SUBJECT: COLONY COMMERCE CENTER EAST SPECIFIC PLAN FOCUSED TRAFFIC ASSESSMENT

Dear Ms. Konstanza Dobrev:

The following Focused Traffic Assessment letter has been prepared for the proposed Colony Commerce Center East Specific Plan development (“Project”), which is located on the southwest corner of Archibald Avenue and Merrill Avenue in the City of Ontario, to include an evaluation of Existing plus Project (E+P) traffic conditions for the proposed Project. The E+P analysis scenario has been evaluated for informational purposes only. As such, no mitigation measures have been identified for the purposes of this analysis.

PROJECT TRIP GENERATION

The Project trip generation utilized for the purposes of this assessment is consistent with that published in the Colony Commerce Center East Specific Plan Traffic Impact Analysis (referred to as Traffic Study), dated November 2, 2017. The Specific Plan contains three Planning Areas (PA). PA1 and PA2 of the Specific Plan are proposed to consist of up to 175,330-sf of manufacturing use (25 percent of the square footage for Buildings 1 through 8), 525,991-sf of warehousing use (75 percent of the square footage for Buildings 1 through 8), and 998,680-sf high-cube warehouse/distribution center use (Building 9). Similarly, PA3 would develop consist of up to 57,799-sf of manufacturing use (25 percent of the square footage), 173,396-sf of warehousing use (75 percent of the square footage). The proposed Project is anticipated to generate a net total of 4,782 passenger car equivalent (PCE) trip-ends per day, 454 PCE AM peak hour trips and 514 PCE PM peak hour trips. Project Buildout (PAs 1-3) has been assumed for the purposes of this assessment for E+P traffic conditions.

PROJECT TRIP DISTRIBUTION

Project trip distribution patterns utilized for the purposes of this assessment are consistent with those published in the Traffic Study.

PEAK HOUR INTERSECTION OPERATIONS

The intersection analysis results are summarized in Table 1, which indicates there are no additional study area intersections anticipated to operate at unacceptable LOS with the addition of Project Buildout traffic, in addition to those identified for Existing traffic conditions in the Traffic Study. The intersection operations analysis worksheets for E+P traffic conditions are included in Attachment A of this letter.

ROADWAY SEGMENT ANALYSIS

Table 2 provides a summary of the E+P conditions roadway segment capacity analysis based on the City of Ontario General Plan Roadway Segment Capacity Thresholds identified on Table 2-3 of the Traffic Study. As shown on Table 2, there are no additional roadway segments anticipated to operate at an unacceptable LOS under E+P traffic conditions, in addition to those identified under Existing (2017) traffic conditions in the Traffic Study.

OFF-RAMP QUEUES

Queuing analysis findings for E+P are presented in Table 3. As shown on Table 3, there are no movements anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows with the addition of Project Buildout traffic, consistent with Existing traffic conditions in the Traffic Study. Worksheets for E+P traffic conditions off-ramp queuing analysis are provided in Attachment B.

BASIC FREEWAY SEGMENT ANALYSIS

As shown on Table 4, no additional freeway segments analyzed for this assessment were found to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours for E+P traffic conditions, in addition to those identified under Existing traffic conditions in the traffic Study. E+P basic freeway segment analysis worksheets are provided in Attachment C.

FREEWAY RAMP MERGE/DIVERGE ANALYSIS

Ramp merge and diverge operations were also evaluated for E+P conditions and the results of this analysis are presented in Table 5. As shown in Table 5, there are no additional merge and diverge areas that currently operate at LOS E or LOS F for E+P in addition to those listed under Existing traffic conditions in the Traffic Study. E+P freeway ramp junction operations analysis worksheets are provided in Attachment D.

BOLD = Level of Service (LOS) does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).
¹ Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.
² CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **CSS** = Improvement

Table 2

Roadway Segment Capacity Analysis for E+P Conditions

#	Roadway	Segment Limits	Roadway Section	LOS Capacity ¹	Existing 2017	V/C ²	LOS ³	E+P	V/C ²	LOS ³	Acceptable LOS
1	Merrill Avenue	East of Euclid Av. (SR-83)	2U	14,000	8,407	0.60	B	9,017	0.64	B	D

4	Archibald Avenue	North of Ontario Ranch Rd.	4D	35,900	21,177	0.59	A	22,399	0.62	B	D
5		Between Eucalyptus Av. and Merrill Av.	4D	35,900	20,073	0.56	A	22,225	0.62	B	D
6		North of the County Line	2D	17,950	27,064	1.51	F	28,579	1.59	F	D

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ These maximum roadway capacities have been obtained from the City of Ontario's General I Plan.

² V/C = Volume to Capacity Ratio

³ LOS = Level of Service

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the SR-60, SR-71, or I-15 Freeway mainline.

Table 4

Basic Freeway Segment Analysis for E+P Conditions

Freeway	Direction ¹	Mainline Segment	Lanes ²	Existing (2017)				E+P
