. Waste code: 214  
. Waste name: Unspecified solvent mixture

. Waste code: D001  
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Additional drums were discovered during the response activities. By sunset, eight buried drums had been removed from the excavation. The drums did not have lids and contained soil that had been placed on top of other materials. The contents of the drums were field tested using a HazCat chemical identification kit, and determined to be a non-explosive, flammable, non-corrosive, organic resin-type material. The eight drums were placed in a roll-off bin. Two more drums were visible in the excavation, but were left in place due to limited remaining daylight. Samples were collected of the soil, the material in the drums, and the liquid in one of the drums. The samples were delivered to Microbac Laboratory in Riverside, and analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), total petroleum hydrocarbons (TPH) carbon range, polynuclear aromatic hydrocarbons (PAHs), CAM17 metals, and flashpoint (only the liquid sample). The analytical results indicated that high concentrations of benzene were present in all of the samples. Also detected were toluene, ethylbenzene, xylene, styrene, 1,2,4-trimethylbenzene, and naphthalene. On July 28, 2010, a geophysical survey was conducted in an effort to locate any additional buried drums. During the survey, several areas to the east and west of the original excavation were marked as possible targets for further investigation. Excavation and removal of additional drums was conducted between August 16 and August 25, 2010. A total of 51 drums, several aluminum canisters and pieces of wood were removed from the excavation and placed in roll-off-bins. Excavated soil was stockpiled and covered with plastic sheeting. Additional soil was excavated from beneath the drums, placed in stockpiles and covered. The resulting excavation measured approximately 100 feet from east to west and 20 feet from north to south. The bottom of the excavation varied from 10 to 15 feet below ground surface. Patricia Hannon of Board Staff observed the collection of the final confirmation soil samples on August 26, 2010. Staff from the U.S. EPA and the California Department of Toxic Substances Control were also present. The samples were submitted to a California certified laboratory for analysis as per the TCRAP. The analytical results for the soil samples showed only very low concentrations of benzene (&lt;1 to 1.28 micrograms/kilogram (a%g/kg)), ethylbenzene (&lt;1 to 2.24 a%g/kg), xylene (&lt;1 to 28.8 a%g/kg), 1,3,5 trimethylbenzene (&lt;5 to 55.4 a%g/kg), naphthalene (&lt;5 to 10.9 a%g/kg), TPH gasoline range (&lt;1 to 4.71 milligrams/kilogram (mg/kg)), TPH diesel range &lt;1 to 123 mg/kg, and TPH motor oil range (&lt;1 to 355 mg/kg).</p>

Potential Media Affected: Aquifer used for drinking water supply  
Potential Contaminants of Concern: 1,2,3-Trichloropropane (TCP), Dichloroethene (DCE), Trichloroethylene (TCE)  
Site History: The primary chemicals of concern in the groundwater at the site are trichloroethene, 1,2,3-trichloropropane, cis-1,2-dichloroethene, 1,2-dichloroethane, and 1,1-dichloroethene. Offsite plume characterization field activities were initiated in 2007. Twelve cone penetrometer testing (CPT)/direct push borings were advanced to investigate the below grade lithology, and to determine the horizontal and vertical extent of the VOCs in the groundwater in the vicinity of the site. Eleven additional direct push borings were also advanced, and water samples were collected. The soils encountered consisted of silts, sands, gravels and some clay lenses. The depth to groundwater ranged from 25 to 50 feet below ground surface (bgs), with the depth to water decreasing toward the south. Groundwater was detected at approximately 50 feet bgs at the Kimball Avenue boring location, approximately 30 to 45 feet bgs at the Bickmore Avenue boring locations and approximately 25 to 35 feet bgs at the Pine Avenue boring locations. The local groundwater flow direction is toward the southeast. Based on the results of the investigation in 2007, nine nested groundwater monitoring wells were installed in 2008 at three locations along the axis of the plume. Three wells were installed at each location to monitor the shallow (approximately 35 to 96 feet bgs), intermediate (approximately 91 to 146 feet bgs) and deep (approximately 206 to 309 feet bgs) groundwater zones.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/17/2018	Source: EPA
Date Data Arrived at EDR: 08/09/2018	Telephone: N/A
Date Made Active in Reports: 09/07/2018	Last EDR Contact: 08/09/2018
Number of Days to Update: 29	Next Scheduled EDR Contact: 10/15/2018
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/17/2018	Source: EPA
Date Data Arrived at EDR: 08/09/2018	Telephone: N/A
Date Made Active in Reports: 09/07/2018	Last EDR Contact: 08/09/2018
Number of Days to Update: 29	Next Scheduled EDR Contact: 10/15/2018
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/17/2018

Last EDR Contact: 07/06/2018  
Next Scheduled EDR Contact: 10/15/2018  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/17/2018  
Date Data Arrived at EDR: 08/09/2018

Next Scheduled EDR Contact: 10/29/2018  
Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/17/2018	Source: EPA
Date Data Arrived at EDR: 08/09/2018	Telephone: 800-424-9346
Date Made Active in Reports: 09/07/2018	Last EDR Contact: 08/09/2018
Number of Days to Update: 29	Next Scheduled EDR Contact: 10/29/2018
	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/01/2018	Source: EPA
Date Data Arrived at EDR: 03/28/2018	Telephone: 800-424-9346
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 09/19/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 09/19/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 09/19/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 09/19/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 09/19/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 01/07/2019
	Data Release Frequency: Quarterly

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/14/2018	Source: Department of the Navy
Date Data Arrived at EDR: 05/18/2018	Telephone: 843-820-7326
Date Made Active in Reports: 07/20/2018	Last EDR Contact: 07/16/2018
Number of Days to Update: 63	Next Scheduled EDR Contact: 11/26/2018
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 07/31/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/28/2018	Telephone: 703-603-0695
Date Made Active in Reports: 09/14/2018	Last EDR Contact: 08/28/2018
Number of Days to Update: 17	Next Scheduled EDR Contact: 12/10/2018
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 07/31/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/28/2018	Telephone: 703-603-0695
Date Made Active in Reports: 09/14/2018	Last EDR Contact: 08/28/2018
Number of Days to Update: 17	Next Scheduled EDR Contact: 12/10/2018
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 06/18/2018

Date Data Arrived at EDR: 06/27/2018

Date Made Active in Reports: 09/14/2018

Number of Days to Update: 79

Source: National Response Center, United States Coast Guard

Telephone: 202-267-2180

Next Scheduled EDR Contact: 11/12/2018

Data Release Frequency: Quarterly

## ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 07/30/2018

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **Local Lists of Hazardous waste / Contaminated Sites**

### **US HIST CDL: National Clandestine Laboratory Register**

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 05/18/2018	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 06/20/2018	Telephone: 202-307-1000
Date Made Active in Reports: 09/14/2018	Last EDR Contact: 08/28/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 12/10/2018
	Data Release Frequency: No Update Planned

### **HIST CAL-SITES: Calsites Database**

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005	Source: Department of Toxic Substance Control
Date Data Arrived at EDR: 08/03/2006	Telephone: 916-323-3400
Date Made Active in Reports: 08/24/2006	Last EDR Contact: 02/23/2009
Number of Days to Update: 21	Next Scheduled EDR Contact: 05/25/2009
	Data Release Frequency: No Update Planned

### **SCH: School Property Evaluation Program**

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 07/30/2018	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 07/31/2018	Telephone: 916-323-3400
Date Made Active in Reports: 09/07/2018	Last EDR Contact: 07/31/2018
Number of Days to Update: 38	Next Scheduled EDR Contact: 11/12/2018
	Data Release Frequency: Quarterly

### **CDL: Clandestine Drug Labs**

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

Date of Government Version: 12/31/2017	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 06/12/2018	Telephone: 916-255-6504
Date Made Active in Reports: 08/06/2018	Last EDR Contact: 08/17/2018
Number of Days to Update: 55	Next Scheduled EDR Contact: 10/22/2018
	Data Release Frequency: Varies

### **TOXIC PITS: Toxic Pits Cleanup Act Sites**

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/1995	Source: State Water Resources Control Board
Date Data Arrived at EDR: 08/30/1995	Telephone: 916-227-4364
Date Made Active in Reports: 09/26/1995	Last EDR Contact: 01/26/2009
Number of Days to Update: 27	Next Scheduled EDR Contact: 04/27/2009
	Data Release Frequency: No Update Planned

### **US CDL: Clandestine Drug Labs**

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 06/04/2018

	Data Release Frequency: Quarterly

## SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012	Source: FirstSearch
Date Data Arrived at EDR: 01/03/2013	Telephone: N/A
Date Made Active in Reports: 02/22/2013	Last EDR Contact: 01/03/2013
Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000
Date Made Active in Reports: 06/17/2014	Last EDR Contact: 08/03/2018
Number of Days to Update: 88	Next Scheduled EDR Contact: 11/19/2018

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/08/2018	Telephone: 703-308-4044

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 05/13/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: 703-416-0223
Date Made Active in Reports: 06/29/2018	Last EDR Contact: 09/07/2018
Number of Days to Update: 30	Next Scheduled EDR Contact: 12/17/2018
	Data Release Frequency: Annually

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 05/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 05/17/2018	Telephone: 202-564-8600
Date Made Active in Reports: 09/07/2018	Last EDR Contact: 07/20/2018
Number of Days to Update: 113	Next Scheduled EDR Contact: 11/05/2018
	Data Release Frequency: Varies

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 06/02/2008
Number of Days to Update: 35	Next Scheduled EDR Contact: 09/01/2008
	Data Release Frequency: No Update Planned

### PRP: Potentially Responsible Parties

A listing of verified Potentially Responsible Parties

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 10/17/2014	Telephone: 202-564-6023
Date Made Active in Reports: 10/20/2014	Last EDR Contact: 08/09/2018
Number of Days to Update: 3	Next Scheduled EDR Contact: 11/19/2018
	Data Release Frequency: Quarterly

### PADS: PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 06/01/2017	Source: EPA
Date Data Arrived at EDR: 06/09/2017	Telephone: 202-566-0500
Date Made Active in Reports: 10/13/2017	Last EDR Contact: 07/13/2018
Number of Days to Update: 126	Next Scheduled EDR Contact: 10/22/2018

## RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 04/03/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/05/2018	Telephone: 202-343-9775
Date Made Active in Reports: 06/29/2018	Last EDR Contact: 07/05/2018
Number of Days to Update: 85	Next Scheduled EDR Contact: 10/15/2018
	Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008
	Data Release Frequency: No Update Planned

## HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Data Release Frequency: Varies

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

06071C9375H	FEMA FIRM Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
PRADO DAM	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### Soil Map ID: 2

Soil Component Name: HILMAR

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	22 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
2	22 inches	59 inches	stratified loamy sand to loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9

### Soil Map ID: 3

Soil Component Name: GRANGEVILLE

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

### RADON

#### State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Group Delta Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America
- ✓ EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

Group Delta Consultants (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Ontario, CA 91761  
Contact: Jack Packwood

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Group Delta Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

## INTRODUCTION

### A: PROJECT LOCATION

The project site is located at the northeast corner of Merrill Avenue and Bon View Avenue, south of Eucalyptus Avenue, west of Grove Avenue in the City of Ontario, California. Please see next page for vicinity map.

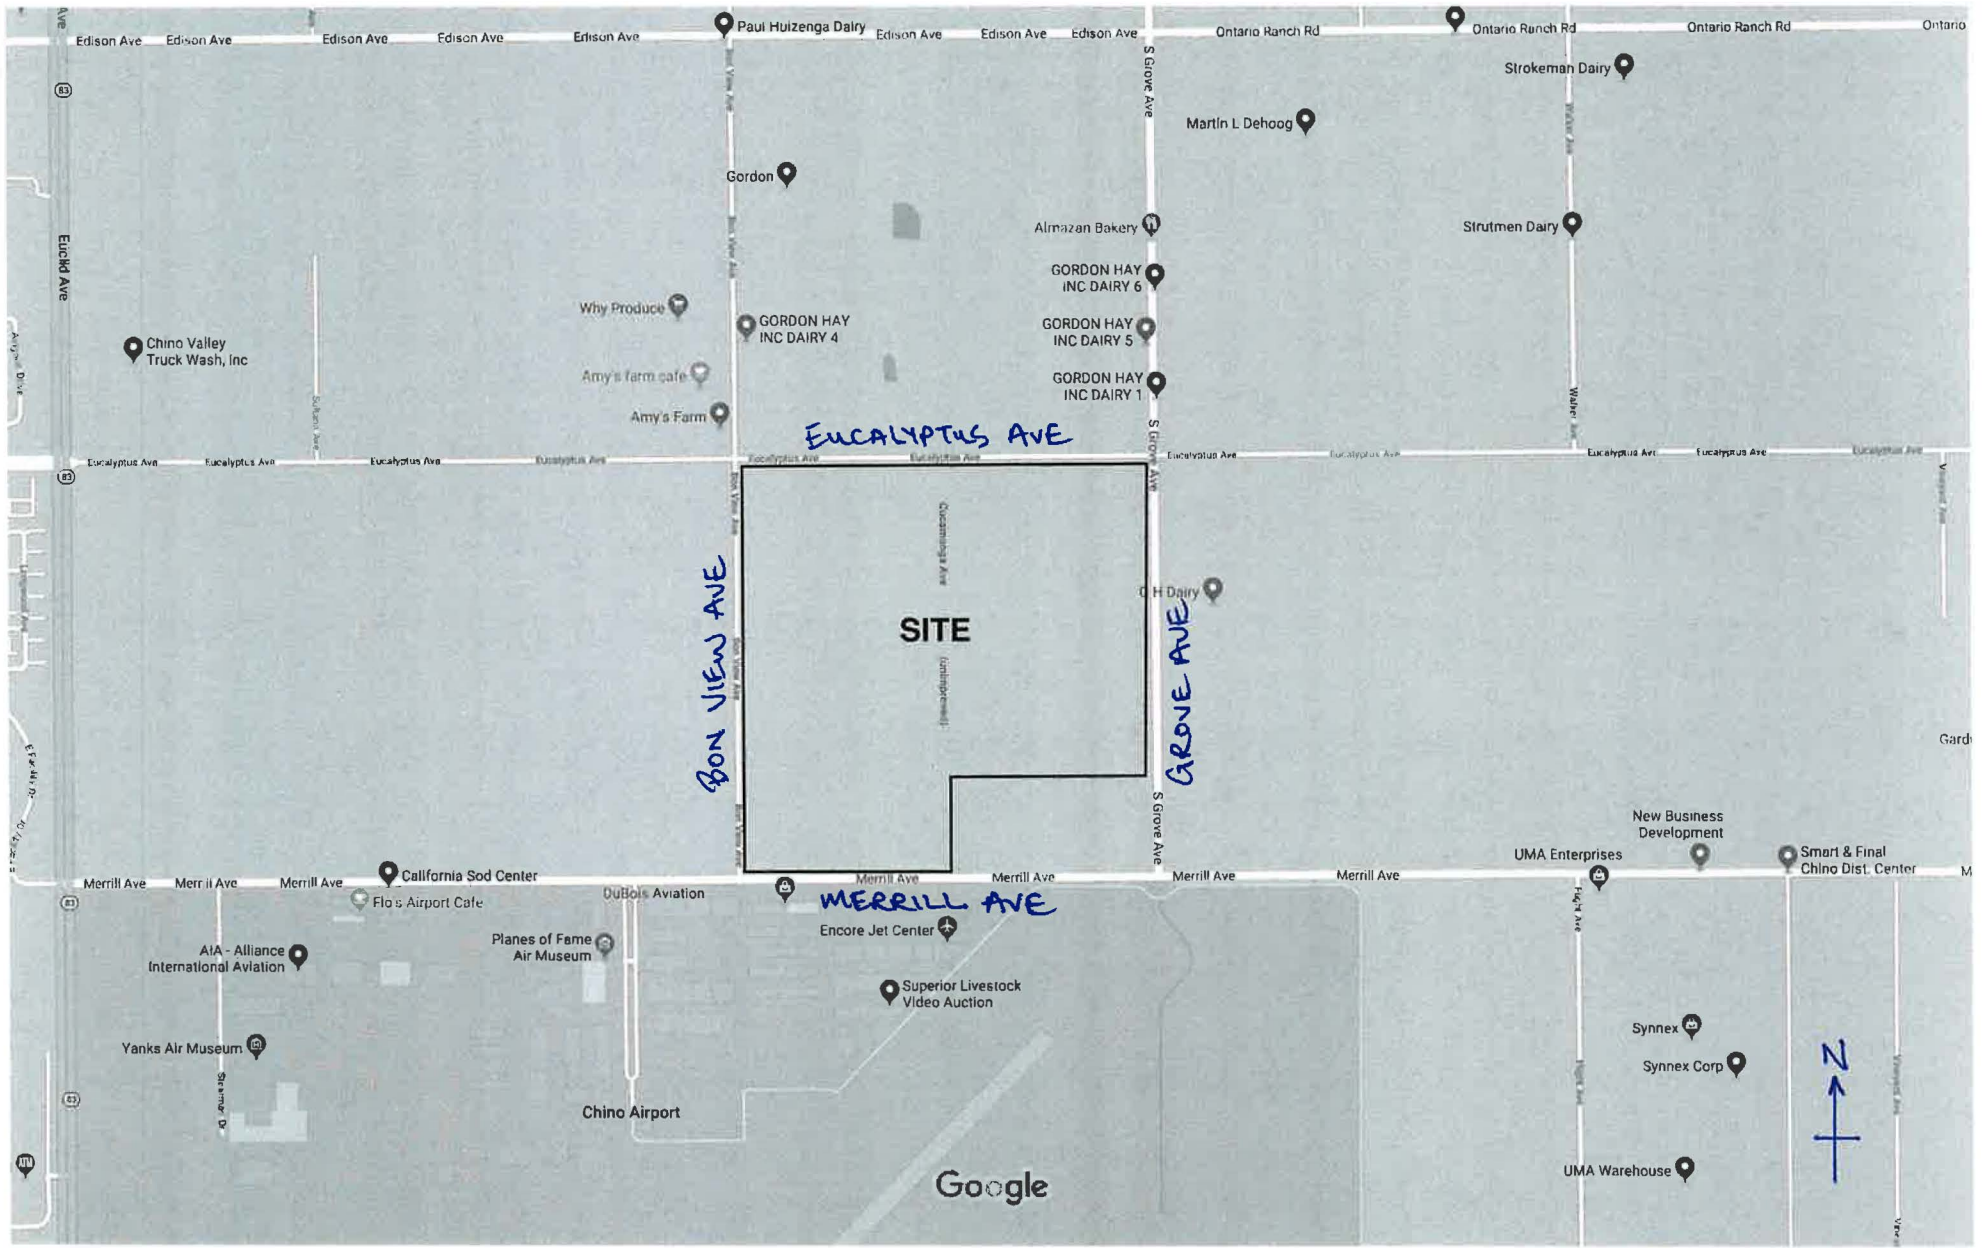

### B: STUDY PURPOSE

The purpose of this study is to determine the existing and proposed condition 100-year peak flow rates from the project site.

### C: PROJECT STAFF:

Thienes Engineering staff involved in this study include:

Reinhard Stenzel  
Ricky Hwa

VICINITY MAP

## DISCUSSION

The project site encompasses approximately 130.35 acres. Proposed improvements to the site include eight commercial type buildings ranging from 80,202 square feet to 1,268,446 square feet. There will be a truck yard and several vehicle parking lots adjacent to each building. Proposed landscaping will be along the site's property lines and scattered throughout the site.

### Master Plan Hydrology

Per the City of Ontario's Master Plan of Drainage dated March 2012 by Hunsaker & Associates, the westerly two-thirds of the project site is tabled to a proposed 102" RCP master plan storm drain in Bon View Avenue (BNVW-XIV-1), which drains southerly to a proposed 9.5' by 9.5' RCB Master Plan storm drain in Merrill Avenue (MERL-XIV-1), which drains westerly to an existing dirt channel in Euclid Avenue. The easterly one-third of the site is tabled to another proposed public storm drain in Grove Avenue (GROV-XIII-1), a 120" RCP that drains southerly to the Chino Airport.

Although the above mentioned Master Plan storm drains will be constructed separately from proposed site improvements, the ultimate discharge location downstream in Euclid Avenue will not be fully improved. The existing earthen channel adjacent to Euclid Avenue south of Merrill Avenue, downstream of the proposed Merrill Avenue Master Plan storm drain, does not have the capacity to convey Master Plan peak flow rates. Therefore, proposed condition discharge from the project site to Euclid Avenue via proposed Master Plan storm drains will be limited to significantly below the existing condition 25-year runoffs from the site, with the remainder of the proposed condition 100-year runoff to be temporarily detained onsite.

Please see Appendix "A" for the City's Master Plan of Drainage and other pertinent reference materials.

### Existing Condition

The project site is currently used for agricultural and dairy purposes. Runoff from the site generally drains from north to south. There are several detention areas throughout the site.

The existing condition 100-year site runoff from the north and west portions of the site (Nodes 100-205, 95.45 acres), tributary to Merrill Avenue via the south-westerly detention basin, is approximately 101.7 cfs. The existing condition 100-year site runoff from the southeast portion of the site (Nodes 300-304, 30.80 acres) tributary to Merrill Avenue is approximately 39.6 cfs, resulting in a total 141.3 cfs from the site tributary to Merrill Avenue.

The easterly portion of the project site (Nodes 400-402, 4.15 acres) adjacent to Grove Avenue surface drains to Grove Avenue. The existing condition 100-year runoffs from this portion of the site is 5.8 cfs.

See Appendix "B" for existing condition hydrology calculations and Appendix "D" for existing condition hydrology map.

### Proposed Condition

Buildings 4, 5, 6, 7 and 8 at the project site's northerly end (Nodes 100-192, 20.85 acres) drain to catch basins in each building's truck yard and parking lots. Runoff is then conveyed westerly via a proposed onsite storm drain to the proposed 102" RCP master plan storm drain in Bon View Avenue, which is tributary to the existing dirt channel in Euclid Avenue. The proposed condition 100-year peak flow rate from Buildings 4 through 8 are approximately 53.9 cfs.

For the remainder of the site, Buildings 1, 2 and 3 (Nodes 200-282, 106.45 acres) drain to catch basins in each building's truck yards and parking lots. Runoff is then conveyed southerly, then westerly, via another onsite storm drain system to the same proposed 102" RCP in Bon View Avenue. The proposed condition 100-year peak flow rate from Buildings 1 through 3 are approximately 236.2 cfs.

The total proposed condition 100-year peak flow rate from the site to the proposed 102" RCP in Bon View Avenue – and ultimately, to the existing dirt channel in Euclid Avenue – is approximately 290.1 cfs.

The landscape frontage east of Building 2 (0.50 acres) will surface drain easterly to Grove Avenue. The entry driveway west of Building 4 (0.30 acres), plus the landscape frontage and entry driveway west of Building 1 (0.85 acres), will surface drain westerly to Bon View Avenue. Lastly, the entry driveway southeast of Building 1 (0.25 acres), plus the landscape frontage and entry driveways south of Building 1 (1.15 acres), will surface drain southerly to Merrill Avenue.

See Appendix "B" for proposed condition hydrology calculations and Appendix "D" for proposed condition hydrology map.

### Detention

The total proposed 100-year peak flow rate from the project site (236.2 cfs) is higher than the existing condition 100-year runoff (141.3 cfs). Runoffs tributary to onsite truck yards will be sufficiently detained such that the overall proposed condition 100-year discharge from the site to the existing dirt channel in Euclid Avenue will be significantly below the existing condition 100-year discharge. Runoffs from the parking lot west of Building 4 (1.5 cfs over 0.45 acres), the frontage landscape north of Building 4 (1.0 cfs over 0.35 acres),

and parking lots south of Building 1 (18.0 cfs over 7.70 acres), will be allowed to discharge undetained.

See Appendix “C” for detention calculations for each onsite truck yard. The following is a summary of required detention volume and post-detention 100-year discharge for each truck yard.

Truck Yard	Node	Area	Volume	Ponding Depth	Q100 Tributary	Q100 Discharge
Building 1 West	281	23.35 ac.	4.136 ac-ft	1.46 ft	58.0 cfs	4.1 cfs
Building 1 East	261	23.40 ac.	4.152 ac-ft	1.46 ft	62.3 cfs	4.2 cfs
Building 2 North	205	15.00 ac.	2.554 ac-ft	1.74 ft	38.4 cfs	2.8 cfs
Building 2 South	216	15.55 ac.	1.716 ac-ft	1.58 ft	36.0 cfs	4.3 cfs
Building 3	241	21.45 ac.	3.292 ac-ft	1.90 ft	51.6 cfs	4.5 cfs
Building 4	182	3.55 ac.	0.178 ac-ft	1.07 ft	9.6 cfs	1.4 cfs
Building 5	171	4.10 ac.	0.249 ac-ft	1.12 ft	11.3 cfs	1.4 cfs
Building 6	151	4.00 ac.	0.142 ac-ft	0.90 ft	11.1 cfs	2.3 cfs
Building 7	131	3.75 ac.	0.206 ac-ft	1.04 ft	10.7 cfs	1.4 cfs
Building 8	112	4.65 ac.	0.175 ac-ft	0.97 ft	12.2 cfs	2.4 cfs

Total Q100 Discharge from truck yards = 28.8 cfs

With onsite detention, the total proposed condition 100-year discharge from the project site to the existing dirt channel in Euclid Avenue, via proposed onsite storm drains and proposed master plan storm drains in Bon View Avenue and Merrill Avenue, will be approximately 49.3 cfs (28.8 cfs from truck yards + 1.5 cfs from parking lot west of Building 4 + 1.0 cfs from frontage landscape north of Building 4 + 18.0 cfs from parking lots south of Building 1). This is significantly less than the existing condition 100-year discharge (141.3 cfs) from the site to Merrill Avenue.

Proposed onsite storm drains will be sized during the project’s final design phase to restrict site discharge such that there will be no negative impact on existing downstream drainage facilities.

### Methodology

Hydrology calculations were computed using the San Bernardino County Rational Method program (by AES Software). The soil type is “A” for the northeast corner of the project site, “B” for the westerly half of the site, and “C” for the remainder of the site per the San Bernardino County Hydrology Manual. See Appendix “A” for pertinent reference materials.

 FLOW PROCESS FROM NODE 281.00 TO NODE 281.00 IS CODE = 3.1  
 <----->  
 >>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<<<  
 <----->

ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1  
 THROUGH A FLOW-THROUGH DETENTION BASIN  
 SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 DEAD STORAGE(AF) = 0.000  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.000  
 SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET = 0.000  
 DETENTION BASIN CONSTANT LOSS RATE(CFS) = 0.00

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.21	2.90	0.040
3	0.41	3.10	0.220
4	0.61	3.30	0.660
5	0.81	3.50	1.300
6	1.01	3.70	2.060

TIME DURATION(minutes) OF PERCENTILES OF ESTIMATED PEAK FLOW RATE:

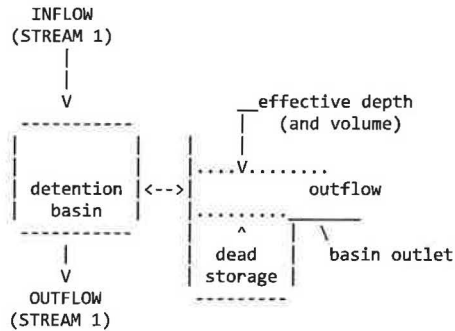

(Note: 100% of Peak Flow Rate estimate assumed to have an instantaneous time duration)

Percentile of Estimated Peak Flow Rate	Duration (minutes)
0%	1475.0
10%	365.0
20%	55.0
30%	25.0
40%	20.0
50%	15.0
60%	10.0
70%	10.0
80%	10.0
90%	10.0

\*\*\*\*\*

FLOW PROCESS FROM NODE 261.00 TO NODE 261.00 IS CODE = 3.1

>>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<<

ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1 THROUGH A FLOW-THROUGH DETENTION BASIN  
 SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 DEAD STORAGE(AF) = 0.000  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.000  
 SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET = 0.000  
 DETENTION BASIN CONSTANT LOSS RATE(CFS) = 0.00

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.21	2.90	0.040
3	0.41	3.10	0.220
4	0.61	3.30	0.660
5	0.81	3.50	1.300
6	1.01	3.70	2.070
7	1.21	3.90	2.930
8	1.41	4.10	3.880
9	1.61	4.30	4.890
10	1.71	4.40	5.410

MODIFIED-PULS BASIN ROUTING MODEL RESULTS(5-MINUTE COMPUTATION INTERVALS):  
 (Note: Computed EFFECTIVE DEPTH and VOLUME are estimated at the clock time;  
 MEAN OUTFLOW is the average value during the unit interval.)

CLOCK TIME (HRS)	DEAD-STORAGE FILLED(AF)	INFLOW (CFS)	LOSS (CFS)	EFFECTIVE DEPTH(FT)	MEAN OUTFLOW (CFS)	EFFECTIVE VOLUME(AF)
0.083	0.000	0.21	0.00	0.01	0.0	0.001

\*\*\*\*\* DESCRIPTION OF STUDY \*\*\*\*\*  
 \* JOB #3654 MERRILL BUSINESS CENTER, ONTARIO \*  
 \* 100-YEAR DETENTION \*  
 \* BUILDING 2 NORTH TRUCK YARD, NODE 205 \*  
 \*\*\*\*\*

FILE NAME: W:\3654\BLDG2N.DAT  
 TIME/DATE OF STUDY: 10:36 12/10/2020

\*\*\*\*\*  
 FLOW PROCESS FROM NODE 205.00 TO NODE 205.00 IS CODE = 1

>>>>SUBAREA RUNOFF (UNIT-HYDROGRAPH ANALYSIS)<<<<<

(UNIT-HYDROGRAPH ADDED TO STREAM #1)

WATERSHED AREA = 15.000 ACRES  
 BASEFLOW = 0.000 CFS/SQUARE-MILE  
 \*USER ENTERED "LAG" TIME = 0.136 HOURS  
 CAUTION: LAG TIME IS LESS THAN 0.50 HOURS.  
 THE 5-MINUTE PERIOD UH MODEL (USED IN THIS COMPUTER PROGRAM)  
 MAY BE TOO LARGE FOR PEAK FLOW ESTIMATES.  
 VALLEY(DEVELOPED) S-GRAPH SELECTED  
 MAXIMUM WATERSHED LOSS RATE(INCH/HOUR) = 0.042  
 LOW LOSS FRACTION = 0.079  
 \*HYDROGRAPH MODEL #1 SPECIFIED\*

SPECIFIED PEAK 5-MINUTES RAINFALL(INCH)= 0.37  
 SPECIFIED PEAK 30-MINUTES RAINFALL(INCH)= 0.75  
 SPECIFIED PEAK 1-HOUR RAINFALL(INCH) = 1.00  
 SPECIFIED PEAK 3-HOUR RAINFALL(INCH) = 1.90  
 SPECIFIED PEAK 6-HOUR RAINFALL(INCH) = 2.90  
 SPECIFIED PEAK 24-HOUR RAINFALL(INCH) = 5.90

PRECIPITATION DEPTH-AREA REDUCTION FACTORS:  
 5-MINUTE FACTOR = 0.999  
 30-MINUTE FACTOR = 0.999  
 1-HOUR FACTOR = 0.999  
 3-HOUR FACTOR = 1.000  
 6-HOUR FACTOR = 1.000  
 24-HOUR FACTOR = 1.000

UNIT HYDROGRAPH TIME UNIT = 5.000 MINUTES  
 UNIT INTERVAL PERCENTAGE OF LAG-TIME = 61.275

UNIT HYDROGRAPH DETERMINATION

TIME DURATION(minutes) OF PERCENTILES OF ESTIMATED PEAK FLOW RATE:

(Note: 100% of Peak Flow Rate estimate assumed to have an instantaneous time duration)

Percentile of Estimated Peak Flow Rate	Duration (minutes)
0%	1470.0
10%	370.0
20%	70.0
30%	25.0
40%	20.0
50%	20.0
60%	10.0
70%	10.0
80%	10.0
90%	10.0

\*\*\*\*\*  
 FLOW PROCESS FROM NODE 205.00 TO NODE 205.00 IS CODE = 3.1  
 >>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<  
 \*\*\*\*\*

ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1 THROUGH A FLOW-THROUGH DETENTION BASIN  
 SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 DEAD STORAGE(AF) = 0.000  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.000  
 SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET = 0.000  
 DETENTION BASIN CONSTANT LOSS RATE(CFS) = 0.00

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.13	1.80	0.002
3	0.33	1.90	0.050
4	0.53	2.10	0.180
5	0.73	2.20	0.440
6	0.93	2.30	0.770
7	1.13	2.50	1.150
8	1.33	2.60	1.570
9	1.53	2.70	2.020
10	1.73	2.80	2.520
11	1.93	2.90	3.050
12	2.13	3.00	3.630

\*\*\*\*\*  
 MODIFIED-PULS BASIN ROUTING MODEL RESULTS(5-MINUTE COMPUTATION INTERVALS):  
 (Note: Computed EFFECTIVE DEPTH and VOLUME are estimated at the clock time;  
 MEAN OUTFLOW is the average value during the unit interval.)

CLOCK TIME (HRS)	DEAD-STORAGE FILLED(AF)	INFLOW (CFS)	LOSS (CFS)	MEAN EFFECTIVE DEPTH(FT)	OUTFLOW (CFS)	EFFECTIVE VOLUME(AF)
------------------	-------------------------	--------------	------------	--------------------------	---------------	----------------------

FLOOD ROUTING ANALYSIS  
 USING COUNTY HYDROLOGY MANUAL OF SAN BERNARDINO(1986)  
 (c) Copyright 1989-2016 Advanced Engineering Software (aes)  
 Ver. 23.0 Release Date: 07/01/2016 License ID 1435

Analysis prepared by:

\*\*\*\*\* DESCRIPTION OF STUDY \*\*\*\*\*  
 \* JOB #3654 MERRILL BUSINESS CENTER, ONTARIO \*  
 \* 100-YEAR DETENTION \*  
 \* BUILDING 2 SOUTH TRUCK YARD, NODE 218 \*  
 \*\*\*\*\*

FILE NAME: W:\3654\BLDG2S.DAT  
 TIME/DATE OF STUDY: 23:13 12/12/2020

\*\*\*\*\*  
 FLOW PROCESS FROM NODE 216.00 TO NODE 216.00 IS CODE = 1

-----  
 >>>>SUBAREA RUNOFF (UNIT-HYDROGRAPH ANALYSIS)<<<<<  
 =====

(UNIT-HYDROGRAPH ADDED TO STREAM #1)

WATERSHED AREA = 15.550 ACRES  
 BASEFLOW = 0.000 CFS/SQUARE-MILE  
 \*USER ENTERED "LAG" TIME = 0.163 HOURS  
 CAUTION: LAG TIME IS LESS THAN 0.50 HOURS.  
 THE 5-MINUTE PERIOD UH MODEL (USED IN THIS COMPUTER PROGRAM)  
 MAY BE TOO LARGE FOR PEAK FLOW ESTIMATES.  
 VALLEY(DEVELOPED) S-GRAPH SELECTED  
 MAXIMUM WATERSHED LOSS RATE(INCH/HOUR) = 0.042  
 LOW LOSS FRACTION = 0.079  
 \*HYDROGRAPH MODEL #1 SPECIFIED\*

SPECIFIED PEAK 5-MINUTES RAINFALL(INCH)= 0.37  
 SPECIFIED PEAK 30-MINUTES RAINFALL(INCH)= 0.75  
 SPECIFIED PEAK 1-HOUR RAINFALL(INCH) = 1.00  
 SPECIFIED PEAK 3-HOUR RAINFALL(INCH) = 1.90  
 SPECIFIED PEAK 6-HOUR RAINFALL(INCH) = 2.90  
 SPECIFIED PEAK 24-HOUR RAINFALL(INCH) = 5.90

PRECIPITATION DEPTH-AREA REDUCTION FACTORS:  
 5-MINUTE FACTOR = 0.999  
 30-MINUTE FACTOR = 0.999  
 1-HOUR FACTOR = 0.999  
 3-HOUR FACTOR = 1.000  
 6-HOUR FACTOR = 1.000  
 24-HOUR FACTOR = 1.000

UNIT HYDROGRAPH TIME UNIT = 5.000 MINUTES  
 UNIT INTERVAL PERCENTAGE OF LAG-TIME = 51.125

-----  
 UNIT HYDROGRAPH DETERMINATION

INTERVAL NUMBER	"S" GRAPH MEAN VALUES	UNIT HYDROGRAPH ORDINATES(CFS)
1	4.647	8.740

 FLOW PROCESS FROM NODE 216.00 TO NODE 216.00 IS CODE = 3.1

>>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<<

ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1  
 THROUGH A FLOW-THROUGH DETENTION BASIN  
 SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 DEAD STORAGE(AF) = 0.000  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.000  
 SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET = 0.000  
 DETENTION BASIN CONSTANT LOSS RATE(CFS) = 0.00

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.15	2.90	0.010
3	0.35	3.10	0.050
4	0.55	3.30	0.180
5	0.75	3.50	0.390
6	0.95	3.70	0.650
7	1.15	3.90	0.950
8	1.35	4.10	1.280
9	1.55	4.30	1.660
10	1.75	4.40	2.080
11	1.95	4.50	2.540
12	2.00	4.60	2.660

MODIFIED-PULS BASIN ROUTING MODEL RESULTS(5-MINUTE COMPUTATION INTERVALS):  
 (Note: Computed EFFECTIVE DEPTH and VOLUME are estimated at the clock time;  
 MEAN OUTFLOW is the average value during the unit interval.)

CLOCK

 FLOW PROCESS FROM NODE 241.00 TO NODE 241.00 IS CODE = 3.1

>>>>FLOW-THROUGH DETENTION BASIN ROUTING MODEL APPLIED TO STREAM #1<<<<<<  
 =====

ROUTE RUNOFF HYDROGRAPH FROM STREAM NUMBER 1  
 THROUGH A FLOW-THROUGH DETENTION BASIN  
 SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 DEAD STORAGE(AF) = 0.000  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.000  
 SPECIFIED EFFECTIVE VOLUME(AF) FILLED ABOVE OUTLET = 0.000  
 DETENTION BASIN CONSTANT LOSS RATE(CFS) = 0.00

BASIN DEPTH VERSUS OUTFLOW AND STORAGE INFORMATION:

INTERVAL NUMBER	DEPTH (FT)	OUTFLOW (CFS)	STORAGE (AF)
1	0.00	0.00	0.000
2	0.11	2.80	0.002
3	0.31	3.00	0.050
4	0.51	3.20	0.200
5	0.71	3.40	0.480
6	0.91	3.60	0.850
7	1.11	3.80	1.250
8	1.31	4.00	1.710
9	1.51	4.20	2.200
10	1.71	4.40	2.740
11	1.91	4.50	3.320
12	2.11	4.60	3.940

=====

MODIFIED-PULS BASIN ROUTING MODEL RESULTS(5-MINUTE COMPUTATION INTERVALS):  
 (Note: Computed EFFECTIVE DEPTH and VOLUME are estimated at the clock time;  
 MEAN OUTFLOW is the average value during the unit interval.)

CLOCK TIME (HRS)	DEAD-STORAGE FILLED(AF)	INFLOW (CFS)	LOSS (CFS)	EFFECTIVE DEPTH(FT)	MEAN OUTFLOW (CFS)	EFFECTIVE VOLUME(AF)
------------------	-------------------------	--------------	------------	---------------------	--------------------	----------------------

-----  
 TIME DURATION(minutes) OF PERCENTILES OF ESTIMATED PEAK FLOW RATE:  
 (Note: 100% of Peak Flow Rate estimate assumed to have  
 an instantaneous time duration)

Percentile of Estimated Peak Flow Rate	Duration (minutes)
0%	1447.6
10%	282.0
20%	28.2
30%	18.8
40%	9.4
50%	9.4
60%	9.4
70%	9.4
80%	9.4
90%	9.4

Problem Descriptions:  
 JOB #3654 SOUTH ONTARIO LOGISTICS CENTER, ONTARIO  
 100-YEAR DETENTION  
 BUILDING 4 TRUCK YARD (NODE 182)

=====

FLOW-THROUGH DETENTION BASIN MODEL

SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 CONSTANT HYDROGRAPH TIME UNIT(MINUTES) = 9.400  
 DEAD STORAGE(AF) = 0.00  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.00  
 ASSUMED INITIAL DEPTH(FEET) IN STORAGE BASIN = 0.00

DEPTH-VS.-STORAGE AND DEPTH-VS.-DISCHARGE INFORMATION:

TOTAL NUMBER OF BASIN DEPTH INFORMATION ENTRIES = 9

* BASIN-DEPTH (FEET)	STORAGE (ACRE-FEET)	OUTFLOW (CFS)	** BASIN-DEPTH (FEET)	STORAGE (ACRE-FEET)	OUTFLOW (CFS)
* 0.000	0.000	0.000**	0.120	0.001	1.020*
* 0.320	0.005	1.110**	0.520	0.020	1.190*
* 0.720	0.060	1.260**	0.920	0.120	1.330*
* 1.120	0.200	1.400**	1.320	0.280	1.470*
* 1.480	0.360	1.520**			

BASIN STORAGE, OUTFLOW AND DEPTH ROUTING VALUES:

INTERVAL NUMBER	DEPTH (FEET)	{S-0*DT/2} (ACRE-FEET)	{S+0*DT/2} (ACRE-FEET)
1	0.00	0.00000	0.00000
2	0.12	-0.00560	0.00760
3	0.32	-0.00219	0.01219
4	0.52	0.01230	0.02770
5	0.72	0.05184	0.06816

7	1.12	0.19094	0.20906
8	1.32	0.27048	0.28952
9	1.48	0.35016	0.36984

WHERE S=STORAGE(AF);O=OUTFLOW(AF/MIN.);DT=UNIT INTERVAL(MIN.)

DETENTION BASIN ROUTING RESULTS:

NOTE: COMPUTED BASIN DEPTH, OUTFLOW, AND STORAGE QUANTITIES OCCUR AT THE GIVEN TIME. BASIN INFLOW VALUES REPRESENT THE AVERAGE INFLOW DURING THE RECENT HYDROGRAPH UNIT INTERVAL.

