeological manifestations in the region. The Late Prehistoric component in the area of San Bernardino County was represented by the Cahuilla, Gabrielino, and Luiseño Indians. Absolute chronological information, where possible, will be incorporated into this discussion to examine the effectiveness of continuing to use these terms interchangeably.

### *The Paleo Indian Period*

The Paleo Indian Period is associated with the terminus of the late Pleistocene (12,000 to 10,000 YBP). The environment during the late Pleistocene was cool and moist, which allowed for glaciation in the mountains and the formation of deep, pluvial lakes in the deserts and basin lands (Moratto 1984). However, by the terminus of the late Pleistocene, the climate became warmer, which caused glaciers to melt, sea levels to rise, greater coastal erosion, large lakes to recede and evaporate, extinction of Pleistocene megafauna, and major vegetation changes (Moratto 1984; Martin 1967, 1973; Fagan 1991). Paleo Indians were likely attracted to multiple habitat types, including mountains, marshlands, estuaries, and lakeshores. These people likely subsisted using a more generalized hunting, gathering, and collecting adaptation, utilizing a variety of resources including birds, mollusks, and both large and small mammals (Erlandson and Colten 1991; Moratto 1984; Moss and Erlandson 1995). The earliest sites known in the area are attributed to the San Dieguito culture, which consists of a hunting culture with flaked stone tool industry (Warren 1967). The material culture related to this time included scrapers, hammer stones, large flaked cores, drills, and choppers, which were used to process food and raw material.

### *Milling Stone Period*

Around 8,000 years ago, subsistence patterns changed, resulting in a material complex consisting of an abundance of milling stones (for grinding food items) with a decrease in the number of chipped stone tools. The material culture from this time period includes large, bifacially worked dart points and grinding stones, handstones and metates. Archaeologists initially designated this period as the "Millingstone Horizon" (Wallace 1955). Later, the Millingstone Horizon was redefined as a cultural tradition named the Encinitas Tradition (Warren 1967) with various regional expressions including Topanga and La Jolla. Use by archaeologists varied as some adopted a generalized Encinitas Tradition without regional variations, while others continued to use Millingstone Horizon, and still others used Middle Holocene (the geologic time period) to indicate this observed pattern (Sutton and Gardner 2010:1-2). Recently, this generalized terminology was criticized by Sutton and Gardner (2010) as suppressing the identification of cultural, spatial, and temporal variation, as well as the movement of peoples throughout space and time. It is these factors that are believed to be critical to an understanding of prehistoric cultural adaptation and change in this portion of southern California (Sutton and Gardner 2010:1-2).

The Encinitas Tradition characteristics include abundant metates and manos, crudely-made core and flake tools, bone tools, shell ornaments, very few projectile points, indicating a subsistence pattern focused on hunting and gathering a variety of floral resources. Faunal remains vary by location but include marine mammals, fish, and shellfish, as well as terrestrial animals, reptiles, and birds (Sutton and Gardner 2010:7). The Encinitas Tradition has been redefined to have four patterns (Sutton and Gardner 2010: 8-25). These include the Topanga Pattern in coastal Los Angeles and Orange counties, the La Jolla Pattern in coastal San Diego County, and the Sayles or Pauma cultures in inland San Diego County extending into western San Bernardino County, where the project is located. At approximately 3,500 years ago, Pauma groups in the general Project vicinity adopted new cultural traits which transformed the archaeological site characteristics - including mortar and pestle technology. This indicated the development of food storage, largely acorns, which could be processed and saved for the leaner, cooler months of the year.

### *Late Prehistoric Period*

At approximately 1,500 years before present, bow and arrow technology started to emerge in the archaeological record, which also indicates new settlement patterns and subsistence systems. The local population retained the subsistence methods of the past, but incorporated new materials into their day to day existence, as evidenced by the archaeological record. The Palomar Tradition is attributed to this time, and is comprised of larger two patterns: the Peninsular Pattern in the inland areas of the northern Peninsular Ranges (e.g., San Jacinto and Santa Rosa mountains) and the northern Coachella Valley (Sutton 2010), and the San Luis Rey pattern of the project area. Archaeological sites from this time period are characterized by soapstone bowls, arrowhead projectile points, pottery vessels, rock paintings, and evidence of cremation sites. The shift in material culture assemblages is largely attributed to the emergence of Shoshonean (Takic-speaking) people who entered California from the east.

### **ETHNOGRAPHY**

The territory of the Gabrielino at the time of Spanish contact covered much of current-day Los Angeles and Orange Counties and extended into the western part of San Bernardino County. The southern extent of this culture area is bounded by Aliso Creek, the eastern extent is located east of present-day San Bernardino along the Santa Ana River, the northern extent includes the San Fernando Valley, and the western extent includes portions of the Santa Monica Mountains. The Gabrielino also occupied several Channel Islands including Santa Barbara Island, Santa Catalina Island, San Nicholas Island, and San Clemente Island. Because of their access to certain resources, including a steatite source from Santa Catalina Island, this group was among the wealthiest and most populous aboriginal groups in all of southern California. Trade of materials and resources controlled by the Gabrielino extended as far north as the San Joaquin Valley, as far east as the Colorado River, and as far south as Baja California (Johnson 1962; Kroeber 1976; Bean and Smith 1978).

The Gabrielino lived in permanent villages and smaller, resource-gathering camps occupied at various times of the year depending upon the seasonality of the resource. Larger villages were comprised of several families or clans, while smaller, seasonal camps typically housed smaller family units. The coastal area between San Pedro and Topanga Canyon was the location of primary subsistence villages, while secondary sites were located near inland sage stands, oak groves, and pine forests. Permanent villages were located along rivers and streams, as well as in sheltered areas along the coast. As previously mentioned, the Channel Islands were also the locations of relatively large settlements (Kroeber 1976; Bean and Smith 1978).

The Gabrielino tribe carried out food exploitation strategies that utilized local resources ranging from plants to animals; coastal resources were also exploited. Rabbit and deer were hunted and acorns, buckwheat, chia, berries, fruits and many other plants were collected. Artifacts associated with their occupations include a wide array of chipped stone tools including knives and projectile points, wooden tools like digging sticks and bows, and ground stone tools like bedrock and portable mortars, metates and pestles. Local vegetation was used to construct shelters as well as for medicinal purposes. Cooked foods were prepared on hearths (Kroeber 1976; Bean and Smith 1978; McCawley 1996). Acorns were one of the most important food resources utilized by the Gabrielino and other Native American groups across California. The acorns were ground into a fine powder in order to make an acorn mush or gruel. A dietary staple, acorns provided a large number of calories and nutrients. The ability to store and create stockpiles in case of lean times also contributed to the importance of acorns as a vital natural resource. Much of the material evidence available to archaeologists concerning the Gabrielino is a result of tools and technologies related to their subsistence activities.

The social structure of the Gabrielino is little known; however, there appears to have been at least three social classes: 1) the elite, which included the rich, chiefs, and their immediate family; 2) a middle class, which included people of relatively high economic status or long established lineages; and 3) a class of people that included most other individuals in the society. Villages were politically autonomous units comprised of several lineages. During

times of the year when certain seasonal resources were available, the village would divide into lineage groups and move out to exploit them, returning to the village between forays (Kroeber 1976; Bean and Smith 1978). Each lineage had its own leader, with the village chief coming from the dominant lineage. Several villages might be allied under a paramount chief. Chiefly positions were of an ascribed status, most often passed to the eldest son. Chiefly duties included providing village cohesion, leading warfare and peace negotiations with other groups, collecting tribute from the village(s) under his jurisdiction, and arbitrating disputes within the village(s). The status of the chief was legitimized by his safekeeping of the sacred bundle, a representation of the link between the material and spiritual realms and the embodiment of power (Kroeber 1976; Bean and Smith 1978). Shamans were leaders in the spirit realm. The duties of the shaman included conducting healing and curing ceremonies, guarding of the sacred bundle, locating lost items, identifying and collecting poisons for arrows, and making rain (Kroeber 1976; Bean and Smith 1978). Marriages were made between individuals of equal social status and, in the case of powerful lineages, marriages were arranged to establish political ties between the lineages (Kroeber 1976; Bean and Smith 1978). Men conducted the majority of the heavy labor, hunting, fishing, and trading with other groups. Women's duties included gathering and preparing plant and animal resources, and making baskets, pots, and clothing (Kroeber 1976; Bean and Smith 1978). The name "Gabrielino" is Spanish in origin and was used in reference to the Native Americans associated with the Mission San Gabriel. It is unknown what these people called themselves before the Spanish arrived, but today they call themselves "Tongva", meaning "people of the earth".

## **HISTORICAL SETTING**

The "Sacred Expedition" of 1769, led by Spaniard Gaspar de Portola and Franciscan Fray (or Father) Junipero Serra, started the process of colonization in Alta California was meant to begin the permanent settlement of Alta California, beginning in San Diego. Once the first European exploration of California occurred, the region underwent immense change. As early as 1827, Anglo-Americans were migrating into Southern California. In the decades to come, California would be taken by the United States with the close of the Mexican-American War and subsequent events such as the Civil War and California Gold Rush would continue to shape the history of California.

### *Spanish Period (1769 to 1821) to Mexican Period (1821 to 1848)*

The Spanish period began in 1769 with Captain Gaspar de Portolá's land expedition and ended in 1821 with Mexican Independence. During the Spanish Period, the establishment of the Mission San Gabriel Arcángel (1771) was influential throughout the surrounding regions, using the area for cattle grazing. An asistencia was established within the area nearby in Redlands in 1819 and helped facilitate the Mission's control of the surrounding area. However, after control of the area shifted to Mexico, secularization began throughout the area and the missions and their associated ranches began to decline. The Mexican government proceeded to push settlements of Mexican populations from the south by deeding large grants to individuals who promised to employ settlers. One such land grant was the *Rancho Santa Ana del Chino*.

In 1841, Antonio Maria Lugo was granted the rights to what became *Rancho Santa Ana del Chino*. After building an adobe house (now currently the location of Boy's Republic in Chino Hills), Lugo turned over the management of the ranch to his son-in-law, Isaac Williams. For decades, Williams successfully grazed cattle on the 46,000 acres Rancho. Notably, Williams played a significant part of the Battle of Chino, a local skirmish during the Mexican-American War. On September 26 and 27, 1846, the Mexican army sent an advancing contingency to intercept 24 American sympathizers, led by Benjamin D. Wilson, on their way to Los Angeles (Beattie 1942; Martino et al. 2011; Lech 2014). The adobe house at *Rancho Santa Ana del Chino*, where the sympathizers had been hiding, was set ablaze as a result of multiple attacks. The American group surrendered and, instead of execution, the group was taken to Los Angeles where they remained prisoners of war until they were eventually released (Beattie 1942; Lech 2014).

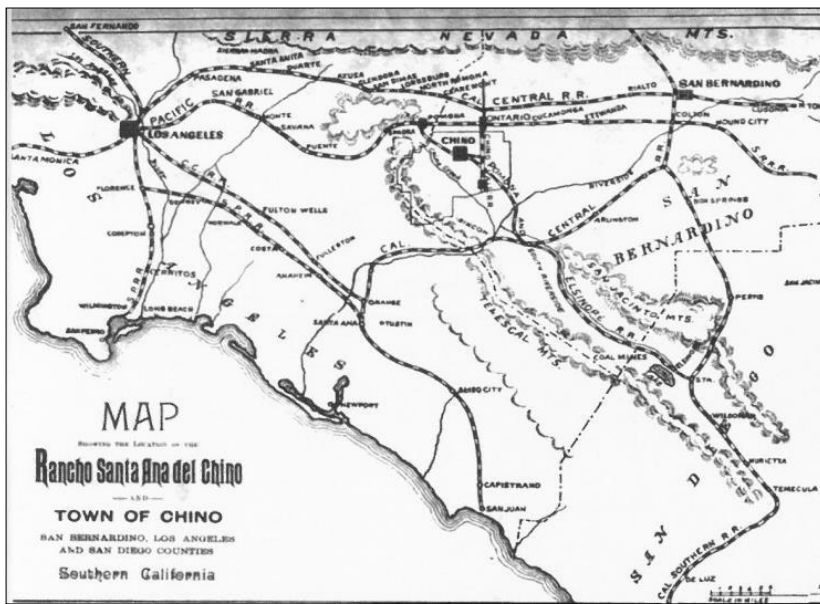

Figure 5. Map of Rancho Santa Ana del Chino (Martino et al. 2011)

#### *American Period (1848 to present)*

The Gold Rush of 1849 would see tremendous influx of Americans and Europeans flooding into Southern California. *Rancho Santa Ana del Chino* became a popular stopover for travelers of the rush (Martino et al. 2011). The passing of the Homestead Act of 1862 continued this increase of settlers within the region, George and William Chaffey were among these early pioneers. In 1881, the Chaffey brothers believed that if the land was properly irrigated, it could be converted to profitable agriculture property. They bought over 6,000 acres of land in 1882 that was arid and covered by patches of scrub brush (City of Ontario 2018a). The Chaffey brothers designed a water system that connected miles of cement pipe from an underground water source to each parcel of land. This land would eventually become the cities of Ontario and Upland. George and William Chaffey derived the name of the city from their native province of Ontario in Canada (Galvin Preservation Associates 2007). The City of Ontario was incorporated in 1891, becoming one of the earliest established towns in San Bernardino County (City of Ontario 2018a and b). By 1903, the city was referred to as a “Model Irrigation Colony” after receiving an award at the World Fair as a “Model Colony” for innovation in water rights and technology, which assisted in attracting settlers to the City (City of Ontario 2018a). Charles Frankish, an early citizen of Ontario, guided and encouraged early development in the city by successfully attracting the Southern Pacific Railway to locate a depot in the center of town on Euclid Avenue, making it an important feature of the City. The establishment of the Southern Pacific Railroad depot transformed Ontario into an agricultural center. Ontario focused primarily on the citrus industry, but also grew walnuts, peaches, and grapes. There was a large gentry class of citrus growers who constructed many grand ornamental Victorian houses throughout the city (City of Ontario 2018b).

**Figure 6.** Citrus grove in North Ontario area, circa 1905 (Galvin Preservation Associates 2007)

Dairies began to be established in the region, known as Chino Valley, during the late 1890s and continued to dominate the area throughout the 20<sup>th</sup> century. During the 1920s and 1930s, middle European dairymen began settling in the area (Galvin and Associates 2004). In 1967, the County of San Bernardino designated 14,000 acres of land in Chino Valley as an agricultural preserve protected by the Williamson Act and the Land Conservation Act. By the 1980s, the area had more cows per acre and higher milk yields than anywhere else in the world (Galvin and Associates 2004). By the 1990s, increased demand for housing and high dairy operation costs pressured farmers in the San Bernardino Agricultural Preserve to consider relocating their dairies and annexing their land to adjoining cities. Anticipating the expiration of the Williamson Act, the area was divided, and portions were incorporated into the Cities of Ontario, Chino, and Chino Hills. The City of Ontario annexed 8,200 acres of the former San Bernardino Agriculture Preserve in 1999 and called the area the New Model Colony. The Local Agency Formation Commission (LAFCO) required the City to prepare a General Plan Amendment and EIR prior to annexation. In 1996, the City of Ontario began planning for annexation and adopted the New Model Colony General Plan Amendment and EIR in 1998 (Galvin and Associates 2004). Today, the City of Ontario retains its history through many recognizable historic neighborhoods, buildings, and agricultural districts.

## METHODS

### **CALIFORNIA HISTORIC RESOURCES INVENTORY SYSTEM AND CULTURAL BACKGROUND RESEARCH**

On September 18, 2018, Judy Cardoza, conducted a search of the California Historical Resource Information System (CHRIS) at the South Central Coast Information Center (SCCIC), located at the California State University, Fullerton, Orange County. On January 29, 2020, Julia Carvajal, conducted a supplemental search at SCCIC for the amended Project Area. The search covered any previously recorded cultural resources and investigations within a 1 mile radius of the Project Area. The CHRIS search also included a review of the National Register of Historic Places (NRHP), the California Register of Historical Resources (CRHR), the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Inventory of Historic Resources.

### **NATIVE AMERICAN OUTREACH AND BACKGROUND RESEARCH**

MCC requested a search of the Sacred Lands File from the Native American Heritage Commission (NAHC) on October 2, 2018. The Commission responded with a letter dated October 10, 2018, although this response was not logged in with MCC until October 31, 2018, stating that there are no known sacred lands within a 1- mile radius of the Project Area. The NAHC requested that nine Native American tribes or individuals be contacted for further information regarding the general Project vicinity. MCC has extensive experience conducting archaeological investigations within the region of the Project Area and has established working relationships with local Native American representatives. As a result, informational letters were mailed on October 24, 2018, to each group or individual anticipated to be an interested party in advance of the NAHC response, in order to expedite a streamlined Native American contact program. Maps depicting the Project APE were attached to each letter. On November 2, 2018, any individuals that was not covered by MCC's initial outreach was mailed out the same informational letters and map. Overall, a total of 22 parties were contacted, nine of which were identified by the NAHC as potential contacts and 13 additional Native American representatives, to solicit comments regarding the Project. Additional attempts at contact by letter, email, or phone call were made on November 12 and November 27, 2018. On January 30, 2020, MCC sent informational letters and maps of the expanded Project Area to the nine Native American Tribes and/or individuals identified by the NAHC as contacts to have knowledge of cultural resources in the Project Area. MCC did not conduct formal consultation with the Native American representatives.

### **PALEONTOLOGICAL RECORDS SEARCH**

The literature review included an examination of geologic maps of the project area and a review of relevant geological and paleontological literature to determine which geologic units are present within the project area and whether fossils have been recovered from those geologic units elsewhere in the region. As geologic units may extend over large geographic areas and contain similar lithologies and fossils, the literature review includes areas well beyond the project area. The results of this literature review include an overview of the geology of the project areas and a discussion of the paleontological sensitivity (or potential) of the geologic units within the project area. A search for paleontological records was completed by staff of the Natural History Museum of Los Angeles County (LACM) in Los Angeles on October 12, 2018. The record search included a one-mile radius around the Project Area, as well as the Project Area itself identified any vertebrate localities in the museum's records that exist near the project area in the same or similar deposits.

### **CULTURAL AND PALEONTOLOGICAL FIELD SURVEY**

The survey stage is important in a Project's environmental assessment phase to verify the exact location of each identified cultural or paleontological resource, the condition or integrity of the resource, and the proximity of the resource to areas of cultural resources sensitivity. In addition, the field survey provides invaluable information on the type of sediment present within the Project Area, which informs the assessment of paleontological sensitivity. Judy Cardoza, MCC Archaeologist and cross-trained Paleontologist, conducted the survey of the proposed Project Area on September 21, 2018. The survey consisted of walking in parallel transects spaced at approximately 15-

meter intervals over the Project parcel, while closely inspecting the ground surface. All undeveloped ground surface areas within the ground disturbance portion of the Project Area were examined for artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools or fire-affected rock), soil discoloration that might indicate the presence of a cultural midden, soil depressions and features indicative of the former presence of structures or buildings (e.g., postholes, foundations), or historic-era debris (e.g., metal, glass, ceramics). Existing ground disturbances (e.g. cutbanks, ditches, animal burrows, etc.) were visually inspected. Representative photographs were taken of the entire Project Area.

## RESULTS

### CALIFORNIA HISTORIC RESOURCES INVENTORY SYSTEM AND CULTURAL BACKGROUND RESEARCH

The CHRIS records search identified a total of 19 cultural resources investigation that have been previously conducted within a 1-mile mile radius buffer around the Project Area, with two studies adjacent to the Project Area (see Table 1).

**Table 1.** Previous Conducted Resources Studies within 1 -mile Buffer of Project Area

CHRIS Report Number	Authors	Year	Title of Study	Affiliation	Distance from Project Area

The records search identified nine previously recorded cultural resources within a 1-mile buffer, with no resources located within the Project Area boundaries (see Table 2). A review of historical aerial photographs and maps show the Project Area has been consistently used for agricultural and dairy activities since the 1930s (see Table 3 and Confidential Appendix B).

**Table 2.** Previously Recorded Cultural Resources within 1-mile Buffer of Project Area

**NATIVE AMERICAN OUTREACH AND BACKGROUND RESEARCH**

As a result of the effort to contact the 22 Native American Tribes or individuals identified by the NAHC and established working relationships with other Native American representatives, MCC received seven responses. These responses came in the form of emails and a phone call. Below is a summary of the responses provided by Native American Tribes.

MCC received several responses prior to our first follow-up attempt. On November 1, 2018, MCC received an email from Jessica Mauck, Cultural Resources Analyst for San Manuel Band of Mission Indians (SMBMI). Ms. Mauck stated the proposed Project Area is located just outside of Serrano ancestral territory and SMBMI would not request consulting party status or elect to participate with further development of the Project. On November 2, 2018, MCC received an email containing a letter from Travis Armstrong, Tribal Historic Preservation Officer for

Morongo Band of Mission Indians (MBMI). Mr. Armstrong stated the Project is located within the MBMI's aboriginal territory or in an area considered to be a traditional use area or one in which the Tribe has cultural ties. MBMI requested a through records search be conducted via CHRIS and a copy of the search results be provided to the tribe. MBMI also requested a tribal monitor participate during the initial pedestrian field survey of the Phase I Study of the Project with copy of results of the study provided. Mr. Armstrong stated that if the pedestrian survey has already been conducted, MBMI would request a copy of the Phase I study be provided to the Tribe as soon as it is made available. On November 7, 2018, MCC received an email from Lacy Padilla, Archaeological Technician for Agua Caliente Band of Cahuilla Indians (ACBCI), who were a part of MCC's preliminary outreach effort. Ms. Padilla stated the proposed Project is not located within ACBCI's Traditional Use Area and they defer to other tribes in the area.

MCC conducted a follow-up to the nine NAHC-provided Native American contacts on November 12, 2018. In response, Brandy Salas, admin specialist for Gabrieleno Band of Mission Indians- Kizh Nation (Kizh Nation), requested a digital copy of the outreach letter be sent to the Tribe. MCC provided a digital copy to Ms. Salas on November 14, 2018. On November 16, 2018, Ms. Salas responded that the Kizh Nation request that if any ground disturbance should take place regarding the Project that their tribal government would like to consult with the agency. On November 16, 2018, MCC received an email from Sarah Bliss, Cultural Resources Manager for Twenty-Nine Palms Band of Mission Indians (TNPBMI), who were apart of MCC's preliminary outreach effort. Ms. Bliss stated that TNPBMI was unaware of any additional cultural resources or any Tribal Cultural Resources within the Project area. TNPBMI requested any updates or changes to the Project be brought to their attention. On November 28, 2018 MCC received a return call from Mr. Anthony Morales, chairperson of the Gabrieleno / Tongva San Gabriel Band of Mission Indians. Mr. Morales indicated that the Project area is historically known to have had Gabrieleno villages in the general vicinity, that the area would have been used as a trade route to the Inland Empire, and that there may even be traces of water conveyance features intact. Mr. Morales also requested that the Gabrieleno / Tongva San Gabriel Band of Mission Indians be contacted in the event that any ground disturbing activity takes place within the Project area, as they would like to be involved in the monitoring process.

As a result of notifying Native American Tribes or individuals identified by the NAHC about changes to the Project Area, MCC received one response from Alexandra McCleary, Tribal Archaeologist for the San Manuel Band of Mission Indians (SMBMI). Dr. McCleary stated that the proposed Project are is located outside of ancestral territory and as such does not have any comments at this time.

As of March 4,2020, MCC has not received any additional responses from the remaining NAHC-listed groups or individuals we contacted for information. Should MCC receive additional responses once the final report is submitted, the information will be passed on to Euclid Land Ventures to be added to the report as an addendum. NAHC and Native American correspondence materials, including our communication attempts, are provided as Appendix C.

#### **PALEONTOLOGICAL RECORDS SEARCH**

The locality search at LACM did not yield any fossil localities within 1 mile of the Project Area and no fossil localities within the Project Area (See Appendix D) (McLeod 2018). The geological units mapped within the entirety of the Project Area is comprised of younger Quaternary alluvium (McLeod 2018). While these deposits typically do not contain significant vertebrate fossils within the uppermost layers, it is likely they are underlain in this area by older Quaternary deposits at relatively shallow depth. The closest vertebrate fossil locality from similar sediments is LACM 7811, which is located just south of due east of the Project Area, and west of Mira Loma, California. This locality produced a fossil specimen of whipsnake (*Masticophis*) at a depth of nine to eleven ft below surface (McLeod 2018). The next closest vertebrate fossil locality from Older Quaternary deposits is LACM 1207, located south-southeast of the Project Area on the northwestern side of Corona, California. This locality produced fossil

specimen of deer (*Odocoileus*) (McLeod 2018). Additional literature was consulted, including The University of California Museum of Paleontology (UCMP)'s Miocene Mammal Mapping Project (MioMap), with no fossil localities within the area of the Project (Carrasco et al. 2005).

### **CULTURAL AND PALEONTOLOGICAL FIELD SURVEY RESULTS**

The majority of the Project Area is comprised of facilities supporting ongoing agricultural and dairy activities. Historic structures, in addition to modern residences and buildings associated with the dairy farm, are located throughout the Project Area, and were surveyed and assessed by Pamela Daly, MSHP (see Appendix E). The entire Project Area has been previously disturbed with the current agricultural/dairy operations within its boundaries. Retaining ponds are located within the southeast portion of the project area.

On September 21, 2018. MCC archaeologist and cross-trained paleontologist Judy Cardoza, conducted an intensive pedestrian survey of the project area. Visibility throughout the project area during the archaeological and paleontological survey ranged from 10% to 80%, vegetation consists of dry seasonal grasses. Soil throughout the area is a light brown, disturbed by agricultural and dairy activities. Representative photos of the project area are found below (Figures 7-12). A survey for the supplemental assessment acreage was not surveyed due to the area only being programmatically analyzed at this time. If development is to occur at a later date, then an intensive pedestrian survey must be completed prior to work.

The Specific Plan area is occupied by the George Borba & Son Dairy, which appears to have established their organization at this location in 1963 (per information from San Bernardino County building permits). George A. Borba Sr. was the son of Pete Borba, who had moved to the Chino Valley-Edison Road area in the late 1920s, to grow potatoes and be a dairy operator. George Borba Sr. established in dairy operation in 1963 at 7955 Eucalyptus Avenue, and built a large modern milking operation and a private residence. He expanded his operation in 1978 with the construction of an additional dairy barn, and built a residence for his farm manager. Borba's neighbor to the southeast, Harry Boersma, sold his dairy operation to Borba in 1993. When Borba moved onto the land in 1963, there had been three single-family bungalows and a large, metal sided utility barn located at the southeast corner of Eucalyptus Avenue and Bon View Avenue. The three bungalows were removed in 1988, and replaced with four, single-family residences that same year. The Specific Plan area includes the Borba main house, the manager's house, the Boersma house, the Borba main dairy barn/milking parlor, the Borba auxiliary dairy barn/milking parlor, the Boersma dairy barn/milking parlor, four single-family residences, an older barn, and structures associated with a dairy farm operation. The buildings and structures of the George Borba & Son Dairy property are all situated within the Specific Plan area. The George Borba & Son Dairy property has met the aspects of physical integrity, and character-defining features, to be identified as a Post 1950s Scientific, Large Capacity Dairy, but does not appear to have played a significant role in the history of dairy farming, or appear to be an important example of a large-scale, concentrated animal dairy operation in Ontario, or the Chino Valley area.

**Figure 12.** Representative photos of historic buildings (View Northeast)

## CONCLUSIONS AND RECOMMENDATIONS

### CULTURAL RESOURCES CONCLUSIONS

The Phase I cultural resource assessment of the Project Area included a CHRIS records search, NAHC outreach, background research, a field pedestrian survey, and a historic resource survey and evaluation. The records search results indicated no previously recorded resource within the Project Area. During the field survey, several historic structures were observed in the project area, which were assessed for significance by a qualified architectural historian, Pamela Daly, MSHP. The historic-era dairy is not considered significant as per CEQA or NHPA Section 106, and therefore does not require additional mitigation or management.

### CULTURAL RESOURCES RECOMMENDATIONS

Based on the results of the cultural resources search and survey, the proposed Project Area is considered to have a low sensitivity for presence of significant prehistoric or historical archaeological deposits or features. MCC recommends **No Mitigation is Needed**. However, this recommendation is based on the condition of no development taking place within the supplemental assessment area. Future development in the expansion area will require an intensive pedestrian survey prior to any development. If the expansion area yields a positive survey, mitigation measures will need to be reassessed and archaeological monitoring maybe required. While we do not recommend additional mitigation at this time, MCC does recommend setting a plan in place to expediently address inadvertent discoveries and human remains (as described below), should these be encountered during construction activities.

#### *Inadvertent Discoveries*

Despite actions taken to ensure that all cultural resources are located prior to construction, including record searches and field surveying, there still remains the possibility that undiscovered, buried archaeological resources might be encountered during construction. In the event that these resources are inadvertently discovered during ground-disturbing activities, work must be halted within 50 feet of the find until it can be evaluated by a qualified archaeologist. Construction activities could continue in other areas. If the discovery proves to be significant, additional work, such as data recovery excavation or fossil recovery, may be warranted and would be discussed in consultation with the appropriate regulatory agency(ies).

#### *Human Remains*

Procedures of conduct following the discovery of human remains on non-federal lands have been mandated by California Health and Safety Code §7050.5, PRC §5097.98 and the California Code of Regulations (CCR) §15064.5(e). According to the provisions in CEQA, should human remains be encountered, all work in the immediate vicinity of the burial must cease, and any necessary steps to insure the integrity of the immediate area must be taken. The Riverside County Coroner will be immediately notified. The Coroner must then determine whether the remains are Native American. If the Coroner determines the remains are Native American, the Coroner has 24 hours to notify the NAHC, who will, in turn, notify the person they identify as the most likely descendent (MLD) of any human remains. Further actions will be determined, in part, by the desires of the MLD. The MLD has 48 hours to make recommendations regarding the disposition of the remains following notification from the NAHC of the discovery. If the MLD does not make recommendations within 48 hours, the owner shall, with appropriate dignity, reinter the remains in an area of the property secure from further disturbance. Alternatively, if the owner does not accept the MLD's recommendations, the owner or the descendent may request mediation by the NAHC.

## **PALEONTOLOGICAL RESOURCES CONCLUSIONS**

The Phase I paleontological resource assessment of the Project Area included a locality records search, literature review, and a field pedestrian survey. No significant paleontological resources were identified within the direct Project Area during the locality search or the field survey. The Project show the geological units mapped within the Project Area is comprised of younger Quaternary Alluvium, derived from San Bernardino Mountains to the north. While these deposits typically do not contain significant vertebrate fossils within the uppermost layers, it is likely there are underlying sediments of older Quaternary deposits. There are nearby localities from similar sedimentary deposits found within the proposed Project Area. MCC recommends the Project Area be considered low to moderate sensitivity to have the potential for construction activities of the proposed project to impact underlying paleontological resources.

## **PALEONTOLOGICAL RESOURCES RECOMMENDATIONS**

Based on the above findings, MCC recommends periodic paleontological spot checks should be conducted when excavation exceeds depths of five feet to determine if older, paleontologically sensitive sediments are present. If present, monitoring should be implemented. Prior to the start of construction, a paleontological resources monitoring plan (PRMP) should be prepared and implemented. It is recommended the Project's PRMP implement the following procedures:

- A trained and qualified paleontological monitor should perform spot-check and/or monitoring of any excavations on the Project that have the potential to impact paleontological resources in undisturbed native sediments below 5 feet in depth. The monitor will have the ability to redirect construction activities to ensure avoidance of adverse impacts to paleontological resources.
- The Project paleontologist may re-evaluate the necessity for paleontological monitoring after examination of the affected sediments during excavation, with approval from Lead Agency and Client representatives.
- Any potentially significant fossils observed shall be collected and recorded in conjunction with best management practices and SVP professional standards.
- Any fossils recovered during mitigation should be deposited in an accredited and permanent scientific institution for the benefit of current and future generations.
- A report documenting the results of the monitoring, including any salvage activities and the significance of any fossils, will be prepared and submitted to the appropriate personnel.

This recommendation is based on the condition of no development taking place within the supplemental assessment area. Future development in the expansion area will require an intensive pedestrian survey prior to any development. If the expansion area yields a positive survey, mitigation measures will need to be reassessed.

Appendix A:  
Staff  
Qualifications

---

Tria Belcourt oversees and is responsible for the entire work process at Material Culture Consulting. She is responsible for planning, supervising, and overseeing field projects, including responsibility for the professional quality of evaluations and recommendations. Tria has primary accountability for the technical completeness and competence of work conducted by her staff. She is responsible for development of work plans and/or research designs, for performance of crew chiefs, for selection standards and limitations on work assignments of crew members, for analysis and interpretation of field data, for integration of fieldwork results into comparative regional perspectives, and for preparation of reports. Tria's advanced academic training and more than twelve years of professional archaeological experience has included rigorous training and application of anthropological and archaeological theory and methods, and in recording, collecting, handling, analyzing, evaluating, and reporting cultural property data, relative to the type and scope of work proposed.

Tria has been an archaeological project manager and principal investigator for over six years, leading and managing several complex compliance projects throughout the State of California and in Southern Nevada, which have involved each step of cultural resource compliance and management. Prior to this, she spent six years as a field technician and crew chief on projects throughout California and the Southeastern United States. Her experience includes conducting background research, field survey, resource testing and formal NRHP/CRHR evaluation, data recovery plan development and implementation. She has prepared hundreds of technical reports for all of the above to state and federal standards, including following BLM standards for GIS spatial data management and technical reporting – ranging from simple clearance forms, to letter reports, to extensive data recovery reports. She was the lead preparer of the Fort Irwin Integrated Cultural Resource Management Plan (2009-2013) and has also prepared several cultural resource management plans for state regulated projects. She has overseen and conducted archaeological monitoring and management of unanticipated discovery of resources, including Native American human remains on federal lands (and repatriation of the remains), and reported the results and outcomes of cultural resource monitoring efforts in lengthy technical reports. Finally, Tria regularly provides third party and QA/QC review of cultural resource technical documents, due to her keen understanding of state and federal regulations and laws governing the management of cultural resources throughout the state of California.

#### EDUCATION

2014	Graduate Certificate in Environmental Management of Military Lands, Colorado State University
2010	Professional Certification in CEQA/NEPA, ICF International Corporation
2009	M.A. in Anthropology, University of Florida Gainesville, Florida Professional Certification in GIS
2006	B.A. in Anthropology, Magna Cum Laude, University of California, Los Angeles, California

#### AFFILIATIONS/CERTIFICATIONS/TRAINING

- Society for Historical Archaeology (SHA)
- Society for California Archaeology (SCA)

#### UTILITY SECTOR EXPERIENCE

***SCE Transmission Line Rating and Remediation Project (TLRR) – Control Silver Peak 66kV Subtransmission, Kern and Los Angeles Counties, California. Cultural Resource Inventory Assessment (October 2016- present).*** Ms. Belcourt provides project management and leadership for this SCE project, as the Principal Investigator for Archaeology, under contract to Arcadis (2016-2018) and Environmental Intelligence (2018-present). MCC is tasked with all aspects of cultural resources assessments including records searches, surveys, maintaining and generating GIS data according to SCE Schema, obtaining federal and state permits for cultural resources studies, and technical reporting.

***SCE Transmission Line Rating and Remediation Project (TLRR) - Kern River 66kV, Kern and Los Angeles Counties, California. Cultural Resource Inventory Assessment (October 2016- present).*** Ms. Belcourt provides project management and leadership for this SCE project, as the Principal Investigator for Archaeology, under contract to Arcadis (2016-present). MCC is tasked with all aspects of cultural resources assessments including records searches, surveys, maintaining and generating GIS data according to SCE Schema, obtaining federal and state permits for cultural resources studies, and technical reporting.

***SCE Transmission Line Rating and Remediation Project (TLRR) – Eldorado Pisgah Lugo 220kV Subtransmission, Kern and Los Angeles Counties, California. Cultural Resource Inventory Assessment (October 2016- present).*** Ms. Belcourt provides project management and leadership for this SCE project, as the Principal Investigator for Archaeology, under contract to Arcadis (2016-present). MCC is tasked with all aspects of cultural resources assessments including records searches, surveys, maintaining and generating GIS data according to SCE Schema, obtaining federal and state permits for cultural resources studies, and technical reporting.

***SCE Transmission Line Rating and Remediation Project (TLRR) – Control Haiwee 115kV Subtransmission, Kern and Los Angeles Counties, California. Cultural Resource Inventory Assessment (April 2017- present).*** Ms. Belcourt provides project management and leadership for this SCE project, as the Principal Investigator for Archaeology, under contract to Arcadis (2016-2018) and to SWCA (2018-present). MCC is tasked with all aspects of cultural resources assessments including records searches, surveys, maintaining and generating GIS data according to SCE Schema, obtaining federal and state permits for cultural resources studies, and technical reporting.

***SCE Transmission Line Rating and Remediation Project (TLRR) – Ivanpah Coolwater Kramer Inyokern 115kV Subtransmission, Kern and Los Angeles Counties, California. Cultural Resource Inventory Assessment (April 2017- present).*** Ms. Belcourt provides project management and leadership for this SCE project, as the Principal Investigator for Archaeology, under contract to Arcadis (2016-2018) and to SWCA (2018-present). MCC is tasked with all aspects of cultural resources assessments including records searches, surveys, maintaining and generating GIS data according to SCE Schema, obtaining federal and state permits for cultural resources studies, and technical reporting.

***Pacific Gas and Electric Company (PG&E), NERC Alert Program – Archaeological Principal Investigator; throughout California; 2015 – Present.*** Belcourt provides oversight of all task orders and project management of on-call task orders involving cultural resource desktop reviews, records searches and field reviews for the PG&E NERC Alert program: tracking and reporting efforts, maintaining project schedule, and timely submittal of data to prime contractor (Arcadis).

***Southern California Edison (SCE), On-Call and Emergency Projects – Archaeological Principal Investigator and Project Manager; throughout California, 2013 – Present.*** Belcourt has provided oversight of over 200 task orders for on-call and emergency projects to date, involving cultural resource desktop reviews, records searches and field reviews for deteriorated poles, system upgrades, initial studies to support capital projects, and monitoring support to replace facilities due to natural disasters. This high-volume program includes preparing and submitting budgets, managing support staff and overseeing work, tracking and reporting efforts, maintaining project schedules, and preparing technical reports and GIS datasets for submittal to prime contractor (SWCA).

***Southern California Edison (SCE), Large Capital Projects – Archaeological Principal Investigator and Project Manager; throughout California, 2014 – Present.*** Belcourt has provided oversight of over 20 task orders for major projects to date, involving cultural resources for this contract with SWCA, Environmental Intelligence and ICF. This includes preparing and submitting budgets, managing support staff and overseeing work, tracking and reporting efforts, maintaining project schedule, and preparing technical reports and GIS datasets for submittal to prime contractors.

***Southern California Edison (SCE), Small Capital Projects – Archaeological Principal Investigator and Project Manager; throughout California, 2014 – Present.*** Belcourt provides oversight of all task orders and project management of task orders involving cultural resources for this contract with Environmental Intelligence and ICF. This includes preparing and submitting budgets, managing support staff and overseeing work, tracking and reporting efforts, maintaining project schedule, and preparing technical reports and GIS datasets for submittal to prime contractors.

***Southern California Edison (SCE), Coolwater Lugo Transmission Project — Environmental Project Manager; San Bernardino County, California; 2014 – 2015.*** Belcourt provided oversight of all project management on CWLTP: tracking and reporting efforts of subconsultants (Pacific Legacy, Paleo Solutions and Urbana Preservation and Planning), maintaining project schedule and timely submittal of project deliverables to agency reviewers. Served as communication facilitator between SCE and BLM/CPUC agency reviewers. Provided final review of the Cultural Resources Technical Report (which included over 1,000 cultural resources) and the Historic Built Environment Report - prior to draft submittal to BLM.

***SCE, Eldorado Ivanpah Transmission Project – In-house Consultant for Archaeology; San Bernardino County, California and Clark County, Nevada; 2010-2012.*** Belcourt provided complex regulatory oversight and project management regarding cultural and paleontological resource management. She developed compliance training to inform and guide construction activities and major capital project teams. She also developed and implemented internal cultural resource management programs based on project mitigation measures. Tria coordinated with BLM archaeologists on discovery and management of previously unknown cultural resources identified during construction. She provided environmental analyses, technical reports, and clearance documentation for over 20 project modifications during construction without delay to project. Developed the cultural resources geodatabase for EITP and coordinated regularly with the project GIS team.

***Silver State South Substation, In-house Consultant for Archaeology; Southern California Edison, Clark County, NV; 2010-2012.*** Provided regulatory oversight and project management regarding cultural and paleontological resource management during project licensing and scoping. Identified potential impacts to cultural and paleontological resources, developing appropriate mitigation measures in preparation for and projecting alternative conclusions.

***Tehachapi Renewable Transmission Project, Multiple Roles; Southern California Edison, Segments 1-3 and Segments 6-11, Kern, Los Angeles and Orange County, CA; 2009 - Present.*** Tria provided service to this project over seven years in multiple roles – archaeological field monitor, project coordinator, in-house consultant at SCE, and principal investigator. She provided regulatory oversight and project management regarding cultural and paleontological resource management for all segments of TRTP. Developed and implemented internal cultural resource management programs based on the mitigation measures in the Final Environmental Impact Report/Environmental Impact Statement (FEIR/EIS) for TRTP, and for the existing Special Use Permits and Record of Decision for TRTP, issued by the Angeles National Forest (ANF). Oversaw preparation of the Historic Properties Treatment Plans, fieldwork and technical report preparation for two large-scale Phase III Data Recovery excavations on Angeles National Forest. Coordinated with ANF archaeologists on discovery and management of previously unknown cultural resources identified during construction. Provided cultural resources analyses and clearance documentation, including technical reports, for over 100 project modifications during construction without delay to project. Finally, Tria was responsible for maintaining the geospatial data for the project within the SCE cultural resources geodatabase TRTP and coordinated with the project GIS team.

***Desert Tortoise Habitat Conservation Plan Area, Principal Investigator; Cadiz Inc., San Bernardino County, CA; 2013.*** Oversaw records search to identify the extent of previous cultural resources surveys and all previously recorded prehistoric and historic resources within the 7,500-acre Desert Tortoise Habitat Conservation Plan (HCP) area (Project Area) located on lands administered by the BLM Needles Field Office in unincorporated San Bernardino County, California.

## **SOLAR SECTOR EXPERIENCE**

***Ecoplexus California Correctional Institution Solar Project, Tehachapi, Kern County, California. Cultural and Paleontological Assessments (April 2018 – present).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, coordinated AB52 consultation between the State of California and local tribes, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus Ironwood State Prison and Chuckawalla Valley State Prison Solar Project, City of Blythe, Riverside County. Cultural and Paleontological Assessments (June 2018 – present).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, coordinated AB52 consultation between the State of California and local tribes, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus California State Prison Centinela Solar Project, City of Imperial, Imperial County, California. Cultural and Paleontological Assessments (August 2017 – April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, coordinated AB52 consultation between the State of California and local tribes, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus Calipatria State Prison Solar Project, City of Calipatria, Imperial County, California. Cultural and Paleontological Assessments (August 2017 – April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, coordinated AB52 consultation between the State of California and local tribes, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus RJ Donovan State Prison Solar Project, San Diego, San Diego County, California. Cultural and Paleontological Assessments (March 2018 – April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus Salinas Valley State Prison Solar Project, City of Soledad, Monterey County, California. Cultural and Paleontological Assessments (March 2018 – April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Ecoplexus Correctional Training Facility Soledad Project, City of Soledad, Monterey County, California. Cultural and Paleontological Assessments (March 2018 – April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***SDG&E Cameron Substation Photovoltaic Project, San Diego, San Diego County, California. Cultural and Paleontological Assessments (September 2017 – present).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, facilitated Native American consultation between County of San Diego and local tribes, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Beard Solar Project, Dustin Acres, Kern County, California. Cultural and Paleontological Assessments (March 2018- April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Broadman Solar Project, Livermore, Alameda County, California. Cultural and Paleontological Assessments (February 2018- March 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Nachtigall Solar Project, Wasco, Kern County, California. Cultural and Paleontological Assessments (March 2018-April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Rocha Solar Project, Fuller Acres, Kern County, California. Cultural and Paleontological Assessments (March 2018-April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Shafter Solar Project, City of Shafter, Kern County, California. Cultural and Paleontological Assessments (March 2018-present).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Anderson Twisselman Solar Project, Lost Hills, Kern County, California. Cultural and Paleontological Assessments (March 2018-April 2018).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

***Forefront Power Weedpatch Solar Project, Kern County, California. Cultural and Paleontological Assessments (March 2018-present).*** Belcourt provided oversight and project management for this project, involving cultural and paleontological resource desktop reviews, Native American outreach, arranged for the records searches and coordinated field surveys. She also oversaw production of the final technical report, project schedule, and timely submittal of data to prime contractor.

Jennifer Kelly, M.Sc.  
Senior Paleontologist and Principal Investigator

---

Jennifer Kelly has experience in all aspects of paleontology. She has extensive experience with monitoring, salvage, fieldwork, project management, and report writing, as well as volunteer experience from the La Brea Tar Pits/Page Museum and the Cooper Center of Orange County (Paleontology department) and field experience as a Staff Geologist for Leighton Geotechnical. Her expertise is Geology, and she has her M.S. in Geological Sciences, emphasis in Geochemistry.

Jennifer has taught lab courses in paleontology and general geology, and also assisted with field mapping classes. Jennifer is HAZWOPER 40-hour certified and a registered Orange County paleontologist. She has co-authored more than 60 paleontological compliance documents, including PRMPs, EIR, EIS, PEA, final monitoring reports, survey reports, and other compliance documents, in compliance with NEPA, CEQA, Caltrans and city and county laws, ordinances, regulations, and statutes.

## Education

- 2012 M.Sc. in Geology, California State University, Long Beach, California
- 2005 B.S., Geology (preliminary work for entry to M.S. Geology Program), California State University, Long Beach
- 2004 B.A., Theater Arts, California State University, Long Beach

## Certifications and Training

- 40 Hour Certification for HAZWOPER training under 29 CFR 1910.120, CA (2013 – 2014)
- Orange County Certified Paleontologist
- San Diego County Certified Paleontologist

## Utility Sector Experience

**Assistant PM/Research Specialist, Tehachapi Renewable Transmission Project (TRTP), Southern California Edison (SCE), Kern County, Los Angeles County, San Bernardino County.** Kelly conducted and led surveys along this project's right of way. She additionally was in charge of scheduling monitoring crews during grading in areas of paleontological sensitivity, managing and reviewing log sheets, and tracking data that is incorporated to final reports. Ms. Kelly played a valuable role with scheduling for the project's needs. She has monitored, surveyed, and reported on all paleontological facets of this project as the Lead Paleontological Monitor for segment 3B and 4-11. She has co-authored more than 10 of the compliance reports for this project. She has also performed monitoring on every segment of this Project.

**Assistant PM/Research Specialist, SCE, Valley South Subtransmission Line Project, Riverside County, California.** Kelly assisted with scheduling and oversight for coordination of all surveying, preparation of compliance and environmental documentation for this project, including three proposed alternatives,

and co-wrote the final PEA and survey reports, utilizing CEQA and Riverside County paleontological guidelines.

**Assistant PM/Research Specialist, SCE, San Joaquin Cross Valley Loop Project, Tulare County, California.** Kelly assisted with coordination of all surveying, preparation of compliance and environmental documentation for this project, and co-authored the final Paleontological Monitoring Plan for this project.

**Assistant PM/Research Specialist, SCE, Devore Substation Project, San Bernardino County, California.** Kelly assisted with preparation of compliance and environmental documentation including a paleontological inventory and geological map research for this project.

**Assistant PM/Research Specialist, SCE, Horsetown Substation Project, Riverside County, California.** Kelly assisted with preparation of compliance and environmental documentation including a paleontological inventory and geological map research for this project.

**Paleontological Field Technician, El Casco System-Transmission Line, SCE, throughout Riverside County.** Kelly performed paleontological monitoring. Her duties included salvaging small and large fossils, screen washing and sorting fossils. She aided in the processing of microfossils collected from bulk sampling of fossil bearing sediment, and documenting stratigraphic locations of fossil bearing units. This project was in compliance with both CEQA and the CPUC.

**Assistant PM/Research Specialist, South of Kramer Project, SCE, Hesperia to Barstow, San Bernardino, County.** Kelly assisted in overseeing portions of project management and compliance surveying, which included surveying from Hesperia to Barstow, CA for a Proponent's Environmental Assessment (PEA). All portions of the Proposed Project were located within San Bernardino County, California. This project is still active and survey results are being finalized. Kelly co-authored the final survey report for this Project. A BLM Permit was authorized for the survey.

**Assistant PM/Research Specialist, OC Access Road Grading, SCE, Orange and Riverside County.** Kelly assisted in documentation for the cultural resources portion, which include information regarding the location and condition of archaeological and paleontological sites recorded at or near the access roads, and recommends impact avoidance measures for future years in implementing the Protocol for 73 known archaeological sites. This required extensive coordination with Orange County Fire Authority grading department, SCE's Operations and Maintenance (O&M), and Orange County Parks. Trimble units were used for the documentation before and after grading of access roads. Communication played a key role when strategizing which locations were being graded where and when. The company came in under budget because of Kelly's efficiency and ability to coordinate and schedule.

**Assistant PM/Research Specialist, West of Devers Transmission Line Project, SCE, Riverside County, California.** Kelly assisted with all project management and paleontological related services. This included proper BLM authorization and permitting to conduct surveying and a research design for field reconnaissance related to PEA, EIS/EIR documentation for the proposed transmission line. She assisted with managing documentation with laws relating to paleontological resources, among which are CEQA and NEPA compliance.

**Assistant PM/Research Specialist, Grid Reliability and Maintenance for Seawolf, Thresher, and Argonaut 12 kV Distribution Lines, SCE, City of Temecula, Riverside County, California.** Kelly assisted with preparation of compliance and environmental documentation including co-authoring the final paleontological report for this project in Riverside County. This report was prepared under CEQA and Riverside County guidelines.

**Assistant PM/Research Specialist, Pacific Gas and Electric (PG&E), Line 300A/MP 147.7 and 180.8 Projects, San Bernardino County, California.** Kelly assisted in the preparation of mitigation recommendations and a paleontological inventory report for this project. She also assisted with and scheduled planned surveys on BLM and United States Marine Corps lands.

**Assistant PM/Research Specialist, PG&E, Jefferson to Stanford No. 2 60 kV Feasibility Project, San Mateo County, California.** Kelly assisted with the preparation of the paleontological resources review and paleontological inventory report (PIR) and Proponent's Environmental Assessment (PEA) for this project. Several potential routes were assessed for this project, and the feasibility and paleontological potential was determined for this project. The report and PIR were prepared according to CEQA guidelines.

**Assistant PM/Research Specialist, PG&E, Line 107/131 Projects, Alameda County, California.** Kelly assisted with preparation of mitigation recommendations and a paleontological inventory report for this project. She also assisted with and scheduled planned surveys of proposed pipeline locations.

**Assistant PM/Research Specialist, Laguna Niguel Reliability Project, SDG&E, Laguna Niguel, Orange County.** Kelly performed initial research for this Project and co-authored the final report on the monitoring efforts for this project in the Capistrano Formation.

**Assistant PM/Research Specialist, Camp Pendleton Project, SDG&E, throughout San Diego and Orange Counties.** Kelly provided on-call paleontological services for this project. She was a key facet in report production and research which enabled her firm to perform all survey and monitoring work required on Camp Pendleton for CEQA/NEPA check list assessments requested from SDG&E. Kelly was cleared from the Department of Defense in order to conduct work on the base. Site assessments and monitoring include all work related to: future location of power poles and towers, water control features, trenching and subsurface excavations, access roads, grading impacts to develop substations and other facilities, work pads, staging yards, and gas pipelines.

**Assistant PM/Research Specialist, SDG&E Wind Interconnection Project (WIP), San Diego County, California.** Kelly co-authored the paleontological mitigation portion of the Environmental Impact Report (EIR) for this project, utilizing both San Diego County and CEQA guidelines for paleontological resources.

**Assistant PM/Research Specialist, LADWP-Scattergood Project, County of Los Angeles.** Kelly provided on-call paleontological support for this project. She assisted with all project aspects associated to paleontology. She co-authored a paleontological mitigation monitoring plan and assisted in scheduling the monitoring the Scattergood Olympic Line 1 Project, completed the final mitigation document for trench exploration, and performed extensive monitoring for the project.

## Transportation Sector Experience

**Assistant PM/Research Specialist, Paleontological Mitigation Plans (PMP) for Caltrans Cherry/Citrus Ave I-10 interchange Project — PCR/Caltrans, San Bernardino, California.** Kelly conducted all aspects of surveying, and literature searches for both projects.

## Water Sector Experience

**Assistant PM/Research Specialist, Cadiz Ground Water Project, ESA, San Bernardino County, California.** Kelly conducted all research and data collection for the Cadiz Groundwater Conservation and

Storage Project for completion of a DEIR section on paleontological resources. The project included the pipeline corridor but not the Well Field Area and Spreading Basins. Based on the results of the analysis, mitigation measures were developed and are designed to reduce potential adverse impacts to paleontological resources as a result of proposed Project construction to a less than significant level. Only one Project alternative was analyzed for impacts on paleontological resources. The paleontological analysis for the Cadiz Project is a requirement of the California Environmental Quality Act (CEQA).

## Private Development Sector Experience

***Assistant PM/Research Specialist, Holy Sepulchre Cemetery Expansion Project, Diocese of Orange, Santa Ana, Orange County, California.*** Kelly assisted with scheduling monitoring for this project, performed all project-related research, and was the co-author for the final report. The project consisted of grading and leveling several new areas for expansion of the Holy Sepulchre Cemetery, including portions that lie in paleontologically sensitive rock formations with the potential to produce fossils.

***Assistant PM/Research Specialist, UC Irvine Alumni Center Project, Irvine, Orange County, California.*** Kelly performed all monitoring scheduling and coordination duties, as well as research and writing for the final report and the initial monitoring guidelines. This project was a high-visibility construction project for a new alumni center on the grounds of UC Irvine, in a paleontologically sensitive area.

***Assistant PM/Research Specialist, Peters Canyon County Park Restrooms Project, Orange County, California.*** Kelly performed all paleontological monitoring scheduling and coordination duties, as well as research and writing for the final paleontological resources letter report. This project involved the leveling of a pad and significant trenching through paleontologically sensitive soils in order to install a new restroom at the northern end of this park.

***Assistant PM/Research Specialist, UHS Temecula Medical Center, Tuner Construction, Temecula, Riverside County, California.*** Kelly was in charge of day to day scheduling, conducted occasional monitoring duties and part of the writing process for the final report.

## Renewable Energy Sector Experience

***Assistant PM/Research Specialist, Ocotillo Wind Express Project, ASPEN, Imperial County, California.*** Kelly was responsible for managing and collecting all field forms and data that was electronically mailed daily, and incorporating these forms in the final DEIR/EIS Report. She conducted all technical research and compiled both geological and compliance documentation into the final report that was then incorporated into the EIR/EIS.

***Assistant PM/Research Specialist, Manzana Wind Express Project, Kern County, California.*** Kelly assisted in writing the Paleontological Mitigation Monitoring Resource Plan, which allowed her to develop a key role in presenting environmental training programs to construction workers and other environmental compliance monitors. She co-authored the final paleontological monitoring report. The Project's construction consisted of the installation of 107 to 300 wind energy turbines, aligned along approximately 26 rows, on the 6,275-acre proposed site. The Manzana Wind Energy Project site was found to have the potential for scientifically significant paleontological resources that could be impacted by construction-related ground disturbance. She co-authored the final paleontological mitigation report in compliance with CEQA and Kern County guidelines.

***Assistant PM/Research Specialist, Pacific Wind Express Project, Kern County, California.*** Kelly assisted

in writing the Paleontological Mitigation Monitoring Resource Plan, which allowed her to develop a key role in presenting environmental training programs to construction workers and other environmental compliance monitors. She co-authored the final paleontological mitigation report.

## PAMELA DALY

4486 University Ave., Riverside, California 92501 (951) 369-1366

### Education

- Master of Science - Historic Preservation - University of Vermont, Burlington, Vermont. 1998  
Awarded Graduate Teaching Fellowship in Historic Preservation.
- Bachelor of Science - Business Administration - Elmira College, Elmira, New York. 1994

### Experience and Skills

#### Historic Preservation

##### • Federal Level Projects

- Section 106 – 404 Permit – Historic Context for Phase I Ballona Creek Wetlands Restoration, Culver City, CA
- Section 106 – 404 Permit – Historic Resource Evaluation for Lake Street Improvements, Lake Elsinore, CA
- Section 106 - 404 Permit – Historic Resource Evaluation for Foothill Parkway Extension Project, Corona, CA
- Section 106 – NEPA Historic Resource Evaluation of Green Beach Trestle, San Onofre, CA
- Section 106 – NHPA Historic Resource Evaluation of Brea Tracks Project, Brea, CA
- Section 106 – NEPA Historic Resource Evaluation of Upper Arroyo Seco Canyon, Pasadena, CA
- Section 106 – NEPA Historic Resource Evaluation of Big Santa Anita Wash, Angeles National Forest, CA.
- Section 106 – NEPA Historic Resource Evaluation of a segment of the California Aqueduct, Kings County, CA.
- Section 106 – Federal Highway Administration – Historic Resources Evaluation, Mitigation, and Treatment Plan for the Westside Subway Extension, Metropolitan Transportation Agency, Los Angeles, CA. Survey and evaluation of buildings, bridges, landscapes dating from 1910 to 1975 in an eight-mile long corridor.
- Section 106 – U.S. Housing and Urban Development – San Bernardino Housing Agency – Historic Resource Evaluation of Waterman Housing Development, San Bernardino County, CA. Survey and evaluation of a public housing development dating from 1943.
- Section 106 – Claremont Police Communication Tower, Los Angeles County, CA. Perform evaluation for siting of a communications cell tower.
- Section 106 – U.S. Forest Service, San Bernardino National Forest. Developed building plans for the construction of a new recreational cabin to be constructed in a historic cabin tract. Plans reviewed and accepted by California SHPO.
- Section 106 – Cobb Reservoir, Angeles National Forest, Altadena, CA. Perform a Historic Resource Survey and Eligibility Investigation of a privately owned reservoir constructed in 1910.
- Section 106 – Keyes Mine and Walker Cabin, Sequoia National Forest, Keyesville, CA. Perform a Historic Resource Survey and Eligibility Investigation for structures related to the early mining days of California. The project also included the preparation of detailed drawings and structural evaluations of the stamp mill building and Walker barn.
- Section 106 – Bitter Creek National Wildlife Refuge, Maricopa, CA. Perform a Historic Resource Survey and Eligibility Investigation for the Hudson Family Homestead Ranch Historic District for eligibility to the National Register. The project also included the preparation of detailed drawings and structural evaluations of the building known as “Percy’s Place”.
- Section 106 – Ivanpah Valley, Eastern Mojave Desert, CA. Perform a Historic Resource Survey and Eligibility Investigation for two historic roads and a railroad line for eligibility to the National Register.
- Section 106 – Army Corp of Engineers, 404 Permit Historic Resource Assessment Report of the East Garden Grove Wintersburg Channel, part of the Orange County Flood Control System, Bolsa Chica, CA.
- Section 106 – Evaluate impact of proposed removal and storage of National Register-eligible object at Camp Parks Army Reserve Base, Dublin, CA.
- Section 106 – Naval Air Station, North Island, San Diego, California. Historic Resources Survey and Eligibility Investigation of thirteen historic airplane hangars for eligibility to the National Register.
- Section 106 - Edwards Air Force Base, California – Report of findings on 37 Historic Wells and Homesteads. Includes HAER documentation, analysis and curation of historic and pre-historic artifacts, site form preparation, archival research, Phase II and Phase III reports.

- Section 106 – Air Force Research Laboratory, Mesa, Arizona – Historic Building Assessment and Evaluation Report. Project included archival research, historic context, building description and site form.
- Section 106 – Army Corp of Engineers, 404 Permit review of the decommissioned Marine Corps Air Station El Toro, California. Project consisted of re-surveying 76 buildings and structures previously reviewed in 1996 for National Register Eligibility. Project included field survey, archival research, and updating site forms.
- Section 106 - Nellis Air Force Base, Nevada – Historic Building Report on Capehart & Wherry Housing. Project included archival research, site forms, photography.
- Section 106 - Andersen Air Force Base, Guam - Supervise archaeological subcontractors Phase III survey project for Air Force client.
- Section 106 - Clear Air Force Base, Alaska – Project to create booklet, bronze plaque and outdoor interpretive signs to record the Cold War radar operations.
- Section 106 – Bureau of Land Management, Kern Front Oil Fields, Bakersfield, CA - Historic Building Assessment and Evaluation Report for leaseholder. Project included archival research, historic context, building description, industrial archeology investigation and site form.
- Section 106 – Army Corp of Engineers, Union Pacific Railroad - Historic Building Assessment and Evaluation Report of all the bridges and culverts located in 102 mile section. Project included field survey, archival research, historic context, bridge and culvert descriptions, and site forms.
- Section 106 re-survey of decommissioned El Toro Air Station, Irvine, CA.
- Section 106 review of Jim’s Corner Store, Burlington, VT.
- Section 106 Level 1 Reconnaissance of Jericho, VT, Rt. 15 intersection.
- Section 106 Level 1 Reconnaissance of Milton, VT, sidewalk project.
- Section 106 Level 1 Reconnaissance of Essex, VT, sidewalk project.
- Section 106 Level 1 Reconnaissance of Town of Hartford, VT, sidewalk/bike project.
- CALTRANS – Historic Resource Evaluation of Old Newport Blvd. Improvement, Newport Beach, CA
- CALTRANS – Historic Resource Evaluation of Brittan School Sidewalk Improvements, Sutter, CA
- CALTRANS – Historic Resource Evaluation of Interstate 10 Interchange, Coachella, CA
- CALTRANS – Historic Resource Survey of APE, Route 94, Juma, San Diego County, CA
- CALTRANS – Finding of Effects for High Desert Corridor Project, Los Angeles and San Bernardino Counties
- CALTRANS – Historic Resource Survey of APE for Park Avenue Bridge, Balboa Island, Orange County, CA
- CALTRANS – Historic Resource Evaluation of two bridges in Madera County, CA
- CALTRANS – Historic Resources Evaluation of Kentucky Avenue and Streets Widening, Woodland, CA
- CALTRANS – Historic Resources Evaluation of five housing tracts and two individual resources for the Brookhurst Road Widening Project, Anaheim, CA.
- CALTRANS – Historic Resources Evaluation, Lincoln Avenue Widening Project, Orange, CA.
- CALTRANS – Historic Resources Evaluation, Bridge Evaluation, and Finding of Effect for Araz Bridge in the All-American Canal Historic District, Araz Junction, CA.
- CALTRANS – Historic Resources Evaluation Report and Finding of Effect for the Park Once Transit Parking Structure, Redlands Santa Fe Depot Historic District, Redlands, CA.
- CALTRANS – Survey and evaluation of the project corridor for the proposed Cabot-Camino Bridge, Mission Viejo, CA.
- CALTRANS – Survey and evaluation of Pacific Mobile Home Park, Huntington Beach, CA.
- CALTRANS – Finding of Project Effects, Victoria Avenue, Riverside, CA.
- CALTRANS - Survey and evaluation of 45 buildings and structures along State Route 99, Stockton, CA.
- CALTRANS - Survey and evaluation of 1915 railroad bridge for seismic repair project, El Monte, CA.
- CALTRANS - Survey and evaluation of 75 buildings and structures along State Route 99, Manteca, CA.
- CALTRANS - Survey and evaluation of Pacific Coast Highway Interchange, Long Beach, CA.
- CALTRANS - Review of residential structures located in the project area, Red Hill Avenue, Orange County.
- NYS DOT - Survey of historic bridges in Oswego, Oswego and Onondaga Counties, New York.
- ISTEA Historic Resource survey, Lake Champlain Railroad Causeway/Bikepath, Colchester, VT.
- VSA22 Historic Resource review, Goodrich Memorial Library, Newport, VT.
- VAOT Highway Resurfacing Program, Dufresne-Henry Engineers. 2001-2003.
- National Register Historic Landscape survey of historic agricultural properties in Essex County, NY.  
Intensive level survey of 8 historic farmsteads.

National Register Nomination for Residential Historic District, Vergennes, VT. NR nomination of 110 residences and outbuildings dating ca. 1790 to 1950.

National Register Nomination of Fairfield Baptist Church, Fairfield, VT. Nomination of rural community church with ties to President Chester Arthur.

National Register nomination for Laurel Hall, Cuttingsville, VT. Nomination of private country villa, conservatory, carriage barn, and mausoleum.

Integrated Cultural Resources Management Plan (ICRMP) Update – Corona Naval Weapons Center – update historic properties treatment.

Integrated Cultural Resources Management Plan (ICRMP) Update – Seal Beach Naval Weapons Center – update historic properties treatment.

Integrated Cultural Resources Management Plan (ICRMP) Update – Fort Hunter Liggett, U.S. Army Reserves Base – update historic properties treatment.

Integrated Cultural Resources Management Plan (ICRMP) Update – Camp Parks, U.S. Army Reserves Base – update historic properties treatment.

Integrated Cultural Resources Management Plan (ICRMP) – Moffat Field, U.S. Army Real Property – create historic properties treatment for ICRMP.

● **State Level Projects**

CEQA – Historic Resource Assessment Report of Lincoln Street Improvements, Taft, CA

CEQA – Historic Resource Assessment Report of Chollas Creek Bikeway Project, San Diego, CA

CEQA – Historic Resource Assessment Report of Brookside Equestrian Center, Walnut, CA

CEQA – Historic Resource Assessment Report of George Washington School, Colton Joint Unified School District, CA

CEQA – Historic Resource Assessment Report of 985 South Hamilton Blvd., Pomona, CA

CEQA – Historic Resource Assessment Report of Oak Crest School, San Dieguito School District, CA

CEQA – Historic Resource Assessment Report of 812 North State Street, Hemet, Riverside County, CA

CEQA – Historic Resource Assessment Report of Killefer School, Orange Unified School District, Orange County, CA

CEQA – Historic Resource Assessment Report of the Dam at Lake Gregory, San Bernardino County, CA

CEQA – Historic Resource Assessment Report of 1336 – 1365 East Colorado Boulevard, Pasadena, CA

Rehabilitation of 19<sup>th</sup> century barn for use as residence, Trumansburg, NY.

● **Historic Preservation Educational Projects**

Presentation to the Orange County Association of Environmental Professionals (AEP) “Current Issues with CEQA and Historic Resources.”  
Presentation to the Mission Inn Museum – “Hidden Histories.”  
Presentation to the Moreno Valley Historical Society – “Explaining Historic Resource Eligibility Criteria.”  
Presentation to the U.S. Forest Service – Region 5, “Evaluating Historic Resources.”  
Create text on the history of the San Antonio Valley after 1850 for Fort Hunter Liggett Army Reserve.  
Education and slide presentation of American architectural styles.  
Education and slide presentation of California revival architectural styles.  
Walking tours of Windsor, Vergennes and Shelburne, Vermont.  
Research paper on decorative historic painted finishes created in Vermont public buildings during the late 19<sup>th</sup> century.

● **Other Preservation Projects:**

Adaptive Reuse – Downtown Development Project for six historic structures in Morrisville, VT.  
Develop Revised Design Review and Zoning Guidelines, City of Burlington, VT.  
Part of team to develop guidelines for protecting historic resources in the city.  
Presenter at Vermont Historic Preservation Conference on Industrial Archeology and site research.  
Developed and implemented educational tours and day programs of historic sites and properties.  
Awarded grant proposals for educational and historic preservation projects.  
Developed and designed fundraising and publicity brochures.

● **Preservation Skills**

Maintenance and repairs to historic structures including painting, mortar analysis, mortar repointing, and plaster repair.  
Historic Structures Reports - condition assessment reports.  
Use of the Secretary of the Interiors Standards for the restoration, rehabilitation, or restoration of historic buildings.  
Historical paint analysis (chromochronology).  
Research of historic structures using deeds, wills, public records and archival documentation.  
Nomination of historic sites and structures for the National Register of Historic Places.  
Section 106 and 110 of the National Historic Preservation Act.  
Federal Historic Preservation Tax Incentive program.  
California “Mills Act” historic preservation program.

**Business Management/Accounting**

- Over 25 years experience in financial management and accounting.
- Competence in all accounting aspects: profit and not-for-profit organizations.
- Successful grant writing and funding from state, private and federal agencies.
- Extensive experience corresponding with federal, state, county and private organizations regarding agency fiscal requirements.
- Analyzed the efficiency of business internal accounting systems, implementing procedures to improve financial accuracy and operating cost-effectiveness.

**Financial Project Management/Supervision**

- Managed agency and individual project budgets from \$350,000 to \$2.5 million.
- Responsible for overseeing budget and direct labor requirements of Government contracts.
- Financial project management for 26 concurrent projects valued at \$29 million.
- Coordinated five departments to meet financial and organizational goals.
- Supervised eight project managers to meet contractual agreements.
- Negotiated prime and sub-contractor agreements and purchase orders.
- Qualified contract specialist with U.S. Department of Defense, NASA and National Park Service. Experience with FAR, DFAR and associated regulations.

**Employment History**

2005 - present	Architectural Historian Consultant	Daly & Associates, Riverside, CA.
2003 – 2005	Sr. Architectural Historian	Earth Tech, Inc., Colton, CA.
1998 to June 2003	Architectural Historian Consultant	Daly & Associates, Shelburne, VT.
1998 (two semesters)	Teaching Assistant	Historic Preservation Dept., University of Vermont
1989 - 1997	Director of Contracts	Odyssey Research Assoc., Inc., Ithaca, NY.
1987 - 1989	Senior Corporate Accountant	Emerson Power Transmission, Ithaca, NY.

**Volunteer History**

1999– 2003	Commission Member – Town of Shelburne, Vermont Historic Preservation Design Review Board.
1996 - 1997	President - Board of Directors, Historic Ithaca, NY.
1993 - 1996	Board Member, Secretary, Historic Ithaca, NY.

## CONTINUATION SHEET

Continuation     Update

**Caltrans Map Reference No.:** \_\_\_\_\_

**Resource Identifier:** P-36-024903

**County/Route/Postmile:** San Bernardino

This resource was recorded in 2012 by M. Dice as the open-air Cypress Channel, which was likely dug before 1938 to remove excess water out of orchards (Dice 2012). P-36-024903 was observed, as previously recorded during a survey by ICF archaeologists (2017) and appears to be currently used by the El Prado Golf Course for channeling runoff water. Only the portion running underneath and approximately 150 feet on either side of Pine Avenue was included in this 2017 survey. Modern culverts appear to have been added for sections of the channel undercutting portions of golf cart access roads for the El Prado Golf Course. Ornamental vegetation including palms were observed on either side of Pine Avenue along this earthen channel. This resource was previously found to be ineligible for inclusion in the NRHP and CRHR, which was supported by the most current survey.

**Overview of P-36-024903 including modern culverts, facing north.**

**Resources:**

Dice, M.

2012 DPR form P-36-024903. On file at the South Central Coastal Information Center.

\*P3a. Description: Located in east Chino and south Ontario, historic aerial photographs disclose that the Cypress Channel was a long ditch and trench very likely dug before 1938 that was used to remove excess water out of orchards in Ontario and fields in Chino. Today, the open-air portion of the channel begins at the corner of Walnut and Sultana where runoff from a storm drain buried below Sultana is deposited. County Flood Control has built a modern asphalted box culvert in this section of the channel. At this point waters run southwest in the culvert following the track of a former historic-era railroad branch line, through an undercrossing below Euclid, then into another v-shaped concrete box culvert, thence to a turn south at Riverside Drive, whereupon the channel runs directly south and across California Correctional Facility properties. The channel remains a concrete culvert until reaching a point just west of the Majestic project site, whereupon it becomes a shored trench, which quite likely represents the original condition of the channel during the 1938 historic period. Just before passing beneath Kimball Avenue, it again returns to a concrete v-shaped culvert and winds its way south until the channel reaches the El Prado Golf Course. Water then winds through the golf course in what appears to have been the original wash channel, joins with Chino Creek at Euclid and eventually merges with the floodplain of the Prado Basin.

**\*Resource Name or #: Cypress Channel**

**B1. Historic Name:** unknown

**B2. Common Name:**

**B3. Original Use:** Runoff drain for orchards, fields and roads.

**B4. Present Use:** Flood control channel

**\*B5. Architectural Style:** None

**\*B6. Construction History: (Construction date, alterations, and date of alterations)**

According to a 1938 aerial photograph found at "[www.netr.com](http://www.netr.com)" the Cypress Channel may have begun as a simple ditch along a spur railroad originating at a Sunkist packinghouse at Sunkist and Monterey south of the Ontario downtown core. The old spur railroad grade, known on the 1912 USGS *Ontario, CA.* topographic map as the *Southern Pacific Railroad Chino Branch* ran roughly south from the packinghouse parallel to what is now Monterey Avenue (in the 1938 photo, the tracks have clearly been removed but the grade scar remains) then southwest until ending at the railroad sidings just south of the downtown portion of Chino where other packing houses were located. The railroad grade ran through numerous small orchards located on relatively flat land, and a ditch would have been necessary to shunt water away from the grade. The ditch appears to have become a formal excavated and probably cut and shored channel just south of the corner of what is now Fern and Blue Jay Way a little east of Euclid in northeast Chino. At that time, a second railroad line (this appears to have been the then-active *Chino Valley Narrow Gauge Railway* - which ran down the middle of Euclid Avenue) plus another drain paralleling Fern Avenue merged to form a formal channel along the north side of the narrow gauge railway tracks. At Cypress Avenue, the channel turned and ran due south through orchards and fields, similar to that observed near the project site. This channel appears constructed in the same manner until reaching Kimball Avenue, whereupon it becomes a very natural-looking wash channel that winds its way through the bottomlands between Chino Creek and Cucamonga Wash in an area that is now known as the 200-year flood reservoir of the Prado Basin. At time of the 1938 photograph, Prado Dam has not yet been built.

Only that portion of the Cypress Channel adjacent to the Majestic project area as well as certain unshored sections in the El Prado Golf Course appears original compared with the 1938 image, while the rest of the channel has been modified to concrete through regional flood control efforts. *This remains the only segment of the channel evaluated for significance. The El Prado section has not been previously recorded.*

Near the Majestic project site, the channel consists of a trench cut to about 10 feet below existing grade using heavy equipment, then shoring in the form of cut railroad ties and wire netting had been placed along the edges of the cut channel so as to hold back erosional deterioration. Soils located below the plow zone of adjacent properties can be observed, but an extensive amount of dumping had occurred due to the open nature of the channel in this area. Piles of concrete, vegetation, wood and trash can be observed.

Channels such as these were built during the historic period purely as a way of removing unwanted water from roadways, railroads and developed lots with impermeable surfaces. Because regional (County) flood control management had not been authorized by the State until 1939, runoff from orchards, fields and the streets of cities was typically sent to the nearest creek or river that was nearby by local authorities. In the case of Chino and Ontario, runoff was an increasingly cumbersome problem because these towns were built on ancient alluvial fan sediments east of Chino Creek and north of the Santa Ana with a drop in grade typically about 50-60 feet per mile (55/5280) or about 1% slope. Few natural creeks or drainages existed in this area so flooding and damage to existing roadways and orchards was often extensive during intense storms, especially when flood waters would develop and flow out of the San Gabriel Mountains to the north.

There is no evidence that this flood control engineering structure was created by a significant local person, nor is it known exactly when it was first constructed. Events that are reflected by its existence as an engineered structure are uniquely significant to the history of flood control in the Chino-Ontario region because most of the old channels have been converted to concrete culverts. However, the loss of integrity in the whole of the channel since 1938 is nearly complete. The section of Cypress Channel directly adjacent to the project site represents the only original portion of the old channel that exists: *the remainder has been modernized by San Bernardino County Flood Control.* Therefore the integrity of the facility since the earliest period we know about (1938 and before) has been lost to the point where the whole of the channel no longer reflects the historical period. The location of the old channel is marked by a permanent culvert

**\*B7. Moved?**  No  Yes  Unknown

**\*P3a. Description:**

The subject property is an approximate 12-mile 220kV electrical transmission line connecting the Southern California Edison Company's Chino and Mira Loma substations. The circuit is comprised of the transmission cables and their supporting towers as well as a grounding system. The line was originally designed with two parallel lines of single circuit towers; however in 1979 the eastern two-mile segment was converted to a single line of double circuit towers. The towers, which are the steel lattice type, are the most obvious feature of the transmission line. They are "T" shaped, holding the transmission cables in a horizontal array across their top. The towers were designed to be modular and their heights vary based on the given topography of their location, however they are typically approximately 90 feet tall. Each tower has four legs, approximately twenty feet apart, and rest on simple concrete footings. Spacing, like their height, varies based on topography, but they are generally installed 1,200 feet apart. Coil mount insulators provide connection between the transmission cables and the towers.

\*B10. Significance: Theme: N/A Area: N/A

Period of Significance: N/A Property Type: Engineering Structure Applicable Criteria: N/A

The Chino-Mira Loma No. 1 220kV Transmission Line does not appear to be eligible for inclusion on the California Register of Historical Resources or the National Register of Historic Places. No information was found during the course of historical research to support a positive eligibility statement for the transmission line or its steel lattice transmission towers. The line was not identified as having a direct association with the historic elements or construction period at the Chino Substation (1912-1920s), nor was the transmission line found to relate to the City of Chino or the City of Ontario's outward expansion or growth patterns. The Chino-Mira Loma Transmission Line was not found to be technologically or materially innovative within the history of electrical transmission and voltage systems, and additional research of the line would not appear to provide additional information that would be considered important to the history of Chino, Ontario, San Bernardino County, the Southern California Inland Empire region, California, or the nation.