TIME (HRS)	DEAD-STORAGE FILLED(AF)	INFLOW (CFS)	EFFECTIVE DEPTH(FT)	OUTFLOW (CFS)	EFFECTIVE VOLUME(AF)

 Problem Descriptions:

JOB #3654 SOUTH ONTARIO LOGISTICS CENTER, ONTARIO  
 100-YEAR DETENTION  
 BUILDING 5 TRUCK YARD (NODE 171)  
 -----

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
 TOTAL CATCHMENT AREA(ACRES) = 4.10  
 SOIL-LOSS RATE, Fm,(INCH/HR) = 0.042  
 LOW LOSS FRACTION = 0.079  
 TIME OF CONCENTRATION(MIN.) = 8.80  
 SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
 USER SPECIFIED RAINFALL VALUES ARE USED  
 RETURN FREQUENCY(YEARS) = 100  
 5-MINUTE POINT RAINFALL VALUE(INCHES) = 0.37  
 30-MINUTE POINT RAINFALL VALUE(INCHES) = 0.75  
 1-HOUR POINT RAINFALL VALUE(INCHES) = 1.00  
 3-HOUR POINT RAINFALL VALUE(INCHES) = 1.90  
 6-HOUR POINT RAINFALL VALUE(INCHES) = 2.90  
 24-HOUR POINT RAINFALL VALUE(INCHES) = 5.90

-----  
 TOTAL CATCHMENT RUNOFF VOLUME(ACRE-FEET) = 1.67  
 TOTAL CATCHMENT SOIL-LOSS VOLUME(ACRE-FEET) = 0.34

-----  
 TIME DURATION(minutes) OF PERCENTILES OF ESTIMATED PEAK FLOW RATE:  
 (Note: 100% of Peak Flow Rate estimate assumed to have  
 an instantaneous time duration)

Percentile of Estimated Peak Flow Rate	Duration (minutes)
0%	1443.2
10%	255.2
20%	26.4
30%	17.6
40%	8.8
50%	8.8
60%	8.8
70%	8.8

80% 8.8  
90% 8.8

Problem Descriptions:  
JOB #3654 SOUTH ONTARIO LOGISTICS CENTER, ONTARIO  
100-YEAR DETENTION  
BUILDING 5 TRUCK YARD (NODE 171)

-----  
FLOW-THROUGH DETENTION BASIN MODEL

SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
CONSTANT HYDROGRAPH TIME UNIT(MINUTES) = 8.800  
DEAD STORAGE(AF) = 0.00  
SPECIFIED DEAD STORAGE(AF) FILLED = 0.00  
ASSUMED INITIAL DEPTH(FEET) IN STORAGE BASIN = 0.00

DEPTH-VS.-STORAGE AND DEPTH-VS.-DISCHARGE INFORMATION:

TOTAL NUMBER OF BASIN DEPTH INFORMATION ENTRIES = 7

* (FEET)	(ACRE-FEET)	STORAGE (CFS)	OUTFLOW (CFS)	** (FEET)	(ACRE-FEET)	**BASIN-DEPTH STORAGE (CFS)	OUTFLOW *
* 0.000	0.000	0.000	0.000**	0.220	0.002	0.002	1.060*
* 0.420	0.020	1.150**	0.620	0.620	0.050	0.050	1.230*
* 0.820	0.110	1.300**	1.020	1.020	0.200	0.200	1.370*
* 1.220	0.300	1.430**					

-----  
BASIN STORAGE, OUTFLOW AND DEPTH ROUTING VALUES:

INTERVAL NUMBER	DEPTH (FEET)	{S-O*DT/2} (ACRE-FEET)	{S+O*DT/2} (ACRE-FEET)

-----  
 TIME DURATION(minutes) OF PERCENTILES OF ESTIMATED PEAK FLOW RATE:  
 (Note: 100% of Peak Flow Rate estimate assumed to have  
 an instantaneous time duration)

Percentile of Estimated Peak Flow Rate	Duration (minutes)
0%	1444.2
10%	252.3
20%	26.1
30%	17.4
40%	8.7
50%	8.7

60% 8.7  
 70% 8.7  
 80% 8.7  
 90% 8.7

Problem Descriptions:  
 JOB #3654 SOUTH ONTARIO LOGISTICS CENTER, ONTARIO  
 100-YEAR DETENTION  
 BUILDING 6 TRUCK YARD (NODE 151)

-----  
 FLOW-THROUGH DETENTION BASIN MODEL

SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 CONSTANT HYDROGRAPH TIME UNIT(MINUTES) = 8.700  
 DEAD STORAGE(AF) = 0.00  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.00  
 ASSUMED INITIAL DEPTH(FEET) IN STORAGE BASIN = 0.00

DEPTH-VS.-STORAGE AND DEPTH-VS.-DISCHARGE INFORMATION:

TOTAL NUMBER OF BASIN DEPTH INFORMATION ENTRIES = 6

* (FEET)	STORAGE (ACRE-FEET)	OUTFLOW (CFS)	** (FEET)	STORAGE (ACRE-FEET)	OUTFLOW (CFS)
* 0.000	0.000	0.000**	0.140	0.001	1.800*
* 0.340	0.010	2.000**	0.540	0.030	2.100*
* 0.740	0.080	2.200**	0.940	0.160	2.400*

BASIN STORAGE, OUTFLOW AND DEPTH ROUTING VALUES:

INTERVAL NUMBER	DEPTH (FEET)	{S-0*DT/2} (ACRE-FEET)	{S+0*DT/2} (ACRE-FEET)
1	0.00	0.00000	0.00000
2	0.14	-0.00979	0.01179
3	0.34	-0.00198	0.02198
4	0.54	0.01742	0.04258
5	0.74	0.06682	0.09318
6	0.94	0.14562	0.17438

WHERE S=STORAGE(AF);O=OUTFLOW(AF/MIN.);DT=UNIT INTERVAL(MIN.)

DETENTION BASIN ROUTING RESULTS:

NOTE: COMPUTED BASIN DEPTH, OUTFLOW, AND STORAGE QUANTITIES OCCUR AT THE GIVEN TIME. BASIN INFLOW VALUES REPRESENT THE AVERAGE INFLOW DURING THE RECENT HYDROGRAPH UNIT INTERVAL.

TIME (HRS)	DEAD-STORAGE FILLED(AF)	INFLOW (CFS)	EFFECTIVE DEPTH(FT)	OUTFLOW (CFS)	EFFECTIVE VOLUME(AF)

Problem Descriptions:  
 JOB #3654 SOUTH ONTARIO LOGISTICS CENTER, ONTARIO  
 100-YEAR DETENTION  
 BUILDING 7 TRUCK YARD (NODE 131)

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
 TOTAL CATCHMENT AREA(ACRES) = 3.75  
 SOIL-LOSS RATE, Fm, (INCH/HR) = 0.042  
 LOW LOSS FRACTION = 0.079  
 TIME OF CONCENTRATION(MIN.) = 8.10  
 SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
 USER SPECIFIED RAINFALL VALUES ARE USED  
 RETURN FREQUENCY(YEARS) = 100  
 5-MINUTE POINT RAINFALL VALUE(INCHES) = 0.37  
 30-MINUTE POINT RAINFALL VALUE(INCHES) = 0.75  
 1-HOUR POINT RAINFALL VALUE(INCHES) = 1.00  
 3-HOUR POINT RAINFALL VALUE(INCHES) = 1.90  
 6-HOUR POINT RAINFALL VALUE(INCHES) = 2.90  
 24-HOUR POINT RAINFALL VALUE(INCHES) = 5.90

TOTAL CATCHMENT RUNOFF VOLUME(ACRE-FEET) = 1.53  
 TOTAL CATCHMENT SOIL-LOSS VOLUME(ACRE-FEET) = 0.32

-----  
 TIME DURATION(minutes) OF PERCENTILES OF ESTIMATED PEAK FLOW RATE:

(Note: 100% of Peak Flow Rate estimate assumed to have an instantaneous time duration)

Percentile of Estimated Peak Flow Rate	Duration (minutes)
0%	1441.8
10%	226.8
20%	24.3
30%	16.2
40%	8.1
50%	8.1
60%	8.1
70%	8.1
80%	8.1
90%	8.1

Problem Descriptions:  
 JOB #3654 SOUTH ONTARIO LOGISTICS CENTER, ONTARIO  
 100-YEAR DETENTION  
 BUILDING 7 TRUCK YARD (NODE 131)

FLOW-THROUGH DETENTION BASIN MODEL

SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 CONSTANT HYDROGRAPH TIME UNIT(MINUTES) = 8.100  
 DEAD STORAGE(AF) = 0.00  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.00  
 ASSUMED INITIAL DEPTH(FEET) IN STORAGE BASIN = 0.00

DEPTH-VS.-STORAGE AND DEPTH-VS.-DISCHARGE INFORMATION:

TOTAL NUMBER OF BASIN DEPTH INFORMATION ENTRIES = 8

* (FEET)	STORAGE (ACRE-FEET)	OUTFLOW (CFS)	** (FEET)	STORAGE (ACRE-FEET)	OUTFLOW (CFS)
* 0.000	0.000	0.000**	0.110	0.001	1.010*
* 0.310	0.010	1.100**	0.510	0.030	1.180*
* 0.710	0.080	1.260**	0.910	0.150	1.330*
* 1.110	0.240	1.400**	1.230	0.310	1.440*

BASIN STORAGE, OUTFLOW AND DEPTH ROUTING VALUES:

INTERVAL NUMBER	DEPTH (FEET)	{S-O*DT/2} (ACRE-FEET)	{S+O*DT/2} (ACRE-FEET)
1	0.00	0.00000	0.00000
2	0.11	-0.00463	0.00663
3	0.31	0.00386	0.01614
4	0.51	0.02342	0.03658
5	0.71	0.07297	0.08703
6	0.91	0.14258	0.15742
7	1.11	0.23219	0.24781
8	1.23	0.30197	0.31803

WHERE S=STORAGE(AF);O=OUTFLOW(AF/MIN.);DT=UNIT INTERVAL(MIN.)

DETENTION BASIN ROUTING RESULTS:

NOTE: COMPUTED BASIN DEPTH, OUTFLOW, AND STORAGE QUANTITIES OCCUR AT THE GIVEN TIME. BASIN INFLOW VALUES REPRESENT THE AVERAGE INFLOW DURING THE RECENT HYDROGRAPH UNIT INTERVAL.

TIME (HRS)	DEAD-STORAGE FILLED(AF)	INFLOW (CFS)	EFFECTIVE DEPTH(FT)	OUTFLOW (CFS)	BLDG7.txt EFFECTIVE VOLUME(AF)

Problem Descriptions:

JOB #3654 SOUTH ONTARIO LOGISTIC CENTER, ONTARIO  
 100-YEAR DETENTION  
 BUILDING 8 TRUCK YARD (NODE 112)

-----

RATIONAL METHOD CALIBRATION COEFFICIENT = 0.90  
 TOTAL CATCHMENT AREA(ACRES) = 4.65  
 SOIL-LOSS RATE, Fm, (INCH/HR) = 0.042  
 LOW LOSS FRACTION = 0.079  
 TIME OF CONCENTRATION(MIN.) = 8.70  
 SMALL AREA PEAK Q COMPUTED USING PEAK FLOW RATE FORMULA  
 USER SPECIFIED RAINFALL VALUES ARE USED  
 RETURN FREQUENCY(YEARS) = 100  
 5-MINUTE POINT RAINFALL VALUE(INCHES) = 0.37  
 30-MINUTE POINT RAINFALL VALUE(INCHES) = 0.75  
 1-HOUR POINT RAINFALL VALUE(INCHES) = 1.00  
 3-HOUR POINT RAINFALL VALUE(INCHES) = 1.90  
 6-HOUR POINT RAINFALL VALUE(INCHES) = 2.90  
 24-HOUR POINT RAINFALL VALUE(INCHES) = 5.90

-----

TOTAL CATCHMENT RUNOFF VOLUME(ACRE-FEET) = 1.90  
 TOTAL CATCHMENT SOIL-LOSS VOLUME(ACRE-FEET) = 0.39

=====

FLOW-THROUGH DETENTION BASIN MODEL

SPECIFIED BASIN CONDITIONS ARE AS FOLLOWS:  
 CONSTANT HYDROGRAPH TIME UNIT(MINUTES) = 8.700  
 DEAD STORAGE(AF) = 0.00  
 SPECIFIED DEAD STORAGE(AF) FILLED = 0.00  
 ASSUMED INITIAL DEPTH(FEET) IN STORAGE BASIN = 0.00

DEPTH-VS.-STORAGE AND DEPTH-VS.-DISCHARGE INFORMATION:

TOTAL NUMBER OF BASIN DEPTH INFORMATION ENTRIES = 7

* (FEET)	* (ACRE-FEET)	OUTFLOW (CFS)	** (FEET)	STORAGE (ACRE-FEET)	OUTFLOW (CFS)
0.000	0.000	0.000**	0.090	0.001	1.700*
0.290	0.004	1.900**	0.490	0.020	2.100*
0.690	0.070	2.200**	0.890	0.140	2.300*
1.010	0.190	2.400**			

BASIN STORAGE, OUTFLOW AND DEPTH ROUTING VALUES:

INTERVAL NUMBER	DEPTH (FEET)	{S-O*DT/2} (ACRE-FEET)	{S+O*DT/2} (ACRE-FEET)

## Preliminary Water Quality Management Plan (PWQMP)

For compliance with Santa Ana Regional Water Quality Control Board

Order Number R8-2010-0036 (NPDES Permit No. CAS618036)

**for**

**Project Name:** South Ontario Logistics Center

**Ontario Project #:** XXXXX

**Project Description:** Light Industrial

**Applicant Name:** Real Estate Development Associates

**Applicant Address:** 4450 MacArthur Boulevard, Suite 100  
Newport Beach, CA 92660

**Project Address:** NEC of Merrill Avenue and Bon View Avenue

**Size of Development:** 130.35 acres

**1<sup>st</sup> Submittal Date: 12/14/2020**

# Preliminary Water Quality Management Plan (PWQMP)

## 1. Introduction

The Preliminary Water Quality Management Plan (PWQMP) is a planning tool to improve integration of required water quality elements, stormwater management, water conservation, rainwater harvesting and re-use, and flood management in land use planning and the City's development process. The Preliminary WQMP will assist project applicants and planners in properly designing and laying out project sites so that water quality may be incorporated in the most effective manner and at the lowest cost for the developer.

The San Bernardino County Municipal Separate Storm Sewer System Permit (MS4 Permit) requires project-specific Water Quality Management plans (WQMP) to be prepared for all priority new development and significant redevelopment projects listed in Section 2 of this document. The MS4 Permit stipulates that the City of Ontario require priority project applicants to submit a Preliminary project-specific WQMP, as early as possible, during the environmental review or planning phase of a development project and that the Preliminary WQMP be approved prior to the issuance of land use entitlement.

## 2. Priority Projects (requiring a Preliminary WQMP)

Land Use entitlement shall not be issued for any of the listed projects, below, until a Preliminary WQMP has been approved by the City's Engineering Department. For construction projects not going through entitlement, a Preliminary and Final project-specific WQMP shall be approved, prior to the issuance of construction permits:

Check the appropriate project category below, for this project:

<b>Check below</b>	<b>Project Categories</b>
	1. All significant re-development projects. Significant re-development is defined as the addition or replacement of 5,000 or more square feet of impervious surface on an already developed site subject to discretionary approval of the Permittee. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing developed site, and the existing development was not subject to WQMP requirements, the numeric sizing criteria discussed below applies only to the addition or replacement, and not to the entire developed site. Where redevelopment results in an increase of fifty percent or more of the impervious surfaces of a previously existing developed site, the numeric sizing criteria applies to the entire development (new and existing).

**Check  
below**

**Project Categories**

<b>X</b>	2. New development projects that create 10,000 square feet or more of impervious surface (collectively over the entire project site) including commercial, industrial, residential housing subdivisions (i.e., detached single family home subdivisions, multi-family attached subdivisions or townhomes, condominiums, apartments, etc.), mixed-use, and public projects. This category includes development projects on public and private land, which fall under the planning and building authority of the permitting agency.
	3. Automotive repair shops (with SIC codes 5013, 5014, 5541, 7532- 7534, 7536-7539).
	4. Restaurants and Food Service Establishments where the land area of development is 5,000 square feet or more.
	5. Developments of 2,500 square feet of impervious surface or more adjacent to (within 200 feet) or discharging directly into environmentally sensitive areas (ESA's) such as areas designated in the Ocean Plan as areas of special biological significance or waterbodies listed on the CWA Section 303(d) list of impaired waters.
	6. Parking lots of 5,000 square feet or more exposed to storm water. Parking lot is defined as land area or facility for the temporary storage of motor vehicles.
	7. Retail Gasoline Outlets (RGOs) that are either 5,000 sq ft or more, or have a projected average daily traffic of 100 or more vehicles per day.
	8. *This project is not covered under any of the categories listed above.

\* If the development is not covered under any of the project categories listed in Section 2, the project is not required to design and install Site Design/LID BMPs or Treatment Control BMPs to treat the design storm event (Design Capture Volume) described in Section 4.

### **3. Preliminary WQMP Objectives**

Through a combination of Site Design/LID BMPs (where feasible), Source Control, and/or Treatment Control BMPs, project-specific WQMPs shall address all identified pollutants and hydrologic conditions of concern from new development and significant re-development projects for the categories of projects (priority projects) listed in Section 2. Under each type of BMP, listed below, please indicate which BMPs are planned to be implemented and included in the Final WQMP for the project:

#### **A. Site Design/LID (Low Impact Design) for Reducing Stormwater Runoff:**

The MS4 Permit requires each priority development project to infiltrate, harvest and use, evapotranspire, or bio-treat the runoff from a 2-yr, 24-hour storm event (Design Capture Volume). If site conditions do not permit infiltration, harvest and use, evapotranspiration, and/or bio-treatment of the entire Design Capture Volume, at the project site, Site Design/LID techniques are required to be implemented to the Maximum Extent Practicable, at the project site, and the remainder of the DCV shall be infiltrated, harvested, bio-treated or treated by alternative measures.

Project applicants shall submit a Preliminary WQMP that documents the LID/Site Design BMPs, proposed for the project. Please indicate, in the table below, which Site Design/LID BMPs will be utilized on this project to accomplish this requirement:

Site Design/LID Practice	Planned	Not Planned
Provide at least the minimum effective area required for LID BMPs, to comply with the WQMP (see Table 3-1 below).		X <sup>1</sup>
Grade parking lot areas/drive aisles/roof drains to sheet flow runoff into landscaped swales, via curb cuts or zero-face curbs or otherwise disconnect direct drainage from MS4.		X <sup>1</sup>
Design landscaped areas as swales and grade to accept runoff from building roofs, parking lots and project roadways.		X <sup>1</sup>
Install surface retention basins or infiltration trenches to receive impervious area runoff.		X <sup>2</sup>
Install pervious pavement in parking stalls, alleys, driveways, gutters, walkways, trails or patios.		X <sup>2</sup>
Install underground stormwater retention chambers where downstream landscaped areas are limited.		X <sup>2</sup>
Install approved Stormwater Drywells in detention areas.		X <sup>2</sup>
Construct streets, sidewalks, and parking lot stalls to the minimum widths necessary.	X	
Install on-site Biotreatment basins/trenches with underdrains, where soil type is poorly draining.	X	
Install "Engineered Soil" to increase uptake/soil storage capacity and/or evapotranspiration.		X <sup>2</sup>
Install Rainwater Harvesting/Use Equipment.		X <sup>3</sup>
Utilize approved off-site retention/infiltration, biotreatment or proprietary treatment, where it is infeasible to install, on-site.		X <sup>2</sup>

<sup>1</sup> Project capable of treating the full DCV onsite and not required to demonstrate this site design.

<sup>2</sup> The site will be captured and treated by the proposed Contech underground CMP systems (CMP) and Maxwell Drywells.

<sup>3</sup> Concept not utilized because the impervious area is much greater than landscape.

Table 3-1 Minimum Effective Area<sup>1</sup> Required for LID BMPs (surface + subsurface facilities) for Project WQMP to Demonstrate Infeasibility<sup>2</sup> (% of site)

Project Type	New Development	Re-Development
SF/MF Residential < 7 du/ac	10%	5%
SF/MF Residential < 7 - 18 du/ac	7%	3.5%
SF/MF Residential > 18 du/ac	5%	2.5%
Mixed Use, Commercial/Industrial w/FAR < 1.0	10%	5%
Mixed Use, Commercial/Industrial w/FAR 1.0-2.0	7%	3.5%
Mixed Use, Commercial/Industrial w/FAR > 2.0	5%	2.5%
Podium (parking under > 75% of project)	3%	1.5%
Zoning allowing development to property lines	2%	1%
Transit Oriented Development <sup>3</sup>	5%	2.5%
Parking	5%	2.5%

<sup>1</sup> “Effective area” is defined as land area which 1) is suitable for a retention/infiltration BMP (based on infeasibility criteria) and 2) is located down-gradient from building roof or paved areas, so that it may receive gravity flow runoff.

<sup>2</sup> Criteria only required if the project WQMP seeks to demonstrate that the full DCV cannot be feasibly managed on-site.

<sup>3</sup> Transit oriented development is defined as a project with development center within one half mile of a mass transit center.

Key: du/ac = dwelling units/acre, FAR = Floor Area Ratio = ratio of gross floor area of building to gross lot area, MF = Multi Family, SF = Single Family

**B. Source Control BMPs** – The following BMPs are designed to control stormwater pollutants and runoff water at the location where it is generated. Please indicate which of the listed BMPs are planned to be implemented for the project:

Source Control BMPs	Planned	Not Planned
Minimize non-stormwater site runoff through efficient irrigation system design and controllers.	X	
Minimize trash and debris in storm runoff through a regular parking lot, storage yard and roadway sweeping program.	X	
Provide proper covers/roofs and secondary containment for outside material storage & work areas.		X <sup>1</sup>
Provide solid roofs over all trash enclosures.	X	
Site Owner(s)/Property Manager/HOA or POA will be familiar with the project WQMP and stormwater BMPs.	X	
Owner or HOA or POA to provide Education/Training of site occupants and employees on stormwater BMPs.	X	
Install stormwater placards/stenciled messages with a “No Dumping” message on all on-site/off-site storm drain inlets.	X	
Provide contained equipment/vehicle wash rack areas that discharge to sanitary sewer.		X <sup>2</sup>

<sup>1</sup> Not applicable. No outside material storage or work areas. Secondary containment not needed.

<sup>2</sup> Not applicable, no vehicle wash areas.

**C. Treatment Control BMPs** – The following BMPs are designed to control stormwater pollutants where it is not feasible to install on-site Site Design/LID BMPs, with the requisite capacity to treat the Design Capture Volume for identified Pollutants of Concern or where pretreatment of stormwater runoff is required, ahead of infiltration BMPs. Please indicate which of the listed BMPs are planned to be implemented for the project:

Treatment Control BMP	Planned	Not Planned
Gravity Separator devices for pretreatment of sediment, trash/litter or Oil & Grease	X <sup>1</sup>	
Proprietary Biofiltration vaults/devices		X
Media Cartridge Filtration Vaults		X
Proprietary Filter Inserts for on-site storm drain inlets or retention basin/trench overflow drains		X
Regional Treatment facilities are installed or are planned for installation, off-site, and provide a superior level of treatment or clear advantage to on-site treatment BMPs		X

<sup>1</sup>The site will be pre-treated by the proposed Bio Clean Hydrodynamic Separators (DSBB).

<sup>2</sup>The site will be captured and treated by the proposed Contech underground CMP systems (CMP) and Maxwell Drywells.

**4. Volume-based calculation (approximate) for sizing on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities**

- 1) Calculate the “Watershed Imperviousness Ratio”, *i*, which is equal to the percent of impervious area in the BMP Drainage Area (DA) divided by 100.
- 2) Calculate the composite runoff coefficient *C<sub>BMP</sub>* for the Drainage Area (DA) above using the following equation:

$$C_{BMP} = 0.858i^3 - 0.78i^2 + 0.774i + 0.04$$

where: *C<sub>BMP</sub>* = composite runoff coefficient; and,  
*i* = watershed imperviousness ratio.

- 3) Determine the area-averaged “6-hour Mean Storm Rainfall”, *P<sub>6</sub>*, for the Drainage Area (DA). This is calculated by multiplying the area averaged 2-year 1-hour value (0.55”-0.6”) by the appropriate regression coefficient from Table 1 (1.4807). The 2-yr, 1-hr value for southern Ontario is approximately to 0.5” (*P<sub>6</sub>* = 0.5\*1.4807 = 0.74 and northern Ontario is approximately 0.6” in/hr (*P<sub>6</sub>* = 0.6\*1.4807 = 0.89).
- 4) Determine the appropriate drawdown time. Use the regression constant *a* = 1.582 for 24 hours and *a* = 1.963 for 48 hours. *Note: Regression constants are provided for both 24 hour and 48 hour drawdown times; however, 48 hour drawdown times should be used in most areas of California. Drawdown times in excess of 48 hours should be used with caution as vector breeding can be a problem after water has stood in excess of 72 hours. (Use of the 24 hour drawdown time should be limited to drainage areas with coarse soils (Class ‘A’ soils, that readily drain.)*

5) Calculate the “Maximized Detention Volume”,  $P_0$ , using the following equation:

$$P_0 = a \cdot C_{BMP} \cdot P_6$$

where:  $P_0$  = Maximized Detention Volume, in inches  
 $a$  = 1.582 for 24 hour and  $a$  = 1.963 for 48 hour drawdown,  
 $C_{BMP}$  = composite runoff coefficient; and,  
 $P_6$  = 6-hour Mean Storm Rainfall, in inches

6) Calculate the “Target Capture Volume”,  $V_0$ , using the following equation:

$$V_0 = (P_0 \cdot A) / 12$$

where:  $V_0$  = Target Capture Volume, in acre-feet  
 $P_0$  = Maximized Detention Volume, in inches; and,  
 $A$  = BMP Drainage Area (DA), in acres

**Project Volume-based calculation (approximate) for planned on-site or off-site Stormwater Retention/Infiltration, Harvest & Re-Use or Biotreatment facilities:**

Variable	Factor/Formula	DA 1 DMA A CMP & DRY WELL #1	DA 1 DMA B CMP & DRY WELL #2	DA 1 DMA C CMP & DRY WELL #3	DA 1 DMA D CMP & DRY WELL #4

\*Volume treated utilizing the Contech underground CMP systems (CMP) and Maxwell Drywells. Refer to the DCV Calculations section for calculations.

\*\*For P<sub>6</sub> value, use site coordinates and NOAA website to determine project's average 2-yr, 1-hr rainfall depth, at: [http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca\\_pfds.html](http://hdsc.nws.noaa.gov/hdsc/pfds/sa/sca_pfds.html).

Refer to the DCV Calculations section for onsite flow-based calculations.

**5. Hydrologic Conditions of Concern (HCOC) and use of the on-line San Bernardino County HCOC Map for determining necessary mitigation steps necessary if there are HCOCs downstream of a project:**

Project applicants may access the on-line HCOC Map at: <http://sbcounty.permitrack.com/WAP/>. The map will indicate any hydrology concerns with downstream waterways that are hydraulically connected to the project and will indicate if there are any approved regional projects downstream that could be utilized for off-site mitigation of HCOCs. Please indicate here if the project will or will not be able to retain/infiltrate, harvest and use or biotreat and detain the DCV, on-site, as calculated in Section 4 and if there are HCOCs identified downstream of the project:

Retain or Harvest/Use the DCV on site?	Yes	<b>X</b>	No	
Biotreat the DCV but not infiltrate the runoff?	Yes		No	<b>X</b>
HCOCs identified downstream of site?	Yes	<b>X</b>	No	

If the entire DCV will not be retained on site, the DCV is biotreated but not infiltrated or additional detention capacity is needed to address identified HCOCs, downstream of the site, please list here, what additional mitigation measures will be utilized (on-site or off-site) to address HCOCs (see Section 4.2.1-4.2.3 of the SB County WQMP Technical Guidance):

Additional retention capacity is not required for HCOCs. Refer to HCOC Calculations.

**6. Site Plan and Conceptual Grading/Drainage Plan requirements for submission with the Preliminary WQMP:**

Provide a Site Plan and Conceptual Grading/Drainage Plan along with this Preliminary WQMP, which conceptually shows the proposed locations of buildings, homes, parking lots, parks, new paved roadways, landscaped areas, drainage patterns and drainage sub-areas, methods of conveyance, proposed retention/infiltration, harvest & use or biotreatment facilities that are planned for installation. Where it is determined to be infeasible to capture and detain design storm runoff volumes, on-site, please include other design features, as described in Section 3, above. Include numbered or lettered notes on the Site Plan with a legend detailing other BMPs, as described in Section 3.

## FLOW-BASED BMP DESIGN (ONSITE)

### DA 1 DMA A – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #1

Region		Valley	
Drainage Area (acres)		4.35	acres
Drainage Area (sq-ft)		189,486	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	<b>C =</b>	<b>0.81</b>	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		<b>0.2787</b>	
Intensity BMP (in/hr)		<b>0.318</b>	
Flow (cfs)	Q =	<b>1.12</b>	

Use DSBB-4-8

80% @ 75 Micron treats 1.42 cfs

### DA 1 DMA B – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #2

Region		Valley	
Drainage Area (acres)		4.10	acres
Drainage Area (sq-ft)		178,596	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	<b>C =</b>	<b>0.81</b>	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		<b>0.2787</b>	
Intensity BMP (in/hr)		<b>0.318</b>	
Flow (cfs)	Q =	<b>1.05</b>	

Use DSBB-4-6

80% @ 75 Micron treats 1.06 cfs

### DA 1 DMA C – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #3

Region		Valley	
Drainage Area (acres)		4.00	acres
Drainage Area (sq-ft)		174,240	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	<b>C =</b>	<b>0.81</b>	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		<b>0.2787</b>	
Intensity BMP (in/hr)		<b>0.318</b>	
Flow (cfs)	Q =	<b>1.03</b>	

Use DSBB-4-6

80% @ 75 Micron treats 1.06 cfs

#### DA 1 DMA D – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #4

Region		Valley	
Drainage Area (acres)		3.75	acres
Drainage Area (sq-ft)		163,350	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.81	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		0.2787	
Intensity BMP (in/hr)		0.318	
Flow (cfs)	Q =	0.96	

Use DSBB-4-6

80% @ 75 Micron treats 1.06 cfs

#### DA 1 DMA E – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #5

Region		Valley	
Drainage Area (acres)		4.65	acres
Drainage Area (sq-ft)		202,554	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.81	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		0.2787	
Intensity BMP (in/hr)		0.318	
Flow (cfs)	Q =	1.19	

Use DSBB-4-8

80% @ 75 Micron treats 1.42 cfs

#### DA 2 DMA A – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #6

Region		Valley	
Drainage Area (acres)		23.35	acres
Drainage Area (sq-ft)		1,017,126	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.81	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		0.2787	
Intensity BMP (in/hr)		0.318	
Flow (cfs)	Q =	6.00	

Use DSBB-10-18

80% @ 75 Micron treats 7.98 cfs

### DA 2 DMA B – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #7

Region		Valley	
Drainage Area (acres)		23.40	acres
Drainage Area (sq-ft)		1,019,304	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.81	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		0.2787	
Intensity BMP (in/hr)		0.318	
Flow (cfs)	Q =	6.01	

Use DSBB-10-18

80% @ 75 Micron treats 7.98 cfs

### DA 2 DMA C – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #8

Region		Valley	
Drainage Area (acres)		15.00	acres
Drainage Area (sq-ft)		653,400	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.81	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		0.2787	
Intensity BMP (in/hr)		0.318	
Flow (cfs)	Q =	3.85	

Use DSBB-8-14

80% @ 75 Micron treats 4.96 cfs

### DA 2 DMA D – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #9

Region		Valley	
Drainage Area (acres)		15.55	acres
Drainage Area (sq-ft)		677,358	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.81	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		0.2787	
Intensity BMP (in/hr)		0.318	
Flow (cfs)	Q =	3.99	

Use DSBB-8-14

80% @ 75 Micron treats 4.96 cfs

### DA 2 DMA E – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #10

Region		Valley	
Drainage Area (acres)		21.45	acres
Drainage Area (sq-ft)		934,362	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.81	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		0.2787	
Intensity BMP (in/hr)		0.318	
Flow (cfs)	Q =	5.51	

Use DSBB-8-16

80% @ 75 Micron treats 5.67 cfs

### DA 2 DMA F1 – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #11

Region		Valley	
Drainage Area (acres)		3.00	acres
Drainage Area (sq-ft)		130,680	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.81	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		0.2787	
Intensity BMP (in/hr)		0.318	
Flow (cfs)	Q =	0.77	

Use DSBB-4-6

80% @ 75 Micron treats 1.06 cfs

### DA 2 DMA F2 – BIOCLEAN DEBRIS SEPARATING BAFFLE BOX #12

Region		Valley	
Drainage Area (acres)		5.35	acres
Drainage Area (sq-ft)		233,046	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.81	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
Intensity Coeff		0.2787	
Intensity BMP (in/hr)		0.318	
Flow (cfs)	Q =	1.37	

Use DSBB-4-8

80% @ 75 Micron treats 1.42 cfs

## VOLUME-BASED BMP DESIGN (ONSITE)

### DA 1 DMA A – CMP #1 AND DRY WELL #1

Region		Valley	
Drainage Area (acres)		4.35	acres
Drainage Area (sq-ft)		189,486	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.807	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
P6 Coeff		1.4807	
Mean 6-hr (P6)		0.845	
Drawdown Rate (a)		1.963	
DCV		21,149	cu-ft
DCV		0.486	acre-ft

## MAXWELL IV DRAINAGE SYSTEM CALCULATIONS (DA 1 DMA A)

### Given:

Measured Percolation Rate =	0.3670	cfs
Safety Factor =	2	
Design Percolation Rate =	0.1835	cfs
Design Capture Volume (DCV) =	21,149	ft <sup>3</sup>
Required Drawdown Time =	48	hours
Minimum Depth to Infiltration =	10	ft
Groundwater Depth for Design =	100+	ft
Rock Porosity =	40%	
Duration of Storm When Infiltrating is Occuring as Basin is Filling =	3	hours
Drywell Chamber Diameter =	4	ft
Drywell Chamber Area =	12.57	ft <sup>2</sup>
Drywell Chamber Depth =	25	ft
Drywell Rock Shaft Diameter =	4	ft
Drywell Rock Shaft Area =	12.57	ft <sup>2</sup>
Drywell Rock Shaft Depth =	35	ft

### Volume of disposal for each drywell based on various time frames are included below.

48 hours =	31,709	ft <sup>3</sup>	<i>Design Percolation Rate x Drawdown Time x (3600 sec/1 hour)</i>
3 hours =	1,982	ft <sup>3</sup>	<i>Design Percolation Rate x Drawdown Time x (3600 sec/1 hour)</i>

### Volume provided in each drywell

Volume Provided =	490	ft <sup>3</sup>	<i>(Drywell Chamber Depth x Drywell Chamber Area) + (Drywell Rock Shaft Depth x Drywell Rock Shaft Area x Rock Porosity)</i>
-------------------	-----	-----------------	--

### Maxwell System Design

# of Drywells Provided =	1	
Total Volume Provided in Drywells =	490	ft <sup>3</sup>
Total Volume Infiltrated in 48 hours =	31,709	ft <sup>3</sup>
Total Volume Infiltrated in 3 hours =	1,982	ft <sup>3</sup>
Total Infiltration Flowrate =	0.1835	cfs

The DCV will be stored in an underground system while the DCV infiltrates via drywells.

DCV		0.519	acre-ft

## MAXWELL IV DRAINAGE SYSTEM CALCULATIONS (DA 1 DMA E)

### Given:

Measured Percolation Rate =	0.3670	cfs
Safety Factor =	2	
Design Percolation Rate =	0.1835	cfs
Design Capture Volume (DCV) =	22,607	ft <sup>3</sup>
Required Drawdown Time =	48	hours
Minimum Depth to Infiltration =	10	ft
Groundwater Depth for Design =	100+	ft
Rock Porosity =	40%	
Duration of Storm When Infiltrating is Occuring as Basin is Filling =	3	hours
Drywell Chamber Diameter =	4	ft
Drywell Chamber Area =	12.57	ft <sup>2</sup>
Drywell Chamber Depth =	25	ft
Drywell Rock Shaft Diameter =	4	ft
Drywell Rock Shaft Area =	12.57	ft <sup>2</sup>
Drywell Rock Shaft Depth =	35	ft

### Volume of disposal for each drywell based on various time frames are included below.

48 hours =	31,709	ft <sup>3</sup>	<i>Design Percolation Rate x Drawdown Time x (3600 sec/1 hour)</i>
3 hours =	1,982	ft <sup>3</sup>	<i>Design Percolation Rate x Drawdown Time x (3600 sec/1 hour)</i>

### Volume provided in each drywell

Volume Provided =	490	ft <sup>3</sup>	<i>(Drywell Chamber Depth x Drywell Chamber Area) + (Drywell Rock Shaft Depth x Drywell Rock Shaft Area x Rock Porosity)</i>
-------------------	-----	-----------------	--

### Maxwell System Design

# of Drywells Provided =	1	
Total Volume Provided in Drywells =	490	ft <sup>3</sup>
Total Volume Infiltrated in 48 hours =	31,709	ft <sup>3</sup>
Total Volume Infiltrated in 3 hours =	1,982	ft <sup>3</sup>
Total Infiltration Flowrate =	0.1835	cfs

The DCV will be stored in an underground system while the DCV infiltrates via drywells.

## DA 2 DMA F – CMP #11 AND DRY WELL #11

Region		Valley	
Drainage Area (acres)		8.35	acres
Drainage Area (sq-ft)		363,726	sq-ft
Impervious Coeff	i =	0.95	< 1.0
Runoff Coeff	C =	0.807	
<a href="#">1-hr 2-yr from NOAA</a>		0.571	
P6 Coeff		1.4807	
Mean 6-hr (P6)		0.845	
Drawdown Rate (a)		1.963	
DCV		40,596	cu-ft
DCV		0.932	acre-ft

## MAXWELL IV DRAINAGE SYSTEM CALCULATIONS (DA 2 DMA F)

### Given:

Measured Percolation Rate =	0.3670	cfs
Safety Factor =	2	
Design Percolation Rate =	0.1835	cfs
Design Capture Volume (DCV) =	40,596	ft <sup>3</sup>
Required Drawdown Time =	48	hours
Minimum Depth to Infiltration =	10	ft
Groundwater Depth for Design =	100+	ft
Rock Porosity =	40%	
Duration of Storm When Infiltrating is Occuring as Basin is Filling =	3	hours
Drywell Chamber Diameter =	4	ft
Drywell Chamber Area =	12.57	ft <sup>2</sup>
Drywell Chamber Depth =	25	ft
Drywell Rock Shaft Diameter =	4	ft
Drywell Rock Shaft Area =	12.57	ft <sup>2</sup>
Drywell Rock Shaft Depth =	35	ft

### Volume of disposal for each drywell based on various time frames are included below.

48 hours =	31,709	ft <sup>3</sup>	<i>Design Percolation Rate x Drawdown Time x (3600 sec/1 hour)</i>
3 hours =	1,982	ft <sup>3</sup>	<i>Design Percolation Rate x Drawdown Time x (3600 sec/1 hour)</i>

### Volume provided in each drywell

Volume Provided =	490	ft <sup>3</sup>	<i>(Drywell Chamber Depth x Drywell Chamber Area) + (Drywell Rock Shaft Depth x Drywell Rock Shaft Area x Rock Porosity)</i>
-------------------	-----	-----------------	--

### Maxwell System Design

# of Drywells Provided =	2	
Total Volume Provided in Drywells =	980	ft <sup>3</sup>
Total Volume Infiltrated in 48 hours =	63,418	ft <sup>3</sup>
Total Volume Infiltrated in 3 hours =	3,964	ft <sup>3</sup>
Total Infiltration Flowrate =	0.3670	cfs

The DCV will be stored in an underground system while the DCV infiltrates via drywells.

## Form 4.2-2 of HCOC Assessment

Does project have the potential to cause or contribute to an HCOC in a downstream channel:  Yes  No

Go to: <http://sbcounty.permitrack.com/WAP/>

If "Yes", then complete HCOC assessment of site hydrology for 2yr storm event using Forms 4.2-3 through 4.2-5 and insert results below (Forms 4.2-3 through 4.2-5 may be replaced by computer software analysis based on the San Bernardino County Hydrology Manual)

If "No," then proceed to Section 4.3 Project Conformance Analysis

Condition	Runoff Volume (ft <sup>3</sup> )	Time of Concentration (min)	Peak Runoff (cfs)
<b>Pre-developed</b>	<sup>1</sup> 531,965 <i>Form 4.2-3 Item 12</i>	<sup>2</sup> TBD <i>Form 4.2-4 Item 13</i>	<sup>3</sup> TBD <i>Form 4.2-5 Item 10</i>
<b>Post-developed</b>	<sup>4</sup> 1,017,027 <i>Form 4.2-3 Item 13</i>	<sup>5</sup> TBD <i>Form 4.2-4 Item 14</i>	<sup>6</sup> TBD <i>Form 4.2-5 Item 14</i>
<b>Difference</b>	<sup>7</sup> 485,062 <i>Item 4 – Item 1</i>	<sup>8</sup> TBD <i>Item 5 – Item 2</i>	<sup>9</sup> TBD <i>Item 6 – Item 3</i>
<b>Difference</b> (as % of pre-developed)	<sup>10</sup> 91% <i>Item 7 / Item 1</i>	<sup>11</sup> TBD <i>Item 8 / Item 2</i>	<sup>12</sup> TBD <i>Item 9 / Item 3</i>

To meet HCOC requirements, a mitigation volume must be achieved by using LID and/or hydromodification mitigation BMPs. The mitigation volume is approximately 434,211 cu-ft  $((0.95 * 1,017,027) - 531,965)$ . The total volume being retained is 687,210 cu-ft which is greater than the mitigation volume needed. As a result, the mitigation volume has been contained by the proposed BMPs. Since the mitigation volume has been met, it is physically impossible for the project to avoid increasing the time of concentration and reducing peak runoff by more than five percent of pre-development conditions (see Section 5.6.1 of the Technical Guidance Document for more information).

Percolation Test Results for Drywell #1

Dear Mr. Johnston,

Pursuant to your request, we have performed a constant head percolation test on the Drainage System at the above referenced location.

The test on Drywell No. 1 commenced on 11/05/2019 at 12:08 PM and was completed at 1:53 PM the same day with a total volume flow of 19,578 GAL. The average percolation rate for the well over the last fifteen minutes of the test is 0.367 cubic feet per second.

If you have any questions or require additional information, please do not hesitate to contact me.

Very truly yours,

## TABLE OF CONTENTS

<b>TABLE OF CONTENTS</b> .....	<b>I</b>
<b>APPENDICES</b> .....	<b>III</b>
<b>LIST OF EXHIBITS</b> .....	<b>V</b>
<b>LIST OF TABLES</b> .....	<b>VII</b>
<b>LIST OF ABBREVIATED TERMS</b> .....	<b>IX</b>
<b>1 SUMMARY OF FINDINGS</b> .....	<b>1</b>
1.1 Project Overview.....	1
1.2 Analysis Scenarios .....	3
1.3 Study Area.....	5
1.4 Project Deficiencies.....	9
1.5 Recommendations .....	16
1.6 Truck Access.....	22
<b>2 METHODOLOGIES</b> .....	<b>35</b>
2.1 Level of Service .....	35
2.2 Intersection Capacity Analysis .....	35
2.3 Traffic Signal Warrant Analysis.....	38
2.4 Freeway Off-Ramp Queuing Analysis.....	39
2.5 Minimum Acceptable Levels of Service (LOS).....	40
2.6 Deficiency Criteria.....	42
2.7 Project Fair Share Calculation Methodology .....	43
<b>3 AREA CONDITIONS</b> .....	<b>45</b>
3.1 Existing Circulation Network.....	45
3.2 City of Ontario General Plan Circulation Element.....	45
3.3 City of Chino, City of Chino Hills, City of Eastvale, City of Jurupa Valley General Plan Circulation Element.....	52
3.4 Truck Routes .....	52
3.5 Bicycle, Equestrian, & Pedestrian Facilities .....	63
3.6 Transit Service.....	63
3.7 Existing Traffic Counts.....	63
3.8 Intersection Operations Analysis .....	70
3.9 Traffic Signal Warrants Analysis.....	78
3.10 Off-Ramp Queuing Analysis .....	78
3.11 Improvements.....	80
<b>4 PROJECTED FUTURE TRAFFIC</b> .....	<b>83</b>
4.1 Project Trip Generation.....	83
4.2 Project Trip Distribution.....	92
4.3 Modal Split .....	99
4.4 Project Trip Assignment .....	99
4.5 Background Traffic .....	99
4.6 Cumulative Development Traffic .....	112
4.7 Horizon Year (2040) Volume Development .....	122
<b>5 E+P TRAFFIC CONDITIONS</b> .....	<b>125</b>
5.1 Roadway Improvements .....	125
5.2 Existing plus Project Traffic Volume Forecasts .....	125

5.3 Intersection Operations Analysis ..... 125

5.4 Traffic Signal Warrants Analysis ..... 137

5.5 Off-Ramp Queuing Analysis ..... 137

5.7 Improvements ..... 143

**6 OPENING YEAR CUMULATIVE (2024) TRAFFIC CONDITIONS ..... 147**

6.1 Roadway Improvements ..... 147

6.2 Opening Year Cumulative (2024) Without Project Traffic Volume Forecasts ..... 147

6.3 Opening Year Cumulative (2024) With Project (Phase 1) Traffic Volume Forecasts ..... 147

6.4 Opening Year Cumulative (2024) With Project (Project Buildout) Traffic Volume Forecasts .. 147

6.5 Intersection Operations Analysis ..... 160

6.6 Traffic Signal Warrants Analysis ..... 164

6.7 Off-Ramp Queuing Analysis ..... 169

6.8 Improvements ..... 169

**7 HORIZON YEAR (2040) TRAFFIC CONDITIONS ..... 175**

7.1 Roadway Improvements ..... 175

7.2 Horizon Year (2040) Without Project Traffic Volume Forecasts ..... 175

7.3 Horizon Year (2040) With Project Traffic Volume Forecasts ..... 180

7.4 Intersection Operations Analysis ..... 180

7.5 Traffic Signal Warrants Analysis ..... 190

7.6 Off-Ramp Queuing Analysis ..... 190

7.8 Improvements ..... 192

**8 LOCAL AND REGIONAL FUNDING MECHANISMS ..... 197**

8.1 City of Ontario Development Impact Fee Program ..... 197

8.2 Measure “I” Funds ..... 199

8.3 Fair Share Contribution ..... 199

**9 REFERENCES ..... 203**

## **APPENDICES**

- APPENDIX 1.1: APPROVED TRAFFIC STUDY SCOPING AGREEMENT**
- APPENDIX 1.2: SITE ADJACENT QUEUES**
- APPENDIX 3.1: EXISTING TRAFFIC COUNTS – JANUARY 2019**
- APPENDIX 3.2: EXISTING (2021) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WORKSHEETS**
- APPENDIX 3.3: EXISTING (2021) CONDITIONS TRAFFIC SIGNAL WARRANT ANALYSIS WORKSHEETS**
- APPENDIX 3.4: EXISTING (2021) CONDITIONS OFF-RAMP QUEUING ANALYSIS WORKSHEETS**
- APPENDIX 3.5: EXISTING (2021) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WORKSHEETS WITH IMPROVEMENTS**
- APPENDIX 4.1: POST PROCESSING WORKSHEETS**
- APPENDIX 5.1: E+P (PHASE 1) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WORKSHEETS**
- APPENDIX 5.2: E+P (PROJECT BUILDOUT) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WORKSHEETS**
- APPENDIX 5.3: E+P (PHASE 1) CONDITIONS TRAFFIC SIGNAL WARRANT ANALYSIS WORKSHEETS**
- APPENDIX 5.4: E+P (PROJECT BUILDOUT) CONDITIONS TRAFFIC SIGNAL WARRANT ANALYSIS WORKSHEETS**
- APPENDIX 5.5: E+P (PHASE 1) CONDITIONS OFF-RAMP QUEUING ANALYSIS WORKSHEETS**
- APPENDIX 5.6: E+P (PROJECT BUILDOUT) CONDITIONS OFF-RAMP QUEUING ANALYSIS WORKSHEETS**
- APPENDIX 5.7: E+P (PHASE 1) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WORKSHEETS WITH IMPROVEMENTS**
- APPENDIX 5.8: E+P (PROJECT BUILDOUT) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WORKSHEETS WITH IMPROVEMENTS**
- APPENDIX 6.1: OPENING YEAR CUMULATIVE (2024) WITHOUT PROJECT CONDITIONS INTERSECTION OPERATIONS ANALYSIS WORKSHEETS**
- APPENDIX 6.2: OPENING YEAR CUMULATIVE (2024) WITH PROJECT (PHASE 1) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WORKSHEETS**
- APPENDIX 6.3: OPENING YEAR CUMULATIVE (2024) WITH PROJECT (PROJECT BUILDOUT) CONDITIONS INTERSECTION OPERATIONS ANALYSIS WORKSHEETS**
- APPENDIX 6.4: OPENING YEAR CUMULATIVE (2024) WITHOUT PROJECT CONDITIONS TRAFFIC SIGNAL WARRANT ANALYSIS WORKSHEETS**
- APPENDIX 6.5: OPENING YEAR CUMULATIVE (2024) WITH PROJECT (PHASE 1) CONDITIONS TRAFFIC SIGNAL WARRANT ANALYSIS WORKSHEETS**

# 1 SUMMARY OF FINDINGS

This report presents the results of the traffic analysis (TA) for the proposed South Ontario Logistics Center Specific Plan (“Project”), which is located north of Merrill Avenue between Campus Avenue and Grove Avenue in the City of Ontario, as shown on Exhibit 1-1.