The Chino-Mira Loma No. 1 220kV Transmission Line does not appear to meet the definition of a historic property under the National Historic Preservation Act or a historical resource under the California Environmental Quality Act. Future undertakings or discretionary projects proposed along the line, including replacement of existing cables or steel towers, would not appear to cause a significant adverse effect or cause a substantial adverse change in the significance of a historic property or historical resource.

RE: Eucalyptus East

Dear Ms. Hill;

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact me at my email address: [Katy.Sanchez@NAHC.ca.gov](mailto:Katy.Sanchez@NAHC.ca.gov).  
Sincerely,

A handwritten signature in blue ink that reads "Katy Sanchez for".

**RE: Proposed Ontario Ranch Commerce Center Project, City of Ontario; Ontario and Prado Dam  
USGS Quadrangle, San Bernardino County, California.**

**Greetings,**

This Project proposes to convert multiple parcels of land into new warehouse facilities in the City of Ontario, San Bernardino County, California (see attached map). Material Culture Consulting, Inc (MCC) is conducting the cultural resources review of the project to support preparation of the environmental documents. As part of our background research, we would like to request your input on potential cultural resources within the project area. This request is not part of any formal local, state, or federal consultation process.

Our firm contacted the Native American Heritage Commission (NAHC) on July 19, 2018 to request review of the Sacred Lands File and for a list of tribes with traditional lands and/or cultural places within the area. The NAHC responded on July 25, 2018, stating that the Sacred Lands File review resulted in negative results, and provided your contact information as part of the list. We understand that negative results do not preclude the existence of cultural resources, and that a tribe may be the only source of information regarding the existence of a tribal cultural resource, which is why we are contacting you.

**Project Location and Description**

The proposed project is located at the northwest corner of the intersection of Eucalyptus Avenue and S. Grove Avenue, bounded by Eucalyptus Avenue to the north, S. Grove Avenue to the east, Bon View Avenue to the west, and Merrill Avenue to the south (see attached map). The area of potential impact (API) includes a total of approximately 126.8 acres and located within Section 19 of Township 2 South and Range 7 West (San Bernardino Base Meridian).

Please respond at your earliest convenience if you wish to share any knowledge of cultural resources within or adjacent to the API. Any information, concerns, or recommendations regarding cultural resources within the API can be shared with me via telephone, email, or via standard mail. Thank you very much for your assistance.

Kindest regards,

Re:  
Ontario Ranch Commerce Center

Dear,  
Tria Belcourt  
President and Principal Archaeologist  
Material Culture Consulting

Thank you for contacting the Morongo Band of Mission Indians (MBMI) Cultural Heritage Department regarding the above referenced project(s). After conducting a preliminary review of the project, the tribe would like to respectfully issue the following comments and/or requests:

- The project is located within the Tribe's aboriginal territory or in an area considered to be a traditional use area or one in which the Tribe has cultural ties. In order to further evaluate the project for potential impacts to tribal cultural resources, we would like to formally request the following:
  - A thorough records search be conducted by contacting one of the California Historical Resources Information System (CHRIS) Archaeological Information Centers and a copy of the search results be provided to the tribe.
  - Tribal monitor participation during the initial pedestrian field survey of the Phase I Study of the project and a copy of the results of that study. In the event the pedestrian survey has already been conducted, MBMI requests a copy of the Phase I study be provided to the tribe as soon as it can be made available.

Please include this response in your report to your client.

Sincerely,

Travis Armstrong  
Tribal Historic Preservation Officer

Good afternoon,

Material Culture Consulting, Inc (MCC) is attempting a follow-up on our letter (dated October 24, 2018) regarding the proposed Ontario Ranch Commerce Center Project, located in the City of Ontario, San Bernardino County, to verify you received the letter and if you had a chance to review the Project Area. Additionally, MCC informs you that the Project is now known as Eucalyptus East.

Please respond at your earliest convenience if you wish to share any knowledge of cultural resources within or adjacent to the API. Any information, concerns, or recommendations regarding cultural resources within the Project Area can be shared with us via telephone, email, or via standard mail. Thank you very much for your assistance.

Good Morning,

For the Ontario Ranch Commerce Center Project, the Twenty-Nine Palms Band of Mission Indians Tribal Historic Preservation Office (THPO) is not aware of any additional archaeological/cultural resources that pertain to the Twenty-Nine Palms Band of Mission Indians. If there are any findings during the cultural resource investigation, please have the Lead Agency send the completed cultural report to the THPO. After evaluation of the completed cultural report, the THPO will send additional recommendations. If you have any questions, please do not hesitate to contact the Tribal Historic Preservation Office at (760) 775-3259 or by email: [TNPConsultation@29palmsbomi-nsn.gov](mailto:TNPConsultation@29palmsbomi-nsn.gov).

Thank you,

re: Paleontological resources for the proposed Eucalyptus East Project, in the City of Ontario, San Bernardino County, project area

Dear Allison:

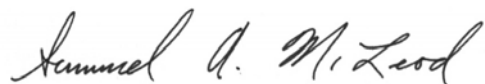

I have conducted a thorough check of our paleontology collection records for the locality and specimen data for the proposed Eucalyptus East Project, in the City of Ontario, San Bernardino County, project area as outlined on the portion of the Prado Dam USGS topographic quadrangle map that you sent to me via e-mail on 2 October 2018. We do not have any vertebrate fossil localities that lie within the proposed project area boundaries, but we do have localities nearby from sedimentary deposits similar to those that occur at depth in the proposed project area.

The entire proposed project area has surface deposits that consist of younger Quaternary Alluvium, derived broadly as alluvial fan deposits from the San Bernardino Mountains to the north. These deposits typically do not contain significant vertebrate fossils in the uppermost layers, but at relatively shallow depth there are probably older Quaternary deposits that may well contain significant vertebrate fossils. Our closest fossil vertebrate locality from similar older Quaternary deposits is LACM 7811, just south of due east of the proposed project area west of Mira Loma east of Archibald Avenue along Sumner Road north of Cloverdale Road, that produced a fossil specimen of whipsnake, *Masticophis*, at a depth of 9 to 11 feet below the surface. Further to the south-southeast of the proposed project area, on the northwestern side of Corona west of Cota Street between Railroad Street and Harrington Street, our vertebrate fossil locality LACM 1207 produced a fossil specimen of deer, *Odocoileus*.

Shallow excavations in the younger Quaternary Alluvium exposed throughout the proposed project area are unlikely to uncover significant fossil vertebrate remains. Deeper excavations there that extend down into the older Quaternary sediments, however, may well encounter significant vertebrate fossils. Any substantial excavations in the proposed project area, therefore, should be monitored closely to quickly and professionally recover any fossil remains while not impeding development. Sediment samples should also be collected from the finer-grained deposits in the proposed project area and processed to determine their small fossil potential. Any fossils collected should be placed in an accredited scientific institution for the benefit of current and future generations.

This records search covers only the vertebrate paleontology records of the Natural History Museum of Los Angeles County. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Sincerely,

A handwritten signature in cursive script that reads "Samuel A. McLeod". The signature is written in black ink and is positioned below the word "Sincerely,".

Samuel A. McLeod, Ph.D.

EXAMPLE

**RE: Update for the Proposed Eucalyptus East Project, City of Ontario; Prado Dam USGS Quadrangle, San Bernardino County, California.**

**Greetings,**

Material Culture Consulting, Inc. (MCC) previously contacted you in 2018 and 2019, regarding the Eucalyptus East Project. This Project proposes the construction of new warehouse facilities on 140 acres of land located on the north/east intersection of Bon View Ave and Merrill Ave in the City of Ontario, San Bernardino County. Material Culture Consulting, Inc (MCC) conducted the initial cultural resources review of the project to support preparation of the environmental documents. As part of this review, our firm contacted the Native American Heritage Commission (NAHC) and was provided your contact information. Outreach for this project was not part of any formal local, state, or federal consultation process.

The initial cultural resources assessment included a cultural records search of the California Historical Resources Information System (CHRIS), a search of the Sacred Lands File by the NAHC, outreach efforts with Native American tribal representatives, a pedestrian survey, and a literature review. MCC found that the project area had been consistently utilized for agricultural and dairy activities since the 1930s. No archaeological resources were identified during survey of the Project Area. A total of seven historic structures, including George Borba & Sons Dairy, were identified within the Project Area, which were evaluated by a qualified architectural historian and determined to be ineligible for listing on the National Register of Historic Places or California Register of Historical Resources. Based on our findings, MCC recommended that the probability of encountering significant cultural resources within the Project Area is considered low. MCC recommends no further mitigation measures prior to implementation of the Project. While we did not recommend additional mitigation prior to construction, we did recommend including a condition of approval or mitigation measure which addresses inadvertent discoveries of cultural materials and/or human remains, should these be encountered during any projects within the Specific Plan Area.

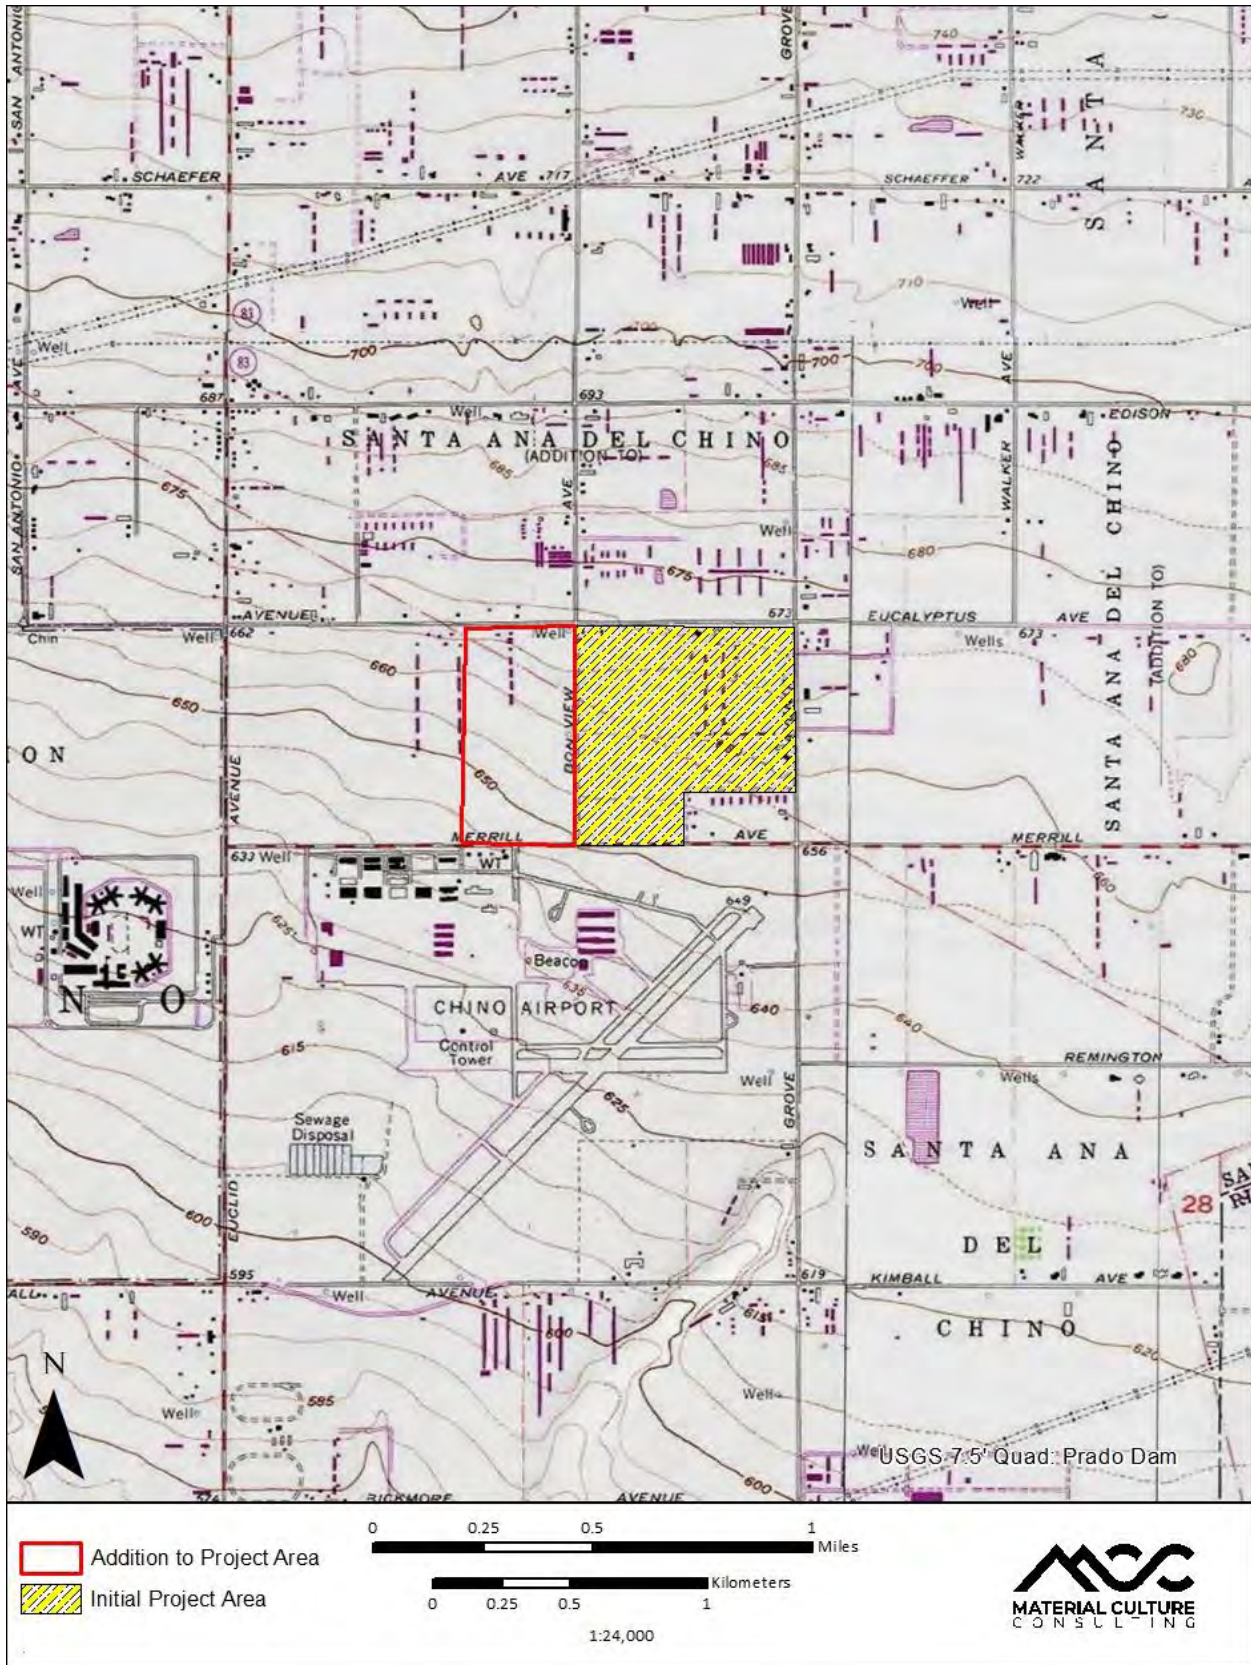

MCC is contacting you to inform you that the footprint for this project has been expanded to include an adjoining 80 acres located at the north/west intersection of Bon View Ave and Merrill Ave (See attached map). The Project area now includes a total of approximately 220 acres located within Section 19 of Township 2 South and Range 7 West (San Bernardino Base Meridian). If you wish to share additional information with us, to include in the revised assessment, we invite you to contact us vial email, letter, or phone. MCC will be conducting a supplemental assessment of this expanded Project Area. The City of Ontario remains the lead agency for this Project if you wish to seek formal consultation.

Thank you very much for your time.

Kindest regards,

Subject: Proposed Eucalyptus East Project Update  
To: Tria Belcourt <[tria@materialcultureconsulting.com](mailto:tria@materialcultureconsulting.com)>

Dear Tria,

Thank you for contacting the San Manuel Band of Mission Indians (SMBMI) regarding the above-referenced project. SMBMI appreciates the opportunity to review the project documentation, which was received by the Cultural Resources Management Department on February 3, 2020. The proposed project is located outside of Serrano ancestral territory and, as such, SMBMI will not be requesting consulting party status with the lead agency or requesting to participate in the scoping, development, and/or review of documents created pursuant to legal and regulatory mandates.

Kind regards,

Alexandra McCleary

The 130.4 acre dairy farm is situated at the southeast corner of Bon View Avenue and Eucalyptus Avenue.

**\*P3a. Description:**

Per information from the San Bernardino County Assessor's Office, the George Borba & Son Dairy was established at this location in 1963. Aerial photographs from 1938, 1959, 1966 and 2002 present a visual history of a small collection of houses and barn were the only built-environment resources on the land in 1938, and how the Borba Dairy property expanded the size of their operations. (See Continuation Sheets for historic aerial photographs.) George Borba & Son Dairy would expand his holdings with the purchase of the 16-acre Boersma Dairy property in 1993, leaving the Haranga ranch as the only acreage not owned by the Borbas in the quarter section. When Borba established his dairy, there were three, small worker cottages and a utility barn located at the corner of Eucalyptus Avenue and Bon View Avenue, of his property.

**Borba Main House:** The house was constructed in 1963 as a modern interpretation of Ranch style architecture with modest reference to the Eichler and Cliff May Homes that had been presented to the public in the early 1950s. Eichler and Cliff May shared the design aspects of using a post-and-beam structure with board-and-batten siding, and emphasized access to outdoor terraces (Hess, Alan. *The Ranch House*. New York: Harry N. Abrams, Inc.; 2004.)

The 4,868 square foot, one-story home was designed using a compound plan of center block comprised of a low-pitch, gable-roofed rectangular mass with wide overhanging eaves, arranged with two wings of rectangular-massed block with low-pitched gable roofs set on each side of center block at 45° in a northerly direction. The roof of the main block is set on a north-south axis, while the two wings are set at a northeast-southwest, and northwest-southeast axis. The house may have been designed to take advantage of the views provided by the San Gabriel Mountains to the east. (See Continuation Sheet for additional text.)

\*Resource Name: **George Borba & Son Dairy**

B1. Historic Name: George Borba & Son Dairy

B2. Common Name: Borba Dairy

B3. Original Use: Dairy farm

B4. Present Use: Dairy farm

\*B5. **Architectural Style:** Ranch style 1960-1980

\*B6. **Construction History:** George Borba Sr. moved onto the land in 1963. Already existing on his land were worker cottages and a utility barn at the southeast corner of Bon View Ave. and Eucalyptus Ave. Borba Sr. built dairy associated structures and a managers house on his land. In 1993, he purchased the Harry Boersma house and dairy at 14746 South Grove Ave.. The worker cottages were demolished in 1988, and four new, single family dwellings were erected in the same location.

\*B7. **Moved?** No Yes Unknown **Date:** **Original Location:**

\*B8. **Related Features:**

Utilitarian dairy farm features that include: pole structures, out buildings, garages, utility sheds, feed bins, cooling tanks, water tanks, and runoff pits.

b. Builder: Unknown

\*B10. **Significance:** None **Theme:** New Model Colony Area (Ontario, CA)

**Area:** San Bernardino County

**Period of Significance:** None

**Property Type:** Large Capacity Dairy Farm

**Applicable Criteria:** Ontario/CR

The following text is excerpted from *The City of Ontario's Historic Context for the New Model Colony Area*, prepared by Galvin & Associates for the City of Ontario Planning Department in September 2004.

In 1967, the County of San Bernardino designated 14,000 acres of agricultural land in the Chino Valley, located in the southwest area of San Bernardino County, an agricultural preserve. This agricultural land, which has been protected by Williamson Act contracts and the 1965 Land Conservation Act, has been farmed primarily by Dutch, French Basque and Portuguese dairy farmers for the last 50 years.

In the 1990s, as dairy operation costs escalated and the demand for housing in the region swelled, development pressures mounted and the process of incorporating this area into adjacent cities began. Anticipating the expiration of the Williamson Act contracts, this area was divided and portions were incorporated into three adjacent cities. In 1999, 8,200 acres were annexed by the City of Ontario; in 2003, 5,000 acres were annexed by the City of Chino, referred to as the Preserve; and the City of Chino Hills annexed the remaining few hundred acres of land.

The City of Ontario named their portion of the former San Bernardino County Agricultural Preserve the *New Model Colony* (NMC) after the original *Model Colony of Ontario* established by the Chaffey Brothers, William and George Jr., in 1882. Over time, the New Model Colony area has been known as Santa Ana Del Chino, the Chino Valley, the Chino Basin, and the San Bernardino Agricultural Preserve or Ag Preserve. It consists of an expansive area of flat arid land that was historically sandy desert. In 2004, the NMC survey area included 711 parcels of predominately open agricultural land scattered with single-family homes and farm buildings. (See Continuation Sheet for additional text.)

\*Date: June 14, 2019

Continuation

Update

**P3. Description, continued:**

**Borba Main House, continued:** The entire building maintains a linear pattern with an emphasis on a horizontal plan. The main block serves as the formal entrance to the house and four trapezoidal-shaped, fixed clerestory lights are set equally on the gable end, under the eaves. Under the band of clerestory lights, the front façade is divided into four sections, reflecting the narrow rafter tails extending from under the wide overhanging eave. A large pair of wood entrance doors, with fixed side lights, are situated to the west of the center of the façade. The entire façade to the west of the front doors is clad with a stucco finish over regularly set, narrow, vertical bands of wood that give the wall surface movement. The wall surface to the east of the front doors is also clad with the narrow, vertical banding, and large, wood-framed picture windows are set in each of the two eastern wall sections. Extending northward from the front façade, on both sides of the doors, are screen walls constructed with decorative breezeway block. The same breezeway block is used in the lower perimeter wall, approximately 36" to 48" high, which parallels the front elevation. The perimeter wall on the west is topped with metal fencing as an additional deterrent to trespassing.

The two wings of the house are clad with a stucco finish, have aluminum window fenestration, and are virtually devoid of ornamentation. The eastern wing of the house contains the attached garage, which is entered on the south elevation, and the kitchen and dining room areas of the house. The bedrooms are located in the west wing, and the center section is where the living room/family room is situated. The roof is clad with composite shingles, and the building has a poured concrete foundation. An inground pool was constructed in the backyard in 1973, and a concrete-block wall encircles the backyard area. A circular driveway curves from Eucalyptus Avenue to the front entrance, and the area around the house is nicely landscaped with lawn, mature trees and shrubs.

The Contemporary Ranch style house associated with the George Borba & Son Dairy property meets the criteria to be considered a "1960s through 1980s Ranch" style house within the historic context of the New Model Colony. The Main House of the George Borba & Son Dairy reflects how, after World War II, the simple Ranch style homes of the 1920s evolved into sprawling homes with little association to their original roots derived from the houses found on the historic ranchos in California. The Main House of George Borba & Son Dairy meets, but does not rise above being a modest example, of a 1960s Contemporary Ranch style house that was widely constructed in California during the same time period. "Some thought that the Contemporary style afforded opportunities to build at a lower cost. In particular, very low-pitch or flat roofs, relatively open floor plans, and the use of post-and-beam rather than stud construction were characteristics of many Contemporary style houses that builders touted as cost-saving innovations (California Department of Transportation. "Tract Housing in California, 1945-1973: A Context for National Register Evaluation"; Sacramento: 2011.)

Plan books published as early as 1945 by companies such as Industrial Publications, Inc., Chicago, Illinois; The L.F. Garlinghouse Co., Topeka, Kansas; and Hiawatha Estates & Associates, Northridge, California, all had plans available for one-story, rambling styled homes with exterior features ranging from a rustic/ranch look - to that which would be considered a Modern exterior today. The design plans offered were all but unrecognizable in relation to the first "modern" Ranch style residence, the Gregory House, designed by California architect William Wurster in 1928. In 1946, architect Cliff May and Sunset Magazine collaborated to write and publish a book, *Sunset Western Ranch Houses* (Hess, 2004.) "The Magazine of Western Living consciously linked the Ranch House to Modernism (Hess, 2004.)

**Managers House, 8099 Eucalyptus Avenue (14544 Grove Avenue):** The house at the corner of Eucalyptus Avenue and Grove Avenue was constructed for the George Borba & Son Dairy in 1978, and enlarged in 1990. The house is one-story, cross-gable, rectangular-massed structure, comprised of 1,974 square feet of living space, and an attached garage. The exterior walls are clad in stucco, and the fenestration is provided by metal-frame sliding windows and modern-composite fixed windows. The house does not present any significant architectural features or characteristics that raise it above a common residential design that dates from the late 1970s.

(See Continuation sheets for additional text)

**CONTINUATION SHEET**

\*Recorded by: Pamela Daly, M.S.H.P.

\*Date: June 14, 2019

Continuation  Update

**P3. Descriptions, continued:**

**Main Dairy Barn/Milking Parlor at 7955 Eucalyptus Ave.:** The Dairy Barn was constructed at the same time of the Main House in 1963. The exterior of the milk storage portion of the building is clad in a stucco finish and devoid of any superfluous ornamentation or architectural features. The Main Dairy Barn, comprised of both the milking parlor and sanitary milk storage facility, is a rectangular-massed building approximately 168 feet long (north-south) and 62 feet wide. The northern section of the building contains the sanitary milk storage facilities, and the automated milking parlor makes up the remainder of the building. The cows pass through the washing bays at the south end of the building before entering the milking parlor stalls, attached to stations and milking machinery. This part of the building is partially open sided, and covered with a corrugated metal roof. The roof is supported on angular, steel support beams set along the stucco-clad concrete walls that form the outside of the building. There is a stepped parapet wall at the roof line between the milking parlor and storage structure. The northern portion of the Dairy Barn has a medium pitch gable roof set on a north-south axis, and the exterior walls of this section are clad with a stucco finish. The west half of the storage facility is wider than the east side, and the roof slope extends over this additional room area, creating uneven roof slopes. A large, aluminum utility door is set in the center of the north (front) façade, and is flanked on both sides by aluminum sliding windows. A poured concrete, circular driveway with the dimensions to allow large tanker trucks access to the front of the building, provides egress from Eucalyptus Avenue.

**Auxilliary Dairy Barn at 7955 Eucalyptus Ave:** The Auxilliary Dairy Barn was constructed in 1978, when the decision was made to enlarge the size of the herd and milk production. This dairy barn is somewhat unique solely for the reason that it is situated on an east-west axis, instead of a north-south axis as usually seen for dairy barns. The exterior of the milk storage portion of the building is clad in a stucco finish and devoid of any superfluous ornamentation or architectural features. The Auxilliary Dairy Barn, comprised of both the milking parlor and sanitary milk storage facility, is a rectangular-massed building approximately 172 feet long (east-west). The milk parlor section is approximately 40 feet wide, and the storage storage section is 62 feet wide. The west section of the building contains the sanitary milk storage facilities, and the automated milking parlor makes up the remainder of the building. The cows pass through the washing bays at the east end of the building before entering the milking parlor stalls, attached to stations and milking machinery. This part of the building is partially open sided, and covered with a corrugated metal roof. The roof is supported on angular, steel support beams set along the stucco-clad concrete walls that form the outside of the building. The western portion of the Dairy Barn has a medium pitch gable roof set on a north-south axis, and the exterior walls of this section are clad with a stucco finish. The south half of the storage facility is wider than the east side, and the roof slope extends over this additional room area, creating uneven roof slopes. A pedestrian door is situated in line with the gable peak, and sliding, metal unit windows provide the fenestration on both sides of the pedestrian door. A poured concrete, circular driveway with the dimensions to allow large tanker trucks access to the front of the building, provides egress from Eucalyptus Avenue.

**Feed (dry and wet) sorting structures:** There are two large, rectangular-massed, dry feed sorting structures situated to the southwest of the Main House, in the western area of the dairy farm. One feed sorter structure is open to the west, and measures approximately 162 feet long and 52 feet wide. The second dry feed sorter is open to the east, and measures approximately 92 feet long and 34 feet wide. Each structure has a concrete foundation, a shed roof, and is enclosed on three sides. The larger feed sorter has seven bays, with the bay walls topped by plywood panels. A wet-feed structure is located to the immediate northwest of the dry feed sheds, and it has a two bay, poured concrete lined pit, where raw vegetables and excess produce can be dumped and then accessed by bucket loaders for depositing into feed troughs in the pens.

**Cattle shade pole structures:** Cattle covers have shed roofs that are supported by a system of steel poles, with a shed having a roof height ranging between approximately 10 feet tall to 18 feet tall. The sheds roofs are approximately 16 feet to 22 feet in width, and range from 30 feet to almost 1,000 feet long. There are approximately sixteen pole structures situated within the cattle pens on all the Borba property used for providing shelter from sun and inclement weather to the dairy cows, and these provide over 1.25-linear miles of cattle sheds. The acreage covered by the shades and the gable roof cover is approximately 4 acres.

(See Continuation Sheet for additional text.)

**CONTINUATION SHEET**

\*Recorded by: Pamela Daly, M.S.H.P.

\*Date: June 14, 2019

Continuation

Update

**P3. Description, continued:**

**Hay cover pole structures:** There are multiple pole structures with shed roofs located in a north-south line between the Borba Main and Auxiliary Dairy Barns, and in an east-west line to the southwest of the Boersma Dairy Barn. These pole structures are similar in construction to the cattle shade structures.

**Cattle pens:** The cattle pens were designed using feedlot fencing around a large section of land, with the large pens divided into various sized pens that can hold from just a few cows to more than 100. The tubular steel fencing is embedded in concrete footing and a concrete apron and/or concrete trough extends away from the fencing on the outside of the pen to allow an area for the feed to be laid out for each pen.

**Manure pits:** There is a dry manure capture structure situated south of the Managers House, parallel to Grove Avenue. This structure may actually date from before George Borba built his dairy. In the most southern portion of the dairy property, near Merrill Avenue, there are two sections of land that are dug to a depth of approximately 8' to be filled with the liquid runoff from the cattle pens. On a routine basis, the pits are drained to be recycled as liquid fertilizer.

**Water pumping systems and equipment:** A farm the size of Borba's 130+acres required multiple water pumping systems to supply all of the farms needs. Pumping equipment would be comprised of electrically-powered jet pumps used to raise water from underground resources.

**Single-family residences at 7721, 7735, 7745 Eucalyptus Ave.:** According to the demolition and building permits filed in San Bernardino County, the three houses that were located at the southeast corner of Eucalyptus Avenue and Bon View Avenue were demolished in 1988, and a permit to build four new single-family houses of 1,075 square feet each, was submitted that same year. The older houses had dated from circa 1915, and were associated with the gable roof barn that still stands just south of the houses, on Bon View Avenue.

**Old Barn:** Research failed to produce any information regarding the construction date of this barn that may date from the 1920s, or 1930s. It appears to be in its original location, which was near three small worker cottages located at the southeast corner of Bon View Avenue and Eucalyptus Avenue. (The original cottages, that according to San Bernardino County Assessor records, dated from 1915 and 1925, were demolished in 1988 and replaced with four new single family dwellings in the same location.) Aerial photographs dating from 1936 do not show any agricultural buildings and structures within an entire quarter-section of the barn that can provide information as to who the barn belonged to, or what its exact purpose was originally. The barn is comprised of a gable roof structure that measures approximately 66 feet lone (east-west) by 45 feet wide, and is 20 feet high at its peak. The barn appears to have been used for general farm use, and based upon the vent features in the gable ridge and lack of window openings, for the storage of equipment, supplies, and/or temporary harvest space. The building is clad entirely with corrugated steel panels on its walls and roof. There is a set of tall hanging doors on the west (front) façade of the barn. A tall pole, shade structure with concrete pad, is situated to the immediate north of the barn. This structure may have been used to cover tractors or other motor vehicles. The barn has lost its association with its historic context, and aspects of integrity of feeling, setting, and design (its original purpose is unknown).

**Boersma House, 14746 South Grove Ave.:** According to building permits records from San Bernardino County, the house was constructed in 1960 as a modest example of Ranch style architecture from the 1950s and 1960s. The one-story home has a low-pitch gable roof with wide overhanging eaves and exposed rafter tails. The roof is set on a north-south axis, and the rectangular main body of the house is approximately 62 feet long by 42 feet wide. The garage is attached to the main block, but set back (to the west) approximately 18 feet from being in alignment with the house's front façade. At the south end of the house, there is a room projection from the building that creates a cross gable extension. The formal entrance to the house is in an unusual location, as it is set between the recessed façade of the garage, next to the north façade of the main block, and the front door has sidelights of glass block. (It is unknown if this was the original design or a later alteration.) Based on the style of windows in the dairy barn, which was constructed at the same time as the house, all of the house's original fenestration has been removed and replaced with modern composite window units. The house is clad with a stucco finish, except for a false water table row of wide clapboards creating a decorative element to the house. The element of wide clapboards is repeated in the north gable end of the house. (See Continuation Sheet for additional text.)

Continuation

Update

**P3. Description, continued:**

**Boersma House, continued:**

The Ranch style house constructed by Harry Boersma, and now owned by the George Borba and Son Dairy, meets the criteria to be considered a “1960s through 1980s Ranch” style house within the historic context of the New Model Colony. While the house meets the architectural description to be considered a “1960s through 1980s Ranch” style house associated with dairy farms in Ontario, California, it also meets the architectural characteristics of a Ranch style house that was constructed during the same time period anywhere in California, or the United States. From the publication written by the Cultural Studies Office of Caltrans Division of Environmental Analysis, “Tract Housing in California, 1945-1973: A Context for National Register Evaluation; 2011”, the characteristics of a Ranch House are those houses that are “one-story and exhibit a predominant horizontality”.

Plan books published as early as 1945 by companies such as Industrial Publications, Inc., Chicago, Illinois; The L.F. Garlinghouse Co., Topeka, Kansas; and Hiawatha Estes & Associates, Northridge, California, all had plans available for one-story, rambling styled homes with exterior features ranging from a rustic/ranch look - to that which would be considered a Modern exterior today. The design plans offered were all but unrecognizable in relation to the first “modern” Ranch style residence, the Gregory House, designed by architect William Wurster in 1928.

**Boersma Dairy Barn/Milking Parlor:** The Dairy Barn was constructed at the same time of the Boersma House in 1960, and was designed to reflect the modest architectural details and design of the house. The Dairy Barn is a rectangular-massed building approximately 153 feet long (east-west) and 42 feet wide, and eastern portion of the building facing South Grove Avenue is where the formal front pedestrian entrance and sanitary milk storage units are located. This eastern portion of the building is covered with a gable roof system, with an added shed roof slope running across the façade to create a false gable-on-hip roof system. There are rafter tails that extend from under the roof eaves, and these, in association with diamond frames on the windows, are the sole decorative features of the front elevation. The milking parlor of the building has solid, concrete masonry walls approximately 6 feet tall, and these walls support the steel support poles and beams that support the roof system. The parlor portion of the building is covered with a corrugated metal roof that has a vent system along the gable ridge. The west end of the building is where the cows enter and exit the milking parlor.

Update

**B10. Statement of Significance, continued:**

During the Rancho Period in the history of Southern California, large land grants were given to influential citizens leading to European settlement of ranchos for raising cattle in the San Bernardino Valley. The Rancho period lasted from 1834 until the Mexican War of 1846. Colonists were encouraged to settle in the San Bernardino Valley to help protect the region from such raids. Recipients of the land grants included Spanish gentlemen (dons) from many of the first families of California, such as the Lugos, Sepulvedas, Yorbas, Bandinis, Tapias, Palomares, and Picos.

One of the largest land grants in the area was Rancho Santa Ana del Chino, which encompassed the New Model Colony project study area. In 1841, the Spanish governor Alvarado granted the 22,000-acre Rancho Santa Ana del Chino to his uncle, Antonio Maria Lugo.

Located on a sloping plateau at the base of the 10,000-foot Mt. San Antonio, the City of Ontario, California, was named for Ontario, Canada by George Chaffey, a Canadian-born engineer who came to Riverside in 1880. He and his brother William acquired 1000 acres of the Garcia Rancho in 1881 which they intended to subdivide into small fruit farms. The Chaffey's purchased an additional 6,000 acres that would become the cities of Ontario and Upland. One of the keys to the Chaffey's success as developers was their creation of a "mutual water company" in which each landowner became a stockholder. Ontario was incorporated on December 10, 1891.

Chino's beginning can be traced to Isaac William's Rancho Santa Ana del Chino, known for its cattle and fine horses, its sugar beet factory, its dairy farms, and its truck farms in the early days. After Williams died the Chino Ranch suffered difficult times until the ranch and some additional lands were purchased by Richard Gird in 1881. Gird imported dairy cattle and built up a herd of 200 milk cows, which was the start of Chino's more recent role as a dairy center of Southern California. In 1887 he subdivided half the ranch and set aside the town site of Chino.

The first herds of good cows to reach California were those led or driven across the plains by the gold-seekers of 1849. The cows were fed or grazed along the trail and contributed to the family menu on the way. These cows were the foundation stock of pioneer dairy efforts in the foothills and mountain valleys of the Sierra Nevada. During the late 1840s and early 1850s, Sacramento was the center of California's cattle market. It was during this period that dairying became an established industry in California.

The scientist, Louis Pasteur, discovered in 1865 that heating milk to 140 degrees Fahrenheit for 20 minutes would destroy germs of tuberculosis, typhoid fever and other pathogenic organisms. Due to his discovery, the milk manufacturing industry began to develop in other areas related to the dairy industry such as supply machinery and equipment for milk pasteurizing plants, coolers, pasteurizers, bottling machines and a score of other products.

In the 1880s, dairying was largely confined to Humboldt County, Pt. Reyes Peninsula, the coastal section of San Luis Obispo and the mountain pastures of the Lake Tahoe region. In the early 1890s, the first farm separators (mechanical milk separators) were introduced into California.

There are three distinct phases in dairy farming in Southern California. The first phase was from 1900-1930 and consisted of free grazing of the cattle. The first dairies before 1930s were small family concerns, consisting of five or six acres. During the 1920s, the dairies gravitated to the southeastern part of Los Angeles County around Paramount, Artesia, and Bellflower.

The second phase of dairying, from 1931-1949 saw a change from free grazing dairying to dry-lot dairying with the mechanization of milking. Prior to World War II, dairies were widely dispersed throughout Los Angeles County. Large clusters of dairies were found in areas such as Torrance, Artesia, El Monte and the San Fernando Valley. During this period much of the feed and fodder was available from the local area, and dairies usually occupied the less valuable land that was not suited to citrus or truck farms raising vegetables for market.

The third phase of dairying in Southern California took place between 1950 and 1969. One of the paradoxes of the 1950s Los Angeles milk industry is that the rapidly growing human population and industry of Los Angeles County after the end of World War II, squeezed the dairymen into smaller and smaller areas, forcing the dairy industry to produce milk more economically than before the squeeze began. The dairy farmers moved to new dairies to take advantage of mechanization; their old barns were not large enough for the new machinery.

Dairies first came to the Chino Valley in the late 1890s, mostly on rented land. The Chino Valley was a good location for dairy farming because of its vast areas to cultivate hay and its sunshine, fertile soil, and water supply. In the late 1950s and early 1960s many housing developments began in Westminster and Cypress and dairymen started to buy farm land in the Chino Valley which had been used mostly for growing grapes. By 1957, more than 135 dairies were located in the Chino Valley area. (See additional text on Continuation Page)

\*Date: June 14, 2019 ■ Continuation

Update

**B10. Statement of Significance, continued:**

In moving to the Chino Valley area, the dairymen established the most efficient and modern dairies in the nation. By 1979, the largest concentration of dairies in the world was located in the approximately 18 square miles that comprise the Chino Valley. Sixty percent of the milk produced in the State of California was produced in this area.

Dairy farming in the Chino Valley, between 1950 and 1969, consisted of the introduction of scientific feeding and breeding, resulting in larger herds and more productive dairy operations. The dairy properties that developed during 1950-1969 are located on very large parcels or on properties that comprise multiple smaller parcels. The average size for a property associated with this context is approximately forty (40) acres or more. As the mechanization of dairying advanced, the size of the parcel increased as the dairy farmer was capable of milking more cattle. The layout of the dairy property also changed as the dairy operation began to introduce new farming equipment for the mechanization process.

With the technology of the new milking systems (of the 1950s-60s) one man easily could milk 450 cows twice a day. Machines could handle more cows, consequently, the herds increased in size again. Also, the dairy farmers from this period were able to afford more land after selling their dairies for premium prices in the highly valued inner-city areas of Los Angeles County, and could consequently increase the size of their operations and upgrade their milking facilities as the cost of land in the Chino Valley area was far less costly.

The George A Borba & Son Dairy operation is situated on 130+ acres, divided into 11 legal parcels, and is situated in the southeast corner of Bon View Avenue and Eucalyptus Avenue. The history and evaluation of the Borba & Son Dairy is based upon a review of historic aerial photographs dating from 1938 to 2002 that provide a view of buildings and structures on the parcels in the subject area; San Bernardino County building permit records from the 1960s for the subject parcels; historic newspaper articles; census information; and an interview with George Borba Sr.'s daughter, Linda Borba Gourdakian.

The George Borba & Son Dairy was established in Chino by George Antonio Borba, who had been born in Ontario, California, in 1932. George A. Borba was the fourth child of Pete Borba Sr. (given name Pedro Antonio Borba) and his wife Marie. Pete Borba had been born in 1895, and was 17 when he emigrated from the Azore Islands (an autonomous region of Portugal), and arrived in the United States in 1912. He followed the arrival of his brothers, Joa/Joe in 1900, John in 1903, and Emanuel in 1909. By 1920, he is married and living in the dairy community of Lemoore, in Kings County, California. At least two of his brothers have also settled in Lemoore, and a search of census lists suggest there were possibly more members of the extended family living in that area of California.

Pete, his wife Marie, and three children (Pete Jr., Joe, and John) moved to Southern California in time for the 1930 Census, and were living in the Cucamonga area of San Bernardino County. It then appears that Pete Sr. joins with brothers Emanuel and Joe, and moves to the Chino Valley dairy area. Pete Sr. is noted in City Directories as living on Edison Avenue, in Chino. Pete Sr. and Marie would have two additional children while living in Ontario-Chino, George Antonio, and Mary. George Antonio Borba, born in 1932, grew up working with his brothers for his father's successful potato farm, and on his Uncle Joe's dairy farm. During George's high school years, his name shows up frequently in local newspapers for his outstanding skills on the baseball field.

George married a high school classmate, Dolores Sartain in 1955, and they settled in the northern Chino (southern Ontario) area near his father's farm on Edison Avenue. It was in 1963 that George and Dolores established a dairy operation on three-quarters of the land bound by Bon View Avenue to the west; Eucalyptus Avenue to the north; Grove Avenue to the east; and Merrill Avenue to the south. (In 1963, the two, 16-acre parcels in the southeast quarter of the "block" were owned by Harry Boersma and Rudy Haringa.) When George purchased the land for his future house and dairy, there were three houses and one barn situated at the southeast corner of the intersection of Eucalyptus Avenue and Bon View Avenue, and there was a small house at the southwest corner of built the house and dairy farm at 7955 Eucalyptus Avenue.

The Borba Dairy was recognized for its gold medal winning milk, and Borba was able to expand his operations in the 1970s. He increased the size of his herd so much that in 1978, he built an additional dairy barn and a single-family residence to be used by the farm manager. The Boersma Dairy farm property became available in 1993, after Mr. Boersma passed away, and Borba now had over 130 acres of land and three dairy barns to keep over 3,000 head of milking cows. Besides the dairy operations, George Sr. (now that there was a George Jr.) was very active in the dairy community, local government and land use organizations, and even was a director of the newly established Chino Valley Bank. George A. Borba (Sr.) passed away in 2012, and his son has continued the family business in Chino/Ontario and in Kern County. (Sources: Ancestry.com for "George Antonio Borba". Resources include 1910, 1920, 1930 and 1940 U.S. Census records, World War II draft card for "George A. Borba", Immigration Record for Pete A. Borba, City Directories and Voter Registration Records.)

**CONTINUATION SHEET**

\*Recorded by: Pamela Daly, M.S.H.P.

\*Date: June 14, 2019

Continuation

Update

**B10 Statement of Significance, continued:**

In assessing the historical significance of the subject property, federal, state, and local significance criteria were applied. The subject property is not currently listed in either the National Register of Historic Places, California Register of Historical Resources, or as a City of Ontario Historic Landmark.

**National Register and California Register**

**Criteria A/1:** Pursuant to the National Register and/or California Register criterion relating to the Borba & Son Dairy Farm property's association with significant historical events that exemplify broad patterns of our history, the subject property does not qualify as a significant resource under Criteria A/1. While the history of the Borba & Son Dairy Farm with the development of the dairy industry in Chino Valley-Ontario is important, the Borba & Son Dairy was not specifically identified in our research as the site of an event important to the history of large-scale dairy farming in California, or the United States. There is no evidence that the Borba & Son Dairy Farm property is eligible for listing under National Register Criterion A or California Register Criterion 1.

**Criteria B/2:** Pursuant to National Register and California Register criteria relating to the Borba & Son Dairy's association with the lives of persons significant in our past, the property does not qualify as a significant resource under National Register Criterion B or California Register Criterion 2. This criterion is used to determine if George A. Borba Sr. is *directly* associated with the development and history of large-scale dairy farming in the mid-twentieth century, or if he was important in the settlement of Chino Valley or Ontario. While George A. Borba Sr. was very active in local, regional, and even statewide organizations associated with the dairy industry and related subjects, our research did not reveal that his activities were demonstrably important on a national or state level.

**Criteria C/3:** Pursuant to the National Register and California Register criteria relating to the distinctive characteristics of a type, period, region, or method of construction, the Borba & Son Dairy does not appear to be eligible for listing as a significant Large Capacity Dairy under National Register Criterion C or California Register Criterion 3. The Borba & Son Dairy Farm property is an example of a Large Capacity Dairy constructed in Ontario in 1963. The design of a Large Capacity Dairy had been developed over 50 years of both technical improvements in milking machinery and the handling of dairy cows. The Large Capacity Dairies were simply an expansion of the dairy operations built soon after World War II, which brought together the improved hygienics of milking operations with the use of mechanical milking parlors. Large-scale dairy farms had been established, constructed, and operated in Southern California and the Chino Valley Dairy region since the early 1950s, and Borba & Son Dairy was not found to be a pioneer of large-scale dairy management. Borba & Son Dairy built an operation whose success was insured by following the example of the layout and management of other regional farms and industry guidelines. The Borba & Son Dairy does not present any significant contributions to the history of Large Capacity Dairies that would warrant it being eligible for listing as a significant property under Criterion C/3.

**Evaluation of the Ranch style house of the Borba & Son Dairy Farm property per National Register and California Register Criteria**

The Main House of the Borba & Son Dairy has been found to meet the criteria to be considered a contributing resource, 1960s through 1980s Ranch style house, under the New Model Colony Historic Context. While the Main House of the Borba & Son Dairy meets the level of integrity to be considered a local resource, the building itself has not been found to meet the criteria to be listed in the National Register or California Register.

The Main House of Borba & Son Dairy has not been found to have been associated with events that have made a significant contribution to the broad pattern of dairy farm ranch houses, or to the cultural history of dairy farming, in Chino Valley-Ontario, California, or the United States.

The Main House of Borba & Son Dairy has not been found to have been directly associated with persons important to the dairy farm industry in Ontario, California, or the United States.

The Main House of Borba & Son Dairy does not present a Contemporary Ranch style residence of high artistic values, or a design that contributes to the national or regional discussion regarding Contemporary Ranch style houses constructed in 1963.

(See Continuation Sheet for additional text.)

Update

**B10 Statement of Significance, continued:**

**City of Ontario Criteria**

The Borba & Son Dairy does present high integrity for a “Post 1950, Scientific, Large Capacity Dairy” farm constructed in 1963, for possessing the physical attributes of a large-scale dairy operation, but it does not appear to have the capacity to be determined a significant individual property as a contributor to the history of dairy farming in the City of Ontario.

Prior to 1950, the dairy farms in the Chino Valley area were primarily owned and operated by a single family, with some hired hands to supplement the family’s involvement. Even with the advent of modern milking equipment, improved feeding and animal husbandry, the dairy farms continued to resemble those of the early twentieth-century, with the cows able graze in pastures and the farms make a visual connection to the early days of settlement in Ontario and the Chino Valley.

After World War II, the pressure from urban development, high price of land, and loss of interest by the younger generations of dairy farmers, forced dairy farmers in the New Model Colony Area to adapt to the modern livestock business plan of operating, what is called in common terminology, a factory farm. The Borba & Son Dairy can accommodate approximately 3,000 head of cattle on the property, with approximately 1,500 head being milked on a daily basis due to the improvement of technology, and the three dairy barns located on the farm. A factory farm is considered:

“An operation is defined as an animal feeding operation, or AFO, if the facility confines, stables, or feeds animals for 45 days or more in a 12-month period, and a ground cover of vegetation is not sustained over at least 50 percent of the confinement area. An operation is defined as a concentrated animal feeding operation, or CAFO, if it meets the definition of an AFO and also confines more than 1,000 animal units (1,000 animal units is equal to 700 dairy cows). (United State Department of Agriculture (USDA) <https://www.nrcs.usda.gov/wps/portal/nrcs/main/national/plantsanimals/livestock/afo/>)

Criterion a.: Evaluating the property under the City of Ontario criteria for historic landmarks, the property of the Borba & Son Dairy has not been found to exemplify or reflect special elements of the City’s history. The “Post 1950, Scientific, Large Capacity Dairies” were identified in the “New Model Colony Historic Context” not for their contribution to the post World War II development of the City of Ontario, but rather that the advancements of dairy management and technology allowed for farmers to milk a greater number of cows in a 24-hour period. Farmers expanded the size of their cattle pens to hold more head of cattle, and that in turn allowed a dairy farmer to sell more milk. There may have been technological improvements which contributed to the amount of milk produced in Southern California, but we find no evidence that the activities of the Borba & Son Dairy operations presented any special elements to the City’s history.

Criterion b.: The Borba & Son Dairy has not been identified with persons or events significant in local, state, or national history. George A. Borba was very active in his community; both in civic and industry activities, but his contributions were not so substantial as to have demonstrably changed local history.

Criterion c.: The built-environment resources of the Borba & Son Dairy were not designed or organized by a notable builder, designer, architect, or dairy farm expert. These types of large-scale dairy operations were being constructed across California, and in many parts of the United States, since the end of World War II. Per the USDA, there are over 450,000 AFOs in the United States in 2017, of which dairy operations make up a large percentage of the total number.

Criterion d.: While the Borba & Son Dairy property has been noted as having high integrity as an example of a “Post 1950 Scientific, Large Capacity Dairy”, the buildings and structures of the Borba & Son Dairy Farm do not exhibit significantly important examples of building practices that would be important to the dairy industry dating from after 1963. The design of the dairy facility at Borba & Son Dairy had no impact on the future of architectural or agricultural development of dairy farms in Ontario or the Chino Valley in the last half of the twentieth-century.

Criterion e.: The buildings and structures of the Borba & Son Dairy do not exhibit noteworthy examples of the use of indigenous materials or craftsmanship.

(See Continuation Sheet for additional text.)

**CONTINUATION SHEET**

\*Recorded by: Pamela Daly, M.S.H.P.

\*Date: June 14, 2019

Continuation

Update

**B10 Statement of Significance, continued:**

Criterion f.: The Borba & Son Dairy property does not embody elements that represent significant dairy technology, or design of a factory farm, constructed in the 1960s. The Borba & Son Dairy Farm operation presents the type of large scale, dry lot, milking operation widely used across California where urban growth pushes against agrarian interests. (And why the Williamson Act was enacted to protect agricultural and open space land.)

Criterion g.: The Main House and Dairy Barns of Borba & Son Dairy are not located in a unique location. The farm is just one of many dating from the 1960s that are still located in the Chino Valley-Ontario area.

Criterion h.: Large capacity dairies continue to operate across California. Many of the dairy farmers who are leaving the Chino Valley area are moving north to Tulare, Merced, and Kern Counties. They are constructing dairy operations that are based upon the same basic physical design, but are being outfitted with technologically advanced milking, animal husbandry, and herd control devices. The Borba & Son Dairy is not an important or significant example of a large capacity dairy, and its loss would not adversely affect the history of dairy operations in Ontario.

The Borba & Son Dairy property has not been identified as a contributing member of any identified Historic District of thematically related groupings of Large Capacity Dairy farms in the Model Colony Area.

**NATIVE AMERICAN CONSULTATION**

## **NAHC CONSULTATION**

## NATIVE AMERICAN HERITAGE COMMISSION

January 28, 2021

Alexis Vaughn  
City of Ontario

Via Email to: [avaughn@ontarioca.gov](mailto:avaughn@ontarioca.gov)

**Re: Native American Consultation, Pursuant to Senate Bill 18, Government Code §65352.3 and §65352.4, South Ontario Logistics Center Specific Plan Project, San Bernardino County**

Dear Ms. Vaughn:

Attached is a consultation list of tribes with traditional lands or cultural places located within the boundaries of the above referenced counties.

Government Code §65352.3 and §65352.4 require local governments to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose of avoiding, protecting, and/or mitigating impacts to cultural places when creating or amending General Plans, Specific Plans and Community Plans.

The law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction. The NAHC believes that this is the best practice to ensure that tribes are consulted commensurate with the intent of the law.

The NAHC also believes that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:
  - A listing of any and all known cultural resources that have already been recorded or are adjacent to the APE, such as known archaeological sites;
  - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
  - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the APE; and
  - If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.
2. The results of any archaeological inventory survey that was conducted, including:
  - Any report that may contain site forms, site significance, and suggested mitigation measures.

West Sacramento,  
California 95691  
(916) 373-3710  
[nahc@nahc.ca.gov](mailto:nahc@nahc.ca.gov)  
NAHC.ca.gov

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code §6254.10.

3. The result of the Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was negative.
4. Any ethnographic studies conducted for any area including all or part of the APE; and
5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event, that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we are able to assure that our consultation list remains current.

If you have any questions or need additional information, please contact me at my email address:

[Andrew.Green@nahc.ca.gov](mailto:Andrew.Green@nahc.ca.gov).

Sincerely,

Andrew Green  
Cultural Resources Analyst

**SUBJECT: AB 52 NOTIFICATION – South Ontario Logistics Center Specific Plan / Nos. PSP19-001 & PGPA19-004**

Dear Mr. Salas:

The City of Ontario is evaluating a proposed Specific Plan and General Plan amendment, along with a Development Plan, Tentative Parcel Map, and Development Agreement (“Specific Plan” or “project”). The project is described below and illustrated on the attached map. The project is subject to the California Environmental Quality Act (CEQA). In accordance with Assembly Bill 52 (Public Resources Code Section 21080.3.1), California Native American Tribes may request consultation regarding possible significant effects that implementation of the proposed project may have on tribal cultural resources. A request for consultation must be received within 30 days of the date of this letter. The request must be in writing to the City of Ontario and must identify a lead contact person. If consultation is requested, the City of Ontario will begin the consultation process within 30 days.

The project and contact information are provided below:

**Project Name/File No.:** South Ontario Logistics Center Specific Plan (File Nos. PSP19-001 & PGPA19-004)

**Project Location:** The project site is bound by Eucalyptus Avenue to the north, existing right-of-way for the future Campus Avenue extension to the west, Merrill Avenue to the south, and Grove Avenue to the east. Regional location and local vicinity maps are provided in Figure 1, *Regional Location Map* and Figure 2, *Vicinity Map*, respectively. The project site is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. Regional access is available to the Project site via State Route 83 (SR-83) approximately one mile to the west, State Route 60 (SR-60) approximately three miles to the north, Interstate 15 (I-15) approximately five miles to the east, and State Route 91 (SR-91) approximately eight miles to the south. The attached exhibits depict the regional location

of the site (Exhibit 1); the project vicinity (Exhibit 2); aerial of the project site and surrounding area (Exhibit 3); and, USGS Map (Exhibit 4).

The proposed Project site consists of 23 parcels that are associated with the San Bernardino County Assessor’s Parcel Numbers (APNs) presented in Table 1.

**Table 1: Assessor Parcel Numbers**

1054-251-02	1054-301-01	1054-301-02		

**Project Description:** The proposed Project site is currently occupied by agricultural uses, including a dairy farm and row crops, and vacant land. There are several residential structures located throughout the Project site. Dairy farming and agriculture have been the primary uses of the property since the 1930s or earlier. The Project also includes dairy barns, a storage structure, feed storage barns, and numerous livestock corrals. There are large existing retention ponds that collect agricultural waste.

The Project includes a General Plan Amendment, Specific Plan, Development Agreement, Development Plan(s), and Tentative Parcel Map(s) to allow development of approximately 5.4 million square feet (SF) of industrial and business park land uses on the 222.18-acre site, as described further below. The Project is proposed in two phases. Phase I, comprised of Planning Areas 1 and 2, would allow approximately 3,172,780 SF of industrial and business park uses. Phase I is depicted in Exhibit 2, Concept Site Plan, and will be evaluated at a project-specific level in the EIR. The Development Plan for Phase I currently proposes the construction of eight industrial concrete tilt-up industrial/warehouse buildings totaling 2,926,955 SF of industrial/warehouse and ancillary office space. The EIR will also evaluate, at a programmatic level, the potential future development of Phase II, which is comprised of Planning Areas 3, 4 and 5 (no specific development proposals have been identified for the Phase II area). The EIR will evaluate the total maximum allowable development in the Specific Plan, which is 5,412,591 SF of industrial and business park land uses and associated onsite and offsite infrastructure improvements.

The following summarize the discretionary approvals to be evaluated in the EIR as part of the Project review and approval process by the City of Ontario.

General Plan Amendment (GPA). The proposed GPA would amend the City’s General Plan Land Use Map by changing the existing land use designations of the 222.18-acre Project site from 159.04 acres of “Low Medium Density Residential” and 63.14 acres of “Business Park” to 181.04 acres of “General Industrial,” and 41.14 acres of “Business Park,” to facilitate development of the Project site.

South Ontario Logistics Center Specific Plan (SP). The SP proposes a comprehensive land use plan, circulation plan, streetscape plan, infrastructure service plan, grading plan, maintenance plan, phasing plan, design guidelines, development regulations, and implementation measures to guide the development of the 222.18-acre Project site into a master-planned industrial/business park. The SP consists of five Planning Areas (PAs) which would accommodate a variety of industrial-serving commercial, low-intensity office, technology, manufacturing, and warehouse/distribution uses that are compatible with the Project site’s location within Safety Zone 6 of the Chino Airport.

## ONTARIO PLANNING DEPARTMENT – AB 52 NOTIFICATION

FILE NO.: PSP19-001, PGPA19-004

---

The SP would allow up to 5,412,591 SF of building space for these PAs combined. PAs 1 and 3 would be located along Eucalyptus Avenue frontage. PAs 2, 4, and 5 will be located south of the PAs 1 and 3, north of Merrill Avenue, along the Bon View Avenue frontage (west) and Grove Avenue (east). The SP would establish two land use designations encompassing the SP area as follows:

- **Business Park:** The SP would allow for up to 1,075,235 SF of Business Park building space to be developed on a total of 41.14 gross acres within PAs 1 and 3. These PAs would be developed with business park buildings that would allow for the development of uses such as offices, technology centers, research and development, enterprises, light manufacturing and warehouse/distribution uses.
- **General Industrial:** The SP would allow for up to 4,337,356 SF of Industrial building space to be constructed within PAs 2, 4 and 5. These PAs would comprise 181.04 gross acres and would allow for the development of uses such as general light industrial, manufacturing, warehouse/distribution, and e-commerce fulfillment center operations.

**Housing Accountability Act (Senate Bill [SB] 330):** The EIR will include evaluation of “replacement housing” in accordance with SB 330, the Housing Crisis Act of 2019 (Government Code Section 6300). SB 330 requires in part, that where a development project results in reducing the number of housing units allowed under existing zoning, the City must concurrently rezone other parcels such that there is no “net loss” of the total allowable housing development in the City. The City has evaluated the proposed Project, and has determined that it would result in the “loss” of approximately 1,352 low to moderate density housing units (due to the proposed rezoning and associated General Plan Amendment and Zone Change). Therefore, the City is evaluating replacement sites for rezoning to ensure that there is no net loss in allowable housing density due to the Project: the City may either rezone a portion of Grove Avenue to create a higher density transit-friendly corridor, or may rezone two specific sites proposed by the applicant at slightly higher residential densities. Both options are shown in see Figure 6, ***SB330 Replacement Sites***. The EIR will evaluate the potential environmental impacts of rezoning this area for higher density residential uses at a programmatic level, as no specific development has been proposed for these sites and no site-specific applications have been submitted to the City at this time.

**Background:** The City is preparing an Environmental Impact Report (EIR) for the project and will be incorporating project-specific mitigation measures along with standard The Ontario Plan (General Plan) set mitigation measures from the Certified Environmental Impact Report (FEIR) prepared for The Ontario Plan that was adopted in 2010. At minimum, the following Cultural Resources mitigation measure will be required for the project:

1. Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be an historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, avoidance of other appropriate measures shall be implemented.
2. If paleontological resources are identified during any excavations, construction activities shall be moved to other parts of the project site and a qualified paleontologist shall be contacted to

## ONTARIO PLANNING DEPARTMENT – AB 52 NOTIFICATION

FILE NO.: PSP19-001, PGPA19-004

---

determine the significance of these resources. If the find is determined to be significant, avoidance or other appropriate measures shall be implemented. One appropriate measure would include that a qualified paleontologist shall be permitted to recover and evaluate the find(s) in accordance with current standards and guidelines.

3. In the event of the accidental discovery or recognition of any human remains during excavation/construction, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been contacted and any required investigation or required Native American consultation has been completed.

General Plan FEIR Cultural Resources Mitigation Measures:

5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals.

5-2 In Areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendation of a qualified cultural preservation expert. The Mitigation plan shall include the following requirements:

- a) Archaeologist and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.
- b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.
- c) Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.

**Cultural Resources Analysis:** The project is required to prepare a cultural resources impact analysis and the results of which will be included in the project EIR. In March 2020, a phase 1 cultural and paleontological resources assessment records search information was provided by the Material Culture Consulting group. A copy of the report's Appendix B: Cultural Resources Records Search Results is enclosed. Further research will need to occur for Phase 2 of the Specific Plan area, should it be developed in the future.

**SUBJECT: SB 18 NOTIFICATION – South Ontario Logistics Center Specific Plan / Nos. PSP19-001 & PGPA19-004**

Dear Mr. Salas:

In an effort to preserve and protect California Native American traditional tribal cultural places, the City of Ontario invites you to consult on the proposed Specific Plan, pursuant to Government Code 65352.3. The City of Ontario recognizes that the proposed project may have impacts to potential cultural resources and encourages tribal participation. It is important for the City and local Tribes to collaborate efforts in order to preserve cultural resources through the local planning process.

The project and contact information are provided below:

**Project Name/File No.:** South Ontario Logistics Center Specific Plan (File Nos. PSP19-001 & PGPA19-004)

**Project Location:** The project site is bound by Eucalyptus Avenue to the north, existing right-of-way for the future Campus Avenue extension to the west, Merrill Avenue to the south, and Grove Avenue to the east. Regional location and local vicinity maps are provided in Figure 1, *Regional Location Map* and Figure 2, *Vicinity Map*, respectively. The project site is located in southwestern San Bernardino County, within the City of Ontario. The City of Ontario is located approximately 40 miles from downtown Los Angeles, 20 miles from downtown San Bernardino, and 30 miles from Orange County. Regional access is available to the Project site via State Route 83 (SR-83) approximately one mile to the west, State Route 60 (SR-60) approximately three miles to the north, Interstate 15 (I-15) approximately five miles to the east, and State Route 91 (SR-91) approximately eight miles to the south. The attached exhibits depict the regional location

***Project Description:*** The proposed Project site is currently occupied by agricultural uses, including a dairy farm and row crops, and vacant land. There are several residential structures located throughout the Project site. Dairy farming and agriculture have been the primary uses of the property since the 1930s or earlier. The Project also includes dairy barns, a storage structure, feed storage barns, and numerous livestock corrals. There are large existing retention ponds that collect agricultural waste.

The Project includes a General Plan Amendment, Specific Plan, Development Agreement, Development Plan(s), and Tentative Parcel Map(s) to allow development of approximately 5.4 million square feet (SF) of industrial and business park land uses on the 222.18-acre site, as described further below. The Project is proposed in two phases. Phase I, comprised of Planning Areas 1 and 2, would allow approximately 3,172,780 SF of industrial and business park uses. Phase I is depicted in Exhibit 2, Concept Site Plan, and will be evaluated at a project-specific level in the EIR. The Development Plan for Phase I currently proposes the construction of eight industrial concrete tilt-up industrial/warehouse buildings totaling 2,926,955 SF of industrial/warehouse and ancillary office space. The EIR will also evaluate, at a programmatic level, the potential future development of Phase II, which is comprised of Planning Areas 3, 4 and 5 (no specific development proposals have been identified for the Phase II area). The EIR will evaluate the total maximum allowable development in the Specific Plan, which is 5,412,591 SF of industrial and business park land uses and associated onsite and offsite infrastructure improvements.

The following summarize the discretionary approvals to be evaluated in the EIR as part of the Project review and approval process by the City of Ontario.

***General Plan Amendment (GPA).*** The proposed GPA would amend the City's General Plan Land Use Map by changing the existing land use designations of the 222.18-acre Project site from 159.04 acres of "Low Medium Density Residential" and 63.14 acres of "Business Park" to 181.04 acres of "General Industrial," and 41.14 acres of "Business Park," to facilitate development of the Project site.

***South Ontario Logistics Center Specific Plan (SP).*** The SP proposes a comprehensive land use plan, circulation plan, streetscape plan, infrastructure service plan, grading plan, maintenance plan, phasing plan, design guidelines, development regulations, and implementation measures to guide the development of the 222.18-acre Project site into a master-planned industrial/business park. The SP consists of five Planning Areas (PAs) which would accommodate a variety of industrial-serving commercial, low-intensity office, technology, manufacturing, and warehouse/distribution uses that are compatible with the Project site's location within Safety Zone 6 of the Chino Airport.

## ONTARIO PLANNING DEPARTMENT – SB 18 NOTIFICATION

FILE NO.: PSP19-001 & PGPA19-004

---

The SP would allow up to 5,412,591 SF of building space for these PAs combined. PAs 1 and 3 would be located along Eucalyptus Avenue frontage. PAs 2, 4, and 5 will be located south of the PAs 1 and 3, north of Merrill Avenue, along the Bon View Avenue frontage (west) and Grove Avenue (east). The SP would establish two land use designations encompassing the SP area as follows:

- **Business Park:** The SP would allow for up to 1,075,235 SF of Business Park building space to be developed on a total of 41.14 gross acres within PAs 1 and 3. These PAs would be developed with business park buildings that would allow for the development of uses such as offices, technology centers, research and development, enterprises, light manufacturing and warehouse/distribution uses.
- **General Industrial:** The SP would allow for up to 4,337,356 SF of Industrial building space to be constructed within PAs 2, 4 and 5. These PAs would comprise 181.04 gross acres and would allow for the development of uses such as general light industrial, manufacturing, warehouse/distribution, and e-commerce fulfillment center operations.

**Housing Accountability Act (Senate Bill [SB] 330):** The EIR will include evaluation of “replacement housing” in accordance with SB 330, the Housing Crisis Act of 2019 (Government Code Section 6300). SB 330 requires in part, that where a development project results in reducing the number of housing units allowed under existing zoning, the City must concurrently rezone other parcels such that there is no “net loss” of the total allowable housing development in the City. The City has evaluated the proposed Project, and has determined that it would result in the “loss” of approximately 1,352 low to moderate density housing units (due to the proposed rezoning and associated General Plan Amendment and Zone Change). Therefore, the City is evaluating replacement sites for rezoning to ensure that there is no net loss in allowable housing density due to the Project: the City may either rezone a portion of Grove Avenue to create a higher density transit-friendly corridor, or may rezone two specific sites proposed by the applicant at slightly higher residential densities. Both options are shown in see Figure 6, ***SB330 Replacement Sites***. The EIR will evaluate the potential environmental impacts of rezoning this area for higher density residential uses at a programmatic level, as no specific development has been proposed for these sites and no site-specific applications have been submitted to the City at this time.

**Background:** The City is preparing an Environmental Impact Report (EIR) for the project and will be incorporating project-specific mitigation measures along with standard The Ontario Plan (General Plan) set mitigation measures from the Certified Environmental Impact Report (FEIR) prepared for The Ontario Plan that was adopted in 2010. At minimum, the following Cultural Resources mitigation measure will be required for the project:

1. Should any cultural and/or archaeological resources be accidentally discovered during construction, construction activities shall be moved to other parts of the project site and a qualified archaeologist shall be contacted to determine the significance of these resources. If the find is determined to be an historical or unique archaeological resource, as defined in Section 15064.5 of the CEQA Guidelines, avoidance of other appropriate measures shall be implemented.
2. If paleontological resources are identified during any excavations, construction activities shall be moved to other parts of the project site and a qualified paleontologist shall be contacted to

## ONTARIO PLANNING DEPARTMENT – SB 18 NOTIFICATION

FILE NO.: PSP19-001 & PGPA19-004

---

determine the significance of these resources. If the find is determined to be significant, avoidance or other appropriate measures shall be implemented. One appropriate measure would include that a qualified paleontologist shall be permitted to recover and evaluate the find(s) in accordance with current standards and guidelines.

3. In the event of the accidental discovery or recognition of any human remains during excavation/construction, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner has been contacted and any required investigation or required Native American consultation has been completed.

General Plan FEIR Cultural Resources Mitigation Measures:

5-1 Historic or potentially historic resources in the City shall be evaluated for historic significance through the City's tier system prior to the issuance of plan or development approvals.

5-2 In Areas of documented or inferred archaeological and/or paleontological resource presence, City staff shall require applicants for development permits to provide studies to document the presence/absence of such resources. On properties where resources are identified, such studies shall provide a detailed mitigation plan, including a monitoring program and recovery and/or in situ preservation plan, based on the recommendation of a qualified cultural preservation expert. The Mitigation plan shall include the following requirements:

- a) Archaeologist and/or paleontologist shall be retained for the project and will be on call during grading and other significant ground-disturbing activities.
- b) Should any cultural resources be discovered, no further grading shall occur in the area of the discovery until the Planning Director or designee is satisfied that adequate provisions are in place to protect these resources.

Unanticipated discoveries shall be evaluated for significance by a San Bernardino County Certified Professional Archaeologist/Paleontologist. If significance criteria are met, then the project shall be required to perform data recovery, professional identification, radiocarbon dates, and other special studies; submit materials to a museum for permanent curation; and provide a comprehensive final report including catalog with museum numbers.

I would like to assure you that the City of Ontario will enforce all above mitigation measures as set forth in the General Plan FEIR. In addition, project specific mitigations measures identified in the project's EIR will also be enforced.

**Lead Agency Contact:** Alexis Vaughn, City of Ontario, 303 East "B" Street, Ontario, California 91764.

In accordance with Government Code section 65352.3 (a)(2), please respond to this request for consultation within 90 days following receipt of this notification.

Gentlemen:

In accordance with your request, we have conducted a geotechnical feasibility study at the subject site. We are pleased to present this report summarizing the conclusions and recommendations developed from our investigation.

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

**SOUTHERN CALIFORNIA GEOTECHNICAL, INC.**

## 1.0 EXECUTIVE SUMMARY

---

Presented below is a brief summary of the conclusions and recommendations of this investigation. Since this summary is not all inclusive, it should be read in complete context with the entire report.

It should be noted that this investigation was focused on determining the geotechnical feasibility of the proposed development. This report is not a design-level investigation. Future studies will be necessary to refine the preliminary design parameters that are presented within this report.

### Preliminary Geotechnical Design Recommendations

- Demolition of the existing structures, including the residence, milking barn, sheds, ponds, canopy shelters, and the existing pavements will be required in order to facilitate construction of the new buildings. Demolition of these structures should include all foundations, floor slabs, utilities, septic systems, and any other subsurface improvements that will not remain in place for use with the new development. Debris resultant from demolition should be disposed of offsite. Alternatively, concrete and asphalt debris may be pulverized to a maximum 2 inch particle size, well mixed with the on-site soils, and incorporated into new structural fills or it may be crushed and made into crushed miscellaneous base (CMB).
- Site stripping of any existing vegetated areas should include all vegetation, organic soils, and root masses. These materials should be disposed of offsite. Site stripping should also include removal of all manure and any topsoil. These materials should also be disposed of off-site. Manure was observed throughout the cattle pen areas with thicknesses of up to 2± inches at the boring and trench locations. Additionally, some of the soils in the upper 6 to 24± inches in the cattle pen areas possess moderate to high organic contents.
- Existing undocumented fill soils were encountered most of the boring and trench locations, extending to depths of up to 3± feet. Potentially compressible native alluvial soils were at various depths throughout the upper 9 to 10± feet.
- The near-surface soils possess very low expansion potentials.
- The on-site soils possess moderate to high corrosion potentials. Some of the soils possess chloride concentrations that may be corrosive to steel within reinforced concrete. We recommend that the client contact a corrosion engineer for a more thorough evaluation.
- The proposed development is considered to be feasible with respect to the geotechnical conditions encountered at the boring and trench locations at the site. However, remedial grading will be necessary in order to support the proposed structures on conventional shallow foundation systems. Preliminary remedial grading and foundation design recommendations have been provided herein, based on the preliminary site plan, assumed site grading, and assumed foundation loads.
- Preliminarily, the overexcavations within the building areas are recommended to extend to a depth of at least 4 to 6 feet below existing grades and 3 to 4 feet below proposed building pad subgrade elevations. The overexcavation should also extend to a depth of at least 2 to 3 feet below bearing grade within the influence zones of any new foundations. These recommendations are subject to review and may be revised based on the results of the design-level geotechnical investigation.

- Preliminarily, the new parking area subgrade soils are recommended to be scarified to a depth of 12± inches, thoroughly moisture conditioned to within 0 to 4 percent above the optimum moisture content and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density.

#### Preliminary Foundation Design Recommendations

- Conventional shallow foundations, supported in newly placed compacted fill.
- 2,500 to 3,000 lbs/ft<sup>2</sup> maximum allowable soil bearing pressure.
- The design of the foundations will depend on the results of the future design-level geotechnical study. Minimum reinforcement consisting of two (2) to four (4) No. 5 rebars in strip footings. Additional reinforcement may be necessary for structural considerations.

#### Preliminary Floor Slab Design Recommendations

- Conventional slab-on-grade, minimum 6 to 7 inches thick.
- The design of the floor slabs will depend on the results of the future design-level geotechnical study. The actual thickness and reinforcement of the floor slabs should be determined by the structural engineer.

#### Preliminary Pavement Design Recommendations

ASPHALT PAVEMENTS (R = 30)					
Materials	Thickness (inches)				
	Auto Parking and Auto Drive Lanes (TI = 4.0 to 5.0)	Truck Traffic			
		TI = 6.0	TI = 7.0	TI = 8.0	TI = 9.0
Asphalt Concrete	3	3½	4	5	5½
Aggregate Base	6	8	10	11	13
Compacted Subgrade	12	12	12	12	12

PORTLAND CEMENT CONCRETE PAVEMENTS (R = 30)				
Materials	Thickness (inches)			
	Autos and Light Truck Traffic (TI = 6.0)	Truck Traffic		
		TI = 7.0	TI = 8.0	TI = 9.0
PCC	5	5½	6½	8
Compacted Subgrade (95% minimum compaction)	12	12	12	12

## 2.0 SCOPE OF SERVICES

---

The scope of services performed for this project was in general accordance with our Proposal No. 19P305-2, dated July 29, 2019. The scope of services included a visual site reconnaissance, subsurface exploration, field and laboratory testing, and geotechnical engineering analysis to determine the geotechnical feasibility of the proposed development. The evaluation of the environmental aspects of this site was beyond the scope of services for this geotechnical feasibility study.

## 3.0 SITE AND PROJECT DESCRIPTION

---

### 3.1 Site Conditions

The subject site is located at the southwest corner of Eucalyptus Avenue and Grove Avenue in Ontario, California. The site is bounded to the north by Eucalyptus Avenue, to the west by Bon View Avenue, to the south by Merrill Avenue and an existing dairy farm, and to the east by Grove Avenue. The general location of the site is illustrated on the Site Location Map, enclosed as Plate 1 in Appendix A of this report.

The site is currently developed as a dairy farm. The eastern half of the subject site is presently developed with several cattle pens which include steel canopies, and steel barn. The northeastern portion of the site is developed with two (2) single-family residences, a milking parlor, and other structures associated with milking activities. The single-family residences appear to be of wood-frame and stucco construction, and are assumed to be supported on conventional shallow foundations with concrete slab-on-grade floors. The southeastern portion of the site is developed with multiple cattle pens, a 106,500± ft<sup>2</sup> wastewater pond, and a single-family residence in the southeastern corner. The ground surface cover surrounding the residences and the other structures generally consists of turf grass, aggregate base (AB), asphaltic concrete (AC), and concrete pavements, as well as manure in the cattle pen areas and exposed soils with sparse native grass and weed growth in the remaining areas of the site.