The purpose of this TA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and where necessary recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. This traffic study has been prepared in accordance with the San Bernardino County Congestion Management Program (CMP) Guidelines for CMP Traffic Impact Analysis Reports (Appendix B, 2016 Update) and consultation with City staff during the traffic study scoping process. (1) (2) The City approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TA.

## 1.1 PROJECT OVERVIEW

Exhibit 1-1 illustrates the preliminary Project land use plan and proposed phasing. The Project anticipates development over two phases and is expected to be fully built and operational by 2024. Phase 1 of the proposed Project is anticipated to be developed by Year 2024 and includes the development of Planning Areas (PAs) 1 and 2. Phase 2 of the proposed Project is also anticipated to be developed by Year 2024 and includes the development of PAs 3, 4, and 5. Phase 1 and Phase 2 have been evaluated separately in order to identify the improvement needs for each phase of the development.

Phase 1 (PAs 1 and 2) of the proposed Project includes the development for the following uses:

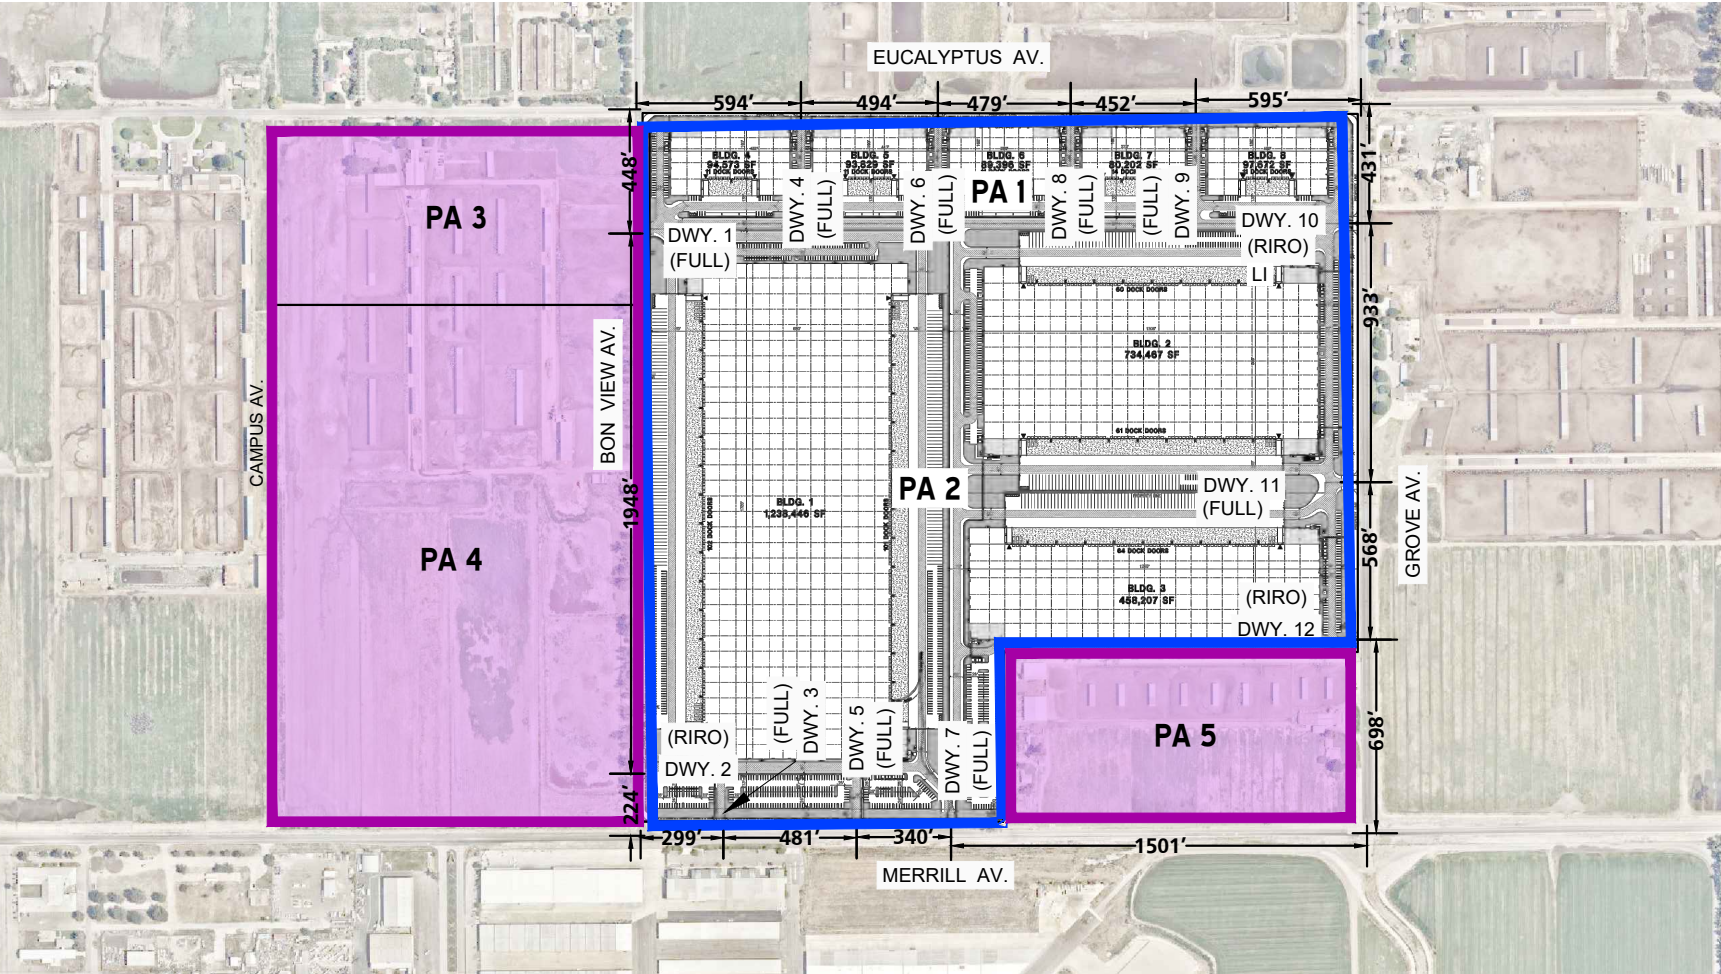

- Industrial: 1,671,574 square feet of high-cube fulfillment center warehouse use, 334,315 square feet of high-cube cold storage warehouse, and 565,763 square feet of general warehousing use
- Business Park: 601,128 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses (as would fall under Institute Transportation Engineer’s Land Use Code 130).

For purposes of this analysis, the following mix of land uses are assumed for Phase 2 (PAs 3, 4, and 5), which represent a reasonable mix of industrial and business park uses that would be permitted by the Project:

- Industrial: 1,147,708 square feet of high-cube fulfillment center warehouse use, 229,542 square feet of high-cube cold storage warehouse, and 388,455 square feet of general warehousing use
- Business Park: 474,107 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses (as would fall under ITE Land Use Code 130).

For the purposes of the operations analysis, Project buildout includes both Phase 1 and Phase 2.

EXHIBIT 1-1: PRELIMINARY SITE PLAN

LEGEND:

- RIRO = RIGHT-IN/RIGHT-OUT ONLY ACCESS
- LI = LEFT IN
- FULL = FULL ACCESS
- █ = PHASE 1 (2022)
- █ = PHASE 2 (2024)

In an effort to conduct a conservative analysis, high-cube fulfillment center warehouse use and high-cube cold storage warehouse use were selected to capture the range of allowable uses within the Industrial areas of the Specific Plan. Similarly, the industrial park rate was selected to capture the range of allowable uses within the Business Park areas of the Specific Plan. From a trip generation perspective, these land use assumptions are conservative in that trip generation would likely be overstated as opposed to understated. Lastly, since the time this Project has been scoped with the lead agency and following the commencement of the operations analysis contained within this TA, the site plan square footages have been modified. The latest site plan is reflected in Exhibit 1-1, however the old site plan/square footage assumptions, which are more conservative, have been utilized for the purposes of the analysis.

Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the ITE Trip Generation Manual, 10<sup>th</sup> Edition, 2017 and the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019). (3) (4) The proposed Project is anticipated to generate a total of 12,446 actual trip-ends per day, 991 AM peak hour trips and 1,136 PM peak hour trips (actual vehicles). The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

## 1.2 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential deficiencies to traffic and circulation have been assessed for each of the following conditions:

- Existing (2021)
- Existing plus Project (E+P), with analysis broken down for:
  - Phase 1
  - Phase 1 + Phase 2 (Project Buildout)
- Opening Year Cumulative (2024) Without Project
- Opening Year Cumulative (2024) With Project (Phase 1)
- Opening Year Cumulative (2024) With Project (Phase 1 + Phase 2)
- Horizon Year (2040) Without Project
- Horizon Year (2040) With Project (Project Buildout)

### 1.2.1 EXISTING (2021) CONDITIONS

Information for Existing (2021) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared. An ambient growth rate of 2% per year has been utilized for the 2019 traffic counts to reflect 2021 traffic conditions. See Section 3.7 *Existing Traffic Counts* for a detailed discussion on the methodology.

### **1.2.2 EXISTING PLUS PROJECT CONDITIONS**

The Existing plus Project (E+P) analysis determines traffic deficiencies that would occur on the existing roadway system with the addition of Project traffic. E+P traffic conditions have been evaluated for each development phase in order to determine any potential off-site improvements, by phase.

### **1.2.3 OPENING YEAR CUMULATIVE (2024) CONDITIONS**

The Opening Year Cumulative conditions analysis determines the potential near-term cumulative circulation system deficiencies. To account for background traffic growth, traffic associated with other known cumulative development projects in conjunction with an ambient growth factor from Existing conditions of 2% per year (compounded annually) are included for Opening Year Cumulative (2024) traffic conditions. Opening Year Cumulative traffic conditions have been evaluated for each phase of the proposed Project. This comprehensive list was compiled from information provided by the City of Ontario and other near-by agencies.

### **1.2.4 HORIZON YEAR (2040) CONDITIONS**

Traffic projections for Horizon Year (2040) with Project conditions were derived from the San Bernardino Transportation Analysis Model (SBTAM) modified to represent buildout of the City of Ontario. Horizon Year traffic conditions evaluates only the Project Buildout (Phase 1 + Phase 2). The Horizon Year (2040) conditions analysis will be utilized to determine if improvements funded through regional transportation mitigation fee programs, such as the City's Development Impact Fee (DIF) program, or other approved funding mechanisms can accommodate the long-range cumulative traffic at the target level of service (LOS) identified by the City of Ontario (lead agency). It should be noted that the City of Ontario has updated their DIF program to also include appropriate contributions towards regionally significant improvements that have been identified via the San Bernardino County CMP regional fee program study. If the planned and funded improvements can provide the target LOS, then the Project's payment into established fee programs will be considered as an improvement to address deficiencies. Other improvements needed beyond the "funded" improvements (such as localized improvements to non-DIF facilities) are identified as such.

### 1.3 STUDY AREA

To ensure that this TA satisfies the City of Ontario’s traffic study requirements, Urban Crossroads, Inc. prepared a project traffic study scoping package for review by City staff prior to the preparation of this report. The Agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology.

#### 1.3.1 INTERSECTIONS

The following 75 study area intersections shown on Exhibit 1-2 and listed on Table 1-1 were selected for this TIA based on consultation with City of Ontario staff. The “50 peak hour trip” criterion utilized by the City of Ontario is consistent with the methodology employed by the County of San Bernardino, and generally represents a minimum number of trips at which a typical intersection would have the potential to be affected by a given development proposal. Although each intersection may have unique operating characteristics, this traffic engineering rule of thumb is a widely utilized tool for estimating a potential area of influence (i.e., study area). The “50 peak hour trip” criterion is also utilized by the City of Eastvale. Other analysis intersections, within the adjacent cities were not selected for evaluation as the Project is anticipated to contribute less than 50 peak hour trips.

**TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS**

ID	Intersection Location	Jurisdiction	SBCTA CMP?

The intent of a CMP is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. Study area intersections that are identified as CMP facilities in the County of San Bernardino per the San Bernardino County Transportation Authority (SBCTA) CMP are indicated on Table 1-1. (1)

EXHIBIT 1-2: LOCATION MAP

## 1.4 PROJECT DEFICIENCIES

This section provides a summary of Project deficiencies. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 5 *E+P Traffic Analysis*, Section 6 *Opening Year Cumulative (2024)*, and Section 7 *Horizon Year (2040) Traffic Analysis* includes the detailed analysis. A summary of LOS results for all analysis scenarios is presented on Exhibit 1-3.

### 1.4.1 EXISTING (2021) CONDITIONS

The existing study area intersections are currently operating at acceptable LOS during the peak hours with the exception of the following intersections:

- Euclid Avenue (SR-83) & Riverside Drive (#13) – LOS E PM peak hour only
- Grove Avenue & SR-60 Eastbound Ramps (#37) – LOS E AM peak hour only
- Grove Avenue & Edison Avenue (#42) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#43) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#47) – LOS F AM peak hour; LOS E PM peak hour
- Walker Avenue & Edison Avenue (#36) – LOS F PM peak hour only
- Carpenter Avenue & Merrill Avenue (#54) – LOS F AM and PM peak hours
- Archibald Avenue & SR-60 WB Ramps (#56) – LOS F PM peak hour only
- Archibald Avenue & Limonite Avenue (#64) – LOS E AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#70) – LOS F PM peak hour only

### 1.4.2 E+P (PHASE 1) CONDITIONS

The following additional study area intersections are anticipated to operate at an unacceptable LOS, in addition to those identified for Existing traffic conditions:

- Euclid Avenue (SR-83) & Merrill Avenue (#18) – LOS E PM peak hour only
- Walker Avenue/Flight Avenue & Merrill Avenue (#49) – LOS E AM and PM peak hours

### 1.4.3 E+P (PROJECT BUILDOUT) CONDITIONS

The following additional study area intersections are anticipated to operate at an unacceptable LOS, in addition to those identified for Existing traffic conditions:

- Euclid Avenue (SR-83) & Edison Avenue (#16) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#18) – LOS E PM peak hour only
- Bon View Avenue & Edison Avenue (#24) – LOS F AM and PM peak hours
- Bon View Avenue & Merrill Avenue (#28) – LOS F PM peak hour only
- Walker Avenue/Flight Avenue & Merrill Avenue (#49) – LOS F AM and PM peak hours

### 1.4.4 OPENING YEAR CUMULATIVE (2024) CONDITIONS

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2024) Without Project traffic conditions:

- Euclid Avenue (SR-83) & Riverside Drive (#13) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Edison Avenue (#16) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Merrill Avenue (#18) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Kimball Avenue (#19) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Pine Avenue (#21) – LOS F PM peak hour only
- Bon View Avenue & Edison Avenue (#24) – LOS F AM and PM peak hours
- Bon View Avenue & Merrill Avenue (#28) – LOS F PM peak hour only
- Grove Avenue & SR-60 EB Ramps (#37) – LOS E AM peak hour only
- Grove Avenue & Edison Avenue (#42) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#43) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#47) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#48) – LOS F AM and PM peak hours
- Walker Avenue/Flight Avenue & Merrill Avenue (#49) – LOS F AM and PM peak hours
- Carpenter Avenue & Merrill Avenue (#54) – LOS F AM and PM peak hours
- Archibald Avenue & Ontario Ranch Road (#61) – LOS F AM peak hour only
- Archibald Avenue & Merrill Avenue (#63) – LOS F PM peak hour only
- Archibald Avenue & Limonite Avenue (#56) – LOS F AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#63) – LOS E AM peak hour; LOS F PM peak hour

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2024) With Project traffic conditions with the addition of Phase 1 Project traffic, in addition to the locations identified above for Opening Year Cumulative (2024) Without Project traffic conditions.

- Grove Avenue & Riverside Drive (#39) – LOS F PM peak hour only
- Grove Avenue & Chino Avenue (#40) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#41) – LOS F AM and PM peak hours

The following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2024) With Project (Project Buildout) traffic conditions with the addition of Project Buildout traffic, in addition to the locations identified above for Opening Year Cumulative (2024) Without Project traffic conditions.

- Campus Avenue & Merrill Avenue (#23) – LOS F PM peak hour only
- Grove Avenue & Riverside Drive (#39) – LOS F PM peak hour only
- Grove Avenue & Chino Avenue (#40) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#41) – LOS F AM and PM peak hours

**1.4.5 HORIZON YEAR (2040) CONDITIONS**

The following additional study area intersections are anticipated to operate at an unacceptable LOS under Horizon Year (2040) Without Project traffic conditions:

- SR-71 Southbound Ramps & Grand Avenue (#1) – LOS E PM peak hour only
- SR-71 Southbound Ramps & Butterfield Ranch Road (#2) – LOS E AM and PM peak hours
- SR-71 Northbound Ramps & Edison Avenue (#3) – LOS F AM peak hour only
- Central Avenue & Edison Avenue (#7) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#10) –LOS E AM and PM peak hours
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#11) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Riverside Drive (#13) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#14) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Schaefer Avenue (#15) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#16) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#17) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Merrill Avenue (#18) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Kimball Avenue (#19) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Bickmore Avenue (#20) – LOS E AM and PM peak hours
- Euclid Avenue (SR-83) & Pine Avenue (#21) – LOS F AM and PM peak hours
- Bon View Avenue & Edison Avenue (#24) – LOS F AM and PM peak hours
- Bon View Avenue & Eucalyptus Avenue (#25) – LOS F PM peak hour only
- Bon View Avenue & Merrill Avenue (#28) – LOS F AM and PM peak hours

- Grove Avenue & SR-60 Westbound Ramps (#36) – LOS E AM peak hour only
- Grove Avenue & SR-60 Eastbound Ramps (#37) – LOS F AM and PM peak hours
- Grove Avenue & Riverside Drive (#39) – LOS F AM and PM peak hours
- Grove Avenue & Chino Avenue (#40) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#41) – LOS F AM and PM peak hours
- Grove Avenue & Edison Avenue (#42) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#43) – LOS F AM and PM peak hours
- Grove Avenue & Merrill Avenue (#47) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#48) – LOS F AM and PM peak hours
- Walker Avenue & Eucalyptus Avenue (#37) – LOS F AM and PM peak hours
- Walker Avenue/Flight Avenue & Merrill Avenue (#49) – LOS F AM and PM peak hours
- Van Vliet Avenue/Baker Avenue & Merrill Avenue (#50) – LOS F PM peak hour only
- Vineyard Avenue & Edison Avenue (#51) – LOS F PM peak hour only
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#52) – LOS F AM and PM peak hours
- Hellman Avenue & Kimball Avenue (#53) – LOS F PM peak hour only
- Carpenter Avenue & Merrill Avenue (#54) – LOS F AM and PM peak hours
- Hellman Avenue & Edison Avenue (#55) – LOS F PM peak hour only
- Archibald Avenue & Riverside Drive (#58) – LOS F AM and PM peak hours
- Archibald Avenue & Schaefer Avenue (#60) – LOS F PM peak hour only
- Archibald Avenue & Ontario Ranch Road (#61) – LOS F AM and PM peak hours
- Archibald Avenue & Eucalyptus Avenue (#62) – LOS F AM and PM peak hours
- Archibald Avenue & Merrill Avenue (#63) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#64) – LOS F AM and PM peak hours
- Turner Avenue & Ontario Ranch Road (#65) – LOS F AM and PM peak hours
- Haven Avenue & Ontario Ranch Road (#67) – LOS F AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#70) – LOS F AM and PM peak hours

The following study area intersection is anticipated to operate at a deficient LOS during one or both peak hours for Horizon Year (2040) With Project traffic conditions with the addition of Project traffic, in addition to the locations identified above for Horizon Year (2040) Without Project traffic conditions.

- Campus Avenue & Eucalyptus Avenue (#22) – LOS F PM peak hour only
- Campus Avenue & Merrill Avenue (#23) – LOS F AM and PM peak hours

## 1.5 RECOMMENDATIONS

### 1.5.1 SITE ACCESS AND SITE ADJACENT ROADWAY RECOMMENDATIONS

The following recommendations are based on the improvements needed to accommodate site access. Exhibit 1-4 shows the site adjacent recommendations for Phase 1 and Exhibit 1-5 shows the Phase 2 off-site improvement recommendations.

#### *Phase 1 Conditions:*

**Recommendation 1 – Bon View Avenue & Driveway 1 (#26)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a shared left-right turn lane.

**Recommendation 2 – Bon View Avenue & Driveway 2 (#27)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the westbound approach and a right turn lane.

**Recommendation 3 – Bon View Avenue & Merrill Avenue (#28)** – The following improvement is necessary to accommodate site access:

- Project to construct a westbound right turn lane.

**Recommendation 4 – Driveway 3 & Merrill Avenue (#29)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the southbound approach and a right turn lane.
- Project to construct a westbound shared through-right turn lane.

**Recommendation 5 – Driveway 4 & Eucalyptus Avenue (#30)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a shared left-right turn lane.
- Project to construct an eastbound shared through-right turn lane.

**Recommendation 6 – Driveway 5 & Merrill Avenue (#31)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the southbound approach and a right turn lane.
- Project to construct a westbound shared through-right turn lane.

**Recommendation 7 – Driveway 6 & Eucalyptus Avenue (#32)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a right turn lane.
- Project to construct an eastbound shared through-right turn lane.

**EXHIBIT 1-4: SITE ADJACENT ROADWAY AND SITE ACCESS RECOMMENDATIONS (PHASE 1)**

**Recommendation 8 – Driveway 7 & Merrill Avenue (#33)** – The following improvement is necessary to accommodate site access:

- Project to install a stop control on the southbound approach and a shared left-right turn lane.
- Project to construct a westbound shared through-right turn lane.

**Recommendation 9 – Driveway 8 & Eucalyptus Avenue (#34)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a right turn lane.
- Project to construct an eastbound shared through-right turn lane.

**Recommendation 10 – Driveway 9 & Eucalyptus Avenue (#35)** – The following improvements are necessary to accommodate site access:

- Project to install a stop control on the northbound approach and a shared left-right lane.
- Project to construct an eastbound shared through-right turn lane.

**Recommendation 11 – Grove Avenue & Eucalyptus Avenue (#43)** – The following improvements are recommended:

- Project to install stop signs on the northbound and southbound approaches, converting the intersection to an all-way stop controlled intersection.
- Project to construct an eastbound right turn lane.

**Recommendation 12 – Grove Avenue & Driveway 10 (#44)** – The following improvements are necessary to accommodate site access:

- Project to construct a southbound shared through-right turn lane.
- Project to install a stop control on the eastbound approach and a right turn lane.

**Recommendation 13 – Grove Avenue & Driveway 11 (#45)** – The following improvements are necessary to accommodate site access:

- Project to construct a southbound shared through-right turn lane.
- Project to install a stop control on the eastbound approach and a shared left-right turn lane.

**Recommendation 14 – Grove Avenue & Driveway 12 (#46)** – The following improvements are necessary to accommodate site access:

- Project to construct a southbound shared through-right turn lane.
- Project to install a stop control on the eastbound approach and a right turn lane.

There are no recommended improvements to the intersections of Bon View Avenue & Eucalyptus Avenue (#25) and Grove Avenue & Merrill Avenue (#47) for Phase 1.

**Recommendation 15 – Merrill Avenue** – Merrill Avenue is an east-west oriented roadway located along the Project’s southern boundary. Project to construct Merrill Avenue from Bon View Avenue to the western boundary of PA5 at its ultimate half-section width as a 4-lane collector (108-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 16 – Eucalyptus Avenue** – Eucalyptus Avenue is an east-west oriented roadway located along the Project’s northern boundary. Project to construct Eucalyptus Avenue from Bon View Avenue to Grove Avenue at its ultimate half-section width as a 4-lane collector (108-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 17 – Grove Avenue** – Grove Avenue is a north-south oriented roadway located along the Project’s eastern boundary. Project to construct Grove Avenue from the northern boundary of PA5 to Eucalyptus Avenue at its ultimate half-section width as a 4-lane other principal arterial (124-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 18 – Bon View Avenue** – Bon View Avenue is a north-south oriented roadway that bisects the Project. Project to construct Eucalyptus Avenue from Merrill Avenue to Eucalyptus Avenue at its ultimate half-section (east side) width as a 4-lane collector (66-foot ultimate right-of-way, 40-foot curb-to-curb with 13-foot parkway) plus one lane (southbound) in compliance with the circulation recommendations found in City of Ontario General Plan.

*Phase 2 Conditions:*

**Recommendation 19 – Campus Avenue & Eucalyptus Avenue (#22)** – The following improvements are recommended to accommodate site access:

- Project to install a stop control on the northbound approach, a left turn lane, and a right turn lane.

**Recommendation 20 – Campus Avenue & Merrill Avenue (#23)** – The following improvements are recommended to accommodate site access:

- Project to install a stop control on the southbound approach and a shared left-right turn lane.
- Project to construct a westbound right turn lane.

**Recommendation 21 – Bon View Avenue & Eucalyptus Avenue (#25)** – The following improvement is recommended to accommodate site access:

- Project to construct an eastbound shared through-right turn lane.

**Recommendation 22 – Grove Avenue & Merrill Avenue (#47)** – The following improvement is recommended to accommodate site access:

- Project to construct a southbound right turn lane.

**Recommendation 23 – Merrill Avenue** – Merrill Avenue is an east-west oriented roadway located along the Project’s southern boundary. Project to construct Merrill Avenue from Campus Avenue to Bon View Avenue and from the western boundary of PA5 to Grove Avenue at its ultimate half-section width as a 4-lane collector (108-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 24 – Eucalyptus Avenue** – Eucalyptus Avenue is an east-west oriented roadway located along the Project’s northern boundary. Project to construct Eucalyptus Avenue from Bon View Avenue to Campus Avenue at its ultimate half-section width as a 4-lane collector (108-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 25 – Bon View Avenue** – Bon View Avenue is a north-south oriented roadway that bisects the Project. Project to construct Bon View Avenue from Merrill Avenue to Eucalyptus Avenue at its ultimate half-section (west side) width as a 4-lane collector (66-foot ultimate right-of-way, 40-foot curb-to-curb with 13-foot parkway) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 26 – Campus Avenue** – Campus Avenue is a north-south oriented roadway located on the Project’s western boundary. Project to construct Campus Avenue from Merrill Avenue to Eucalyptus Avenue at its ultimate half-section width as a 4-lane minor arterial (108-foot ultimate right-of-way) plus one lane (southbound) in compliance with the circulation recommendations found in City of Ontario General Plan.

**Recommendation 27 – Grove Avenue** – Grove Avenue is a north-south oriented roadway located along the Project’s eastern boundary. Project to construct Grove Avenue from Merrill Avenue to the northern boundary of PA5 at its ultimate half-section width as a 4-lane other principal arterial (124-foot ultimate right-of-way) in compliance with the circulation recommendations found in City of Ontario General Plan.

On-site traffic signing and striping should be implemented agreeable with the provisions of the California Department of Transportation (Caltrans) California Manual on Uniform Traffic Control Devices (CA MUTCD) and in conjunction with detailed construction plans for the Project site.

Sight distance at each project access point should be reviewed with respect to standard Caltrans and City of Ontario sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

### 1.5.2 OFF-SITE RECOMMENDATIONS

The recommended improvements needed to address the cumulative deficiencies identified under Existing (2021), Opening Year Cumulative (2024), and Horizon Year (2040) traffic conditions are summarized in Table 1-2. For those improvements listed in Table 1-2 and not constructed as part of the Project, the Project Applicant's responsibility for the Project's contributions towards deficient intersections is fulfilled through payment of fees (e.g., DIF) or fair share that would be assigned to construction of the identified recommended improvements. Please refer to Section 8 *Local and Regional Funding Mechanisms*.

Table 1-2 also summarizes the applicable cost associated with each of the recommended improvements based on the preliminary construction cost estimates found in Appendix G of the San Bernardino County CMP in conjunction with a cost escalation factor of 1.568 to reflect current (2021) costs. A rough order of magnitude cost has been prepared to determine the appropriate contribution value based upon the Project's fair share of traffic as part of the project approval process. Based on the Project fair share percentages, the Project's fair share cost is estimated at \$1,869,943. These estimates are a rough order of magnitude only as they are intended only for disclosure purposes and do not imply any legal responsibility or formula for contributions or mitigation.

**Recommendation 28** – Prior to the issuance of building permits, the Project Applicant shall pay the Project's fair share amount of \$1,869,943 for the improvements identified in Table 1-2 at intersections located within the City of Ontario, or as agreed to by the City and Project Applicant.

### 1.6 TRUCK ACCESS

Due to the typical wide turning radius of large trucks, a truck turning template has been overlaid on the site plan at each applicable Project driveway anticipated to be utilized by heavy trucks in order to determine appropriate curb radii and to verify that trucks will have sufficient space to execute turning maneuvers (see Exhibit 1-6). A WB-67 (53-foot trailer) has been utilized for the purposes of this analysis. As shown on Exhibit 1-6, the following change is necessary in order to accommodate the wide turning radius of the heavy trucks:

- Driveway 1 should be modified to provide a 50-foot curb radius on the northeast and southeast corners and to widen the drive aisle to 60-feet.

Table 1-2

													<b>Total</b>	<b>\$635,040</b>		<b>\$31,850</b>		
													<b>Total Costs for Horizon Year (2040) Improvements</b>		<b>\$22,254,160</b>		<b>\$1,937,999</b>	
													<b>Total Project Fair Share Contribution to the City of Ontario (non-DIF/other)<sup>6</sup></b>			<b>\$1,408,135</b>		

<sup>1</sup> Improvements included in City of Ontario DIF program for local, regional and specific plan components.

<sup>2</sup> Costs have been estimated using the data provided in Appendix "G" of the CMP (2003 Update) for preliminary construction costs.

<sup>3</sup> Appendix "G" costs escalated by a factor of 1.568 per City direction except Traffic Signals.

<sup>4</sup> Program improvements constructed by project may be eligible for fee credit, at discretion of City. See Table 8-2 for Fair Share Calculations.

<sup>5</sup> Rough order of magnitude cost estimate.

<sup>6</sup> Total project fair share contribution consists of the improvements which are not already included in the City-wide DIF for those intersections wholly or partially within the City of Ontario.

<sup>7</sup> Improvements are anticipated to be constructed as part of the SR-60 Freeway/Archibald Avenue interchange improvements.

<sup>8</sup> Improvement includes modifying the traffic signal to run the northbound and southbound left turns as lead-lag, with the northbound left turn running as lag.

## 2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with City of Ontario's Traffic Study Guidelines.

### 2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

### 2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 6<sup>th</sup> Edition Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (5) The HCM uses different procedures depending on the type of intersection control.

#### 2.2.1 SIGNALIZED INTERSECTIONS

##### ***City of Ontario, City of Chino, City of Chino Hills, City of Eastvale, City of Jurupa Valley***

The City of Ontario, City of Chino, City of Chino Hills, City of Eastvale, and City of Jurupa Valley require signalized intersection operations analysis based on the methodology described in the HCM. (5) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described on Table 2-1.

**TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS**

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F	F

Source: HCM (6<sup>th</sup> Edition)

Consistent with Appendix B of the San Bernardino County CMP, the following saturation flow rates, in vehicles per hour green per lane (vphgpl), will be utilized in the traffic analysis for signalized intersections:

*Existing and Opening Year Cumulative Traffic Conditions:*

- Exclusive through: 1800 vphgpl
- Exclusive left: 1700 vphgpl
- Exclusive right: 1800 vphgpl
- Exclusive dual left: 1600 vphgpl
- Exclusive triple left: 1500 vphgpl

*Horizon Year (2040) Traffic Conditions:*

- Exclusive through: 1900 vphgpl
- Exclusive left: 1800 vphgpl
- Exclusive dual left: 1700 vphgpl
- Exclusive right: 1900 vphgpl
- Exclusive dual right: 1800 vphgpl
- Exclusive triple left: 1600 vphgpl or less

The traffic modeling and signal timing optimization software package Synchro (Version 10) has been utilized to analyze signalized intersections within the City of Ontario, City of Chino, City of

Chino Hills, City of Eastvale, and City of Jurupa Valley. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g.  $PHF = [Hourly Volume] / [4 \times Peak\ 15\text{-minute\ Flow\ Rate}]$ ). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (5)

**California Department of Transportation (Caltrans)**

The traffic modeling and signal timing optimization software package Synchro (Version 10) has also been utilized to analyze signalized intersections under Caltrans’ jurisdiction, which include interchange to arterial ramps (i.e., SR-60 Freeway ramps at Euclid Avenue (SR-83), Grove Avenue, and Archibald Avenue, SR-71 Freeway ramps at Edison Avenue, I-15 Freeway ramps at Cantu Galleano Ranch Road and Limonite Avenue, etc.). (2) Euclid Avenue (SR-83) is also under Caltrans jurisdiction and intersections along Euclid Avenue (SR-83) have been evaluated per Caltrans’ guidelines. Signal timing for the freeway arterial-to-ramp intersections and intersections along Euclid Avenue (SR-83) have been obtained from Caltrans District 8 and were utilized for the purposes of this analysis.

**2.2.2 UNSIGNALIZED INTERSECTIONS**

The City of Ontario, City of Chino, City of Chino Hills, City of Eastvale, and City of Jurupa Valley require the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (5) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

**TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS**

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

Source: HCM (6<sup>th</sup> Edition)

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. Per HCM, the worst individual turning movement (typically on the side-street) is reported for the overall intersection’s delay at cross-street stop-controlled intersections. For all-way stop controlled intersections, LOS is computed for the intersection as a whole.

**2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY**

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TIA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (6)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (6) Specifically, this TA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Warrant 3 is appropriate to use for this TIA because it provides specialized warrant criteria for intersections with rural characteristics (e.g. located in communities with populations of less than 10,000 persons or with adjacent major streets operating above 40 miles per hour). For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection.

Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets.

Traffic signal warrant analyses were performed for the following study area intersection shown on Table 2-3:

**TABLE 2-3: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS**

ID	Intersection Location	Jurisdiction	SBCTA CMP?
22	Campus Av. & Eucalyptus	Chino, Caltrans	No
23	Campus Av. & Merrill Av.	Chino, Caltrans	No
24	Bon View Av. & Edison Av.	Ontario	No
25	Bon View Av. & Eucalyptus Av.	Ontario	No
26	Bon View Av. & Driveway 1 – Future Intersection	Ontario	No
28	Bon View Av. & Merrill Av.	Chino, Ontario	No
30	Driveway 4 & Eucalyptus Av. – Future Intersection	Ontario	No

ID	Intersection Location	Jurisdiction	SBCTA CMP?
33	Driveway 7 & Merrill Av. – Future Intersection	Ontario	No
35	Driveway 9 & Eucalyptus Av. – Future Intersection	Ontario	No
40	Grove Av. & Chino Av.	Ontario	No
41	Grove Av. & Schaefer Av.	Ontario	No
42	Grove Av. & Edison Av.	Ontario	No
43	Grove Av. & Eucalyptus Av.	Ontario	No
45	Grove Av. & Driveway 11 – Future Intersection	Ontario	No
47	Grove Av. & Merrill Av.	Chino, Ontario	No
48	Walker Av. & Edison Av.	Ontario	No
49	Walker Av./Flight Av. & Merrill Av.	Chino, Ontario	No
50	Baker Av./Van Vliet Av. & Merrill Av.	Ontario	No
52	Vineyard Av./Hellman Av. & Merrill Av.	Chino, Ontario	No
54	Carpenter Av. & Merrill Av.	Chino, Ontario	No

Although unsignalized, traffic signal warrants have not been evaluated at the intersections of Driveway 2 on Bon View Avenue, Driveway 3 and Driveway 5 on Merrill Avenue, Driveway 6 and Driveway 8 on Eucalyptus Avenue, and Driveway 10 and Driveway 12 on Grove Avenue since these intersections are anticipated to have restricted access (right-in/right-out only) and would therefore not be suitable locations for installing a traffic signal.

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Analysis*, Section 6 *Opening Year Cumulative (2024) Traffic Analysis*, and Section 7 *Horizon Year (2040) Traffic Analysis* of this report. It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

## 2.4 FREEWAY OFF-RAMP QUEUING ANALYSIS

The study area for this TA includes the following freeway-to-arterial interchanges:

- SR-71 Freeway & Grand Avenue/Edison Avenue
- SR-71 Freeway & Euclid Avenue (SR-83)
- Euclid Avenue (SR-83) & SR-60 Freeway
- Grove Avenue & SR-60 Freeway
- Archibald Avenue & SR-60 Freeway
- I-15 Freeway & Cantu Galleano Ranch Road
- I-15 Freeway & Limonite Avenue

The 95<sup>th</sup> percentile queuing of vehicles has been assessed at the off-ramps to determine potential queuing deficiencies at the freeway ramp intersections at the interchanges identified above. Specifically, the queuing analysis is utilized to identify any potential queuing and “spill back” onto the SR-71, SR-60, or I-15 Freeway mainline from the off-ramps.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential deficiencies/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations at the ramps have been based upon the 95<sup>th</sup> percentile queue resulting from the Synchro progression analysis. There are two footnotes which appear on the Synchro outputs. One footnote indicates if the 95<sup>th</sup> percentile cycle exceeds capacity. Traffic is simulated for two complete cycles of the 95<sup>th</sup> percentile traffic in Synchro in order to account for the effects of spillover between cycles. In practice, the 95<sup>th</sup> percentile queue shown will rarely be exceeded and the queues shown with the footnote are acceptable for the design of storage bays. The other footnote indicates whether or not the volume for the 95<sup>th</sup> percentile queue is metered by an upstream signal. In many cases, the 95<sup>th</sup> percentile queue will not be experienced and may potentially be less than the 50<sup>th</sup> percentile queue due to upstream metering. If the upstream intersection is at or near capacity, the 50<sup>th</sup> percentile queue represents the maximum queue experienced.

A vehicle is considered queued whenever it is traveling at less than 10 feet/second. A vehicle will only become queued when it is either at the stop bar or behind another queued vehicle. The 95<sup>th</sup> percentile queue is the maximum back of queue with 95<sup>th</sup> percentile traffic volumes during the peak hour and is derived from the average queue plus 1.65 standard deviations. The queue length reported is for the lane with the highest queue in the lane group. The 95<sup>th</sup> percentile queue is not necessarily ever observed it is simply based on statistical calculations.

## **2.5 MINIMUM ACCEPTABLE LEVELS OF SERVICE (LOS)**

Minimum Acceptable LOS and associated definitions of intersection deficiencies has been obtained from each of the applicable surrounding jurisdictions.

### **2.5.1 CITY OF ONTARIO**

Per the Ontario Plan’s Policy M-1, the City of Ontario utilizes a minimum acceptable LOS of LOS E, where feasible. (7)

### **2.5.2 CITY OF CHINO HILLS**

The Traffic Impact Study Guidelines for Development Projects in the City of Chino Hills (dated October 15, 2001) indicates LOS D shall be the minimum acceptable LOS to be used for all City of Chino Hills roadways and intersections. Therefore, any intersection operating at LOS E or LOS F will be considered deficient. (8)

### **2.5.3 CITY OF CHINO**

According to the City of Chino's General Plan Objective TRA-1.2/Policy P1, LOS D is the minimum acceptable condition that should be maintained during the peak commute hours, where feasible. (9)

### **2.5.4 CITY OF EASTVALE**

The City of Eastvale General Plan Policy C-10 sets a standard of LOS C with LOS D as acceptable in commercial and employment areas and at intersections of any combination of major highways, urban arterials, secondary highways, or freeway ramps. (10) Based on this criterion, where feasible, LOS D is the minimum acceptable LOS at each of the study intersections within the City of Eastvale.

### **2.5.5 CITY OF JURUPA VALLEY**

Per the City of Jurupa Valley's General Plan Policy ME 1.1, the City of Jurupa Valley utilizes a minimum acceptable LOS of LOS D at all intersections, except where flexibility is warranted based on a multi-modal LOS evaluation, or where LOS E is deemed appropriate to accommodate complete streets/multi-modal facilities. (11)

### **2.5.6 CMP**

The CMP definition of deficiency is based on maintaining a level of service standard of LOS E or better, where feasible, except where an existing LOS F condition is identified in the CMP document. However, in an effort to overstate as opposed to understate potential deficiencies, LOS D has been utilized for the CMP intersections for the purposes of this analysis, unless the intersection is located in the City of Ontario (which uses LOS E). (1)

### **2.5.7 CALTRANS**

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State Highway System (SHS) facilities, however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. (2) If an existing State highway facility is operating at less than this target LOS, the existing LOS should be maintained. In general, the region-wide goal for an acceptable LOS on all freeways and intersections is LOS D. Consistent with the City of Ontario LOS threshold of LOS D and in excess of the City of Ontario stated LOS threshold of LOS E, LOS D will be used as the target LOS.

## 2.6 DEFICIENCY CRITERIA

To determine whether the addition of project traffic at a study intersection would result in a traffic deficiency, the following will be utilized:

- When the Without Project condition is at or better than LOS D (or LOS E for CMP intersections and intersections located in the City of Ontario) (i.e., acceptable LOS), and project-generated traffic causes deterioration below LOS D/LOS E (i.e., unacceptable LOS), a deficiency is deemed to occur.

When the Without Project condition is already below LOS D/LOS E (i.e., unacceptable LOS), the Project will be responsible for improving its deficiency to acceptable levels of service. Thus, for intersections operating at unacceptable LOS during either the AM and/or PM peak hour, improvements have been identified to improve the deficiencies of the Project to an intersection LOS that is equal to or better than Without Project conditions (see Table 2-6).

The Project’s contribution to a deficiency can be reduced if the Project is required to implement or fund its fair share of improvements designed to alleviate its contribution to the deficient condition.