The western half of the site appears to be primarily utilized for agricultural purposes and wastewater storage. The ground surface cover generally consists of exposed soils with moderate to very dense native grass and weed growth. The northwestern corner of the site is developed with four (4) small farmhouses and a steel barn structure. The farmhouses appear to be of wood-frame and stucco construction, and are assumed to be supported on conventional shallow foundations with concrete slab-on-grade floors. The ground surface cover surrounding these structures consists of turf grass, concrete pavements, and exposed soil. The southern portion of the western half of the site contains ten (10) wastewater holding ponds ranging in size from 28,500± ft<sup>2</sup> to 90,000± ft<sup>2</sup> and depths ranging from 3 to 5± feet.

Topographic information of the subject site was prepared by Thienes Engineering, Inc. The site topography generally slopes downward to the south-southwest at a gradient of less than 1± percent. With the exception of the aforementioned wastewater holding ponds, the existing site grades range from an elevation of 675± feet mean sea level (msl) in the northeastern area of the site to 652± feet msl in the southwestern area.

### 3.2 Proposed Development

A conceptual site plan, prepared by HPA, Inc., was provided to our office by the client. This plan indicates that the site will be developed with eight (8) commercial/industrial buildings (identified as Buildings 1 through 8). Buildings 1 through 3 will occupy the majority of the subject site and will range from 473,335± ft<sup>2</sup> to 1,238,720± ft<sup>2</sup> in size. Buildings 1 and 2 will be constructed in

cross-dock configurations, and Building 3 will be constructed with dock-high doors along the southern building wall. Buildings 4 through 8 will be located in the northern region of the site along Eucalyptus Avenue, and will range from 67,490± ft<sup>2</sup> to 118,550± ft<sup>2</sup> in size. These buildings will be constructed with dock-high doors along the southern wall of each building. It is expected that the new buildings will be surrounded by asphaltic concrete pavements in the parking and drive lane areas, and Portland cement concrete pavements in the loading dock areas. We expect that several landscaped planters and areas of concrete flatwork will be constructed throughout the site.

Detailed structural information has not been provided. It is assumed that the commercial/industrial buildings will be single-story structures of tilt-up concrete construction, typically supported on conventional shallow foundations with concrete slab-on-grade floors. Based on the assumed construction, maximum column and wall loads are expected to be on the order of 100 kips and 3 to 6 kips per linear foot, respectively.

Preliminary grading plans were not available at the time of this report. Based on the existing topography, and assuming a relatively balanced site, cuts and fills of up to 5± feet are expected to be necessary to achieve the proposed site grades within the proposed building areas. The proposed structures are not expected to incorporate any significant below-grade construction such as basements or crawl spaces. It should be noted that this estimate does not include the preliminary remedial grading recommendations which are presented in a subsequent section of this report.

### 3.3 Previous Study

Southern California Geotechnical, Inc. (SCG) previously performed infiltration testing at the subject site. The subsurface exploration for the previous study consisted of nine (9) infiltration test borings advanced to depths of 12 to 20± feet below the existing site grades. In addition to the nine (9) infiltration borings, one (1) exploratory boring was drilled to a depth of 60± feet. Disturbed alluvial soils were encountered at the ground surface at most of the infiltration test locations, extending to a depth of 3± feet below the existing site grades. The disturbed alluvial soils consisted of very loose to medium dense silty fine sands with varying amounts of medium sand. Native alluvial soils were encountered beneath the disturbed alluvium and at the ground surface at the exploratory boring and the remaining infiltration boring locations, extending to at least 60± feet. The alluvium consisted of soft to very stiff silty clays and fine sandy clays, and loose to dense fine sandy silts, silty fine sands, clayey fine sands, and fine sands with varying medium sand, silt, and clay content. Free water was not encountered during the drilling of any of the borings, and was considered to have existed at a depth in excess of 60± feet at the time of the previous subsurface exploration. Preliminary infiltration rates of 0 to 4.2 inches per hour were recommended to be used in the design of the proposed infiltration systems.

## 4.0 SUBSURFACE EXPLORATION

---

### 4.1 Scope of Exploration/Sampling Methods

The subsurface exploration conducted for this project consisted of six (6) borings advanced to depths of 20 to 25± feet below the existing site grades. In addition, five (5) trenches were excavated to depths of 4.5 to 10± feet below the existing site grades. The trenches were excavated using a backhoe with a 36-inch-wide bucket. All of the borings and trenches were logged during the drilling and excavation by members of our staff.

The borings were advanced with hollow-stem augers, by a truck-mounted drilling rig. Representative bulk and undisturbed soil samples were taken during drilling. Relatively undisturbed samples were taken with a split barrel "California Sampler" containing a series of one inch long, 2.416± inch diameter brass rings. This sampling method is described in ASTM Test Method D-3550. Samples were also taken using a 1.4± inch inside diameter split spoon sampler, in general accordance with ASTM D-1586. Both of these samplers are driven into the ground with successive blows of a 140-pound weight falling 30 inches. The blow counts obtained during driving are recorded for further analysis. Bulk samples were collected in plastic bags to retain their original moisture content. The relatively undisturbed ring samples were placed in molded plastic sleeves that were then sealed and transported to our laboratory.

The approximate locations of the borings (identified as Boring Nos. B-1 through B-6) and trenches (identified as Trench Nos. T-1 through T-5) are indicated on the Boring and Trench Location Plan, included as Plate 2 in Appendix A of this report. The Boring and Trench Logs, which illustrate the conditions encountered at the boring and trench locations, as well as the results of some of the laboratory testing, are included in Appendix B.

### 4.2 Geotechnical Conditions

#### Manure

Manure was present at the ground surface, within the cattle pen at Trench No. T-3, with a thickness of 1 to 2± inches below the existing site grades.

#### Artificial Fill

Artificial fill soils were encountered at the ground surface at Boring Nos. B-3 through B-6, and Trench Nos. T-1, T-2, T-4 and T-5, extending to depths of ½ to 3± feet below the existing site grades. The fill soils generally consist of very loose to medium dense silty fine sands to fine sandy silts with varying medium to coarse sand and fine to gravel content. The fill soils possess a disturbed appearance, resulting in their classification as artificial fill.

## Alluvium

Native alluvium was encountered at the ground surface at Boring Nos. B-1 and B-2, beneath the manure at Trench No. T-3, and beneath the fill soils at the remaining boring and trench locations, extending to at least the maximum depth explored of 25± feet below the existing site grades. The near-surface alluvial soils generally consist of loose to medium dense fine sandy silts to silty fine sands, with varying medium sand and clay content, and occasional fine sands, with varying silt content, extending to depths of 4½ to 10± feet. At greater depths and extending to the maximum depth explored of 25± feet, the alluvial soils generally consist of medium stiff to stiff fine sandy clays, clayey silts, and silty clays, and occasional fine sands, with varying silt content. Boring No. B-2 encountered a medium dense layer consisting of silty fine to coarse sands at depths of 12 to 17± feet. Occasional very stiff to hard silty clay strata were encountered at depths between 8½ to 17± feet.

## Groundwater

Free water was not encountered during the drilling of any of the borings nor during the excavation of the trenches. Based on the lack of any water within the borings and trenches, and the moisture contents of the recovered soil samples, the static groundwater table is considered to have existed at a depth in excess of 25± feet at the time of the subsurface exploration.

As part of our research, we reviewed available groundwater data in order to determine the historic high groundwater level for the site. Recent water level data was obtained from the California State Water Resources Control Board, GeoTracker, website, <https://geotracker.waterboards.ca.gov/>. The closest monitoring well in this database is located 200± feet from the southwestern corner of the subject site. Water level readings within this monitoring well indicates a high groundwater level of 83± feet below the ground surface, in April 2016.

## 5.0 LABORATORY TESTING

---

The soil samples recovered from the subsurface exploration were returned to our laboratory for further testing to determine selected physical and engineering properties of the soils. The tests are briefly discussed below. It should be noted that the test results are specific to the actual samples tested, and variations could be expected at other locations and depths.

### Classification

All recovered soil samples were classified using the Unified Soil Classification System (USCS), in accordance with ASTM D-2488. The field identifications were then supplemented with additional visual classifications and/or by laboratory testing. The USCS classifications are shown on the Boring and Trench Logs and are periodically referenced throughout this report.

### Dry Density and Moisture Content

The density has been determined for selected relatively undisturbed ring samples. These densities were determined in general accordance with the method presented in ASTM D-2937. The results are recorded as dry unit weight in pounds per cubic foot. The moisture contents are determined in accordance with ASTM D-2216, and are expressed as a percentage of the dry weight. These test results are presented on the Boring and Trench Logs.

### Consolidation

Selected soil samples have been tested to determine their consolidation potential, in accordance with ASTM D-2435. The testing apparatus is designed to accept either natural or remolded samples in a one-inch high ring, approximately 2.416 inches in diameter. Each sample is then loaded incrementally in a geometric progression and the resulting deflection is recorded at selected time intervals. Porous stones are in contact with the top and bottom of the sample to permit the addition or release of pore water. The samples are typically inundated with water at an intermediate load to determine their potential for collapse or heave. The results of the consolidation testing are plotted on Plates C-1 through C-8 in Appendix C of this report.

### Soluble Sulfates

Representative samples of the near-surface soils were submitted to a subcontracted analytical laboratory for determination of soluble sulfate content. Soluble sulfates are naturally present in soils, and if the concentration is high enough, can result in degradation of concrete which comes into contact with these soils. The results of our soluble sulfate testing are presented below, and are discussed further in a subsequent section of this report.

<u>Sample Identification</u>	<u>Soluble Sulfates (%)</u>	<u>Sulfate Classification</u>
B-6 @ 0 to 5 feet	0.033	Not Applicable (S0)
T-3 @ 0 to 5 feet	0.049	Not Applicable (S0)

### Corrosivity Testing

Representative bulk samples of the near-surface soils were submitted to a subcontracted analytical laboratory for determination of electrical resistivity, pH, and chloride concentrations. The resistivity of the soils is a measure of their potential to attack buried metal improvements such as utility lines. The results of the resistivity and pH testing are presented below:

<u>Sample Identification</u>	<u>Resistivity (ohm-cm)</u>	<u>pH</u>	<u>Chlorides (mg/kg)</u>
B-6 @ 0 to 5 feet	920	7.6	25
T-3 @ 0 to 3 feet	282	7.8	897

### Organic Content Testing

Selected soil samples have been tested to determine their organic content, in accordance with ASTM Test Method 2974. The results of the testing are as follows:

<u>Sample Identification</u>	<u>Organic Content (%)</u>
T-1 @ 0 to 6 inches	6.2
T-1 @ 6 to 12 inches	4.1
T-2 @ 0 to 6 inches	5.1
T-2 @ 6 to 12 inches	5.3
T-3 @ 0 to 6 inches	5.1
T-3 @ 6 to 12 inches	2.8
T-3 @ 12 to 18 inches	3.7
T-3 @ 18 to 24 inches	4.5

### Expansion Index

The expansion potential of the on-site soils was determined in general accordance with ASTM D-4829 as required by the California Building Code (CBC). The testing apparatus is designed to accept a 4-inch diameter, 1-in high, remolded sample. The sample is initially remolded to 50± 1 percent saturation and then loaded with a surcharge equivalent to 144 pounds per square foot. The sample is then inundated with water, and allowed to swell against the surcharge. The resultant swell or consolidation is recorded after a 24-hour period. The results of the EI testing are as follows:

<u>Sample Identification</u>	<u>Expansion Index</u>	<u>Expansive Potential</u>
B-1 @ 0 to 5 feet	0	Non-expansive
T-3 @ 0 to 3 feet	2	Very Low

### Maximum Dry Density and Optimum Moisture Content

A representative bulk sample was tested to determine its maximum dry density and optimum moisture content. The results have been obtained using the Modified Proctor procedure, per

ASTM D-1557, and are presented on Plates C-9 in Appendix C of this report. This test is generally used for comparison with the in-situ densities of undisturbed field samples, and for later compaction testing. Additional testing of other soil types or soil mixes may be necessary at a later date.

## 6.0 CONCLUSIONS AND RECOMMENDATIONS

---

Based on the results of our review, field exploration, laboratory testing, and geotechnical analysis, the proposed development, which will consist of a new commercial/industrial development, is considered feasible from a geotechnical standpoint. The recommendations contained in this report should be taken into the design, construction, and grading considerations. The recommendations are contingent upon all grading and foundation construction activities being monitored by the geotechnical engineer of record.

Based on the preliminary nature of this investigation, further geotechnical investigation will be required prior to construction of the proposed development. The Grading Guide Specifications, included as Appendix D, should be considered part of this report, and should be incorporated into the project specifications. The contractor and/or owner of the development should bring to the attention of the geotechnical engineer any conditions that differ from those stated in this report, or which may be detrimental for the development.

### 6.1 Seismic Design Considerations

The subject site is located in an area which is subject to strong ground motions due to earthquakes. The performance of a site-specific seismic hazards analysis was beyond the scope of this investigation. However, numerous faults capable of producing significant ground motions are located near the subject site. Due to economic considerations, it is not generally considered reasonable to design a structure that is not susceptible to earthquake damage. Therefore, significant damage to structures may be unavoidable during large earthquakes. The proposed structures should, however, be designed to resist structural collapse and thereby provide reasonable protection from serious injury, catastrophic property damage and loss of life.

#### Faulting and Seismicity

Research of available maps indicates that the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Furthermore, SCG did not identify any evidence of faulting during the geotechnical investigation. Therefore, the possibility of significant fault rupture on the site is considered to be low.

The potential for other geologic hazards such as seismically induced settlement, lateral spreading, tsunamis, inundation, seiches, flooding, and subsidence affecting the site is considered low.

#### Seismic Design Parameters

The California Building Code (CBC) provides procedures for earthquake resistant structural design that include considerations for on-site soil conditions, occupancy, and the configuration of the structure including the structural system and height. The seismic design parameters presented below are based on the soil profile and the proximity of known faults with respect to the subject site.

Based on standards in place at the time of this report, the proposed development is expected to be designed in accordance with the requirements of the 2016 edition of the California Building Code (CBC). However, it is also possible that the proposed development may be designed using the 2019 CBC, which will be adopted on January 1, 2020. Therefore, this report provides design parameters for both the 2016 CBC and the 2019 CBC. Other design consultants should verify the version of the code under which the proposed development will be submitted.

The 2016 and 2019 CBC Seismic Design Parameters have been generated using the SEAOC/OSHPD Seismic Design Maps Tool, a web-based software application available at the website [www.seismicmaps.org](http://www.seismicmaps.org). This software application calculates seismic design parameters in accordance with several building code reference documents, including ASCE 7-10 and ASCE 7-16, upon which the 2016 CBC and 2019 CBC are based, respectively. The application utilizes a database of risk-targeted maximum considered earthquake ( $MCE_R$ ) site accelerations at 0.01-degree intervals for each of the code documents. The tables below were created using data obtained from the application. The output generated from this program is included as Plates E-1A (2016 CBC) and E-1B (2019 CBC) in Appendix E of this report. Based on this output, the following parameters may be utilized for the subject site:

#### 2016 CBC SEISMIC DESIGN PARAMETERS

Parameter		Value
Mapped Spectral Acceleration at 0.2 sec Period	$S_s$	1.500
Mapped Spectral Acceleration at 1.0 sec Period	$S_1$	0.600
Site Class	---	D
Site Modified Spectral Acceleration at 0.2 sec Period	$S_{MS}$	1.500
Site Modified Spectral Acceleration at 1.0 sec Period	$S_{M1}$	0.900
Design Spectral Acceleration at 0.2 sec Period	$S_{DS}$	1.000
Design Spectral Acceleration at 1.0 sec Period	$S_{D1}$	0.600

The 2019 CBC requires that a site-specific ground motion study be performed in accordance with Section 11.4.8 of ASCE 7-16 for Site Class D sites with a mapped  $S_1$  value greater than 0.2. However, Section 11.4.8 of ASCE 7-16 also indicates an exception to the requirement for a site-specific ground motion hazard analysis for certain structures on Site Class D sites. The commentary for Section 11 of ASCE 7-16 (Page 534 of Section C11 of ASCE 7-16) indicates that **"In general, this exception effectively limits the requirements for site-specific hazard analysis to very tall and or flexible structures at Site Class D sites."** Based on our understanding of the proposed development, the seismic design parameters presented below were calculated assuming that the exception in Section 11.8.4 applies to the proposed structures at this site. However, the structural engineer should verify that this exception is applicable to the proposed structures. **Based on the exception, the spectral response accelerations presented below were calculated using the site coefficients ( $F_a$  and  $F_v$ ) from Tables 1613.2.3(1) and 1613.2.3(2) presented in Section 16.4.4 of the 2019 CBC.**

## 2019 CBC SEISMIC DESIGN PARAMETERS

Parameter		Value
Mapped $MCE_R$ Acceleration at 0.2 sec Period	$S_s$	1.661
Mapped $MCE_R$ Acceleration at 1.0 sec Period	$S_1$	0.595
Site Class	---	D
Site Modified Spectral Acceleration at 0.2 sec Period	$S_{MS}$	1.661
Site Modified Spectral Acceleration at 1.0 sec Period	$S_{M1}$	1.014
Design Spectral Acceleration at 0.2 sec Period	$S_{DS}$	1.107
Design Spectral Acceleration at 1.0 sec Period	$S_{D1}$	0.676

It should be noted that the site coefficient  $F_v$  and the parameters  $S_{M1}$  and  $S_{D1}$  were not included in the [SEAOC/OSHPD Seismic Design Maps Tool](#) output for the 2019 CBC. We calculated these parameters-based on Table 1613.2.3(2) in Section 16.4.4 of the 2019 CBC using the value of  $S_1$  obtained from the [Seismic Design Maps Tool](#), assuming that a site-specific ground motion hazards analysis is not required for the proposed buildings at this site.

### Liquefaction

Liquefaction is the loss of strength in generally cohesionless, saturated soils when the pore-water pressure induced in the soil by a seismic event becomes equal to or exceeds the overburden pressure. The primary factors which influence the potential for liquefaction include groundwater table elevation, soil type and plasticity characteristics, relative density of the soil, initial confining pressure, and intensity and duration of ground shaking. The depth within which the occurrence of liquefaction may impact surface improvements is generally identified as the upper 50 feet below the existing ground surface. Liquefaction potential is greater in saturated, loose, poorly graded fine sands with a mean ( $d_{50}$ ) grain size in the range of 0.075 to 0.2 mm (Seed and Idriss, 1971). Non-sensitive clayey (cohesive) soils which possess a plasticity index of at least 18 (Bray and Sancio, 2006) are generally not considered to be susceptible to liquefaction, nor are those soils which are above the historic static groundwater table.

Research of the San Bernardino County Land Use Services website indicates that the subject site is not located within a zone of liquefaction susceptibility. In addition, the subsurface conditions at the boring locations are not considered to be conducive to liquefaction. Based on the mapping performed by San Bernardino County and the conditions encountered at the boring and trench locations, liquefaction is not considered to be a design concern for this project.

### 6.2 Geotechnical Design Considerations

#### General

The active cattle pen areas are covered with manure at the ground surface, with thicknesses of about 1 to 2± inches, where encountered at the trench locations. All of the manure and any organic topsoil should be removed and exported from the site. Additionally, some of soils in the upper 24± inches, located beneath the manure and topsoil, possess organic contents greater

than 2 percent. Based on our experience with other former dairy and agricultural projects located in the city of Ontario, we understand that the city of Ontario requires that soils used as fill possess organic contents of less than 2 percent. It may be feasible to use soils possessing organic contents greater than 2 percent in structural fills, provided that they are cleaned of highly organic materials and can be blended with the underlying soils in order to reduce the organic content to less than 2 percent throughout. It may be necessary to export the highly organic materials off-site or use them in non-structural planter areas of the site.

The subject site is partially underlain by surficial fill soils, extending to depths of up to 3± feet. These fill soils vary in strength and composition. Furthermore, the existing undocumented fill and near-surface alluvium within the upper 10± feet possess variable strengths and variable consolidation characteristics.

Based on their variable strengths, the existing fill soils are considered to represent undocumented fill. They are therefore not considered suitable for support of new structures. Remedial grading will be necessary within the proposed building areas in order to remove and replace these undocumented fill soils as well as near-surface, variable strength alluvial soils as compacted structural fill.

#### Settlement

The recommended remedial grading will remove the existing undocumented fill soils as well as a portion of the near-surface native alluvium, and replace these materials as compacted structural fill. The native soils that will remain in place below the recommended depth of overexcavation will not be subject to significant load increases from the foundations of the new structures. Provided that the recommended remedial grading is completed, the post-construction static settlements of the proposed structures are expected to be within tolerable limits.

#### Soluble Sulfates

The results of the soluble sulfate testing, as discussed in Section 5.0 of this report, indicate soluble sulfate concentrations of 0.033 and 0.049 percent. These concentrations are considered to be negligible with respect to the American Concrete Institute (ACI) Publication 318-05 Building Code Requirements for Structural Concrete and Commentary, Section 4.3. Therefore, specialized concrete mix designs are not considered to be necessary, with regard to sulfate protection purposes. It is, however, recommended that additional soluble sulfate testing be conducted during the design-level geotechnical investigation and at the completion of rough grading to verify the soluble sulfate concentrations of the soils which are present at the proposed building pad grades.

#### Corrosion Potential

The results of the electrical resistivity and pH testing indicate that two samples of the on-site soils have resistivities of 282 and 960 ohm-cm and pH values of 7.6 and 7.8. These test results have been evaluated in accordance with guidelines published by the Ductile Iron Pipe Research Association (DIPRA). The DIPRA guidelines consist of a point system by which characteristics of the soils are used to quantify the corrosivity characteristics of the site. Resistivity and pH are two of the five factors that enter into the evaluation procedure. Relative soil moisture content as well as redox potential and sulfides are also included. Although redox potential and sulfide testing

were not part of the scope of services for this project, we have evaluated the corrosivity characteristics of the on-site soils using resistivity, pH and moisture content. Based on these factors, and utilizing the DIPRA procedure, the on-site soils are considered to be severely corrosive to ductile iron pipes and other buried metal improvements. Therefore, it is expected that polyethylene encasement will be required for iron pipes. If a more detailed evaluation is desired, redox potential and sulfide content should be determined for the on-site soils. Since SCG does not practice in the area of corrosion engineering, it is recommended that the client contact a corrosion engineer to provide a more thorough evaluation. SCG also recommends additional corrosion testing during the future design-level geotechnical investigation.

The results of the laboratory testing also indicates that selected samples of the on-site soils possess chloride concentrations of 25 and 897 mg/kg. The Caltrans Memo to Designers 10-5, Protection of Reinforcement Against Corrosion Due to Chlorides, Acids and Sulfates, dated June 2010, indicates that soils possessing chloride concentrations greater than 500 ppm are considered to be corrosive. Chlorides present in soils in contact with reinforced concrete can cause corrosion and weakening of steel reinforcement within reinforced concrete. Since SCG does not practice in the area of corrosion engineering, the client should also consult a corrosion engineer regarding the protection of steel reinforcement in reinforced concrete since laboratory testing indicates that the onsite soils possess relatively high chloride concentrations. We expect that it will be necessary for any reinforced concrete in contact with on-site soils that contain chloride concentrations in excess of 500 ppm to possess a reduced water to cement ratio and a higher compressive strength. Additional testing should be performed during the design-level investigation to better define the areas that possess high chloride concentrations.

### Expansion

The near surface soils at this site generally consist of silty sands, sandy silts and fine sands. Laboratory testing indicates that these materials have a very low expansion potential (EI = 0 and 2). Based on these test results, no design considerations related to expansive soils are considered warranted for this site. Please note that expansive clayey soils are present below depths of 4½ to 8½ feet. Therefore, the depth of proposed cuts and fills may affect the exposure of the foundations and floor slabs to expansive soils. It is recommended that additional expansion index testing be conducted during design-level geotechnical investigation and at the completion of rough grading to verify the expansion potential of the as-graded building pads.

### Organic Content

The results of laboratory testing performed on near-surface soils within the active cattle pen areas indicates soils within the upper 24± inches possess organic contents ranging from 2.8 to 6.2 percent.

It is recommended that all manure and any organic topsoil be removed during site stripping. It is expected that grubbing and segregating of the manure in the cattle pens will be performed prior to grading. Any additional organic materials encountered in buried fills should also be segregated during grading and disposed of off-site or utilized in non-structural planter areas throughout the site.

As previously discussed, it may be feasible to use some of the soils from the upper 6 to 24± in structural fills (not including the manure and organic topsoil) provided that these soils are cleaned of all apparent vegetation or highly organic material and thoroughly blended with the inorganic soils from greater depths at the site. Based on our experience with similar projects in the vicinity of the project site, a final mixture containing less than 2 percent organic content is acceptable for the project site. It is recommended that additional organic content testing be conducted during the design-level geotechnical investigation and at the completion of rough grading of the building pads in order to verify that the organic contents of the blended on-site soils are within the acceptable limits. Please note that some off-site disposal of the organic material will likely be required.

### Shrinkage/Subsidence

Based on the results of the laboratory testing, removal and recompaction of the loose to medium dense undocumented fill and near-surface native alluvial soils, extending to depths of 1 to 2± feet, is estimated to result in an average shrinkage of 9 to 14 percent. The native medium dense silty sands and the clayey soils encountered below this layer, extending to depths of 5 to 6± feet, will likely possess an average shrinkage of 5 to 12 percent. The native alluvial soils encountered at greater depths are expected to possess an average shrinkage of 1 to 6 percent. Please note that based on the variation on soil type, in-place densities throughout the subject site, and in-place moisture contents, the local variation of shrinkage ranges from 1 to 14 percent. It should be noted that the potential shrinkage estimate is based on dry density testing performed on small-diameter samples taken at the boring locations. If a more accurate and precise shrinkage estimate is desired, SCG can perform a shrinkage study involving several excavated test-pits where in-place densities are determined using in-situ testing methods instead of laboratory density testing on small-diameter samples. Please contact SCG for details and a cost estimate regarding a shrinkage study, if desired.

Minor ground subsidence is expected to occur in the soils below the zone of removal, due to settlement and machinery working. The subsidence is estimated to be 0.10 feet.

These estimates are based on previous experience and the subsurface conditions encountered at the boring locations. The actual amount of subsidence is expected to be variable and will be dependent on the type of machinery used, repetitions of use, and dynamic effects, all of which are difficult to assess precisely.

### Grading and Foundation Plan Review

No grading or foundation plans were available at the time of this report. It is therefore recommended that we be provided with copies of the preliminary plans, when they become available, for review with regard to the conclusions, recommendations, and assumptions contained within this report. These plans should also be made available prior to performance of the design-level geotechnical investigation.

### 6.3 Preliminary Site Grading Recommendations

The preliminary grading recommendations presented below are based on the design details that were available at the time of this report, and the subsurface conditions encountered at our boring

locations. These recommendations are general in nature, and should be confirmed as part of the design-level geotechnical investigation.

### Site Stripping and Demolition

Initial site stripping should include removal of all manure and any surficial vegetation. The actual extent of site stripping should be determined in the field by the geotechnical engineer, based on the organic content and stability of the materials encountered.

The proposed development will require demolition of the existing buildings, dairy structures and pavements. Additionally, any existing improvements that will not remain in place for use with the new development should be removed in their entirety. This should include all foundations, floor slabs, utilities, and any other subsurface improvements associated with the existing structures. The existing pavements are not expected to be reused with the new development. Debris resultant from demolition should be disposed of offsite. Alternatively, concrete and asphalt debris may be pulverized to a maximum 2-inch particle size, well mixed with the on-site soils, and incorporated into new structural fills or it may be crushed and made into CMB, if desired. Additionally, concrete and asphalt debris may be crushed to 2 to 4-inch particle sizes to be utilized as mechanical stabilization material for very moist subgrade soils.

### Treatment of Existing Soils: Building Pads

Remedial grading will be necessary within the proposed building pad areas to remove all of the existing undocumented fill soils and a portion of the near surface potentially compressible/collapsible alluvial soils in order to provide a uniform blanket of compacted fill upon which to support the proposed structures. Based on the borings we drilled as part of this feasibility study, the fill soils extend to depths of up to 3± feet below ground surface. The actual depth of overexcavation should be refined during the design-level geotechnical investigation. On a preliminary basis, overexcavation to depths of 4 to 6 feet below existing building pad grades and 3 to 4 feet below proposed building pad grades should be anticipated. The overexcavation recommendation within the foundation areas will likely be 2 to 3± feet below foundation bearing grade. Any adverse geologic conditions encountered during the future design-level investigation could result in additional overexcavation requirements.

The overexcavation areas should extend at least 5 feet beyond the building perimeters and foundations, and to an extent equal to the depth of fill below the new foundations. If the proposed structures incorporate any exterior columns (such as for a canopy or overhang) the overexcavation should also encompass these areas.

Based on conditions encountered at the exploratory boring locations, some zones of very moist soils may be encountered at or near the base of the recommended overexcavation. Stabilization of the exposed overexcavation subgrade soils may be necessary. Scarification and air drying of these materials is expected to be sufficient to obtain a stable subgrade. However, if highly unstable soils are identified, and if the construction schedule does not allow for delays associated with drying, mechanical stabilization, usually consisting of coarse crushed stone or geotextile, could be necessary. In this event, the geotechnical engineer should be contacted for supplementary recommendations.

### Treatment of Existing Soils: Retaining Walls and Site Walls

Although not indicated on the site plan, it may be necessary to construct some small retaining walls or site walls at or near the existing surface grade. Overexcavation will also be necessary in these areas to remove the existing fill soils and lower strength alluvium. The overexcavation depth should be expected to be on the order of 2 to 3 feet below proposed foundation bearing grade.

### Treatment of Existing Soils: Parking and Drive Areas

Based on economic considerations, overexcavation of the existing soils in the new parking and drive areas is not considered warranted, with the exception of areas where lower strength, or unstable soils are identified by the geotechnical engineer during grading.

Subgrade preparation in the new parking areas should initially consist of removal of all soils disturbed during stripping and demolition operations. The geotechnical engineer should then evaluate the subgrade to identify any areas of additional unsuitable soils. The subgrade soils should then be scarified to a depth of 12± inches, moisture conditioned to within 0 to 4 percent above the optimum moisture content, and recompacted to at least 90 percent of the ASTM D-1557 maximum dry density. Based on the presence of variable strength soils throughout the site, it is expected that some isolated areas of additional overexcavation may be required to remove zones of lower strength, unsuitable soils.

The grading recommendations presented above for the proposed parking and drive areas assume that the owner and/or developer can tolerate minor amounts of settlement within the proposed parking areas. The grading recommendations presented above do not mitigate the extent of undocumented fill and variable density alluvial soils in the parking areas. As such, settlement and associated pavement distress could occur. Typically, repair of such distressed areas involves significantly lower costs than completely mitigating these soils at the time of construction. If the owner cannot tolerate the risk of such settlements, the parking and drive areas should be overexcavated to a depth of 2 feet below proposed pavement subgrade elevation, with the resulting soils replaced as compacted structural fill.

### Fill Placement

- Fill soils should be placed in thin (6± inches), near-horizontal lifts, moisture conditioned to within 0 to 4 percent above the optimum moisture content, and compacted.
- On-site soils may be used for fill provided they are cleaned of any debris to the satisfaction of the geotechnical engineer.
- All grading and fill placement activities should be completed in accordance with the requirements of the CBC and the grading code of the city of Ontario.
- All fill soils should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Fill soils should be well mixed.
- Compaction tests should be performed periodically by the geotechnical engineer as random verification of compaction and moisture content. These tests are intended to aid the contractor. Since the tests are taken at discrete locations and depths, they may not be indicative of the entire fill and therefore should not relieve the contractor of his responsibility to meet the job specifications.

### Imported Structural Fill

All imported structural fill should consist of very low expansive ( $EI < 20$ ), well graded soils possessing at least 10 percent fines (that portion of the sample passing the No. 200 sieve). Additional specifications for structural fill are presented in the Grading Guide Specifications, included as Appendix D.

### Utility Trench Backfill

In general, all utility trench backfill should be compacted to at least 90 percent of the ASTM D-1557 maximum dry density. Compacted trench backfill should conform to the requirements of the local grading code, and more restrictive requirements may be indicated by the city of Ontario. All utility trench backfills should be witnessed by the geotechnical engineer. The trench backfill soils should be compaction tested where possible; probed and visually evaluated elsewhere.

Utility trenches which parallel a footing, and extending below a 1h:1v plane projected from the outside edge of the footing should be backfilled with structural fill soils, compacted to at least 90 percent of the ASTM D-1557 standard. Pea gravel backfill should not be used for these trenches.

## 6.4 Construction Considerations

### Excavation Considerations

The near surface soils generally consist of a variety of materials, including sands, silts, and clays. These materials may be subject to minor caving within shallow excavations. Where caving occurs within shallow excavations, flattened excavation slopes may be sufficient to provide excavation stability. On a preliminary basis, the inclination of temporary slopes should not exceed 2h:1v. Deeper excavations may require some form of external stabilization such as shoring or bracing. Maintaining adequate moisture content within the near-surface soils will improve excavation stability. All excavation activities on this site should be conducted in accordance with Cal-OSHA regulations.

### Moisture Sensitive Subgrade Soils

The near-surface soils contain appreciable amounts of silt and clay and will become unstable if exposed to significant moisture infiltration or disturbance by construction traffic. In addition, based on their granular content, some of the on-site soils will also be susceptible to erosion. The site should, therefore, be graded to prevent ponding of surface water and to prevent water from running into excavations.

If the construction schedule dictates that site grading will occur during a period of wet weather, allowances should be made for costs and delays associated with drying the on-site soils or import of a drier, less moisture sensitive fill material. Grading during wet or cool weather may also increase the depth of overexcavation in the pad areas as well as the need for and/or the thickness of the crushed stone stabilization layer, discussed in Section 6.3 of this report.

## Groundwater

Based on the conditions encountered in the borings and trenches, groundwater is not present within 30± feet of the ground surface. Based on the anticipated depth to groundwater, it is not expected that the groundwater will affect excavations for the foundations or utilities.

## 6.5 Preliminary Foundation Design and Construction Recommendations

Based on the preceding geotechnical design considerations and preliminary grading recommendations, it is assumed that the new buildings will be underlain by newly placed structural fill soils, extending to depths of at least 2 to 3 feet below foundation bearing grade. Based on this subsurface profile, the proposed structures may be supported on conventional shallow foundations.

The foundation design parameters presented below provide anticipated ranges for the allowable soil bearing pressures. These ranges should be refined during the subsequent design-level geotechnical investigation.

### Building Foundation Design Parameters

New square and rectangular footings may be designed as follows:

- Maximum, net allowable soil bearing pressure: 2,500 to 3,000 lbs/ft<sup>2</sup>.
- Minimum longitudinal steel reinforcement within strip footings: Two (2) to Four (4) No. 5 rebars.

### General Foundation Design Recommendations

The allowable bearing pressures presented above may be increased by one-third when considering short duration wind or seismic loads. Additional reinforcement may be necessary for structural considerations. The actual design of the foundations should be determined by the structural engineer.

### Estimated Foundation Settlements

Typically, foundations designed in accordance with the preliminary foundation design parameters presented above will experience total and differential settlements of less than 1.0 and 0.5 inches, respectively. A detailed settlement analysis should be conducted as part of the design-level geotechnical investigation, once detailed foundation loading information is available.

### Lateral Load Resistance

Lateral load resistance will be developed by a combination of friction acting at the base of foundations and slabs and the passive earth pressure developed by footings below grade. The following friction and passive pressure may be used to resist lateral forces:

- Passive Earth Pressure: 250 to 300 lbs/ft<sup>3</sup>

- Friction Coefficient: 0.25 to 0.30

## 6.6 Preliminary Floor Slab Design and Construction Recommendations

Subgrades which will support new floor slabs should be prepared in accordance with the recommendations contained in the *Site Grading Recommendations* section of this report. Preliminarily, the floors of the proposed structures may be constructed as conventional slabs-on-grades supported on newly placed structural fill. Based on geotechnical considerations, the floor slab may be designed as follows:

- Minimum slab thickness: 6 to 7 inches.
- Minimum slab reinforcement: Not required for geotechnical considerations due to the very low expansion potential of the near-surface soils. Additional expansion index testing should be performed to confirm this recommendation at the time of the design-level investigation. The actual floor slab reinforcement should be determined by the structural engineer, based upon the imposed loading.
- Slab underlayment: If moisture sensitive floor coverings will be used then minimum slab underlayment should consist of a moisture vapor barrier constructed below the entire area of the proposed slab which will incorporate such coverings. The moisture vapor barrier should meet or exceed the Class A rating as defined by ASTM E 1745-97 and have a permeance rating less than 0.01 perms as described in ASTM E 96-95 and ASTM E 154-88. A polyolefin material such as Stego® Wrap Vapor Barrier or equivalent will meet these specifications. The moisture vapor barrier should be properly constructed in accordance with all applicable manufacturer specifications. Given that a rock free subgrade is anticipated and that a capillary break is not required, sand below the barrier is not required. The need for sand and/or the amount of sand above the moisture vapor barrier should be specified by the structural engineer or concrete contractor. The selection of sand above the barrier is not a geotechnical engineering issue and hence outside our purview. Where moisture sensitive floor coverings are not anticipated, the vapor barrier may be eliminated.
- Moisture condition the floor slab subgrade soils to 0 to 4 percent above the Modified Proctor optimum moisture content, to a depth of 12 inches. The moisture content of the floor slab subgrade soils should be verified by the geotechnical engineer within 24 hours prior to concrete placement.
- Proper concrete curing techniques should be utilized to reduce the potential for slab curling or the formation of excessive shrinkage cracks.

The actual design of the floor slab should be completed by the structural engineer to verify adequate thickness and reinforcement.

## 6.7 Preliminary Retaining Wall Design and Construction Recommendations

Although not indicated on the site plan, some small (less than 6 feet in height) retaining walls may be required to facilitate the new site grades and in the dock-high areas of the new buildings. Retaining walls are also expected within the truck dock areas of the proposed buildings. The parameters recommended for use in the design of these walls are presented below.

### Retaining Wall Design Parameters

Based on the soil conditions encountered at the boring locations, the following parameters may be used in the design of new retaining walls for this site. The following parameters assume that only the on-site soils will be utilized for retaining wall backfill. The soils within the upper 4½ to 8½± feet generally consist of silty sands, sandy silts, and fine sands. Based on their composition, the on-site soils have been assigned a friction angle of 30 degrees when compacted to 90 percent of the ASTM D-1557 maximum dry density. These design values should be confirmed during the design-level geotechnical investigation. The on-site soils consisting of silty clays and clayey silts are not considered suitable for retaining wall backfill.

The select fill material must be placed within the entire active failure wedge. This wedge is defined as extending from the heel of the retaining wall upwards at an angle of approximately 60° from horizontal.

#### RETAINING WALL DESIGN PARAMETERS

Design Parameter		Soil Type
		On-Site Sands, Silty Sands, and Sandy Silts
Internal Friction Angle ( $\phi$ )		30°
Unit Weight		125 lbs/ft <sup>3</sup>
Equivalent Fluid Pressure:	Active Condition (level backfill)	42 lbs/ft <sup>3</sup>
	Active Condition (2h:1v backfill)	67 lbs/ft <sup>3</sup>
	At-Rest Condition (level backfill)	63 lbs/ft <sup>3</sup>

The walls should be designed using a soil-footing coefficient of friction ranging from 0.25 to 0.30 and an equivalent passive pressure ranging from 250 to 300 lbs/ft<sup>3</sup>. Please note that these values are preliminary and the actual design values will be determined during the design-level geotechnical investigation. The structural engineer should incorporate appropriate factors of safety in the design of the retaining walls.

The active earth pressure may be used for the design of retaining walls that do not directly support structures or support soils that in turn support structures and which will be allowed to deflect. The at-rest earth pressure should be used for walls that will not be allowed to deflect such as those which will support foundation bearing soils, or which will support foundation loads directly.

Where the soils on the toe side of the retaining wall are not covered by a "hard" surface such as a structure or pavement, the upper 1 foot of soil should be neglected when calculating passive resistance due to the potential for the material to become disturbed or degraded during the life of the structure.

### Seismic Lateral Earth Pressures

In addition to the lateral earth pressures presented in the previous section, retaining walls which are more than 6 feet in height should be designed for a seismic lateral earth pressure, in accordance with the 2016 CBC. Based on the current site plan, it is not expected that any walls in excess of 6 feet in height will be required for this project. If any such walls are proposed, our office should be contacted for supplementary design recommendations.

### Backfill Material

Retaining wall backfill soils should consist of on-site sands, silty sands, and/or sandy silts, possessing an expansion index less than 20. All backfill material placed within 3 feet of the back wall face should have a particle size no greater than 3 inches. The retaining wall backfill materials should be well graded.

It is recommended that a properly installed prefabricated drainage composite such as the MiraDRAIN 6000XL (or approved equivalent), which is specifically designed for use behind retaining walls, be placed against the face on the back side of the retaining walls. This material should extend from the top of the retaining wall footing to within 1 foot of the ground surface on the back side of the retaining wall. A 12-inch thick layer of a low permeability soil should be placed over the backfill to reduce surface water migration to the underlying soils.

All retaining wall backfill should be placed and compacted under engineering controlled conditions in the necessary layer thicknesses to ensure an in-place density between 90 and 93 percent of the maximum dry density as determined by the Modified Proctor test (ASTM D1557). Care should be taken to avoid over-compaction of the soils behind the retaining walls, and the use of heavy compaction equipment should be avoided.

### Subsurface Drainage

As previously indicated, the retaining wall design parameters are based upon drained backfill conditions. Consequently, some form of permanent drainage system will be necessary in conjunction with the appropriate backfill material. Subsurface drainage may consist of either:

- A weep hole drainage system typically consisting of a series of 4-inch diameter holes in the wall situated slightly above the ground surface elevation on the exposed side of the wall and at an approximate 8-foot on-center spacing. The weep holes should include a 2 cubic foot pocket of open graded gravel, surrounded by an approved geotextile fabric, at each weep hole location.
- A 4-inch diameter perforated pipe surrounded by 2 cubic feet of gravel per linear foot of drain placed behind the wall, above the retaining wall footing. The gravel layer should be wrapped in a suitable geotextile fabric to reduce the potential for migration of fines. The footing drain should be extended to daylight or tied into a storm drainage system.

Weep holes or a footing drain will not be required for building stem walls.

## 6.8 Preliminary Pavement Design Parameters

Presented below are preliminary recommendations for pavements that may be required around the perimeters of the proposed structures. Grading and pavement thickness recommendations for these pavement areas should be developed during the design-level geotechnical investigation.

### Pavement Subgrades

It is anticipated that the new pavements will be primarily supported on a layer of compacted structural fill, consisting of scarified, thoroughly moisture conditioned and recompacted existing soils. The soils within the upper  $4\frac{1}{2}$  to  $8\frac{1}{2}\pm$  feet below the ground surface generally consist of silty sands, sandy silts and fine sands. These soils are considered to possess fair to good pavement support characteristics with estimated R-values ranging from 30 to 50. The subsequent pavement design is based upon an assumed R-value of 30. Any fill material imported to the site should have support characteristics equal to or greater than that of the on-site soils and be placed and compacted under engineering controlled conditions. It should be noted that cuts extending to depths greater than  $4\frac{1}{2}\pm$  feet may expose clayey soils that possess lower R-values. Therefore, these pavement design recommendations should be refined during the design-level investigation and after grading plans become available for this project. It is recommended that R-value testing be performed after completion of rough grading.

### Asphaltic Concrete

Presented below are the recommended thicknesses for new flexible pavement structures consisting of asphaltic concrete over a granular base. The pavement designs are based on the traffic indices (TI's) indicated. The client and/or civil engineer should verify that these TI's are representative of the anticipated traffic volumes. If the client and/or civil engineer determine that the expected traffic volume will exceed the applicable traffic index, we should be contacted for supplementary recommendations. The design traffic indices equate to the following approximate daily traffic volumes over a 20 year design life, assuming six operational traffic days per week.

Traffic Index	No. of Heavy Trucks per Day
4.0	0
5.0	1
6.0	3
7.0	11
8.0	35
9.0	93

For the purpose of the traffic volumes indicated above, a truck is defined as a 5-axle tractor trailer unit with one 8-kip axle and two 32-kip tandem axles. All of the traffic indices allow for 1,000 automobiles per day.

ASPHALT PAVEMENTS (R = 30)					
Materials	Thickness (inches)				
	Auto Parking and Auto Drive Lanes (TI = 4.0 to 5.0)	Truck Traffic			
		TI = 6.0	TI = 7.0	TI = 8.0	TI = 9.0
Asphalt Concrete	3	3½	4	5	5½
Aggregate Base	6	8	10	11	13
Compacted Subgrade	12	12	12	12	12

The aggregate base course should be compacted to at least 95 percent of the ASTM D-1557 maximum dry density. The asphaltic concrete should be compacted to at least 95 percent of the Marshall maximum density, as determined by ASTM D-2726. The aggregate base course may consist of crushed aggregate base (CAB) or crushed miscellaneous base (CMB), which is a recycled gravel, asphalt and concrete material. The gradation, R-Value, Sand Equivalent, and Percentage Wear of the CAB or CMB should comply with appropriate specifications contained in the current edition of the "Greenbook" Standard Specifications for Public Works Construction.

#### Portland Cement Concrete

The preparation of the subgrade soils within concrete pavement areas should be performed as previously described for proposed asphalt pavement areas. The minimum recommended thicknesses for the Portland Cement Concrete pavement sections are as follows:

PORTLAND CEMENT CONCRETE PAVEMENTS (R=30)				
Materials	Thickness (inches)			
	Autos and Light Truck Traffic (TI = 6.0)	Truck Traffic		
		TI = 7.0	TI = 8.0	TI = 9.0
PCC	5	5½	6½	8
Compacted Subgrade (95% minimum compaction)	12	12	12	12

The concrete should have a 28-day compressive strength of at least 3,000 psi. Any reinforcement within the PCC pavements should be determined by the project structural engineer. The maximum joint spacing within all of the PCC pavements is recommended to be equal to or less than 30 times the pavement thickness.

## 7.0 GENERAL COMMENTS

---

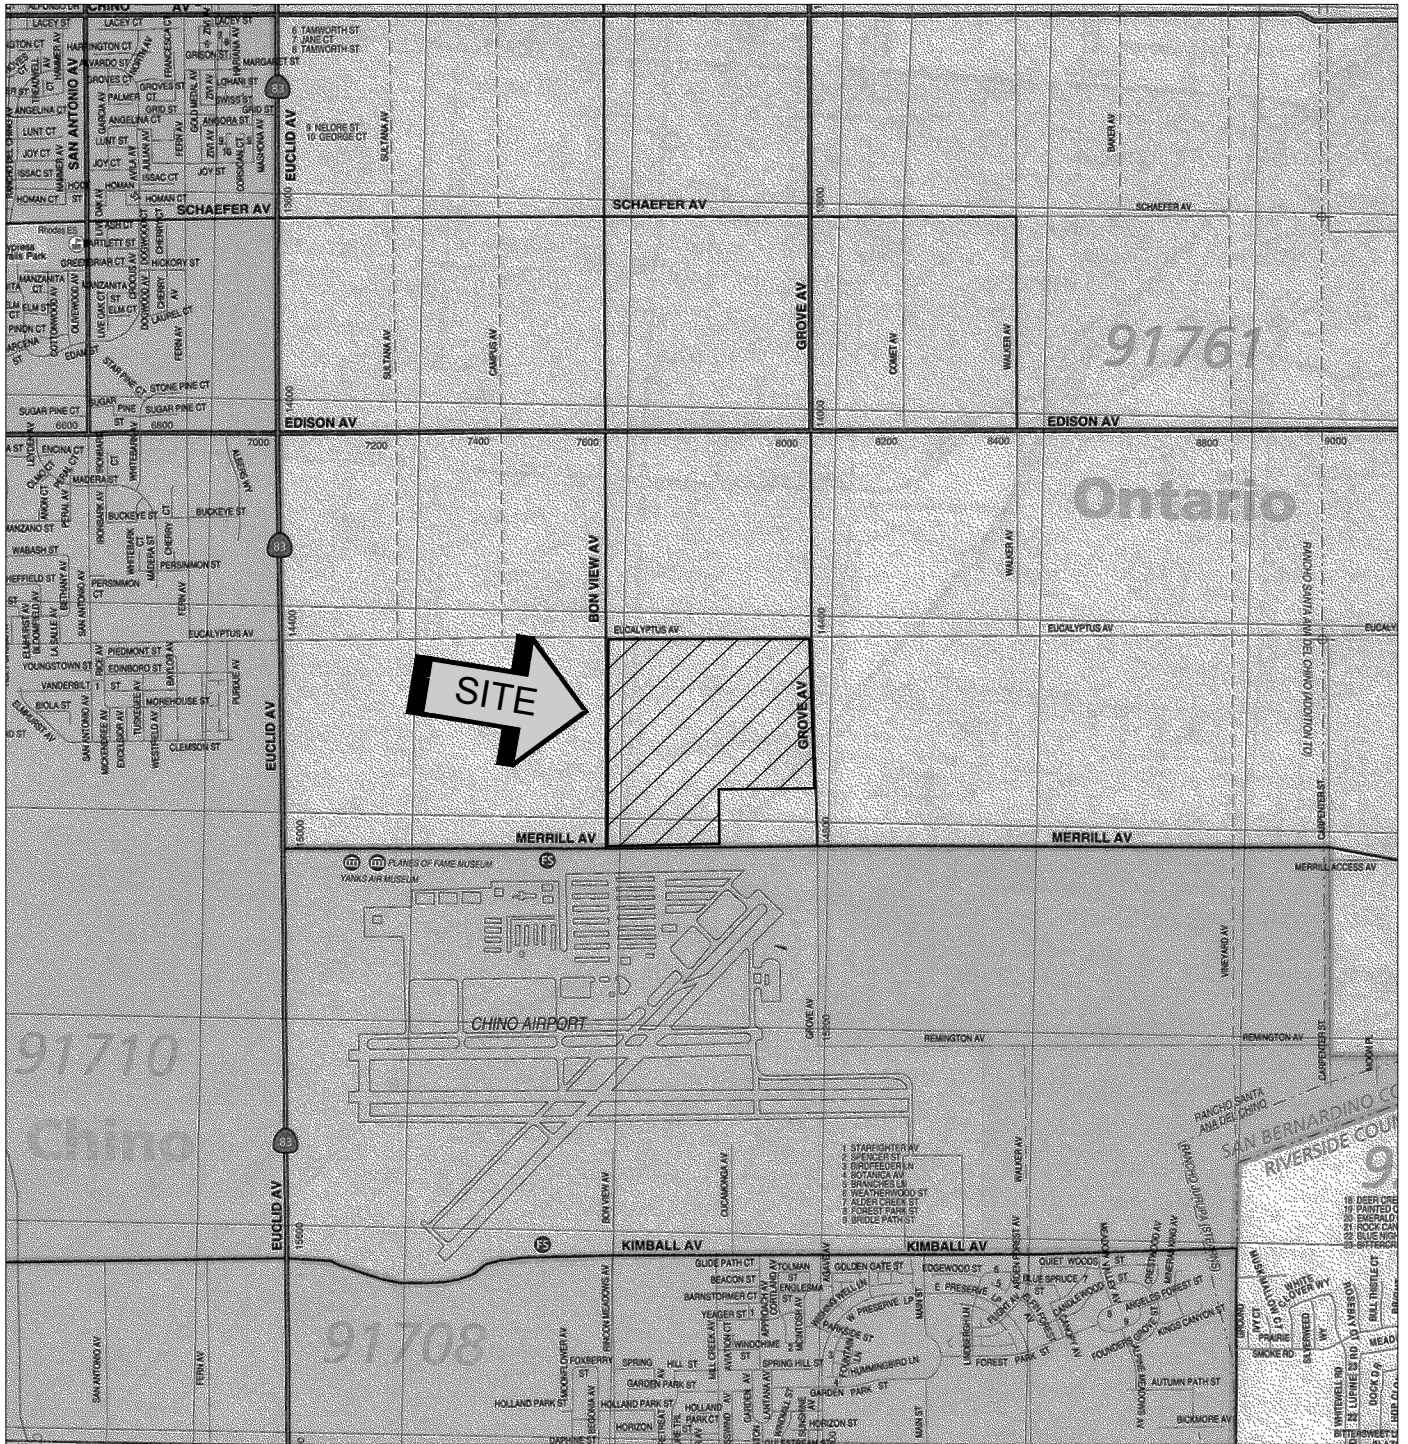

This report has been prepared as an instrument of service for use by the client, in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, civil engineer, and/or structural engineer. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur. The client(s)' reliance upon this report is subject to the Engineering Services Agreement, incorporated into our proposal for this project.

The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between boring locations and sample depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted.

The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

# APPENDIX B

# BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

## COLUMN DESCRIPTIONS

### DEPTH:

Distance in feet below the ground surface.

### SAMPLE:

Sample Type as depicted above.

### BLOW COUNT:

Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.

### POCKET PEN.:

Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.

### GRAPHIC LOG:

Graphic Soil Symbol as depicted on the following page.

### DRY DENSITY:

Dry density of an undisturbed or relatively undisturbed sample in lbs/ft<sup>3</sup>.

### MOISTURE CONTENT:

Moisture content of a soil sample, expressed as a percentage of the dry weight.

### LIQUID LIMIT:

The moisture content above which a soil behaves as a liquid.

### PLASTIC LIMIT:

The moisture content above which a soil behaves as a plastic.

### PASSING #200 SIEVE:

The percentage of the sample finer than the #200 standard sieve.

### UNCONFINED SHEAR:

The shear strength of a cohesive soil sample, as measured in the unconfined state.

# APPENDIX

## GRADING GUIDE SPECIFICATIONS

These grading guide specifications are intended to provide typical procedures for grading operations. They are intended to supplement the recommendations contained in the geotechnical investigation report for this project. Should the recommendations in the geotechnical investigation report conflict with the grading guide specifications, the more site specific recommendations in the geotechnical investigation report will govern.

### General

- The Earthwork Contractor is responsible for the satisfactory completion of all earthwork in accordance with the plans and geotechnical reports, and in accordance with city, county, and applicable building codes.
- The Geotechnical Engineer is the representative of the Owner/Builder for the purpose of implementing the report recommendations and guidelines. These duties are not intended to relieve the Earthwork Contractor of any responsibility to perform in a workman-like manner, nor is the Geotechnical Engineer to direct the grading equipment or personnel employed by the Contractor.
- The Earthwork Contractor is required to notify the Geotechnical Engineer of the anticipated work and schedule so that testing and inspections can be provided. If necessary, work may be stopped and redone if personnel have not been scheduled in advance.
- The Earthwork Contractor is required to have suitable and sufficient equipment on the job-site to process, moisture condition, mix and compact the amount of fill being placed to the approved compaction. In addition, suitable support equipment should be available to conform with recommendations and guidelines in this report.
- Canyon cleanouts, overexcavation areas, processed ground to receive fill, key excavations, subdrains and benches should be observed by the Geotechnical Engineer prior to placement of any fill. It is the Earthwork Contractor's responsibility to notify the Geotechnical Engineer of areas that are ready for inspection.
- Excavation, filling, and subgrade preparation should be performed in a manner and sequence that will provide drainage at all times and proper control of erosion. Precipitation, springs, and seepage water encountered shall be pumped or drained to provide a suitable working surface. The Geotechnical Engineer must be informed of springs or water seepage encountered during grading or foundation construction for possible revision to the recommended construction procedures and/or installation of subdrains.

### Site Preparation

- The Earthwork Contractor is responsible for all clearing, grubbing, stripping and site preparation for the project in accordance with the recommendations of the Geotechnical Engineer.
- If any materials or areas are encountered by the Earthwork Contractor which are suspected of having toxic or environmentally sensitive contamination, the Geotechnical Engineer and Owner/Builder should be notified immediately.

- Major vegetation should be stripped and disposed of off-site. This includes trees, brush, heavy grasses and any materials considered unsuitable by the Geotechnical Engineer.
- Underground structures such as basements, cesspools or septic disposal systems, mining shafts, tunnels, wells and pipelines should be removed under the inspection of the Geotechnical Engineer and recommendations provided by the Geotechnical Engineer and/or city, county or state agencies. If such structures are known or found, the Geotechnical Engineer should be notified as soon as possible so that recommendations can be formulated.
- Any topsoil, slopewash, colluvium, alluvium and rock materials which are considered unsuitable by the Geotechnical Engineer should be removed prior to fill placement.
- Remaining voids created during site clearing caused by removal of trees, foundations basements, irrigation facilities, etc., should be excavated and filled with compacted fill.
- Subsequent to clearing and removals, areas to receive fill should be scarified to a depth of 10 to 12 inches, moisture conditioned and compacted
- The moisture condition of the processed ground should be at or slightly above the optimum moisture content as determined by the Geotechnical Engineer. Depending upon field conditions, this may require air drying or watering together with mixing and/or discing.

#### Compacted Fills

- Soil materials imported to or excavated on the property may be utilized in the fill, provided each material has been determined to be suitable in the opinion of the Geotechnical Engineer. Unless otherwise approved by the Geotechnical Engineer, all fill materials shall be free of deleterious, organic, or frozen matter, shall contain no chemicals that may result in the material being classified as "contaminated," and shall be very low to non-expansive with a maximum expansion index (EI) of 50. The top 12 inches of the compacted fill should have a maximum particle size of 3 inches, and all underlying compacted fill material a maximum 6-inch particle size, except as noted below.
- All soils should be evaluated and tested by the Geotechnical Engineer. Materials with high expansion potential, low strength, poor gradation or containing organic materials may require removal from the site or selective placement and/or mixing to the satisfaction of the Geotechnical Engineer.
- Rock fragments or rocks less than 6 inches in their largest dimensions, or as otherwise determined by the Geotechnical Engineer, may be used in compacted fill, provided the distribution and placement is satisfactory in the opinion of the Geotechnical Engineer.
- Rock fragments or rocks greater than 12 inches should be taken off-site or placed in accordance with recommendations and in areas designated as suitable by the Geotechnical Engineer. These materials should be placed in accordance with Plate D-8 of these Grading Guide Specifications and in accordance with the following recommendations:
  - Rocks 12 inches or more in diameter should be placed in rows at least 15 feet apart, 15 feet from the edge of the fill, and 10 feet or more below subgrade. Spaces should be left between each rock fragment to provide for placement and compaction of soil around the fragments.
  - Fill materials consisting of soil meeting the minimum moisture content requirements and free of oversize material should be placed between and over the rows of rock or

concrete. Ample water and compactive effort should be applied to the fill materials as they are placed in order that all of the voids between each of the fragments are filled and compacted to the specified density.

- Subsequent rows of rocks should be placed such that they are not directly above a row placed in the previous lift of fill. A minimum 5-foot offset between rows is recommended.
- To facilitate future trenching, oversized material should not be placed within the range of foundation excavations, future utilities or other underground construction unless specifically approved by the soil engineer and the developer/owner representative.
- Fill materials approved by the Geotechnical Engineer should be placed in areas previously prepared to receive fill and in evenly placed, near horizontal layers at about 6 to 8 inches in loose thickness, or as otherwise determined by the Geotechnical Engineer for the project.
- Each layer should be moisture conditioned to optimum moisture content, or slightly above, as directed by the Geotechnical Engineer. After proper mixing and/or drying, to evenly distribute the moisture, the layers should be compacted to at least 90 percent of the maximum dry density in compliance with ASTM D-1557-78 unless otherwise indicated.
- Density and moisture content testing should be performed by the Geotechnical Engineer at random intervals and locations as determined by the Geotechnical Engineer. These tests are intended as an aid to the Earthwork Contractor, so he can evaluate his workmanship, equipment effectiveness and site conditions. The Earthwork Contractor is responsible for compaction as required by the Geotechnical Report(s) and governmental agencies.
- Fill areas unused for a period of time may require moisture conditioning, processing and recompaction prior to the start of additional filling. The Earthwork Contractor should notify the Geotechnical Engineer of his intent so that an evaluation can be made.
- Fill placed on ground sloping at a 5-to-1 inclination (horizontal-to-vertical) or steeper should be benched into bedrock or other suitable materials, as directed by the Geotechnical Engineer. Typical details of benching are illustrated on Plates D-2, D-4, and D-5.
- Cut/fill transition lots should have the cut portion overexcavated to a depth of at least 3 feet and rebuilt with fill (see Plate D-1), as determined by the Geotechnical Engineer.
- All cut lots should be inspected by the Geotechnical Engineer for fracturing and other bedrock conditions. If necessary, the pads should be overexcavated to a depth of 3 feet and rebuilt with a uniform, more cohesive soil type to impede moisture penetration.
- Cut portions of pad areas above buttresses or stabilizations should be overexcavated to a depth of 3 feet and rebuilt with uniform, more cohesive compacted fill to impede moisture penetration.
- Non-structural fill adjacent to structural fill should typically be placed in unison to provide lateral support. Backfill along walls must be placed and compacted with care to ensure that excessive unbalanced lateral pressures do not develop. The type of fill material placed adjacent to below grade walls must be properly tested and approved by the Geotechnical Engineer with consideration of the lateral earth pressure used in the design.

### Foundations

- The foundation influence zone is defined as extending one foot horizontally from the outside edge of a footing, and proceeding downward at a ½ horizontal to 1 vertical (0.5:1) inclination.
- Where overexcavation beneath a footing subgrade is necessary, it should be conducted so as to encompass the entire foundation influence zone, as described above.
- Compacted fill adjacent to exterior footings should extend at least 12 inches above foundation bearing grade. Compacted fill within the interior of structures should extend to the floor subgrade elevation.

### Fill Slopes

- The placement and compaction of fill described above applies to all fill slopes. Slope compaction should be accomplished by overfilling the slope, adequately compacting the fill in even layers, including the overfilled zone and cutting the slope back to expose the compacted core
- Slope compaction may also be achieved by backrolling the slope adequately every 2 to 4 vertical feet during the filling process as well as requiring the earth moving and compaction equipment to work close to the top of the slope. Upon completion of slope construction, the slope face should be compacted with a sheepsfoot connected to a sideboom and then grid rolled. This method of slope compaction should only be used if approved by the Geotechnical Engineer.
- Sandy soils lacking in adequate cohesion may be unstable for a finished slope condition and therefore should not be placed within 15 horizontal feet of the slope face.
- All fill slopes should be keyed into bedrock or other suitable material. Fill keys should be at least 15 feet wide and inclined at 2 percent into the slope. For slopes higher than 30 feet, the fill key width should be equal to one-half the height of the slope (see Plate D-5).
- All fill keys should be cleared of loose slough material prior to geotechnical inspection and should be approved by the Geotechnical Engineer and governmental agencies prior to filling.
- The cut portion of fill over cut slopes should be made first and inspected by the Geotechnical Engineer for possible stabilization requirements. The fill portion should be adequately keyed through all surficial soils and into bedrock or suitable material. Soils should be removed from the transition zone between the cut and fill portions (see Plate D-2).

### Cut Slopes

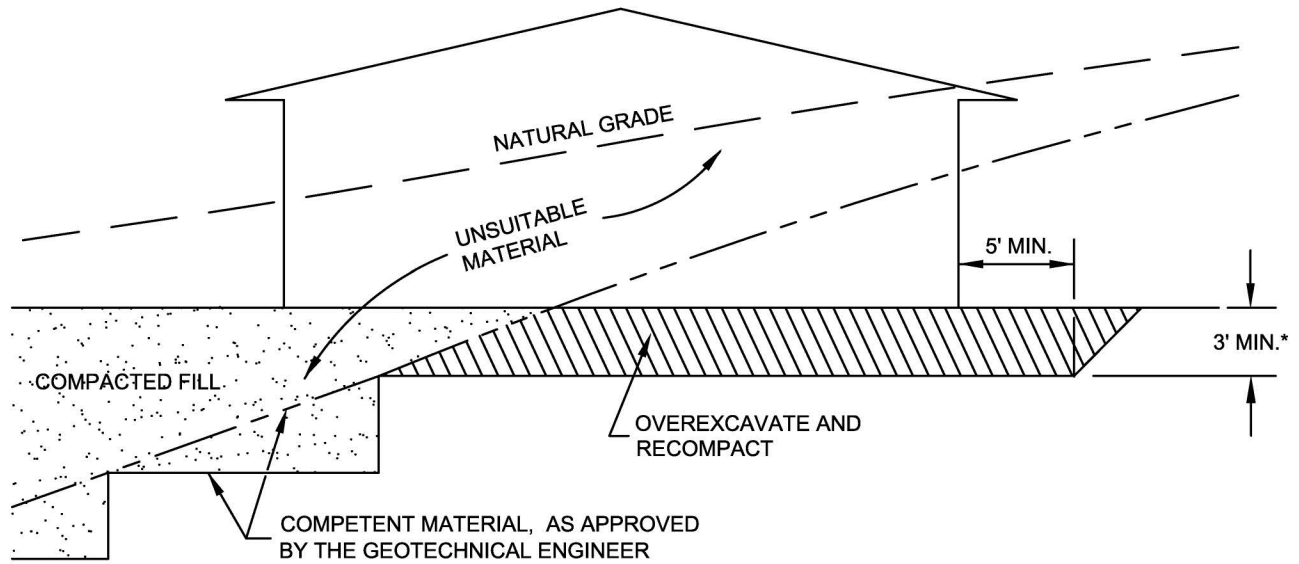

- All cut slopes should be inspected by the Geotechnical Engineer to determine the need for stabilization. The Earthwork Contractor should notify the Geotechnical Engineer when slope cutting is in progress at intervals of 10 vertical feet. Failure to notify may result in a delay in recommendations.
- Cut slopes exposing loose, cohesionless sands should be reported to the Geotechnical Engineer for possible stabilization recommendations.
- All stabilization excavations should be cleared of loose slough material prior to geotechnical inspection. Stakes should be provided by the Civil Engineer to verify the location and dimensions of the key. A typical stabilization fill detail is shown on Plate D-5.

- Stabilization key excavations should be provided with subdrains. Typical subdrain details are shown on Plates D-6.

#### Subdrains

- Subdrains may be required in canyons and swales where fill placement is proposed. Typical subdrain details for canyons are shown on Plate D-3. Subdrains should be installed after approval of removals and before filling, as determined by the Soils Engineer.
- Plastic pipe may be used for subdrains provided it is Schedule 40 or SDR 35 or equivalent. Pipe should be protected against breakage, typically by placement in a square-cut (backhoe) trench or as recommended by the manufacturer.
- Filter material for subdrains should conform to CALTRANS Specification 68-1.025 or as approved by the Geotechnical Engineer for the specific site conditions. Clean  $\frac{3}{4}$ -inch crushed rock may be used provided it is wrapped in an acceptable filter cloth and approved by the Geotechnical Engineer. Pipe diameters should be 6 inches for runs up to 500 feet and 8 inches for the downstream continuations of longer runs. Four-inch diameter pipe may be used in buttress and stabilization fills.

**APPENDIX E2**

**INFILTRATION TESTING REPORT**

May 3, 2019

REDA LLC  
4100 MacArthur Boulevard, Suite 120  
Newport Beach, California 92660

Attention: Mr. Bill Goltermann

Project No.: **19G134-1**

Subject: **Results of Preliminary Infiltration Testing**  
Proposed Commercial/Industrial Development  
SWC Eucalyptus Avenue and Grove Avenue  
Ontario, California

Reference: Geotechnical Feasibility Study, Proposed Commercial/Industrial Development, SWC Eucalyptus Avenue and Grove Avenue, Ontario, California, prepared by Southern California Geotechnical, Inc. (SCG), for Hillwood, SCG Project No. 18G133-1, dated April 18, 2018.

Dear Mr. Goltermann:

In accordance with your request, we have conducted infiltration testing at the subject site. We are pleased to present this report summarizing the results of the infiltration testing and our design recommendations. A total of nine (9) infiltration tests were performed in order to assess the feasibility of using on-site infiltration throughout the subject site. Additional infiltration testing will be required at a later date in order to determine the infiltration rates at the other infiltration system locations.

### **Scope of Services**

The scope of services performed for this project was in general accordance with our Proposal No. 19P173R, dated March 27, 2019. The scope of services included site reconnaissance, subsurface exploration, field testing, and engineering analysis to determine the infiltration rates of the onsite soils. The infiltration testing was performed in general accordance with the guidelines published in the Technical Guidance Document for Water Quality Management Plans (WQMP), prepared for the County of San Bernardino Areawide Stormwater Program dated June 7, 2013. The San Bernardino County standards defer to guidelines published by Riverside County Department of Environmental Health (RCDEH).

### **Site and Project Description**

The subject site is located at the southwest corner of Eucalyptus Avenue and Grove Avenue in Ontario, California. The site is bounded to the north by Eucalyptus Avenue, to the west by Bon View Avenue, to the south by Merrill Avenue and an existing dairy farm, and to the east by Grove Avenue. The general location of the site is illustrated on the Site Location Map, enclosed as Plate 1 of this report.

The site is currently developed as a dairy farm. The eastern half of the subject site is presently developed with several cattle pens, steel canopies, and a large steel barn structure in the north-central region. The northeastern portion of the site is developed with two (2) single-family residences, a milking parlor, and other structures associated with milking activities. The single-family residences appear to be of wood-frame and stucco construction, and are assumed to be supported on conventional shallow foundations with concrete slab-on-grade floors. The southeastern portion of the site is developed with multiple cattle pens, a large 106,500± ft<sup>2</sup> wastewater pond, and a single-family residence in the southeastern corner. The ground surface cover surrounding the residences and the other structures generally consists of turf grass, aggregate base (AB), asphaltic concrete (AC), and concrete pavements, as well as manure in the cattle pen areas and exposed soils with sparse native grass and weed growth in the remaining areas.

The western half of the site appears to be primarily utilized for agricultural purposes and wastewater storage. The ground surface cover generally consists of exposed soils with moderate to very dense native grass and weed growth. The northwestern corner of the site is developed with four (4) small farmhouses and a steel barn structure. The farmhouses appear to be of wood-frame and stucco construction, and are assumed to be supported on conventional shallow foundations with concrete slab-on-grade floors. The ground surface cover surrounding these structures consists of turf grass, concrete pavements, and exposed soil. The southern portion of the western half of the site contains ten (10) wastewater holding ponds ranging in size from 28,500± ft<sup>2</sup> to 90,000± ft<sup>2</sup> and depths ranging from 3 to 5± feet.

Topographic information for the subject site was obtained from a grading plan prepared by Thienes Engineering, Inc. The plan indicates that the site topography generally slopes downward to the south-southwest at a gradient of less than 1± percent. With the exception of the aforementioned wastewater holding ponds, the existing site grades range from an elevation of 675± feet mean sea level (msl) in the northeastern area of the site to 652± feet msl in the southwestern area.

### **Proposed Development**

Based on the site plan provided to our office, the subject site will be developed with a total of eight (8) new commercial/industrial buildings. The buildings will be identified as Building 1 through Building 8. Buildings 1 through 3 will occupy the majority of the subject site and will range from 507,620± ft<sup>2</sup> to 1,294,400± ft<sup>2</sup> in size. Buildings 1 and 2 will be constructed in cross-dock configurations and Building 3 will be constructed with dock-high doors along the southern building wall. Buildings 4 through 8 will be located in the northern area of the site along Eucalyptus Avenue, and will range from 67,490± ft<sup>2</sup> to 118,550± ft<sup>2</sup> in size. These buildings will be constructed with dock-high doors along the southern wall of each building. It is expected that the buildings will be surrounded by asphaltic concrete pavements for the parking and drive lanes, and Portland cement concrete pavements in the loading dock areas. Several landscape planters and areas of concrete flatwork will also be included throughout the site.

We understand that the proposed development will include on-site infiltration to dispose of storm water. Based on an infiltration test exhibit, prepared by Thienes Engineering, Inc., the project civil engineer, the proposed infiltration system will consist of a total of twelve (12) below-grade chamber systems for the proposed development. The below-grade chambers are identified as

(Infiltration Chamber "A" through Infiltration Chamber "L". The bottoms of the below-grade chambers will range from 11 to 21½± feet below the existing site grades. In addition, several dry well systems may also be included as part of the infiltration system. The dry wells are expected to extend to depths of 50± feet. It should be noted that the infiltration testing was only completed for nine (9) of the below-grade chamber systems. The remaining infiltration systems are expected to be tested at a later time.

## **Previous Study**

Southern California Geotechnical, Inc. (SCG) previously conducted a geotechnical feasibility study at the subject site, referenced above. As a part of this study, six (6) borings were advanced to depths of 20 to 30± feet below currently existing site grades. In addition to the six borings, five (5) trenches were excavated at the site to depths of 5 to 10± feet below existing site grades. Manure was present at the ground surface at two of the trenches with thicknesses of 4½ to 5± inches. Highly organic topsoil materials were encountered at some of the boring and trench locations, which consisted of silty fine sands and contained manure and/or other fibrous organic material. A 6±-inch-thick surficial layer of aggregate base was observed at the ground surface at one of the borings. Artificial fill soils were encountered beneath the AB layer and at the ground surface at one of the boring locations, extending to depths of 2½ to 3± feet. The fill soils consisted of medium dense fine sand with trace silt, fine gravel, and AC fragments. Native alluvial soils were encountered at the ground surface or beneath the fill, topsoil, and manure at all of the boring and trench locations. The near-surface alluvium generally consisted of loose to medium dense fine sands and silty fine sands to fine sandy silts, extending to depths of 4½ to 8½± feet below ground surface. Beneath these soils, the borings encountered stiff to very stiff clayey silts, silty clays, and sandy clays with occasional layers of medium dense silty sands, sandy silts, and clayey sands, extending to at least the maximum depth explored of 30± feet below existing site grades. Free water was not encountered during the drilling of any of the borings.

## **Subsurface Exploration**

### **Scope of Exploration**

The subsurface exploration conducted for the infiltration testing consisted of nine (9) infiltration test borings advanced to depths of 12 to 20± feet below the existing site grades. In addition to the nine (9) infiltration borings, one (1) exploratory boring was drilled to a depth of 60± feet to verify that the depth to groundwater is at least 10± feet below the bottom of the proposed dry well systems. All of the borings were advanced using a truck-mounted drilling rig, equipped with 8-inch-diameter hollow stem augers and were logged during drilling by a member of our staff. The approximate locations of the infiltration test borings (identified as I-1 through I-9) and the exploratory boring (Boring No. B-7) are indicated on the Infiltration Test Location Plan, enclosed as Plate 2 of this report.

Upon the completion of the infiltration borings, the bottom of each test boring was covered with 2± inches of clean ¾-inch gravel. A sufficient length of 3-inch-diameter perforated PVC casing was then placed into each test hole so that the PVC casing extended from the bottom of the test hole to the ground surface. Clean ¾-inch gravel was then installed in the annulus surrounding the PVC casing.

## Geotechnical Conditions

Disturbed alluvial soils were encountered at the ground surface at Infiltration Boring Nos. I-1, I-2, and I-6 through I-8, extending to a depth of 3± foot below existing site grades. The disturbed alluvial soils consist of very loose to medium dense silty fine sands with varying amounts of medium sand. The soils classified as disturbed alluvium generally resemble the underlying native alluvium but have a disturbed, loose appearance from the possible tillage of the surficial soils resulting in their classification as disturbed alluvium.

Native alluvial soils were encountered beneath the disturbed alluvium and at the ground surface at the exploratory boring and the remaining infiltration boring locations, extending to at least 60± feet below the existing site grades. The alluvium generally consists of soft to very stiff silty clays and fine sandy clays, and loose to dense fine sandy silts, silty fine sands, clayey fine sands, and fine sands with varying medium sand, silt, and clay content. The Boring Logs, which illustrate the conditions encountered at the boring locations, are included with this report.

## Groundwater

Free water was not encountered during the drilling of any of the borings. Based on the lack of any water within the borings and the moisture contents of the recovered soil samples, the static groundwater is considered to have existed at a depth in excess of 60± feet at the time of the subsurface exploration. As part of our research, we reviewed readily available groundwater data in order to determine regional groundwater depths. Recent water level data was obtained from the California State Water Resources Control Board GeoTracker website, <http://geotracker.waterboards.ca.gov/>. Available data for one of the monitoring wells, located approximately 3,090± feet southwest from the site, indicates a high groundwater level of 71± feet below ground surface.

## **Infiltration Testing**

As previously mentioned, the infiltration testing was performed in general accordance with the guidelines published in the Technical Guidance Document for Water Quality Management Plans (WQMP), prepared for the County of San Bernardino Areawide Stormwater Program.

## Pre-soaking

In accordance with the county infiltration standards, all nine (9) of the infiltration test borings were pre-soaked prior to the infiltration testing. The pre-soaking process consisted of filling the test borings by inverting a full 5-gallon bottle of clear water supported over each hole so that the water level reaches a level of at least 5 times the hole's radius above the gravel at the bottom of each hole. The pre-soaking was completed after all of the water had percolated through each test hole or after 15 hours since initiating the pre-soak. Based on the results of the pre-soaking process, different infiltration procedures were used during the infiltration testing at the infiltration boring locations.

## Infiltration Testing

Following the pre-soaking process of the infiltration test borings, SCG performed the infiltration testing. Each test hole was filled with water to a depth of at least 5 times the hole's radius above the gravel at the bottom of each test hole, and less than or equal to the water level used during the pre-soaking process. In accordance with the San Bernardino County guidelines, since "sandy soils" were encountered at the bottom of Infiltration Boring Nos. I-3 through I-5 (where 6 inches of water infiltrated into the surrounding soils for two-consecutive 25-minute readings), readings were taken at 10-minute intervals for a total of 1 hour at Infiltration Test Nos. I-3, I-4, and I-5. Since "non-sandy soils" were encountered at the bottom of Infiltration Boring Nos. I-1, I-2, and I-6 through I-9, readings were taken at 30-minute intervals for a total of 6 hours for these six (6) infiltration tests. After each reading, the borings were refilled to the correct water level above the gravel at the bottom of each test hole. The water level readings are presented on the spreadsheets enclosed with this report. The infiltration rates for each of the timed intervals are also tabulated on the spreadsheets.