**TABLE 2-6: DEFICIENCY CRITERIA**

Without Project Level of Service	Level of Service	Deficient?	Improvement Required?
<b>City of Ontario</b>			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D-E	No	No
E	E	No	No
A-E	F	Yes	Yes, bring LOS to E or better
F	F	Yes	Yes, bring LOS to E or better
<b>City of Chino, City of Eastvale, City of Chino Hills, City of Jurupa Valley</b>			
A	A-D	No	No
B	B-D	No	No
C	C-D	No	No
D	D	No	No
A-D	E or F	Yes	Yes, bring LOS to D or better
E	E	Yes	Yes, bring LOS to D or better
E	F	Yes	Yes, bring LOS to D or better
F	F	Yes	Yes, bring LOS to D or better

In the event that an intersection is operating at or is forecast to operate at a deficient LOS, the CMP guidelines have defined a series of steps to be completed to determine the Project's contribution to the deficiency of intersections, which has been applied to both CMP and non-CMP study area intersections. The steps are as follows:

- Determine the improvements necessary to achieve an acceptable service level,
- Calculate the Project's share in the future traffic volume projections for the peak hours,
- Estimate the cost to implement recommended improvements, and
- Calculate the Project's fair-share contribution to improve the Project's traffic deficiencies

## 2.7 PROJECT FAIR SHARE CALCULATION METHODOLOGY

In cases where this TA identifies that the Project would contribute additional traffic volumes to traffic deficiencies, Project fair share costs of improvements necessary to address deficiencies have been identified. The Project's fair share cost of improvements is determined based on the following equation, which is the ratio of Project traffic to new traffic, and new traffic is total future (Horizon Year) traffic less existing baseline traffic:

$$\text{Project Fair Share \%} = \frac{\text{Project (2040) AM/PM Traffic}}{\text{(2040 With Project AM/PM Total Traffic - Existing AM/PM Traffic)}}$$

The project fair share percentage has been calculated for both the AM peak hour and PM peak hour and the highest of the two has been selected. The Project fair share contribution calculations are presented in Section 8 *Local and Regional Funding Mechanisms* of this TIA. The cost of implementing the improvements shown on Table 1-2 have been estimated based on the preliminary construction cost estimates found in Appendix G of the San Bernardino County CMP in conjunction with a total cost escalation factor of 1.568 to more closely approximate current (2021) costs. These cost estimates have been utilized in conjunction with the Project fair share percentages to determine the Project's fair share cost of the recommended improvements (see Table 8-2). These estimates are a rough order of magnitude only as they are intended only for discussion purposes and do not imply any legal responsibility or formula for contributions or physical improvements.

This Page Intentionally Left Blank

### 3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Ontario General Plan Circulation Network, and a review of existing peak hour intersection operations, off-ramp queueing, and traffic signal warrant analyses.

#### 3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with City of Ontario staff (Appendix 1.1), the study area includes a total of 75 existing and future intersections as shown previously on Exhibit 1-2. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

#### 3.2 CITY OF ONTARIO GENERAL PLAN CIRCULATION ELEMENT

As noted previously, the Project site is located within the City of Ontario. The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the City of Ontario General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the City of Ontario General Plan Circulation Element and Exhibit 3-3 illustrates the City of Ontario General Plan roadway cross-sections.

The study area roadways that are classified as 8-lane Other Principal Arterials are identified as having four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 8-lane Other Principal Arterials:

- Euclid Avenue (SR-83) from the SR-60 Freeway to Merrill Avenue
- Edison Avenue/Ontario Ranch Road from Euclid Avenue (SR-83) to Hamner Avenue
- Hamner Avenue from the SR-60 Freeway to Bellegrave Avenue

The study area roadways that are classified as 6-lane Other Principal Arterials are identified as having three lanes of travel in each direction and a 14-foot curbed or painted median. The following study area roadways within the City of Ontario are classified as 6-lane Other Principal Arterials:

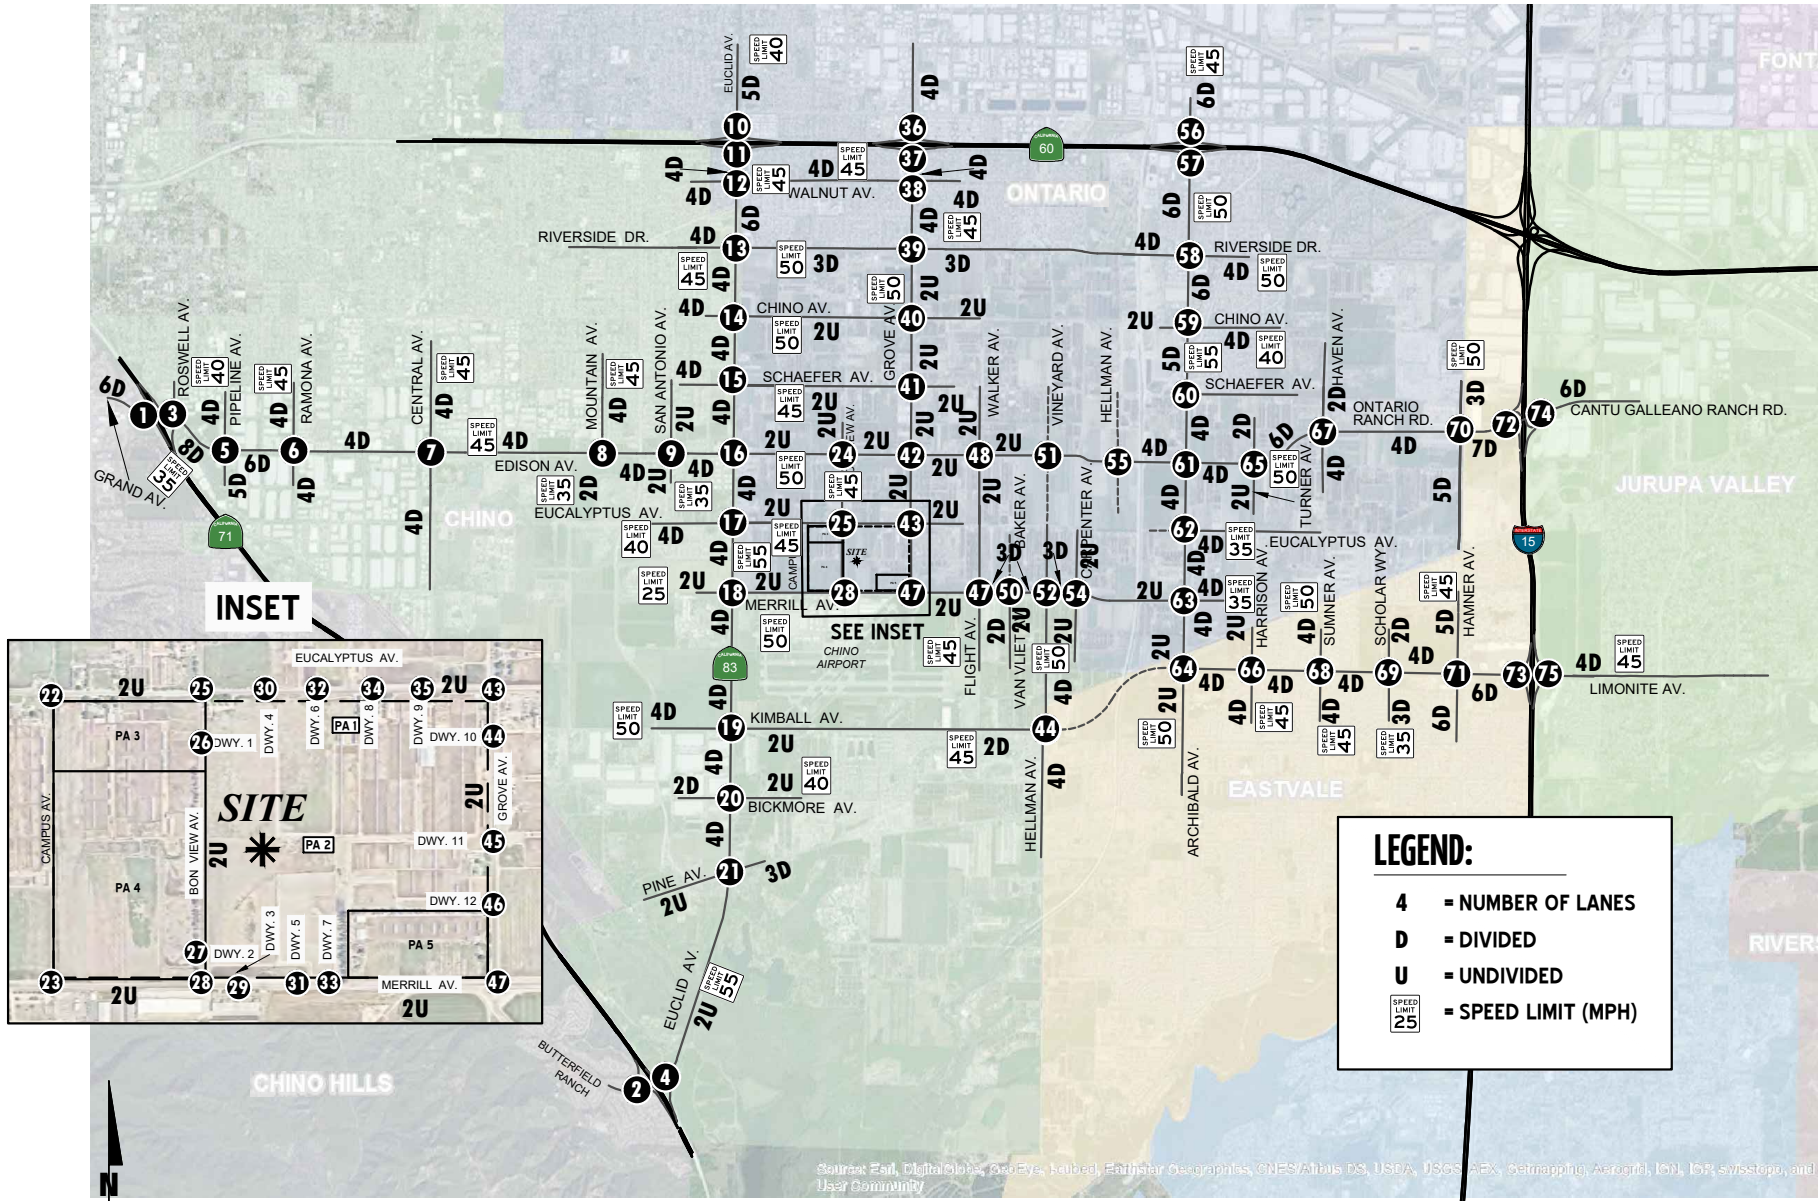

- Grove Avenue north of Riverside Drive
- Vineyard Avenue from the SR-60 Freeway to Merrill Avenue
- Archibald Avenue north of Bellegrave Avenue

The study area roadways that are classified as 4-lane Other Principal Arterials are identified as having two lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as 4-lane Other Principal Arterials:

- Grove Avenue north of Merrill Avenue
- Haven Avenue from Riverside Drive to Bellegrave Avenue

**EXHIBIT 3-3: CITY OF ONTARIO GENERAL PLAN ROADWAY CROSS-SECTIONS**

SOURCE: CITY OF ONTARIO

The study area roadway that is classified as a 6-lane Minor Arterial is identified as having three lanes of travel in each direction. The following study area roadway within the City of Ontario is classified as a 6-lane Minor Arterial:

- Riverside Drive

The study area roadway that is classified as a 4-lane Minor Arterial is identified as having two lanes of travel in each direction and a 14-foot median. The following study area roadway within the City of Ontario is classified as a 4-lane Minor Arterial:

- Bellegrave Avenue from Haven Avenue to Hamner Avenue

The study area roadways that are classified as Collector Streets are identified as having two to four lanes of travel in each direction. The following study area roadways within the City of Ontario are classified as Collector Streets:

- Walnut Street
- Chino Avenue
- Schaefer Avenue
- Eucalyptus Avenue
- Merrill Avenue
- Bon View Avenue
- Walker Avenue
- Hellman Avenue
- Turner Avenue

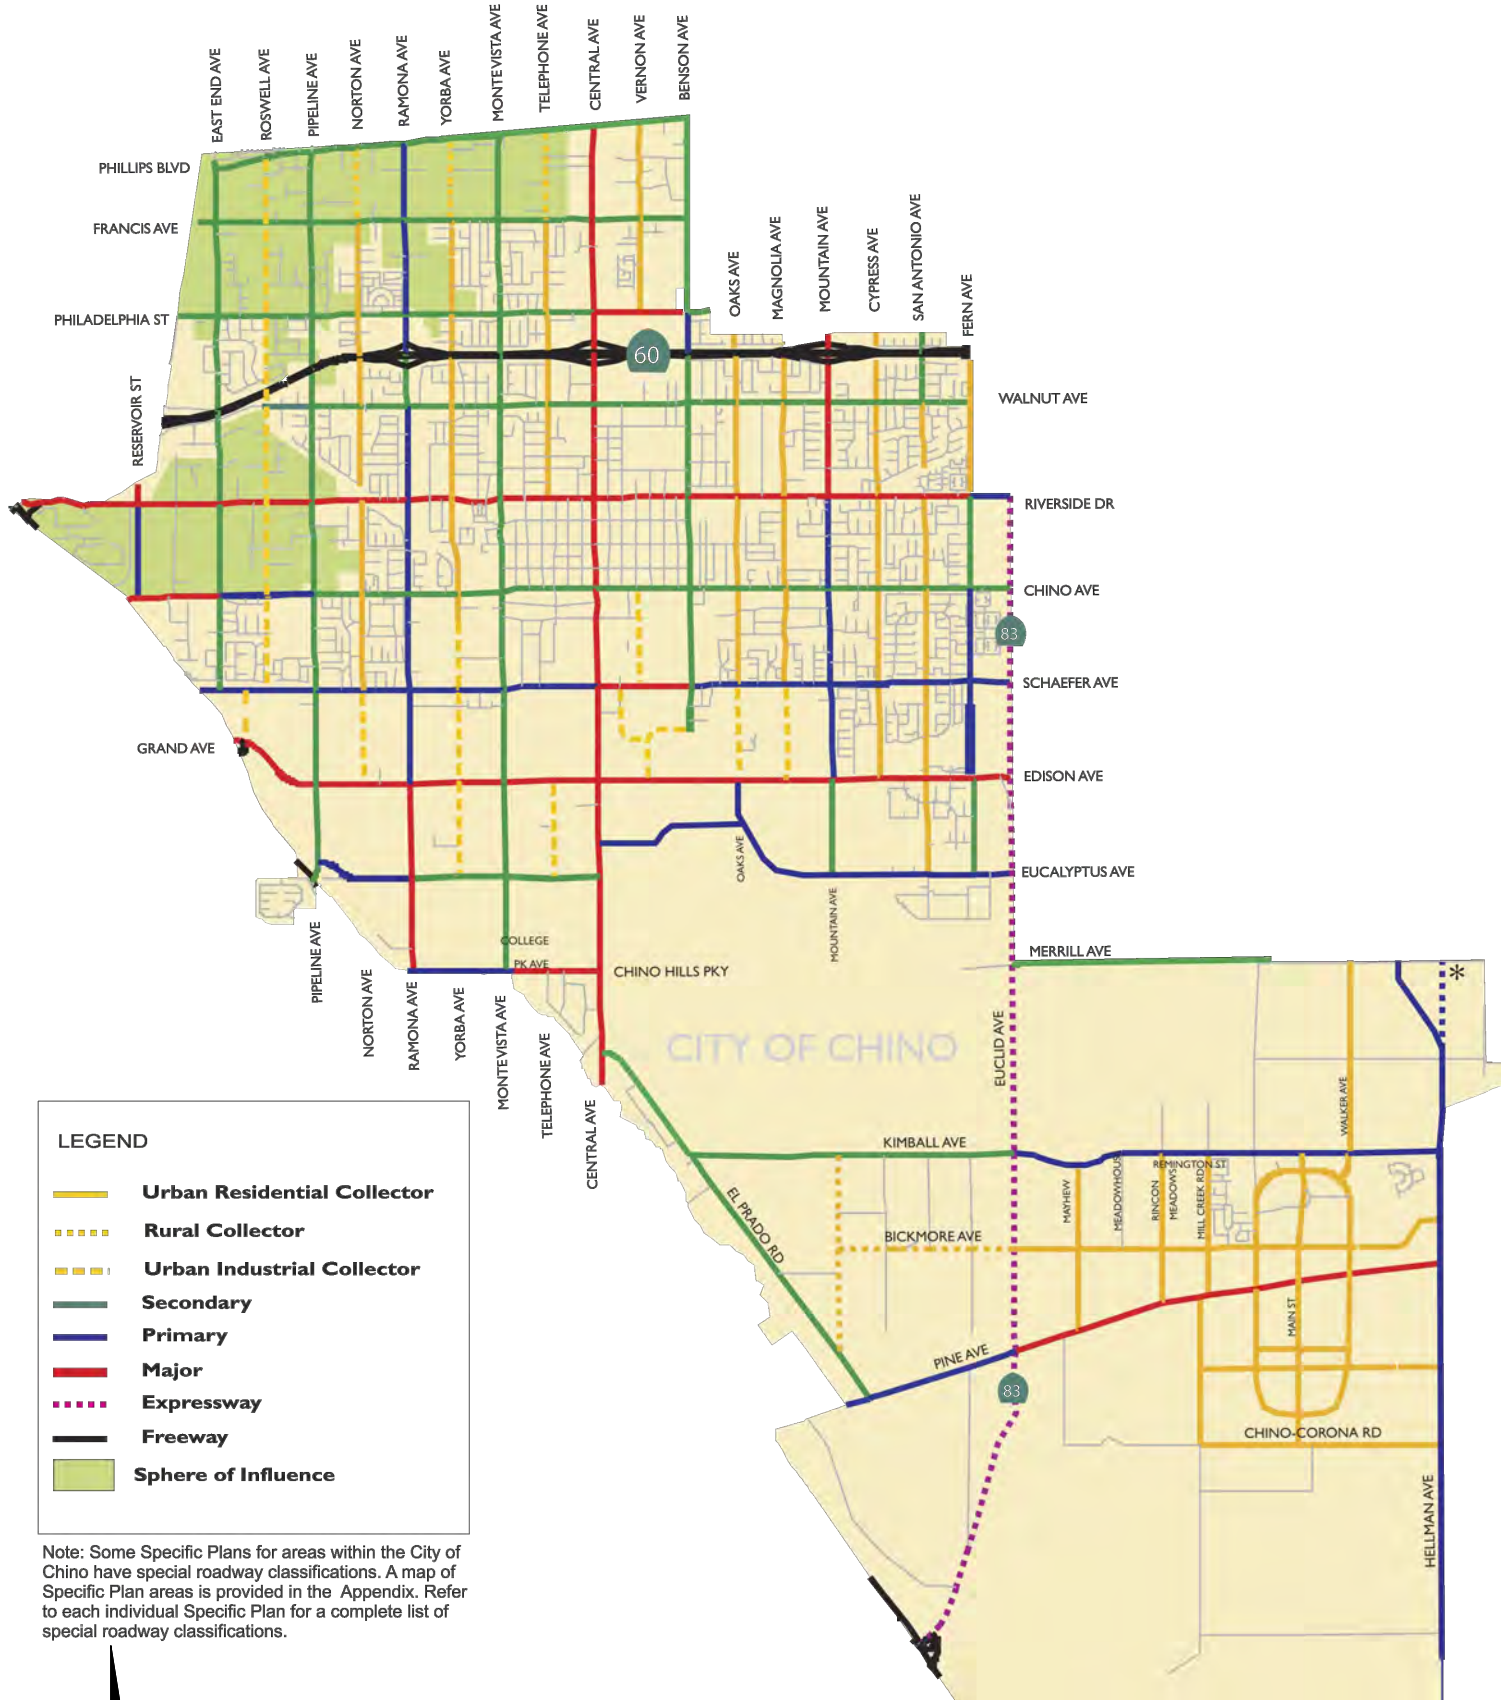

### **3.3 CITY OF CHINO, CITY OF CHINO HILLS, CITY OF EASTVALE, CITY OF JURUPA VALLEY GENERAL PLAN CIRCULATION ELEMENT**

Exhibits 3-4 and 3-5 show the City of Chino General Plan Circulation Element and roadway cross-sections, respectively. Exhibits 3-6 and 3-7 show the City of Chino Hills General Plan Circulation Element and roadway cross-sections, respectively. Exhibits 3-8 and 3-9 show the City of Eastvale General Plan Circulation Element and roadway cross-sections, respectively. Lastly, Exhibits 3-10 and 3-11 show the City of Jurupa Valley General Plan Circulation Element and roadway cross-sections, respectively.

### **3.4 TRUCK ROUTES**

The City of Ontario designated truck route map is shown on Exhibit 3-12. Euclid Avenue (SR-83), Edison Avenue/Ontario Ranch Road, Merrill Avenue, Archibald Avenue, and Hamner Avenue/Milliken Avenue are designated as Truck Routes in the City of Ontario. The designated truck route map has been utilized to route truck traffic for the proposed Project and cumulative development projects throughout the study area.

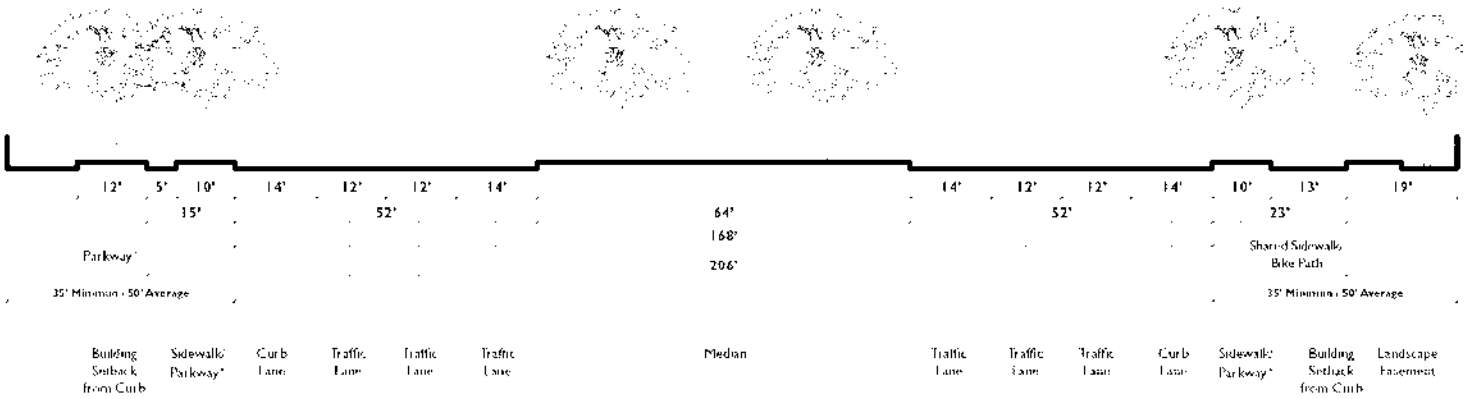

**EXHIBIT 3-4: CITY OF CHINO GENERAL PLAN CIRCULATION ELEMENT**

**EXHIBIT 3-5 (1 of 2): CITY OF CHINO GENERAL PLAN ROADWAY CROSS-SECTIONS**

**Major Arterial (Expressway): Typical 8 Lane**  
 Provides 8 traffic lanes and a wide median without parking

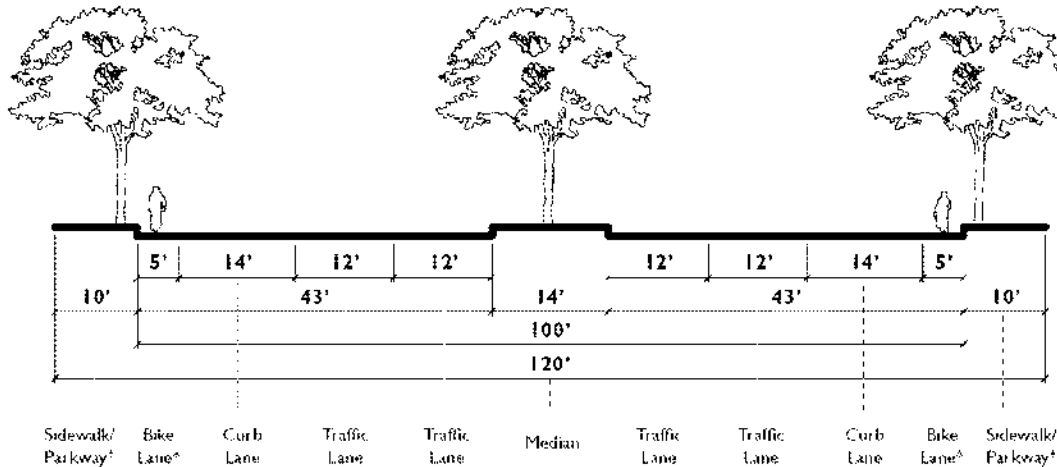

**Major Arterial: Minimum 8 Lane**

Provides 8 traffic lanes and 2 bicycle lanes separated by a median without parking

**Major Arterial: Minimum 6 Lane**

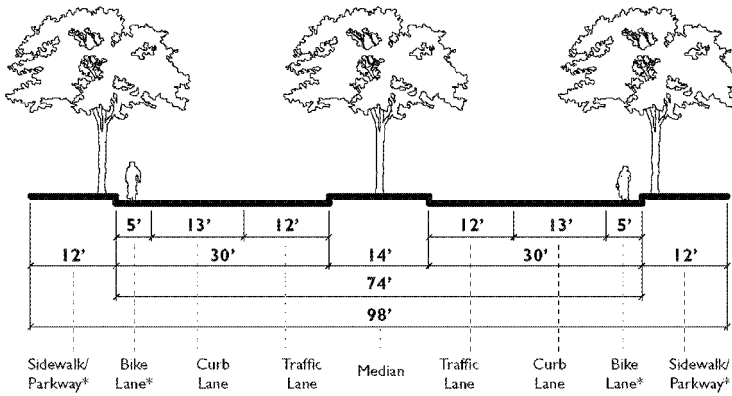

Provides 6 traffic lanes and 2 bicycle lanes separated by a median without parking

**EXHIBIT 3-5 (2 of 2): CITY OF CHINO GENERAL PLAN ROADWAY CROSS-SECTIONS**

**Primary Arterial: Typical 4 Lane**

Provides 4 traffic lanes and 2 bicycle lanes separated by a median without parking

**Secondary Arterial**

Provides 4 traffic lanes with parking

**Urban Residential/Rural Collector**

Provides 2 traffic lanes with parking and shared bicycle access

**Urban Residential/Rural Collector with Equestrian Trails**

Provides 2 traffic lanes and 2 equestrian trails with parking and shared bicycle access

**Urban Industrial Collector**

Provides 2 traffic lanes

**Local Street**

Provides 2 traffic lanes

The City of Chino designated truck route map is shown on Exhibit 3-13. Riverside Drive, Central Avenue, Edison Avenue, Merrill Avenue, Kimball Avenue, Pine Avenue, Flight Avenue, and Hellman Avenue are some of the designated City of Chino truck routes within the study area while Euclid Avenue (SR-83) is designated as a State Truck Route. The designated truck route map has been utilized to route study area truck traffic.

### **3.5 BICYCLE, EQUESTRIAN, & PEDESTRIAN FACILITIES**

Field observations indicate nominal pedestrian and bicycle activity within the study area. Exhibit 3-14 illustrates the City of Ontario future planned bicycle facilities, which proposes Class II and Multipurpose Trails along Merrill Avenue and Campus Avenue adjacent to the Project and the Cucamonga Creek Multipurpose Trail located east of the Project. A Multipurpose Trail is also proposed along Grove Avenue. Exhibit 3-15 illustrates City of Chino future bicycle facilities, which proposes Class I bicycle facilities along Hellman Avenue and Kimball Avenue near the vicinity of the site and Class II or II bicycle facilities along Euclid Avenue (SR-83). Exhibit 3-16 illustrates the City of Eastvale trails and bikeway systems. Existing pedestrian facilities within the study area are shown on Exhibit 3-17.

### **3.6 TRANSIT SERVICE**

The study area within the City of Ontario is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. Based on a review of the existing transit routes within the vicinity of the proposed Project, Omnitrans Route 81 operates on Riverside Drive north of the site. However, there are no existing bus routes near the vicinity of the Project. The Riverside Transit Authority (RTA) serves the City of Eastvale (and other areas of Riverside County). Transit service is reviewed and updated by Omnitrans periodically to address ridership, budget and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the applicant work in conjunction with Omnitrans to potentially provide additional bus service to the site. Existing transit routes in the vicinity of the study area are illustrated on Exhibit 3-18.

### **3.7 EXISTING TRAFFIC COUNTS**

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in January 2019. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

The weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1.

The traffic counts collected in January 2019 include the following vehicle classifications: Passenger Cars, 2-Axle Trucks, 2-Axle Trucks, and 4 or More Axle Trucks. To represent the effect of large trucks, buses and recreational vehicles have on traffic flow; all trucks were converted into passenger car equivalent (PCE). By their size alone, these vehicles occupy the same space as two or more passenger cars. In addition, the time it takes for them to accelerate and slow-down is much longer than for passenger cars and varies depending on the type of vehicle and number of axles. For the purpose of this analysis, a PCE factor of 1.5 has been applied to 2-axle trucks, 2.0 for 3-axle trucks, and 3.0 for 4+-axle trucks to estimate each turning movement. These factors are consistent with the values recommended for use in the CMP.

Due to the school and business closures associated with the currently ongoing COVID-19 pandemic, traffic counts were not collected since the traffic volumes would likely be understated. As such and pursuant to discussions with City staff, a 5% per year growth rate for turning movements along major roadways (i.e., Archibald Avenue, Pine Avenue, Euclid Avenue, Limonite Avenue) and a 2% per year growth rate for all other movements have been utilized to conservatively reflect 2021 conditions.

Existing weekday ADT volumes are shown on Exhibit 3-19. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

$$\text{Weekday PM Peak Hour (Approach Volume + Exit Volume)} \times 12.55 = \text{Leg Volume}$$

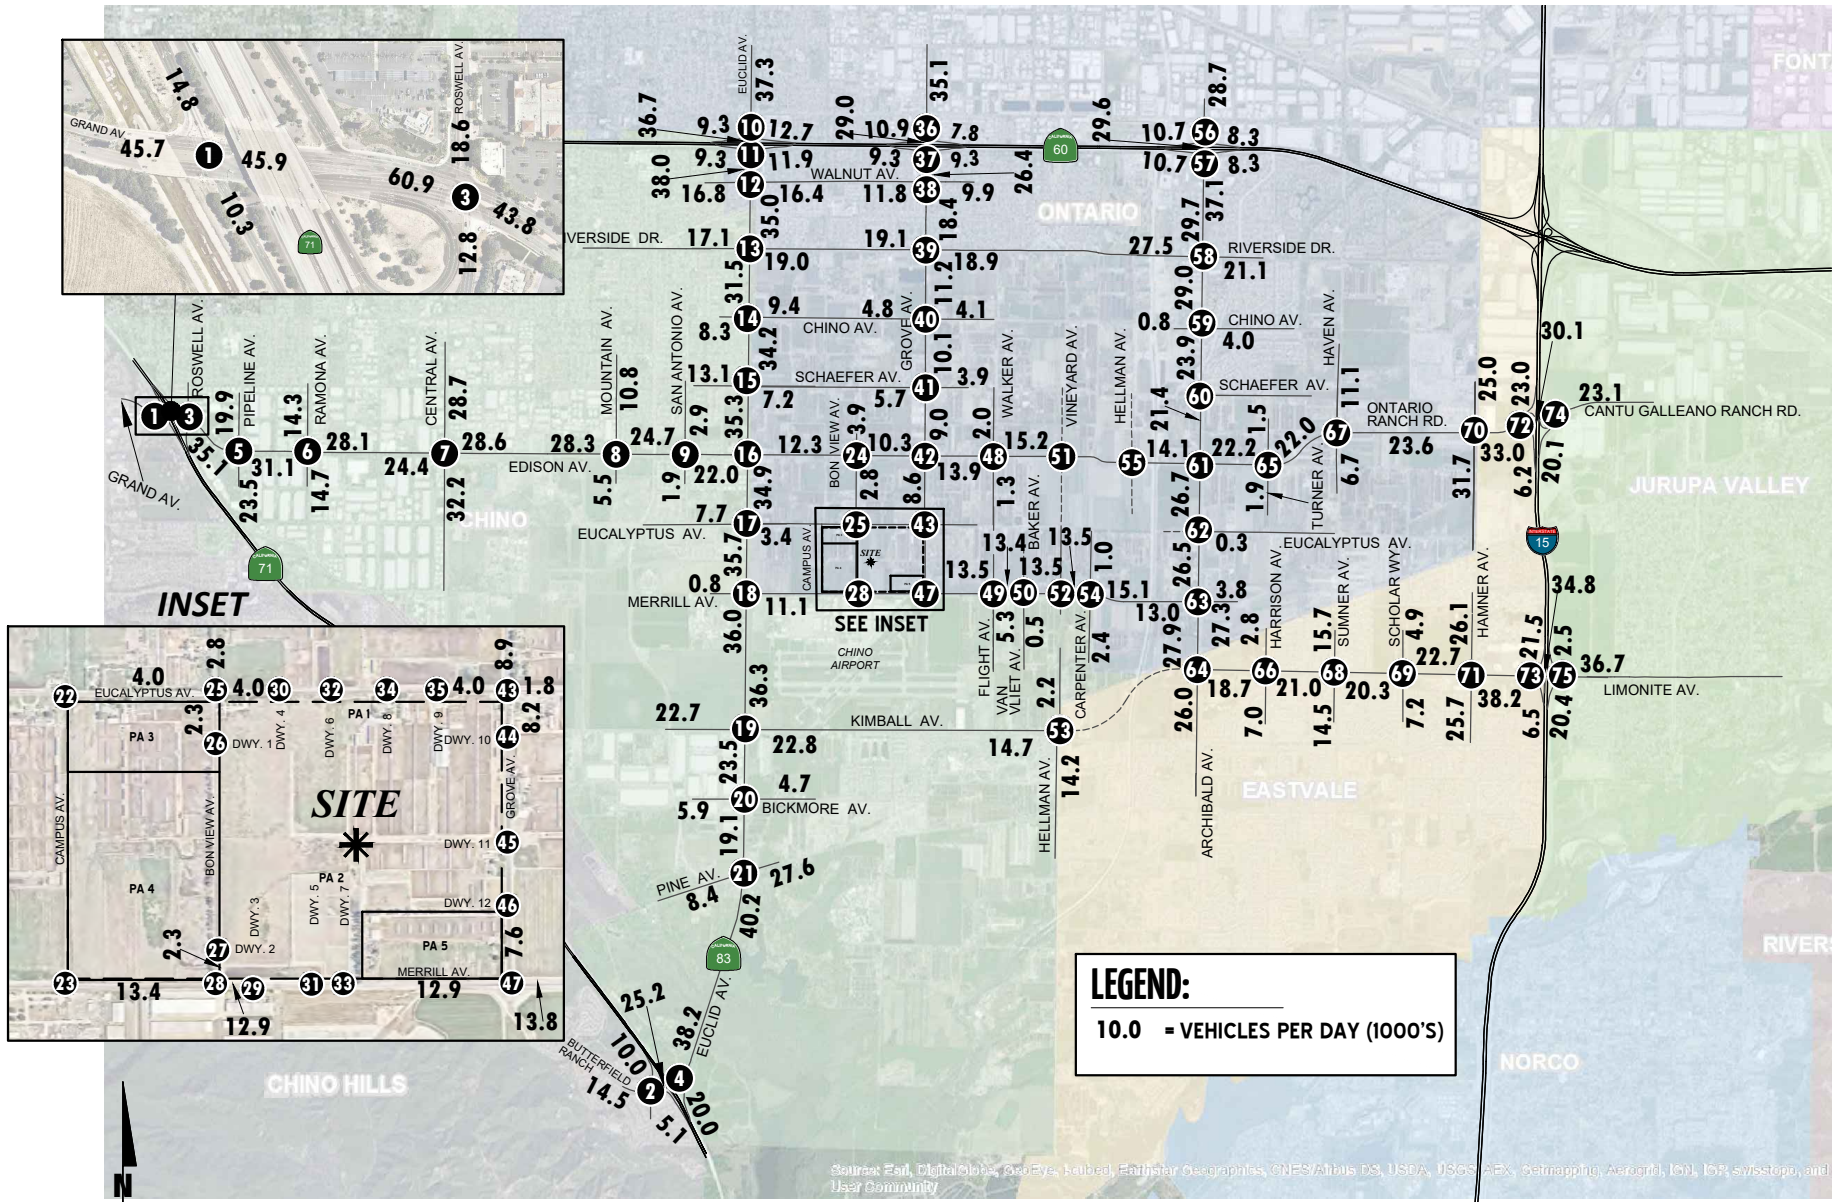

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 7.97 percent. As such, the above equation utilizing a factor of 12.55 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 7.97 percent (i.e.,  $1/0.0797 = 12.55$ ) and was assumed to sufficiently estimate average daily traffic (ADT) volumes for planning-level analyses. Existing weekday AM and weekday PM peak hour intersection volumes (in actual vehicles) are shown on Exhibit 3-20. The peak hour operations analyses utilize PCE volumes per the City's Traffic Study Guidelines (PCE volumes are included in the appendices with the HCM operations analysis worksheets for each applicable analysis scenario).

### 3.8 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized on Table 3-1, which indicates that all existing study area intersections are currently operating at acceptable LOS during the peak hours with exception to the following:

- Euclid Avenue (SR-83) & Riverside Drive (#13) – LOS E PM peak hour only
- Grove Avenue & SR-60 Eastbound Ramps (#37) – LOS E AM peak hour only
- Grove Avenue & Edison Avenue (#42) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#43) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#47) – LOS F AM peak hour; LOS E PM peak hour

\* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

= Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; d= Defacto

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal

<sup>4</sup> Minimum acceptable LOS for each applicable jurisdiction.

- Carpenter Avenue & Merrill Avenue (#54) – LOS F AM and PM peak hours
- Archibald Avenue & SR-60 WB Ramps (#56) – LOS F PM peak hour only
- Archibald Avenue & Limonite Avenue (#64) – LOS E AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#70) – LOS F PM peak hour only

Consistent with Table 3-1, a summary of the peak hour intersection LOS for Existing conditions are shown on Exhibit 3-21. The intersection operations analysis worksheets are included in Appendix 3.2 of this TA.

### 3.9 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The following study area intersections currently warrant a traffic signal for Existing traffic conditions:

- Bon View Avenue & Edison Avenue (#24)
- Grove Avenue & Chino Avenue (#40)
- Grove Avenue & Schaefer Avenue (#41)
- Grove Avenue & Edison Avenue (#42)
- Grove Avenue & Eucalyptus Avenue (#43)
- Grove Avenue & Merrill Avenue (#47)
- Walker Avenue/Flight Avenue & Merrill Avenue (#49)
- Carpenter Avenue & Merrill Avenue (#54)

Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.3.

### 3.10 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the study area intersections along the SR-71 Freeway, SR-60 Freeway, and I-15 Freeway to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the SR-71, SR-60, and I-15 Freeway mainlines. Queuing analysis findings are presented on Table 3-2. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown on Table 3-2, there are no movements that are currently experiencing queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows. Worksheets for Existing traffic conditions off-ramp queuing analysis are provided in Appendix 3.4.

**Table 3-2**

**Peak Hour Freeway Off-Ramp Queuing Summary for Existing (2021) Conditions**

Intersection	Movement	Available Stacking Distance (Feet)	95th Percentile Queue (Feet) <sup>3</sup>		Acceptable? <sup>1</sup>

	NBR	400	34	274	Yes	Yes

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

### **3.11 IMPROVEMENTS**

Improvement strategies have been identified at intersections that have been identified as deficient under Existing (2021) traffic conditions in an effort to achieve an acceptable LOS (i.e., LOS D or better).

#### **3.11.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS**

The effectiveness of the recommended improvement strategies to address Existing (2021) traffic deficiencies are presented on Table 3-3. Worksheets for Existing (2021) Conditions, with improvements, HCM calculation worksheets are provided in Appendix 3.5.

#### **3.12.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously on Table 3-2, there are no peak hour queuing issues at the SR-71 Freeway, SR-60 Freeway, and I-15 Freeway study area interchanges. As such, no improvements have been identified.

Table 3-3

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d = Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-Street Stop; TS = Traffic Signal; TS = Improvement

<sup>4</sup> Improvement includes restriping the northbound approach to provide one left turn lane, two through lanes, and one shared through-right turn lane.

<sup>5</sup> Improvements are consistent with the SR-60/Archibald Avenue interchange improvement project currently under construction.

<sup>6</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.

This Page Intentionally Left Blank

## 4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network. Phase 1 of the proposed Project is anticipated to be developed by Year 2024 and includes the development of PAs 1 and 2. Phase 2 of the proposed Project is also anticipated to be developed by Year 2024 and includes the development of PAs 3, 4, and 5. As stated in Section 1, Phase 1 and Phase 2 have been evaluated separately in order to identify the improvement needs for each phase.

Phase 1 (PAs 1 and 2) of the proposed Project includes the development for the following uses:

- Industrial: 1,671,574 square feet of high-cube fulfillment center warehouse use, 334,315 square feet of high-cube cold storage warehouse, and 565,763 square feet of general warehousing use
- Business Park: 601,128 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses (as would fall under ITE Land Use Code 130).

For purposes of this analysis, the following mix of land uses are assumed for Phase 2 (PAs 3, 4, and 5), which represent a reasonable mix of industrial and business park uses that would be permitted by the Project:

- Industrial: 1,147,708 square feet of high-cube fulfillment center warehouse use, 229,542 square feet of high-cube cold storage warehouse, and 388,455 square feet of general warehousing use
- Business Park: 474,107 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses (as would fall under ITE Land Use Code 130).

For the purposes of the operations analysis, Project buildout includes both Phase 1 and Phase 2.

### 4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development.

Trip generation rates for the Project are shown on Table 4-1 for both actual vehicles and PCE. The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project in actual vehicles and PCE are shown in Table 4-2 and Table 4-3, respectively. The trip generation rates used for this analysis are based upon information collected by the ITE as provided in their Trip Generation Manual (10<sup>th</sup> Edition, 2017) and the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019). (3) (4)

<sup>1</sup> Trip Generation Source: Institute of Transportation Engineers (ITE), *Trip Generation Manual*, Tenth Edition (2017).

<sup>2</sup> TSF = thousand square feet

<sup>3</sup> Vehicle Mix Source: *High Cube Warehouse Trip Generation Study*, WSP, January 29, 2019.

Inbound and outbound split source: *High Cube Warehouse Vehicle Trip Generation Analysis*, October 2016, ITE.

<sup>4</sup> The Specific Plan allows for the Business Park area to be developed with merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses. However, the Business Park (ITE Land Use Code 770) land use has trip generation rates for the peak hours is based on limited data (i.e., one surveyed site). As such, the trip generation rates for ITE Land Use Code 130 has been utilized for the business park portion of the Project.

<sup>1</sup> TSF = thousand square feet

For purposes of this analysis, the following ITE land use codes and vehicle mixes have been utilized:

- High-Cube Fulfillment Center Warehouse has been used to derive site specific trip generation estimates for the proposed Project. The ITE Trip Generation Manual (2017) has trip generation rates for high-cube fulfillment center use (ITE land use code 155), however, these rates are unreliable because they are based on limited data (i.e., one to two surveyed sites) and the ITE Trip Generation Manual recommends the use of local data sources where available. As such, the trip-generation statistics published in the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019) which was commissioned by the Western Riverside Council of Governments (WRCOG) in support of the Transportation Uniform Mitigation Fee (TUMF) update, has been utilized for the high-cube fulfillment center use. The WSP trip generation rates were published in January 2019 and are based on data collected at 11 local high-cube fulfillment center sites. However, the WSP study does not include a split for inbound and outbound vehicles, as such, the inbound and outbound splits per the ITE High-Cube Warehouse Vehicle Trip Generation Analysis (October 2016) have been utilized. (12)
- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for the proposed Project. The truck percentage was obtained from the ITE's High Cube Warehouse Vehicle Trip Generation Analysis (October 2016). The vehicle mix varies by peak hour and overall daily: 69.2% passenger cars in the AM peak hour, 78.3% passenger cars in the PM peak hour, and 67.8% passenger cars weekday daily. Trip generation for heavy trucks was further broken down by truck type (or axle type). The total truck percentage is comprised of 3 different truck types: 2-axle, 3-axle, and 4+-axle trucks. For the purposes of this analysis, the percentage of trucks, by axle type, were obtained from the SCAQMD Warehouse Truck Trip Study Data Results and Usage (2014) recommended truck mix. The SCAQMD has recently performed surveys of existing facilities and compiled the data to provide interim guidance on the mix of heavy trucks for these types of high-cube warehousing/distribution facilities. Based on this interim guidance from the SCAQMD, the following truck fleet mix was utilized for the purposes of estimating the truck trip generation for the site (with cold storage): 34.7% of the total trucks as 2-axle trucks, 11.0% of the total trucks as 3-axle trucks, and 54.3% of the total trucks as 4+-axle trucks.
- The Specific Plan allows for business park to be developed with merchant wholesale, professional services, professional office, warehouse/storage, research and development, and other similar related uses. Because the peak hour trip generation rates collected for the "business park" land use category by the ITE as provided in their Trip Generation Manual, 10<sup>th</sup> Edition, 2017 (ITE land use code 770) are based on limited data (i.e., a single surveyed site) that does not have the same physical or operational characteristics as the range of uses permitted in the Business Park planning areas of the Specific Plan, the trip generation rates for ITE land use code 130 (Industrial Park) have been used to derive site specific trip generation estimates for the Project. The ITE Trip Generation Handbook (3<sup>rd</sup> Edition, 2017) identifies a 13% mix of heavy trucks for ITE land use code 130, however, does not provide a breakdown of the 13% further by axle type. As such, the percentage of trucks, by axle type, were obtained from the South Coast Air Quality Management District (SCAQMD) Warehouse Truck Trip Study Data Results and Usage (2014) recommended truck mix. Based on this guidance from the SCAQMD, the following truck fleet mix was utilized for the purposes of estimating the truck trip generation for the business park use (without cold storage): 16.7% of the total trucks as 2-axle trucks, 20.7% of the total trucks as 3-axle trucks, and 62.6% of the total trucks as 4+-axle trucks.

Finally, PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles) for both the Industrial and Business Park planning areas of the Merrill Commerce Center Specific Plan. PCEs allow the typical “real-world” mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in Appendix B of the San Bernardino County CMP, 2016 Update.

As shown on Table 4-2, the proposed Project (Project Buildout) is anticipated to generate a total of 12,446 trip-ends per day, with 991 AM peak hour trips and 1,136 PM peak hour trips. For the purposes of the operations analysis, the PCE trip generation shown in Table 4-3 has been utilized.

## 4.2 PROJECT TRIP DISTRIBUTION

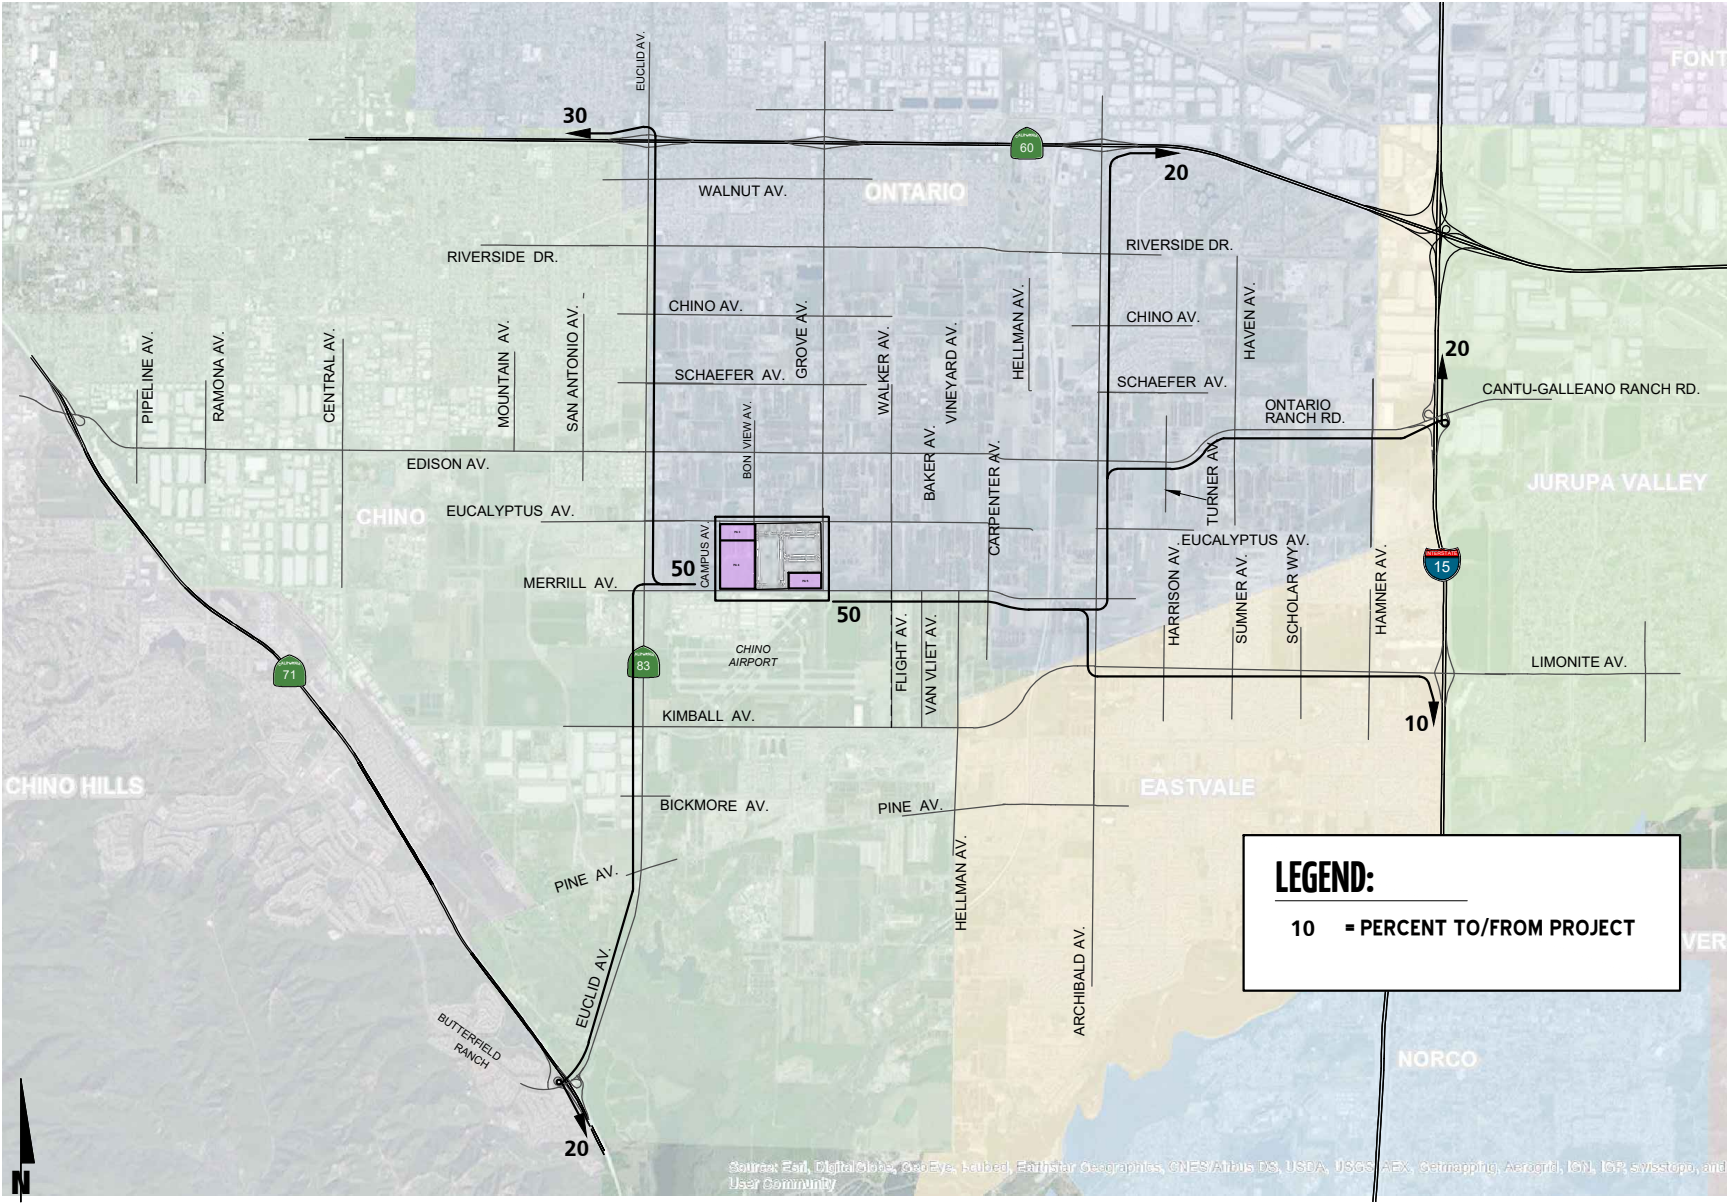

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The trip distribution pattern of passenger cars is heavily influenced by the geographical location of the site, the location of surrounding uses, and the proximity to the regional freeway system. The trip distribution pattern for truck traffic is also influenced by the local truck routes approved by the City of Ontario, City of Chino, City of Chino Hills, City of Eastvale, City of Jurupa Valley, and Caltrans. Given these differences, separate trip distributions were generated for both passenger cars and truck trips.

The Opening Year Cumulative distribution patterns utilize the existing roadway system in relation to the Horizon Year trip distribution patterns, which assumes future roadway connections. The Project trip distribution patterns are also affected by near-term development patterns in the vicinity of the Project site. The extension of Limonite Avenue/Kimball Avenue extension between Hellman Avenue and Archibald Avenue, and the Merrill Avenue extension to Bellegrave Avenue have also been assumed for Horizon Year conditions only.

Exhibit 4-1 illustrates the truck trip distribution patterns for Opening Year Cumulative and Horizon Year conditions. As shown on Exhibit 4-1, trucks are anticipated to utilize designated truck routes such as Merrill Avenue, Euclid Avenue (SR-83), Archibald Avenue, Edison Avenue/Ontario Ranch Road, and Limonite Avenue to reach regional freeways such as the SR-71, SR-60, and I-15 Freeways. These travel patterns are not anticipated to change with the addition of new future facilities for Horizon Year traffic conditions.

Exhibit 4-2 illustrates the Opening Year Cumulative passenger car trip distribution patterns. The Opening Year Cumulative passenger car trip distribution patterns are based on a SBTAM select zone run for a zone wholly or partially containing the Project, with modifications to utilize existing roadways. Exhibit 4-3 illustrates the passenger car trip distribution patterns for Horizon Year traffic conditions which is based on a SBTAM select zone run of the Project.

- ↔ (dashed) = INBOUND

### **4.3 MODAL SPLIT**

The potential for Project trips (non-truck) to be reduced by the use of public transit, walking or bicycling have not been included as part of the Project's estimated trip generation. Essentially, the Project's traffic projections are "conservative" in that these alternative travel modes would reduce the forecasted traffic volumes (non-truck trips only).

### **4.4 PROJECT TRIP ASSIGNMENT**

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movement volumes are shown on the following exhibits:

- Exhibits 4-4 and 4-5 for Phase 1 traffic conditions
- Exhibits 4-6 and 4-7 for Project Buildout traffic conditions
- Exhibits 4-8 and 4-9 for Horizon Year (2040) traffic conditions

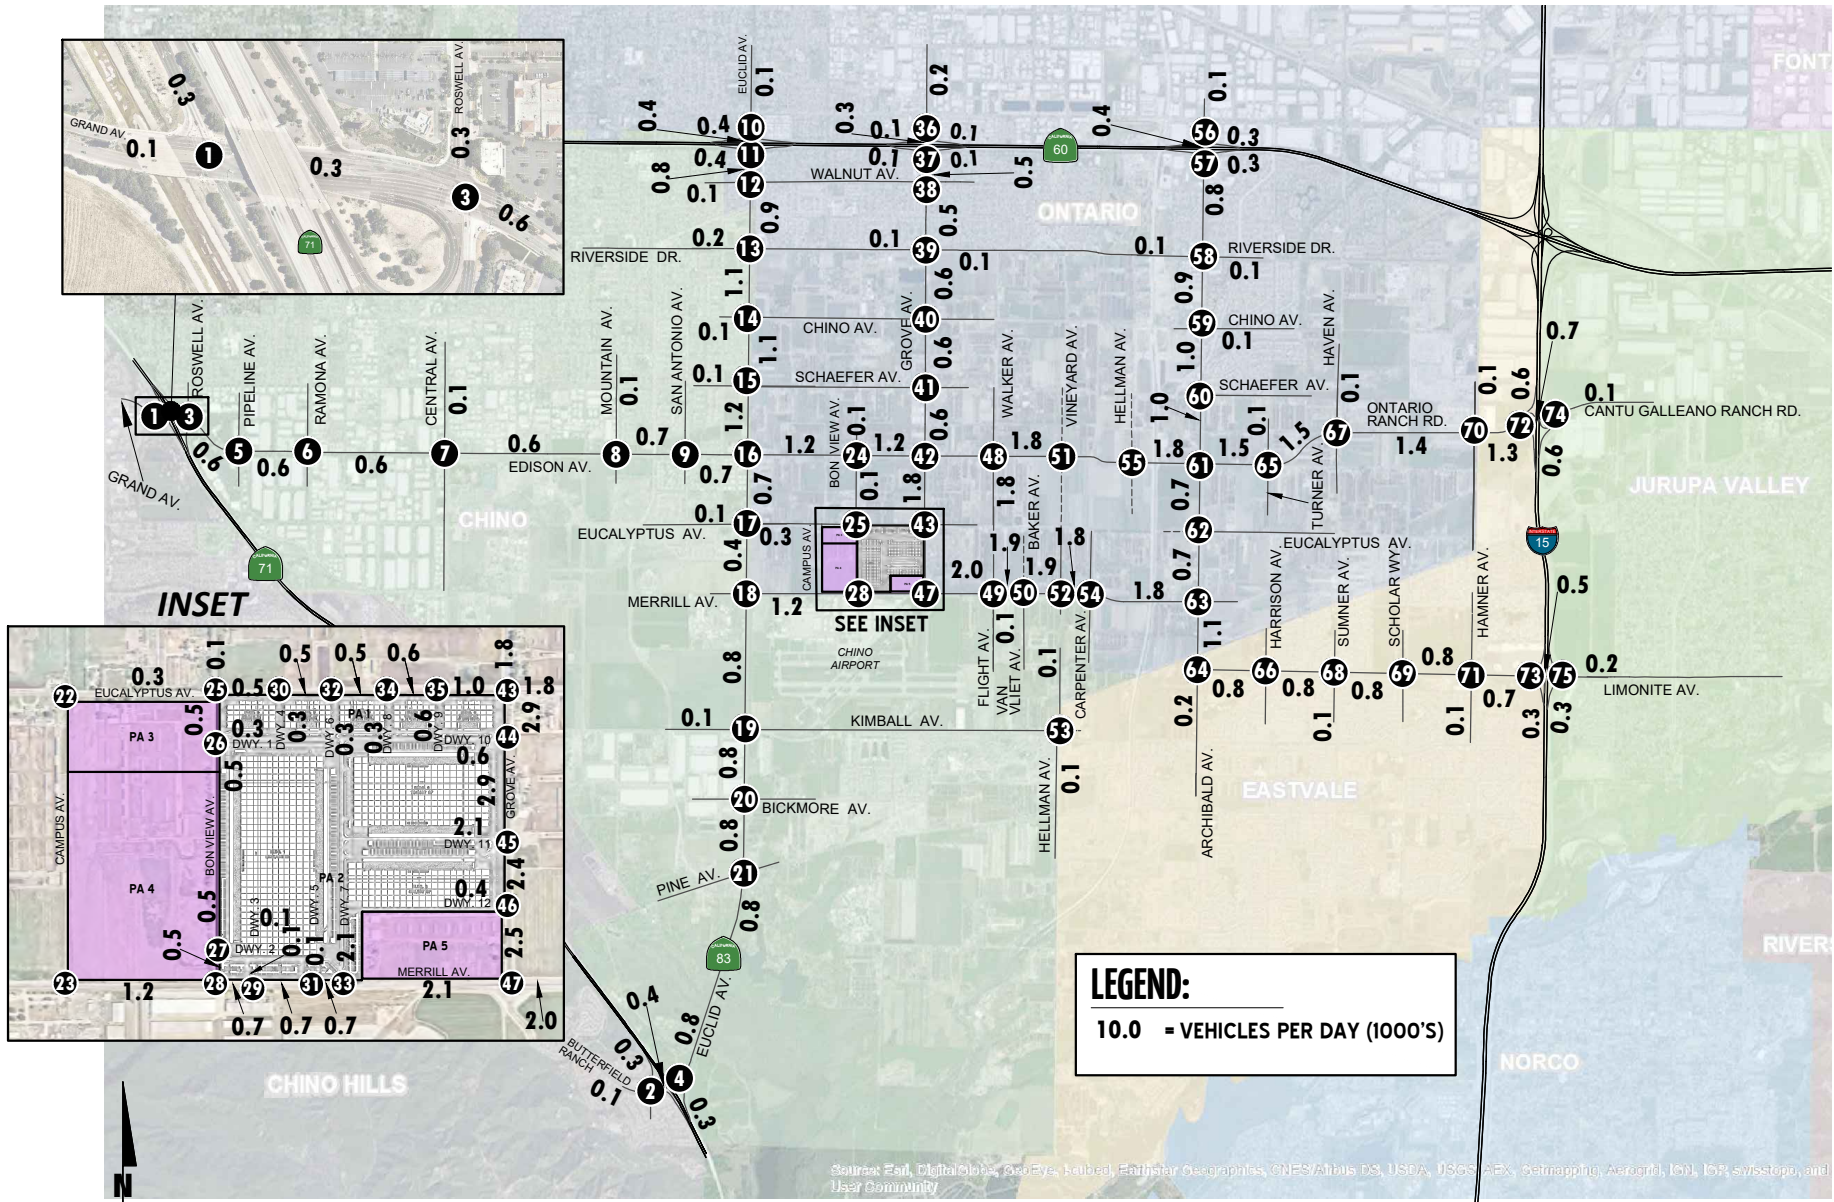

### **4.5 BACKGROUND TRAFFIC**

#### **4.5.1 OPENING YEAR CUMULATIVE CONDITIONS**

Future year traffic forecasts have been based upon background (ambient) growth at 2% per year for 2024 traffic conditions. The ambient growth factor is intended to approximate regional traffic growth. This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in addition to traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies.

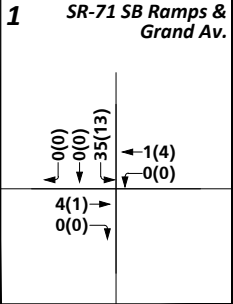

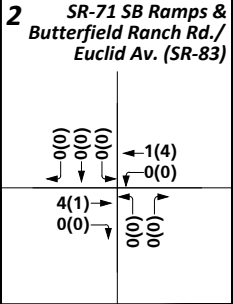

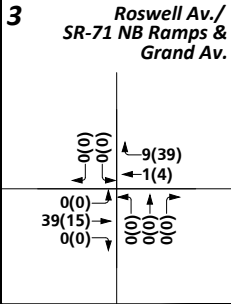

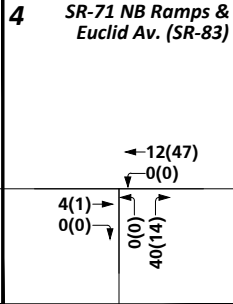

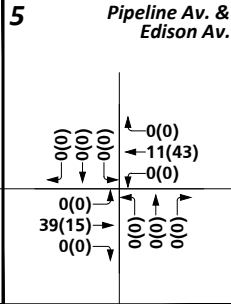

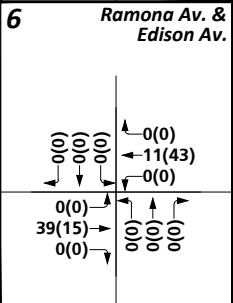

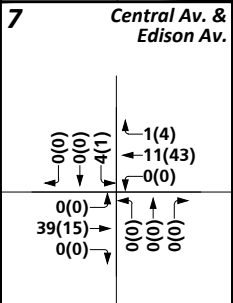

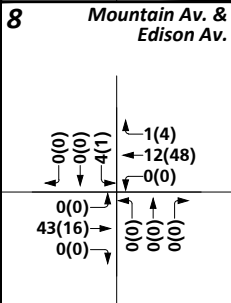

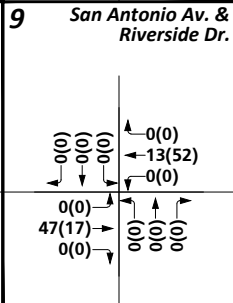

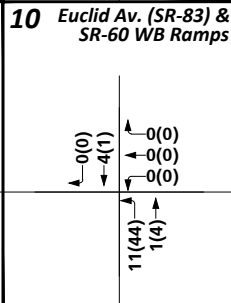

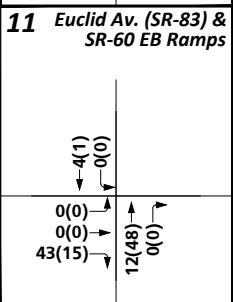

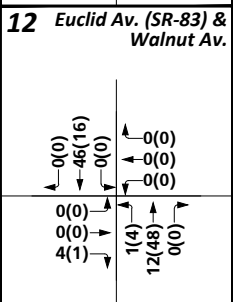

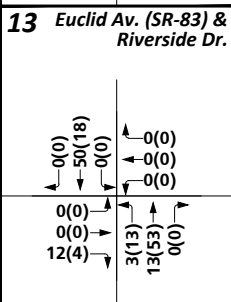

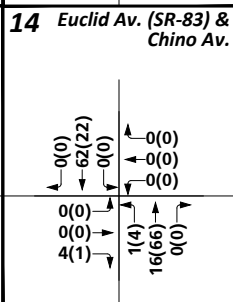

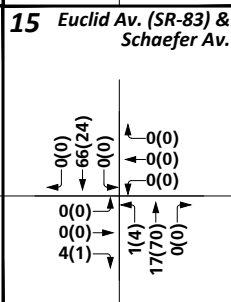

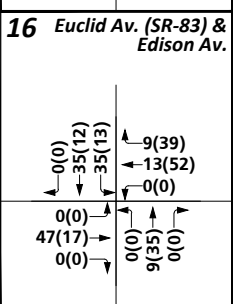

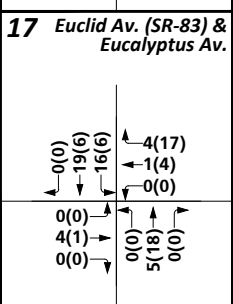

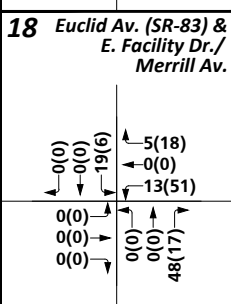

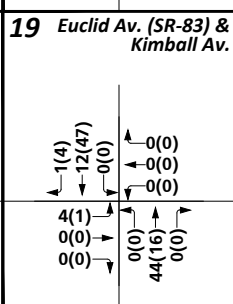

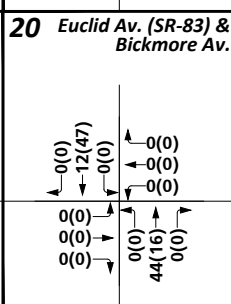

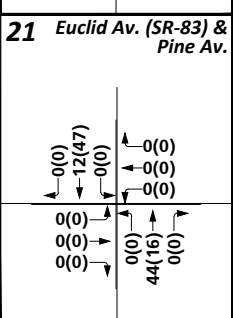

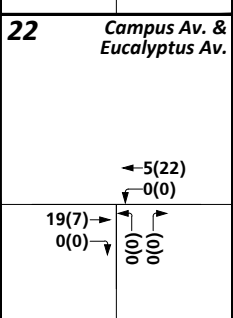

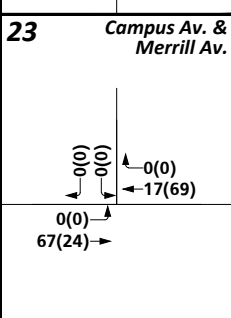

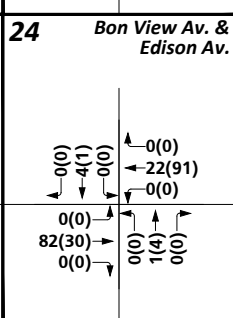

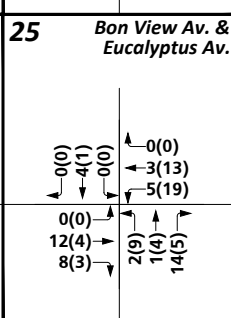

Opening Year Cumulative (2024) traffic volumes are provided in Section 6 of this report. The traffic generated by the proposed Project was then manually added to the base volume to determine Opening Year Cumulative "With Project" forecasts for each applicable phase.

#### 4.5.2 HORIZON YEAR (2040) CONDITIONS

The adopted Southern California Association of Governments (SCAG) 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (May 2020) growth forecasts for the City of Ontario identifies projected growth in population of 172,200 in 2016 to 269,100 in 2045, or a 56.3% increase over the 29-year period. (13) The change in population equates to roughly a 1.55% growth rate, compounded annually. Similarly, growth over the same 29-year period in households is projected to increase by 62.0%, or a 1.67% annual growth rate. Finally, growth in employment over the same 29-year period is projected to increase by 48.6%, or a 1.38% annual growth rate.

Therefore, the annual growth rate utilized for the purposes of this analysis would appear to conservatively approximate the anticipated regional growth in traffic volumes in the City of Ontario for Opening Year Cumulative and Horizon Year (2040) traffic conditions, especially when considered along with the addition of project-related traffic. As such, the growth in traffic volumes assumed in this traffic impact analysis would tend to overstate as opposed to understate the potential deficiencies to traffic and circulation. Horizon Year (2040) With Project traffic forecasts reflects buildout of the Project.

#### 4.6 CUMULATIVE DEVELOPMENT TRAFFIC

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Ontario. The cumulative projects listed are those that would generate traffic and would contribute traffic to study area intersections. The neighboring jurisdictions of Chino, Eastvale, and Jurupa Valley have also been contacted to include key projects in their respective cities.

Exhibit 4-10 illustrates the cumulative development location map. A summary of cumulative development projects and their proposed land uses are shown on Table 4-4. If applicable, the traffic generated by individual cumulative projects was manually added to the Opening Year Cumulative forecasts to ensure that traffic generated by the listed cumulative development projects on Table 4-4 are reflected as part of the background traffic. In an effort to conduct a conservative analysis, the cumulative projects are added in conjunction with the ambient growth identified in Section 4.5.1 *Background Traffic: Opening Year Cumulative Conditions*. Cumulative ADT and peak hour intersection turning movement volumes are shown on Exhibits 4-11 and 4-12 for near-term traffic conditions.

#### 4.7 HORIZON YEAR (2040) VOLUME DEVELOPMENT

Traffic projections for Horizon Year (2040) without Project conditions were derived from the San Bernardino Transportation Analysis Model (SBTAM) using accepted procedures for model forecast refinement and smoothing for study area intersections located within the County of San Bernardino. The current version of the SBTAM (Version 2.20, March 2019) reflects the local input in the adopted 2020 SCAG RTP within the County of San Bernardino.

The traffic forecasts reflect the area-wide growth anticipated between Existing (2021) conditions and Horizon Year (2040) traffic conditions. In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Horizon Year (2040) peak hour forecasts were refined using the model derived long range forecasts, base (validation) year model forecasts, along with existing peak hour traffic count data collected at each analysis location in January 2019. The SBTAM has a base (validation) year of 2012 and a horizon (future forecast) year of 2040. The difference in model volumes (2040-2012) defines the growth in traffic over the 28-year period. Similarly, the Riverside Transportation Analysis Model (RivTAM) has a base (validation) year of 2012 and a horizon (future forecast) year of 2040.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 785), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

The SBTAM uses an AM peak period-to-peak hour factor of 0.35 and a PM peak period-to-peak hour factor of 0.27. These factors represent the relationship of the highest single AM peak hour to the modeled 3-hour AM peak period (an even distribution would result in a factor of 0.33) and the highest single PM peak hour to the modeled 4-hour PM peak period (an even distribution would result in a factor of 0.25). The model data from RivTAM represents peak hour data and therefore did not require adjustments.

Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Horizon Year traffic conditions. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing or Opening Year Cumulative traffic conditions were not assumed as part of this analysis. As such, in conjunction with the addition of cumulative projects that are not consistent with the General Plan, additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable Horizon Year (2040) forecasts. Horizon Year (2040) turning volumes were compared to Opening Year Cumulative (2024) volumes in order to ensure a minimum growth as a part of the refinement process. The minimum growth includes any additional growth between Opening Year Cumulative (2024) and Horizon Year (2040) traffic conditions that is not accounted for by the traffic generated by cumulative development projects and ambient growth rates assumed between Existing (2021) and Opening Year Cumulative (2024) conditions. Adjustments have not

been made to study area intersections that may be affected by new future roadway connections (such as the extension of Pine Avenue or the extension of Kimball Avenue/Limonite Avenue), where travel patterns would likely get affected and forecasts may potentially decrease from the Opening Year Cumulative conditions. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the Horizon Year (2040) peak hour forecasts.

The future Horizon Year (2040) Without Project peak hour turning movements were then reviewed by Urban Crossroads, Inc. for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two adjacent driveway locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there is no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis.

The SBTAM and RivTAM do not include a truck component or have data that is unusually low. As such, in an effort to conduct a conservative analysis, the presence of trucks has been accounted for based on the manual volume adjustments made to demonstrate growth above Opening Year Cumulative (2024) traffic forecasts, which are presented and evaluated in PCE (see Section 3.7 *Existing Traffic Counts* for discussion on PCE). As such, the Horizon Year (2040) forecasts are also assumed to be in PCE for the purposes of this analysis. Post-processing worksheets for Horizon Year (2040) without Project traffic conditions are provided in Appendix 4.1.

This Page Intentionally Left Blank

## 5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Existing plus Project (E+P) conditions and the resulting intersection operations, off-ramp queuing, and traffic signal warrant analyses. E+P traffic conditions has been evaluated for each Phase.

### 5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

### 5.2 EXISTING PLUS PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus Project traffic. The ADT and weekday AM and PM peak hour intersection turning movement volumes which can be expected for E+P traffic conditions are shown on the following exhibits:

- Exhibits 5-1 and 5-2: E+P (Phase 1) Conditions
- Exhibits 5-3 and 5-4: E+P (Project Buildout) Conditions

### 5.3 INTERSECTION OPERATIONS ANALYSIS

E+P peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TIA.

#### 5.3.1 E+P (PHASE 1)

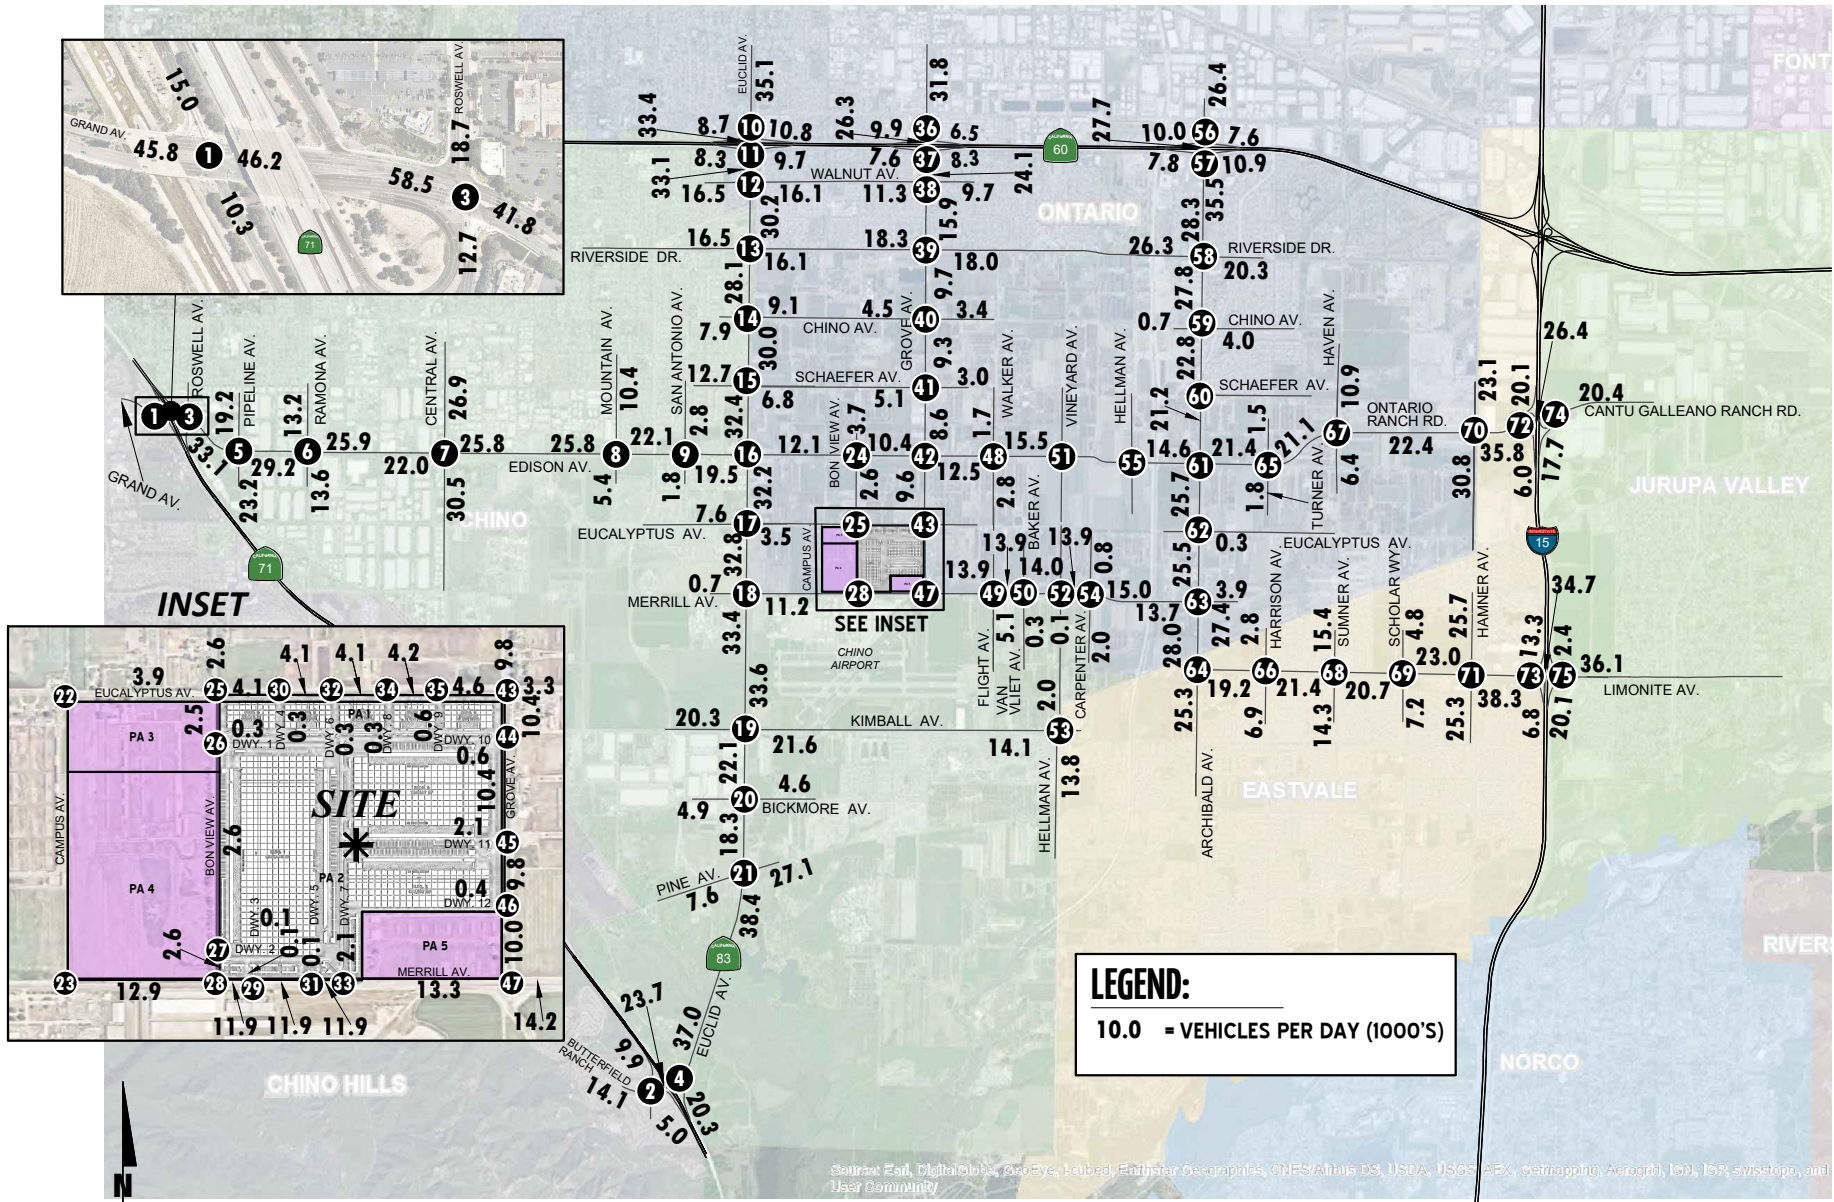

The intersection analysis results are summarized on Table 5-1 for E+P (Phase 1) traffic conditions, which indicate that the following additional study area intersections are anticipated to operate at an unacceptable LOS, in addition to those identified for Existing traffic conditions:

- Euclid Avenue (SR-83) & Merrill Avenue (#18) – LOS E PM peak hour only
- Walker Avenue/Flight Avenue & Merrill Avenue (#49) – LOS E AM and PM peak hours

Consistent with Table 5-1, a summary of the peak hour intersection LOS is shown on Exhibit 5-5 for E+P (Phase 1) traffic conditions. The intersection operations analysis worksheets for E+P (Phase 1) traffic conditions are included in Appendix 5.1 of this TA.

EXHIBIT 5-1: E+P (PHASE 1) AVERAGE DAILY TRAFFIC (ADT)

\* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

<sup>3</sup> Minimum acceptable LOS for each applicable jurisdiction.

### 5.3.2 E+P (PROJECT BUILDOUT)

The intersection analysis results are summarized on Table 5-2 for E+P (Project Buildout) traffic conditions, which indicate that the following additional study area intersections are anticipated to operate at an unacceptable LOS, in addition to those identified for Existing traffic conditions:

- Euclid Avenue (SR-83) & Edison Avenue (#16) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Merrill Avenue (#18) – LOS E PM peak hour only
- Bon View Avenue & Edison Avenue (#24) – LOS F AM and PM peak hours
- Bon View Avenue & Merrill Avenue (#28) – LOS F PM peak hour only
- Walker Avenue/Flight Avenue & Merrill Avenue (#49) – LOS F AM and PM peak hours

Consistent with Table 5-2, a summary of the peak hour intersection LOS is shown on Exhibit 5-6 for E+P (Project Buildout) traffic conditions. The intersection operations analysis worksheets for E+P (Project Buildout) traffic conditions are included in Appendix 5.2 of this TA.

### 5.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

The following study area intersections are anticipated to meet peak hour volume-based traffic signal warrants for E+P (Phase 1) traffic conditions (see Appendix 5.3), in addition to those previously warranted under Existing traffic conditions:

- Bon View Avenue & Merrill Avenue (#28)
- Driveway 7 & Merrill Avenue (#33)
- Grove Avenue & Driveway 11 (#45)
- Walker Avenue & Edison Avenue (#48)

The following study area intersection is anticipated to meet peak hour volume-based traffic signal warrant for E+P (Project Buildout) traffic conditions (see Appendix 5.4), in addition to those previously warranted under Existing and E+P (Phase 1) traffic conditions:

- Bon View Avenue & Eucalyptus Avenue (#25)

### 5.5 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for E+P are presented on Table 5-3 and 5-4 for Phase 1 and Project Buildout, respectively. As shown on Table 5-3 and 5-4, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows with the addition of Project (Phase 1 or Project Buildout) traffic. Worksheets for E+P (Phase 1 and Project Buildout) traffic conditions off-ramp queuing analysis are provided in Appendix 5.5 and Appendix 5.6, respectively.

**Table 5-2**

\* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

<sup>3</sup> Minimum acceptable LOS for each applicable jurisdiction.

<sup>4</sup> Impact is significant if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels, or if the Project contributes 50 or more peak hour trips to an existing deficiency. However, if the pre-project condition is already below LOS D (or acceptable LOS), the Project will be responsible for mitigating its impact to a LOS equal to or better than it was without the Project.

<sup>5</sup> Traffic signal is currently flashing red. As such, an all-way stop controlled intersection was assumed for Existing and E+P traffic conditions only.

<sup>6</sup> I-15 Freeway and Limonite Avenue Interchange is currently under construction and is anticipated to be completed in 2020. Pre-construction volumes and lane geometrics have been utilized for the operations analysis.

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

	NBR	400	34	274	Yes	Yes	33	267	Yes	Yes

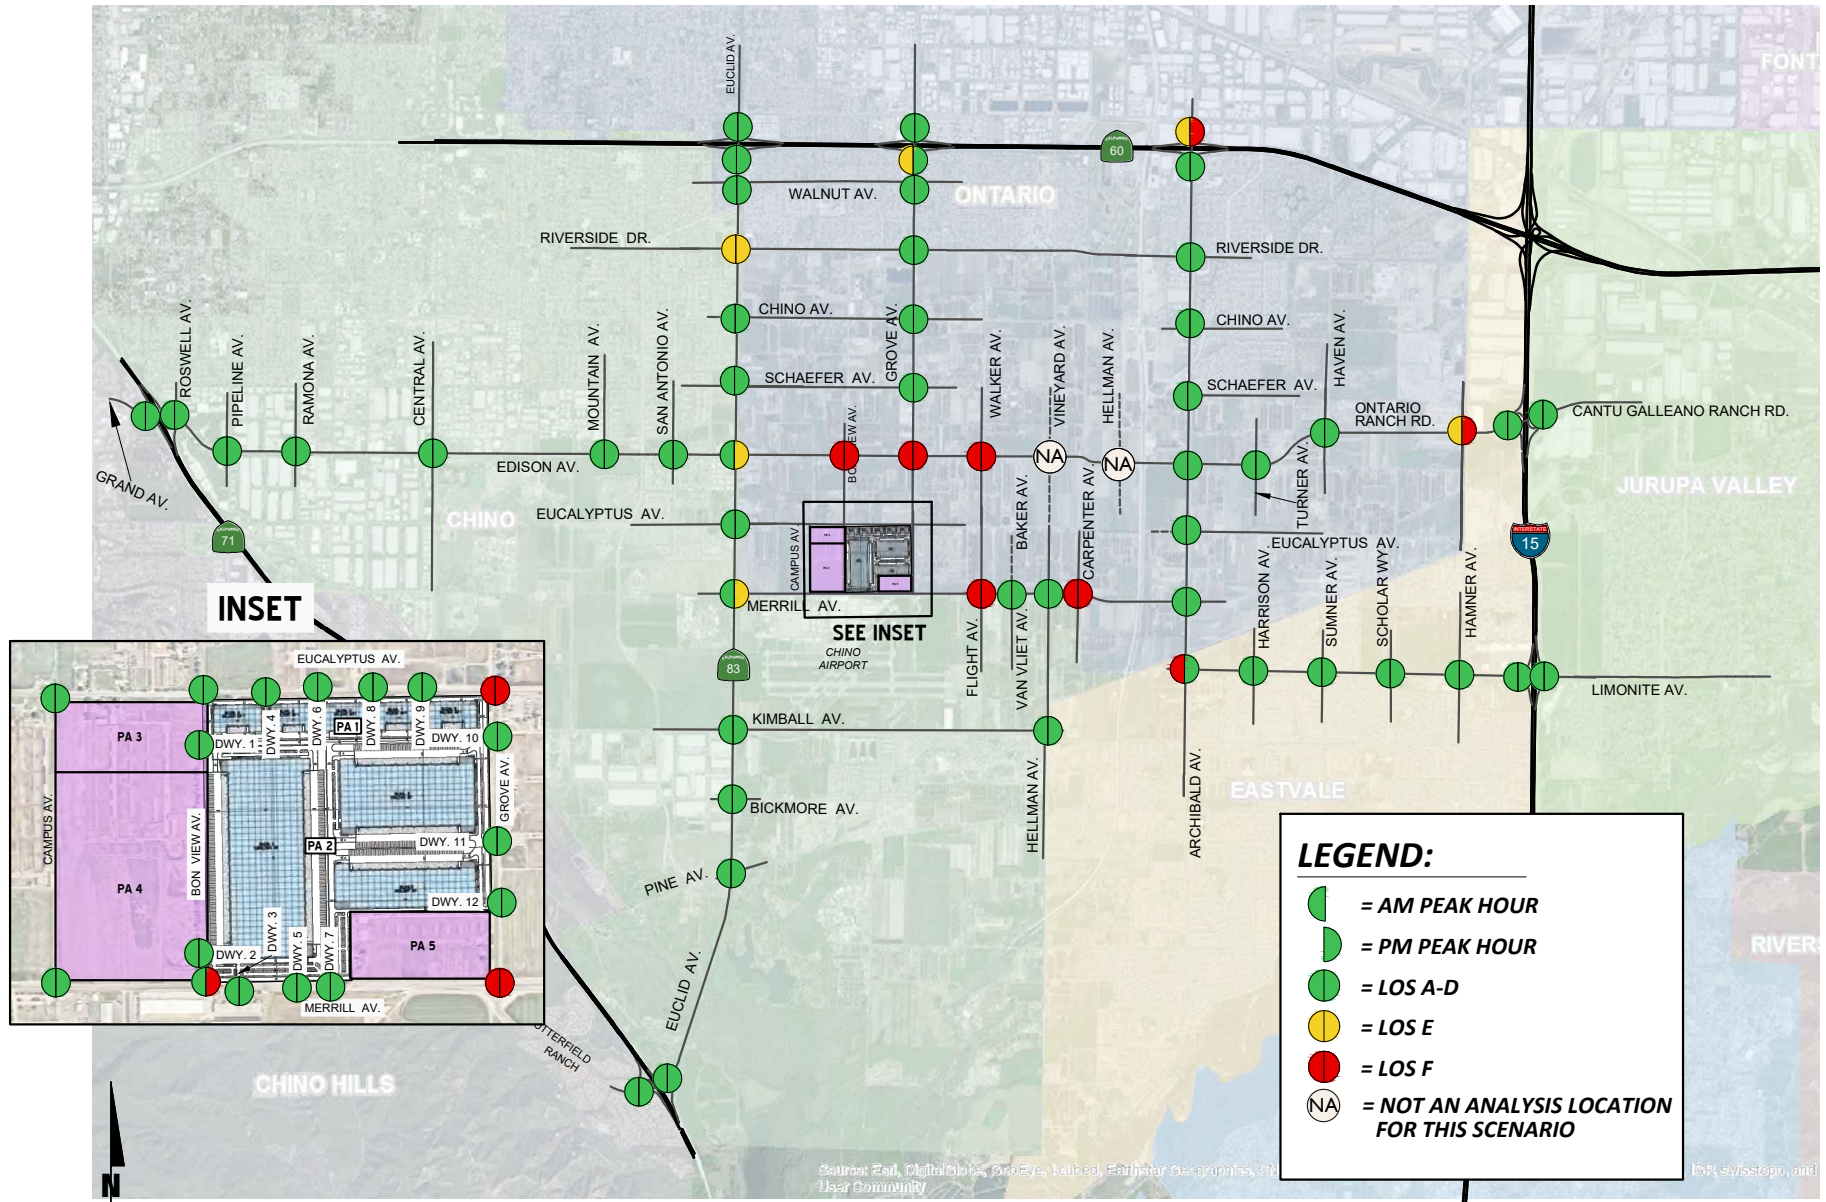

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

EXHIBIT 5-6: E+P (PROJECT BUILDOUT) SUMMARY OF LOS

## **5.7 IMPROVEMENTS**

This section provides a summary of Project deficiencies and identified improvements. Based on the City of Ontario deficiency criteria discussed in Section 2.6 *Deficiency Criteria*, intersections were found to be deficient.