The infiltration rates from the test are tabulated in inches per hour. In accordance with the typically accepted practice, it is recommended that the most conservative reading from the latter part of the infiltration tests be used as the design infiltration rate. The rates are summarized below:

<u>Infiltration Test No.</u>	<u>Depth (feet)</u>	<u>Test Elevation (msl)</u>	<u>Soil Description</u>	<u>Infiltration Rate (inches/hour)</u>
I-1	15	653	Fine Sandy Clay, trace Silt	0.1
I-2	15½	652.5	Fine Sandy Clay	0.1
I-3	14	655	Silty fine to medium Sand, trace coarse Sand, trace Clay	4.0
I-4	16½	649	Silty fine to medium Sand	4.2
I-5	18½	645.5	Silty fine Sand	3.8
I-6	15½	645	Fine Sandy Clay, trace medium Sand, trace Silt	0.2
I-7	20	645	Clayey fine Sand, trace medium Sand	0.2
I-8	12	645	Fine Sandy Clay, little Silt	0.3
I-9	12	663.5	Fine Sandy Clay, trace Silt	0.2

## **Laboratory Testing**

### **Moisture Content**

The moisture contents for the recovered soil samples within the borings were determined in accordance with ASTM D-2216 and are expressed as a percentage of the dry weight. These test results are presented on the Boring Logs.

### **Grain Size Analysis**

The grain size distribution of selected soils collected from the bottom of each infiltration test boring have been determined using a range of wire mesh screens. These tests were performed in general accordance with ASTM D-422 and/or ASTM D-1140. The weight of the portion of the sample retained on each screen is recorded and the percentage finer or coarser of the total weight is calculated. The results of these tests are presented on Plates C-1 through C-9 of this report.

## **Design Recommendations**

Nine (9) infiltration tests were performed at the subject site. As noted above, the infiltration rates at these locations range from 0.1 to 4.2 inches per hour. The primary factors affecting the infiltration rates are the silt and clay content of the soils encountered at the bottom of each infiltration test boring, which vary at different depths and locations at the subject site. As previously mentioned, a total of nine (9) infiltration tests were performed as part of the initial infiltration testing in order to assess the feasibility of using on-site infiltration throughout the subject site.

**Based on the initial infiltration test results, the following preliminary infiltration rates are recommended:**

<b>Infiltration Chamber</b>	<b>Infiltration Rate (in/hr)</b>
A	No Significant Infiltration
B	No Significant Infiltration
C	Additional Testing Required
D	Additional Testing Required
E	4.0
F	4.2
G	3.8
H	No Significant Infiltration
I	0.3
J	No Significant Infiltration
K	Additional Testing Required
L	No Significant Infiltration

Additional infiltration testing will be required within the proposed infiltration chambers that have not been tested and within Infiltration Chambers "E", "F", and "G" to confirm the infiltration rates at other locations within the chambers.

The design of the proposed storm water infiltration systems should be performed by the project civil engineer, in accordance with the City of Ontario and/or County of San Bernardino guidelines. However, it is recommended that the systems be constructed so as to facilitate removal of silt and clay, or other deleterious materials from any water that may enter the systems. The presence of such materials would decrease the effective infiltration rate. **It is recommended that the project civil engineer apply an appropriate factor of safety. The infiltration rates are based on the assumption that only clean water will be introduced to the subsurface profile. Any fines, debris, or organic materials could significantly impact the infiltration rates.** It should be noted that the infiltration rates are based on infiltration testing at nine (9) discrete locations and the overall infiltration rates of the storm water infiltration systems could vary considerably.

### **Construction Considerations**

The infiltration rates presented in this report are specific to the tested locations and tested depths. Infiltration rates can be significantly reduced if the soils are exposed to excessive disturbance or compaction during construction. Therefore, the subgrade soils within proposed infiltration system areas should not be overexcavated, undercut or compacted in any significant manner. **It is recommended that a note to this effect be added to the project plans and/or specifications.**

### **Infiltration versus Permeability**

Infiltration rates are based on unsaturated flow. As water is introduced into soils by infiltration, the soils become saturated and the wetting front advances from the unsaturated zone to the saturated zone. Once the soils become saturated, infiltration rates become zero, and water can only move through soils by hydraulic conductivity at a rate determined by pressure head and soil permeability. The infiltration rates presented herein were determined in accordance with the ASTM Test Method D-3385-03 standard and are considered valid for the time and place of the actual test. Changes in soil moisture content will affect these infiltration rates. Infiltration rates should be expected to decrease until the soils become saturated. Soil permeability values will then govern groundwater movement. Permeability values may be on the order of 10 to 20 times less than infiltration rates. The system designer should incorporate adequate factors of safety and allow for overflow design into appropriate traditional storm drain systems, which would transport storm water off-site.

### **Location of Infiltration Systems**

The use of on-site storm water infiltration systems carries a risk of creating adverse geotechnical conditions. Increasing the moisture content of the soil can cause the soil to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Overlying structures and pavements in the infiltration areas could potentially be damaged due to saturation of subgrade soils. **The proposed infiltration systems for this site should be located at least 25 feet away from any structures, including retaining walls.** Even with this provision of locating the infiltration system at least 25 feet from the building, it is possible that infiltrating water into the subsurface soils could have an adverse effect on the proposed or existing structures. It should also be noted that utility trenches which

happen to collect storm water can also serve as conduits to transmit storm water toward the structure, depending on the slope of the utility trench. Therefore, consideration should also be given to the proposed locations of underground utilities which may pass near the proposed infiltration systems.

### **General Comments**

This report has been prepared as an instrument of service for use by the client in order to aid in the evaluation of this property and to assist the architects and engineers in the design and preparation of the project plans and specifications. This report may be provided to the contractor(s) and other design consultants to disclose information relative to the project. However, this report is not intended to be utilized as a specification in and of itself, without appropriate interpretation by the project architect, structural engineer, and/or civil engineer. The design of the infiltration system is the responsibility of the civil engineer. The role of the geotechnical engineer is limited to determination of infiltration rate only. By using the design infiltration rates contained herein, the civil engineer agrees to indemnify, defend, and hold harmless the geotechnical engineer for all aspects of the design and performance of the infiltration system. The reproduction and distribution of this report must be authorized by the client and Southern California Geotechnical, Inc. Furthermore, any reliance on this report by an unauthorized third party is at such party's sole risk, and we accept no responsibility for damage or loss which may occur. The analysis of this site was based on a subsurface profile interpolated from limited discrete soil samples. While the materials encountered in the project area are considered to be representative of the total area, some variations should be expected between trench locations and testing depths. If the conditions encountered during construction vary significantly from those detailed herein, we should be contacted immediately to determine if the conditions alter the recommendations contained herein.

This report has been based on assumed or provided characteristics of the proposed development. It is recommended that the owner, client, architect, structural engineer, and civil engineer carefully review these assumptions to ensure that they are consistent with the characteristics of the proposed development. If discrepancies exist, they should be brought to our attention to verify that they do not affect the conclusions and recommendations contained herein. We also recommend that the project plans and specifications be submitted to our office for review to verify that our recommendations have been correctly interpreted. The analysis, conclusions, and recommendations contained within this report have been promulgated in accordance with generally accepted professional geotechnical engineering practice. No other warranty is implied or expressed.

**Closure**

We sincerely appreciate the opportunity to be of service on this project. We look forward to providing additional consulting services during the course of the project. If we may be of further assistance in any manner, please contact our office.

Respectfully Submitted,

# BORING LOG LEGEND

SAMPLE TYPE	GRAPHICAL SYMBOL	SAMPLE DESCRIPTION
AUGER		SAMPLE COLLECTED FROM AUGER CUTTINGS, NO FIELD MEASUREMENT OF SOIL STRENGTH. (DISTURBED)
CORE		ROCK CORE SAMPLE: TYPICALLY TAKEN WITH A DIAMOND-TIPPED CORE BARREL. TYPICALLY USED ONLY IN HIGHLY CONSOLIDATED BEDROCK.
GRAB		SOIL SAMPLE TAKEN WITH NO SPECIALIZED EQUIPMENT, SUCH AS FROM A STOCKPILE OR THE GROUND SURFACE. (DISTURBED)
CS		CALIFORNIA SAMPLER: 2-1/2 INCH I.D. SPLIT BARREL SAMPLER, LINED WITH 1-INCH HIGH BRASS RINGS. DRIVEN WITH SPT HAMMER. (RELATIVELY UNDISTURBED)
NSR		NO RECOVERY: THE SAMPLING ATTEMPT DID NOT RESULT IN RECOVERY OF ANY SIGNIFICANT SOIL OR ROCK MATERIAL.
SPT		STANDARD PENETRATION TEST: SAMPLER IS A 1.4 INCH INSIDE DIAMETER SPLIT BARREL, DRIVEN 18 INCHES WITH THE SPT HAMMER. (DISTURBED)
SH		SHELBY TUBE: TAKEN WITH A THIN WALL SAMPLE TUBE, PUSHED INTO THE SOIL AND THEN EXTRACTED. (UNDISTURBED)
VANE		VANE SHEAR TEST: SOIL STRENGTH OBTAINED USING A 4 BLADED SHEAR DEVICE. TYPICALLY USED IN SOFT CLAYS-NO SAMPLE RECOVERED.

## COLUMN DESCRIPTIONS

<u>DEPTH:</u>	Distance in feet below the ground surface.
<u>SAMPLE:</u>	Sample Type as depicted above.
<u>BLOW COUNT:</u>	Number of blows required to advance the sampler 12 inches using a 140 lb hammer with a 30-inch drop. 50/3" indicates penetration refusal (>50 blows) at 3 inches. WH indicates that the weight of the hammer was sufficient to push the sampler 6 inches or more.
<u>POCKET PEN.:</u>	Approximate shear strength of a cohesive soil sample as measured by pocket penetrometer.
<u>GRAPHIC LOG:</u>	Graphic Soil Symbol as depicted on the following page.
<u>DRY DENSITY:</u>	Dry density of an undisturbed or relatively undisturbed sample in lbs/ft <sup>3</sup> .
<u>MOISTURE CONTENT:</u>	Moisture content of a soil sample, expressed as a percentage of the dry weight.
<u>LIQUID LIMIT:</u>	The moisture content above which a soil behaves as a liquid.
<u>PLASTIC LIMIT:</u>	The moisture content above which a soil behaves as a plastic.
<u>PASSING #200 SIEVE:</u>	The percentage of the sample finer than the #200 standard sieve.
<u>UNCONFINED SHEAR:</u>	The shear strength of a cohesive soil sample, as measured in the unconfined state.

12	Initial	1:30 PM	30.0	13.20	0.04	1.68	0.09
	Final	2:00 PM		13.24			

Per County Standards, Infiltration Rate calculated as follows:

$$Q = \frac{\Delta H(60r)}{\Delta t(r + 2H_{avg})}$$

Where: Q = Infiltration Rate (in inches per hour)  
 ΔH = Change in Height (Water Level) over the time interval  
 r = Test Hole (Borehole) Radius  
 Δt = Time Interval  
 H<sub>avg</sub> = Average Head Height over the time interval

Per County Standards, Infiltration Rate calculated as follows:

$$Q = \frac{\Delta H(60r)}{\Delta t(r + 2H_{avg})}$$

Where: Q = Infiltration Rate (in inches per hour)  
 ΔH = Change in Height (Water Level) over the time interval  
 r = Test Hole (Borehole) Radius  
 Δt = Time Interval  
 H<sub>avg</sub> = Average Head Height over the time interval

SUBJECT: Phase I Environmental Site Assessment  
South Ontario Logistics Center  
Ontario, California

Dear Mr. Krotts:

Group Delta Consultants, Inc. is pleased to submit to REDA Acquisitions this Phase I Environmental Site Assessment report for the proposed development located in Ontario, California. This report discusses our project purpose, scope of work, execution of work, conclusions, and recommendations for the site. This Environmental Site Assessment was performed in general accordance with our proposal submitted on September 26, 2018.

We appreciate your selection of Group Delta Consultants for this project and look forward to assisting you further on this and other projects. If you have any questions, please do not hesitate to contact us.

Should you have any questions regarding this report, please feel free to call us at (949) 450-2100.

Sincerely,  
**GROUP DELTA CONSULTANTS, INC.**

## EXECUTIVE SUMMARY

REDA Acquisitions (herein referred to as Client) has engaged Group Delta Consultants, Inc. (Group Delta) to perform a Phase I Environmental Site Assessment (ESA) for a 130.34-acre property located north of Merrill Avenue, west of Grove Avenue, east of Bon View Avenue, and south of Eucalyptus Avenue (Site) in Ontario, California. The Site is also identified by the San Bernardino County Assessor's Parcel Numbers (APN's) 1054-071-01, -02; 1054-081-03; 1054-091-01, -02; 1054-101-01, -02; 1054-241-01, -02; 1054-311-01, -02; 1054-231-01, -02. The Site is currently under consideration for redevelopment.

This Phase I ESA was performed in accordance with the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13. This version of the ASTM standard complies with the Federal All Appropriate Inquiry (AAI) rule (40 Code of Federal Regulations [CFR] Part 312 – Standards and Practices for All Appropriate Inquiries). The purpose of the Phase I ESA is to review, evaluate, and document present and past land use and practices, and visually examine Site conditions in order to identify Recognized Environmental Conditions (RECs). The Phase I ESA included a Site reconnaissance, observation of adjacent properties, environmental regulatory agency records review, review of available historic documents, and an interview.

A Site reconnaissance was performed on October 4, 2018 as part of the ESA to observe current conditions throughout the Site. No observations of environmental concern were observed during the Site reconnaissance. No RECs were identified as a result of the Site reconnaissance. The Owner interview conducted during this Phase I ESA did not identify any RECs for the Site.

This assessment also included a review of available federal and state data reported by Environmental Data Resources (EDR), available regulatory agency environmental records, and available site history and records. The review did not identify any RECs for the Site. The review also included properties in the vicinity of the Site. Records indicated listed locations within ½ mile of the Site as listed in the EDR report. However, based on type of regulatory listing, regulatory status of the case, and/or location with respect to regional groundwater flow, the likelihood of Site contamination from an off-site source is considered low.

The information procured during this investigation was used to identify, to the extent practical and within the limitations of the Scope, RECs associated with the Site due to current or past land use.

This assessment has revealed no evidence of RECs in association with the Site, but one environmental concern:

- The former agricultural land use of the Site, beginning prior to 1938 and continuing to approximately 2005 is considered an environmental concern. This land use presents potential for residual organochlorine pesticides and arsenic commonly used on

agricultural land during the dates the Site was used for agriculture. These pesticides may persist in shallow soil on the Site.

The following are noteworthy considerations for the Site:

- Various hazardous materials are stored and used on the Site. In addition, per the interview with Ms. Gourdikian, used tractor oil is stored in a small tank next to the northwestern storage building adjacent to the chicken coop.
- Dairy farming on the Site presents the potential for elevated methane in soil-gas on the Site.
- Numerous structures onsite may contain hazardous building materials including asbestos and lead-based paint.
- There are a 2,000-gallon and 240-gallon AST on the Site. The 240-gallon AST was on concrete but did not have secondary containment.
- One or more septic systems are present on the Site.
- There are at least three water production wells on the Site.
- Three 1,000-gallon USTs were removed in March 1998. One UST contained diesel and two contained gasoline. The documentation provided by SBFD was sparse; however, residual concentrations detected in soil were considered low and the UST removal received case closure.

Based upon the findings and conclusions, Group Delta is providing the following opinions:

- A limited soil screening is recommended to assess for the presence of residual organochlorine pesticides and arsenic in the Site's soil.
- Hazardous materials and waste should be removed from the Site by the current owners prior to redevelopment in accordance with the Hazardous Materials Business Plan and under oversight from the Certified Unified Program Agencies (CUPA) (i.e., San Bernardino Fire Department (SBFD)).
- The City of Ontario may require a soil-gas survey for methane prior to development.
- A hazardous materials survey should be conducted on the Site's structures prior to demolition.
- The ASTs on the Site should be removed and receive closure from appropriate regulatory agencies.
- The SBFD issued case closure for three USTs removed from the Site in the late 1998. As a conservative measure, a limited Phase II site investigation could be considered for the area of the former USTs. At a minimum, earthwork in the vicinity of the former USTs should be monitored for indications of residual contamination.

## 1.0 INTRODUCTION

### 1.1 Background and Project Description

REDA Acquisitions (herein referred to as Client) has engaged Group Delta Consultants, Inc. (Group Delta) to perform a Phase I Environmental Site Assessment (ESA) for a 130.34-acre property located north of Merrill Avenue, west of Grove Avenue, east of Bon View Avenue, and south of Eucalyptus Avenue (Site) in Ontario, California. The Site is currently under consideration for commercial redevelopment.

### 1.2 Purpose

The purpose of the Phase I ESA is to review, evaluate, and document present and past land uses and practices, and visually examine Site conditions in order to identify Recognized Environmental Conditions (RECs). A REC is defined as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The REC term does not include *de minimis* conditions that generally do not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

### 1.3 Detailed Scope of Work

Group Delta has interpreted American Society for Testing and Materials (ASTM) E1527-13 as the guidance document and used its provisions to the extent deemed appropriate for this report. In general, the scope of work included:

- Review of available information to describe the general geology and hydrogeology at the Site and adjacent areas;
- Search of regulatory records regarding possible hazardous material handling, spills, storage, or production at the Site or in its vicinity;
- Review of on-line available data including databases maintained by the Department of Toxic Substances Control (DTSC) and the State Water Resources Control Board (SWRCB);
- Perform agency records review of available files from the South Coast Air Quality Management District (SCAQMD), San Bernardino County Fire Department (SBFD), Department of Transportation Pipeline and Hazardous Materials Administration (PHMSA) National Pipeline Mapping System (NPMS), and Division of Oil, Gas, and Geothermal Resources (DOGGR) for onsite wells;
- Review of historic aerial photographs, historic topographic maps, Sanborn® fire maps, City Directories, and a radius map database search provided by Environmental Data Resources, Inc. (EDR);

- Reconnaissance of the Site and the immediately surrounding area to identify indicators of the existence of hazardous materials or RECs;
- Interview of an owner representative for the Site;
- Development of conclusions and findings, and;
- Preparation of a report describing the assessment and presenting the results and findings.

A statement of interpretive limitations is contained in Section 1.5 of the report.

#### **1.4 Significant Assumptions**

As stated in the previous section, this ESA was conducted in general accordance with ASTM E1527-13 to the extent deemed appropriate. This was done to identify and analyze environmental conditions that constitute existing, past, or potential environmental risks associated with the Site. Performance in accord with this standard is intended to reduce, but not eliminate uncertainty with respect to the potential for RECs associated with the Site.

#### **1.5 Limitations and Exceptions**

This ESA report is intended for the sole use of the Client and on the specific project identified. Our services have been performed under mutually agreed-upon terms and conditions. If other parties wish to rely on this report, please have them contact us so that a mutual understanding and agreement of the terms and conditions for our services can be established prior to their use and reliance of this report and the information it contains.

The findings and opinions presented are relative to the dates of our Site work and should not be relied on to represent conditions at substantially later dates. The opinions included herein are based on information obtained during the study and our experience. If additional information becomes available, which might impact our environmental findings, we request the opportunity to review the information, reassess the potential conditions, and modify our opinions, if warranted.

Although this assessment has attempted to identify the potential for environmental impacts to the Site, potential sources of contamination may have escaped detection due to: (1) the limited scope of this assessment, (2) the inaccuracy of public records, and/or (3) the presence of undetected or unreported environmental incidents.

It was not within the scope of this assessment to address issues not included in ASTM E1527-13 (such as radon, lead in drinking water, naturally-occurring hazardous materials or vegetation, endangered species, wetlands, etc.). Furthermore, it was not the purpose of this study to determine the degree or extent of contamination, if any, at the Site.

Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar conditions, by reputable environmental consultants practicing in this or

similar localities. No other warranty, expressed or implied, is made regarding the professional information in this report.

### **1.6 Special Terms and Conditions**

All appropriate inquiry (AAI) into the prior uses of the Site was made in accordance with good commercial and customary practices to identify and analyze RECs constituting existing, past or potential environmental conditions in connection with the Site.

There are no special terms and conditions that apply to the preparation of this report.

### **1.7 User Reliance**

This assessment was performed at the request of the Client, utilizing methods and procedures consistent with good commercial or customary practices designed to conform to acceptable industry standards. The assessment and conclusions presented in this report represent the best professional judgment of the Environmental Professional based on the conditions that existed during the assessment and the information and data available to us during the course of this assignment.

Factual information regarding operations and conditions provided by the Client, owner, or their representative has been assumed to be correct and complete.

The report may be distributed and relied upon by the Client, its successors and assigns. Reliance on the information and conclusions presented in this report by any other party or parties is not authorized without the written consent of Group Delta.

## **2.0 SITE DESCRIPTION**

### **2.1 Location and Legal Description of the Site**

The Site is comprised of 130.34 acres of dairy farm land located north of Merrill Avenue, west of Grove Avenue, east of Bon View Avenue, and south of Eucalyptus Avenue, in the City of Ontario, San Bernardino County, California (Figure 1). The Site is also identified by the San Bernardino County Assessor's Parcel Numbers (APN's) 1054-071-01, -02; 1054-081-03; 1054-091-01, -02; 1054-101-01, -02; 1054-241-01, -02; 1054-311-01, -02; and 1054-231-01, -02.

A complete legal description of the Site is contained in the Preliminary Title Report provided by the Client. The Preliminary Title Report is presented as Appendix A.

### **2.2 Site and Vicinity General Characteristics**

The Site is irregular-shaped and is composed of thirteen (13) adjoining parcels. The Site is operational as a dairy farm or farms and contains multiple single-family residences distributed amongst the dairy areas. The Site is relatively flat.

The Site's vicinity is generally characterized by rural land uses consisting primarily of dairy farming. The Chino Airport is located immediately south of the Site beyond Merrill Avenue.

### **2.3 Current Use of the Site**

The Site is currently used as a dairy farm with single-family residences.

Photographic documentation of the Site is provided in Appendix B.

### **2.4 Site Geology**

The site is located within the Peninsular Ranges geomorphic province of California. This province is typically characterized by rugged north-south trending mountains separated by subparallel faults, and a coastal plain of subdued landforms underlain by sedimentary formations. Based upon available published geology maps, the site appears to consist of young eolian and alluvial fan deposits (Holocene and late Pleistocene) originating from the San Gabriel and San Bernardino Mountains to the north. Based upon the published mapping for the area, these young eolian and alluvial fan deposits are generally composed of unconsolidated cobbles, gravel, and sand deposits.

### **2.5 Site Hydrology**

The Site is located approximately 1.6 miles west of Cucamonga Creek. The Deer Creek drains to the Cucamonga Creek approximately 600 feet south of the proposed Schaefer Avenue Bridge. The Cucamonga Creek eventually drains towards the Chino Creek and the Santa Ana River. The groundwater in the hydrologic unit is used for municipal, agricultural, and recreational purposes.

Site specific groundwater data was not readily available. As site-specific data was unavailable, groundwater data was reviewed in the Site's vicinity using the California Department of Water Resources Groundwater Information Map. The approximate depth to groundwater at this site is reported at approximately 120-140 feet below ground surface (bgs); however, groundwater underlying the nearby creeks may be shallower. Groundwater at this location likely flows in a southerly direction based on the proximity to the Cucamonga Creek and eventual drainage to the Chino Creek and Santa Ana River.

## **2.6 Current Uses of Adjacent Properties**

The properties to the north, east, and west of the Site are dairy farms and farms. The Chino Airport is located immediately south of the Site beyond Merrill Avenue.

### **3.0 USER PROVIDED INFORMATION**

#### **3.1 Title Records**

A preliminary title report was provided to Group Delta. A copy of the report is in Appendix A.

#### **3.2 Environmental Liens or Activity and Other Use Limitations (AUL)**

No reports of environmental liens or AULs were provided by the User during this ESA or identified in the title report.

#### **3.3 Owner/Occupant Interviews**

##### **3.3.1 Current Owners**

Ms. Linda Gourdikian and Mr. George Borba, two of the multiple Owners of the Site completed the Owner Questionnaire regarding any knowledge about present or past land use at the Site that may be of environmental concern on October 10, 2018. According to Mr. Borba, the west portion of the Site was used for corn, wheat, and barley agriculture through 2003 and is now used as pasture grazing. According to Ms. Gourdikian, land use at the Site has historically been dairy farming and agriculture. Ms. Gourdikian stated no hazardous waste use, illicit dumping, or unauthorized releases have occurred at the Property, to her knowledge. According to Ms. Gourdikian, at least one underground storage tank (UST) was removed from the Site in the 1980s. No documentation of removal was provided to Group Delta by the Owners. See section 5.2.1 San Bernardino Fire Department for more information regarding the UST removals.

Group Delta also received information regarding current Owners of the Site from Ms. Christine Buckle of Hillwood. According to Ms. Buckle, current Owners of the Site include POCAMO, LLC, a California limited liability company; George Borba, Jr. and Linda Borba Gourdikian, as Trustees of the Survivor's Trust created under the George Borba Family Trust dated April 12, 1990, as amended; George Borba, Jr. and Linda Borba Gourdikian, as Trustees of the Marital Trust created under the George Borba Family Trust dated April 12, 1990, as amended; and George Borba, Jr., an individual as of April 2018.

##### **3.3.2 Previous Owners**

The previous owner(s) of the Site was not identified during this Phase I ESA.

#### **3.4 Reason for Performing ESA**

The purpose of the ESA is to identify apparent and potential sources of contamination for the Site that, by their association or proximity to the Site, could represent an REC. This report can serve to identify environmental conditions at the Site that may impact the proposed project and may permit the User to satisfy one of the requirements to qualify for the bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation and Liability

Act (CERCLA) liability (42 U.S.C. §9601). It was not the purpose of this study to determine the degree or extent of contamination, if any, but rather to identify the potential for contamination or environmental concern.

### **3.5 Review of Existing Site Reports**

The User provided one study report prepared for the Site. A summary of the summary report provided to Group Delta is as follows:

1. Phase I Environmental Site Assessment, Athanor Environmental Services Inc., October 2017

After review of the Phase I provided by the User, no issues of environmental concern were noted.

## **4.0 ENVIRONMENTAL DATA SEARCH**

### **4.1 Database Information on the Site and the Adjacent Properties**

#### **4.1.1 Standard Environmental Record Sources for the Site and Vicinity**

Group Delta conducted a review of reasonably ascertainable environmental regulatory agency databases to identify known or suspected environmental concerns or RECs that may be associated with the Site. A search of readily available environmental records was obtained from EDR of Shelton, Connecticut (Appendix C). The purpose of the regulatory database report review was to evaluate to the extent possible whether prior activities, processes, operations, or actions on the Site, adjoining properties, and nearby locations have the potential to adversely impact the environmental integrity of the Site, are suspected sources of environmental contamination, or present RECs for the Site. The regulatory database report provides information regarding current operations and prior regulatory listings for the Site and previous owners and/or operators on the Site. The presence or absence of information about the Site does not necessarily mean that there are or are not environmental issues associated with the Site.

The regulatory database report includes a list of government databases searched, a statistical profile listing the number of properties within ASTM Standard Practice specified search radii, selected detailed information from environmental regulatory agency databases, and a map illustrating the identified properties, sites, or facilities of interest.

The regulatory database report provides a mechanism to evaluate a relatively large number of environmental regulatory agency databases and eliminate many properties, sites, operations, and/or facilities that have a low potential of adversely impacting the Site. However, it should be noted that the information included in the regulatory database report is not necessarily all-inclusive and environmental regulatory agency files may have been purged by public officials prior to release to the public. In addition, mapping errors may not reflect actual distances and directions between the Site and the properties, sites, operations, and/or facilities listed in the regulatory database report.

The regulatory database report includes information from federal, state, local, military, and tribal environmental regulatory agency databases.

#### **4.1.2 Site Records**

Table 1 provides a summary of databases the Site was identified on in the EDR regulatory database report. The table includes the operating business name and address associated with the listing; Map ID number of the listing; associated database(s) on which the listing occurs; and a summary of information pertaining to the listing.

**Table 1: Site Findings**

<b>Environmental Atlas Findings – Site Findings</b>
<b>George Borba &amp; Son Dairy – 7955 Eucalyptus Ave, Chino, CA</b>
Map Key Number A1 – A7
EDR Listing of Concern and Associated Databases: AST, NPDES, WDS, HIST UST, AST, ENF, HAZNET, CA FID UST, FINDS, ECHO
Summary of Listing: This Site was identified on the AST database as having an aboveground storage tank (AST). The Site was also identified on the NPDES and WDS databases as a facility that treats and/or disposes of wastes associated with confined and concentrated animal feeding, confined animal holding, confined and concentrated aquatic animal production facilities, and/or aquaculture. The Site also has a historical UST listed. No other information regarding the historical UST is provided by EDR. The Site also was reported on the HAZNET database as having waste oil and mixed oil recycling onsite, an active UST, and an AST. No other information is provided.
For more information regarding this listing, see section 5.2 Local Department Records

#### **4.1.3 Vicinity Records Search**

Multiple sites were listed in the EDR database radius search for the project area. The radius search area included the project limits and a one-mile radius from the project limits. Numerous properties within this search area were listed on the EDR database and were found not to pose a hazardous waste impact based on the following criteria, or a combination thereof:

- The regulatory case status of the property is identified as completed and closed;
- The type of media affected was identified as soil only;
- The release was in nominal amounts or concentrations as to not present a hazardous waste impact concern to the project;
- The listing was identified on low-hazardous risk databases (i.e., underground storage tank [UST] HAZNET, small quantity generator databases) with no reported spills, cleanups, or violations;
- The property is identified on a low-hazardous risk database as receiving one or more violations, but the nature of violations received was associated with financial, administrative, or record-keeping practices only;
- The distance of the listing to project limits is great enough that it does not present a hazardous waste impact concern to the project, and/or;
- The listing is down-gradient or cross-gradient from the project limits.

Based on these criteria, these listings are not considered an environmental concern to the project and were not evaluated further.

Table 2 provides a summary of properties in the vicinity of the site identified on high-hazardous risk databases (LUST) in the EDR regulatory database report. Table 2 includes the operating

business name and address associated with the listing; Map ID number of the listing; associated database(s) on which the listing occurs; and a summary of information pertaining to the listing.

**Table 2: Site Vicinity Findings**

<b>Environmental Atlas Findings – Site Vicinity Findings</b>
<b>Private Residence – Private Residence, Chino, CA</b>
Map Key Number D15
EDR Listing of Concern and Associated Databases: LUST
This property is located north and upgradient to the Site and is listed on the LUST database.  A leaking UST was reported to be discovered on January 2004, with potential contaminants of concern as diesel and gasoline in soil. A soil and water investigation report was prepared and reportedly submitted February 2006. Remediation was conducted on the property in April 2004. A no further action (NFA) letter was reportedly issued in October 2006.  For more information pertaining to this listing, refer to Section 5.1.2 – State Water Resources Control Board.
<b>CAL-AERO FIELD / ACADEMY</b>
Map Key Number E21
EDR Listing of Concern and Associated Databases: LUST
This listing is located south-adjacent and downgradient to the Site and is listed on the Envirostor database. The status of this listing is reported as inactive and needing evaluation as of July 2005.  No other information is listed in EDR.  For more information pertaining to this listing, refer to Section 5.1.1 – Department of Toxic Substances Control (DTSC) and Section 5.1.2 – State Water Resources Control Board.

A copy of the Radius Search Map is provided in Appendix C.

## **4.2 Historical Use Information on the Site and Adjoining Properties**

Group Delta reviewed available historical information to ascertain the historical uses of the Site and the adjoining properties. Reviewed information included Sanborn insurance maps, historic aerial photographs, historic topographic maps, and city directories.

### **4.2.1 Sanborn Map Review**

Group Delta reviewed a certified Sanborn map report prepared by EDR. After a complete search of the Sanborn Library and fire insurance maps by EDR, fire insurance maps of the target property were not found.

A copy of the Sanborn search findings is provided in Appendix C of this report.

#### 4.2.2 Historical Aerial Photography and Topographic Map Review

Aerial photographs and historical topographic maps of the Site and adjoining properties were provided by EDR and reviewed to identify historical land development. Photographs and historical topographic maps dating between 1902 and 2014 were reviewed. Table 3 and 4 summarizes the results of the topographic map and aerial photograph review. Copies of the aerial photographs and topographic maps provided by EDR are included as Appendix C.

**Table 3: Summary of Topographic Map Review**

Summary of Topographic Map Review			
Year	Source and Scale	Summary	
1902	Topographic Map 30-minute	Due to the scale of the maps from 1902, no inferences regarding land use for the Site, adjacent properties, or surrounding vicinity could be ascertained.	
1933 through 1947	Topographic Map 7.5-minute	The Site is depicted in a rural setting with between three and seven structures shown on Site.	The Site's vicinity is also shown as rural.
1949 through 1954	Topographic Map 7.5-minute	No changes are depicted.	Cal-Aero Flight Academy (Deactivated) is depicted immediately south of the Site.
1973 through 2012	Topographic Map 7.5-minute	Additional structures are depicted on the Site associated with dairy farming.	The former Cal-Aero Flight Academy (Deactivated) is identified as the Chino Airport.

**Table 4: Summary of Aerial Photography Review**

Summary of Aerial Photography Review			
Year	Source and Scale	Summary	
1938	Aerial Photographs 1:500	With the exception of a few structures, the entire Site was used for agriculture.	The Site's vicinity is also shown as agricultural.
1946	Aerial Photographs 1:500	No major changes are evident.	Cal-Aero Flight Academy (Deactivated) is evident immediately south of the Site. Hundreds of airplanes were stored at this facility.  No other major changes are evident.
1948 through 1953	Aerial Photographs 1:500	No major changes are evident.	All of the airplanes were removed from Cal-Aero Flight Academy.  No other major changes are evident.

1966 through 1975	Aerial Photographs 1:500	The Site can be seen undergoing a transformation into a dairy farm with additional dairy-related structures being built during this period. The western half of the Site continued to be used for agriculture.	The Site's vicinity also underwent a transition from farming to dairy during this period.
1987 through 2014	Aerial Photographs 1:500	<p>Throughout this period, additional structures associated with dairy farming were built, primarily on the eastern half of the Site.</p> <p>The western half of the Site continued to be used primarily for agriculture.</p> <p>Beginning in 2006, retention ponds were present on the southwestern portion of the Site</p>	<p>Development of the Chino Airport to the south is evident beginning in 1987, including what appear to be hangars.</p> <p>The Site's vicinity continued to be used primarily for dairy with some agriculture.</p>

Representative aerial photographs and topographic maps are included in Appendix C.

#### 4.2.3 City Directory Report

The EDR City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. City directories generally include listings of residents or businesses organized both alphabetically and alphanumerically by street names and street addresses and are prepared for many urban and suburban areas of the United States dating back to the early 1900s.

Group Delta reviewed the city directory search prepared by EDR. The search was performed for the Site and the adjacent properties. According to the city directory, the vicinity of the Site was mainly comprised of residences and businesses related to dairy and agriculture. No businesses that would present an environmental concern to the subject Site were identified. No RECs were identified as a result of the review of the EDR City Directory Report.

The city directory search results prepared by EDR are presented in Appendix C.

## 5.0 REGULATORY AGENCY RECORDS

### 5.1 Online Available Records

#### 5.1.1 Department of Toxic Substances Control (DTSC)

Group Delta reviewed available files of the State of California DTSC published on the internet records database Envirostor. The purpose of this search was to identify any evidence of unauthorized releases of hazardous materials to the surface, subsurface soil, and groundwater.

The Site was not identified on the Envirostor database.

One site was identified in the vicinity of the Site. A summary of the case associated with the cleanup sites is provided below.

1. CAL-AERO FIELD / ACADEMY (80000986)

This listing is located south-adjacent and downgradient to the Site. No site history was available on the Envirostor database. This case is listed as inactive and needing evaluation as of July 2005.

For more information regarding this listing, see section 5.1.2 State Water Resources Control Board (SWRCB) – 2. Chino Airport

#### 5.1.2 State Water Resources Control Board (SWRCB)

Group Delta reviewed available files through the online GeoTracker database maintained by the California SWRCB. GeoTracker maintains files related to UST facilities, LUSTs, site clean-ups, disposal sites, wells, and information related to hazardous materials and/or waste.

The Site was not identified on the GeoTracker database,

One LUST Cleanup Site was identified in the vicinity of the Site. A summary of the case associated with the cleanup sites is provided below.

1. Private Residence – Ferreira Dairy, 14400 S Grove Avenue, Chino, CA

The facility is located approximately 580-ft north and upgradient of the Site.

According to GeoTracker, in January 2004, a Phase I Environmental Assessment was conducted as part of a pending property transfer from the current owner, Mrs. Leontina Ferreira, to the Stratham Group, a residential developer. The Phase I identified the following areas of concern: over 30 years of agricultural activities, hazardous materials storage associated with agriculture, two septic systems, a drinking water well, an irrigation well, two 500-gallon ASTs for gasoline and diesel fuel, and two USTs that had been removed in December 1994. San Bernardino County issued tank permits in May of

2004, identifying Mr. Joe C. Ferreira, Jr. as the tank operator who removed the tanks himself in 1994. The two 1,000-gallon USTs stored gasoline and diesel fuel.

According to Mrs. Leontina Ferreira, no subsurface investigation was conducted at the time of the tank removal. Based on the recommendations in the Phase I report, a Phase II Environmental Assessment was conducted in February 2004, to assess the impacts to soil from past agricultural activities and the operation of the USTs at the site. Eleven borings were drilled to a maximum depth of 50 feet in the UST area and five borings were advanced to 2.5 feet within the agricultural areas.

Pesticides were detected in shallow soil at concentrations below the Environmental Protection Agency (EPA) Preliminary Remediation Goals (PRGs) for residential soil published by the U.S. EPA Region 9 at the time. Therefore, no further action was recommended regarding the pesticides.

Petroleum hydrocarbons were detected in soil from approximately 5 to 30 feet below surface. The highest concentrations of total petroleum hydrocarbons as diesel fuel (7,400 milligrams per kilogram [mg/kg]), ethylbenzene (69 mg/kg), and xylenes (1,300 mg/kg) were detected in a soil sample collected at a depth of 10 feet. The highest concentration of toluene (88 mg/kg) was detected in a sample collected from a depth of 24 feet. Excavation of the impacted soil and additional assessment were recommended.

On April 21, 2004, six more borings were drilled to determine the vertical and lateral extent of petroleum hydrocarbons in soil in the former UST area. Then, from April 27 to April 30, 2004, seventeen overlapping 5-foot-diameter borings were drilled to depths ranging from 32 to 50 feet in order to remove contaminated soil without destabilizing the adjacent residential building.

Confirmation samples collected at the bottom of the borings and along the sidewalls demonstrated that the core contamination had been removed.