### **5.7.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS**

The effectiveness of the proposed recommended improvements is presented on Table 5-5 for E+P (Phase 1 and Project Buildout) traffic conditions. The intersection operations analysis worksheets for E+P (Phase 1 and Project Buildout) traffic conditions, with improvements, are included in Appendix 5.7 and Appendix 5.8 of this TA.

### **5.7.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously on Tables 5-3 and 5-4, there are no peak hour queuing issues anticipated at the SR-71 Freeway, SR-60 Freeway, and I-15 Freeway study area interchanges. As such, no improvements have been identified.

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-Street Stop; TS = Traffic Signal; TS = Improvement

<sup>4</sup> Improvement includes restriping the northbound approach to provide one left turn lane, two through lanes, and one shared through-right turn lane.

<sup>5</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.

This Page Intentionally Left Blank

## 6 OPENING YEAR CUMULATIVE (2024) TRAFFIC CONDITIONS

This section discusses the methods used to develop Opening Year Cumulative (2024) Without and With Project traffic forecasts, and the resulting intersection operations, off-ramp queuing, and traffic signal warrant analyses.

### 6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2024) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only.

### 6.2 OPENING YEAR CUMULATIVE (2024) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus an ambient growth factor of 6.12% plus traffic from pending and approved but not yet constructed known development projects in the area. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2024) Without Project traffic conditions are shown on Exhibits 6-1 and 6-2, respectively.

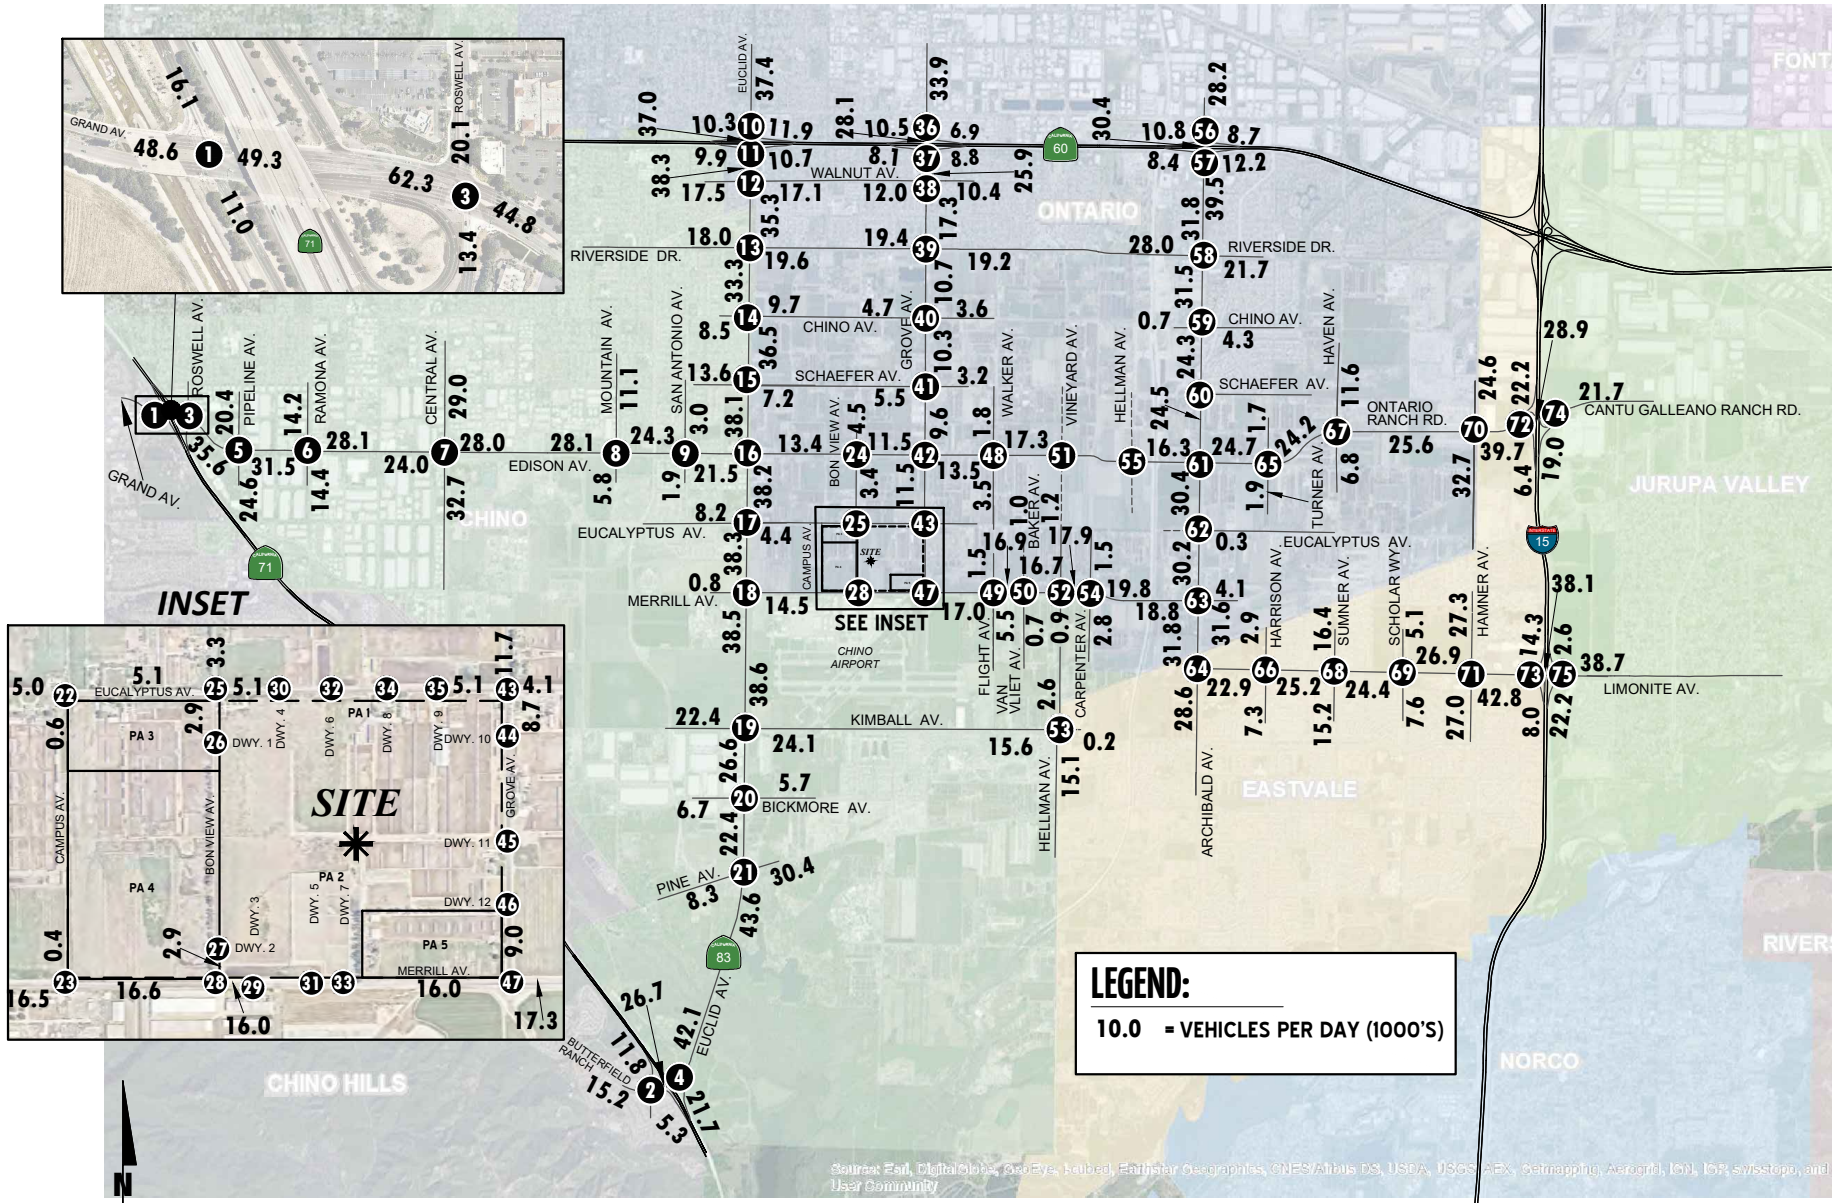

### 6.3 OPENING YEAR CUMULATIVE (2024) WITH PROJECT (PHASE 1) TRAFFIC VOLUME FORECASTS

This scenario includes Opening Year Cumulative (2024) Without Project traffic in conjunction with the addition of Project (Phase 1) traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2024) With Project traffic conditions are shown on Exhibits 6-3 and 6-4, respectively.

### 6.4 OPENING YEAR CUMULATIVE (2024) WITH PROJECT (PROJECT BUILDOUT) TRAFFIC VOLUME FORECASTS

This scenario includes Opening Year Cumulative (2024) Without Project traffic in conjunction with the addition of Project (Project Buildout) traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2024) With Project traffic conditions are shown on Exhibits 6-5 and 6-6, respectively.

## 6.5 INTERSECTION OPERATIONS ANALYSIS

### 6.5.1 OPENING YEAR CUMULATIVE (2024) WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Opening Year Cumulative (2024) Without Project conditions with roadway and intersection geometrics consistent with Section 6.1 *Roadway Improvements*. As shown on Table 6-1, the following additional study area intersections are anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2024) Without Project traffic conditions:

- Euclid Avenue (SR-83) & Riverside Drive (#13) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Edison Avenue (#16) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Merrill Avenue (#18) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Kimball Avenue (#19) – LOS E PM peak hour only
- Euclid Avenue (SR-83) & Pine Avenue (#21) – LOS F PM peak hour only
- Bon View Avenue & Edison Avenue (#24) – LOS F AM and PM peak hours
- Bon View Avenue & Merrill Avenue (#28) – LOS F PM peak hour only
- Grove Avenue & SR-60 EB Ramps (#37) – LOS E AM peak hour only
- Grove Avenue & Edison Avenue (#42) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#43) – LOS F PM peak hour only
- Grove Avenue & Merrill Avenue (#47) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#48) – LOS F AM and PM peak hours
- Walker Avenue/Flight Avenue & Merrill Avenue (#49) – LOS F AM and PM peak hours
- Carpenter Avenue & Merrill Avenue (#54) – LOS F AM and PM peak hours
- Archibald Avenue & Ontario Ranch Road (#61) – LOS F AM peak hour only
- Archibald Avenue & Merrill Avenue (#63) – LOS F PM peak hour only
- Archibald Avenue & Limonite Avenue (#56) – LOS F AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#63) – LOS E AM peak hour; LOS F PM peak hour

A summary of the peak hour intersection LOS for Opening Year Cumulative (2024) Without Project conditions is shown on Exhibit 6-7. The intersection operations analysis worksheets for Opening Year Cumulative (2024) Without Project traffic conditions are included in Appendix 6.1 of this TA.

<sup>1</sup> **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).  
<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.  
<sup>3</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

**EXHIBIT 6-7: OPENING YEAR CUMULATIVE (2024) WITHOUT PROJECT SUMMARY OF LOS**

### 6.5.2 OPENING YEAR CUMULATIVE (2024) WITH PROJECT (PHASE 1) TRAFFIC CONDITIONS

As shown on Table 6-1 and illustrated on Exhibit 6-8, the following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2024) With Project (Phase 1) traffic conditions with the addition of Phase 1 Project traffic, in addition to the locations identified above for Opening Year Cumulative (2024) Without Project traffic conditions.

- Grove Avenue & Riverside Drive (#39) – LOS F PM peak hour only
- Grove Avenue & Chino Avenue (#40) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#41) – LOS F AM and PM peak hours

The intersection operations analysis worksheets for Opening Year Cumulative (2024) With Project (Phase 1) traffic conditions are included in Appendix 6.2 of this TA.

### 6.5.3 OPENING YEAR CUMULATIVE (2024) WITH PROJECT (PROJECT BUILDOUT) TRAFFIC CONDITIONS

As shown on Table 6-2 and illustrated on Exhibit 6-9, the following study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Opening Year Cumulative (2024) With Project (Project Buildout) traffic conditions with the addition of Project Buildout traffic, in addition to the locations identified above for Opening Year Cumulative (2024) Without Project traffic conditions.

- Campus Avenue & Merrill Avenue (#23) – LOS F PM peak hour only
- Grove Avenue & Riverside Drive (#39) – LOS F PM peak hour only
- Grove Avenue & Chino Avenue (#40) – LOS F AM and PM peak hours
- Grove Avenue & Schaefer Avenue (#41) – LOS F AM and PM peak hours

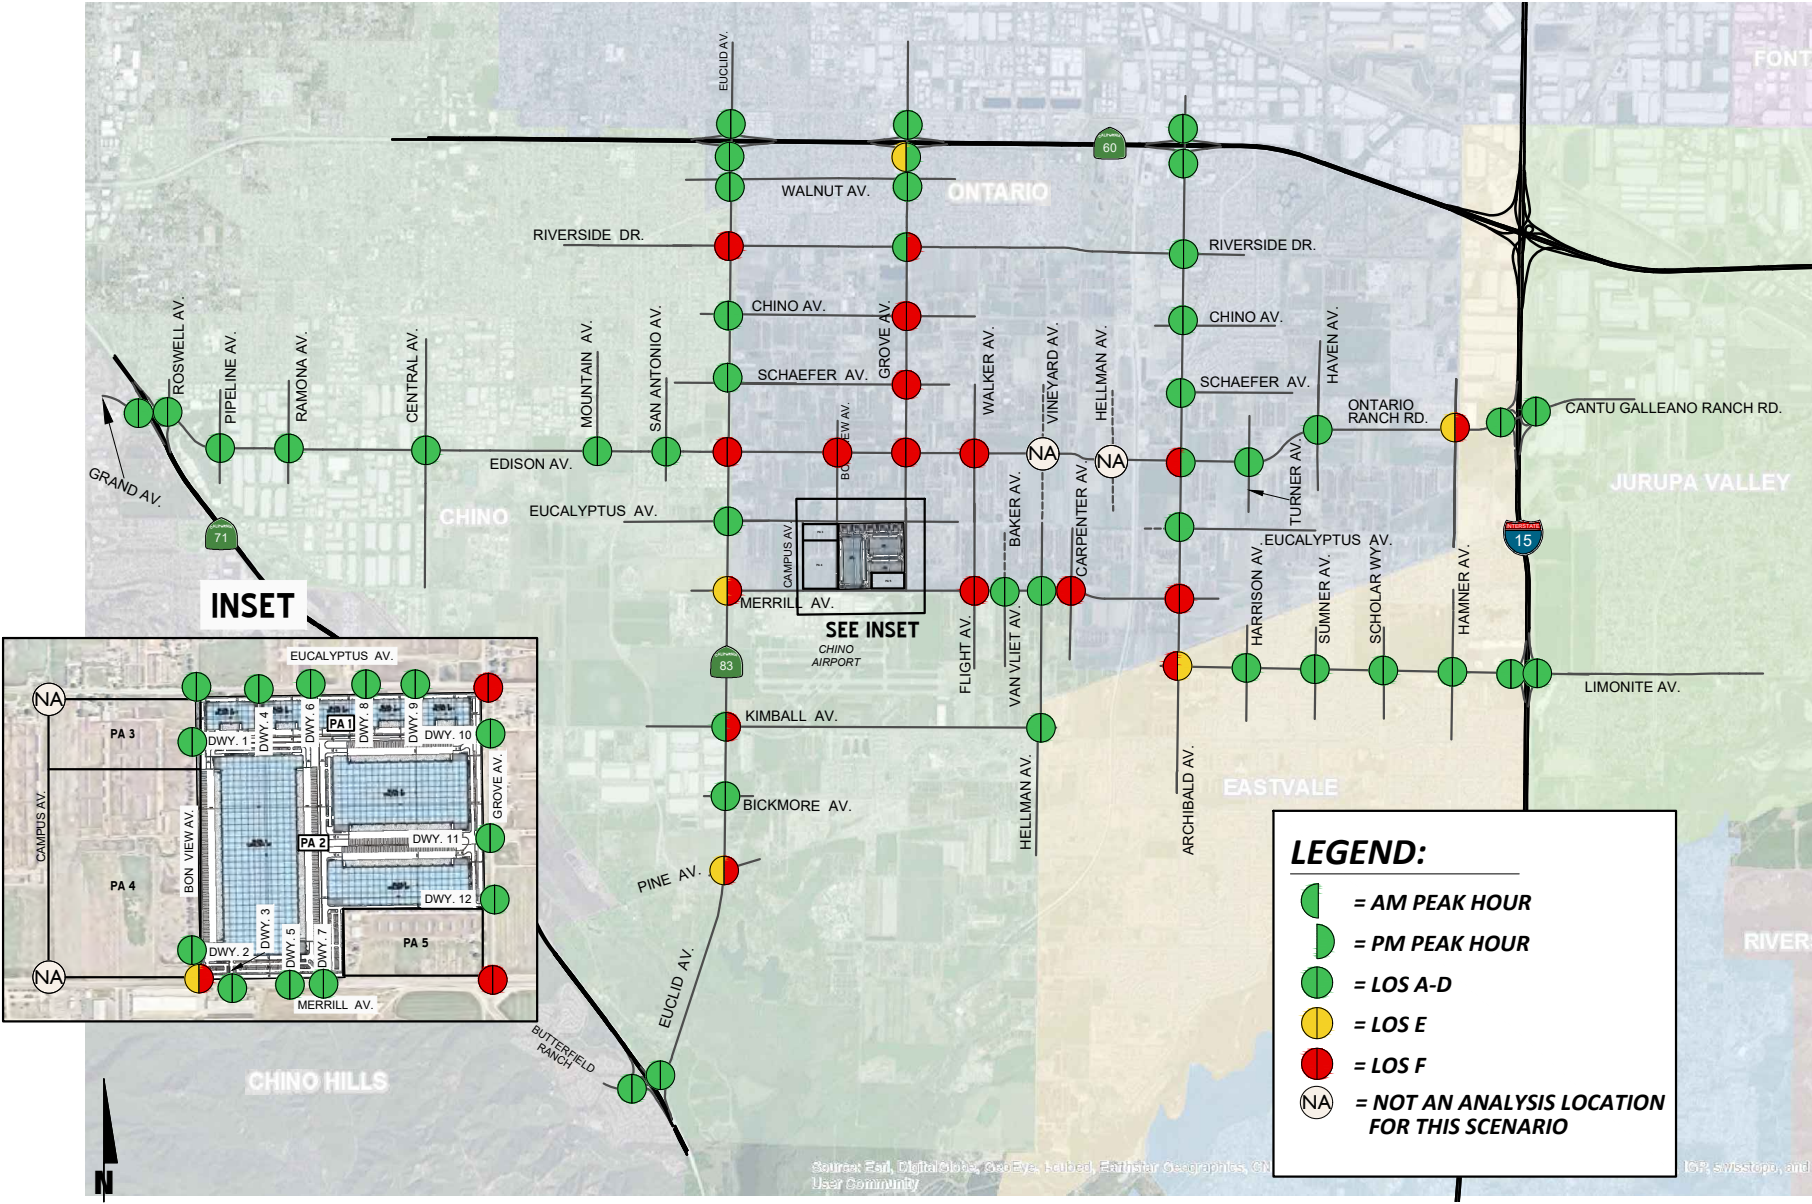

The intersection operations analysis worksheets for Opening Year Cumulative (2024) With Project (Project Buildout) traffic conditions are included in Appendix 6.3 of this TA.

## 6.6 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no additional unsignalized study area intersections anticipated to meet a peak hour or daily volume-based traffic signal warrant under Opening Year Cumulative (2024) Without Project and With Project (Phase 1) traffic conditions, in addition to the locations previously identified under Existing and E+P (Phase 1) traffic conditions (see Appendices 6.4 and 6.5, respectively).

Similarly, there are no additional unsignalized study area intersections anticipated to meet a peak hour or daily volume-based traffic signal warrant under Opening Year Cumulative (2024) With Project (Project Buildout) traffic conditions (see Appendix 6.6).

## **6.7 OFF-RAMP QUEUING ANALYSIS**

Queuing analysis findings for Opening Year Cumulative (2024) Without Project and With Project (Phase 1 and Project Buildout) traffic conditions are shown on Tables 6-3 and 6-4. As shown on Tables 6-3 and 6-4, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows under Opening Year Cumulative (2024) Without Project and With Project (Phase 1 and Project Buildout) traffic conditions. Worksheets for Opening Year Cumulative (2024) Without and With Project (Phase 1 and Project Buildout) traffic conditions off-ramp queuing analysis are provided in Appendices 6.7, 6.8, and 6.9, respectively.

## **6.8 IMPROVEMENTS**

### **6.8.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS**

Improvement strategies have been identified at intersections that have been identified as deficient, in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better).

The effectiveness of the recommended improvement strategies to address Opening Year Cumulative (2024) traffic deficiencies are presented on Table 6-5. If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of City DIF fees or fair share contribution as identified on Table 1-2. Worksheets for Opening Year Cumulative (2024) Without and With Project (Phase 1 and Project Buildout) conditions, with improvements, HCM calculation worksheets are provided in Appendices 6.10, 6.11, and 6.12, respectively.

### **6.8.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously on Tables 6-3 and 6-4, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for Opening Year Cumulative (2024) traffic conditions. As such, no improvements have been recommended.

**Table 6-3**

**Peak Hour Freeway Off-Ramp Queuing Summary for Opening Year Cumulative (2024) Conditions - Phase 1**

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-Street Stop; TS = Traffic Signal; TS = Improvement

<sup>4</sup> Improvement includes restriping the northbound approach to provide one left turn lane, two through lanes, and one shared through-right turn lane.

<sup>5</sup> Improvement includes modifying the traffic signal to extend the cycle length to 130 seconds.

This Page Intentionally Left Blank

## 7 HORIZON YEAR (2040) TRAFFIC CONDITIONS

This section discusses the methods used to develop Horizon Year (2040) Without and With Project traffic forecasts, and the resulting intersection operations, off-ramp queuing, and traffic signal warrant analyses.

### 7.1 ROADWAY IMPROVEMENTS

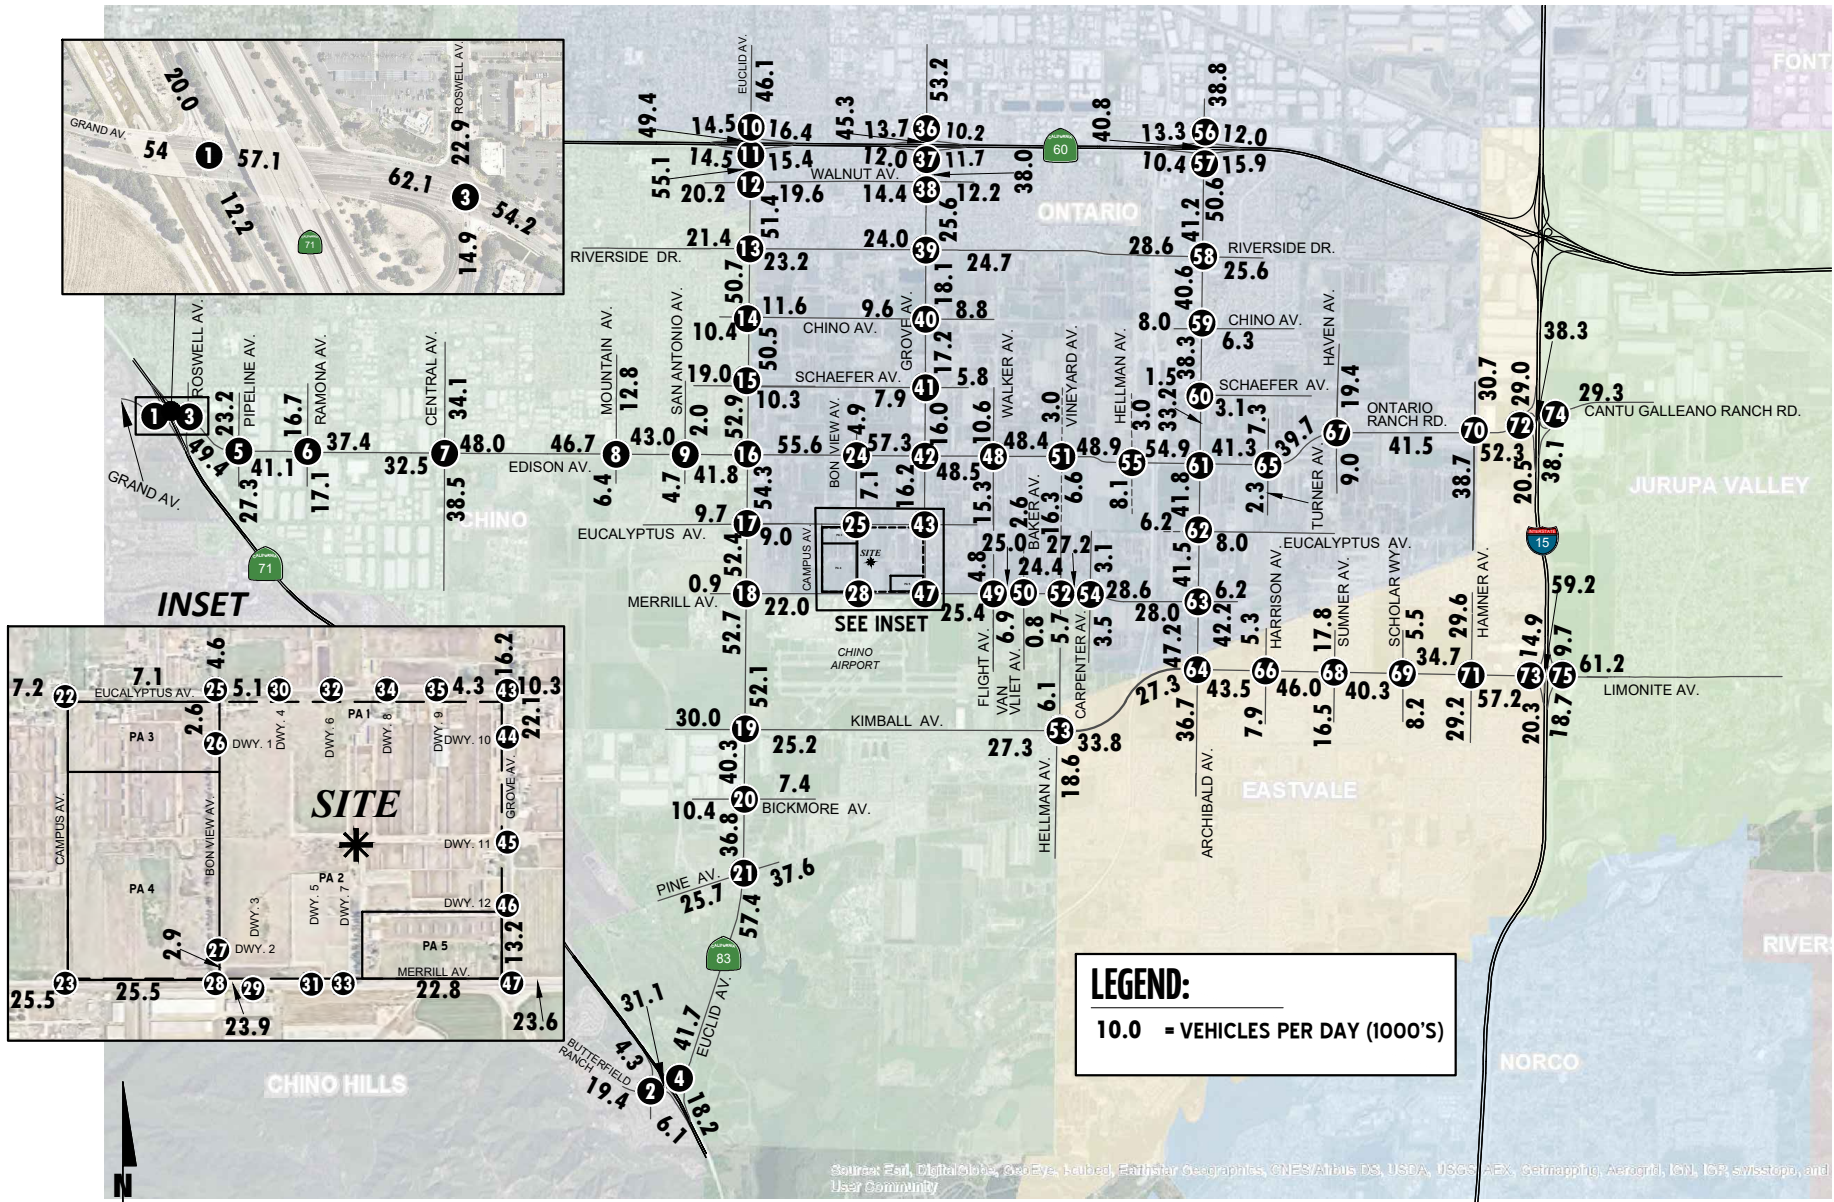

The lane configurations and traffic controls assumed to be in place for Horizon Year (2040) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages and driveways such as the northern extension of Meadow Valley Avenue on Kimball Avenue and the northern extension of Hellman Avenue north of Kimball Avenue).
- The Pine Avenue extension between its El Prado Road and the SR-71 Freeway.
- The Kimball Avenue/Limonite Avenue extension between Hellman Avenue and Archibald Avenue.
- Other parallel facilities, that although not evaluated for the purposes of this analysis, are anticipated to be in place for Horizon Year traffic conditions and would affect the travel patterns within the study area (e.g., new future roadways within the New Model Colony area such as Schaefer Avenue east of Archibald Avenue, Eucalyptus Avenue east of Archibald Avenue, Merrill Avenue east of Archibald Avenue, The Preserve Specific Plan roadway network within the City of Chino, etc.).

### 7.2 HORIZON YEAR (2040) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM/RivTAM (see Section 4.7 *Horizon Year (2040) Volume Development* of this TA for a detailed discussion on the post-processing methodology). The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) Without Project traffic conditions are shown on Exhibits 7-1 and 7-2, respectively.

**LEGEND:**

10(10) = AM(PM) PEAK HOUR INTERSECTION VOLUMES

### 7.3 HORIZON YEAR (2040) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-process volumes obtained from the SBTAM/RivTAM, plus the traffic generated by the proposed Project. Horizon Year (2040) With Project traffic forecasts assumes buildout of the Project. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) With Project traffic conditions are shown on Exhibits 7-3 and 7-4, respectively.

### 7.4 INTERSECTION OPERATIONS ANALYSIS

#### 7.4.1 HORIZON YEAR (2040) WITHOUT PROJECT TRAFFIC CONDITIONS

LOS calculations were conducted for the study intersections to evaluate their operations under Horizon Year (2040) Without Project conditions with roadway and intersection geometrics consistent with Section 7.1 *Roadway Improvements*. As shown on Table 7-1, the following additional study area intersections are anticipated to operate at an unacceptable LOS under Horizon Year (2040) Without Project traffic conditions:

- SR-71 Southbound Ramps & Grand Avenue (#1) – LOS E PM peak hour only
- SR-71 Southbound Ramps & Butterfield Ranch Road (#2) – LOS E AM and PM peak hours
- SR-71 Northbound Ramps & Edison Avenue (#3) – LOS F AM peak hour only
- Central Avenue & Edison Avenue (#7) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & SR-60 Westbound Ramps (#10) – LOS E AM and PM peak hours
- Euclid Avenue (SR-83) & SR-60 Eastbound Ramps (#11) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Riverside Drive (#13) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Chino Avenue (#14) – LOS E AM peak hour; LOS F PM peak hour
- Euclid Avenue (SR-83) & Schaefer Avenue (#15) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Edison Avenue (#16) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Eucalyptus Avenue (#17) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Merrill Avenue (#18) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Kimball Avenue (#19) – LOS F AM and PM peak hours
- Euclid Avenue (SR-83) & Bickmore Avenue (#20) – LOS E AM and PM peak hours
- Euclid Avenue (SR-83) & Pine Avenue (#21) – LOS F AM and PM peak hours
- Bon View Avenue & Edison Avenue (#24) – LOS F AM and PM peak hours
- Bon View Avenue & Eucalyptus Avenue (#25) – LOS F PM peak hour only
- Bon View Avenue & Merrill Avenue (#28) – LOS F AM and PM peak hours
- Grove Avenue & SR-60 Westbound Ramps (#36) – LOS E AM peak hour only
- Grove Avenue & SR-60 Eastbound Ramps (#37) – LOS F AM and PM peak hours
- Grove Avenue & Riverside Drive (#39) – LOS F AM and PM peak hours
- Grove Avenue & Chino Avenue (#40) – LOS F AM and PM peak hours

- Grove Avenue & Schaefer Avenue (#41) – LOS F AM and PM peak hours
- Grove Avenue & Edison Avenue (#42) – LOS F AM and PM peak hours
- Grove Avenue & Eucalyptus Avenue (#43) – LOS F AM and PM peak hours
- Grove Avenue & Merrill Avenue (#47) – LOS F AM and PM peak hours
- Walker Avenue & Edison Avenue (#48) – LOS F AM and PM peak hours
- Walker Avenue/Flight Avenue & Merrill Avenue (#49) – LOS F AM and PM peak hours
- Van Vliet Avenue/Baker Avenue & Merrill Avenue (#50) – LOS F PM peak hour only
- Vineyard Avenue & Edison Avenue (#51) – LOS F PM peak hour only
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#52) – LOS F AM and PM peak hours
- Hellman Avenue & Kimball Avenue (#53) – LOS F PM peak hour only
- Carpenter Avenue & Merrill Avenue (#54) – LOS F AM and PM peak hours
- Hellman Avenue & Edison Avenue (#55) – LOS F PM peak hour only
- Archibald Avenue & Riverside Drive (#58) – LOS F AM and PM peak hours
- Archibald Avenue & Schaefer Avenue (#60) – LOS F PM peak hour only
- Archibald Avenue & Ontario Ranch Road (#61) – LOS F AM and PM peak hours
- Archibald Avenue & Eucalyptus Avenue (#62) – LOS F AM and PM peak hours
- Archibald Avenue & Merrill Avenue (#63) – LOS F AM and PM peak hours
- Archibald Avenue & Limonite Avenue (#64) – LOS F AM and PM peak hours
- Turner Avenue & Ontario Ranch Road (#65) – LOS F AM and PM peak hours
- Haven Avenue & Ontario Ranch Road (#67) – LOS F AM peak hour only
- Hamner Avenue & Ontario Ranch Road (#70) – LOS F AM and PM peak hours

A summary of the peak hour intersection LOS for Horizon Year (2040) Without Project conditions is shown on Exhibit 7-5. The intersection operations analysis worksheets for Horizon Year (2040) Without Project traffic conditions are included in Appendix 7.1 of this TA.

**7.4.2 HORIZON YEAR (2040) WITH PROJECT TRAFFIC CONDITIONS**

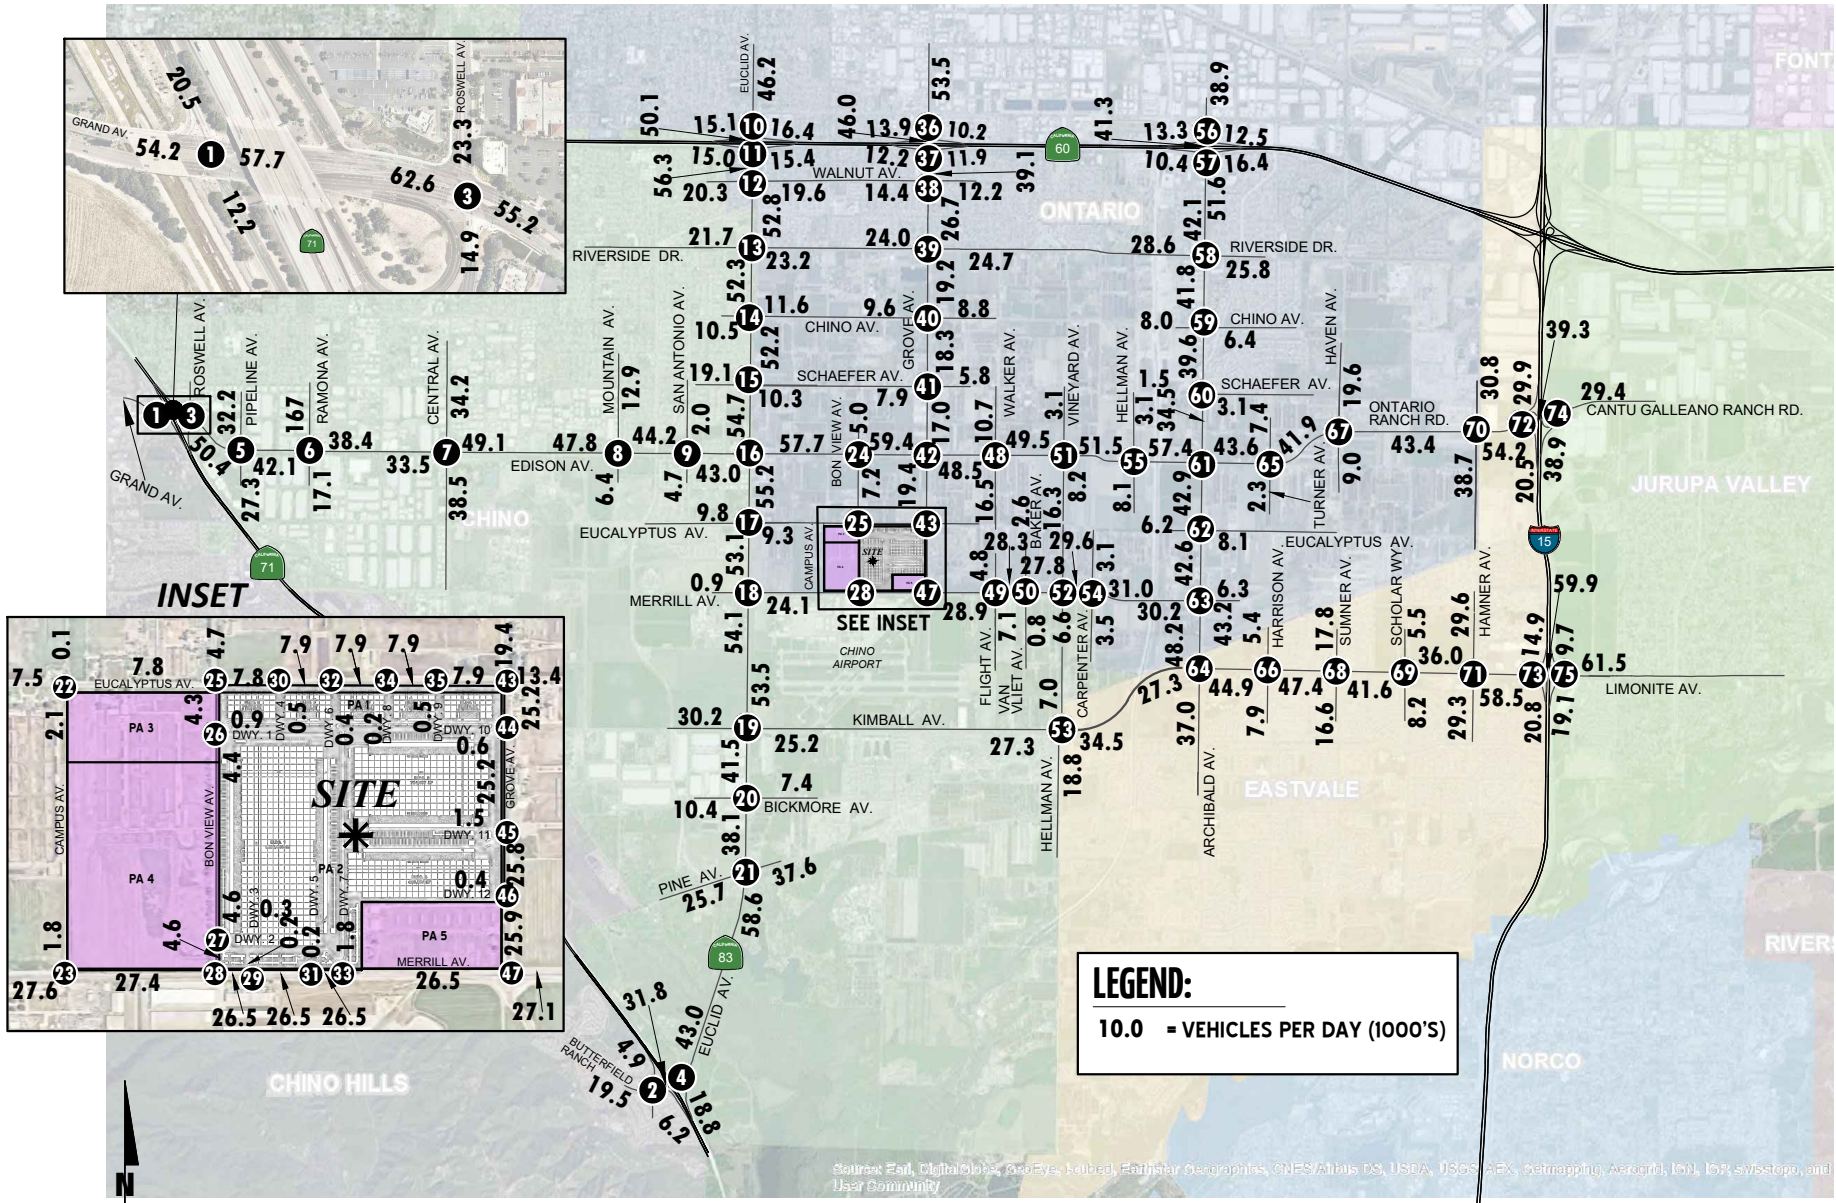

As shown on Table 7-1 and illustrated on Exhibit 7-6, the following study area intersection is anticipated to operate at a deficient LOS during one or both peak hours for Horizon Year (2040) With Project traffic conditions with the addition of Project traffic, in addition to the locations identified above for Horizon Year (2040) Without Project traffic conditions.

- Campus Avenue & Eucalyptus Avenue (#22) – LOS F PM peak hour only
- Campus Avenue & Merrill Avenue (#23) – LOS F AM and PM peak hours

The intersection operations analysis worksheets for Horizon Year (2040) With Project traffic conditions are included in Appendix 7.2 of this TA.

\* **BOLD** = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

## 7.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

The following study area intersections are anticipated to meet peak hour or planning level (ADT) volume-based traffic signal warrants for Horizon Year (2040) Without Project traffic conditions (see Appendix 7.3), in addition to those previously warranted under Existing, E+P, and Opening Year Cumulative traffic conditions:

- Campus Avenue & Eucalyptus Avenue (#22)
- Campus Avenue & Merrill Avenue (#23)
- Van Vliet Avenue/Baker Avenue & Merrill Avenue (#50)
- Vineyard Avenue & Edison Avenue (#51)
- Vineyard Avenue/Hellman Avenue & Merrill Avenue (#52)
- Hellman Avenue & Edison Avenue (#55)

There are no additional study area intersections anticipated to meet planning level (ADT) volume-based traffic signal warrant for Horizon Year (2040) With Project traffic conditions (see Appendix 7.4), in addition to those previously warranted under Horizon Year (2040) Without Project traffic conditions.

## 7.6 OFF-RAMP QUEUING ANALYSIS

Queuing analysis findings for Horizon Year (2040) Without and With Project traffic conditions are shown on Table 7-2. As shown on Table 7-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows under Horizon Year (2040) Without and With Project traffic conditions. Worksheets for Horizon Year (2040) Without and With Project traffic conditions off-ramp queuing analysis are provided in Appendices 7.5 and 7.6, respectively.

**Table 7-2**

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

## **7.8 IMPROVEMENTS**

### **7.8.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS**

Improvement strategies have been identified at intersections that have been identified as deficient, in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D/E or better). The effectiveness of the recommended improvement strategies to address Horizon Year (2040) traffic deficiencies are presented on Table 7-3. If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of City DIF fees or fair share contribution as identified on Table 1-2.

Worksheets for Horizon Year (2040) Without and With Project conditions, with improvements, HCM calculation worksheets are provided in Appendix 7.9 and Appendix 7.10, respectively.

### **7.8.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously on Table 7-2, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for Horizon Year (2040) traffic conditions. As such, no improvements have been identified.

**Table 7-3**

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.  
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free Right Turn Lane; d = Defacto Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; TS = Improvement

<sup>4</sup> Improvement consists of modifying the traffic signal to extend the cycle length to 120 seconds. No other physical improvements are recommended.

<sup>5</sup> Assumes signalization of the intersection and the buildout of the east leg.

<sup>6</sup> Improvement includes modifying the coordinated cycle length from 90 seconds to 120 seconds.

<sup>7</sup> Improvement consists of modifying the traffic signal to extend the cycle length to 130 seconds.

This Page Intentionally Left Blank

## 8 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the City of Ontario are funded through a combination of construction of improvements, development impact fee programs or fair share contributions, such as the City of Ontario Development Impact Fee (DIF) program. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

### 8.1 CITY OF ONTARIO DEVELOPMENT IMPACT FEE PROGRAM

The City of Ontario has created its own local DIF program to impose and collect fees from new residential, commercial and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF includes regional improvements to comply with Measure "I." The fee schedule was last updated in January 2020 and is reviewed/adjusted annually based upon changes in the construction cost index (CCI). Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list. The City also uses this data to ensure that the improvements listed on the facilities list are constructed before the LOS falls below the LOS performance standards adopted by the City. In this way, the improvements are constructed before the LOS falls below the City's LOS performance thresholds.

The Project Applicant will be subject to the City's DIF fee program and will pay the requisite City DIF fees at the rates then in effect pursuant to the City's ordinance. The Project Applicant's payment of the requisite DIF at the rates then in effect, pursuant to the City DIF Program, would satisfy the Project's proportional improvement requirements at potentially affected DIF-funded facilities.

**TABLE 10-1: ESTIMATED FEE OBLIGATION**

<b>Fee Reference</b>	<b>Light Industrial (\$ PER SQ. FT.)</b>
Industrial: Regional and Local Streets	\$3.002/SF
Business Park: Regional and Local Streets	\$5.824/SF

\* Ontario Ranch DIF rates effective as of January 1, 2020.

<b>Fee Calculation</b>				
<b>Program</b>	<b>Category</b>	<b>Unit Cost</b>	<b>Units/Sq.Ft.</b>	<b>Local Circulation</b>
Local/Regional Impacts	Industrial	\$3.00	4,337,356	\$13,012,935
	Business Park	\$5.82	1,075,235	\$6,262,169
<b>Total Transportation Impact Fees</b>				<b>\$19,275,104</b>

## 8.2 MEASURE “I” FUNDS

In 2004, the voters of San Bernardino County approved the 30-year extension of Measure “I,” a one-half of one percent sales tax on retail transactions, through the year 2040, for transportation projects including, but not limited to, infrastructure improvements, commuter rail, public transit, and other identified improvements. The Measure “I” extension requires that a regional traffic impact fee be created to ensure development is paying its fair share. A regional Nexus study was prepared by SBCTA and concluded that each jurisdiction should include a regional fee component in their local programs in order to meet the Measure “I” requirement. The regional component assigns specific facilities and cost sharing formulas to each jurisdiction and was most recently updated in November 2011. Revenues collected through these programs are used in tandem with Measure “I” funds to deliver projects identified in the Nexus Study. While Measure “I” is a self-executing sales tax administered by SBCTA, it bears discussion here because the funds raised through Measure “I” have funded in the past and will continue to fund new transportation facilities in San Bernardino County.

## 8.3 FAIR SHARE CONTRIBUTION

Project improvement may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City’s discretion).

When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, has been provided on Table 8-2 for the applicable deficient study area intersections.

These fees are collected with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases.

**APPENDIX I2**  
**VEHICLE MILES TRAVELED ANALYSIS**

August 13, 2021

Mr. Kevin Thomas  
Kimley Horn and Associates, Inc.  
3880 Lemon Street, Suite 420  
Riverside, CA 92501

**SUBJECT: SOUTH ONTARIO LOGISTICS CENTER VEHICLE MILES TRAVELED (VMT) ANALYSIS**

Dear Mr. Kevin Thomas:

The following VMT Analysis has been prepared for the proposed South Ontario Logistics Center Project (**Project**), which is located on the northeast corner of Bon View Avenue and Merrill Avenue, in the City of Ontario (San Bernardino County).

**PROJECT OVERVIEW**

The proposed Project is assumed to include the following mix of land uses, which represent a reasonable mix of industrial and business park uses that would be permitted by the Project:

- Industrial: 4,337,356 square feet of industrial building spaces
- Business Park designation includes the commercial retail as one of its uses, potential future retail uses in the business park planning areas would tend to shorten trips versus industrial uses. However, future tenants are not yet known. In the interest of providing a more conservative analysis the following assumption will be made: 1,075,235 square feet of a mix of uses including merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses (as would fall under ITE Land Use Code 130<sup>1</sup>).
- **Total of 5,412,591 square feet**

**BACKGROUND**

Changes to California Environmental Quality Act (CEQA) Guidelines were adopted in December 2018, which require all lead agencies to adopt VMT as a replacement for automobile delay-based level of service (LOS) as the measure for identifying transportation impacts for land use projects. This statewide mandate went into effect July 1, 2020. To aid in this transition, the Governor's Office of Planning and Research (OPR) released a Technical Advisory on Evaluating Transportation Impacts in CEQA (December of 2018) (**Technical Advisory**). (1) Based on OPR's Technical Advisory, the San Bernardino County Transportation Authority (SBCTA) prepared the SBCTA Countywide SB 743 VMT Implementation Study

---

<sup>1</sup> ITE Land Use Code 130 includes partial commercial retail in its rate.

(February 2020) to assist its member agencies with implementation tools necessary to adopt analysis methodology, impact thresholds and mitigation approaches for VMT. Included in this work effort, SBCTA in February 2020 also released to each of its member agencies Recommended Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment (SBCTA Guidelines) (2), which provides a template of specific procedures for complying with the new CEQA requirements for VMT analysis. Based on the SBCTA Guidelines, the City of Ontario adopted new transportation impact guidelines (June 2020) (**City Guidelines**) (3), which documents the City's VMT analysis methodology and impact thresholds. The VMT analysis presented in this report has been developed based on the recently adopted City Guidelines.

## **PROJECT SCREENING**

Consistent with City Guidelines, projects that meet certain screening thresholds based on their location and project type may be presumed to result in a less than significant transportation impact. Consistent with the screening criteria recommended in OPR's Technical Advisory, the City of Ontario utilizes the following project screening thresholds<sup>2</sup>:

- Low VMT Area Screening
- Low Trip Generating Uses Screening
- Transit Priority Area (TPA) Screening
- Project Type Screening

A land use project need only meet one of the above screening criteria to result in a less than significant impact.

### **LOW VMT AREA SCREENING**

City Guidelines state that "projects located within a low VMT-generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary."<sup>3</sup> The SBCTA screening tool was utilized to determine low areas of VMT. The screening tool uses the sub-regional San Bernardino Transportation Analysis Model (SBTAM) to measure VMT performance within individual traffic analysis zones (TAZ's) within the region. Parcels containing the proposed Project were selected and the screening tool was run for the Origin/Destination (OD) VMT per service population (SP) measure of VMT. Based on the Screening Tool results, the Project resides within TAZ 53653401 and that TAZ was shown to not be within a low VMT generating zone based on the OD method of calculating VMT.

The results of the screening tool for the OD VMT per SP calculations are provided in Attachment A.

**The Low VMT Area screening threshold is not met.**

---

<sup>2</sup> City of Ontario Vehicle Miles Traveled Analysis Thresholds for CEQA (SB 743); Page 1

<sup>3</sup> City Guidelines; Page 19

### **LOW TRIP GENERATING USES SCREENING**

The City Guidelines indicate that small development projects generating fewer than 110 daily vehicle trips or less may be presumed to have a less than significant impact, subject to discretionary approval by the City. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10<sup>th</sup> Edition, 2017. (4) Based on information contained in the Project's LOS based traffic study<sup>4</sup>, the Project is anticipated to generate more than 110 daily trips. (5)

**The Low Trip Generating Uses screening threshold is not met.**

### **TPA SCREENING**

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing "major transit stop"<sup>5</sup> or an existing stop along a "high-quality transit corridor"<sup>6</sup>) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

The Project site is not located within ½ mile of an existing major transit stop, or along a high-quality transit corridor.

**The TPA screening threshold is not met.**

### **PROJECT TYPE SCREENING**

The City Guidelines identify that local serving retail less than 50,000 square feet or other local serving essential services (e.g., day care centers, public schools, medical/dental office buildings, etc.) are presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, small projects anticipated to generate low traffic volumes and by association low greenhouse gas (GHG)

---

<sup>4</sup> Urban Crossroads South Ontario Center Specific Plan Traffic Study, March 2021; Page 95

<sup>5</sup> Pub. Resources Code, § 21064.3 ("Major transit stop" means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").

<sup>6</sup> Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

emissions are also assumed to cause a less than significant impact. The Project consists of industrial and business park uses, which do not typically consist of local-serving or essential services.

**The Project Type screening threshold is not met.**

**PROJECT GENERATED VMT**

The City Guidelines state that projects not screened through the steps above should complete VMT analysis and forecasting through the SBTAM model to determine if they have a significant VMT impact. The first step in the analysis is to calculate project generated VMT and compare it to the City’s adopted impact threshold. SBTAM is a useful tool to calculate VMT as it considers interaction between different land uses based on socio-economic data such as population, employment and other factors. It was also the tool used to establish the City’s impact threshold, so is the appropriate tool to conduct the analysis to ensure an apples-to-apples comparison of project generated VMT to the adopted threshold.

Project generated VMT has been calculated using the most current version of SBTAM, which was updated recently by SBCTA as part of the development of their recommended VMT guidelines. Adjustments in socio-economic data (SED) (i.e., population, households, and employment) have been made to a separate traffic analysis zone (TAZ) to reflect the Project’s proposed land uses (i.e., employment). A separate TAZ is used to isolate project generated VMT from other land uses in the model. Table 1 summarizes the population and employment estimates for the Project.

**TABLE 1: SED ESTIMATES**

Land Use	% Mixture	Employees/TSF	Total TSF	Estimated Employment
Business Park	Non-Office (50%)	0.650	1,075.235	349
	Office (50%)	2.860		1,538
Industrial	Non-Office (90%)	0.650	4,337.356	2,537
	Office (10%)	2.860		1,240
<b>Total</b>			<b>5,412.591</b>	<b>5,664</b>

Because the tenant of the Project’s buildings are not yet known, the number of jobs that the Project would generate cannot be precisely determined; therefore, for purposes of this analysis, employment estimates were calculated using employment density factors of 0.65 employees/thousand square feet (TSF) for non-office portions and 2.86 employees/TSF for office portions of industrial and business park uses consistent with the Ontario General Plan Buildout Methodology document (April 2015)<sup>7</sup>. Based on these employment generation rates; the Project is expected to generate approximately 5,664 jobs. Project employment was added to the Project’s TAZ in both the base year model (2016) and the cumulative year model (2040). The base year model and cumulative year model were then run inclusive

<sup>7</sup> Source: <http://www.ontarioplan.org/wp-content/uploads/sites/4/2016/01/Methodology-Revised.pdf>

of the Project’s employment estimate.

The City has chosen the OD method of calculating VMT for purposes of establishing their impact threshold. The OD method of calculating VMT includes all vehicle trips and trip purposes (i.e., passenger cars and heavy trucks). Project generated VMT using the OD trip matrix from SBTAM was calculated for both the base year model (2016) and cumulative year model (2040), and linear interpolation was used to determine the Project’s baseline (2020) VMT. The VMT value was then normalized by dividing by the Project’s SP, which in this case is the number of Project employees. Table 2 presents the key inputs for the calculation of project generated VMT per SP.

**TABLE 2: PROJECT VMT PER SP**

	Base Year (2016)	Cumulative (2040)	Baseline (2020)
Project generated VMT	221,751	204,705	218,910
SP	5,664	5,664	5,664
Project VMT per SP	39.15	36.14	38.65

The City of Ontario has selected a threshold based on the General Plan Buildout VMT performance in the City. More specifically, the City Guidelines state that a significant impact would occur if the project VMT per SP exceeds the Citywide average for SP under General Plan Buildout Conditions.

Table 3 presents a comparison between baseline project generated VMT per SP to the City’s impact threshold. As shown, the baseline project generated VMT per SP is 38.65 or 6.77% above the City’s threshold.

**TABLE 3: PROJECT VMT IMPACT DETERMINATION**

	Baseline (2020)
Project VMT per SP	38.65
General Plan Buildout VMT per SP	36.20
Percent Change	+6.77%
Potentially Significant?	Yes

**PROJECT’S CUMULATIVE EFFECT ON VMT**

Consistent with City Guidelines, projects that are found to have a potential impact using efficiency-based metrics (such as VMT per SP) should also provide an additional assessment to evaluate a project’s effect on VMT. This analysis is performed using the boundary method, which includes all vehicle trips with one or both trip-ends within a specific geographic area of interest (i.e., City of Ontario). As shown on Table 4, the Project is anticipated to result in an increase in total VMT within the City of Ontario for General Plan Buildout conditions.

**TABLE 4: CUMULATIVE NET CHANGE IN CITYWIDE VMT**

	General Plan Buildout (2040) No Project	General Plan Buildout (2040) With Project
VMT	8,992,608	9,028,855

**POTENTIAL VMT REDUCTION STRATEGIES**

Consistent with SBCTA Guidelines, VMT reduction strategies should be considered to address project generated VMT that exceeds the City’s threshold. Transportation demand management (TDM) strategies have been evaluated for the purpose of reducing VMT impacts determined to be potentially significant. The effectiveness of TDM strategies to reduce VMT has been determined based on the SB 743 Implementation Mitigation and TDM Strategy Assessment (November 11, 2019, Fehr & Peers) prepared for SBCTA (**SBCTA TDM Report**), which was based on a current assessment of the previously published Quantifying Greenhouse Gas Mitigation Measures (CAPCOA, 2010) for applicability to projects in the SBCTA region. The SBCTA TDM Report indicates that of the 50 transportation measures presented by CAPCOA, only 41 of those measures are applicable at a building and site level. The remaining 9 measures are functions of, or depend on, site location and/or actions by local and regional agencies or funders.<sup>8</sup>

Based on a review of the 41 transportation measures identified by CAPCOA, the SBCTA TDM Report identifies that only 7 of those measures may be effective at the project level. Land use context is a major factor relevant to the potential application and effectiveness of TDM measures. More specifically, the land use context of the Project is characteristically suburban<sup>9</sup>. Based on a review of the potentially relevant TDM measures presented in the SBCTA TDM Report, the following TDM measures were evaluated for their applicability to the Project based on its suburban context and their ability to reduce project generated VMT:

- **Measure 1: Increase Diversity of Land Uses (LUT-3).** Having different types of land uses near one another can decrease VMT since trips between land use types are shorter and may be accommodated by non-auto modes of transportation. For example, when residential areas are in the same neighborhood as retail and office buildings, a resident does not need to travel outside of the neighborhood to meet his/her trip needs.

**Remarks:** The Project proposes the construction of 5,412,591 square feet of industrial and business park use. In order for the above measure to apply, at least 3 of the following land uses should be located on-site, or if not on-site then within ¼ mile or less of the Project: residential development, retail development, office development, park, or open space. Business Park land use designation allows for commercial retail use. However, at the time of this analysis future tenants are not known. Therefore, to perform a more conservative analysis industrial land use assumption was assumed in its entirety. As the proposed Project does not include a diverse mix of land uses on-site and is not located within a ¼ mile of 3 of the land uses listed above, this particular TDM measure is therefore not evaluated further as a means of providing a reduction in Project VMT.

<sup>8</sup> Measures obtained from SBCTA TDM report, p. 5.

<sup>9</sup> **Suburban:** Characterized by dispersed, low intensity, single use, automobile dependent land use patterns, usually outside of the central city (a suburb). (*Quantifying Greenhouse Gas Mitigation Measures*, p. 60).

It is, however, recognized that the Project would introduce additional employment opportunities, acting to generally improve the City and region jobs/housing balance. The resulting improved jobs/housing balance could reduce area commute VMT. This analysis, however, conservatively assumes no such VMT reduction.

- Measure 2: Provide Pedestrian Network Improvements (SDT-1). Providing on-site pedestrian access network to link areas of the Project to the off-site pedestrian network encourages people to walk for short trips instead of drive. This mode shift results in people driving less for nearby trips (typically less than ¼ mile and no greater than ½ mile) and thus a reduction in VMT.

Remarks: Although there are existing sidewalks off-site along portions of Merrill Avenue, field observations conducted at the time the Project's level of service analysis (i.e., traffic study) was prepared indicate there is nominal pedestrian activity in the study area likely due to the lack of diversity of land uses. Similarly, as noted in the previous measure, the future tenant is not yet known. To provide a more conservative analysis industrial use was assumed in its entirety. Furthermore, given the industrial nature of the Project and surrounding uses, it is unlikely that there would be substantive pedestrian activity even if a pedestrian network were to be expanded. This measure is therefore not evaluated further as means of providing a reduction in Project VMT.

- Measure 3: Provide Traffic Calming Measure (SDT-2). Providing traffic calming measures encourages people to walk or bike instead of using a passenger car. This mode shift would result in a decrease in VMT. Traffic calming features may include marked crosswalks, count-down signal timers, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others.

Remarks: Business Park allows for commercial retail as a use which gives this measure the potential for reducing VMT. However, to provide a more conservative analysis industrial use is assumed. Given the industrial nature of the Project and similar characteristics of surrounding uses, there is limited opportunity for pedestrian and bicycle activity. This measure is therefore not evaluated further as means of providing a reduction in Project VMT.

- Measure 4: Implement Car-Sharing Program (TRT-9). Implementing a car-sharing program would allow individuals to have on-demand access to a shared fleet of vehicles on an as-needed basis. User costs are typically determined through mileage or hourly rates, with deposits and/or annual membership fees.

Remarks: It is possible that employers within the Project site could implement car-sharing programs. This may provide car access for employees on an as-needed basis, and thereby alleviate some of the costs and responsibilities of individual car ownership. However, this would not necessarily result in a reduction of VMT, but would rather transfer the VMT source from individually-owned autos to employee-subsidized autos. The potential reduction in VMT is also extremely limited with a maximum reduction in VMT between 0.4 – 0.7 percent as noted by CAPCOA (Quantifying Greenhouse Gas Mitigation Measures, p. 245), therefore, this measure is not evaluated further as a means of providing a reduction in Project VMT.

- Measure 5: Increase Transit Service Frequency and Speed (TST-4). This measure serves to reduce transit-passenger travel time through more reduced headways and increased speed and reliability. This makes transit service more attractive and may result in a mode shift from auto to transit which reduces VMT.

Remarks: The study area is currently served by Omnitrans, a public transit agency serving various jurisdictions within San Bernardino County. No bus routes currently provide proximate service (within one-quarter mile) of the Project site. Transit service is reviewed and updated periodically to address ridership, budget and community demand needs. Changes in land use can affect these periodic adjustments which may lead to

either enhanced or reduced service where appropriate. It is recommended that the Applicant work in conjunction with the Lead Agency and Omnitrans to coordinate potential bus service to the Project site. Since implementation of this strategy would require agency implementation it is not applicable for individual development projects. This measure is therefore not evaluated further as means of providing a reduction in Project VMT.

- Measure 6: Encourage Telecommuting and Alternative Work Schedule (TRT-6). Encouraging telecommuting and alternative work schedules reduces the number of commute trips and therefore VMT traveled by employees. Alternative work schedules could take the form of staggered starting times, flexible schedules, or compressed work weeks.

Remarks: The effectiveness of this measure is dependent on the ultimate building tenant(s) which are unknown at this time. This measure could provide for a potential reduction in Project VMT. CAPCOA notes that implementation of this measure could reduce commute VMT by 0.07 – 5.50 percent (Quantifying Greenhouse Gas Mitigation Measures, p. 236).

- Measure 7: Provide Ride-Sharing Programs (TRT-3). This strategy focuses on encouraging carpooling and vanpooling, but its ultimate implementation is limited similarly as Measure 6 above.

Remarks: The effectiveness of this measure is dependent on the ultimate building tenant(s) which are unknown at this time. This measure could provide for a potential reduction in Project VMT. CAPCOA notes that implementation of this measure could reduce commute VMT by 1.0 – 15.0 percent (Quantifying Greenhouse Gas Mitigation Measures, p. 227).

The effectiveness of the above-noted TDM measures would be dependent building occupancies, which are unknown at this time. Beyond Project tenancy considerations, land use context is a major factor relevant to the potential application and effectiveness of TDM measures. More specifically, the land use context of the Project is characteristically suburban. Of itself, the Project’s suburban context acts to reduce the range of feasible TDM measures and moderates their potential effectiveness. Relevant discussion in this regard is presented in *WRCOG SB 743 Implementation Pathway Document Package* (Fehr + Peers [for WRCOG]) March 2019, excerpted in pertinent part below:

The Technical Advisory relies on the *Quantifying Greenhouse Gas Mitigation Measures*, (CAPCOA) 2010 resource document to help justify the 15 percent reduction in VMT threshold stating, “. . . fifteen percent reduction in VMT are achievable at the project level in a variety of place types . . .”. A more accurate reading of the CAPCOA document is that a fifteen percent is the maximum reduction when combining multiple mitigation strategies for the *suburban center*<sup>10</sup> place type. For *suburban*<sup>11</sup> place types 10 percent is the maximum and requires a project to contain a diverse land use mix, workforce housing, and project-specific transit. It is also important to note that the maximum percent

---

<sup>10</sup> **Suburban Center:** A project typically involving a cluster of multi-use development within dispersed, low-density, automobile dependent land use patterns (a suburb). The center may be an historic downtown of a smaller community that has become surrounded by its region’s suburban growth pattern in the latter half of the 20th Century. The suburban center serves the population of the suburb with office, retail and housing which is denser than the surrounding suburb (*Quantifying Greenhouse Gas Mitigation Measures*, p. 60).

<sup>11</sup> **Suburban:** A project characterized by dispersed, low-density, single-use, automobile dependent land use patterns, usually outside of the central city . . . (*Quantifying Greenhouse Gas Mitigation Measures*, p. 60).

reductions were not based on data or research comparing the actual performance of VMT reduction strategies in these place types. Instead, the percentages were derived from a limited comparison of aggregate citywide VMT performance for Sebastopol, San Rafael, and San Mateo where VMT performance ranged from 0 to 17 percent below the statewide VMT/capita average based on data collected prior to 2002. Little evidence exists about the long-term performance of similar TDM strategies in different land use contexts. As such, VMT reductions from TDM strategies cannot be guaranteed in most cases (*WRCOG SB 743 Implementation Pathway Document Package*, pp. 65 – 66).

It is also recognized that as the Project area and City develop as envisioned under the City of Ontario Policy Plan, new residential, commercial/retail, and industrial development would be implemented. These actions could collectively alter transportation patterns, improve the City’s jobs/housing ratio, diminish VMT/SP, and support implementation of new or alternative TDM measures. There is no means however to quantify any VMT reductions that could result. Additionally, the effectiveness of the TDM strategies that have potential to reduce the Project VMT/SP are dependent on as yet unknown final Project building tenant(s); and as noted above, “VMT reductions from TDM strategies cannot be guaranteed in most cases.” Further, the identified TDM measures are not likely to reduce Project truck VMT. Pointedly, CAPCOA provides no TDM measures targeted at truck traffic.

## CONCLUSION

In summary, the Project was found to exceed the City’s adopted VMT threshold by 6.77%. Reductions in commute VMT through feasible TDM measures such as those described previously will be provided by the Project. Inclusion of such VMT reduction measures in areas that are characteristically suburban<sup>12</sup> in context are noted to be limited to a maximum VMT reduction of 10%.<sup>13</sup> However, as future Project design features and building tenants are not yet known, reductions in VMT related to the above TDM measures cannot be accurately estimated or guaranteed. Therefore, the Project’s transportation impact based on VMT should conservatively be considered **significant and unavoidable**.

**SUBJECT: SOUTH ONTARIO LOGISTICS CENTER SPECIFIC PLAN SB330 TRANSPORTATION EVALUATION**

Dear Mr. Kevin Thomas:

The following transportation evaluation has been prepared for the proposed South Ontario Logistics Center Specific Plan (SOLC SP) development (**Project**), which is located on the northeast corner of Bon View Avenue and Merrill Avenue in the City of Ontario (San Bernardino County). The purpose of this evaluation is to qualitatively assess the potential impacts to transportation associated with the programmatic review of the reallocation of 1,352 low to moderate density housing units associated with the proposed Project.

## **PROJECT OVERVIEW**

The proposed Project includes 5,412,591 square feet of industrial, merchant wholesale, professional services, professional office, warehouse/storage, and research and development uses. The Project requires a General Plan Amendment (GPA) that would change existing land use designations from 159.04 acres of "Low Medium Density Residential" and 63.14 acres of "Business Park" to 181.04 acres of "General Industrial" and 41.14 acres of "Business Park".

## **BACKGROUND**

The Project's Environmental Impact Report (EIR) must include the evaluation of "replacement housing" in accordance with Senate Bill (SB) 330, the Housing Crisis Act of 2019 (Government Code Section 6300). SB330 requires that where a development project results in the reduction in the number of housing units allowed under existing zoning, the City must concurrently rezone other parcels such that there is no "net loss" of the total allowable housing development within the City. The City in its evaluation of the proposed Project has determined that there would be a net loss of 1,352 low to moderate density housing units.

To address the reallocation of the 1,352 low to moderate density housing units, the City is considering the potential rezone of a portion of Grove Avenue bounded by Bon View Avenue to the west, Riverside Avenue to the north, Baker Avenue to the east and Schaefer Avenue to the south to higher residential densities (Grove Avenue Corridor), which would capture the displaced 1,352 units consistent with SB330 requirements. In support of this effort, the Project's EIR must evaluate the potential environmental

impacts associated with rezoning this area for higher density residential uses. Since there is no specific development proposal at this time, the environmental effects of the rezoning are evaluated at a programmatic level.

## **TRANSPORTATION EVALUATION**

Due to the adoption of SB743 in 2013, all cities within the State of California are required to adopt vehicle miles traveled (VMT) as the measure of a transportation impact under the California Environmental Quality Act (CEQA) as of July 1<sup>st</sup>, 2020. To aid in this transition, the Governor's Office of Planning and Research (OPR) released a Technical Advisory on Evaluating Transportation Impacts in CEQA (December of 2018) (**Technical Advisory**). (1) The City of Ontario has also adopted VMT analysis guidelines and thresholds in June 2020 (**City Guidelines**). (2) This evaluation has been based on information contained in the Technical Advisory and the adopted City Guidelines.

### **VMT**

As noted previously, a specific development project is not currently proposed for the reallocation of 1,352 dwelling units displaced by the proposed Project. However, information cited in both the Technical Advisory and City Guidelines describe that a project's land use context, location and design characteristics all play a role in the resulting amount of VMT generated by an individual land use project. As the proposed Project would include the reallocation of 1,352 low to moderate density residential dwelling units to a mixed-use corridor with higher density residential that would offer improved access to transit, there are numerous aspects of the proposed change that would reduce VMT compared to the "No Project" condition.

The Technical Advisory and City Guidelines each provide evidence that land use projects located within a transit priority area (TPA) or close to a high-quality transit corridor would tend to generate low VMT when compared to typical suburban residential areas characterized by dispersed, low-density, single-use, automobile dependent land use patterns. In addition to proximity to transit, higher density projects located within walking distance of a diverse mix of land uses (e.g., shopping, office, government services, etc.) also generates lower VMT when compared to typical dispersed suburban development. The proximity of complementary land uses combined with safe and convenient bike and pedestrian networks are proven to reduce the need for automobile dependent travel and therefore a reduction in VMT. The Project's reallocation of 1,352 low to moderate density residential dwelling units to a higher density transit-oriented corridor that includes a diverse mix of uses would result in lower net VMT when compared to standard low to moderate density residential development.

Mr. Kevin Thomas  
Kimley Horn and Associates, Inc.  
February 2, 2021  
Page 3 of 4

### **OTHER TRANSPORTATION CONSIDERATIONS**

In addition, future land use development projects associated with the reallocation of the 1,352 units along the Grove Avenue Corridor will be required to follow standard development review process. In other words, future implementing projects associated with the reallocated 1,352 dwelling units along the Grove Avenue Corridor will need to evaluate site access driveways, parking, operational safety, and other factors as directed by the City Traffic Engineer.

### **CONCLUSION**

In summary, the proposed Project includes the reallocation of 1,352 low to moderate density residential units to the Grove Avenue Corridor. The reallocated units will be located in a planned higher density transit-oriented corridor that includes a diverse mix of uses, and due to these factors, is anticipated to generate lower VMT as compared to the lower density development plan assumed for the Project's current location. As such, the Project's potential transportation impact based on VMT is less than significant.

## Introduction

This document prepared for the City of Ontario is a Water Supply Assessment (WSA) intended to meet the requirements of Senate Bill (SB) 610. The water demand for the South Ontario Logistics Center Specific Plan (“proposed project”) is calculated and the adequacy of water supplies to meet the proposed project is evaluated.

SB 610 established the primary legal standards for assessing the sufficiency of water supplies for new development projects. These statutes require as part of the environmental review conducted for a qualifying project pursuant to the California Environmental Quality Act (CEQA), the public water supplier or land use agency – in this case the City of Ontario – must prepare a “water supply assessment” of the reliability of water supplies for the project, considering normal, single dry, and multiple dry years over a 20-year horizon. The basic requirement is that a WSA must “include a discussion with regard to whether the public water system’s total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the water system’s existing and planned future uses, including agricultural and manufacturing uses.”<sup>1</sup>

References used in preparing this document include the following:

- City of Ontario 2015 Urban Water Management Plan (UWMP).
- City of Ontario 2012 Water Master Plan

- San Antonio Water Company 2015 UWMP

## Site Location and Project Description

The proposed Project is located on a 222.18-acre site in the southwest portion of the City of Ontario, within San Bernardino County. The proposed Project site is bound by Eucalyptus Avenue to the north, existing right-of-way for the future Campus Avenue extension to the west, Merrill Avenue to the south, and Grove Avenue to the east (refer to Exhibit 1, Vicinity Map).

The proposed Project site is currently occupied by agricultural uses, including a dairy farm and row crops, and vacant land. There are several residential structures located throughout the Project site. Dairy farming and agriculture have been the primary uses of the property since the 1930s or earlier. The Project also includes dairy barns, a storage structure, feed storage barns, and numerous livestock corrals. There are large existing retention ponds that collect agricultural waste. There are potable water wells located throughout the proposed Project site and above ground fuel storage tanks along with various mechanical systems for dairy production practices. The remainder of the proposed Project site is used as irrigated cropland with berms located along the site perimeter. To the north, east, and west of the proposed Project site exists mostly rural farmland, and to the south is the Chino Airport.

---

<sup>1</sup> California Water Code Section 10910(c)(3).

The Project includes a General Plan Amendment, Specific Plan, Development Agreement, Development Plan(s), and Tentative Parcel Map(s) to allow development of approximately 5.4 million square feet (SF) of industrial and business park land uses on the 222.18-acre site, as described further below. The Project is proposed in two phases. Phase I, comprised of Planning Areas 1 and 2, would allow approximately 3,172,780 SF of industrial and business park uses. The Development Plan for Phase I currently proposes the construction of eight industrial concrete tilt-up industrial/warehouse buildings totaling 2,926,955 SF of industrial/warehouse and ancillary office space. Phase II, which is comprised of Planning Areas 3, 4 and 5, has no specific development proposals that have been identified. The total maximum allowable development in the Specific Plan, which is 5,412,591 SF of industrial and business park land uses and associated onsite and off-site infrastructure improvements. The Specific Plan Land Use Plan Concept assigns land uses within the project site as summarized in **Table 1**.

**Table 1 – Proposed Project Land Use**

Planning Area <sup>1</sup>	Maximum Floor Area Ratio <sup>2</sup>	Site Acreage	Maximum Building Square Footage
Phase 1			
Planning Area 1: Business Park	0.6	23.0	601,128 SF
Planning Area 2: General Industrial	0.55	107.34	2,571,652 SF
Subtotal		130.34	3,172,780 SF
Phase 2			
Planning Area 3: Business Park	0.6	18.14	474,107 SF
Planning Area 4: General Industrial	0.55	56.3	1,348,835 SF
Planning Area 5: General Industrial	0.55	17.4	416,869 SF
Subtotal		91.84	2,239,811 SF
<b>TOTAL</b>		<b>222.18</b>	<b>5,412,591 SF</b>
a. Provided the GPA application submitted in conjunction with this Specific Plan to designate PAs 1 and 3 as Business Park and PAS 2,4, and 5 as General Industrial is approved b. The Project EIR as proposed is reviewing square footages and will be addressing the maximum allowable SF, per The Ontario Plan (TOP) thresholds. Land designations per the City of Ontario's latest general plan document entitled The Ontario Plan (2010).			

The proposed project is anticipated to be implemented in 2 Phases – “1,” and “2,” in addition to SB 330 sites. Phase 1 and 2 are both planned for 2023, with SB 330 sites also anticipated to start in 2023. Project phasing would ultimately respond to market demands and would be contingent on the availability of supporting infrastructure.

Figure 2 – Proposed Land Use Map

The Ontario Municipal Utilities Company (OMUC) provides water service to residents, businesses, and other users in the City of Ontario, including the project site. Two small areas in the north central and northeastern sections of the City are served by the Cucamonga Valley Water District (CVWD). As of 2015, OMUC provided water to a population of approximately 168,777 people. The primary source of water is groundwater from Chino Groundwater Basin (Chino Basin). Other water supplies include treated groundwater from the Chino Basin Desalter Authority (CDA), recycled water from Inland Empire Utilities Agency (IEUA), imported water from the Water Facilities Authority (WFA), and purchased water from the San Antonio Water Company (SAWCo).

The City currently owns and operates:

- 17 active wells
- Two wells on standby
- Three of the active wells (Wells 41, 44, and 52) currently undergo treatment at two separate treatment plants

As of 2015, there were 33,720 water meters throughout the City.

Total potable and recycled water demand within the OMUC service area averaged 43,663 acre-feet per year (AFY) between 2005 and 2015. Potable water demands averaged 38,470 AFY and recycled water demands averaged 5,193 AFY (including agricultural demands), between 2005 and 2015. Despite growth within the City between 2005 and 2015, potable demands have steadily decreased in the last 10 years primarily due to increasing recycled water use and conservation efforts. In 2015, the City's total demand was 37,151 AFY. Potable water demands were 29,943 AFY and recycled water demands were 7,208 AFY (including agricultural demands). The total demands in the year 2040 are projected to be 73,640 AFY. Potable water demands are projected to be 57,093 AFY and recycled water demands are projected to be 16,547 AFY (including agricultural demands).

The passage of SB X7-7 (also known as the Water Conservation Act of 2009) resulted in increased efforts to reduce potable water usage by requiring all California urban water suppliers to achieve a 20% reduction in demands (from a historical baseline) by 2020. Using a 10-year base period of 1995 to 2004, the City's baseline water usage is 245 gallons per capita per day (GPCD). The City's interim 2015 water use target is 220 GPCD, and the 2020 target is 196 GPCD.<sup>2</sup>

It is required that every urban water supplier assess the reliability to provide water service to its customers under normal, single dry, and multiple dry years. As discussed in the City's Urban Water Management Plan (UWMP), the City is capable of meeting the water demands of its customers in normal, single dry, and multiple dry years between 2015 and 2040.

## Legal Requirements

SB 610 established the primary legal standards for assessing the sufficiency of water supplies for new development projects. Affected land developments are those that meet certain size thresholds. The proposed project meets the threshold for a proposed industrial, manufacturing, processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area. The proposed project also meets the threshold for a

---

<sup>2</sup> City of Ontario, 2016. 2015 Urban Water Management Plan. Prepared by Ontario Municipal Utilities Company.

proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space. Therefore, the proposed project, as described in Section 1.2, meets the criteria for preparation of a WSA.

The basic requirement is that a WSA must “include a discussion with regard to whether the public water system’s total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the water system’s existing and planned future uses, including agricultural and manufacturing uses.” If the water demand for a proposed project is accounted for in an adopted UWMP, as is the case here, the WSA preparer may incorporate that information into the WSA.

The WSA also requires additional analysis if any portion of the water purveyor's water supplies include groundwater. A description of any groundwater basin or basins from which the proposed project will be supplied in addition to a detailed description and analysis of the amount and location of groundwater pumped by the public water system for the past five years should be provided. The WSA should also include an analysis of the sufficiency of the groundwater from the basin or basins from which the proposed project will be supplied to meet the projected water demand associated with the proposed project.

Upon adoption, the WSA is incorporated into the CEQA document being prepared for the project, and the lead agency must determine, based on the entire record, whether projected water supplies will be sufficient to satisfy demands for the project, in addition to existing and future uses.<sup>3</sup>

## Water Demand Analysis

This section evaluates whether the proposed project was included in the projection of future water demands for the City of Ontario, as described in the 2015 UWMP. As per Section 10910 (c) (2) of the California Water Code:

“if the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan, the public water system may incorporate the requested information from the urban water management plan in preparing the elements of the assessment required to comply with subdivisions (d), (e), (f), and (g).”

### City of Ontario Water Demands

The primary source of water for the proposed project would be existing water supplies used by the City to provide service to its customers. This section analyzes the water demands of existing and planned future City customers.

Current and projected potable and recycled water demands by customer class are presented in Tables 2 and 3. The City’s total 2015 demand was 37,151 AFY. Potable water demand was 29,943 AFY and recycled water demand was 7,208 AFY (including agricultural demands). The projected 2040 potable water demand is 57,093 AFY and recycled water demand (including agricultural demands) is 16,547 AFY for a total of 73,640 AFY.

## Proposed Project Water Demand

The proposed project consists of an approximately 222.18-acre development within the boundaries of the proposed South Ontario Logistics Center Specific Plan. The proposed project plans for new industrial and business uses. Buildout of the Specific Plan would generate 5,412,591 SF of building space. The proposed development would connect to the City’s water main for domestic water use. Recycled water would be used for landscape irrigation.

The proposed Project site is currently occupied by agricultural uses, including a dairy farm and row crops, and vacant land. There are several residential structures located throughout the Project site. Dairy farming and agriculture have been the primary uses of the property since the 1930s or earlier. The Project also includes dairy barns, a storage structure, feed storage barns, and numerous livestock corrals. There are large existing retention ponds that collect agricultural waste. There are three potable water wells located throughout the proposed Project site and two above ground fuel storage tanks along with various mechanical systems for dairy production practices. The remainder of the proposed Project site is used as irrigated cropland with berms located along the site perimeter. To the north, east, and west of the proposed Project site exists mostly rural farmland, and to the south is the Chino Airport.

Water use for the proposed project was calculated using domestic water demand rates and recycled water irrigation demand rates, as specified in the UWMP. **Table 4** shows the total water demand estimate for the proposed development.

**Table 4 – Water Demand Estimate for the Proposed Development**

Land Use	Acres	Domestic Water Demand Rate <sup>a</sup> (gpd/ac)	Total Domestic Water Usage (gal/day)	Recycled Water Demand Rate <sup>b</sup> (gpd/ac)	Total Recycled Water Usage (gal/day)
<b>Phase 1</b>					
PA 1: Business Park	23.00	1,800	41,400	1,340	30,820
PA 2: Industrial	107.34	1,400	150,276	890	95,533
<b>Phase 2</b>					
PA 3: Business Park	18.14	1,800	32,652	1,340	24,308
PA 4: Industrial	56.30	1,400	78,820	890	50,107
PA 5: Industrial	17.40	1,400	24,360	890	15,486
<b>Total</b>	<b>222.18</b>	<b>-</b>	<b>327,508</b>	<b>-</b>	<b>216,253</b>

Source: City of Ontario 2015 UWMP, 2016.

- a. Table 2 of the Ultimate Citywide Water Demand Estimate Technical Memorandum (Appendix B of the UWMP) was used to establish the domestic water demand rate.
- b. Table 2 of the Ultimate Citywide Water Demand Estimate Technical Memorandum (Appendix B of the UWMP) was used to establish the recycled water demand rate.

As shown in **Table 4**, the total domestic water demand within the South Ontario Logistics Center Specific Plan area is estimated to be 327,508 gal/day (366.9 AFY). The total recycled water demand is estimated to be 216,253 gal/day (242.2 AFY). The total water demand would be **543,761 gal/day** or **609.1 AFY**.

### Proposed Project with Respect to 2015 Urban Water Management Plan

In order to evaluate water supply reliability, California statutes require the consideration of water supplies and demands in three types of water conditions: normal, single dry, and multiple dry water years.<sup>4</sup> The 2015 UWMP indicates that the City is capable of meeting the water demands of its customers in normal, single dry, and multiple dry years between 2020 and 2040.

The 2015 UWMP projected water demands are based on future land uses as specified in the City’s latest 2010 General Plan. Based on the projected future land use for the project site in the UWMP, the water demand was estimated, as shown in **Table 5**.

**Table 5 – Water Demand Estimate for the Project Site Based on Projected Future Land Use in 2015 UWMP**

Land Use	Acres	Domestic Water Demand Rate <sup>a</sup> (gpd/ac)	Total Domestic Water Usage (gal/day)	Recycled Water Demand Rate <sup>b</sup> (gpd/ac)	Total Recycled Water Usage (gal/day)
Business Park	63.14	1,800	113,652	1,340	84,608
Low Medium Density Residential	158.89	3,960	629,204	625	99,306
<b>Total</b>	<b>222.03</b>	<b>-</b>	<b>742,856</b>	<b>-</b>	<b>183,914</b>

Comparing Project water demand in **Table 4** with water demand assumed in the 2015 UWMP as shown in **Table 5** shows that the total domestic water demand within the site area will decrease, compared to

<sup>4</sup> Department of Water Resources, 2005. *California Water Plan, Bulletin 160-05, Volume III* (“Each district has different assumptions and policies that guide their planning”).

planned land use as depicted in the 2015 UWMP. Water usage per the 2015 UWMP is estimated to be 742,856 gal/day (832.1 AFY). The total recycled water demand is estimated to be 183,914 gal/day (206.0 AFY). Therefore, the total water demand per the 2015 UWMP would be **926,770 gal/day** or **1,038 AFY**, compared to a total water demand of the Project (shown in **Table 4**) of **543,761 gal/day** or **609.1 AFY**.

Therefore, implementation of the proposed project will not obstruct the City’s ability to meet water demands of its customers in normal, single dry, and multiple dry years, because the Project will not use any additional water that was not accounted for.