On May 4, 2004, the excavated soil was transported to Thermal Remediation Solutions (TRS) in Azusa, California for reclamation. The County of San Bernardino Fire Department reviewed the reports documenting the environmental assessment and remediation and determined that the case status required Regional Water Quality Control Board (RWQCB) involvement.

At the request of Regional Board staff during a meeting in September 2005, an additional boring was drilled to confirm the vertical extent of contamination and to evaluate potential groundwater conditions beneath the site.

On December 22, 2005, the boring was drilled to a depth of 101.5 feet in the central part of the former release. No groundwater was encountered during drilling. Soil samples

collected at 5-foot intervals from 55 to 90 feet were analyzed for total petroleum hydrocarbons (TPH) as diesel fuel and volatile organic compounds (VOCs). No TPH or VOCs were detected in the soil.

Subsequently, no further action for this property was recommended by the RWQCB due to the following reasons: the USTs were removed in 1994; assessment activities defined the lateral and vertical extent of the contamination; contaminated soil was excavated from former tank areas as confirmed by field verification sampling; confirmation sampling demonstrated that most of the contamination had been removed; benzene and fuel oxygenates were not detected on the site prior to site assessment activities, and; groundwater was estimated to be 120 feet bgs, or approximately 90 feet deeper than the residual petroleum hydrocarbons remaining at 32 mg/kg in the soil.

Due to the regulatory status of this property, this listing is not considered a REC to the Site.

2. Cal-Aero/Chino Airport – 7000 Merrill Avenue, Chino, CA

The facility is located south-adjacent and downgradient to the Site.

According to GeoTracker, the following is a history of the site:

During the early 1940s, Chino Airport (airport) was owned by the Federal Government and was used for flight training, aircraft storage, and sales. San Bernardino County Department of Airport (department) acquired the airport in December 1948 and leased the property to Pacific Aero-motive Corporation, which operated a modification facility for military aircraft. The airport became public in 1960. Napalm, bombs, and other incendiary devices were manufactured for the federal government during the 1960s and early 1970s. Past and present businesses and activities at the airport included a flight academy, aircraft sales and storage, modification of military aircraft, crop dusting, aircraft engine repair shops, aircraft painting, stripping and washing, a dispensing facility for the application for fire retardant chemicals for forest fires, and a maintenance and operation facility for United States Forest Service (USFS) aircraft. Use of organic solvents at the airport was widespread and varied due to the manufacturing activities at the airport.

In 1986, Camp Dresser & McKee, Inc., sampled wells in the Chino area to provide information for an environmental impact report for the Metropolitan Water District's proposed Chino Basin Groundwater Storage Program. The analytical results indicated trichloroethylene (TCE) present in at least five wells at levels exceeding the Maximum Contaminant Level (MCL) for drinking water of 5 parts per billion (ppb). Concentrations in wells ranged from 6.0 to 75.0 ppb.

By October 1986, an investigation of potential sources of TCE began by sending questionnaires to 25 possible responsible parties.

In 1988, production wells in the vicinity of the airport were sampled. Many wells were used primarily for irrigation of agricultural lands; however, an unknown number of these wells had some private domestic uses as well. The results of these samples confirmed that groundwater contamination from organic solvents at concentrations above MCLs existed in at least six wells down gradient of the airport. The contaminant plume also included tetrachloroethylene (PCE). Sampling of wells upgradient of the airport revealed no detectable organic solvents. It was concluded that groundwater contamination was occurring downgradient of the airport as a result of onsite source(s) at the airport.

On April 1989, the San Bernardino County Department of Environmental Health Services (SBCDEHS) submitted a proposed workplan for conducting an investigation to identify potential sources of groundwater contamination at the airport.

A report titled "Preliminary Report on Generators of PCE and TCE at the Chino Airport" was submitted on July 1989. The report found 24 USTs at the airport, 11 of which were in use at the time for fuel and waste oil. Only 2 of the tanks had secondary containment. The rest were assumed to be single-walled steel USTs. A number of violations of laws and regulations governing the management of the USTs, hazardous wastes, and hazardous materials at airport facilities were identified. It was concluded that the groundwater contamination in the area appeared to be the result of industrial waste disposal practices at the airport.

In February 1990, SBCDEHS submitted a prioritized list of sites where TCE may be discharged along with a time schedule for implementation of the investigation of these sites.

In October 1990, the RWQCB issued a Cleanup and Abatement Order.

Between 1991 and 1992, 310 containers of hazardous waste were disposed and the soil was characterized onsite. A total of 81 borings were drilled during two phases of soil characterization. Soil samples, borehole vapor samples, soil gas samples, and sludge samples were collected and analyzed. Although elevated concentrations of acetone, methylene chloride, carbon tetrachloride, dichloroethane, and low-level concentrations of TCE were detected in some of these samples, no obvious sources of the TCE/PCE groundwater contamination were identified.

According to the Draft Groundwater Assessment Report dated October 2003, the results for the 11 private production wells indicated concentrations of TCE up to 44 ppb, with the assumed groundwater flow direction to be south-southwest.

CAMW2 is a groundwater monitoring well located at the intersection of Merrill Avenue and Grove Avenue, which is the closest well to the Site. The CAMW2 sample from the

October 2003 assessment reported non-detect results for chloroform, cis-1,2-dichloroethene, 1,1,2-trichloroethane, and TCE. CAMW2 did have elevated levels of nitrate, likely due to agricultural and dairy operations immediately upgradient of the airport. According to a letter from Tetra Tech dated June 2009, Additional Plume Characterization and Well Installation Work Plan, CAMW2 was not included in the TCE plume that was characterized for the groundwater for the site. According to the Groundwater Well Installation and Aquifer Pumping Test Work Plan Chino Airport dated July 2017, CAMW2 also had results less than the laboratory's limit of detection for 1,2,3-trichloropropane (TCP).

As of May 2017, the case is still open for ongoing remediation. The northern limits of the plume have been identified and are near the northern border of the airport, but the plume does not extend north to the Site. A map showing the plume is provided in Appendix D.

Based on the contaminant plume not affecting the Site and the southern direction of groundwater flow, this case is not considered a REC to the Site.

### **5.1.3 Division of Oil, Gas, and Geothermal Resources (DOGGR)**

Group Delta reviewed mapping available on the DOGGR website for oil and gas wells on or in the vicinity of the Project. The mapping did not include any oil and gas wells on, or within 1500 feet of the Site. No RECs were identified as a result of the DOGGR database review.

### **5.1.4 Office of California State Fire Marshall**

Group Delta reviewed available files through the online National Pipeline Mapping System (NPMS) database maintained by the Office of California State Fire Marshal. NPMS is a Geographic Information System (GIS) database of pipeline information for the specific intent of emergency response. The database does not include natural gas lines or liquefied natural gas facilities.

No pipelines were mapped on or within 1500 feet of the Site. No RECs were identified as a result of the NPMS database review.

## **5.2 Local Department Records**

### **5.2.1 San Bernardino Fire Department**

Group Delta requested records associated with the Site from the SBFD on April 3, 2018 and reviewed records associated with the Site on April 18, 2018.

According to letter from SBFD, three 1,000-gallon USTs were removed in March 1998 by Specktrum Engineering. One UST contained diesel and two contained gasoline. Benzene, toluene, ethylbenzene, xylenes, Total Extractable Petroleum Hydrocarbons (TEPH) – Diesel, Total Volatile

Petroleum Hydrocarbons (TVPH) – Gasoline, and Methyl tert-butyl ether (MTBE) were sampled in the soils. Below is a table summarizing the sample results:

Lab ID	Benzene (ug/kg)	Toluene (ug/kg)	Ethylbenzene (ug/kg)	Xylenes (ug/kg)	TEPH – Diesel (ug/kg)	TVPH – Gasoline (ug/kg)	MTBE (ug/kg)
-1	8.0	88	30	260	ND	1100	44
-2	ND	120	1800	5100	ND	2800	28
-3	ND	ND	ND	ND	ND	350	ND
-4	ND	ND	ND	ND	ND	ND	ND
-5	ND	140	900	5100	3800	74000	ND

ug/kg = micrograms per kilogram

ND=Non-detect

No descriptions of the locations of soil samples were included in the documentation provided. A map indicated that the former USTs were located in the northern mid-portion of the Site. The map is provided as Appendix D.

At the time of the sampling, a strong odor at the north end of the diesel tank was noted.

The letter also stated that confirmation sample results from the removal of the USTs indicated that contaminant concentrations remaining in soil within the excavation were below those which are considered a problem and further investigation was deemed not warranted at the time by SBFDD.

Due to the sampling results and regulatory status of the case, this listing is not considered a REC.

In addition, a 2016 Certified Unified Program Agencies (CUPA) compliance inspection report dated December 2016 listed a hazardous materials waste inventory. The inventory included the following: two 55-gallon drums of bleach, two 55-gallon drums of Nu-Dyne 252 Teat Dip, two 55-gallon drums of Nu-Dyne 110 Teat Dip, one 300-gallon container of used oil, one 55-gallon drum of drained used oil filters, one 55-gallon drum of transmission fluid, one 55-gallon drum of hydraulic oil, one 55-gallon drum of motor oil, one 240-gallon AST (empty, previously held gasoline), one 1000-gallon AST split vault of diesel, one 1000-gallon AST split vault (empty, previously held gasoline), two 121-ft<sup>3</sup> cylinders of acetylene, and two 125-ft<sup>3</sup> cylinders of oxygen.

### 5.2.2 South Coast Air Quality Management District (SCAQMD)

Group Delta performed a search on SCAQMD’s Facility Information Detail (FIND) database.

The Site has permits to operate equipment associated with fuel and storage and dairy that are currently active. The Site also have inactive permits associated with equipment including AGOPS IC ENGINE (50-500 HP) and AGOPS EMERGENCY ICE (50-500 HP). No notices of violation or notices to comply were recorded.

The Site produced the following annual emissions:

- Particulate matter, volatile organic compounds, and benzene in the air recorded from 2014 to 2017.
- Reactive organic gases (ROG) and total suspended particulates (TSP) recorded from 2005 to 2014.
- Ammonia recorded from 2005 to 2017.

## **6.0 SITE RECONNAISSANCE**

### **6.1 Methodology and Limiting Conditions**

A Site reconnaissance was performed on October 4, 2018 by Elaine Horng of Group Delta. The Site was observed by traversing paved roads trails by foot while noting evidence of environmental conditions. The Site was accessed from the northern mid-portion of the Site via Eucalyptus Avenue, western mid-portion of the Site via Bon View Avenue, and the eastern mid-portion of the Site via Grove Avenue.

The purpose of the Site reconnaissance was to observe the present Site use and conditions as they relate to the possible presence of potentially hazardous substances and petroleum products. In addition, adjoining properties and roads were visually observed from the Site to identify land uses and the potential presence of structures, operations, activities, or environmental conditions that may involve the use, treatment, storage, disposal, or generation of hazardous wastes and/or petroleum products that may pose an environmental concern to the Site. Photographic documentation of the reconnaissance is included in Appendix B.

### **6.2 General Site Setting**

The Site is a 130.34-acre property and consists of pasture land on the western portion, dairy farms on the eastern portion, and residential housing amongst the pasture and dairy farms. The Site had been used as a dairy farm and for single-family residences since approximately 1963. The Site is mainly dirt and grass, with paved concrete, and several single-family residences.

The main residential house is on the northern mid-portion of the Site and has a main office. It is also attached to one of the dairy farms. Four residential houses are on the northwest corner of the Site, another residential house is on the northeast corner of the Site, and the last residential house is on the southeast corner of the Site. All residences are occupied by workers for the dairy farm.

### **6.3 Adjacent Properties Site Observations**

The properties adjacent to the Site were observed from the Site to assess if they had potential to present RECs for the Site.

Dairy farms are located on the north-adjacent, west-adjacent, east-adjacent, and southeast-adjacent properties to the Site. Chino Airport is located on the south and southwest-adjacent property to the Site. The adjacent properties were viewed from the streets that border the Site. Based on this observation, the properties adjacent to the Site were well-maintained and did not appear to be of environmental concern.

### **6.4 Site Visit Findings**

The following observations were made during the Site reconnaissance:

- There were approximately 3 onsite water wells for the potable water supply.
- Used tractor oil is also stored onsite.
- One 2,000-gallon AST was observed on the northern mid-portion of the Site. The AST is split into separate 1,000 gallons sections, one for diesel fuel and the other for gasoline. A 240-gallon AST next to the 2,000-gallon AST is used for gasoline storage. The 2,000-gallon AST is secured on concrete with a secondary containment. The 240-gallon AST appeared to be on concrete with no secondary containment. No staining was observed during Site reconnaissance.
- A pond system was observed in the southwestern portion of the site for manure water from the dairy farm. The pond appeared dry at the time of the Site reconnaissance.
- Within the dairy farms, there were several 55-gallon drums that are used to store chlorine, acid, and soap water for pipe cleaning.
- Pipes ran throughout the farm and were generally used to clean the cows during dairy activities.
- There was at least one septic system onsite.

No evidence of RECs was observed during the Site reconnaissance.

## **7.0 SIGNIFICANT DATA GAPS**

### **7.1 Data Gaps**

In general, a Data Gap is the inability to gather information as prescribed in the ASTM Standard Practice despite good faith efforts. This may include, but not be limited to, a lack of historical information, inability to interview knowledgeable individuals, or inspect portions of the Site.

No data gaps were encountered during this assessment.

### **7.2 Data Failures**

The objective of reviewing historical information is to identify all obvious uses of the Site from first developed use or 1940, whichever is earlier, in order to identify the likelihood of previous uses resulting in a recognized environmental condition(s). Generally, a Data Failure is when all obvious uses of the site cannot be determined despite gathering and reviewing all of the standard historical sources that are reasonably ascertainable. A historical source is considered reasonably ascertainable if it is (1) publicly available, (2) obtainable within a reasonable period of time and at a reasonable cost, and (3) practically reviewable.

The Site uses were identified back to 1901. Therefore, data failure was not encountered during the course of this assessment.

## 8.0 FINDINGS AND CONCLUSIONS

Group Delta has performed a Phase I ESA for REDA Aquisitions for a 130.34-acre Site located north of Merrill Avenue, west of Grove Avenue, east of Bon View Avenue, and south of Eucalyptus Avenue, in the City of Ontario, San Bernardino County, California (Figure 1). The Site is also identified by the San Bernardino County Assessor's Parcel Numbers (APN's) 1054-071-01, -02; 1054-081-03; 1054-091-01, -02; 1054-101-01, -02; 1054-241-01, -02; 1054-311-01, -02; 1054-231-01, -02.

The information procured during this investigation was used to identify, to the extent practical and within the limitations of the Scope, RECs associated with the Site due to current or past land use. No RECs were identified during this assessment, the following potential environmental concern was identified:

- The former agricultural land use of the Site, beginning prior to 1938 and continuing to approximately 2005 is considered an environmental concern. This land use presents potential for residual organochlorine pesticides and arsenic commonly used on agricultural land during the dates the Site was used for agriculture. These pesticides may persist in shallow soil on the Site.

The following are noteworthy considerations for the Site:

- Various hazardous materials are stored and used on the Site. In addition, per the interview with Ms. Gourdikian, used tractor oil is stored in a small tank next to the northwestern storage building adjacent to the chicken coop.
- Dairy farming on the Site presents the potential for elevated methane in soil-gas on the Site.
- Numerous structures onsite may contain hazardous building materials including asbestos and lead-based paint.
- There are a 2,000-gallon and 240-gallon AST on the Site. The 240-gallon AST was on concrete but did not have secondary containment.
- One or more septic systems are present on the Site.
- There are at least three water production wells on the Site.
- Three 1,000-gallon USTs were removed in March 1998. One UST contained diesel and two contained gasoline. The documentation provided by SBFDD was sparse; however, residual concentrations detected in soil were considered low and the UST removal received case closure.

## 9.0 OPINIONS

We have performed a Phase I ESA of the subject Site in accordance with the scope of work and limitations of ASTM E1527-13. The information procured during this investigation was used to identify, to the extent practical and within the limitations of the Scope, RECs associated with the Site due to current or past land use. This assessment has revealed no evidence of RECs at the Site. Based upon the findings and conclusions, Group Delta is providing the following opinions:

- A limited soil screening is recommended to assess for the presence of residual organochlorine pesticides and arsenic in the Site's soil.
- Hazardous materials and waste should be removed from the Site by the current owners prior to redevelopment in accordance with the Hazardous Materials Business Plan and under oversight from the CUPA (i.e., Sbfd).
- The City of Ontario may require a soil-gas survey or mitigation measures for methane prior to development.
- A hazardous materials survey should be conducted on the Site's structures prior to demolition.
- The ASTs on the Site should be removed and receive closure from appropriate regulatory agencies.
- The Sbfd issued case closure for three USTs removed from the Site in the late 1998. As a conservative measure, a limited Phase II site investigation could be considered for the area of the former USTs. At a minimum, earthwork in the vicinity of the former USTs should be monitored for indications of residual contamination.

## 10.0 DEVIATIONS

There were no deviations to the ASTM Standard Practice associated with the preparation and development of this Phase I ESA.

**FIRST AMENDED PRELIMINARY REPORT**

*In response to the application for a policy of title insurance referenced herein, Chicago Title Company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

*The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.*

*This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.*

*The policy(s) of title insurance to be issued hereunder will be policy(s) of Chicago Title Insurance Company, a Florida corporation.*

***Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.***

***It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.***

Affects: Lots 17 and 18 as described therein

**EXCEPTIONS  
(Continued)**

10. The effect of a Deed as set forth below:

Grantor: George A. Borba, Jr. and Linda Borba Gourdikian, Trustees of the Survivor's Trust created under the George Borba Family Trust dated April 12, 1990, as amended, as to an undivided 50% interest; and  
George A. Borba, Jr. and Linda Borba Gourdikian, Trustees of the Martial Trust created under the George Borba Family Trust dated April 12, 1990, as amended, as to an undivided 50% interest

Grantee: Pocamo LLC, a California limited liability company

Dated: December 31, 2015

Recording Date: June 16, 2016

Recording No.: [2016-0237281 of Official Records](#)

The Company requires that an affidavit (attached) be completed and executed by the above grantor and that said affidavit be acknowledged before a notary who is an employee of the title or escrow Company and then submitted to the Title Officer for review.

The Company further requires a statement of information from the above grantors in order to complete this report, based on the effect of documents, proceedings, liens, decrees, or other matters which do not specifically describe said Land, but which if any do exist, may affect the title or impose liens or encumbrances thereon.

Affects: Lots 1-4, 13-16, 19, 20, 29 and 30

11. Please be advised that our search did not disclose any open Deeds of Trust of record. If you should have knowledge of any outstanding obligation, please contact the Title Department immediately for further review prior to closing.
12. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.
13. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

**PLEASE REFER TO THE "INFORMATIONAL NOTES" AND "REQUIREMENTS" SECTIONS WHICH FOLLOW FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION.**

---

**END OF EXCEPTIONS**

---

## REQUIREMENTS SECTION

1. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

2. The Company will require either (a) a complete copy of the trust agreement and any amendments thereto certified by the trustee(s) to be a true and complete copy with respect to the hereinafter named trust, or (b) a Certification, pursuant to California Probate Code Section 18100.5, executed by all of the current trustee(s) of the hereinafter named trust, a form of which is attached.

Name of Trust: **The George Borba Family Trust, dated April 12, 1990 (Restated)**

3. The Company will require either (a) a complete copy of the trust agreement and any amendments thereto certified by the trustee(s) to be a true and complete copy with respect to the hereinafter named trust, or (b) a Certification, pursuant to California Probate Code Section 18100.5, executed by all of the current trustee(s) of the hereinafter named trust, a form of which is attached.

Name of Trust: **The Survivor's Trust created under the George Borba Family Trust, dated April 12, 1990 (Restated)**

4. The Company will require either (a) a complete copy of the trust agreement and any amendments thereto certified by the trustee(s) to be a true and complete copy with respect to the hereinafter named trust, or (b) a Certification, pursuant to California Probate Code Section 18100.5, executed by all of the current trustee(s) of the hereinafter named trust, a form of which is attached.

Name of Trust: **The Marital Trust, created under the George Borba Family Trust, dated April 12, 1990 (Restated)**

**REQUIREMENTS**  
**(Continued)**

5. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

Limited Liability Company: **Pocamo, LLC**

- a) A copy of its operating agreement, if any, and any and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member
- b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps
- c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member
- d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity was created
- e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

---

**END OF REQUIREMENTS**

---

## INFORMATIONAL NOTES SECTION

1. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.
2. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

**FIDELITY NATIONAL FINANCIAL**  
**PRIVACY NOTICE**

At Fidelity National Financial, Inc., we respect and believe it is important to protect the privacy of consumers and our customers. This Privacy Notice explains how we collect, use, and protect any information that we collect from you, when and to whom we disclose such information, and the choices you have about the use of that information. A summary of the Privacy Notice is below, and we encourage you to review the entirety of the Privacy Notice following this summary. You can opt-out of certain disclosures by following our opt-out procedure set forth at the end of this Privacy Notice.

<p><b>Types of Information Collected.</b> You may provide us with certain personal information about you, like your contact information, address demographic information, social security number (SSN), driver's license, passport, other government ID numbers and/or financial information. We may also receive browsing information from your Internet browser, computer and/or mobile device if you visit or use our websites or applications.</p>	<p><b>How Information is Collected.</b> We may collect personal information from you via applications, forms, and correspondence we receive from you and others related to our transactions with you. When you visit our websites from your computer or mobile device, we automatically collect and store certain information available to us through your Internet browser or computer equipment to optimize your website experience.</p>
<p><b>Use of Collected Information.</b> We request and use your personal information to provide products and services to you, to improve our products and services, and to communicate with you about these products and services. We may also share your contact information with our affiliates for marketing purposes.</p>	<p><b>When Information Is Disclosed.</b> We may disclose your information to our affiliates and/or nonaffiliated parties providing services for you or us, to law enforcement agencies or governmental authorities, as required by law, and to parties whose interest in title must be determined.</p>
<p><b>Choices With Your Information.</b> Your decision to submit information to us is entirely up to you. You can opt-out of certain disclosure or use of your information or choose to not provide any personal information to us.</p>	<p><b>Information From Children.</b> We do not knowingly collect information from children who are under the age of 13, and our website is not intended to attract children.</p>
<p><b>Privacy Outside the Website.</b> We are not responsible for the privacy practices of third parties, even if our website links to those parties' websites.</p>	<p><b>International Users.</b> By providing us with your information, you consent to its transfer, processing and storage outside of your country of residence, as well as the fact that we will handle such information consistent with this Privacy Notice.</p>
<p><b>The California Online Privacy Protection Act.</b> Some FNF companies provide services to mortgage loan servicers and, in some cases, their websites collect information on behalf of mortgage loan servicers. The mortgage loan servicer is responsible for taking action or making changes to any consumer information submitted through those websites.</p>	
<p><b>Your Consent To This Privacy Notice.</b> By submitting information to us or by using our website, you are accepting and agreeing to the terms of this Privacy Notice.</p>	<p><b>Access and Correction; Contact Us.</b> If you desire to contact us regarding this notice or your information, please contact us at <a href="mailto:privacy@fnf.com">privacy@fnf.com</a> or as directed at the end of this Privacy Notice.</p>

## FIDELITY NATIONAL FINANCIAL, INC. PRIVACY NOTICE

Fidelity National Financial, Inc. and its majority-owned subsidiary companies providing title insurance, real estate- and loan-related services (collectively, "FNF", "our" or "we") respect and are committed to protecting your privacy. We will take reasonable steps to ensure that your Personal Information and Browsing Information will only be used in compliance with this Privacy Notice and applicable laws. This Privacy Notice is only in effect for Personal Information and Browsing Information collected and/or owned by or on behalf of FNF, including Personal Information and Browsing Information collected through any FNF website, online service or application (collectively, the "Website").

### Types of Information Collected

We may collect two types of information from you: Personal Information and Browsing Information.

Personal Information. FNF may collect the following categories of Personal Information:

- contact information (e.g., name, address, phone number, email address);
- demographic information (e.g., date of birth, gender, marital status);
- social security number (SSN), driver's license, passport, and other government ID numbers;
- financial account information; and
- other personal information needed from you to provide title insurance, real estate- and loan-related services to you.

Browsing Information. FNF may collect the following categories of Browsing Information:

- Internet Protocol (or IP) address or device ID/UDID, protocol and sequence information;
- browser language and type;
- domain name system requests;
- browsing history, such as time spent at a domain, time and date of your visit and number of clicks;
- http headers, application client and server banners; and
- operating system and fingerprinting data.

### How Information is Collected

In the course of our business, we may collect *Personal Information* about you from the following sources:

- applications or other forms we receive from you or your authorized representative;
- the correspondence you and others send to us;
- information we receive through the Website;
- information about your transactions with, or services performed by, us, our affiliates or nonaffiliated third parties; and
- information from consumer or other reporting agencies and public records maintained by governmental entities that we obtain directly from those entities, our affiliates or others.

If you visit or use our Website, we may collect *Browsing Information* from you as follows:

- **Browser Log Files.** Our servers automatically log each visitor to the Website and collect and record certain browsing information about each visitor. The Browsing Information includes generic information and reveals nothing personal about the user.
- **Cookies.** When you visit our Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. When you visit a website again, the cookie allows the website to recognize your computer. Cookies may store user preferences and other information. You can choose whether or not to accept cookies by changing your Internet browser settings, which may impair or limit some functionality of the Website.

### Use of Collected Information

Information collected by FNF is used for three main purposes:

- To provide products and services to you or any affiliate or third party who is obtaining services on your behalf or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you and to inform you about our, our affiliates' and third parties' products and services, jointly or independently.

### When Information Is Disclosed

We may provide your Personal Information (excluding information we receive from consumer or other credit reporting agencies) and Browsing Information to various individuals and companies, as permitted by law, without obtaining your prior authorization. Such laws do not allow consumers to restrict these disclosures. Please see the section "Choices With Your Personal Information" to learn how to limit the discretionary disclosure of your Personal Information and Browsing Information.

Disclosures of your Personal Information may be made to the following categories of affiliates and nonaffiliated third parties:

- to third parties to provide you with services you have requested, and to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to our affiliate financial service providers for their use to market their products or services to you;
- to nonaffiliated third party service providers who provide or perform services on our behalf and use the disclosed information only in connection with such services;
- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to market financial products or services to you;
- to law enforcement or other governmental authority in connection with an investigation, or civil or criminal subpoena or court order;
- to lenders, lien holders, judgment creditors, or other parties claiming an interest in title whose claim or interest must be determined, settled, paid, or released prior to closing; and

- other third parties for whom you have given us written authorization to disclose your Personal Information.

We may disclose Personal Information and/or Browsing Information when required by law or in the good-faith belief that such disclosure is necessary to:

- comply with a legal process or applicable laws;
- enforce this Privacy Notice;
- investigate or respond to claims that any material, document, image, graphic, logo, design, audio, video or any other information provided by you violates the rights of a third party; or
- protect the rights, property or personal safety of FNF, its users or the public.

We maintain reasonable safeguards to keep your Personal Information secure. When we provide Personal Information to our affiliates or third party service providers as discussed in this Privacy Notice, we expect that these parties process such information in compliance with our Privacy Notice or in a manner that is in compliance with applicable privacy laws. The use of your information by a business partner may be subject to that party's own Privacy Notice. Unless permitted by law, we do not disclose information we collect from consumer or credit reporting agencies with our affiliates or others without your consent.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of our bankruptcy, reorganization, insolvency, receivership or an assignment for the benefit of creditors. You expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings. We cannot and will not be responsible for any breach of security by a third party or for any actions of any third party that receives any of the information that is disclosed to us.

### **Choices With Your Information**

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you. The uses of your Personal Information and/or Browsing Information that, by law, you cannot limit, include:

- for our everyday business purposes – to process your transactions, maintain your account(s), to respond to law enforcement or other governmental authority in connection with an investigation, or civil or criminal subpoenas or court orders, or report to credit bureaus;
- for our own marketing purposes;
- for joint marketing with financial companies; and
- for our affiliates' everyday business purposes – information about your transactions and experiences.

You may choose to prevent FNF from disclosing or using your Personal Information and/or Browsing Information under the following circumstances ("opt-out"):

- for our affiliates' everyday business purposes – information about your creditworthiness; and
- for our affiliates to market to you.

To the extent permitted above, you may opt-out of disclosure or use of your Personal Information and Browsing Information by notifying us by one of the methods at the end of this Privacy Notice. We do not share your personal information with non-affiliates for their direct marketing purposes.

For California Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties, except as permitted by California law. Currently, our policy is that we do not recognize "do not track" requests from Internet browsers and similar devices.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not share your Personal Information and Browsing Information with nonaffiliated third parties, except as permitted by Vermont law, such as to process your transactions or to maintain your account. In addition, we will not share information about your creditworthiness with our affiliates except with your authorization. For joint marketing in Vermont, we will only disclose your name, contact information and information about your transactions.

### **Information From Children**

The Website is meant for adults and is not intended or designed to attract children under the age of thirteen (13). We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian. By using the Website, you affirm that you are over the age of 13 and will abide by the terms of this Privacy Notice.

### **Privacy Outside the Website**

The Website may contain links to other websites. FNF is not and cannot be responsible for the privacy practices or the content of any of those other websites.

### **International Users**

FNF's headquarters is located within the United States. If you reside outside the United States or are a citizen of the European Union, please note that we may transfer your Personal Information and/or Browsing Information outside of your country of residence or the European Union for any of the purposes described in this Privacy Notice. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection and transfer of such information in accordance with this Privacy Notice.

### **The California Online Privacy Protection Act**

FNF Privacy Statement (Eff. 5/1/2015) Last Updated March 1, 2017  
MISC0219 (DSI Rev. 3/2/17)

Copyright © 2017. Fidelity National Financial, Inc. All Rights Reserved

For some FNF websites, such as the Customer CareNet ("CCN"), FNF is acting as a third party service provider to a mortgage loan servicer. In those instances, we may collect certain information on behalf of that mortgage loan servicer via the website. The information which we may collect on behalf of the mortgage loan servicer is as follows:

- first and last name;
- property address;
- user name and password;
- loan number;
- social security number - masked upon entry;
- email address;
- three security questions and answers; and
- IP address.

The information you submit through the website is then transferred to your mortgage loan servicer by way of CCN. **The mortgage loan servicer is responsible for taking action or making changes to any consumer information submitted through this website. For example, if you believe that your payment or user information is incorrect, you must contact your mortgage loan servicer.**

CCN does not share consumer information with third parties, other than (1) those with which the mortgage loan servicer has contracted to interface with the CCN application, or (2) law enforcement or other governmental authority in connection with an investigation, or civil or criminal subpoenas or court orders. All sections of this Privacy Notice apply to your interaction with CCN, except for the sections titled "Choices with Your Information" and "Access and Correction." If you have questions regarding the choices you have with regard to your personal information or how to access or correct your personal information, you should contact your mortgage loan servicer.

#### **Your Consent To This Privacy Notice**

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information by us in compliance with this Privacy Notice. Amendments to the Privacy Notice will be posted on the Website. Each time you provide information to us, or we receive information about you, following any amendment of this Privacy Notice will signify your assent to and acceptance of its revised terms for all previously collected information and information collected from you in the future. We may use comments, information or feedback that you submit to us in any manner that we may choose without notice or compensation to you.

#### **Accessing and Correcting Information; Contact Us**

If you have questions, would like to access or correct your Personal Information, or want to opt-out of information sharing with our affiliates for their marketing purposes, please send your requests to [privacy@fnf.com](mailto:privacy@fnf.com) or by mail or phone to:

## Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the field rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for each discount. These discounts only apply to transaction involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

### **FNF Underwritten Title Company**

CTC - Chicago Title Company

#### **CREDIT FOR PRELIMINARY REPORTS AND/OR COMMITMENTS ON SUBSEQUENT POLICIES (CTIC)**

Where no major change in the title has occurred since the issuance of the original report or commitment, the order may be reopened within 12 months and all or a portion of the charge previously paid for the report or commitment may be credited on a subsequent policy charge within the following time period from the date of the report.

#### **DISASTER LOANS (CTIC)**

The charge for a lender's Policy (Standard or Extended coverage) covering the financing or refinancing by an owner of record, within 24 months of the date of a declaration of a disaster area by the government of the United States or the State of California on any land located in said area, which was partially or totally destroyed in the disaster, will be 50% of the appropriate title insurance rate.

#### **CHURCHES OR CHARITABLE NON-PROFIT ORGANIZATIONS (CTIC)**

On properties used as a church or for charitable purposes within the scope of the normal activities of such entities, provided said charge is normally the church's obligation the charge for an owner's policy shall be 50% to 70% of the appropriate title insurance rate, depending on the type of coverage selected. The charge for a lender's policy shall be 40% to 50% of the appropriate title insurance rate, depending on the type of coverage selected.

#### **EMPLOYEE RATE (CTC and CTIC)**

No charge shall be made to employees (including employees on approved retirement) of the Company or its underwritten, subsidiary title companies for policies or escrow services in connection with financing, refinancing, sale or purchase of the employees' bona fide home property. Waiver of such charges is authorized only in connection with those costs which the employee would be obligated to pay, by established custom, as a party to the transaction.

STANDARD COVERAGE POLICY – 1990**

**EXCLUSIONS FROM COVERAGE**

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
- (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
  - (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
  - (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
  - (c) resulting in no loss or damage to the insured claimant;
  - (d) attaching or created subsequent to Date of Policy; or
  - (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

**EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I**

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.  
Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

**CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)  
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE**

**EXCLUSIONS**

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
  - a. building;
  - b. zoning;
  - c. land use;
  - d. improvements on the Land;
  - e. land division; and
  - f. environmental protection.This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
  - a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
  - b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

- c. that result in no loss to You; or
  - d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
5. Failure to pay value for Your Title.
  6. Lack of a right:
    - a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
    - b. in streets, alleys, or waterways that touch the Land.
 This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
  7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
  8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
  9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

**LIMITATIONS ON COVERED RISKS**

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% % of Policy Amount Shown in Schedule A or \$2,500.00 (whichever is less)	\$ 10,000.00
Covered Risk 18:	1.00% % of Policy Amount Shown in Schedule A or \$5,000.00 (whichever is less)	\$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or \$5,000.00 (whichever is less)	\$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or \$2,500.00 (whichever is less)	\$ 5,000.00

**2006 ALTA LOAN POLICY (06-17-06)**

**EXCLUSIONS FROM COVERAGE**

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
  - (i) the occupancy, use, or enjoyment of the Land;
  - (ii) the character, dimensions, or location of any improvement erected on the Land;
  - (iii) the subdivision of land; or
  - (iv) environmental protection;
 or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
  - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
  - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
  - (c) resulting in no loss or damage to the Insured Claimant;
  - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
  - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
  - (a) a fraudulent conveyance or fraudulent transfer, or
  - (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

**EXCEPTIONS FROM COVERAGE**

(Except as provided in Schedule B - Part II, (t or T)his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

## (PART I

(The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.

## PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:)

### 2006 ALTA OWNER'S POLICY (06-17-06)

#### EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
  - (i) the occupancy, use, or enjoyment of the Land;
  - (ii) the character, dimensions, or location of any improvement erected on the Land;
  - (iii) the subdivision of land; or
  - (iv) environmental protection;or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
  - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
  - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
  - (c) resulting in no loss or damage to the Insured Claimant;
  - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
  - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
  - (a) a fraudulent conveyance or fraudulent transfer; or
  - (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

#### EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

(The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and that are not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.
7. (Variable exceptions such as taxes, easements, CC&R's, etc. shown here.)

**ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (12-02-13)**

**EXCLUSIONS FROM COVERAGE**

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
  - (i) the occupancy, use, or enjoyment of the Land;
  - (ii) the character, dimensions, or location of any improvement erected on the Land;
  - (iii) the subdivision of land; or
  - (iv) environmental protection;or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
  - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
  - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
  - (c) resulting in no loss or damage to the Insured Claimant;
  - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
  - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
  - (a) a fraudulent conveyance or fraudulent transfer, or
  - (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

#### ADDRESS

7955 EUCALYPTUS AVE  
CHINO, CA 91710

#### COORDINATES

Latitude (North): 33.9894490 - 33° 59' 22.01"  
Longitude (West): 117.6312680 - 117° 37' 52.56"  
Universal Transverse Mercator: Zone 11  
UTM X (Meters): 441694.8  
UTM Y (Meters): 3760971.2  
Elevation: 671 ft. above sea level

### USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property Map: 5640938 PRADO DAM, CA  
Version Date: 2012

Northeast Map: 5620426 GUASTI, CA  
Version Date: 2012

Southeast Map: 5640930 CORONA NORTH, CA  
Version Date: 2012

Northwest Map: 5619074 ONTARIO, CA  
Version Date: 2012

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/17/2018 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>CHINO AIRPORT RADIUM</b> Site ID: 0906127 EPA Id: CAN000906127	<b>7000 MERRILL AVE</b>	<b>SW 1/8 - 1/4 (0.224 mi.)</b>	<b>D30</b>	<b>53</b>
<b>CHINO AIRPORT NAPALM</b> Site ID: 0908946 EPA Id: CAN000908946	<b>7000 MERRILL AVENUE</b>	<b>SW 1/8 - 1/4 (0.224 mi.)</b>	<b>D36</b>	<b>64</b>

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>SOUTHERN CALIFORNIA</b> EPA ID:: CAR000220640	<b>7000 MERRILL AVE</b>	<b>SW 1/8 - 1/4 (0.224 mi.)</b>	<b>D29</b>	<b>51</b>

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/30/2018 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

### ADDITIONAL ENVIRONMENTAL RECORDS

#### **Local Lists of Registered Storage Tanks**

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

### Other Ascertainable Records

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/21/2018 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

**FINDS:**

Registry ID: 110006784756

**Environmental Interest/Information System**

**AIR EMISSIONS CLASSIFICATION UNKNOWN**

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

**WDS:**

Facility ID: Santa Ana River 365291001  
Facility Type: Agricultural - Facility that treats and/or disposes of the wastes associated with confined and concentrated animal feeding, confined animal feeding, confined animal holding, confined and concentrated aquatic animal production facilities, and aquaculture. the treatment and/or disposal of agricultural return water is included in this category.  
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
NPDES Number: CAG018001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board  
Subregion: 8  
Facility Telephone: Not reported  
Facility Contact: Not reported  
Agency Name: BORBA GEORGE  
Agency Address: 7955 EUCALYPTUS  
Agency City,St,Zip: CHINO 91710  
Agency Contact: GEORGE BORBA  
Agency Telephone: 9095972568  
Agency Type: Private  
SIC Code: 241  
SIC Code 2: Not reported  
Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid

waste).  
Primary Waste: STORMS  
Waste Type2: N  
Waste2: Stormwater Runoff  
Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).  
Secondary Waste: Solid Wastes  
Secondary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).  
Design Flow: 0  
Baseline Flow: 0  
Reclamation: No reclamation requirements associated with this facility.  
POTW: The facility is not a POTW.  
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