In addition to evaluating changes in water demand for the SOLC Specific Plan Project site in comparison to the 2015 UWMP (**Tables 4 and 5** above), this WSA also evaluates a related aspect of the Project, the change in water demand associated with increasing residential density within the Grove Avenue Corridor SB 330 Replacement Sites study area. Per SB 330, in order for the City to approve the SOLC Specific Plan, the City must also “upzone” an area in the City to offset the loss in residentially zoned land. The City has evaluated the Specific Plan and has determined that it would result in the “loss” of approximately 1,352 low to moderate density housing units (due to the proposed rezoning and associated General Plan Amendment and Zone Change).<sup>5</sup> The City would offset residential density “lost” from the Project site and rezone an area along the Grove Avenue Corridor, referred to as the “SB 330 Replacement Site” (refer to **Figure 3**, SB 330 Replacement Site). To accomplish the required additional residential density in the SB 330 Replacement Site, the City proposes to adopt an Overlay District to allow up to an additional 1,352 DU in this area. The additional density is assumed to be spread evenly across the 473-acre SB 330 Replacement Site. This area is currently zoned with a mix of low density, low-medium density and medium density residential allowing an estimated 3,690 DU, in addition to 18 acres of Neighborhood Commercial and 44 acres of General Commercial. For the purposes of SB 330 compliance, the proposed Overlay District would allow an additional 1,352 DU (as determined by the City’s density determinations to be 8.5 dwelling units per acre [du/ac.] for 159.04 acres of Low-Medium Density Residential), or an overall increase of approximately 37% in dwelling units for this 473-acre area. The City has determined that the Project would displace 1,352 DU of residential capacity as part of the SOLC Specific Plan approval. Therefore, the City has identified an additional density of 1,352 DU within the Grove Avenue Corridor, with an assumed average density of Medium Density Residential. As shown in **Table 6**, for the SB 330 site, the additional daily water usage will be a net increase of **398,840 gal/day**.

Table 6 – SB 330 Water Demands  Land Use	Units	Domestic Water Demand Rate (gpd/du)	Domestic Water Usage (gal/day)	Recycled Water Demand Rate (gpd/du)	Total Recycled Water Usage (gal/day)	Total Water Usage (gal/day)
Medium Density Residential	1,352	268	362,336	27	36,504	398,840

<sup>5</sup> City of Ontario. (2020). Email correspondence with Rudy Zeledon, Planning Director. December 10 2020.

**Table 7 – Water Demand Summary**

<b>Land Use</b>	<b>Total Domestic Water Usage (gal/day)</b>	<b>Total Recycled Water Usage (gal/day)</b>	<b>Total Water Usage (gal/day)</b>
<b>Projected in 2015 UWMP</b>			
Project Site	742,856	183,914	926,770
SB 330 Site	-	-	-
<b>Subtotal</b>	<b>742,856</b>	<b>183,914</b>	<b>926,770</b>
<b>Proposed Project</b>			
Project Site	327,508	216,253	543,761
SB 330 Site	362,336	36,504	398,840
<b>Subtotal</b>	<b>689,844</b>	<b>252,757</b>	<b>942,601</b>
<b>Net Difference</b>			
(gal/day)	<b>-53,012</b>	<b>68,843</b>	<b>15,831</b>
(%)	<b>-7.1%</b>	<b>37.4%</b>	<b>1.7%</b>

As shown in **Table 7** above, the implementation of the Project, and the rezoning of lower-density land for the SB 330 site for the Project, will result in a slight decrease in domestic water demand, an increase in recycled water demand, and an overall slight increase in total water demand (of 1.7%, or 15,831 gallons/day), compared to the 2015 UWMP. Therefore, implementation of the Project would result in a nominal increase in water demand and will not obstruct the City’s ability to meet water demands.

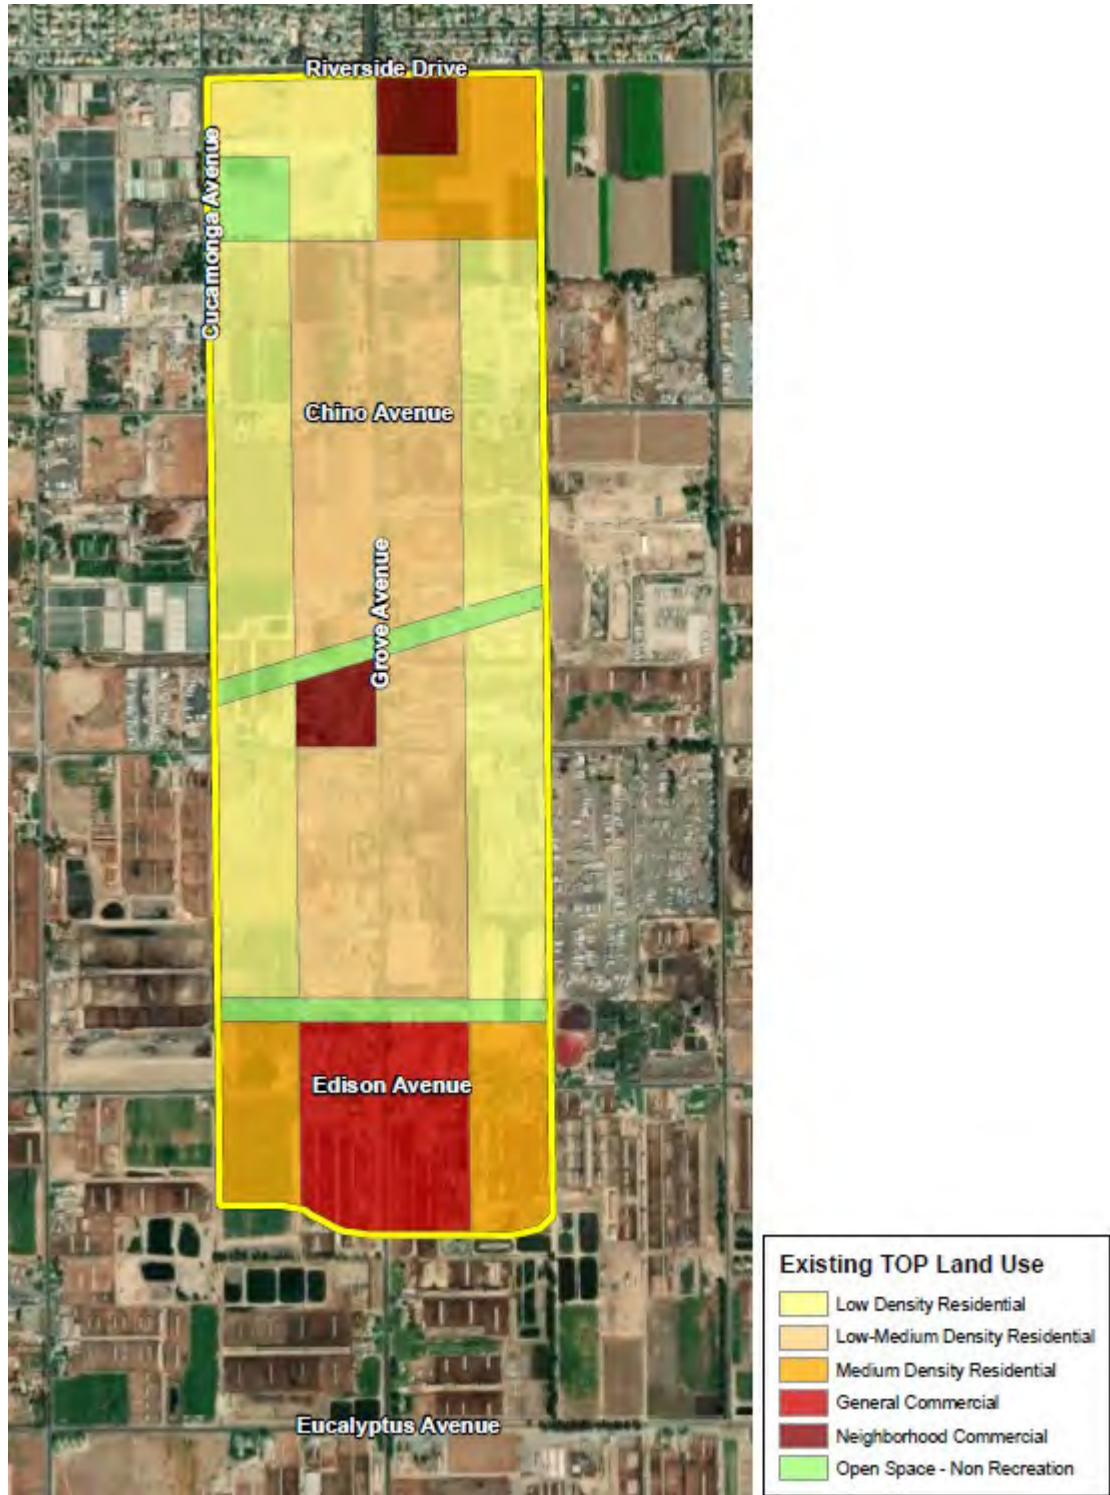

Figure 3 – SB 330 Replacement Site

## Water Supply Analysis

This section identifies the sources of water used by the City of Ontario and evaluates the water supplies that could be used by the City and the proposed project during normal, single-dry, and multiple-dry years through the year 2040.

Water sources used by the City include groundwater from Chino Groundwater Basin (Chino Basin), treated groundwater from the Chino Basin Desalter Authority (CDA), recycled water from Inland Empire Utilities Agency (IEUA), imported water from the Water Facilities Authority (WFA), and purchased water from the San Antonio Water Company (SAWCo).

The City of Ontario owns and operates 19 groundwater wells within the Chino Basin, of which 17 wells are currently active and two are on standby. Groundwater from the Chino Basin is used by the City of Ontario either directly by pumping into its distribution system or by treating the groundwater (Wells 41, 44 and 52) at one of its two plants and then pumping the treated groundwater into the City of Ontario's distribution system. The ultimate capacity of Ontario's existing and future wells is projected to be 105.8 million gallons per day (mgd) or 132,219 AFY.<sup>6</sup> Additional information on the City's groundwater resources and groundwater rights is provided in Section 2.5.

In addition to its well production, the City of Ontario also purchases treated Chino Basin groundwater from the CDA. The CDA was formed in 2002 as a Joint Powers Authority consisting of Inland Empire Utilities Agency; Jurupa Community Services District; Cities of Chino, Chino Hills, Norco, Ontario, and Santa Ana River Water Company. Western Municipal Water District joined in 2010.

As part of the Chino Basin Watermaster requirements in the Optimum Basin Management Program (OBMP), the member agencies of the CDA are required to extract 40,000 AFY of groundwater from the southern portion of the Basin, treat it to potable water standards, and deliver it to the member agencies. The CDA currently owns and operates two desalters (Chino I and Chino II Desalters) that consist of groundwater extraction wells connected to pumps and pipelines that direct water to advanced treatment facilities. The final product is a high-quality drinking water, which is sold to member agencies through "take or pay" contracts. The City has 1,500 AFY capacity rights in the Chino I Desalter and 3,500 AFY capacity rights in the existing Chino II Desalter. When the current expansion of the Chino II Desalter is completed, the City's total deliveries will increase to 8,533 AFY.<sup>7</sup>

Recycled water is provided to the City of Ontario by IEUA, which owns and operate four regional water recycling plants that produce disinfected and filtered tertiary treated recycled water in compliance with California Title 22 regulations. IEUA provides recycled water to Ontario and other local agencies through a distribution system consisting of pipelines, booster pump stations, pressure regulating station, and reservoirs.<sup>8</sup>

The City has been obtaining recycled water from IEUA since 1972. Currently, recycled water is used in the City for agricultural irrigation, landscape irrigation, golf course irrigation, and industrial uses. Based on the City's current Recycled Water Master Plan and the 2015 UWMP, the City has enough recycled water rights

---

<sup>6</sup> City of Ontario, 2012. Water Master Plan. Prepared by AKM Consulting Engineers.

<sup>8</sup> Inland Empire Utilities Agency, 2016. 2015 Urban Water Management Plan. Prepared by Arcadis.

to meet future recycled water demands. In 2015, there were 12,131 AF of recycled water available to the City and 7,208 AF of recycled water were used.

The City also obtains treated imported water from the WFA, which is a wholesale water supplier to the cities of Chino, Chino Hills, Ontario, Upland, and the Monte Vista Water District.<sup>9</sup> The WFA purchases imported water from IEUA, which in turn purchases untreated water from the Metropolitan Water District (MWD). The MWD obtains its water from the State Water Project (SWP) and has projected 100% water supply reliability over the next 20 years, as per its 2015 UWMP.<sup>10</sup> The WFA obtains the raw water from a connection to MWD’s Rialto Feeder Pipeline, which starts at MWD’s Silverwood Lake Reservoir in the San Bernardino Mountains. The City owns 31.4 percent of the plant capacity (25.4 mgd, 28,500 AFY). The maximum capacity available to the City is 19,924 AFY, which equals the total capacity of 28,000 AFY less the Dry Year Yield (DYY) shift obligation of 8,076 AFY.<sup>11</sup>

SAWCo leases groundwater rights to the Cities of Fontana, Ontario, Chino and Upland, and the Cucamonga Valley Water District, the Monte Vista Water District, the Jurupa Community Services Water District and Three Valleys Municipal Water District.<sup>12</sup> The City of Ontario owns 295 shares of the SAWCo. In the past, the City received its water from SAWCo by a stored groundwater transfer. However, in 2015, SAWCo made a connection to the WFA and is now able to deliver water to the City through that connection. SAWCo water supplies are a mix of surface water from San Antonio Creek, groundwater from the San Antonio Tunnel, and three groundwater basins: Chino Basin, Cucamonga Basin, and Six Basins.<sup>13</sup>

Actual water supplies provided to the City for the year 2020 are summarized in **Table 8**.

**Table 8 – Water Supply Sources for the City of Ontario in 2020**

Water Supplier	Water Source	Amount (AFY)
City of Ontario	Groundwater	18,395
Chino Basin Desalter Authority (CDA)	Purchased/Imported Water	6,636
Water Facilities Authority (WFA)	Purchased/Imported Water	66,513
San Antonio Water Company (SAWCo)	Purchased/Imported Water	565
Inland Empire Utilities Authority (IEUA)	Recycled Water	4,907
IEUA – Agriculture Deliveries	Recycled Water	2,905
<b>Total</b>		<b>39,921</b>

Source: City of Ontario, FY 2019/2020

It is required that every urban water supplier assess the reliability to provide water service to its customers under normal, dry, and multiple dry water years. The City depends on a combination of imported and local supplies to meet its water demands and has taken numerous steps to ensure that it has adequate supplies. Water supplies available to the City are projected to meet full-service demands. The UWMP states that the City will be able to meet demand with projected supplies between 2020 and 2040 during normal years, single dry years, and multiple dry years (see **Table 9**).<sup>14</sup>

Source: City of Ontario 2015 UWMP, 2016

The City will increase its total water supply from 37,151 AF of water delivered in 2015, to 73,640 AFY in 2040. The increased water supply will come from full utilization of the City’s groundwater rights in the Chino Basin allowed under the Judgment (including increased groundwater recharge of stormwater and recycled water), and continued expansion of recycled water use and expansion of desalter water. The increase in imported water is assumed to be available in wet and normal years. With the ability for the City to store water in the Chino Basin, in its local and supplemental storage accounts as well as the DYY Program storage account, the City has the capability and water supply available to reduce imported water deliveries in dry years and increase groundwater production to meet future demands.<sup>15</sup>

## Groundwater Analysis

Since most of the potable water supplied by the City of Ontario comes from groundwater, SB610 requires a groundwater analysis to be included as part of the WSA. The Water Code requires that the WSA include:

- Groundwater information from the 2015 UWMP
- Groundwater basin description: Including the legal rights to pump
- Historic Use of Groundwater: from the 2015 UWMP
- Projected Use of Groundwater
- Sufficiency of Groundwater from Chino Basin: The City of Ontario’s legal right to pump water in an amount necessary to meet all of its demands has been adjudicated and will ensure the long-term reliability of the groundwater source as the safe yield of the aquifer has been determined. The construction of Wells 45, 46, and 47, as part of the DYY Storage Program, increases the City’s

<sup>15</sup> City of Ontario, 2016. 2015 Urban Water Management Plan. Prepared by Ontario Municipal Utilities Company.

groundwater pumping capacity to meet peak demands. The City also has stored water in the Chino Basin and participates in an ongoing groundwater recharge program, using stormwater, dry-weather runoff, and recycled water, that ensures the safe yield of the Chino Basin is not exceeded. The ongoing expansion of the groundwater desalter program and recycled water program will reduce the City's dependence on groundwater pumping. In addition, the City participates in water conservation efforts through the California Urban Water Conservation Council (CUWCC), adopts ordinances pertaining to water shortage contingency planning, conservation pricing, and various public outreach programs to encourage its customers to reduce their water consumption.

## **Groundwater Information from the 2015 UWMP**

The 2015 UWMP adopted by the City in June 2016 contains a description of the Chino Groundwater Basin, the City's current and projected water supplies and demands, the reliability of the water supply, water shortage plans, the Optimum Basin Management Plan, and the adjudication judgment administered by the Chino Basin Watermaster. In addition, Appendix B of the UWMP prepared by AKM explains the methods and calculations by which the future water demand of the City was estimated, based on the land use designations in the General Plan.

## **Groundwater Basin Description**

The City of Ontario obtains its groundwater from the Chino Groundwater Basin. The Chino Basin encompasses about 235 square miles of the upper Santa Ana River watershed and lies within portions of San Bernardino, Riverside, and Los Angeles counties. The Chino Basin has approximately 6 million-acre feet of water in storage and an estimated 1 million acre-feet of storage capacity. The Chino Basin is divided into five management zones, based on similar hydrologic conditions, as shown in **Figure 4**, Chino Groundwater Basin Management Zones. The City of Ontario is located approximately in the center of the Chino Basin.

Groundwater quality in Chino Basin is generally good with better quality in the northern portion of the basin where recharge occurs. Salinity (TDS) and nitrate-nitrogen concentrations are higher in the southern portion of the basin. The Chino Basin has been extensively studied by the Chino Basin Watermaster. Reports are available at this website: <http://www.cbwm.org/>.

The Chino Basin Watermaster began development of the Optimum Basin Management Program (OBMP) in 1998 and completed it in 2000. The purpose of the program is to address both water quality and water supply considerations. The southern portion of the Chino Basin requires brackish groundwater treatment to control the outflow of salts and nitrates into the Santa Ana River. As such, one of the main benefits of the CDA is to remove salts and nitrates to clean up the Chino Basin. CDA operates 28 groundwater extraction wells that prevent brackish groundwater from flowing into the Santa Ana River.

The OBMP and its implementation agreement, the Peace Agreement, was approved by the Court in October 2000. One of the stipulations of the OBMP requires member agencies to extract approximately 40,000 AFY of groundwater from the southern portion of the Chino Basin, treat it to potable water standards, and then deliver it to the member agencies. When the Chino II Desalter expansion is complete, CDA is expected to meet this requirement. The City of Ontario purchased 3,543 AF from CDA in 2005, which is approximately 10 percent of the City's total supply. Upon completion of the Chino II Desalter expansion, the City's capacity rights will be 8,533 AFY.

### ***Legal Right to Pump from the Chino Basin***

Water rights to the Chino Basin were adjudicated in 1978 by the Superior Court of the State of California for San Bernardino County. Since that time, the Chino Basin has been sustainably managed, as required by the Judgment, under the direction of the court appointed Watermaster. The original Watermaster was the Chino Basin Municipal Water District (now IEUA). Since 1998, the Watermaster has been the Chino Basin Watermaster.

Multiple cities and water purveyors pump groundwater from the Chino Basin for all or part of their municipal and industrial water supplies. Agricultural users also pump groundwater from the Basin. The safe yield of the Chino Basin is 131,000 AFY as of 2021. The safe yield quantity of 131,000 AFY is allocated among three pools of right holders as follows:

- Overlying agricultural pool (dairymen, farmers, and the State of California): 82,800 AFY
- Overlying non-agricultural pool (businesses and industries): 7,366 AFY
- Appropriative pool (local cities, public water districts, and private water companies): 40,834 AFY

The Judgment states that all Chino Basin users can pump a sufficient quantity of water from the Basin to meet their requirements. If pumping by a party exceeds its share of the safe yield, assessments are levied by the Chino Basin Watermaster to replace overproduction. The Judgment also recognizes that there is a substantial amount of available unused groundwater storage capacity in the Chino Basin that can be used for storage and the conjunctive use of supplemental and basin waters. The Chino Basin Watermaster has the authority to reallocate shares of unallocated safe yield water on an annual basis, as per the latest 2019 Watermaster Resolution No. 2019-03.<sup>16</sup> (add source – Watermaster Resolution 2019-03). The Watermaster publishes an annual report that summarizes the status and management of the Chino Basin. A copy of the Chino Basin Judgment and latest Watermaster Annual Report can be found at [www.cbwm.org](http://www.cbwm.org).

The City of Ontario is a member of both the overlying non-agricultural pool and the appropriative pool and is therefore subject to the regulations imposed by the Chino Basin Watermaster. Per the Judgment, the City of Ontario has water rights of 20.742% of the safe yield of the appropriative pool (i.e., approximately 8,470 AFY). In addition, as of 2020 the City holds groundwater rights of 3,920.6 AFY from the overlying non-agricultural pool.

The City of Ontario also participates in the Dry Year Yield Storage Program (DYY Program), which is a cooperative conjunctive use program involving Metropolitan Water District of Southern California (MWD), IEUA, Chino Basin Watermaster, Three Valleys Municipal Water District (TVMWD), and some of the Chino Basin groundwater producers. Under the DYY Program, MWD is allowed to store up to 100,000 AF of water in the Chino Basin when surplus water is available and the Chino Basin groundwater producers can extract 33,000 AFY for three years in dry, drought, or emergency periods. The City authorized execution of an agreement with IEUA to participate in the DYY program in 2003. Participation obligates the City to reduce its use of imported water compared to a baseline by a fixed amount, known as the “shift obligation.” The City’s shift obligation is 8,076 AFY. During years when MWD calls for extraction, the City’s WFA purchases would be reduced by up to 8,076 AFY compared to the previous year. Because Jurupa Community Services District (JCSD) does not have an imported water connection, it has entered

---

<sup>16</sup> Chino Basin Water Master, 2019. Watermaster Resolution No. 2019-03.

into an agreement with the City for meeting its shift obligation. Under this agreement, JCSD conveys groundwater to the City in an amount equal to its shift obligation. The current shift obligation is 2,000 AFY. This program allows the City to be less reliant upon imported water supplies and the additional groundwater capacity allows the City to increase the percentage of groundwater supply used to meet peak demands.

In addition to the appropriative pool and overlying non-agricultural pool water rights, as well as the contract obligations through the DYY Program, the following is a summary of other groundwater rights for Chino Basin:

### ***Land Use Conversions***

As of 2020, the City has rights to 4,254 AFY from the Chino Basin due to conversions from agricultural to non-agricultural land uses. This amount is expected to increase to 16,602 AFY as agricultural land uses are converted in the future. (However, annual adjustments may be made to the rights obtained through land use conversions.)

### ***Annual Early Transfers***

The Watermaster can approve an “Early Transfer” of unused agricultural pool water to the appropriative pool. The Early Transfer water is annually allocated among the appropriative pool members in accordance with their pro-rata share of the initial safe yield. For the 2020-2021 fiscal year, the Early Transfer of water for the City was 5,177 AF. The total Agricultural Pool Reallocation to the City of Ontario for Fiscal Year 2020-2021 was 10,468 AF.

### ***Increased Groundwater Recharge***

The City is entitled to water rights due to increased groundwater recharge with stormwater and recycled water credits in accordance with the OBMP. Stormwater recharge credit is assigned based on operating safe yield percentage. Recycled water recharge credit is assigned based on the wastewater contribution percentage. Based on an estimated total recharge of 35,000 AFY (20,000 AFY of recycled water and 15,000 AFY of stormwater) in 2035, the City of Ontario would be entitled to approximately 9,600 AFY in the future.

### ***Groundwater From San Antonio Water Company***

The City owns 295 shares of the San Antonio Water Company (SAWCo), which provides 600 AFY to the City. SAWCo supplies a mixture of water from San Antonio Creek, groundwater from the San Antonio Tunnel, and three groundwater basins: Chino Basin, Cucamonga Basin, and Six Basins. In the past, the City received its water from SAWCo by a stored groundwater transfer; however, in 2015, SAWCo made a connection to the WFA and is now able to deliver water to the City.

### ***Fontana Recycled Water Rights***

The City also has a long-term contract to purchase up to 3,000 AFY of recharged recycled water rights from the City of Fontana, which does not operate its own water system.

**City Groundwater Storage**

The City has rights to store water in the Chino Basin (appropriative and overlying non-agricultural) and has been increasing its storage in recent years. The City holds water in both an excess carry over accounts and supplemental accounts. Excess carry over storage accounts hold un-pumped operating safe yield groundwater rights. Supplemental accounts hold both imported water and recycled water that has been recharged into the Chino Basin. As of 2020, the City has a total of 96,544 AF in storage. This consists of 39,261 AF in excess carry over storage accounts and 57,283 AF in supplemental accounts. As of 2015, there is enough water in the City’s storage accounts to meet more than two years of total demands, should other water supply sources be unavailable. Based on the City’s projected increase in additional local supplies (desalter water and recycled water), the City’s groundwater storage accounts are projected to continue to grow at a rate of 2,000 AFY to 5,000 AFY, further increasing the City’s local resource reliability and reducing dependence on imported water.

The various groundwater rights held by the City of Ontario are summarized in **Table 10**.

**Table 10 – City of Ontario Groundwater Rights Summary**

	<b>Current (AFY)</b>	<b>Future Groundwater Produced (AFY)</b>
Dry Year Storage Program	8,076	8,076
Appropriative Pool	8,470	8,470
Overlying Non-Agricultural Pool	3,920	At least 3,920
Land Use Conversions	4,254	16,602
Annual Early Transfer	5,177	20.742 % of Ag Early Transfer
Groundwater Recharge Credits	Unknown	9,600 (in 2035)
Fontana Recycled Water Rights	Max. 3,000	At least 3,000
SAWC Groundwater	600	At least 600
Groundwater Storage Accounts	Excess Carry Over Account: 39,261 Supplemental Account: 57,283	33,500 to 40,500 38,700 to 60,700

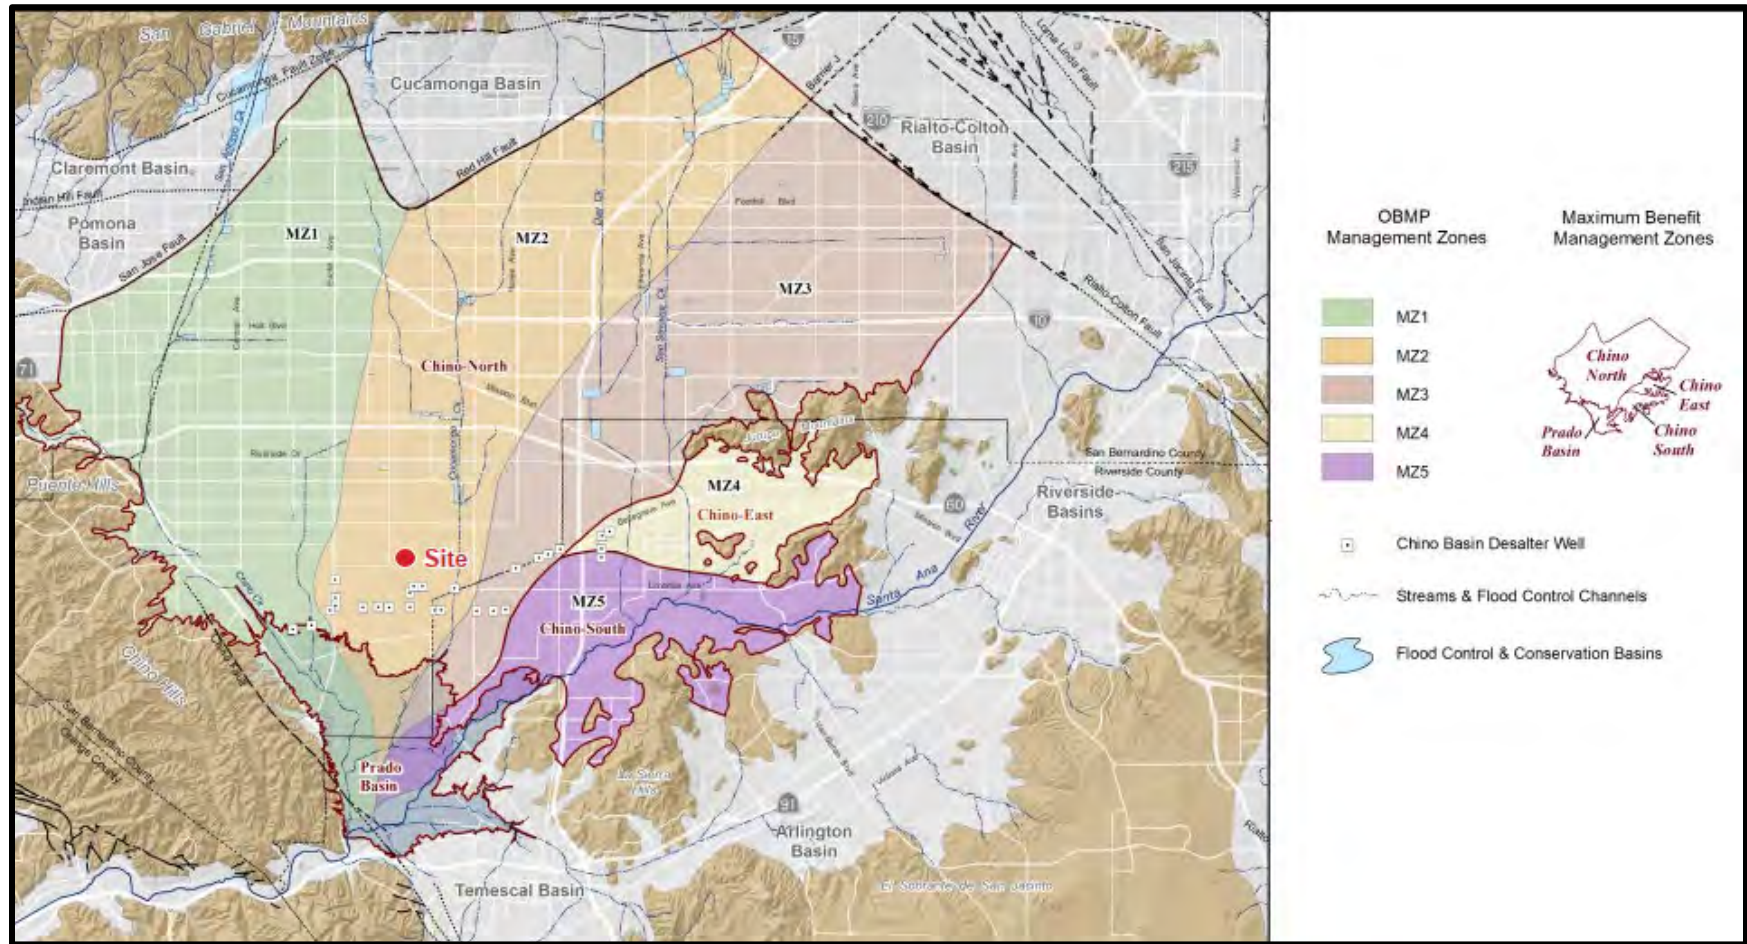

Figure 4 – Chino Groundwater Basin Management Zone

## Historic Use of Groundwater

The City owns and operates 19 groundwater wells, of which 17 are currently active and two are on standby. The City's 2012 Potable Water Master Plan includes nine new groundwater wells that will primarily supply the South Ontario Logistics Center area. The amount of groundwater pumped by the City of Ontario from the Chino Basin since 2000 is listed below in **Table 11**. A map of the location of the groundwater wells and pressure zones is shown on **Figure 5**, Ontario Ultimate Water System.

**Table 11 – Historic Groundwater Production**

Calendar Year	Groundwater produced (AFY)
2011	20,442
2012	20,226
2013	19,967
2014	20,274
2015	19,544
<b>Average</b>	<b>20,091</b>

Source: City of Ontario 2015 UWMP, 2016.

## Projected Use of Groundwater

The proposed project will receive water from the City of Ontario, using groundwater extracted from the Chino Basin, treated groundwater from the CDA, recycled water from the IEUA, and imported water from the WFA.

Groundwater from the Chino Basin will be directly pumped by the City of Ontario into its distribution system or by treating the groundwater extracted at Wells 41, 44 and 52 through ion-exchange facilities before pumping it into the distribution system. The City's current well capacity is 39,638 gallons per minute (gpm). When the nine future wells come on line, the capacity of the City's groundwater system will be greater than 72,315 gpm, this includes the nine future wells.

The City of Ontario also purchases treated groundwater from the CDA. The City currently has an entitlement of 5,000 AFY from the CDA. Once the CDA Desalter II expansion is complete, the City will have an additional entitlement of 3,533 AFY for a total of 8,533 AFY.

## Sufficiency of Groundwater from Chino Basin

According to the 2015 UWMP, the City's water supply (including conservation measures) will be sufficient to supply all of its needs to residential, commercial, and industrial customers through the year 2040 during normal, single dry, and multiple dry years. The City of Ontario's legal right to pump water in an amount necessary to meet all of its demands has been adjudicated and will ensure the long-term reliability of the groundwater source as the safe yield of the aquifer has been determined.

Approximately two-thirds of the City's water supply is groundwater pumped through its own wells located in the Chino Basin. The construction of Wells 45, 46, and 47, as part of the DYY Storage Program, increases the City's groundwater pumping capacity to meet peak demands. The City also has 96,544 AF of stored water in the Chino Basin as of 2020 and participates in an ongoing groundwater recharge program, using

stormwater, dry-weather runoff, and recycled water, that ensures the safe yield of the Chino Basin is not exceeded. The ongoing expansion of the groundwater desalter program and recycled water program will reduce the City’s dependence on groundwater pumping. In addition, the City participates in water conservation efforts through the California Urban Water Conservation Council (CUWCC), adopts ordinances pertaining to water shortage contingency planning, conservation pricing, and various public outreach programs to encourage its customers to reduce their water consumption.

The Cities of Chino, Chino Hills, Ontario, Upland, and the Monte Vista Water District submitted the Water Supply Reliability Certification and supporting documentation to the State Water Resources Control Board in June 2016. This was submitted under the requirements of the State Water Resources Control Board’s (SWRCB’s) May 18, 2016 Emergency Regulation. The results are summarized in **Tables 12 and 13**.

**Table 12 – Water Supplies Available to the City of Ontario for Water Years 2017-2019**

	WY 2017 (AF)	WY 2018 (AF)	WY 2019 (AF)
Water Facilities Authority	13,044	13,448	11,840
Chino Desalter Authority	8,533	8,533	8,533
San Antonio Water Company	545	545	545
Groundwater Rights (Appropriative Pool)	30,137	17,726	17,726
Groundwater Rights (Non-Agricultural Pool)	4,656	2,328	2,328
Recycled Groundwater Recharge	2,684	2,792	2,357

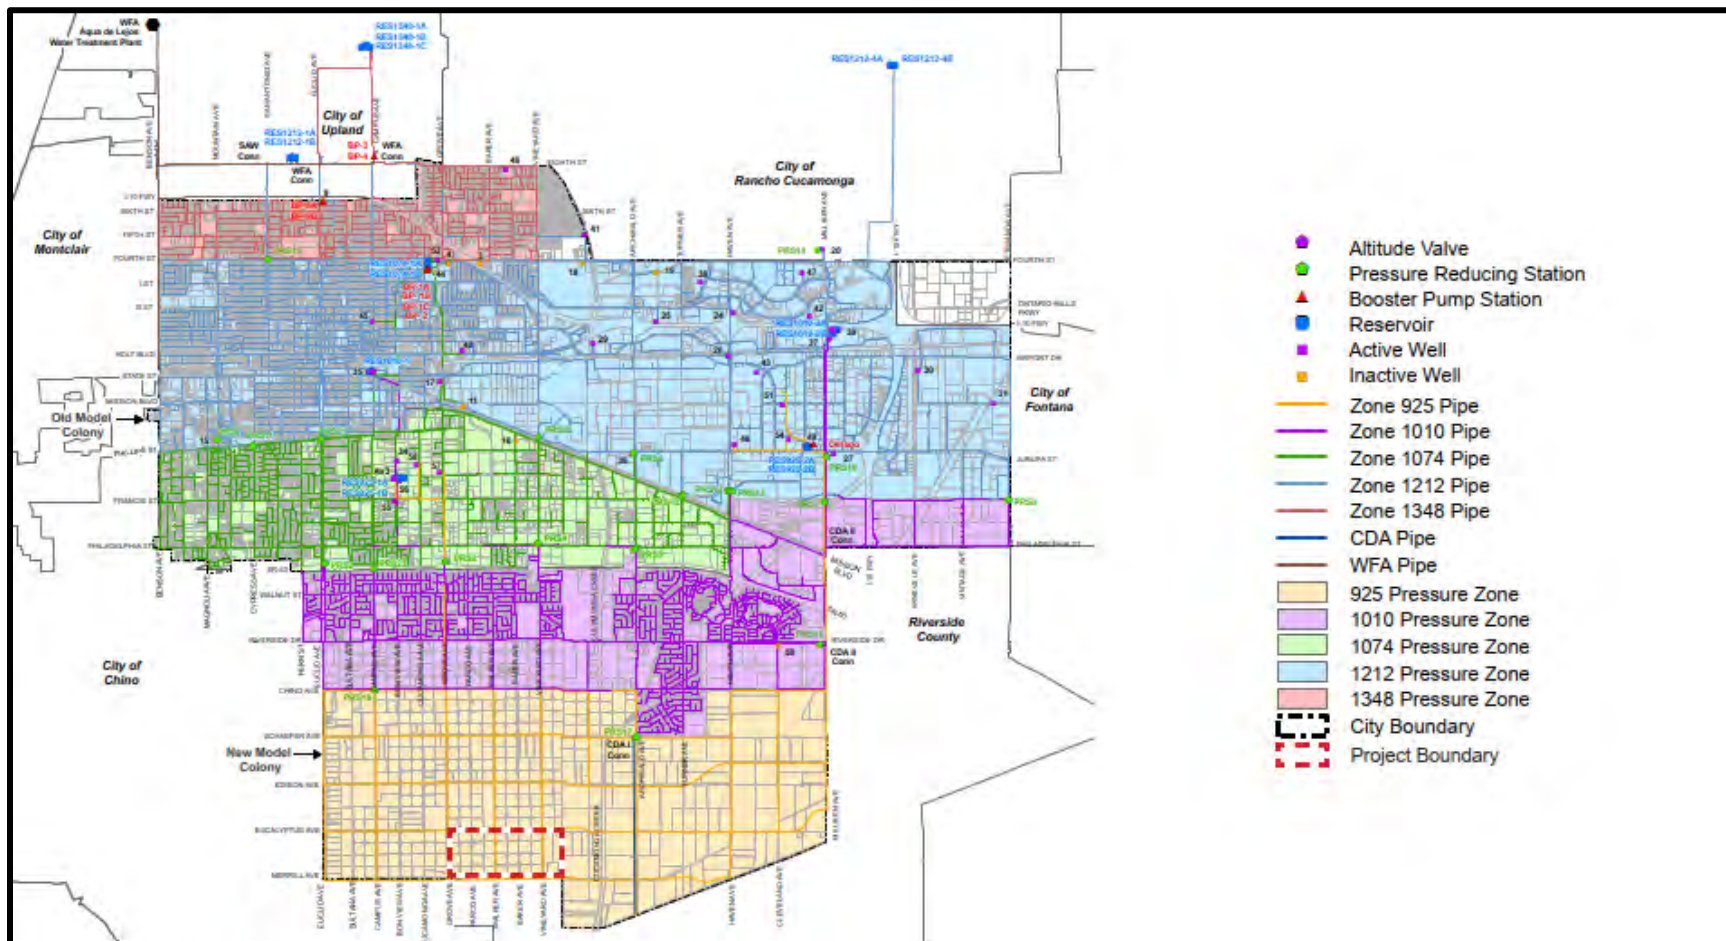

Figure 5 – Ontario Ultimate Water System

In addition, as of 2020 the Chino Basin has approximately 487,048 AF of groundwater that is currently stored and available for safe production through existing groundwater production wells. This quantity of additional available supply is not included in the City’s total supply projections. The amount of Chino Basin groundwater available for the City of Ontario is shown in **Table 14**.

**Table 14 – Chino Basin Stored Groundwater Available to the City of Ontario**

	<b>Local Excess Carry Over Storage (AF)</b>	<b>Local Supplemental Storage (AF)</b>	<b>Total</b>
Appropriative Pool	39,261	57,283	96,544
Non-Agricultural Pool	3,461	-	3,461
<b>Total</b>	<b>42,722</b>	<b>57,283</b>	<b>100,005</b>

In summary, there are sufficient groundwater supplies available to the City, based on the analysis provided above as well as the programs overseen by the Chino Basin Watermaster. The ongoing efforts by the City to implement water conservation programs and the use of recycled water will further reduce its reliance on groundwater resources.

## Water Shortage Contingency Planning

To prepare for water shortages, the City adopted Ordinance No. 3027 on September 1, 2015, in response to the Emergency Conservation Regulations mandated by the State Water Resources Control Board. Under this ordinance, the Water Conservation Plan was updated with more stringent prohibitions and penalties. The Water Conservation Plan establishes a voluntary conservation stage that is always in effect and mandatory water shortage stages 1 through 4, which enforce water conservation routines following a water crisis.

Depending on the City’s customer’s initiative to voluntarily conserve water at times of crisis, the City can determine when and how quickly to implement the mandatory conservation phases. The severity of the water shortage will influence which methods will be implemented. When conservation goals are not met simply through voluntary reduction in water use or when supplies are reduced by 10 percent, Stage 1 prohibitions are implemented. Stage 2 occurs when there is a 10 percent to 20 percent reduction in supplies. A reduction in supplies by more than 20 percent results in Stage 3 prohibitions. Severe water supply interruptions, resulting in a reduction in supplies by 50 percent, caused by earthquakes, widespread fires, or other natural disasters, prompt Stage 4 prohibitions. A Stage 4 water shortage will target the implementation of all consumption reduction methods.

## Water Efficiency Strategies

There are many water efficiency strategies that have been implemented in the City of Ontario that would also reduce water demands for the South Ontario Logistics Center. Since the City is located within an inland arid region where approximately 60 to 70 percent of water is used outdoors, there is a heightened focus on outdoor water use efficiency programs. The City offers outdoor rebates and incentives through various programs, such as: irrigation tune-up program, turf removal programs, landscape evaluations, landscape workshops and smart irrigation controller upgrades.

The City also offers an assortment of indoor rebate programs for residential, commercial, industrial, institutional and customers, such as: high efficiency/ultralow flush toilets, high efficiency clothes washer, waterless urinals, water brooms, pre-rinse nozzles, conductivity controllers, rotating nozzles and weather-based irrigation control.

Furthermore, the City along with other IEUA member agencies implements a Regional Water Use Efficiency Business Plan. The Business Plan references SB X7-7, and the State Water Resources Control Board's Emergency Conservation Regulations as the legislative drivers that help guide the development of water reduction goals. The Business Plan describes in detail how the region, and the City, will achieve the water reduction goals. Below is a summary of how the City will achieve the water reduction goals.

Water Use Efficiency Active Programs – offers customers incentives/rebates through a portfolio of indoor and outdoor programs in order to use water efficiently

Water Use Efficiency Passive Policy Initiative – water savings would result from the implementation of current and future building code standards, plumbing code standards and landscape ordinances

Recycled Water – the continued expansion of recycled water use will reduce demands for potable water supply

## Summary

A Water Supply Assessment (WSA) was prepared to assess the water demand and supply conditions with implementation of the proposed project. The Project proposes to revise current General Plan land use designations from Business Park and Low Medium Density Residential (as shown in Table 5) to Industrial and Business Park. In addition, the Project requires upzoning land within the Grove Corridor SB330 Replacement Site to offset the “loss” of 1,352 DU of residential zoning within the SOLC Specific Plan area. As shown in **Table 7**, the Project (including upzoning within the SB 330 Replacement Site area) would result in a slight decrease in domestic water demand, an increase in recycled water demand, and an overall slight increase in total water demand of 1.7% or 15,831 gallons/day. This nominal increase in water demand will not affect the City's ability to supply water to the Project or to the City.

According to the City's UWMP, the City has adequate supplies to serve 100 percent of its customers during normal, dry year, and multiple dry year demand through 2040 accounting for projected population increases and corresponding increases in water demand. This WSA concludes that the City will have sufficient water supplies available during normal, single dry, and multiple dry years through the year 2040 to meet all projected water demands associated with its existing and future customers, including the proposed project. In the unlikely event of a water shortage, implementation of the City's Water Conservation Plan and water efficiency strategies would ensure that sufficient water supplies were available to serve its customers, including the project and existing and future users.
